

inconsolata-nerd-font—Support package to use the Inconsolata Nerd Font TrueType fonts

Stephan Lukasczyk*

v0.4, 2023-12-08

Abstract

Inconsolata is a monospaced font designed by Raph Levien. It is already available via the `inconsolata` package. However, that package provides a pretty old version of the font; Additionally, the Nerd Font project extended the font by a huge amount of additional glyphs. This package provides the font itself and a convenient interface to load the font for the $\text{Xe}_{\text{L}}\text{TeX}$ and $\text{Lua}_{\text{E}}\text{TeX}$ engines.

1 User Manual

The Inconsolata font is a monospaced font designed by Raph Levien. Its current version is available from the Google Fonts project.¹ There exists an extension of this font by the Nerd Font project,² which adds a huge amount of additional glyphs, especially useful for developers, to the original font. The extended version is available from GitHub.³ This package provides the TrueType font files and a convenient way to use the font with the Xe_{La}TeX or Lua_{La}TeX engines.

This user guide gives a brief introduction into the possibilities provided by the `inconsolata-nerd-font` package.

Since version 0.4, `inconsolata-nerd-font` ships and uses the extended version of the Inconsolata font, called *InconsolataLGC*. This variant also contains Hellenic and Cyrillic glyphs, as well as bold-italic and italic variants.

1.1 License

Permission is granted to copy, distribute, and/or modify this software under the terms of the L^AT_EX Project Public License (LPPL), version 1.3c or later (<https://www.latex-project.org/lppl.txt>). The software has the status ‘maintained’.

The font files bundled with the package (`InconsolataLGCNerdFont*.ttf`) are licensed under the terms of the SIL Open Font License (LPPL), version 1.1 (<http://scripts.sil.org/OFL>).

1.2 Helper Macros

The following macro is not strictly part of the package. It is actually defined by recent L^AT_EX kernels. However, to make the package compatible with older kernels, too, we provide it, if it is not yet defined.

The macro’s purpose is to check whether the used L^AT_EX format is at least from the given date and allows to execute code depending on the result of the check.

```
\IfFormatAtLeastTF \IfFormatAtLeastTF {<date>} {<true>} {<false>}
```

We define this macro to execute code depending on the L^AT_EX format date. The macro is only defined if it is not already part of the L^AT_EX kernel, which it is for recent versions of the kernel.

1.3 Package Arguments

The `inconsolata-nerd-font` package provides the following load-time options.

```
variant variant = <choice>
```

Specifies which variant of the font shall be used, must be one of `default`, `mono`, or `propo`, where `default` is the default value.

The `mono` variant is limited to only mono-spaced characters, the `default` variant provides bigger icons (around 1.5 times the width of a normal character), the `propo` variant provides proportional symbols, which might be suitable, e.g., for presentations.

¹github.com/googlefonts/Inconsolata

²www.nerdfonts.com/

³github.com/ryanoasis/nerd-fonts/tree/master/patched-fonts/InconsolataLGC

`scale` `scale = {\langle factor \rangle}`
`Scale` `Scale = {\langle factor \rangle}`

Set the scaling of the font. See the fontspec documentation for more details. The default value is `MatchLowercase` to match the height of the lower-case character of the default main font of your document.

1.4 Font Macros

While the package sets the default mono-spaced font to the selected variant of the Inconsolata Nerd Font, the package provides six additional macros for convenience, one pair of each variant of the font.

`\inconsolatanffamily` `\inconsolatanffamily`

A font family for the Inconsolata Nerd Font, the default variant provided by this package.

`\inconsolatanfmonofamily` `\inconsolatanfmonofamily`

A font family for the Inconsolata Nerd Font, the mono variant provided by this package.

`\inconsolatanfpropofamily` `\inconsolatanfpropofamily`

A font family for the Inconsolata Nerd Font, the propo variant provided by this package.

`\textinconsolatanf` `\textinconsolatanf {\langle text \rangle}`

A convenience macro to typeset a short text using the default Inconsolata Nerd Font variant.

`\textinconsolatanfmono` `\textinconsolatanfmono {\langle text \rangle}`

A convenience macro to typeset a short text using the mono Inconsolata Nerd Font variant.

`\textinconsolatanfpropo` `\textinconsolatanfpropo {\langle text \rangle}`

A convenience macro to typeset a short text using the propo Inconsolata Nerd Font variant.

The following sentence uses the `\textinconsolatanf` to typeset the words ‘an example’ using Inconsolata Nerd Font: Just an example sentence.

2 Font Tables

This section provides character tables of the different font variants, created using Frank Mittelbach’s `unicodefonttable` package. Thanks to Herbert Voß for his suggestion to add these.

Total number of glyphs shown from InconsolataLGCNerdFontPropo-Regular.ttf: 3196

3 Implementation

Start the DocStrip guards.

```
1 <*package>
```

Identify the internal prefix (L^AT_EX3 DocStrip convention): only internal material in this *module* should be used directly.

```
2 <@=slcd_inf>
```

Load only the essential support (expl3) ‘up-front’, and only if required.

```
3 \ifundefined{ExplLoaderFileDate}
4 { \RequirePackage{expl3} }
5 {}
```

Make sure that the version of l3kernel in use is sufficiently new. We use \ExplFileDate as \ifpackagelater does not work for pre-loaded expl3 in the absence of the package.

```
6 \ifl@t@r\ExplLoaderFileDate{2020-01-09}
7 {}
8 {%
9   \PackageError{inconsolata-nerd-font}{Support package expl3 too old}
10  {%
11    You need to update your installation of the bundles 'l3kernel' and
12    'l3packages'.\MessageBreak
13    Loading~inconsolata-nerd-font~will~abort!%
14  }%
15  \endinput
16  }%
```

\IfFormatAtLeastTF This macro is not present in older kernels, thus we use the L^AT_EX 2_ε mechanism as this is correct for this case.

```
17 \providecommand \IfFormatAtLeastTF { \ifl@t@r \fmtversion }
```

(End of definition for \IfFormatAtLeastTF. This function is documented on page 2.)

Identify the package and give the overall version information.

```
18 \ProvidesExplPackage {inconsolata-nerd-font} {2023-12-08} {0.4}
19 {Support package to use the Inconsolata Nerd Font TrueType fonts}
```

3.1 Options

Define the options for the package.

```
variant
scale 20 \tl_new:N \l__slcd_inf_variant_tl
Scale 21
\l__slcd_inf_variant_tl 22 \keys_define:nn { inconsolatanerdfont }
\l__slcd_inf_scale_tl 23 {
24   variant .choices:nn = { default, mono, propo } {
25     \tl_set_eq:NN \l__slcd_inf_variant_tl \l_keys_choice_tl
26   },
27
28   scale .tl_set:N = \l__slcd_inf_scale_tl,
29   Scale .tl_set:N = \l__slcd_inf_scale_tl,
30 }
31
```

```

32 \keys_set:nn { inconsolatanerdfont }
33 {
34   variant = default,
35   scale = MatchLowercase,
36 }
37 \tl_clear:N \l__slcd_inf_variant_tl

```

(End of definition for variant and others. These variables are documented on page 2.)

Process the options

```

38 \IfFormatAtLeastTF { 2022-06-01 }
39 { \ProcessKeyOptions [ inconsolatanerdfont ] }
40 {
41   \RequirePackage { l3keys2e }
42   \ProcessKeysOptions { inconsolatanerdfont }
43 }

```

and set up the default variant if it was not yet chosen

```

44 \tl_if_empty:NT \l__slcd_inf_variant_tl
45 {
46   \tl_set:Nn \l__slcd_inf_variant_tl { default }
47 }

```

3.2 Load the Font

We require the fontspec package.

```

48 \RequirePackage{fontspec}

```

Define and set a helper variable for the respective font name suffix

```

49 \tl_new:N \l__slcd_inf_font_name_tl
50 \tl_set:Nn \l__slcd_inf_font_name_tl {InconsolataLGCNerdFont}
51 \tl_if_eq:NnTF \l__slcd_inf_variant_tl { mono }
52 { \tl_put_right:Nn \l__slcd_inf_font_name_tl {Mono} }
53 {
54   \tl_if_eq:NnT \l__slcd_inf_variant_tl { propo }
55   { \tl_put_right:Nn \l__slcd_inf_font_name_tl {Propo} }
56 }

```

Define a font family for the three fonts and commands for easier usage.

`\inconsolatanffamily` The default font accessible as a L^AT_EX font family.

```

57 \newfontfamily\inconsolatanffamily{InconsolataLGCNerdFont-Regular.ttf}[
58   BoldFont      = InconsolataLGCNerdFont-Bold.ttf,
59   BoldItalicFont = InconsolataLGCNerdFont-BoldItalic.ttf,
60   ItalicFont    = InconsolataLGCNerdFont-Italic.ttf,
61   FakeStretch   = {0.9},
62   NFSSFamily    = inconsolatanf,
63   Scale         = \l__slcd_inf_scale_tl,
64 ]

```

(End of definition for \inconsolatanffamily. This function is documented on page 3.)

`\inconsolatanfmonofamily` The mono font variant, accessible as a L^AT_EX font family.

```

65 \newfontfamily\inconsolatanfmonofamily{InconsolataLGCNerdFontMono-Regular.ttf}[
66   BoldFont      = InconsolataLGCNerdFontMono-Bold.ttf,
67   BoldItalicFont = InconsolataLGCNerdFontMono-BoldItalic.ttf,
68   ItalicFont    = InconsolataLGCNerdFontMono-Italic.ttf,

```

```

69 FakeStretch = {0.9},
70 NFSSFamilY = inconsolatanfmono,
71 Scale       = \l_slcd_inf_scale_tl,
72 ]

```

(End of definition for \inconsolatanfmonofamily. This function is documented on page 3.)

\inconsolatanfpropofamily The propo font variant, accessible as a L^AT_EX font family.

```

73 \newfontfamily\inconsolatanfpropofamily{InconsolataLGCNerdFontPropo-Regular.ttf}[
74 BoldFont       = InconsolataLGCNerdFontPropo-Bold.ttf,
75 BoldItalicFont = InconsolataLGCNerdFontPropo-BoldItalic.ttf,
76 ItalicFont     = InconsolataLGCNerdFontPropo-Italic.ttf,
77 FakeStretch    = {0.9},
78 NFSSFamilY    = inconsolatanfpropo,
79 Scale         = \l_slcd_inf_scale_tl,
80 ]

```

(End of definition for \inconsolatanfpropofamily. This function is documented on page 3.)

\textinconsolatanf A macro to typeset text in the default font variant.

```

81 \DeclareTextFontCommand{\textinconsolatanf}{\inconsolatanffamily}

```

(End of definition for \textinconsolatanf. This function is documented on page 3.)

\textinconsolatanfmono A macro to typeset text in the mono font variant.

```

82 \DeclareTextFontCommand{\textinconsolatanfmono}{\inconsolatanffamilymono}

```

(End of definition for \textinconsolatanfmono. This function is documented on page 3.)

\textinconsolatanfpropo A macro to typeset text in the propo font variant.

```

83 \DeclareTextFontCommand{\textinconsolatanfpropo}{\inconsolatanffamilypropo}

```

(End of definition for \textinconsolatanfpropo. This function is documented on page 3.)

Now we can actually load the font

```

84 \setmonofont{\l_slcd_inf_font_name_tl}[
85 BoldFont       = *-Bold,
86 BoldItalicFont = *-BoldItalic,
87 ItalicFont     = *-Italic,
88 Extension      = .ttf,
89 FakeStretch    = {0.9},
90 Scale         = \l_slcd_inf_scale_tl,
91 UprightFont    = *-Regular,
92 ]
93 \</package>

```

Index

The italic numbers denote the pages where the corresponding entry is described, numbers underlined point to the definition, all others indicate the places where it is used.
