

LATEX Class for the Association for Computing Machinery^{*}

Boris Veytsman[†]

2023/03/30, v1.90

Abstract

This package provides a class for typesetting publications of the Association for Computing Machinery.

1 Introduction

The Association for Computing Machinery¹ is the world’s largest educational and scientific computing society, which delivers resources that advance computing as a science and a profession. It was one of the early adopters of \TeX for its typesetting.

It provided several different classes for a number of journals and conference proceedings. Unfortunately during the years since these classes were written, the code was patched many times, and supporting different versions of the classes became difficult.

This package provides the uniform interface for all ACM publications. It is intended to replace all the different classes and packages and provide an up-to-date \LaTeX package.

This package uses only free \TeX packages and fonts included in $\text{\TeX}Live$, Mik \TeX and other popular \TeX distributions. It is intended to be published in these distributions itself, which minimizes users’ efforts in the installation and support of this package.

I am grateful to Michael D. Adams, Leif Andersen, Lawrence Christopher Angrave, Dirk Beyer, Andrew Black, Joachim Breitner, Yegor Bugayenko, Benjamin Byholm, John Collins, Roberto Di Cosmo, Nils Anders Danielsson, Michael Ekstrand, Matthew Fluet, Paolo G. Giarrusso, Ben Greenman, Enrico Gregorio, Jamie Davis, Ulrike Fischer, Jason Hemann, Peter Kemp, Luis Leiva, Ben Liblit, Rholais Lii, LianTze Lim, Kuldeep S. Meel, Kai Mindermann, Frank Mittelbach, Serguei Mokhov, Ross Moore, John Owens, Joel Nider, Scott Pakin, Tobias Pape, Henning Pohl, Philip Quinn, Mathias Rav, Andreas Reichinger, Matteo Riondato, Craig Rodkin, Bernard Rous, Feras Saad, Kerry A. Seitz, Jr., David Shamma, Gabriel Scherer, Kartik Singhal, Christoph Sommer, Stephen Spencer, Shin Hwei Tan, Daniel Thomas, Shari Trewin, Zack Weinberg, John Wickerson and many others for their invaluable help.

The development version of the package is available at <https://github.com/borisveytsman/acmart>.

2 User’s guide

This class uses many commands and customizaton options, so it might appear intimidating for a casual user. Do not panic! Many of these commands and options can be safely left with their default values or the values recommended by your conference or journal editors. If you have problems or questions, do not hesitate to ask me directly or the community at <https://github.com/borisveytsman/acmart>, <https://tex.stackexchange.com> or the closest \TeX Users Group. The world-wide \TeX Users Group is at <https://tug.org/>; please consider joining us if you use \TeX regularly.

2.1 Installation

Most probably, you already have this package installed in your favorite \TeX distribution; if not, you may want to upgrade. You may need to upgrade it anyway since this package uses a number of relatively recent packages, especially the ones related to fonts.

The latest released version of this package can be found on CTAN: <https://www.ctan.org/pkg/acmart>. The development version can be found on GitHub: <https://github.com/borisveytsman/acmart>. At this address you can file a bug report—or even contribute your own enhancement by making a pull request.

¹<http://www.acm.org/>

Please note that the version on Github is a development (or experimental) version: please download it for testing new features. The production version is the one on CTAN and ACM sites.

Most users should not attempt to install this package themselves but should rather rely on their \TeX distributions to provide it. If you decide to install the package yourself, follow the standard rules:

1. Run `latex acmart.ins`. This will produce the file `acmart.cls`
2. Put the files `acmart.cls`, `acm-jdslogo.png`, and `ACM-Reference-Format.bst` in places where \LaTeX can find them (see [1] or the documentation for your \TeX system).
3. Update the database of file names. Again, see [1] or the documentation for your \TeX system for the system-specific details.
4. The file `acmart.pdf` provides the documentation for the package. (This is probably the file you are reading now.)

As an alternative to items 2 and 3 you can just put the files in the working directory where your `.tex` file is.

This class uses a number of other packages. They are included in all major \TeX distributions ($\text{\TeX} \text{Live}$, Mac \TeX , Mik \TeX) of 2015 and later, so you probably have them installed. Just in case here is the list of these packages:

- *amscls*, <http://www.ctan.org/pkg/amscls>
- *amsfonts*, <http://www.ctan.org/pkg/amsfonts>
- *amsmath*, <http://www.ctan.org/pkg/amsmath>
- *binhex*, <http://www.ctan.org/pkg/binhex>
- *balance*, <http://www.ctan.org/pkg/balance>
- *booktabs*, <http://www.ctan.org/pkg/booktabs>
- *caption*, <http://www.ctan.org/pkg/caption>
- *comment*, <http://www.ctan.org/pkg/comment>
- *cm-super*, <http://www.ctan.org/pkg/cm-super>
- *cmap*, <http://www.ctan.org/pkg/cmap>
- *doclicense*, <http://www.ctan.org/pkg/doclicense>
- *draftwatermark*, <http://www.ctan.org/pkg/draftwatermark>
- *environ*, <http://www.ctan.org/pkg/environ>
- *etoolbox*, <http://www.ctan.org/pkg/etoolbox>
- *fancyhdr*, <http://www.ctan.org/pkg/fancyhdr>
- *float*, <http://www.ctan.org/pkg/float>
- *fontaxes*, <http://www.ctan.org/pkg/fontaxes>

- *geometry*, <http://www.ctan.org/pkg/geometry>
- *graphics*, <http://www.ctan.org/pkg/graphics>
- *hyperref*, <http://www.ctan.org/pkg/hyperref>
- *hyperxmp*, <http://www.ctan.org/pkg/hyperxmp>
- *iftex*, <http://www.ctan.org/pkg/iftex>
- *inconsolata*, <http://www.ctan.org/pkg/inconsolata>
- *libertine*, <http://www.ctan.org/pkg/libertine>
- *manyfoot*, <http://www.ctan.org/pkg/manyfoot>
- *microtype*, <http://www.ctan.org/pkg/microtype>
- *mmap*, <http://www.ctan.org/pkg/mmap>
- *ms*, <http://www.ctan.org/pkg/ms>
- *mweights*, <http://www.ctan.org/pkg/mweights>
- *natbib*, <http://www.ctan.org/pkg/natbib>
- *nccfoots*, <http://www.ctan.org/pkg/nccfoots>
- *newtx*, <http://www.ctan.org/pkg/newtx>
- *oberdiek*, <http://www.ctan.org/pkg/oberdiek>
- *pdftex-def*, <http://www.ctan.org/pkg/pdftex-def>
- *refcount*, <http://www.ctan.org/pkg/refcount>
- *setspace*, <http://www.ctan.org/pkg/setspace>
- *textcase*, <http://www.ctan.org/pkg/textcase>
- *totpages*, <http://www.ctan.org/pkg/totpages>
- *trimspaces*, <http://www.ctan.org/pkg/trimspaces>
- *upquote*, <http://www.ctan.org/pkg/upquote>
- *url*, <http://www.ctan.org/pkg/url>
- *xcolor*, <http://www.ctan.org/pkg/xcolor>
- *xkeyval*, <http://www.ctan.org/pkg/xkeyval>
- *xstring*, <http://www.ctan.org/pkg/xstring>

2.2 Invocation and options

To use this class, put in the preamble of your document

```
\documentclass[<options>]{acmart}
```

There are several options corresponding to the type of the document and its general appearance. They are described below. Generally speaking, the options have key=value forms, for example,

```
\documentclass[format=acmsmall, screen=true, review=false]{acmart}
```

The option `format` describes the format of the output. There are several possible values for this option, for example,

```
\documentclass[format=acmtog]{acmart}
```

Actually the words `format=` can be omitted, e.g.,

```
\documentclass[acmtog, review=false]{acmart}
```

The possible formats are listed in Table 1. Note that formats starting with `acm` are intended for journals, transactions, and course materials, while formats starting with `sig` are intended for proceedings published as books.

Note that sometimes conference proceedings are published as a special issue (or issues) of an ACM journal. In this case, you should use the journal format for a conference paper. Please contact your conference committee if in doubt.

Starting in 2020, ACM retired formats `sigchi` and `sigchi-a`. SIGCHI conferences now use `sigconf` format for their publications. If a file uses `sigchi` format, a warning is issued, and the format is automatically switched to `sigconf`. Format `sigchi-a` can be used for non-ACM documents only (see Section 2.22). The format `acmcnp` is used for ACM cover pages discussed in Section 2.5.

There are several Boolean options that can take `true` or `false` values. They are listed in Table 2. The words `=true` can be omitted when setting a Boolean option, so instead of `screen=true` one can write just `screen`, for example,

```
\documentclass[acmsmall, screen, review]{acmart}
```

The option `review` is useful when combined with the `manuscript` format option. It provides a version suitable for reviewers and copy editors.

Two samples in the `samples` directory, `manuscript` and `acmsmall-submission`, show manuscripts formatted for submission to ACM.

The default for the option `screen` depends on the publication. At present it is `false` for all publications *but* PACM, since PACM is now electronic-only. Thus PACM titles (see Table 5) set this option to `true`. In the future this option may involve additional features suitable for on-screen versions of articles.

The option `natbib` is used when the corresponding Bib^TE_X style is based on `natbib`. In most cases you do not need to set it. See Section 2.14.

The option `anonymous` is used for anonymous review processes and causes all author information to be obscured.

Table 1: The possible values for the `format` option

Value	Meaning
<code>manuscript</code>	A manuscript. This is the default.
<code>acmsmall</code>	Small single-column format. Used for ACMJCSS, CIE, CSUR, DLT, FAC, GAMES, JACM, JATS, JDIQ, JDS, JEA, JERIC, JETC, JRC, PACM-CGIT, PACMHCI, PACMMOD, PACMNET, PACMPL, TAAS, TACCESS, TACO, TALG, TALLIP (formerly TALIP), TCPS, TDS, TEAC, TECS, TELO, THRI, TIIS, TIOT, TISSEC, TIST, TKDD, TMIS, TOCE, TOCHI, TOCL, TOCS, TOCT, TODAES, TODS, TOIS, TOIT, TOMACS, TOMM (formerly TOMCCAP), TOMPECS, TOMS, TOPC, TOPLAS, TOPML, TOPS, TORS TOS, TOSEM, TOSN, TQC, TRETS, TSAS, TSC, TSLP and TWEB, including special issues.
<code>acmlarge</code>	Large single-column format. Used for DTRAP, HEALTH, IMWUT, JOCH, POMACS and TAP, including special issues.
<code>acmtog</code>	Large double-column format. Used for TOG, including annual conference Technical Papers.
<code>sigconf</code>	Proceedings format for most ACM conferences (with the exception of SIGPLAN) and all ICPS volumes.
<code>sigplan</code>	Proceedings format for SIGPLAN conferences.
<code>acmengage</code>	ACM EngageCSEdu Course materials.
<code>acmcpc</code>	ACM cover page.

The option `timestamp` is used to include a time stamp in the footer of each page. When preparing a document, this can help avoid confusing different revisions. The footer also includes the page range of the document. This helps detect missing pages in hard copies.

The option `authordraft` is intended for author’s drafts that are not intended for distribution. It typesets a copyright block to give the author an idea of its size and the overall size of the paper but overprints it with the phrase “Unpublished working draft. Not for distribution.”, which is also used as a watermark. This option sets `timestamp` and `review` to `true`, but these can be overridden by setting these options to `false` *after* setting `authordraft` to `true`.

The option `balance` determines whether the last page in the two column mode has balanced columns. By default it is `true`; however, it may lead to problems for some documents. Set it to `false` if you encounter compilation errors. Note that for one page documents `\balance` command might cause problems. An alternative is the (experimental) option `pbalance`, which uses the new package `pbalance` for this end.

The option `urlbreakonhyphens` determines whether URLs can be split between lines after hyphens. By default it is `true`. Set it to `false` to disallow these breaks.

The option `language` is used to define the languages for the multi-language papers. It is discussed in Section 2.6.

2.3 Top matter

A number of commands set up *top matter* or (in computer science jargon) *metadata* for an article. They establish the publication name, article title, authors, DOI and other data. Some of these commands, like `\title` and `\author`, should be put by the authors.

Table 2: Boolean options

Option	Default	Meaning
review	false	A review version: lines are numbered and hyperlinks are colored
screen	see text	A screen version: hyperlinks are colored
natbib	true	Whether to use the <code>natbib</code> package (see Section 2.14)
anonymous	false	Whether to make author(s) anonymous
authorversion	false	Whether to generate a special version for the authors' personal use or posting (see Section 2.3)
nonacm	false	Use the class typesetting options for a non-ACM document, which will not include the conference/journal header and footers. Currently such documents allow only a Creative Commons license.
timestamp	false	Whether to put a time stamp in the footer of each page
authordraft	false	Whether author's-draft mode is enabled
acmthm	true	Whether to define theorem-like environments, see Section 2.10
balance	true	Whether to balance the last page in two column mode
pbalance	false	Whether to balance the last page in two column mode using pbalance package
urlbreakonhyphens	true	Whether to break urls on hyphens

Others, like \acmVolume and \acmDOI—by the editors. Below we describe these commands and mention who should issue them. These macros should be used *before* the \maketitle command. Note that in previous versions of ACM classes some of these commands should be used before \maketitle, and some after it. Now they all must be used before \maketitle.

This class internally loads the amsart class, so many top-matter commands are inherited from amsart [2].

\acmJournal The macro \acmJournal{<shortName>} sets the name of the journal or transaction for journals and transactions. The argument is the short name of the publication *in uppercase*, for example,

```
\acmJournal{TOMS}
```

The currently recognized journals are listed in Table 5. Note that conference proceedings published in *book* form do not set this macro.

\acmConference The macro \acmConference[<short name>]{<name>}{<date>}{<venue>} is used for conference proceedings published in the book form. The arguments are the following:

short name: the abbreviated name of the conference (optional).

name: the name of the conference.

date: the date(s) of the conference.

venue: the place of the conference.

Examples:

```
\acmConference[TD'15]{Technical Data Conference}{November  
12--16}{Dallas, TX, USA}  
\acmConference{SA'15 Art Papers}{November 02--06, 2015}{Kobe, Japan}
```

\acmBooktitle By default we assume that conference proceedings are published in the book named *Proceedings of CONFERENCE*, where CONFERENCE is the name of the conference inferred from the command \acmConference above. However, sometimes the book title is different. The command \acmBooktitle can be used to set this title, for example,

```
\acmBooktitle{Companion to the first International Conference on the  
Art, Science and Engineering of Programming (Programming '17)}
```

An ACM paper should have either \acmJournal or \acmConference command. If it has both (or more) commands, the last one takes precedence. Note that if you have the command \acmConference in a journal format like acmsmall, the class will use conference format for bibstrip and reference citation formatting. In the samples directory there is a file sample-acmsmall-conf.tex with the example of this usage.

An ACM Engage material should *not* use \acmJournal or \acmConference command. It may use \acmBooktitle to override the default *ACM EngageCSEdu*. It should use \acmYear to set the date of the material.

\editor In most cases, conference proceedings are edited. You can use the command \editor{<editor>} to set the editor of the volume. This command can be repeated, for example,

```
\editor{Jennifer B. Sartor}
\editor{Theo D'Hondt}
\editor{Wolfgang De Meuter}
```

\title The command **\title**, as in the `amsart` class, has two arguments: one optional, and one mandatory:

```
\title[<ShortTitle>]{<FullTitle>}
```

The mandatory argument is the full title of the article. The optional argument, if present, defines the shorter version of the title for running heads. If the optional argument is absent, the full title is used instead.

It is expected that this command is inserted by the author of the manuscript.

\subtitle Besides title, ACM classes allow a subtitle, set with the `\subtitle{<subtitle>}` macro.

The commands for specifying authors are highly structured. The reason is they serve double duty: the authors' information is typeset in the manuscript *and* is used by the metadata extraction tools for indexing and cataloguing. Therefore it is very important to follow the guidelines exactly.

\author The basic commands are `\author`, `\orcid` (for the researchers registered with ORCID, <http://www.orcid.org/>), `\affiliation` and `\email`. In the simplest case, you `\affiliation` enter them in this order:

```
\email
  \author{...}
  \orcid{...}
  \affiliation{...}
  \email{...}
```

Do *not* use the `\and` macro or commas, or `\backslash` between the authors! Each author deserves his or her own `\author` command. An attempt to list several authors or their e-mails in one command leads to a warning or an error. This is not a bug, but the expected behavior.

Note that some formats do not typeset e-mails or ORCID identifiers. Do not worry: the metadata tools will get them.

ACM strongly encourages that you include ORCIDs for all authors before compiling or submitting for review and/or production processing.

If you do not have an ORCID, you may get one for free by registering at <http://www.orcid.org/>.

Sometimes an author has several affiliations. In this case, the `\affiliation` command should be repeated:

```
\author{...}
\orcid{...}
\affiliation{...}
\affiliation{...}
\email{...}
```

Similarly you can repeat the `\email` command.

You may have several authors with the same affiliation, different affiliations, or overlapping affiliations (author A_1 is affiliated with institutions I_1 and I_2 , while author A_2 is affiliated with I_2 only, author A_3 is affiliated with I_1 and I_3 , etc.). The recommended

solution is to put the \affiliation commands after each author, possibly repeating them:

```
\author{...}
\orcid{...}
\affiliation{...}
\affiliation{...}
\email{...}
\author{...}
\orcid{...}
\affiliation{...}
\email{...}
\author{...}
\orcid{...}
\affiliation{...}
\affiliation{...}
\email{...}
```

In some cases, when several authors share the same affiliation, you can try to save space using the format

```
\author{...}
\email{...}
\author{...}
\email{...}
\affiliation{...}
```

However, this format is not generally recommended.

\additionalaffiliation In some cases, too many affiliations can take too much space. The command \additionalaffiliation{<affiliation>} creates a footnote after an author's name with the words "Also with {<affiliation>}". You should use this command only as a last resort. An example of usage is:

```
\author{G. Tobin}
\author{Ben Trovato}
\additionalaffiliation{%
  \institution{The Th{\o}rv{\aa}ld Group}
  \streetaddress{1 Th{\o}rv{\aa}ld Circle}
  \city{Hekla}
  \country{Iceland}}
\affiliation{%
  \institution{Institute for Clarity in Documentation}
  \streetaddress{P.O. Box 1212}
  \city{Dublin}
  \state{Ohio}
  \postcode{43017-6221}}
```

Here Trovato and Tobin share their affiliation with the Institute for Clarity in Documentation, but only Ben Trovato is affiliated with The Th{\o}rv{\aa}ld Group.

\position The \affiliation and \additionalaffiliation commands are further structured \institution to interact with the metadata extraction tools. Inside these commands you should use the \department, \position, \institution, \department, \city, \streetaddress, \state, \postcode, \streetaddress, \city, \state, \postcode, \country

and \country macros to indicate the corresponding parts of the affiliation. Note that in some cases (for example, journals) these parts are not printed in the resulting copy, but they *are* necessary since they are used by the XML metadata extraction programs. Do *not* put commas or \\ between the elements of \affiliation. They will be provided automatically.

The fields \institution, \city and \country are mandatory. If they are not provided, an error or a warning is issued. Currently the absence of \country produces an error; ACM may change this in the future.

An example of the author block:

```
\author{A. U. Thor}
\orcid{1234-4564-1234-4565}
\affiliation{%
  \institution{University of New South Wales}
  \department{School of Biomedical Engineering}
  \streetaddress{Samuels Building (F25), Kensington Campus}
  \city{Sidney}
  \state{NSW}
  \postcode{2052}
  \country{Australia}}
\email{author@nsw.au.edu}
\author{A. N. Other}
\affiliation{%
  \institution{University of New South Wales}
  \city{Sidney}
  \state{NSW}
  \country{Australia}}
\author{C. O. Respondent}
\orcid{1234-4565-4564-1234}
\affiliation{%
  \institution{University of Pennsylvania}
  \city{Philadelphia}
  \state{PA}
  \country{USA}}
\affiliation{%
  \institution{University of New South Wales}
  \city{Sidney}
  \state{NSW}
  \country{Australia}}
```

Note that the old ACM conference formats did not allow more than six authors and required some effort from authors to achieve alignment. The new format is much better in this.

Sometimes an author works in several departments within the same institution. There could be two situations: the departments are independent, or one department is within another. In the first case, just repeat the command \department several times. To handle the second case the command has an optional numerical parameter. The departments with higher numbers are higher in the organizational chart. Compare

```
\affiliation{%
  \department[0]{Department of Lunar Studies} % 0 is the default
  \department[1]{John Doe Institute} % higher than 0
  \institution{University of San Serriffe}}
```

```
\country{San Serriffe}
```

and

```
\affiliation{%
  \department{Department of Lunar Studies} % Not in the John Doe Institute!
  \department{John Doe Institute}
  \institution{University of San Serriffe}
  \country{San Serriffe}}
```

The command `\affiliation` formats its output according to American conventions. This might be wrong for some cases. Consider, for example, a German address. In Germany, the postcode is put before the city and is not separated by a comma. We can handle this order using

```
\affiliation{%
  \institution{Fluginstitut}
  \streetaddress{Sonnenallee 17}
  \postcode{123456}
  \city{Helm}
  \country{Germany}}
```

However, the comma after the postcode is unfortunate: the address will be typeset (in some formats) as

```
Fluginstitut
Sonnenallee 17
123456, Helm, Germany
```

To overcome this problem, the command `\affiliation` has an optional parameter `obeypunctuation`, which can be `false` (the default) or `true`. If this parameter is `true`, `\affiliation` obeys the author's command. Thus

```
\affiliation[obeypunctuation=true]{%
  \institution{Fluginstitut} \\
  \streetaddress{Sonnenallee 17} \\
  \postcode{123456}
  \city{Helm}, \\
  \country{Germany}}
```

will be typeset as

```
Fluginstitut
Sonnenallee 17
123456 Helm, Germany
```

Note that you should *not* use this option for journals.

It is expected that these commands are inserted by the author of the manuscript.

`\thanks` Like `amsart` (and unlike standard L^AT_EX), we allow `\thanks` only *outside* of the commands `\title` and `\author`. This command is obsolete and should *not* be used in most

cases. Do not list your acknowledgments or grant sponsors here. Put this information in the `acks` environment (see Section 2.13).

`\authorsaddresses` In some formats, addresses are printed as a footnote on the first page. By default L^AT_EX typesets them itself using the information you give it. However, you can override its choice using the command `\authorsaddresses{<contact addresses>}`, for example,

```
\authorsaddresses{%
  Authors' addresses: G.~Zhou, Computer Science Department, College of
  William and Mary, 104 Jameson Rd, Williamsburg, PA 23185, US;
  V.~B'eranger, Inria Paris-Rocquencourt, Rocquencourt, France;
  A.~Patel, Rajiv Gandhi University, Rono-Hills, Doimukh, Arunachal
  Pradesh, India; H.~Chan, Tsinghua University, 30 Shuangqing Rd,
  Haidian Qu, Beijing Shi, China; T.~Yan, Eaton Innovation Center,
  Prague, Czech Republic; T.~He, C.~Huang, J.~A.~Stankovic University
  of Virginia, School of Engineering Charlottesville, VA 22903, USA;
  T. F. Abdelzaher, (Current address) NASA Ames Research Center,
  Moffett Field, California 94035.}
```

You can *suppress* printing authors' addresses by setting them to an empty string: `\authorsaddresses{}`. Please note that authors' addresses are mandatory for journal articles.

`\titlenote` While the command `\thanks` generates a note without a footnote mark, sometimes
`\subtitlenote` the authors might need notes more tightly connected to the title, subtitle or author. The
`\authornote` commands `\titlenote`, `\subtitlenote` and `\authornote` that follow the corresponding commands (`\title`, `\subtitle` and `\author`) generate such notes. For example,

```
\title{This is a title}
\titlenote{This is a titlenote}
\author{A. U. Thor}
\authornote{This is an authornote}
```

Please never use a `\footnote` inside an `\author` or `\title` command since this confuses the metadata extraction software. (Actually these commands now produce errors.)

`\authornotemark` Sometimes one may need to have the same footnote connected to several authors. The command `\authornotemark[<number>]` adds just the footnote mark, for example,

```
\author{A. U. Thor}
\authornote{Both authors contributed equally to the paper}
...
\author{A. N. Other}
\authornotemark[1]
```

The correct numbering of these marks is the responsibility of the user.

`\acmVolume` The macros `\acmVolume`, `\acmNumber`, `\acmArticle`, `\acmYear` and `\acmMonth` are
`\acmNumber` inserted by the editor and set the journal volume, issue, article number, year and month
`\acmArticle` correspondingly. The arguments of all these commands, including `\acmMonth`, is numerical. For example,

```
\acmMonth
\acmVolume{9}
\acmNumber{4}
\acmArticle{39}
\acmYear{2010}
```

```
\acmMonth{3}
```

Note that `\acmArticle` is used not only for journals but also for some conference proceedings.

`\acmArticleSeq` The articles in the same issue of a journal have a *sequence number*. It is used to vertically position the black blob on the first page of some formats. By default it is the same as the article number, but the command `\acmArticleSeq{n}` can be used to change it:

```
\acmArticle{39} % The sequence number will be 39 by default  
\acmArticleSeq{5} % We redefine it to 5
```

Setting this number to zero suppresses the blob.

`\acmSubmissionID` If your paper got a Submission ID from the Conference Management System, put it here:

```
\acmSubmissionID{123-A56-BU3}
```

`\acmPrice` The macro `\acmPrice{price}` sets the price for the article, for example,

```
\acmPrice{25.00}
```

Note that you do not need to put the dollar sign here, just the amount. By default the price is \$15.00, unless the copyright is set to usgov, rightsretained, iW3c2w3, or iW3c2w3g, when it is suppressed. Note that to override the defaults you need to set the price *after* the `\setcopyright` command. Also, the command `\acmPrice{}` suppresses the printing of the price.

`\acmISBN` Book-like volumes have ISBN numbers attached to them. The macro `\acmISBN{ISBN}` sets it. Normally it is set by the typesetter, for example,

```
\acmISBN{978-1-4503-3916-2}
```

Setting it to the empty string, as `\acmISBN{}`, suppresses printing the ISBN.

`\acmDOI` The macro `\acmDOI{DOI}` sets the DOI of the article, for example,

```
\acmDOI{10.1145/9999997.9999999}
```

It is normally set by the typesetter. Setting it to the empty string, as `\acmDOI{}`, suppresses the DOI.

`\acmBadge` Some conference articles get special distinctions, for example, the artifact evaluation for PPoPP 2016 (see <http://ctuning.org/ae/ppopp2016.html>). These articles display special badges supplied by the conference organizers. This class provides command to add these badges: `\acmBadge[url]{graphics}`. The arguments have the following meaning: [*url*], if provided, sets the link to the badge authority in the screen version, while {*graphics*} sets the graphics file with the badge image. The file must be a cropped square, which is scaled to a standard size in the output. For example, if the badge image is ae-logo.pdf, the command is

```
\acmBadgeR[http://ctuning.org/ae/ppopp2016.html]{ae-logo}
```

The command can be repeated, if a paper has several badges.

\startPage The macro \startPage{\langle page\rangle} sets the first page of the article in a journal or book.
 It is used by the typesetter.

\terms The command \keywords{\langle keyword, keyword,...\rangle} sets keywords for the article.

\keywords They must be separated by commas, for example,

```
\keywords{wireless sensor networks, media access control,  

multi-channel, radio interference, time synchronization}
```

CCSXML (*env*) ACM publications are classified according to the ACM Computing Classification Scheme (CCS). CCS codes are used both in the typeset version of the publications *and in* the metadata in various databases. Therefore you need to provide both TeX commands and XML metadata with the paper.

The tool at <http://dl.acm.org/ccs.cfm> can be used to generate CCS codes. After you select the topics, click on “Generate CCS codes” to get results like the following:

```
\begin{CCSXML}
<ccs2012>
<concept>
<concept_id>10010520.10010553.10010562</concept_id>
<concept_desc>Computer systems organization~Embedded systems</concept_desc>
<concept_significance>500</concept_significance>
</concept>
<concept>
<concept_id>10010520.10010575.10010755</concept_id>
<concept_desc>Computer systems organization~Redundancy</concept_desc>
<concept_significance>300</concept_significance>
</concept>
<concept>
<concept_id>10010520.10010553.10010554</concept_id>
<concept_desc>Computer systems organization~Robotics</concept_desc>
<concept_significance>100</concept_significance>
</concept>
<concept>
<concept_id>10003033.10003083.10003095</concept_id>
<concept_desc>Networks~Network reliability</concept_desc>
<concept_significance>100</concept_significance>
</concept>
</ccs2012>
\end{CCSXML}

\ccsdesc[500]{Computer systems organization~Embedded systems}
\ccsdesc[300]{Computer systems organization~Redundancy}
\ccsdesc{Computer systems organization~Robotics}
\ccsdesc[100]{Networks~Network reliability}
```

You just need to copy this code and paste it in your paper anywhere before \maketitle.

CCS Concepts and user-defined keywords are required for all articles over two pages in length, and are optional for one- and two-page articles (or abstracts).

\setcopyright There are several possibilities for the copyright of the papers published by the ACM: the authors may transfer the rights to the ACM, license them to the ACM, some or all

Table 3: Parameters for the `\setcopyright` command

Parameter	Meaning
<code>none</code>	The copyright and permission information is not typeset. (This is the option for some ACM conferences.)
<code>acmcopyright</code>	The authors transfer the copyright to the ACM (the “traditional” choice).
<code>acmlicensed</code>	The authors retain the copyright but license the publication rights to ACM.
<code>rightsretained</code>	The authors retain the copyright and publication rights to themselves or somebody else.
<code>usgov</code>	All the authors are employees of the US government.
<code>usgovmixed</code>	Some authors are employees of the US government.
<code>cagov</code>	All the authors are employees of the Canadian government.
<code>cagovmixed</code>	Some authors are employees of the Canadian government.
<code>licensedusgovmixed</code>	Some authors are employees of the US government, and the publication rights are licensed to ACM.
<code>licensedcagov</code>	All the authors are employees of the Canadian government, and the publication rights are licensed to ACM.
<code>licensedcagovmixed</code>	Some authors are employees of the Canadian government, and the publication rights are licensed to ACM.
<code>othergov</code>	Authors are employees of a government other than the US or Canada.
<code>licensedothergov</code>	Authors are employees of a government other than the US or Canada, and the publication rights are licensed to ACM.
<code>iw3c2w3</code>	Special statement for conferences organized by IW3C2.
<code>iw3c2w3g</code>	Special statement for conferences organized by IW3C2, when some authors are approved Google employees.
<code>cc</code>	Creative Commons license. If this key is set, <code>doclicense</code> images are used to typeset the license. See also <code>\setcctype</code> command. Note that at present this license can be used only for <code>acmengage</code> format or for <code>nonacm</code> publications.

authors might be employees of the US or Canadian governments, etc. Accordingly the command `\setcopyright{...}` is introduced. Its argument is the copyright status of the paper, for example, `\setcopyright{acmcopyright}`. The possible values for this command are listed in Table 3. This command must be placed in the preamble, before `\begin{document}`. Additional information about ACM copyright rules is discussed in Section 2.18.

`\setcctype` If Creative Commons license is used, the package by default chooses CC-BY 4.0 Attribution 4.0 International license. You can override this choice by the command `\setcctype[<version>]{<type>}`, where [<version>] can be either 3.0 or 4.0 (4.0 by default), and {<type>} can be one of zero, by, by-sa, by-nd, by-nc, by-nc-sa, by-nc-nd (see <https://creativecommons.org/licenses/> for the explanation). This command should be used in the preamble only.

Material published under Creative Commons license should include the corresponding icon. A modern TeX distribution includes these icons in the package `doclicense`. In case your distribution does not have them, ACM provides a file `ccicons.zip` with these

icons. Just unzip it in the same directory where your document is.

The ACM submission software should generate the right command for you to paste into your file.

\copyrightyear Each copyright statement must have the year of copyright. By default it is the same as \acmYear, but you can override this using the macro \copyrightyear, e.g.,

```
\acmYear{2016}  
\copyrightyear{2015}
```

There is a special case for a personal copy that the authors may be allowed to generate for their use or a posting on a personal site (check the instructions for the specific journal or conference for the details). The document option authorversion=true produces a special form of the copyright statement for this case. Note that you still need the \setcopyright command and (optionally) \copyrightyear command to tell TeX about the copyright owner and year. Also, you should be aware that due to the different sizes of the permission blocks for the printed version and authors' version, the page breaks might be different between them.

abstract (*env*) The environment abstract must *precede* the \maketitle command. Again, this is different from the standard L^AT_EX. Putting abstract after \maketitle will trigger an error.

teaserfigure (*env*) A special kind of figure is used for many two-column conference proceedings. This figure is placed just after the authors but before the main text. The environment teaserfigure is used for these figures. This environment must be used *before* \maketitle, for example,

```
\begin{teaserfigure}  
  \includegraphics[width=\textwidth]{sampleteaser}  
  \caption{This is a teaser}  
  \label{fig:teaser}  
\end{teaserfigure}
```

\settopmatter Some information in the top matter is printed for certain journals or proceedings and suppressed for others. You can override these defaults using the command \settopmatter{\{*settings*\}}. The settings and their meanings are listed in Table 4. For example,

```
\settopmatter{printacmref=false, printccs=true, printfolios=true}
```

The parameter authorsperrow requires some explanation. In conference proceedings authors' information is typeset in boxes, several boxes per row (see sample-sigconf.pdf, sample-sigplan.pdf, etc.). The number of boxes per row is determined automatically. If you want to override this, you can do it using this parameter, for example,

```
\settopmatter{authorsperrow=4}
```

However, in most cases you should *not* do this and should use the default settings. Setting authorsperrow to 0 will revert it to the default settings.

The parameter printacmref specifies whether to print the ACM bibliographic entry (default), or not. Note that this entry is required for all articles over one page in length, and is optional for one-page articles (abstracts).

Table 4: Settings for the \settopmatter command

Parameter	Values	Meaning
printccs	true/false	Whether to print CCS categories
printacmref	true/false	Whether to print the ACM bibliographic entry
printfolios	true/false	Whether to print page numbers (folios)
authorsperrow	numeric	Number of authors per row for the title page in conference proceedings formats

\received The command \received[<stage>]{<date>} sets the history of the publication. The [<stage>] argument is optional; the default is Received for the first date and revised for the subsequent ones. For example,

```
\received{20 February 2007}
\received[revised]{12 March 2009}
\received[accepted]{5 June 2009}
```

\maketitle The macro \maketitle must be the last command in the top-matter group. That is it must follow the commands defined in this section.

\shortauthors After the command \maketitle, the macro \shortauthors stores the names of the authors for the running head. You can redefine it if the list of author's name is too long, e.g.,

```
\maketitle
\renewcommand{\shortauthors}{Zhou et al.}
```

2.4 Top matter of ACM Engage materials

ACM Engage materials resemble conference proceedings, but have some special features. First, as a rule, they are released under a Creative Commons license. By default CC-BY is used. However, if you want to use another variant of CC license, use \setcctype command, for example, \setcctype{by-nc}. Second, abstract is called *synopsis*. Third, there are special top matter items used for the materials, such as *Course*, *Resource Type*, *Programming Language*, *CS Topics*.

\setengagemetadata These items are set with the command \setengagemetadata{<name>}{<value>}, for example,

```
\setengagemetadata{Course}{CS1}
\setengagemetadata{Programming Language}{Python}
\setengagemetadata{Knowledge Unit}{Programming Concepts}
\setengagemetadata{CS Topics}{Functions, Data Types, Expressions,
Mathematical Reasoning}
```

Note that the type of Creative Commons license, if such license is used, is automatically added to the metadata.

2.5 ACM cover page

ACM cover pages are forms of extended abstracts that are added to journals at the late stage. Authors prepare them as separate .tex files using acmcp format. At present only JDS uses them, but in the future this may change.

There are several top matter commands specific for this format.

\acmArticleType There are five article types accepted by JDS: *Research* (the default), *Review*, *Discussion*, *Invited*, and *Position*. The command \acmArticleType{\textit{type}} sets the article type, for example

```
\acmArticleType{Review}
```

\acmCodeLink The commands \acmCodeDataLink{\textit{link}} and \acmDataLink{\textit{link}} set the links
\acmDataLink to the data and code accompanying the paper, for example,

```
\acmCodeLink{https://github.com/repository/code}  
\acmDataLink{https://datadryad.org/stash/dataset/doi:DOI}
```

You may repeat these commands if you have several repositories.

ACM cover page should have the following obligatory sections:

- Problem statement,
- Methods,
- Results,
- Significance.

Sometimes the addresses extracted from the authors' data are too long to fit on the page. In this case the command \authorsaddresses can be used to override them, for example,

```
\authorsaddresses{Corresponding author: Ben Trovato,  
\href{mailto:trovato@corporation.com}{trovato@corporation.com};  
Institute for Clarity in Documentation, P.O. Box 1212, Dublin,  
Ohio, USA, 43017-6221}
```

The design of the cover page may require additional runs of latex to make the elements of the page align.

2.6 Internationalization

ACM accepts publications in languages other than English, as well as papers in English with translations of titles, subtitles, keywords and abstracts into other languages. Papers in languages other than English usually have titles, subtitles (if applicable), keywords and abstracts in English. Note that CCS concepts are always typeset in English.

To submit these papers you need to set the option language in the \documentclass command. This option can be repeated, for example,

```
\documentclass[sigconf, language=french, language=english]{acmart}
```

The last language in the list is the main language of the paper, i.e. the one for the main title, abstract, body, etc. The other languages are *secondary*, and used for translated titles, keywords, abstracts. Thus the paper above is written in English, and has a secondary abstract and a secondary title in French. On the other hand, a paper in French with secondary titles and abstracts in English and German should use, for example

```
\documentclass[sigconf,
               language=german,
               language=english,
               language=french]{acmart}
```

This key can use any language defined in *babel* package [3] (currently the package is tested with English, French, German and Spanish languages; other languages may require a translation of \keywordsname macro). Actually *acmart* loads *babel* internally, so you can use the facilities provided by this package.

If this key is set, you have access to several additional top matter commands.

`\translatedtitle` The commands \translatedtitle{<language>}title, \translatedsubtitle{<language>}subtitle \translatedsubtitle and \translatedkeywordslanguagekeywords are used to set title, subtitle and key-\translatedkeywords words in the secondary language. For example, a paper in English with French title and abstract may set

```
\title{A note on computational complexity}
\translatedtitle{french}{Remarque sur la complexit\'e de calcul}
```

while a paper in French should set

```
\title{Remarque sur la complexit\'e de calcul}
\translatedtitle{english}{A note on computational complexity}
```

`\translatedabstract (env.)` Similarly, `\translatedabstract` environment has a mandatory language argument, for example,

```
\begin{translatedabstract}{english}
  This is the English version of the abstract
\end{translatedabstract}
```

You can repeat these commands if a paper has more than one secondary language.

Use the standard commands (`\title`, `\subtitle`, `\keywords`, `\abstract`) for the main language of the paper.

2.7 Algorithms

There are now several good packages for typesetting algorithms [4, 5, 6], and the authors are free to choose their favorite one.

2.8 Figures and tables

The new ACM styles use the standard L^AT_EX interface for figures and tables. There are some important items to be aware of, however.

1. The captions for figures must be entered *after* the figure bodies and for tables *before* the table bodies.
2. The ACM uses the standard types for figures and tables and adds several new ones. In total there are the following types:

figure, table: a standard figure or table taking a full text width in one-column formats and one column width in two-column formats.

figure*, table* in two-column formats, a special figure or table taking a full text width.

teaserfigure: a special figure before `\maketitle`.

3. Accordingly, when scaling images, one should use the following sizes:

(a) For `teaserfigure`, `figure` in one-column mode or `figure*` in two-column mode, use `\textwidth`. In one-column mode, you can also use `\columnwidth`, which coincides with `\textwidth` in this case.

(b) For `figure` in two-column mode, use `\columnwidth`.

It is strongly recommended to use the package `booktabs` [7] and follow its main principles of typography with respect to tables:

1. Never, ever use vertical rules.
2. Never use double rules.

It is also a good idea not to overuse horizontal rules.

For table *footnotes* you have several options described in the TeX FAQ [1]. The simplest one is to use a `\minipage` environment:

```
\begin{table}
\caption{Simulation Configuration}
\label{tab:conf}
\begin{minipage}{\columnwidth}
\begin{center}
\begin{tabular}{ll}
\toprule
TERRAIN\footnote{This is a table footnote. This is a table footnote. This is a table footnote.} & \\
(200\,m$\times$200\,m) Square\\
Node Number & 289\\
Node Placement & Uniform\\
Application & Many-to-Many/Gossip CBR Streams\\
Payload Size & 32 bytes\\
Routing Layer & GF\\
MAC Layer & CSMA/MMSN\\
Radio Layer & RADIO-ACCNOISE\\
Radio Bandwidth & 250Kbps\\
Radio Range & 20m--45m\\
\bottomrule
\end{tabular}
\end{center}
\bigskip
\footnotesize\emph{Source:} This is a table
\end{minipage}

```

```
sourcenote. This is a table sourcenote. This is a table  
sourcenote.
```

```
\emph{Note:} This is a table footnote.  
\end{minipage}  
\end{table}
```

Tables and figures are by default centered. However, in some cases (for example, when you use several subimages per figure) you may need to override this. A good way to do so is to put the contents into a `\minipage` of the width `\columnwidth`.

2.9 Descriptions of images

`\Description` Some readers of ACM publications might be visually challenged. These readers might use a voice-over software to read aloud the papers. It is important to provide them a description of each image used in the paper.

The command `\Description[<short description>]{<long description>}` should be placed inside every `figure`, `teaserfigure` or `marginfigure` environment to provide a description of the image(s) used in the figure. Unlike `\caption`, which is used alongside the image, `\Description` is intended to be used instead of the image, for example,

```
\begin{figure}  
  \centering  
  \includegraphics{voltage}  
  \Description{A bell-like histogram centered at $0.5$~V with most  
  measurements between $0.2$~V and $0.8$~V}  
  \caption{Histogram of the measurements of voltage}  
  \label{fig:voltage}  
\end{figure}
```

At present the lack of descriptions generates a warning at compilation.

2.10 Theorems

The ACM classes define two theorem styles and several pre-defined theorem environments:

acmplain: this is the style used for theorem, conjecture, proposition, lemma and corollary, and

acmdefinition: this is the style used for example and definition.

These environments are defined by default. In the unusual circumstance that a user does not wish to have these environments defined, the option `acmthm=false` in the preamble will suppress them.

Sometimes authors want to define new theorem-like constructs that use theorem counters. These constructs must be defined either after `\begin{document}`, or delayed using `\AtEndPreamble` macro, for example,

```
\AtEndPreamble{  
  \theoremstyle{acmdefinition}  
  \newtheorem{remark}[theorem]{Remark}}
```

2.11 Online-only and offline-only material

- `printonly (env)` Some supplementary material in ACM publications is put online but not in the printed screenonly (env) version. The text inside the environment screenonly will be typeset only when the option screen (see Section 2.2) is set to true. Conversely, the text inside the environment printonly is typeset only when this option is set to false. For example,

```
\section{Supplementary materials}

\begin{printonly}
    Supplementary materials are available in the online version of this paper.
\end{printonly}

\begin{screenonly}
    (The actual supplementary materials.)
\end{screenonly}
```

We use the comment package for typesetting this code, so `\begin{` and `\end` should start on a line of their own with no leading or trailing spaces.

2.12 Note about anonymous mode

- `anonsuppress (env)` When the option anonymous is selected, TeX suppresses author information (including the number of authors) for a blind review. However, sometimes the information identifying the authors may be present in the body of the paper. For example,

```
\begin{anonsuppress}
    This is the continuation of the previous work by the author
    \cite{prev1, prev2}.
\end{anonsuppress}
```

As for the `printonly` and `screenonly` environments, `\begin{anonsuppress}` and `\end{anonsuppress}` should start on a line of their own with no leading or trailing spaces.

- `\anon` To suppress short snippets of information, use the command `\anon[<substitute>]{<suppressed-text>}`. By default [<substitute>] is the word ANONYMOUS. Examples:

```
This work was performed at \anon{NSA}.
This work was performed at \anon[No Such Agency]{NSA}.
```

2.13 Acknowledgments

The traditional “Acknowledgments” section is conventionally used to thank persons and granting agencies for their help and support. However, there are several important considerations about this section.

First, in anonymous mode this section must be omitted: it gives too much information to reviewers. Second, data about grants is extracted and stored separately by the postprocessing software. ACM classes provide facilities for both these tasks.

- `acks (env)` The environment `acks` starts an unnumbered section “Acknowledgments” unless the anonymous mode is chosen. Put all thanks inside this environment.

As for the `printonly` and `screenonly` environments, `\begin{acks}` and `\end{acks}` should start on a line of their own with no leading or trailing spaces.

`\grantsponsor` All financial support *must* be listed using the commands `\grantsponsor` and `\grantnum`. These commands tell the postprocessing software about the granting organization and grant. The format of these commands is the following:

```
\grantsponsor{\langle sponsorID \rangle}{\langle name \rangle}{\langle url \rangle}
\grantnum[\langle url \rangle]{\langle sponsorID \rangle}{\langle number \rangle}.
```

Here `\langle sponsorID \rangle` is the unique ID used to match grants to sponsors, `\langle name \rangle` is the name of the sponsor, `\langle url \rangle` is its URL, and `\langle number \rangle` is the grant number. The `\langle sponsorID \rangle` of the `\grantnum` command must correspond to the `\langle sponsorID \rangle` of a `\grantsponsor` command. Some awards have their own web pages, which you can include using the optional argument of the `\grantnum` command.

At present `\langle sponsorID \rangle` is chosen by the authors and can be an arbitrary key in the same way the label of a `\cite` is arbitrarily chosen. There might be a change to this policy if the ACM decides to create a global database of sponsoring organizations.

Example:

```
\begin{acks}
The authors would like to thank Dr. Yuhua Li for providing the
matlab code of the \textit{BEPS} method.

The authors would also like to thank the anonymous referees for
their valuable comments and helpful suggestions. This work is
supported by the \grantsponsor{GS501100001809}{National Natural
Science Foundation of
China}{\url{https://doi.org/10.13039/501100001809}} under Grant
No.: \grantnum{GS501100001809}{61273304}
and \grantnum[\url{http://www.nnsf.cn/youngscientists}]{GS501100001809}{Young
Scientists' Support Program}.
\end{acks}
```

2.14 Bibliography

The ACM lets you use either Bib^TE_X or Bib^LE_X to process your references: they require slightly different setup of your L^ETEX file, as detailed in the following subsections.

2.14.1 Processing using Bib^TE_X

This uses the `natbib` package for formatting references and the Bib^TE_X style file `ACM-Reference-Format.bst` for Bib^TE_X processing. You can disable loading of `natbib` using the option `natbib=false` in `\documentclass`. However, it is not recommended, as well as the use of Bib^TE_X styles other than `ACM-Reference-Format.bst`, and may delay the processing of the manuscript.

`\citetstyle` If you use `natbib`, you can select one of two predefined citation styles using the command `\citetstyle`: the author-year format `acmauthoryear` or the numeric format `acmnumeric`. For example,

```
\citetstyle{acmauthoryear}
```

Note that numeric citations are the default mode for most formats.

\setcitestyle You can further customize natbib using the \setcitestyle command, for example,

```
\setcitestyle{numbers,sort&compress}
```

One of the more common versions is

```
\setcitestyle{nosort}
```

It is useful if you do not like the way natbib sorts citation lists.

If you use natbib, then commands like \citet and \citeauthor are automatically supported. The command \shortcite is the same as \cite in numerical mode and cites the year in author-date mode.

Note that before version 1.48 the command \citeyear put the year in parentheses. In version 1.48 and later it produces just the year; the command \citeyearpar can be used to emulate its old behavior.

There are several customized BibTeX entry types and fields in the ACM style file ACM-Reference-Format.bst that you may want to be aware of.

The style supports the fields doi and url, for example,

```
doi = "10.1145/1188913.1188915",
url = "http://ccrma.stanford.edu/~jos/bayes/bayes.pdf",
```

Normally the printing of URL is suppressed if DOI is present. However, there is a special field distinctURL. If it is present and is not zero, URL is printed even if DOI is present.

The style supports the arXiv-recommended fields eprint and (optionally) primaryclass, for example,

```
eprint = "960935712",
primaryclass = "cs",
```

See the examples at <https://arxiv.org/help/hypertex/bibstyles>.

There are several special entry types. Types online and game are used for Web pages and games, for example,

```
@online{Thornburg01,
  author = "Harry Thornburg",
  year = "2001",
  title = "Introduction to Bayesian Statistics",
  url = "http://ccrma.stanford.edu/~jos/bayes/bayes.html",
  month = mar,
  lastaccessed = "March 2, 2005",
}
```

Entry types artifactsoftware, artifactdataset (with synonyms software and dataset) can be used to cite software artifacts and datasets, for example,

```
@ArtifactSoftware{R,
  title = {R: A Language and Environment for Statistical Computing},
  author = {{R Core Team}},
  organization = {R Foundation for Statistical Computing},
```

```

    address = {Vienna, Austria},
    year = {2019},
    url = {https://www.R-project.org/},
}
@ArtifactDataset{UMassCitations,
    author = {Sam Anzaroot and Andrew McCallum},
    title = {{UMass} Citation Field Extraction Dataset},
    year = 2013,
    url =
        {http://www.iesl.cs.umass.edu/data/data-umasscitationfield},
    lastaccessed = {May 27, 2019}
}

```

For these entry types you can use the `lastaccessed` field to add the access date for the URL.

There are two ways to enter video or audio sources in the bibliography corresponding to two different possibilities. For standalone sources available online, you can use an `online` entry and set its `howpublished` field. For example,

```

@online{Obama08,
    author = "Barack Obama",
    year = "2008",
    title = "A more perfect union",
    howpublished = "Video",
    day = "5",
    url = "http://video.google.com/videoplay?docid=6528042696351994555",
    month = mar,
    lastaccessed = "March 21, 2008",
}

```

For sources available as attachments to conference proceedings and similar documents, you can use the usual `inproceedings` entry type and set its `howpublished` field:

```

@Inproceedings{Novak03,
    author = "Dave Novak",
    title = "Solder man",
    booktitle = "ACM SIGGRAPH 2003 Video Review on Animation theater Program",
    year = "2003",
    publisher = "ACM Press",
    address = "New York, NY",
    pages = "4",
    month = "March 21, 2008",
    doi = "10.9999/woot07-S422",
    howpublished = "Video",
}

```

Sometimes you need to cite a complete issue of a journal. The `periodical` entry type is intended for this:

```

@periodical{JCohen96,
    key = "Cohen",
    editor = "Jacques Cohen",
}

```

```

title =      "Special issue: Digital Libraries",
journal =    "Communications of the {ACM}",
volume =     "39",
number =     "11",
month =      nov,
year =       "1996",
}

```

If you do not know the year of publication, the style will add “[n. d.]” (for “no date”) to the entry.

If you do not know the author (this is often the case for online entries), use the key field to add a key for sorting and citations, for example,

```

@online{TUGInstmem,
key =        {TUG},
year =       2017,
title =      "Institutional members of the {\TeX} Users Group",
url =        "http://wwtug.org/instmem.html",
lastaccessed = "May 27, 2017",
}

```

A note about sorting. The current ACM bibliography styles always sort the entries according to authors names and publication year. There is a controversy about sorting names with “von” or “van” part: should Ludwig van Beethoven be sorted under “V” or under “B”? The American practice is to use “van” in sorting, i.e. to file van Beethoven under “V”. However, some authorities recommend to sort Dutch persons according to their last names (see e.g. https://www.ifla.org/files/assets/cataloguing/pubs/names-of-persons_1996.pdf). While I do not want to take a part in this dispute, I would like to point to the old “noopsort” trick by Oren Patashnik. Add to the .bib file the line

```
@PREAMBLE{"\providecommand{\noopsort}[1]{}"}
```

and then encode the author as

```
author = {Ludwig \noopsort{Beethoven} van Beethoven},
```

This will make the author to be sorted as “Beethoven” rather than “van Beethoven”.

The current bst style defines a number of macros for common journal names. In particular, all journals listed in Table 5 are includes, so you can use strings like journal = taccess for *ACM Transactions on Accessible Computing*.

2.14.2 Processing using Bib \TeX

You will find in this package two sets of style files for Bib \TeX , acmnumeric and acmauthoryear, that mimic the behaviour of the ACM-Reference-Format.bst Bib \TeX style. They provide you access to all the power of Bib \TeX and already include support for advanced citation of software artefact from the biblatex-software package, also separately available on CTAN. Look at the biblatex-software documentation to learn more about what it offers.

There are a few key differences in how the L^AT_EX sources are set up when using BibL^AT_EX instead of BibT_EX, that we summarize briefly here (please refer to the official BibL^AT_EX documentation for more details).

In the preamble of your document you need to load the BibL^AT_EX package and select the appropriate bibliography style, as follows

```
\RequirePackage[
  datamodel=acmdatamodel,
  style=acmnumeric, % use style=acmauthoryear for publications that require it
]{biblatex}
```

Also in the preamble, you need to declare the bibliography sources files using the \addbibresource directive (one \addbibresource command per source file), e.g.:

```
\addbibresource{software.bib}
\addbibresource{sample-base.bib}
```

At the end of the document, where you want the bibliography to appear, you need to place the command \printbibliography.

Look at the sample--biblatex.tex files that can be found in the samples directory after running make for templates showcasing these BibL^AT_EX styles.

2.15 Colors

While printed ACM publications are usually black and white, screen mode allows the use of colors. The ACM classes pre-define several colors according to [8]: ACMBrown, ACMYellow, ACMOrange, ACMRed, ACMLightBlue, ACMGreen, ACMPurple and ACMDarkBlue. You can use them in color assignments.

The ACM provides the following recommendation on color use.

The most accessible approach would be to ensure that your article is still readable when printed in greyscale. The most notable reasons for this are:

1. The most common type of inherited Color Vision Deficiency (CVD) is red-green (in which similar-brightness colors that differ only in their amounts of red or green are often confused), and it affects up to 8% of males and 0.5% of females of Northern European descent.
2. The most common type of acquired Color Vision Deficiency (CVD) is blue-yellow (including mild cases for many older adults).
3. Most printing is in black and white.
4. Situational impairments (e.g., bright sunlight shining on a mobile screen) tend to reduce the entire color gamut, reducing color discriminability.

Note: It is *not* safe to encode information using only variations in color (i.e., only differences in hue and/or saturation) as there is bound to be someone affected!

To ensure that you are using the most accessible colors, the ACM recommends that you choose sets of colors to help ensure suitable variations in when printed in greyscale by using either of the following tools:

1. ColourBrewer: <http://colorbrewer2.org/>
2. ACE: The Accessible Colour Evaluator: <http://daprlab.com/ace/> for designing WCAG 2.0 compliant palettes.

2.15.1 Manual bibliography

Some people create bibliographies manually, writing down `\bibitem` commands explicitly. This approach is *not* recommended for ACM styles. The reason is, ACM submissions, besides being typeset, are also processed by special programs that extract metadata and references. Bibliographies created automatically with ACM styles contain customized macros for these programs, for example,

```
\bibitem[Ablamowicz and Fauser(2007)]%
{Ablamowicz07}
\bibfield{author}{\bibinfo{person}{Rafal Ablamowicz} \{and\}
\bibinfo{person}{Bertfried Fauser}.} \bibfield{year}{\{2007\}} \nate{xlab{}}.
\newblock \bibinfo{booktitle}{\emph{CLIFFORD: a Maple 11 Package for Clifford
Algebra Computations, version 11}}.
\newblock
\urldef{\tempurl}{\url{http://math.tntech.edu/rafal/cliff11/index.html}}
\showURL{%
Retrieved February 28, 2008 from \tempurl{}}
```

Manual bibliographies without these macros may slow down the publication process, and thus are not recommended for ACM submissions.

2.16 Other notable packages and typographic remarks

Several other packages are recommended for specialized tasks.

The package `subcaption` [9] is recommended for complex figures with several subplots or subfigures that require separate subcaptioning. The packages `nomenc1` [10] and `glossaries` [11] can be used for the automatic creation of the lists of symbols and concepts used.

By default `acmart` prevents all widows and orphans (i.e., lonely lines at the beginning or end of the page) and hyphenation at the end of the page. This is done by the rather strict settings

```
\widowpenalty=10000
\clubpenalty=10000
\brokenpenalty=10000
```

However, this may lead to frustrating results when the authors must obey a page limit. Setting these penalties to smaller values may help if you absolutely need to.

Another problem might be the too strict line breaking rules. Again, a strategically placed `\sloppy` command or putting the problematic paragraph inside `sloppypar` environment might help—but beware, the results might be, well, sloppy.

Note that the uppercasing in section titles is done using the `textcase` package [12], so the command `\NoCaseChange` inside the title may help to prevent extraneous uppercasing.

2.17 Counting words

Some ACM conferences use word count limits for papers. The calculation of word number for a paper with math, tables and figures is not a trivial task. Currently the authoritative word count is done by translating the PDF to text and using `wc -w` on the output.

Authors can use the package `texcount` (used by Overleaf) to get an estimate of the word count. To facilitate this one adds to the beginning of the package metacomments

```
%TC:macro \cite [option:text, text]
%TC:macro \citet [option:text, text]
%TC:macro \citet [option:text, text]
%TC:envir table 0 1
%TC:envir table* 0 1
%TC:envir tabular [ignore] word
%TC:envir displaymath 0 word
%TC:envir math 0 word
%TC:envir comment 0 0
```

and uses `\begin{math}... \end{math}` instead of dollar signs for math. Note that the count is in any case approximate, and the final decision of editors is based on PDF count.

The script `texcount` provides a report of word count in the document.

2.18 Creative Commons licenses for ACM publications

At present ACM does not allow the authors to typeset Creative Commons license for most ACM publications. These licenses can be used under an agreement with the ACM publishing office. In this case they are inserted by ACM itself.

The exceptions are ACM Engage format, which allows Creative Commons license, and conferences organized and copyrighted by IW3C2. In these cases the authors should use correspondingly `\setcopyright{cc}`, `\setcopyright{iw3c2w3}`, or `\setcopyright{iw3c2w3g}` (the latter should be used by Google employees).

Yet another case is the typesetting of non-ACM materials, when the option `nonacm` is used. This case is somewhat opposite, because for this case *only* Creative Common licenses are supported.

The command `\setcopyright{cc}` produces an error unless the format is `acmengage` or `nonacm` option is selected. On the other hand, if the option `nonacm` is selected, any argument of `\setcopyright` other than `cc` is treated as none.

2.19 Disabled or forbidden commands

The goal of `acmart` package is to provide a uniform look and feel for ACM publications. Accordingly, a number of commands is forbidden or disabled in `acmart`.

You may *not* put several authors or several e-mails into a `\author` or `\email` command. This may lead to errors or warning.

You cannot change `\baselinestretch` in your document: this produces an error.

You should not abuse the command `\vspace`: this command may disturb the typesetting of ACM papers.

You should not load `amssymb` package since the package `acmart` defines the corresponding symbols itself.

2.20 Notes for wizards

Sometimes you need to change the behavior of `acmart`. The usual way to do this is to redefine commands in the preamble. However, these definitions are executed *after* `acmart` is loaded and certain decisions are made. This presents a number of problems.

For example, one may want to use the `titletoc` package with `acmart`. This package should be loaded before `hyperref`. However, since `acmart` loads `hyperref` itself, the line `\usepackage{titletoc}` in the preamble will lead to grief (see <http://tex.stackexchange.com/questions/357265/using-titletoc-with-acm-acmart-style>).

Another example is passing options to a package. Suppose you want to use the `dvipsnames` option of the `xcolor` package. Normally you cannot do this because `acmart` loads this package itself without options.

The file `acmart-preload-hook.tex` can be used to solve these problems. If this file exists, it will be processed before any other package. You can use this file to load packages or pass options to them. For example, if you put in this file

```
\let\LoadClassOrig\LoadClass
\renewcommand\LoadClass[2][]{\LoadClassOrig[#1]{#2}%
\usepackage{titletoc}}
```

then `titletoc` will be loaded before `hyperref`. If you put in this file

```
\PassOptionsToPackage{dvipsnames}{xcolor}
```

you will pass `dvipsnames` to `xcolor`.

Important note. This hook makes it too easy to create a manuscript that is not acceptable by the ACM. It is even easier to create a file that cannot be compiled. So please do not use it *unless you know what you are doing*. And if you use it, *do not ask for support*. If you decide to use this hook, you are on your own.

`\AtBeginMaketitle` Another hook is `\AtBeginMaketitle`. The commands in this hook are executed before `\maketitle`, for example,

```
\AtBeginMaketitle{\acmPrice{125.00}}
```

2.21 Currently supported publications

Table 5: ACM publications and arguments of the `\acmJournal` command

Abbreviation	Publication
ACMJCSS	ACM Journal on Computing and Sustainable Societies

Besides the publications listed in Table 5, there is a special “publication” type FACMP, a forthcoming ACM publication, reserved for new journals which are not assigned an ISSN yet.

2.22 A note about sigchi-a format

Starting in Spring 2020 ACM retired SIGCHI Extended Abstract format (sigchi-a). ACM will not, under any circumstances, accept documents in this format for publication and will not offer technical support to the authors who use this template.

You may use this format in the nonacm mode only, as in

```
\documentclass[sigchi-a, nonacm]{acmart}
```

sidebar (*env*) This format has large margin uses for special figures and tables. This package provides three environments for this with optional captions:

margintable (*env*) **sidebar**: textual information in the margin,

marginfigure: a figure in the margin,

margintable: a table in the margin.

The environments `figure` and `table` produce figures and tables with the width of the text column. The environments `figure*` and `table*` produce “wide” figures and tables, which take a large part of the margin.

The horizontal sizes of figures are:

1. `figure`: `\columnwidth`,
2. `marginfigure`: `\marginparwidth`,
3. `figure*`: `\fulltextwidth`.

3 Implementation

3.1 Identification

We start with a declaration of who we are. Most .dtx files put driver code in a separate .drv driver file. We roll this code into the main file and use the pseudo-guard <gobble> for it.

```
1 <class>\NeedsTeXFormat{LaTeX2e}
2 <*gobble>
3 \ProvidesFile{acmart.dtx}
4 </gobble>
5 <class>\ProvidesClass{acmart}
6 [2023/03/30 v1.90 Typesetting articles for the Association for Computing Machinery]
```

And the driver code:

```
7 <*gobble>
8 \documentclass[ltxdoc]
9 \usepackage{array,booktabs,amsmath,graphicx,fancyvrb,tabularx, longtable}
10 \usepackage[tt=false, type1=true]{libertine}
11 \usepackage[varqu]{zi4}
12 \usepackage[libertine]{newtxmath}
13 \usepackage[tableposition=top]{caption}
14 \usepackage{hypdoc}
15 \PageIndex
16 \CodelineIndex
17 \RecordChanges
18 \EnableCrossrefs
19 \begin{document}
20   \DocInput{acmart.dtx}
21 \end{document}
22 </gobble>
23 <*class>
24 \def\@classname{acmart}
```

3.2 Preload hook

We preload acmart-preload-hook:

```
25 \InputIfFileExists{acmart-preload-hook.tex}{%
26   \ClassWarning{@classname}{%
27     I am loading acmart-preload-hook.tex. You are fully responsible
28     for any problems from now on.}}{}
```

3.3 Options

We need xkeyval since some of our options may have values:

```
29 \RequirePackage{xkeyval}
We use xstring to check whether user input is valid
30 \RequirePackage{xstring}
We need iftex to check the engine
31 \RequirePackage{iftex}
```

```
format The possible formats
```

```
32 \define@choicekey*+{acmart.cls}{format}[\ACM@format\ACM@format@nr]{%
33   manuscript, acmsmall, acmlarge, acmtog, sigconf, siggraph,
34   sigplan, sigchi, sigchi-a, acmengage, acmcpc}[manuscript]{}{%
35   \ClassError{@classname}{The option format must be manuscript,
36   acmsmall, acmlarge, acmtog, sigconf, siggraph,
37   sigplan, sigchi or sigchi-a}}
38 \def\@DeclareACMFormat#1{\DeclareOptionX{#1}{\setkeys{acmart.cls}{format=#1}}}
39 \@DeclareACMFormat{manuscript}
40 \@DeclareACMFormat{acmsmall}
41 \@DeclareACMFormat{acmlarge}
42 \@DeclareACMFormat{acmtog}
43 \@DeclareACMFormat{sigconf}
44 \@DeclareACMFormat{siggraph}
45 \@DeclareACMFormat{sigplan}
46 \@DeclareACMFormat{sigchi}

```

\normalparindent The *amsart* package defines the `\normalparindent` length and initializes it to 12pt (the value of `\parindent` in *amsart*). It is later used to set the `\listparindent` length in the quotation environment and the `\parindent` length in the `\@footnotetext` command. We set `\normalparindent` to the value of `\parindent` as selected by *acmart* for consistent paragraph indents.

```
774 \setlength\normalparindent{\parindent}
```

Footnotes require some consideration. We have several layers of footnotes: front-matter footnotes, “regular” footnotes and the special insert for the bibstrip. In the old ACM classes, the bibstrip was a `\@float`. The problem with floats is that they tend to, well, float—and we want the guarantee they stay.

We use `manyfoot` for layered footnotes instead.

`copyrightpermissionfootnoterule` This is the footnote rule that separates the bibstrip from the rest of the paper. It is a full width rule.

```
775 \def\copyrightpermissionfootnoterule{\kern-3\p@
776   \hrule \@width \columnwidth \kern 2.6\p@}
```

```

777 \RequirePackage{manyfoot}
778 \SelectFootnoteRule[2]{copyrightpermission}

The AMS uses generous margins for lists. Note that `amsart` defines `\leftmargin` values for list levels at the beginning of the document, so we must redefine them in the same manner. Also, note that `amsart` redefines the `enumerate` and `itemize` environments with a `\makelabel` command that uses `\llap`, so the `\labelwidth` value is (effectively) irrelevant; nonetheless, we follow `amsart` and set `\labelwidth` to `\leftmargin` minus `\labelsep`.

```

\if@insideauthorgroup Whether we are continuing an author group
1482 \newif\if@insideauthorgroup
1483 \@insideauthorgroupfalse

\author Adding an author to the list of authors and addresses.
Note that we want to typeset the link to the author’s orcid if known. The problem is, we know the orcid only after the author is entered. The trick is based on the idea that \csname... \endcsname is \relax unless defined. Therefore we typeset authors by the special macro \csname typeset@author\the\num@authors\endcsname, which is defined by \orcid command.

2103     \@setengagemetadata{#1}{#2}}}
```

3.21 Typesetting top matter

\mkttitle@bx Some of our formats use a two-column design. Some use a one-column design. In all cases we use a wide title. Thus we typeset the top matter in a special box to be used in the construction \atwocolumn[*<box>*].

```
2104 \newbox\mkttitle@bx
```

\maketitle The (in)famous \maketitle. Note that in `sigchi-a` mode, authors are *not* in the title box.

Another note: there is a subtle difference between author notes, title notes and thanks. The latter two refer to the paper itself and therefore belong to the copyright/permission block. By the way, this was the default behavior of the old ACM classes.

```

3.23 Sectioning

\ACM@NRadjust Ross Moore's macro.

Initially \ACM@sect@format@ just passes through its #1 argument unchanged. When a sectioning macro such as \section occurs, the \ACM@NRadjust redefines \ACM@sect@format@ to expand into the styling commands; e.g., \@secfont. Then \Sectionformat is temporarily redefined to produce \realSectionformat{\ACM@sect@format{#1}}{#2}, which ultimately becomes \Sectionformat{@secfont{#1}}{#2}. This is done to allow \Sectionformat to be variable, as may be needed in particular circumstances. Its current expansion is saved as \realSectionformat which is used with the modified 1st argument, then \Sectionformat is reverted to its former expansion.

To style the section-number, the line #1{} is used at the end of \ACM@NRadjust. This imposes style-changing commands for fonts and sizes, but any \MakeUppercase acts on just the {}. It's a bit hacky, by essentially assuming that only numbers occur here, not letters to be case-changed. (This should be acceptable in a class-file, as it ought to be possible to change the case elsewhere, if that was ever desired.) Also, it can result in \@adddotafter being called too soon, so a slight adjustment is made, via \ACM@adddotafter, which now tests whether its argument is empty. But the coding has to allow for other packages to have also patched \@adddotafter.

```

3.24 TOC lists

\@dotsep Related to the \tableofcontents are all the horizontal fillers. Base L^AT_EX defines \@dottedtocline, which we should not disable. Yet, this command expects \@dotsep to be defined but leaves this to the class implementation. Since amsart does not provide this, we copy the standard variant from article here.

```
3276 \providecommand*\@dotsep{4.5}
```

3.25 Theorems

\@acmplainbodyfont The font to typeset the body of the acmplain theorem style.

```
3277 \def\@acmplainbodyfont{\itshape}
```

\@acmplainindent The amount to indent the acmplain theorem style.

```
3278 \def\@acmplainindent{\parindent}
```

```
\@acmplainheadfont The font to typeset the head of the acmplain theorem style.  
3279 \def\@acmplainheadfont{\scshape}
```

```
\@acmplainnotefont The font to typeset the note of the acmplain theorem style.  
3280 \def\@acmplainnotefont{\emptyset}
```

Customization of the acmplain theorem style:

```
3281 \ifcase\ACM@format@nr  
3282 \relax % manuscript  
3283 \or % acmsmall  
3284 \or % acmlarge  
3285 \or % acmtog  
3286 \or % sigconf  
3287 \or % siggraph  
3288 \or % sigplan  
3289 \def\@acmplainbodyfont{\itshape}  
3290 \def\@acmplainindent{\z@}  
3291 \def\@acmplainheadfont{\bfseries}  
3292 \def\@acmplainnotefont{\normalfont}  
3293 \or % sigchi  
3294 \or % sigchi-a  
3295 \or % acmengage  
3296 \or % acmcnp  
3297 \fi
```

acmplain The acmplain theorem style

```
3298 \newtheoremstyle{acmplain}%  
3299 {.5\baselineskip\@plus.2\baselineskip  
3300 \@minus.2\baselineskip}% space above  
3301 {.5\baselineskip\@plus.2\baselineskip  
3302 \@minus.2\baselineskip}% space below  
3303 {\@acmplainbodyfont}% body font  
3304 {\@acmplainindent}% indent amount  
3305 {\@acmplainheadfont}% head font  
3306 {.}% punctuation after head  
3307 {.5em}% spacing after head  
3308 {\thmname{\#1}\thmnumber{\#2}\thmnote{\emptyset}}}% head spec
```

```
\@acmdefinitionbodyfont The font to typeset the body of the acmdefinition theorem style.  
3309 \def\@acmdefinitionbodyfont{\normalfont}
```

```
\@acmdefinitionindent The amount to indent the acmdefinition theorem style.  
3310 \def\@acmdefinitionindent{\parindent}
```

```
\@acmdefinitionheadfont The font to typeset the head of the acmdefinition theorem style.  
3311 \def\@acmdefinitionheadfont{\itshape}
```

```
\@acmdefinitionnotefont The font to typeset the note of the acmdefinition theorem style.  
3312 \def\@acmdefinitionnotefont{\emptyset}
```

Customization of the acmdefinition theorem style:

```
3313 \ifcase\ACM@format@nr  
3314 \relax % manuscript
```

```

3315 \or % acmsmall
3316 \or % acmlarge
3317 \or % acmtog
3318 \or % sigconf
3319 \or % siggraph
3320 \or % sigplan
3321   \def\@acmdefinitionbodyfont{\normalfont}
3322   \def\@acmdefinitionindent{\z@}
3323   \def\@acmdefinitionheadfont{\bfseries}
3324   \def\@acmdefinitionnotefont{\normalfont}
3325 \or % sigchi
3326 \or % sigchi-a
3327 \or % acmengage
3328 \or % acmcpc
3329 \fi

```

acmdefinition The acmdefinition theorem style

```

3330 \newtheoremstyle{acmdefinition}%
3331   {.5\baselineskip\@plus.2\baselineskip}%
3332   \@minus.2\baselineskip}%
3333   {.5\baselineskip\@plus.2\baselineskip}%
3334   \@minus.2\baselineskip}%
3335   {\@acmdefinitionbodyfont}%
3336   {\@acmdefinitionindent}%
3337   {\@acmdefinitionheadfont}%
3338   {.}%
3339   {.5em}%
3340   {\thmname{\#1}\thmnumber{\#2}\thmnote{ {\@acmdefinitionnotefont{\#3}}}}%

```

Make acmplain the default theorem style.

```
3341 \theoremstyle{acmplain}
```

Delay defining the theorem environments until after other packages have been loaded. In particular, the cleveref package must be loaded before the theorem environments are defined in order to show the correct environment name (see <https://github.com/borisveytsman/acmart/issues/138>). The `acmthm` option is used to suppress the definition of any theorem environments. Also, to avoid obscure errors arising from these environment definitions conflicting with environments defined by the user or by user-loaded packages, we only define environments that have not yet been defined.

```

3342 \AtEndPreamble{%
3343   \if@ACM@acmthm
3344     \theoremstyle{acmplain}
3345     \@ifundefined{theorem}{%

3450 \fi\fi}
```

3.27 Acknowledgments

```
\acksname
```

```
3451 \newcommand{\acksname}{Acknowledgments}
```

```
\acks This is a comment-like structure
```

```
3452 \specialcomment{\acks}{%
3453 \begingroup
3454 \section*{\acksname}
3455 \phantomsection\addcontentsline{toc}{section}{\acksname}
3456 }%
3457 \endgroup
3458 }
```

```
\grantsponsor We just typeset the name of the sponsor
```

```
3459 \def\grantsponsor#1#2#3{#2}
```

```
\grantnum
```

```
3460 \newcommand{\grantnum}[3][]{\#3%
3461 \def\@tempa{\#1}\ifx\@tempa\empty\else\space(\url{\#1})\fi}
```

3.28 Conditional typesetting

We use the `comment` package for conditional typesetting:

```
3462 \AtEndPreamble{%
3463 \if@ACM@screen
3464 \includecomment{screenonly}
3465 \excludecomment{printonly}
3466 \else
3467 \excludecomment{screenonly}
3468 \includecomment{printonly}
3469 \fi
3470 \if@ACM@anonymous
3471 \excludecomment{anonsuppress}
3472 \excludecomment{acks}
3473 \else
3474 \includecomment{anonsuppress}
3475 \fi}
```

3.29 Additional bibliography commands

```
\showeprint The command \showeprint has two arguments: the (optional) prefix and the eprint number. Right now the only prefix we understand is the (lowercase) word ‘arxiv’.
```

```
3476 \newcommand{\showeprint}[2][arxiv]{%
3477 \def\@tempa{\#1}%
3478 \ifx\@tempa\empty\def\@tempa{arxiv}\fi
3479 \def\@tempb{arxiv}%
3480 \ifx\@tempa\@tempb\relax
3481 arXiv:\href{https://arxiv.org/abs/#2}{\#2}%
3482 \else
```

```

3483     \def\@tempb{arXiv}%
3484     \ifx\@tempa\@tempb\relax
3485         arXiv:\href{https://arxiv.org/abs/#2}{#2}%
3486     \else
3487         #1:#2%
3488     \fi
3489 \fi}

```

3.30 Index

\theindex Standard amsart uses plain page style in index pages. This clashes with line numbering for review option, so we redefine it.

```

3490 \def\theindex{@restonecoltrue\if@twocolumn@restonecolfalse\fi
3491   \columnseprule\z@\columnsep 35\p@
3492   \@inlisttitlestyle
3493   \let\item\@idxitem
3494   \parindent\z@\parskip\z@\@plus.3\p@\relax
3495   \raggedright
3496   \hyphenpenalty\@M
3497   \footnotesize}

```

3.31 End of Class

\vspace We do not disable \vspace, but add warning to it

```

3498 \let\@vspace@orig=\@vspace
3499 \let\@vspacer@orig=\@vspacer
3500 \apptocmd{\@vspace}{\ClassWarning{@classname}{\string\vspace\space should
3501   only be used to provide space above/below surrounding
3502   objects}}{}{}}
3503 \apptocmd{\@vspacer}{\ClassWarning{@classname}{\string\vspace\space should
3504   only be used to provide space above/below surrounding
3505   objects}}{}{}}
3506 \let\@vspace@acm=\@vspace
3507 \let\@vspacer@acm=\@vspacer

```

\ACM@origbaselinestretch We produce an error if the user tries to change \baselinestretch

```

3508 \let\ACM@origbaselinestretch\baselinestretch
3509 \AtEndDocument{\ifx\baselinestretch\ACM@origbaselinestretch\else
3510   \ClassError{@classname}{An attempt to redefine
3511   \string\baselinestretch\space detected. Please do not do this for
3512   ACM submissions!}\fi}
3513 \normalsize\normalfont\frenchspacing
3514 
```

Change History

1.48	\ccsdesc@parse: Added warning for missing concepts	76
	\if@ACM@printacmref: Added warning for longer papers	74
	\keywords: Added warning for missing keywords	73
1.49	General: Added prologue option to xcolor	50
	Bib code cleanup (Zack Weinberg)	35
	Documentation update (siggraph)	35
1.53	General: New journal: DTRAP	35
1.54	General: New journals: PACMCGIT, TIOT, TDSCI	35
	Rearranged docs	35
1.55	General: Moved footnote stuff before hyperref call (Ross Moore)	35
1.56	General: Documented \Description	35
1.57	General: Booktabs package is now the default	35
1.58	General: Changes in samples (Enrico Gregorio)	35
	New journal: HEALTH. TDS is renamed to TDSCI	35
1.60	General: New option: urlbreakonhyphens	35
	\if@ACM@urlbreakonhyphens: introduced macro	36
1.62	General: New journal: TELO	35
1.63	General: New journal: FACMP	35
	New journal: TQUANT	35
1.63a	General: Move: TQUANT to TQC	35
1.64	General: Putting abstract after \maketitle now causes an error	35
1.65	General: New journal: DGOV	35
1.66	General: ACM reference format is now mandatory for papers over one page; CCS concepts and keywords are now mandatory for papers over two pages	35
	Authors' addresses are mandatory for journal articles	35
	\@mkauthorsaddresses: Added warning for missing addresses	97
1.69	\vspace: Added the changed command to avoid grouping	114
1.70	General: Name change for TDS	59
1.71	General: Bibliography change: volume for @inproceedings is now in brackets together with series	35
	LuaTeX now uses the OTF versions of fonts	35
	Retired sigchi and sigchi-a	35
1.75	General: Documentation update	35
1.78	General: Documentation update: Word count	35
1.80	General: Updated information for TAP, TCPS, TEAC	59
1.82	General: Added DLT and FAC	59
1.84	General: Updated abbreviations and codes for several journals	59
1.85	General: New journals: JDS, GAMES	35, 59
	General: Added CC licenses	35
	Added: acmengage	48
	New journal: JRC	59
	\@mkauthors: Added: acmengage	91
	\@mkttitle: Added: acmengage	88
	\@parfont: Added: acmengage	107
	\@printtopmatter: Added: acmengage	87
	\@specialsection: Added: acmengage	86
	\@subtitlefont: Added: acmengage	89
	\@titlefont: Added: acmengage	88
	\ACM@linecountR: Added: acmengage	100
	format: New format: acmengage	36
	\parskip: Added: acmengage	52

1.87	General: New journals: ACMJCSS, JATS, TORS	59	v1.04	General: Updated bibliography for siggraph	35
	format: New format: acmcp	36		\acmArticleSeq: Name change by Matthew Fluet	71
1.88	General: Added ISSN for ACMJCSS	59		\acmDOI: Name change by Matthew Fluet	72
	Added ISSN for GAMES	59		\acmISBN: Name change by Matthew Fluet	71
	Added PACMNET	59	v1.05	General: Added processing doi numbers for acmsiggraph and doi numbers for sigproc.bib	35
1.89	General: Added PACMMOD	59		Patched \setcitestyle command; closes https://github.com/borisveytsman/acmart/issues/19	35
	Added TOPML	59		\@ACM@badge@skip: Added macro	72
	@printtopmatter: Moved badges to top header	87		\@ACM@badge@width: Added macro	72
1.90	General: Added TOPML eISSN	59		\@ACM@title@width: Added macro	72
v1.00	General: First released version	35	v1.06	\@mktitle@i: Added processing badges	89
v1.01	General: Changed hyperref colors in screen mode (closes https://github.com/borisveytsman/acmart/issues/1)	35		Made generic	89
	Defined ACM colors	35		\@mktitle@ii: Now this macro is obsolete	90
	Explicitly put draft option (closes https://github.com/borisveytsman/acmart/issues/4)	38		\@mktitle@iii: Added processing badges	90
	Set headheight to 1pc for all formats (closes https://github.com/borisveytsman/acmart/issues/5)	35		Made more generic	90
v1.02	General: Added TOPS and TSC (closes https://github.com/borisveytsman/acmart/issues/12)	35		\@subtitlefont: Added macro	89
	Documentation changes (closes https://github.com/borisveytsman/acmart/issues/13)	35		\@titlefont: Added macro	88
v1.03	General: Added anonsuppress environment	35		\acmBadgeL: Added macro	72
	Added authorversion option (closes https://github.com/borisveytsman/acmart/issues/9)	35		\acmBadgeR: Added macro	72
	\@formatdoi: Added macro	79		\if@ACM@badge: Added macro	72
	\if@ACM@authorversion: Added macro	37	v1.07	\maketitle: Corrected a bug with abstract footnotes	83
	\maketitle: Added special case of authorversion	83		Corrected a bug with permssion and footnotes order	83
			v1.08	General: SIGPLAN reformatting by Matthew Fluet	35
				Typos corrected (Tobias Pape)	35
			v1.09	General: Revert SIGPLAN caption rules	35
			v1.10	General: Changes of 'licensedothergov' wording	77
				\maketitle: Corrected a bug with doi in manuscript and author vertson,	

https://github.com/borisveytsman/acmart/issues/36	83	\bibstyle@acmauthoryear: Moved def of \bibstyle@acmauthoryear before use	43
standardpagestyle: Reversed folios location	101	\bibstyle@acmnumeric: Moved def of \bibstyle@numeric before use	43
v1.11		v1.15	
General: Customization of ACM theorem styles and proof environment by Matthew Fluet	35	\@ACM@addtoaddress: Added macro	90
Documentation updates	35	\@mkauthors@iii: New authors system	94
v1.12		\@shortauthors: Introduced macro	101
General: Added graceful behavior when libertine fonts are absent	54	\@typeset@author@bx: Moved to separate macro	94
Documentation updates	35	\acks: Added macro	113
\@marginfigure: Now centering by default	57	\affiliation: Added code for author groups	69
\@margintable: Now centering by default	57	\author: Added code for author groups	68
\@parfont: Moved to \section@raggedright	107	\city: Added macro	91
\copyrightpermissionfootnoterule: Added macro	52	\country: Added macro	91
\descriptionlabel: Redefined	59	\department: Added macro	91
\footnoterule: Made shorter	53	\grantnum: Added macro	113
\if@ACM@natbib@override: Added macro	37	\grantsponsor: Added macro	113
\if@ACM@newfonts: Added macro	54	\if@insideauthorgroup: Introduced macro	68
\maketitle: Moved thankses to copyrightpermission box	83	\institution: Added macro	91
\section@raggedright: Introduced macro	107	\num@authorgroups: Renamed	68
v1.13		\orcid: Introduced macro	70
General: Font adjustments for acmsmall	92	\position: Added macro	91
Increased font size for ACM Large	40	\postcode: Added macro	91
Print bibliographic information by default for the proceedings	74	\state: Added macro	91
\@mpfootnotetext: Made minipage footnotes centered	48	\streetaddress: Added macro	91
\bibliographystyle: Redefined macro	49	standardpagestyle: Better handling of anonymous mode	101
\bibstyle@acmauthoryear: Added macro	43	v1.16	
\bibstyle@acmnumeric: Added macro	43	General: Formatting header/footer (Matthew Fluet)	35
\if@ACM@printfolios: Added macro	74	\@headfootfont: Added macro	101
standardpagestyle: Added headers for sigs	101	standardpagestyle: Customize header/footer text font	101
Expanded headers for sigchi-a	101	v1.17	
Suppressed folios if sig	101	General: Slightly decreased margins for sigs	50
v1.14		\@makefmark: Redefined	48
General: \citetstyle updates (Matthew Fluet)	35	\@mkauthors: TOG now uses the same authors block as other journals	91
Patched \citetstyle	41	\@mkbibcitation: Added \nobreak	98
		Changed format for sigs	98
		\acmArticle: The default is now numerical	71
		\acmMonth: The default must be numerical. Closes #50.	71
		\acmNumber: The default is now numerical	71

\acmVolume: The default is now numerical	71	\ccsdesc@parse: Change from \to to \textrightarrow (Matteo Riondato)	76
\acmYear: The default is now numerical	71	v1.29	
\description: Decreased indent	59	General: Increased head to 13pt	50
\grantrnum: Added url	113	\@mkabstract: Removed spurious indentation (John Wickerson)	97
\grantsponsor: Renamed	113	\ccsdesc@parse: Add spacing after bullet and around rightarrow; semicolon separators no longer in bold/italic (John Wickerson)	76
\if@ACM@printacmref: Renamed from \if@ACM@printbib	73	standardpagestyle: Corrected printfolios (Matthew Fluet)	101
standardpagestyle: Added paper title to sigs	101	v1.30	
v1.18		General: Added \frenchspacing	114
General: Natbib is now the default for all formats	35	Bibtex style now recognizes https:// in doi	35
\@mkauthorse@i: Now we andify affiliations	93	Switched to T1: looks like libertine has problems with \l in OT1	54
\@typeset@author@line: Added macro	92	Updated IMWUT and PACMPL	59
v1.19		\department: Added optional parameter	91
General: Include 'Abstract', 'Acknowledgements', and 'References' in PDF bookmarks (Matthew Fluet)	35	v1.31	
Include 'References' in PDF bookmarks (Matthew Fluet)	41	General: Documentation changes	35
\@mkabstract: Include 'Abstract' in PDF bookmarks (Matthew Fluet)	97	\@additionalaffiliation: Added macro	69
\acks: Include 'Acknowledgements' in PDF bookmarks (Matthew Fluet)	113	\@mkbibcitation: Disabled linebreak	98
v1.20		\@startsection: Added \tochangemeasure	45
General: Bug fixes for bst	35	Redefined macro	47
\@mkabstract: Deleted spurious space	97	\@textbottom: Redefined	53
v1.21		\acmMonth: The default now is the current month (Matteo Riondato)	71
\showeprint: Added macro	113	\acmYear: The default now is the current year (Matteo Riondato)	71
v1.22		\additionalaffiliation: Added macro	69
General: More bibliography changes for Aptara	35	\l@subsection: Redefined macro	47
v1.23		\l@subsubsection: Redefined macro	47
General: Add PACMPL journal option	35	v1.32	
v1.24		General: Added POMACS journal option	35
General: Add IMWUT journal option	59	Format siggraph is now obsolete	35
v1.25		\@formatdoi: New doi format	79
General: Updated PACMPL	59	v1.33	
v1.26		General: Added acmart-preload-hook	35
General: Corrected \shortcite bug	35	Added cmap and glyptounicode	54
Documentation typos fixed (thanks to Stephen Spencer)	35	BibTeX comma before articleno bug corrected	35
v1.27		BibTeX crossref bug corrected	35
\if@ACM@printccs: Typo corrected	73	BibTeX numpages bug corrected	35
v1.28		Documentation updates	35
General: Corrected option natbib behavior	43		
Got rid of warnings in pdf keywords	48		

Moved \citename definition for non-natbib bibliography, so a package may redefine it	49	v1.34	Added timestamp (Michael D. Adams)	101
Switched to Type 1 fonts for libertine even if OTF-capable engine is used (Kai Mindermann) .	54		\@mkbibcitation: Deleted DOI from doi numbers	98
\@ACM@addtoaddress: Added obeypunctuation code	90		\@ACM@linecount@bx: Rulers now are continuous	99
\@mkauthors@i: Added obeypunctuation code	93		\@ACM@linecountL: Rulers now are continuous	100
\@mkauthors@iii: Added obeypunctuation code	94		\@ACM@linecountR: Rulers now are continuous	100
\@mkauthors@iv: Added obeypunctuation code	95		\maketitle: Added date to the bibstrip in conf proceedings	83
\@subtitlefont: Added \normalsize	89		Deleted 'DOI' from doi numbers	83
\@ACM@linecountL: Renamed macro .	100		Rearranged bibstrip	83
\@ACM@linecountR: Added macro .	100		The \terms command is now obsolete	83
\@ACM@timestamp: Added current page number	100	v1.35	\terms: The \terms command now just produces a warning	73
Added macro (Michael D. Adams) .	100		General: BibTeX bug fixed: et al.	35
Added submission id	100		If the copyright is set to usgov or rigtsretained, the price is suppressed	77
\acmSubmissionID: Added macro .	71		\bibstyle@acmauthoryear: Square brackets for author-year style	43
\city: Added obeypunctuation code .	91	v1.36	General: Added PACMHCI journal options	59
\country: Added obeypunctuation code	91		Added the possibility to adjust number of author boxes per row in conference formats	35
\department: Added obeypunctuation code	91		\@ACM@authorsperrow: Added macro .	74
\if@ACM@affiliation@obeypunctuation: Added macro	69		\@mkauthors@iii: Added authorsperrow override	94
\if@ACM@authordraft: Added macro .	38		\@mkauthors@iv: Added authorsperrow override	95
\if@ACM@natbib@override: Deleted macro	37		\if@ACM@authordraft: Corrected typo, thanks to bargteil	38
\if@ACM@timestamp: Added macro (Michael D. Adams)	38	v1.37	General: Reduce list indentation (Matthew Fluet)	58
\institution: Added obeypunctuation code	91		Set \normalparindent; Reduce list indentation (Matthew Fluet)	35
\firstpagestyle: Added right linecount for two-column formats	104		\description: Reduce list indentation (Matthew Fluet)	59
Added timestamp (Michael D. Adams)	104		\descriptionlabel: Reduce list indentation (Matthew Fluet)	59
\maketitle: Fixed the bug with figures on top and bottom of the title page, thanks to David Epstein	83		\normalparindent: Set \normalparindent (Matthew Fluet)	52
\position: Added obeypunctuation code	91	v1.38	General: Increase default font size for SIGPLAN	35, 40
\postcode: Added obeypunctuation code	91			
\state: Added obeypunctuation code .	91			
\streetaddress: Added obeypunctuation code	91			
standardpagestyle: Added right linecount for two-column formats	101			

v1.39	\@@authornotemark: Added macro	97	\@mkbibcitation: If the paper has just one page, use ‘page’ instead of ‘pages’	98
	\authornotemark: Added macro	71	\ACM@restore@pagestyle: Added macro	99
v1.40	General: Added ‘textcase’ package	41	\acmArticle: The default is now empty	71
	Added heightrounded to geometry	50	\acmArticleSeq: Now acmArticle might be empty	71
	Added new copyright version: licensedcagov	35	\acmBooktitle: Added macro	67
	Added package cleveref	35	\editor: Added macro	67
	Added Ross Moore code for glyptounicode	54	\if@ACM@acmthm: Added macro	36
	Bibliography changes	35	\maketitle: Empty DOI or ISBN are not printed (by Michael Ekstrand)	83
	\@copyrightowner: Added new copyright version: licensedcagov	78	v1.45	
	\@copyrightpermission: Added new copyright version: licensedcagov	79	\@folioblob: Switched \bfseries\sffamily to \sffamily\bfseries	104
	\@mkauthors@i: Switched to MakeTextUppercase	93	\@parfont: Switched \bfseries\sffamily to \sffamily\bfseries	107
	\@parfont: Switched to MakeTextUppercase	107	\@titlefont: Switched \bfseries\sffamily to \sffamily\bfseries	88
	\ACM@linecount@bx: Work around a bug in xcolor: looks like cmyk colors in boxes do not work	99	v1.46	
	\ccdesc@parse@finish: Added macro	76	General: Added etoolbox	35
	\city: We now do not print this even in SIG	91	Bst file bug fixes: label width is calculated correctly	35
	\country: Fixed bugs with extra spaces	91	Delayed hypersetup since journal options may change screen mode	48
	\l@subsection: Redefined macro	47	PACM now set screen to true	59
	\postcode: We now do not print this even in SIG	91	Restore theorem defs to class file	35
	\state: We now do not print this even in SIG	91	\@mkauthorsaddresses: Introduced macro	97
	\streetaddress: We now do not print this even in SIG	91	\@mkbibcitation: Added subtitle	98
v1.41	General: Added new badges	35	\@printendtopmatter: Made it \par\bigskip uniformly	99
v1.42	General: Deleted ACM badges	35	\@printtopmatter: Deleted rule	87
v1.43	\@startsection: Added \makeatletter	47	\@setauthorsaddresses: Introduced macro	99
	\country: Added comma before country for journals	91	\ACM@linecount@bx: Rearranged the code to get rid of spurious underfull messages (Benjamin Byholm)	99
v1.44	General: Added package refcount	35	\author: Started counting authors	68
	Deleted package cleveref	35	\authorsaddresses: Introduced macro	70
	Put theorem defs in a separate style	35	\country: Corrected spacing for institution	91
	\acmBooktitle: Added macro	67	\if@ACM@acmthm: Modified description	36
	\acmEditors: Added macro	67	\linenums: Workaround for compatibility with fontspec	55
	\editorsAbbrev: Added macro	67	\maketitle: Added authors’ addresses	83
	\@folioblob: Suppress the blob if acmArticleSeq is empty	104		

Thankses go before authors'	v1.53
addresses	83
\num@authors: Introduced macro	68
v1.47	
General: New journal: THRI	35
v1.48	
General: \citeyear no longer behaves like \citeyearpar	49
Code prettying (Michael D. Adams)	35
Initial support for Biblatex (Daniel Thomas)	35
Misc entries in the bibliography no longer produce a separate date . . .	35
Typos fixed (Jamie Davis)	35
\@headfootfont: Deleted unnecessary switch (Michael D. Adams)	101
\@mkabstract: Removed spurious indentation if abstract is followed by an empty line	97
\ACM@timestamp: Fromatting change (Michael D. Adams)	100
\if@ACM@review: Review mode now switches on folios	36
\maketitle: Added acmart and version info to pdfcreator tag . . .	83
Added language and doctitle attributes to PDF (Andreas Reichinger)	83
Suppressed empty DOI (Serguei Mokhov)	83
v1.50	
\@copyrightpermission: New copyright statements for iw3c2w3[g]	79
v1.51	
General: Corrected the bug with price suppression	77
Suppress price if the copyright is set to iw3c2w3 or iw3c2w3g	77
XeTeX now uses OTF fonts (Joachim Breitner)	54
firstpagestyle: We now use journal abbreviation for footers	104
standardpagestyle: We now use journal abbreviation for footers .	101
v1.52	
\@copyrightowner: Rewording of licenses	78
\@copyrightpermission: Another rewording of copyright statements for iw3c2w3[g]	79
v1.54	
General: Added Ross's patch for sectioning	107
Deleted indent for subsubsection .	107
XeTeX now uses T1 encoding	54
\@mkbibcitation: Bug corrected (Ross Moore)	98
\@shortauthors: Added submission id in anonymous mode	101
\ACM@adddotafter: Added macro . .	107
\ACM@NR@adjustedSectionformat: Added macro	106
\ACM@NR@adjust: Added macro . . .	106
\author: Added submission id in anonymous mode	68
\if@ACM@nonacm: Added macro . . .	37
v1.55	
General: Now we use purple color for links	48
Table captions for SIGCHI now use the same font size as figure captions (Luis Leiva)	56
Typo corrected (Zack Weinberg) .	41
\@mkbibcitation: Bug corrected . .	98
\maketitle: Fixes topnum	83
v1.56	
General: Looks like XeTeX requires explicit monotype font declaration	54
Make two-column layouts flush (Philip Quinn)	50
\@marginfigure: Added checking for description	57
\@mkteasers: Added check for description	97
\acksname: Added macro (Philip Quinn)	113
\ccsdesc@parse: End the concepts list with a period (Philip Quinn)	76
\Description: Added macro	55
\if@Description@present: Added macro	55
\if@undescribed@images: Added macro	55
v1.57	
\ACM@origbaselinestretch: Added check whether the user changed \baselinestretch	114
\author: Added warning if \author has comma	68
\email: Added warning if \author has comma	69

\if@ACM@balance: Added macro	37	\maketitle: Added a switch setting to show that \maketitle is typeset	83
\vspace: Added warning	114		
v1.58		v1.65	
General: Added HEALTH. TDSCI is renamed to TDS	59	\@mkauthorsaddresses: Deleted cs@addpunct	97
Suppressed \addtocounter in pdf subject	48	v1.66	
\@dblfloat: Deleted spurious \vspace warning	57	General: Patching algorithm and algorithm* to prevent spurious space warnings	55
\@margininfigure: Deleted spurious \vspace warning	57	\@specialsection: Suppress warnings about \vspace	86
\@margintable: Deleted spurious \vspace warning	57	v1.67	
\@mkbibcitation: Deleted spurious \vspace warning	98	General: Patching lstlisting and lstlisting* to prevent spurious space warnings	55
\@printendtopmatter: Deleted spurious \vspace warning	99	\@parfont: Deleted redefinitions of sections	107
\@sidebar: Deleted spurious \vspace warning	57	\@specialsection: Paragraph inside group does not print its argument. Added a bugfix	86
\maketitle: Original \vspace inside \maketitle	83	v1.68	
\vspace: Preserved old versions as \@vspace@orig and \@vspace@orig	114	General: New command for unindent paras	107
v1.59		\@specialsection: Deleted grouping altogether	86
\acmConference: Setting \@ACM@journal@bibstrip	67	v1.69	
\acmJournal: Setting \@ACM@journal@bibstrip	67	General: No dots for unindented paragraphs	107
\if@ACM@journal@bibstrip: Introduced macro	39	\@printendtopmatter: Deleted grouping	99
firstpagestyle: Added logic for conference papers using journal format	104	\@specialsection: Changed dot to colon for sigplan	86
Moved page styles to \AtBeginDocument	104	\ACM@linecountR: Do not increase numbers in one column format	100
standardpagestyle: Added logic for conference papers using journal format	101	\ccsdesc@parse: Use math right arrow in text	76
Moved page styles to \AtBeginDocument	101	v1.71	
v1.60		\l@subsubsection: Bug fixed (thanks to Andrew Black)	47
\@headfootfont: Moved to footnotesize	101	v1.72	
v1.61		General: Added hyperxmp	48
\@typeset@author@bx: Added \normalbaselines	94	\author: Added \detokenize (Kuldeep S. Meel)	68
v1.64		\maketitle: Do not andify authors for pdf metadata (Scott Pakin)	83
\ACM@linecount@bx: Bug fix: made the spacing on the left and the right size equal	99	v1.73	
\if@ACM@maketitle@typeset: Introduced macro	59	General: Patching minted and minted* to prevent spurious space warnings	55
		\@ACM@checkaffil: Added macro	93
		\@ACM@resetaffil: Added macro	93
		\@mkauthors@i: Check the presence of required elements for affiliations	93

\@mkauthors@iii: Check the presence of required elements for affiliations	94	v1.82	\anon: Introduced macro	82
\@mkauthors@iv: Check the presence of required elements for affiliations	95	v1.83	General: Use babel for multilanguage papers	43
\city: Check the presence in affil	91		\@mkabstract: I13n	97
\country: Check the presence in affil	91		\@mkttitle@i: Added \translatedtitle and \translatedsubtitle	89
\if@ACM@citypresent: Added macro	93		\@mkttitle@iii: Added \translatedtitle and \translatedsubtitle	90
\if@ACM@countrypresent: Added macro	93		\@mkttitle@iv: Added \translatedtitle and \translatedsubtitle	90
\if@ACM@instppresent: Added macro	93		\@mktranslatedabstract: Added macro	98
\institution: Check the presence in affil	91		\@mktranslatedkeywords: Added macro	70
\maketitle: Do not check again the presense of address fields	83		\@translatedabstracts: Added macro	45
v1.74			\@translatedkeywords: Added macro	45
General: Changed the order of font loading	54		\@translatedsubtitle: Added macro	45
v1.75			\@translatedtitle: Added macro	44
\@ACM@checkaffil: Changed warning to error for country	93		\ACM@lang@check: Added macro	44
\beginmaketitlehook: Introduced macro	82		\ACM@languages: Introduced macro	38
\AtBeginMaketitle: Introduced macro	83		\maketitle: I13n	83
\maketitle: Added \beginmaketitlehook	83		\translatedabstract: Added macro	45
v1.76			\translatedkeywords: Added macro	45
General: Moved hyperxmp before hyperref, see https://github.com/borisveytsman/acmart/issues/425	48		\translatedsubtitle: Added macro	45
\author: Added code for orcid links	68	v1.85	\translatedtitle: Added macro	45
\if@ACM@pbalance: Added macro	37		General: Added CC licenses	77
\maketitle: Put \par inside group for keywords	83		\acmengagemetadata: Introduced macro	83
\orcid: Added code for orcid links	70		\copyrightowner: Added CC licenses	78
\standardpagestyle: Fixed bug with no line numbers for nonacm	101		\copyrightpermission: Added CC licenses	79
v1.77			\typesetengagemetadata: Introduced macro	99
\@mkauthorsaddresses: New separator of institutions	97		\if@ACM@engage: Introduced macro	39
v1.78			\maketitle: acm engage	83
\@mkauthors@i: Unboxing \mkttitle@bx	93		\setcctype: Added macro	78
\@mkauthors@iii: Unboxing \mkttitle@bx	94		\setengagemetadata: Introduced macro	83
\@mkteasers: Unboxing \mkttitle@bx	97	v1.86	\country: Error if country is empty	91
\printtopmatter: Added processing the overflowing title box	87		\standardpagestyle: Special treatment of ACM Engage materials	101
\specialsection: Again suppressed \vspace warning	86			

v1.87	
General: Added ‘framed’ package for	
acmcp	41
No numbering sections for ACMCP	108
\@ACM@color@frame: Introduced	
macro	75
\@ACM@copyright@check@cc: Added	
macro	79
\@copyrightpermission: CC licenses	
now are allowed only for non-acm	
or ACM engage publications . . .	79
\@mkauthors@i: Special treatment for	
acmcp	93
\@mktitle@i: Special treatment for	
acmcp	89
\acmArticleType: Introduced macro	75
\acmCodeLink: Added possibility to	
have several links	75
Introduced macro	75
\acmDataLink: Introduced macro . .	75
Now this is the same as the code link	75
\if@ACM@acmcp: Introduced macro . .	39
firstpagestyle: Special treatment	
for acmcp	104
\maketitle: CC license are allowed	
for non-acm publications	83
\set@ACM@acmcpbox: Added macro . .	86
v1.88	standardpagestyle: Special
	treatment of ACMCP
	101
v1.89	\@mktitle@i: Moved down title for
	acmcp
	89
	General: Added ‘zref-savepos’ package
	for acmcp
	41
	\@ACM@acmcp@delta: Added dimen . .
	41
	\@ACM@badge@skip: Redefined macro
	72
	\@ACM@color@frame: Added saving
	the position of the bottom
	75
	\@acmBadgeL: Introduced macro . . .
	72
	\@acmBadgeR: Introduced macro . . .
	72
	\@mktitle@i: Moved badges to top
	header
	89
	Moved up acmcp title
	89
	\@mktitle@iii: Moved badges to top
	header
	90
	\acmBadge: Added macro
	73
	\acmBadgeL: Redefined macro
	72
	\acmBadgeR: Redefined macro
	72
	\if@ACM@badge: Deleted macro
	72
	firstpagestyle: Moved badges here
	104
	\set@ACM@acmcpbox: Added logo . . .
	86
	Added zref position of the bottom
	86

Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; numbers in roman refer to the code lines where the entry is used.
