## Commentary

This file is a dummy L<sup>A</sup>T<sub>E</sub>X package. The output of `acrotex-js` produces no document that is consumed by any L<sup>A</sup>T<sub>E</sub>X engine. At the time of first publication of this “package” distributes the JavaScript files `aeb.js` and `aeb_pro.js` (found in the `js-files` folder of this distribution) and provides documentation of how to install it, refer to `docs/install_jsfiles.pdf`.

**Packages that require this JS files.** The following is a list of packages that require the proper installation of the JS files provided by this package.

- `aeb.js`: Required by the `insdljs` package,<sup>1</sup> but for only for owners of the Acrobat application *and* who use the `dvips` -> Adobe Distiller or `dvips` -> `ps2pdf` workflow.<sup>2</sup>
- `aeb_pro.js`: Required by the `aeb_pro`, `thorshammer`, and `docassembly` packages.

In all cases, the JS files must be correctly installed for the above packages for them to perform as designed. Refer to `docs/install_jsfiles.pdf` for installation instructions.

```
1 <*package>
2 % noop
3 </package>
```

---

<sup>1</sup>Or, any package that uses `insdljs`.

<sup>2</sup>There is no harm in the routine installation of this file even if you don't use Distiller or `ps2pdf`.
