# 1 The French language

The file `frenchb.dtx`<sup>1</sup>, defines all the language definition macros for the French language.

Customisation for the French language is achieved following the book “Lexique des règles typographiques en usage à l’Imprimerie Nationale” troisième édition (1994), ISBN-2-11-081075-0.

First version released: 1.1 (May 1996) as part of Babel-3.6beta. Version 2.0a was released in February 2007 and version 3.0a in February 2014.

`babel-french` has been improved using helpful suggestions from many people, mainly from Jacques André, Michel Bovani, Thierry Bouche, Vincent Jalby, Denis Bitouzé, Ulrike Fisher and Marcel Krüger. Thanks to all of them!

LaTeX-2.09 is no longer supported. This new version (3.x) has been designed to be used only with LaTeX2e and Plain formats based on TeX, pdfTeX, LuaTeX or XeTeX engines.

Changes between version 3.0 and v3.5m are listed in subsection [1.4 p. 11](#).

An extensive documentation in French (file `frenchb-doc.pdf`) is now included in `babel-french`.

## 1.1 Basic interface

In a multilingual document, some typographic rules are language dependent, i.e. spaces before ‘high punctuation’ ( : ; ! ?) in French, others modify the general layout (i.e. layout of lists, footnotes, indentation of first paragraphs of sections) and should apply to the whole document.

The French language can be loaded with Babel by a command like:

```
\usepackage[german,spanish,french,british]{babel}
```

<sup>2</sup>

A variant `acadian` of `french` is provided; it is originally identical to `french` but can be customised independently in terms of patterns, punctuation spacing, captions, etc. Both variants can be used together inside the same document.

`babel-french` takes account of Babel’s *main language* defined as the *last* option at Babel’s loading. When French is not Babel’s main language, `babel-french` does not alter the general layout of the document (even in parts where French is the current language): the layout of lists, footnotes, indentation of first paragraphs of sections are not customised by `babel-french`.

When French is loaded as the last option of Babel, `babel-french` makes the following changes to the global layout, *both in French and in all other languages*<sup>3</sup>:

1. the first paragraph of each section is indented (LaTeX only);
2. the default items in itemize environment are set to ‘—’ instead of ‘•’, and all vertical spacing and glue is deleted; it is possible to change ‘—’ to something else (‘-’ for instance) using `\frenchsetup{}` (see section [1.2 p. 5](#));
3. vertical spacing in general LaTeX lists is shortened;
4. footnotes are displayed “à la française”.

---

<sup>1</sup>The file described in this section has version number v3.5m and was last revised on 2021/07/20.

<sup>2</sup>Always use `french` as option name for the French language, former aliases `frenchb` or `francais` are depreciated; expect them to be removed sooner or later!

<sup>3</sup>For each item, hooks are provided to reset standard LaTeX settings or to emulate the behavior of former versions of `babel-french` (see command `\frenchsetup{}`, section [1.2 p. 5](#)).

5. the separator following the table or figure number in captions is printed as ‘ – ’ instead of ‘:’; for changing this see [1.2.3 p. 9](#).

Regarding local typography, the command `\selectlanguage{french}` switches to the French language<sup>4</sup>, with the following effects:

1. French hyphenation patterns are made active;
2. ‘high punctuation’ characters (: ; ! ?) automatically add correct spacing <sup>5</sup> in French; this is achieved using callbacks in Lua(La)TeX or ‘XeTeXinterchar’ mechanism in Xe(La)TeX; with TeX’82 and pdf(La)TeX these four characters are made active in the whole document;
3. `\today` prints the date in French;
4. the caption names are translated into French (LaTeX only). For customisation of caption names see section [1.2.2 p. 9](#).
5. the space after `\dots` is removed in French.

Some commands are provided by `babel-french` to make typesetting easier:

1. French quotation marks can be entered using the commands `\og` and `\fg` which work in LaTeX2e and PlainTeX, their appearance depending on what is available to draw them; even if you use LaTeX2e *and* T1-encoding, you should refrain from entering them as <<~French quotation~>>: `\og` and `\fg` provide better horizontal spacing (controlled by `\FBguillspace`). If French quote characters are available on your keyboard, you can use them, to get proper spacing in LaTeX2e see option `og=<`, `fg=>` p. 8.

`\og` and `\fg` can be used outside French, they typeset then English quotes “ and ”.

A new command `\frquote{}` has been added in version 3.1 to enter French quotations. `\frquote{texte}` is equivalent to `\og texte \fg{}` for short quotations. For quotations spreading over more than one paragraph, `\frquote` will add at the beginning of every paragraph of the quotation either an opening French guillemet (`<`), or a closing one (`>`) or nothing depending on option `EveryParGuill=open` or `=close` or `=none`, see p. 8. Command `\NoEveryParQuote` is provided to locally suppress unwanted guillemets (typically when lists are embedded in `\frquote{}`), it is meant to be used inside an environment or a group.

`\frquote` is recommended to enter embedded quotations “à la française”, several variants are provided through options.

- with all engines: the inner quotation is surrounded by double quotes (“texte”) unless option `InnerGuillSingle=true`, then a) the inner quotation is printed as `< texte >` and b) if the inner quotation spreads over more than one paragraph, every paragraph included in the inner quotation starts with a `<` or a `>` or nothing, depending on option `EveryParGuill=open` (default) or `=close` or `=none`.

---

<sup>4</sup>`\selectlanguage{francais}` and `\selectlanguage{frenchb}` are no longer supported.

<sup>5</sup>Well, the automatic insertion may add unwanted spaces in some cases, for correction see `AutoSpacePunctuation` option and `\NoAutoSpacing` command p. 7.

- with LuaTeX based engines, it is possible to add a French opening or closing guillemet (« or ») at the beginning of every line of the inner quotation using option `EveryLineGuill=open` or `=close`; note that with any of these options, the inner quotation is surrounded by French guillemets (« and ») regardless option `InnerGuillSingle`; the default is `EveryLineGuill=none` so that `\frquote{}` behaves as with non-LuaTeX engines.

A starred variant `\frquote*` is meant for inner quotations which end together with the outer one: using `\frquote*` for the inner quotation will print only one closing quote character (the outer one) as recommended by the French ‘Imprimerie Nationale’.

2. `\frenchdate{<year>}{<month>}{<day>}` helps typesetting dates in French: `\frenchdate{2001}{01}{01}` will print 1<sup>er</sup> janvier 2001 in a box without any linebreak.
3. A command `\up` is provided to typeset superscripts like `M\up{me}` (abbreviation for “Madame”), `1\up{er}` (for “premier”). Other commands are also provided for ordinals: `\ier`, `\iere`, `\iers`, `\ieres`, `\ieme`, `\iemes` (`3\iemes` prints 3<sup>es</sup>). All these commands take advantage of real superscript letters when they are available in the current font.
4. Family names should be typeset in small capitals and never be hyphenated, the macro `\bsc` (boxed small caps) does this, e.g., `L.\~\bsc{Lamport}` will print the same as `L.\~\mbox{\textsc{Lamport}}`. Note that composed names (such as Dupont-Durant) may now be hyphenated on explicit hyphens, this differs from babel-french v. 1.x.
5. Commands `\primo`, `\secundo`, `\tertio` and `\quarto` print 1<sup>o</sup>, 2<sup>o</sup>, 3<sup>o</sup>, 4<sup>o</sup>. `\FrenchEnumerate{6}` prints 6<sup>o</sup>.
6. Abbreviations for “Numéro(s)” and “numéro(s)” (N<sup>o</sup> N<sup>os</sup> n<sup>o</sup> and n<sup>os</sup>) are obtained via the commands `\No`, `\Nos`, `\no`, `\nos`.
7. Two commands are provided to typeset the symbol for “degré”: `\degre` prints the raw character and `\degrees` should be used to typeset temperatures (e.g., “20~\degrees C” with a non-breaking space), or for alcohols’ strengths (e.g., “45\degrees” with no space in French) or for angles in math mode.
8. In math mode the comma has to be surrounded with braces to avoid a spurious space being inserted after it, in decimal numbers for instance (see the T<sub>E</sub>Xbook p. 134). The command `\DecimalMathComma` makes the comma behave as an ordinary character *when the current language is French* (no space added); as a counterpart, if `\DecimalMathComma` is active, an explicit space has to be added in lists and intervals: `[$[0,\ 1]$]`, `$(x,\ y)$`. `\StandardMathComma` switches back to the standard behaviour of the comma in French.
- The `icomma` package is an alternative workaround.
9. A command `\nombre` was provided in 1.x versions to easily format numbers in slices of three digits separated either by a comma in English or with a space in French; `\nombre` is now mapped to `\numprint` from `numprint.sty`, which should be loaded *after* Babel, see `numprint.pdf` for more information.

- babel-french has been designed to take advantage of the xspace package if present: adding `\usepackage{xspace}` in the preamble will force macros like `\fg`, `\ier`, `\ieme`, `\dots`, ..., to respect the spaces you type after them, for instance typing '1\ier juin' will print '1<sup>er</sup> juin' (no need for a forced space after 1\ier).

## 1.2 Customisation

Customisation of babel-french relies on command `\frenchsetup{}` (formerly called `\frenchbsetup{}`, the latter name will be kept for ever to ensure backwards compatibility), options are entered using the keyval syntax. The command `\frenchsetup{}` is to appear in the preamble only (after loading Babel).

### 1.2.1 `\frenchsetup{options}`

`\frenchsetup{}` and `\frenchbsetup{}` are synonymous; the latter should be preferred as the language name for French in Babel is no longer `frenchb` but `french`. `\frenchsetup{ShowOptions}` prints all available options to the `.log` file, it is just meant as a remainder of the list of offered options. As usual with keyval syntax, boolean options (as `ShowOptions`) can be entered as `ShowOptions=true` or just `ShowOptions`, the `=true` part can be omitted.

The other options are listed below. Their default value is shown between braces, sometimes followed by a `*`. The `*` means that the default shown applies when babel-french is loaded as the *last* option of Babel —Babel's *main language*—, and is toggled otherwise.

`StandardLayout=true (false*)` forces babel-french not to interfere with the layout: no action on any kind of lists, first paragraphs of sections are not indented (as in English), no action on footnotes; it is useless unless French is the main language. This option can be used to avoid conflicts with classes or packages which customise lists or footnotes.

`GlobalLayoutFrench=false (true*)` can only be used when French is the main language; setting it to `false` will emulate what prior versions of babel-french (pre-2.2) did: lists, and first paragraphs of sections will be displayed the standard way in other languages than French, and “à la française” in French (changing the layout inside a document is a bad practice imho). Note that the layout of footnotes is language independent anyway (see below `FrenchFootnotes` and `AutoSpaceFootnotes`).

`IndentFirst=false (true*)`; set this option to `false` if you do not want babel-french to force indentation of the first paragraph of sections. When French is the main language, this option applies to all languages.

`PartNameFull=false (true)`; when true, babel-french numbers the title of `\part{}` commands as “Première partie”, “Deuxième partie” and so on. With some classes which change the `\part{}` command (AMS classes do so), you could get “Première partie 1”, “Deuxième partie 2” in the toc; when this occurs, this option should be set to `false`, part titles will then be printed as “Partie I”, “Partie II”.

`ListItemsAsPar=true (false)` setting this option to `true` is recommended: list items will be displayed as paragraphs with indented labels (in the “Imprimerie Nationale” way) instead of having labels hanging into the left margin. How these two layouts differ is shown below:

Text starting at ‘parindent’ <= Leftmargin — first item running on two lines or more... — first second level item on two lines... — next one... — second item...	Text starting at ‘parindent’ <= Leftmargin — first item running on two lines or more... — first second level item on two lines... — next one... — second item...
Default French layout	With <code>ListItemsAsPar=true</code>

`StandardListSpacing=true (false*)`<sup>6</sup>; babel-french customises the vertical spaces in the list environment, this affects all lists, including `itemize`, `enumerate`, `description`, but also `abstract`, `quote`, `quotation`, `verse`, etc. which are based on `list`. Setting this option to `true` reverts to the standard settings of the list environment as defined by the document class.

`StandardItemEnv=true (false*)`; babel-french redefines the `itemize` environment to suppress any vertical space between items of `itemize` lists in French and customises left margins. Setting this option to `true` reverts to the standard definition of `itemize`.

`StandardEnumerateEnv=true (false*)`; babel-french redefines `enumerate` and `description` environments to make left margins match those of the French version of `itemize` lists. Setting this option to `true` reverts to the standard definition of `enumerate` and `description`.

`StandardItemLabels=true (false*)` when set to `true` this option prevents babel-french from changing the labels in `itemize` lists in French.

`ItemLabels=\textbullet, \textendash, \ding{43}, (\textemdash*)`;  
when `StandardItemLabels=false` (the default), this option enables to choose the label used in French `itemize` lists for all levels. The next four options do the same but each one for a specific level only. Note that `\ding{43}` requires loading the `pifont` package.

`ItemLabeli=\textbullet, \textendash, \ding{43} (\textemdash*)`

`ItemLabelii=\textbullet, \textendash, \ding{43} (\textemdash*)`

`ItemLabeliii=\textbullet, \textendash, \ding{43} (\textemdash*)`

`ItemLabeliv=\textbullet, \textendash, \ding{43} (\textemdash*)`

`StandardLists=true (false*)` forbids babel-french to customise any kind of list. Try the option `StandardItemLabels` in case of conflicts with classes or

---

<sup>6</sup>This option should be used instead of former option `ReduceListSpacing` (kept for backward compatibility) which could be misleading: with some classes (`smfart`, `smfbook` f.i.) you had to set `ReduceListSpacing=false` to revert to the class settings which actually reduce list's spacings even more than babel-french! `StandardListSpacing=true` replaces `ReduceListSpacing=false`.

packages that customise lists too. This option is just a shorthand setting all four options `StandardListSpacing=true`, `StandardItemizeEnv=true`, `StandardEnumerateEnv=true` and `StandardItemLabels=true`.

`ListOldLayout=true (false)`; starting with version 2.6a, the layout of lists has changed regarding leftmargins' sizes and default itemize label ('—' instead of '–' up to 2.5k). This option, provided for backward compatibility, displays lists as they were up to version 2.5k.

`FrenchFootnotes=false (true*)` reverts to the standard layout of footnotes. By default babel-french typesets leading numbers as '1. ' instead of '1', but has no effect on footnotes numbered with symbols (as in the `\thanks` command). Two commands `\StandardFootnotes` and `\FrenchFootnotes` are available to change the layout of footnotes locally; `\StandardFootnotes` can help when some footnotes are numbered with letters (inside minipages for instance).

`AutoSpaceFootnotes=false (true*)`; by default babel-french adds a thin space in the running text before the number or symbol calling the footnote. Making this option `false` reverts to the standard setting (no space added).

`AutoSpacePunctuation=false (true)`; in French, the user *should* input a space before the four characters ' ; ! ?' but as many people forget about it (even among native French writers!), the default behaviour of babel-french is to automatically typeset non-breaking spaces the width of which is either `\FBthinspace` (defaults to a thin space) before ';' ' !' '?' or `\FBcolonspace` (defaults to `\space`) before ':'; the defaults follow the French 'Imprimerie Nationale's recommendations. This is convenient in most cases but can lead to addition of spurious spaces in URLs, in MS-DOS paths or in timetables (10:55)—this no longer occurs with LuaTeX—, except if they are typed in `\texttt` or verbatim mode. When the current font is a monospaced (typewriter) font, no spurious space is added in that case<sup>7</sup>, so the default behaviour of babel-french in that area should be fine in most circumstances.

Choosing `AutoSpacePunctuation=false` will ensure that a proper space is added before ' ; ! ?' *if and only if* a (normal) space has been typed in. This option gives full control on space insertion before ' ; ! ?'. Those who are unsure about their typing in this area should stick to the default option and use the provided `\NoAutoSpacing` command inside a group in case an unwanted space is added by babel-french (i.e. `\{ \NoAutoSpacing http://mysite }`<sup>8</sup> or `\{ \NoAutoSpacing ??? }` (needed for pdfTeX only)).

`ThinColonSpace=true (false)` changes the non-breaking space added before the colon ':' to a thin space, so that the same amount of space is added before any of the four 'high punctuation' characters. The default setting is supported by the French 'Imprimerie Nationale'.

`OriginalTypewriter=true (false)` prevents any customisation of `\ttfamily` and `\texttt{}` in French. This option should only be used to ensure backward compatibility. The current default behaviour is to switch off any addition of space before high punctuation with typewriter fonts (e.g. verbatim).

---

<sup>7</sup>Unless option `OriginalTypewriter` is set, `\ttfamily` is redefined in French to switch off space tuning, see below.

<sup>8</sup>Actually, this is needed only with the XeTeX and pdfTeX engines. LuaTeX no longer inserts any space in strings like `http://mysite, C:\Foo, 10:55...`

**UnicodeNoBreakSpaces=true (false)**; (experimental) this option should be set to **true** only while converting *LuaLaTeX files* to HTML. It ensures that non-breaking spaces added by *babel-french* are inserted in the PDF file as U+A0 or U+202F (thin) instead of penalties and glues. Note that *lwarp* (v. 0.37 and up) is fully compatible with *babel-french* for translating *PDFLaTeX* or *XeLaTeX* files to HTML.

**og=<, fg=>**; when guillemets characters are available on the keyboard (through a compose key for instance), it is nice to use them instead of typing \og and \fg. This option tells *babel-french* which characters are opening and closing French guillemets (they depend on the input encoding), then you can type either « guillemets » or «guillemets» (with or without spaces) to get properly typeset French quotes. This option works with *LuaLaTeX* and *XeLaTeX*; with *pdfLaTeX* it requires *inputenc* to be loaded with a proper encoding: 8-bits encoding (latin1, latin9, ansinew, applemac,...) or multi-byte encoding (utf8, utf8x).

**INGuillSpace=true (false)** resets the dimensions of spaces after opening French quotes and before closing French quotes to the French ‘Imprimerie Nationale’ standards (inter-word space). *babel-french*’s default setting produces slightly narrower spaces with less stretchability.

**EveryParGuill=open, close, none (open)**; sets whether an opening quote (<) or a closing one (>) or nothing should be printed by \frquote{} at the beginning of every paragraph included in a level 1 (outer) quotation. This option is also considered for level 2 (inner) quotations to decide between < and > when **InnerGuillSingle=true** (see below).

**EveryLineGuill=open, close, none (none)**; with *LuaTeX* based engines only, it is possible to set this option to **open** [resp. **close**]; this ensures that a ‘‘’ [resp. ‘’’] followed by a proper space will be inserted at the beginning of every line of embedded (inner) quotations spreading over more than one line (provided that both outer and inner quotations are entered with \frquote{}). When **EveryLineGuill=open** or =**close** the inner quotation is always surrounded by « and », the next option is ineffective.

**InnerGuillSingle=true (false)**; if **InnerGuillSingle=false** (default), inner quotations entered with \frquote{} start with ` and end with '. If **InnerGuillSingle=true**, < and > are used instead of British double quotes; moreover if option **EveryParGuill=open** (or **close**) is set, a < (or >) is added at the beginning of every paragraph included in the inner quotation.

**ThinSpaceInFrenchNumbers=true (false)**; if *numprint* has been loaded with the *autolanguage* option, while typesetting numbers with the \numprint{} command, \nphousandsep is defined as a non-breaking space (~)<sup>9</sup> in French; when set to true, this option redefines \nphousandsep as a thin space (\,).

**SmallCapsFigTabCaptions=false (true\*)**; when set to **false**, \figurename and \tablename will be printed in French captions as “Figure” and “Table” instead of being printed in small caps (the default). The same result can be achieved by defining \FBfigtabshape as \relax before loading *babel-french* (in a document class f.i.).

---

<sup>9</sup>Actually without stretch nor shrink.

`CustomiseFigTabCaptions=false (true*)`; when `false` the default separator (colon) is used instead of `\CaptionSeparator`. Anyway, babel-french tries hard to insert a proper space before it in French and warns if it fails to do so.

`OldFigTabCaptions=true (false)` is to be used *only* when figures' and tables' captions must be typeset as with pre 3.0 versions of babel-french (with `\CaptionSeparator` in French and colon otherwise). Intended for standard LaTeX classes only.

`FrenchSuperscripts=false (true)`; then `\up=\textsuperscript`. (option added in version 2.1). Should only be made `false` to recompile documents written before 2008 without changes: by default `\up` now relies on `\fup` designed to produce better looking superscripts.

`LowercaseSuperscripts=false (true)`; by default babel-french inhibits the up-percasing of superscripts (for instance when they are moved to page headers). Making this option `false` will disable this behaviour (not recommended).

`SUPPRESSWarning=true (false)`; can be turned to `true` if you are bored with babel-french's warnings; use this option as *first* option of `\frenchsetup{}` to cancel warnings launched by other options.

**Options' order** – Please remember that options are read in the order they appear in the `\frenchsetup{}` command. Someone wishing that babel-french leaves the layout of lists and footnotes untouched but caring for indentation of first paragraph of sections should choose

`\frenchsetup{StandardLayout, IndentFirst}` to get the expected layout. The reverse order `\frenchsetup{IndentFirst, StandardLayout}` would lead to option `IndentFirst` being overwritten by `StandardLayout`.

### 1.2.2 Caption names

All caption names can easily be customised in French using the simplified syntax introduced by Babel 3.9, for instance `\def\frenchproofname{Preuve}` or `\def\acadianproofname{Preuve}` for the acadian dialect. The older syntax `\addto\captionsfrench{\def\proofname{Preuve}}` still works. Keep in mind that *only* french can be used to redefine captions, even if Babel's option was entered as `frenchb` or `francais`.

### 1.2.3 Figure and table captions

In French, captions in figures and tables should never be printed as 'Figure 1: ' which is the default in standard LaTeX2e classes (a space should *always* precede a colon in French), anyway 'Figure 1 – ' is preferred.

When French is the main language, the default behaviour of babel-french is to change the separator (colon) used in figures' and tables' captions *for all languages* to `\CaptionSeparator` which defaults to ' – ' and can be redefined in the preamble with `\renewcommand*{\CaptionSeparator}{...}`. This works for the standard LaTeX2e classes, for the memoir koma-script and beamer classes. In case this procedure fails a warning is issued.

When French is not the main language, the colon is preserved for all languages including French but babel-french tries hard to insert a proper space before it and warns if it fails to do so.

Three options are provided to customise figure and table captions:

- `CustomiseFigTabCaptions` is set to `true` when French is the main language (hence separator = ‘–’) and to `false` otherwise (hence separator = ‘:’ with a proper space before the colon in French if possible); toggle this option if needed;
- the second option, `OldFigTabCaptions`, can be set to `true` to print figures’ and tables’ captions as they were with versions pre 3.0 of babel-french (using `\CaptionSeparator` in French and colon in other languages); this option only makes sense with the standard LaTeX classes `article`, `report` and `book`;
- the last option, `SmallCapsFigTabCaptions`, can be set to `false` to typeset `\figurename` and `\tablename` in French as “Figure” and “Table” rather than in small caps (the default).

### 1.3 Hyphenation checks

Once you have built your format, a good precaution would be to perform some basic tests about hyphenation in French. For LaTeX2e I suggest this:

- run pdfTeX on the following file:

```
%%% Test file for French hyphenation.  
\documentclass[french]{article}  
\usepackage[utf8]{inputenc} % utf8, what else?  
\usepackage[T1]{fontenc}    % mandatory for French  
\usepackage{lmodern}       % or erewhon, palatino...  
\usepackage{babel}  
\begin{document}  
\showhyphens{signal container \'ev\'ement alg\`ebre}  
\showhyphens{signal container \'evenement alg\`ebre}  
\end{document}
```

- check the hyphenations proposed by TeX in your log-file; in French you should get with both 7-bit and 8-bit encodings  
si-gnal contai-ner évé-ne-ment al-gèbre.  
Do not care about how accented characters are displayed in the log-file, what matters is the position of the ‘-’ hyphen signs *only*.

If they are all correct, your installation (probably) works fine, if one (or more) is (are) wrong, ask a local wizard to see what’s going wrong and perform the test again (or e-mail me about what happens).

Frequent mismatches:

- you get sig-nal con-tainer, this probably means that the hyphenation patterns you are using are for US-English, not for French;
- you get no hyphen at all in évé-ne-ment, this probably means that you are using CM fonts and the macro `\accent` to produce accented characters. Using 8-bits fonts with built-in accented characters avoids this kind of mismatch.

## 1.4 Changes

### What's new in version 3.5?

Version 3.5a offers a new option `ListItemsAsPar`. The default layout of lists is unchanged (for backward compatibility), but users should try this new option which ensures a layout of lists closer to French typographic standards: see f.i. how lists are typeset in the book “Lexique des règles typographiques en usage à l’Imprimerie Nationale”.

Version 3.5b fixes a bug due to wrong `\everypar`'s management in `\frquote{}`; it showed up when `\frquote{}` immediately followed a sectionning command.

Starting with version 3.5d, a new option `StandardListSpacing` has been added to supersede `ReduceListSpacing`.

A new command `\NoEveryParQuote` has been added in version 3.5e: it is meant to be used inside a group or environment to suppress unwanted guillemets (typically when lists are embedded in `\frquote{}`).

Version 3.5g fixes a long standing bug affecting LuaTeX: legacy kerning was disabled for Type1 fonts since v3.1g (2015).

Version 3.5j also fixes a long standing bug affecting koma-script, memoir et beamer classes: redefinitions of the caption separator (commands `\captionformat`, `\captiondelim`, etc.) are now taken into account properly.

Version 3.5k is a cleanup release:

- the translations in French of `\figurename` and `\tablename` no longer hold font changing commands (switch to small caps), the font switch has been moved to `\fnum@figure` and `\fnum@table` as suggested by Axel Sommerfeldt.
- Package `caption` can now be loaded whether before or after `babel`, indifferently.
- `\pdfstringdefDisableCommands` is no longer used: as suggested by the LaTeX3 team, all commands requiring special care in `hyperref`'s bookmarks are now defined using `\textorpdfstring{}{}`.

### What's new in version 3.4?

Version 3.4a adds a new command `\frenchdate` (see p. 4) and slightly changes number formatting: `\FBthousandsep` is now a *kern* instead of a rubber length. `\renewcommand*\{\FBthousandsep\}{~}` will switch back to the former (wrong) behaviour.

Both options `french` and `acadian` can now be used simultaneously in a document; currently `french` and `acadian` are identical, it is up to the user to customise `acadian` in terms of hyphenation patterns, captionnames, date format or high punctuation and quotes spacing if he/she needs a variant for French.

A new command `\FBsetspace` has been added for easy customising of spacing before high punctuation and inside quotes independently for `french` and `acadian`, see p. 18.

Version 3.4 requires eTeX and LuaTeX 1.0.4 or newer.

### What's new in version 3.3?

In version 3.3d the automatic insertion of non-breaking spaces before the colon character has been improved *with engine LuaTeX only*: a spurious space is no longer

inserted in strings like `http://mysite`, `C:\Program Files` or `10:55`. Unfortunately, my attempts to do the same with XeTeX or pdfTeX were unsuccessful.

A few internal changes have been made in version 3.3c to improve the conversion into HTML of non-breaking spaces added by `babel-french`. Usage of `lwrap` (v.0.37 and up) is recommended for HTML output, it works fine on files compiled with XeLaTeX or pdfLaTeX formats. A new experimental option `UnicodeNoBreakSpaces` has been added for LuaLaTeX in version 3.3c, see p. 8.

According to current Babel's standards, every dialect should have its own `.ldf` file; starting with version 3.3b, the main support for French is in `french.ldf`, portmanteau files `frenchb.ldf`, `francais.ldf`, `acadian.ldf` and `canadien.ldf` have been added. Recommended options are `french` or `acadian`, all other are deprecated. BTW, options `french` and `acadian` are currently strictly identical.

Release 3.3a is compatible with LuaTeX v. 0.95 (TL2016) and up. Former skips `\FBcolonskip`, `\FBthinspace` and `\FBguillskip` controlling punctuation spacings in LuaTeX have been removed; all three engines now rely on the same commands `\FBcolonspace`, `\FBthinspace` and `\FBguillspace`.

An alias `\frenchsetup{}` for `\frenchbsetup{}` has been added in version 3.3a, it might appear more relevant in the future as the language name `frenchb` should vanish.

Further customisation of the `\part{}` command is provided via three new commands `\frenchpartfirst`, `\frenchpartsecond` and `\frenchpartnameord`.

### What's new in version 3.2?

Version 3.2g changes the default behaviour of `\frquote{}` with LuaTeX based engines, the output is now the same with all engines; to recover the former behaviour, add option `EveryLineGuill=open`.

The handling of footnotes has been redesigned for the `beamer`, `memoir` and `koma-script` classes. The layout of footnotes “à la française” should be unchanged but footnotes' customisations offered by these classes (i.e. font or color changes) are now available even when option `FrenchFootnotes` is `true`.

A long standing bug regarding the `xspace` package has been fixed: `\xspace` has been moved up from the internal command `\FB@fg` to `\fg`; `\frquote{}` now works properly when the `xspace` package is loaded.

Version 3.2b is the first one designed to work with LuaTeX v. 0.95 as included in TeXLive 2016 (LuaTeX's new glue node structure is not compatible with previous versions).

**Warning to Lua(La)TeX users:** starting with version 3.2b the lua code included in `frenchb.lua` will *not work* on older installations (TL2015 f.i.), so `babel-french` reverts to active characters while handling high punctuation with LuaTeX engines older than 0.95! The best way to go is to upgrade to TL2016 or equivalent asap. Xe(La)TeX and pdf(La)TeX users can safely use `babel-french` v. 3.2b and later on older installations too.

The internals of commands `\NoAutoSpacing`, `\ttfamilyFB`, `\rmfamilyFB` and `\sfamilyFB` have been completely redesigned in version 3.2c, they behave now consistently with all engines.

### What's new in version 3.1?

New command `\frquote{}` meant to enter French quotations, especially long ones (spreading over several paragraphs) and/or embedded ones. see p. 3 for details.

## What's new in version 3.0?

Many deep changes lead me to step babel-french's version number to 3.0a:

- Babel 3.9 is required now to process frenchb.ldf, this change allows for cleaner definitions of dates and captions for the Unicode engines LuaTeX and XeTeX and also provides a simpler syntax for end-users, see section [1.2.2 p.9](#).
- \frenchsetup{} options management has been completely reworked; two new options added.
- Canadian French didn't work as a normal Babel's dialect, it should now; btw. the French language should now be loaded as french, *not* as frenchb or francais and preferably as a *global* option of \documentclass. Some tolerance still exists in v3.0, but do not rely on it.
- babel-french no longer loads frenchb.cfg: customisation should definitely be done using \frenchsetup{} options.
- Description lists labels are now indented; try setting \descindentFB=0pt (or \listindentFB=0pt for all lists) in the preamble if you don't like it.
- The last but not least change affects the (recent) LuaTeX-based engines, (this means version 0.76 as included in TL2013 and up): active characters are no longer used in French for 'high punctuation' <sup>10</sup>. Functionalities and user interface are unchanged.

Many thanks to Paul Isambert who provided the basis for the lua code (see his presentation at GUT'2010) and kindly reviewed my first drafts suggesting significant improvements.

Starting with version 3.0c, babel-french no longer customises lists with the beamer class and offers a new option (**INGuillSpace**) to follow French 'Imprimerie Nationale' recommendations regarding quotes' spacing.

---

<sup>10</sup>The current babel-french version requires LuaTeX v. 1.0.4 as included in TL2017, see above.

## 2 The code

### 2.1 Initial setup

The macro `\LdfInit` takes care of preventing that this file is loaded more than once (even if both options `french` and `acadian` are used in the same document), checking the category code of the `@` sign, etc.

```
1 <*french>
2 \LdfInit\CurrentOption{FBclean@on@exit}
```

Let's provide a substitute for `\PackageError`, `\PackageWarning` and `\PackageInfo` not defined in Plain:

```
3 \def\fb@error#1#2{%
4   \begingroup
5     \newlinechar=`\^J
6     \def\\{\^J(french.ldf) }%
7     \errhelp{#2}\errmessage{\\\#1^J}%
8   \endgroup
9 \def\fb@warning#1{%
10   \begingroup
11     \newlinechar=`\^J
12     \def\\{\^J(french.ldf) }%
13     \message{\\\#1^J}%
14   \endgroup
15 \def\fb@info#1{%
16   \begingroup
17     \newlinechar=`\^J
18     \def\\{\^J}%
19     \wlog{#1}%
20   \endgroup}
```

Quit if eTeX is not available.

```
21 \let\bb@tempa\relax
22 \begingroup\expandafter\expandafter\expandafter\endgroup
23 \expandafter\ifx\csname eTeXversion\endcsname\relax
24   \let\bb@tempa\endinput
25   \fb@error{babel-french requires eTeX.\\
26             Aborting here}
27   {Original PlainTeX is not supported,\\
28    please use LuaTeX or XeTeX engines.}
29 \fi
30 \bb@tempa
```

Quit if Babel's version is less than 3.9i.

```
31 \let\bb@tempa\relax
32 \ifdefined\babelfags
33 \else
34   \let\bb@tempa\endinput
35   \ifdefined\PackageError
36     \PackageError{french.ldf}
37     {babel-french requires babel v.3.16.\MessageBreak
38      Aborting here}
39     {Please upgrade Babel!}
40 \else
```

```

41      \fb@error{babel-french requires babel v.3.16.\\
42          Aborting here}
43          {Please upgrade Babel!}
44      \fi
45 \fi
46 \bbl@tempa

```

Make sure that `\l@french` is defined (fallbacks are `\l@nohyphenation` if available or 0). `babel.def` (3.9i and up) defines `\l@<languagename>` also for eTeX, LuaTeX and XeTeX formats which set `\lang@<languagename>`.

```

47 \def\FB@nopatterns{%
48   \ifdefined\l@nohyphenation
49     \adddialect\l@french\l@nohyphenation
50     \edef\bbl@nulllanguage{\string\language=nohyphenation}%
51   \else
52     \edef\bbl@nulllanguage{\string\language=0}%
53     \adddialect\l@french0
54   \fi
55   \nopatterns{French}}
56 \ifdefined\l@french \else \FB@nopatterns \fi

```

Babel's French language can be loaded with option `acadian` which stands for Canadian French. If no specific hyphenation patterns are available, Canadian French will use the French ones.

```

57 \ifdefined\l@acadian
58   \adddialect\l@canadien\l@acadian
59 \else
60   \adddialect\l@acadian\l@french
61   \adddialect\l@canadien\l@french
62 \fi

```

French uses the standard values of `\lefthyphenmin` (2) and `\righthyphenmin` (3); let's provide their values though, as required by Babel.

```

63 \providehyphenmins{french}{\tw@\thr@@}
64 \providehyphenmins{acadian}{\tw@\thr@@}

```

**\ifLaTeXe** No support is provided for late LaTeX-2.09: issue a warning and exit if LaTeX-2.09 is in use. Plain is still supported.

```

65 \newif\ifLaTeXe
66 \let\bbl@tempa\relax
67 \ifdefined\magnification
68 \else
69   \ifdefined\@compatibilitytrue
70     \LaTeXetrue
71   \else
72     \PackageError{french.ldf}%
73       {LaTeX-2.09 format is no longer supported.\MessageBreak
74        Aborting here}
75       {Please upgrade to LaTeX2e!}
76   \let\bbl@tempa\endinput
77 \fi
78 \fi
79 \bbl@tempa

```

**\iffBunicode** French hyphenation patterns are now coded in Unicode, see file `hyph-fr.tex`. XeTeX  
**\iffBLuaTeX** and LuaTeX engines require some extra code to deal with the French “apostrophe”.  
**\iffBXeTeX** Let’s define three new ‘if’: `\iffBLuaTeX`, `\iffBXeTeX` and `\iffBunicode` which will be true for XeTeX and LuaTeX engines and false for 8-bits engines.

```

80 \newif\iffBunicode
81 \newif\iffBLuaTeX
82 \newif\iffBXeTeX
83 \begingroup\expandafter\expandafter\expandafter\endgroup
84 \expandafter\ifx\csname luatexversion\endcsname\relax
85 \else
86   \FBunicodetrue \FBLuaTeXtrue
87 \fi
88 \begingroup\expandafter\expandafter\expandafter\endgroup
89 \expandafter\ifx\csname XeTeXrevision\endcsname\relax
90 \else
91   \FBunicodetrue \FBXeTeXtrue
92 \fi

```

**\iffBfrench** True when the current language is French or any of its dialects; will be set to true by `\extrasfrench` and to false by `\noextrasfrench`. Used in `\DecimalMathComma` and `frenchsetup{og=<, fg=>}`.

```
93 \newif\iffBfrench
```

**\extrasfrench** The macro `\extrasfrench` will perform all the extra definitions needed for the **\noextrasfrench** French language. The macro `\noextrasfrench` is used to cancel the actions of `\extrasfrench`.

In French, character “apostrophe” (U+27 or U+2019) is a letter in expressions like *l’ambulance* (French hyphenation patterns provide entries for this kind of words). This means that the `\lccode` of “apostrophe” has to be non null in French for proper hyphenation of those expressions, and has to be reset to null when exiting French. The following code ensures correct hyphenation of words like *d’aventure*, *l’utopie*, with all TeX engines (XeTeX, LuaTeX, pdfTeX) using `hyph-fr.tex` patterns.

```

94 \def\extrasfrench{%
95   \FBfrenchtrue
96   \babel@savevariable{\lccode"27}%
97   \lccode"27="27
98   \iffBunicode
99     \babel@savevariable{\lccode"2019}%
100    \lccode"2019="2019
101   \fi
102 }
103 \def\noextrasfrench{\FBfrenchfalse}

```

One more thing `\extrasfrench` needs to do is to make sure that “Frenchspacing” is in effect. `\noextrasfrench` will switch “Frenchspacing” off again if necessary.

```

104 \addto\extrasfrench{\bbl@frenchspacing}
105 \addto\noextrasfrench{\bbl@nonfrenchspacing}

```

## 2.2 Punctuation

As long as no better solution is available, the ‘high punctuation’ characters (; ! ? and :) have to be made \active for an automatic control of the amount of space to be inserted before them. Both XeTeX and LuaTeX provide an alternative to active characters (‘XeTeXinterchar’ mechanism and LuaTeX’s callbacks).

\iffB@active@punct Three internal flags are needed for the three different techniques used for ‘high punctuation’ management.

```
106 \newif\iffB@active@punct \FB@active@puncttrue
```

\iffB@luatex@punct With LuaTeX, starting with version 1.0.4, callbacks are used to get rid of active punctuation. With previous versions, ‘high punctuation’ characters remain active (see below).

```
107 \newif\iffB@luatex@punct
108 \ifFBLuaTeX
109   \ifnum\luatexversion<100
110     \ifx\PackageWarning@\undefined
111       \fb@warning{Please upgrade LuaTeX to version 1.0.4 or above!}%
112       babel-french will make high punctuation characters (;!:?)%
113       active with LuaTeX < 1.0.4.%}
114   \else
115     \PackageWarning{french.ldf}{Please upgrade LuaTeX
116       to version 1.0.4 or above!}\MessageBreak
117       babel-french will make high punctuation characters%
118       \MessageBreak (;!:?) active with LuaTeX < 1.0.4;%
119       \MessageBreak reported}%
120   \fi
121 \else
122   \FB@luatex@puncttrue\FB@active@punctfalse
123 \fi
124 \fi
```

\iffB@xetex@punct For XeTeX, the availability of \XeTeXinterchartokenstate decides whether the ‘high punctuation’ characters (; ! ? and :) have to be made \active or not.

The number of available character classes has been increased from 256 to 4096 in XeTeX v. 0.99994, the class for non-characters is now 4095 instead of 255.

```
125 \newcount\FB@nonchar
126 \newif\iffB@xetex@punct
127 \ifdefined\XeTeXinterchartokenstate
128   \FB@xetex@puncttrue\FB@active@punctfalse
129   \ifdim\the\XeTeXversion\XeTeXrevision pt<0.99994pt
130     \FB@nonchar=255 \relax
131   \else
132     \FB@nonchar=4095 \relax
133   \fi
134 \fi
```

\FBguillspace These three commands are meant for basic French. Other French dialects can use \FBcolonspace different settings, see below. According to the I.N. specifications, the ‘:’ requires \FBthinspace an inter-word space before it, the other three require just a thin space. We define \FBcolonspace as \space (inter-word space) and \FBthinspace as an half inter-word

space with no shrink nor stretch. `\FBguillspace` is defined btw. as spacing for French quotes is handled together with high punctuation for LuaTeX and XeTeX. `\FBguillspace` has been fine tuned by Thierry Bouche to 80% of an inter-word space with reduced stretchability. All three are user customisable in the preamble, best using the `\FBsetspace` command described below. A penalty will be added before these spaces to prevent line breaking.

```

135 \newcommand*{\FBguillspace}{\hskip .8\fontdimen2\font
136                         plus .3\fontdimen3\font
137                         minus .8\fontdimen4\font \relax}
138 \newcommand*{\FBcolonspace}{\space}
139 \newcommand*{\FBthinspace}{\hskip .5\fontdimen2\font \relax}
```

**\FBsetspace** This command makes it easy to fine tune `\FBguillspace`, `\FBcolonspace` and `\FBthinspace` in French (default) or independently in a French dialect using the optional argument. They are meant for LaTeX2e *only* and can only be used in the preamble. Four mandatory arguments are expected besides the optional one: the first one is a *string* either "guill", "colon", or "thin", the last four are decimal numbers specifying *width*, *stretch* and *shrink* relative to *fontdimens*. For instance `\FBsetspace[acadian]{colon}{0.5}{0}{0}` defines `\acadianFBcolonspace` as a thinspace which will be used for the Acadian dialect only. When used without optional argument or with argument 'french', the same command would tune the basic `\FBcolonspace` command.

```

140 \ifLaTeXe
141   \newcommand*{\FBsetspace}[5][french]{%
142     \def\bb@tempa{french}\def\bb@tempb{\#1}%
143     \ifx\bb@tempa\bb@tempb \def\bb@tempb{}\fi
144     \namedef{\bb@tempb FB#2space}{\hskip #3\fontdimen2\font
145                               plus #4\fontdimen3\font
146                               minus #5\fontdimen4\font \relax}%

```

With option "acadian", fill the corresponding LaTeX table. All unset values in the "acadian" subtables will be filled 'AtBeginDocument' by `\set@glue@table` with the value available for "french".

```

147   \iffB@luatex@punct
148     \ifx\bb@tempb\FB@acadian
149       \directlua{
150         FBsp.#2.gl.ac[1] = #3
151         FBsp.#2.gl.ac[2] = #4
152         FBsp.#2.gl.ac[3] = #5
153         if #3 > 0.6 then
154           FBsp.#2.ch.ac = 0xA0
155         elseif #3 > 0.2 then
156           FBsp.#2.ch.ac = 0x202F
157         else
158           FBsp.#2.ch.ac = 0x200B
159         end
160       }%
161     \fi
162   \fi
163 }
164 \onlypreamble\FBsetspace
165 \fi
```

Remember that the *same* \extrasfrench command is executed when switching to French or to a French dialect (Acadian). Acadian and French may share the same patterns (or not), and may use different spacing for high punctuation and/or quotes. Basically, for pdfLaTeX and XeLaTeX, the spacing is set for French, then potentially tuned differently for Acadian. LuaTeX relies on an attribute \FB@dialect to decide what spacing is needed for French or Acadian (see LuaTeX table FBsp). As a rough test on \languagename would be unreliable to set the value of \FB@dialect (see babel.pdf), we use a trick based on \detokenize; another option would be to use the \IfLanguageName command from Oberdiek's package iflang.

```

166 \ifLaTeXe
167   \addto\extrasfrench{%
168     \ifFB@luatex@punct
169       \edef\bbl@tempa{\detokenize\expandafter{\languagename}}%
170       \edef\bbl@tempb{\detokenize{french}}%
171       \ifx\bbl@tempa\bbl@tempb \FB@dialect=0 \relax
172     \else \FB@dialect=1 \relax
173   \fi

```

When first entering French, we must set the LuaTeX tables for French (\FB@dialect=0) *before* any dialect redefines any \FB...space command. Doing this 'AtBeginDocument' would be too late: if French or a French dialect is the main language, \extrasfrench has been executed before!

```

174   \ifdefined\FB@once\else
175     \set@glue@table{colon}%
176     \set@glue@table{thin}%
177     \set@glue@table{guill}%
178     \def\FB@once{}%
179   \fi
180 \fi

```

Any dialect dependent customisation done using \FBsetspace[*dialect*] command or alike is now taken into account: the value of \FBthinspace (meant for French, i.e. \FB@dialect=0) is first saved then changed (for Acadian).

```

181   \ifcsname\languagename FBthinspace\endcsname
182     \babel@save\FBthinspace
183     \renewcommand*\{\FBthinspace}{%
184       \csname\languagename FBthinspace\endcsname}%
185   \fi

```

Same for \FBcolonspace:

```

186   \ifcsname\languagename FBcolonspace\endcsname
187     \babel@save\FBcolonspace
188     \renewcommand*\{\FBcolonspace}{%
189       \csname\languagename FBcolonspace\endcsname}%
190   \fi

```

And for \FBguillspace:

```

191   \ifcsname\languagename FBguillspace\endcsname
192     \babel@save\FBguillspace
193     \renewcommand*\{\FBguillspace}{%
194       \csname\languagename FBguillspace\endcsname}%
195   \fi
196 }
197 \fi

```

The conditional `\ifFB@spacing` will be used by pdfTeX and XeTeX engines to switch on or off space tuning before high punctuation and inside French quotes. A matching attribute will be defined later for LuaTeX.

```
198 \newif\ifFB@spacing \FB@spacingtrue
```

**\FB@spacing@off** Two internal commands to switch on and off all space tuning for all six characters **\FB@spacing@on** ‘;:!?«»’. They will be triggered by user command `\NoAutoSpacing` and by font family switching commands `\ttfamilyFB` `\rmfamilyFB` and `\sffamilyFB`. These four commands will now behave the same with any engine (up to version 3.2b, results were engine dependent).

```
199 \newcommand*\{\FB@spacing@on}\{%
200   \ifFB@luatex@punct
201     \FB@spacing=1 \relax
202   \else
203     \FB@spacingtrue
204   \fi}
205 \newcommand*\{\FB@spacing@off}\{%
206   \ifFB@luatex@punct
207     \FB@spacing=0 \relax
208   \else
209     \FB@spacingfalse
210   \fi}
```

### 2.2.1 Punctuation with LuaTeX

The following part holds specific code for punctuation with modern LuaTeX engines, i.e. version 1.0.4 (included in TL2017) or newer.

```
211 \iffBF@luatex@punct
212   \ifdef\newluafunction\else
```

This code is for Plain: load `ltluatex.tex` if it hasn't been loaded before Babel.

```
213   \input ltluatex.tex
214 \fi
```

We define five LuaTeX attributes to control spacing in French and/or Acadian for ‘high punctuation’ and quotes, making sure that `\newattribute` is defined.

`\FB@spacing=0` switches off any space tuning both before high punctuation characters and inside French quotes (i.e. function `french_punctuation` doesn't alter the node list at all).

`\FB@addDPSpace=0` switches off automatic insertion of spaces before high punctuation characters (but typed spaces are still turned into non-breaking thin- or word-spaces). `\FB@addGUILspace` will be set to 1 by option `og=<`, `fg=>`, thus enabling automatic insertion of proper spaces after ‘‘’ and before ‘’’.

`\FB@ucsNBSP` triggers the replacement of glues by characters, it is controlled by option `UnicodeNoBreakSpaces`.

`\FB@dialect` is 0 for French and 1 for Acadian; its value controls which parts of the glue table (`.fr` or `.ac`) are taken into account.

```
215 \newattribute\FB@spacing \FB@spacing=1 \relax
216 \newattribute\FB@addDPSpace \FB@addDPSpace=1 \relax
217 \newattribute\FB@addGUILspace \FB@addGUILspace=0 \relax
218 \newattribute\FB@ucsNBSP \FB@ucsNBSP=0 \relax
```

```

219  \newattribute\FB@dialect      \FB@dialect=0 \relax
220  \ifLaTeXe
221    \PackageInfo{french.ldf}{No need for active punctuation
222      characters\MessageBreak with this version
223      of LaTeX!\MessageBreak reported}
224  \else
225    \fb@info{No need for active punctuation characters\\
226      with this version of LaTeX!}
227  \fi

```

The next command will be used in the first call of `\extrasfrench` to convert `\FBcolonspace`, `\FBthinspace` and `\FBguillspace` into a table usable by LaTeX. This way, any customisation done in the preamble (by `\frenchsetup{}`, redefinitions or `\FBsetspace` commands) are taken into account. Values not explicitly set for Acadian by `\FBsetspace[acadian]` commands are copied from the French ones. In case parsing by the Lua function `FBget_glue` (defined in file `frenchb.lua`) fails due to unexpected syntax in `\FB...space` the table remains unchanged and a warning is issued. The matching space characters for option `UnicodeNoBreakSpaces` are set as word space, thin space or null space according to the `width` parameter.

```

```

**frenchb.lua** This is frenchb.lua. It holds Lua code to deal with ‘high punctuation’ and quotes. This code is based on suggestions from Paul Isambert. First we define two flags to control spacing before French ‘high punctuation’ (thin space or inter-word space).

```
262 <*lua>
263 local FB_punct_thin =
264   {[string.byte("!")] = true,
265   [string.byte("?")] = true,
266   [string.byte(";")] = true}
267 local FB_punct_thick =
268   {[string.byte(":")] = true}
```

Managing spacing after ‘⟨’ (U+00AB) and before ‘⟩’ (U+00BB) can be done by the way; we define two flags, FB\_punct\_left for characters requiring some space before them and FB\_punct\_right for ‘⟨’ which must be followed by some space. In case LuaTeX is used to output T1-encoded fonts instead of OpenType fonts, codes 0x13 and 0x14 have to be added for ‘⟨’ and ‘⟩’.

```
269 local FB_punct_left =
270   {[string.byte("!")] = true,
271   [string.byte("?")] = true,
272   [string.byte(";")] = true,
273   [string.byte(":")] = true,
274   [0x14]           = true,
275   [0xBB]           = true}
276 local FB_punct_right =
277   {[0x13]          = true,
278   [0xAB]          = true}
```

Two more flags will be needed to avoid spurious spaces in strings like !! ?? or (?)

```
279 local FB_punct_null =
280   {[string.byte("!")] = true,
281   [string.byte("?")] = true,
282   [string.byte("[")] = true,
283   [string.byte("(")] = true,
```

or if the user has typed a non-breaking space U+00A0 or U+202F (thin) before a ‘high punctuation’ character: no space should be added by babel-french. Same is true inside French quotes.

```
284   [0xA0]           = true,
285   [0x202F]          = true}
286 local FB_guil_null =
287   {[0xA0]           = true,
288   [0x202F]          = true}
```

Local definitions for nodes:

```
289 local new_node    = node.new
290 local copy_node   = node.copy
291 local node_id     = node.id
292 local HLIST       = node_id("hlist")
293 local TEMP        = node_id("temp")
294 local KERN        = node_id("kern")
295 local GLUE        = node_id("glue")
296 local GLYPH       = node_id("glyph")
297 local PENALTY     = node_id("penalty")
```

```

298 local nobreak      = new_node(PENALTY)
299 nobreak.penalty   = 10000
300 local nbspace     = new_node(GLYPH)
301 local insert_node_before = node.insert_before
302 local insert_node_after  = node.insert_after
303 local remove_node    = node.remove
Commands \FBthinspace, \FBcolonspace and \FBguillspace are converted 'AtBeginDocument' by the next function FBget_glue into tables of three values which are fractions of \fontdimen2, \fontdimen3 and \fontdimen4. If parsing fails due to unexpected syntax, the function returns nil instead of a table.

```

```

304 function FBget_glue(toks)
305   local t = nil
306   local f = string.match(toks,
307                         "[^%w]hskip%s*([%d%.]*%)%s*[^\%w]fontdimen 2")
308   if f == "" then f = 1 end
309   if tonumber(f) then
310     t = {tonumber(f), 0, 0}
311     f = string.match(toks, "plus%s*([%d%.]*%)%s*[^\%w]fontdimen 3")
312     if f == "" then f = 1 end
313     if tonumber(f) then
314       t[2] = tonumber(f)
315       f = string.match(toks, "minus%s*([%d%.]*%)%s*[^\%w]fontdimen 4")
316       if f == "" then f = 1 end
317       if tonumber(f) then
318         t[3] = tonumber(f)
319       end
320     end
321   elseif string.match(toks, "[^\%w]F?B?thinspace") then
322     t = {0.5, 0, 0}
323   elseif string.match(toks, "[^\%w]space") then
324     t = {1, 1, 1}
325   end
326   return t
327 end

```

Let's initialize the global LuaTeX table FBsp: it holds the characteristics of the glues used in French and Acadian for high punctuation and quotes and the corresponding no-breaking space characters for option [UnicodeNoBreakSpaces](#).

```

328 FBsp = {}
329 FBsp.thin = {}
330 FBsp.thin.gl = {}
331 FBsp.thin.gl.fr = {.5, 0, 0} ; FBsp.thin.gl.ac = {}
332 FBsp.thin.ch = {}
333 FBsp.thin.ch.fr = 0x202F ; FBsp.thin.ch.ac = nil
334 FBsp.colon = {}
335 FBsp.colon.gl = {}
336 FBsp.colon.gl.fr = {1, 1, 1} ; FBsp.colon.gl.ac = {}
337 FBsp.colon.ch = {}
338 FBsp.colon.ch.fr = 0xA0 ; FBsp.colon.ch.ac = nil
339 FBsp.guill = {}
340 FBsp.guill.gl = {}
341 FBsp.guill.gl.fr = {.8, .3, .8} ; FBsp.guill.gl.ac = {}
342 FBsp.guill.ch = {}

```

```
343 FBsp.guill.ch.fr = 0xA0 ; FBsp.guill.ch.ac = nil
```

The next function converts the glue table returned by function FBget\_glue into sp for the current font; beware of null values for fid, see \nullfont in TikZ, and of special fonts like lcircle1.pfb for which font.getfont(fid) does not return a proper font table, in such cases the function returns nil.

```
344 local font_table = {}
345 local function new_glue_scaled (fid,table)
346   if fid > 0 and table[1] then
347     local fp = font_table[fid]
348     if not fp then
349       local ft = font.getfont(fid)
350       if ft then
351         font_table[fid] = ft.parameters
352         fp = font_table[fid]
353       end
354     end

356     if fp then
357       node.setglue(gl, table[1]*fp.space,
358                   table[2]*fp.space_stretch,
359                   table[3]*fp.space_shrink)
360     return gl
361   else
362     return nil
363   end
364 else
365   return nil
366 end
367 end
```

Let's catch LuaTeX attributes \FB@spacing, \FB@addDPspace and \FB@addGUILspace.

```
368 local FBspacing      = luatexbase.attributes['FB@spacing']
369 local addDPspace    = luatexbase.attributes['FB@addDPspace']
370 local addGUILspace = luatexbase.attributes['FB@addGUILspace']
371 local FBucsNBSP    = luatexbase.attributes['FB@ucsNBSP']
372 local FBdialect     = luatexbase.attributes['FB@dialect']
373 local has_attribute = node.has_attribute
```

The following function will be added to kerning callback. It catches all nodes of type GLYPH in the list starting at head and checks the language attributes of the current glyph: nothing is done if the current language is not French and only specific punctuation characters (those for which FB\_punct\_left or FB\_punct\_right is true) need a special treatment. In French, local variables are defined to hold the properties of the current glyph (item) and of the previous one (prev) or the next one (next). Constants FR\_fr (french) and FR\_ca (acadian) are defined by command \activate@luatepunct.

```
374 -- Main function (to be added to the kerning callback).
375 local function french_punctuation (head)
```

Restore the built-in kerning for 8-bits fonts.

```
376 node.kerning(head)
377 for item in node.traverse_id(GLYPH, head) do
378   local lang = item.lang
```

```

379     local char = item.char
Skip glyphs not concerned by French kernings.
380     if (lang == FR_fr or lang == FR_ca) and
381         (FB_punct_left[char] or FB_punct_right[char]) then
382         local fid = item.font
383         local attr = item.attr
384         local FRspacing = has_attribute(item, FBspacing)
385         FRspacing = FRspacing and FRspacing > 0
386         local FRucsNBSP = has_attribute(item, FBucsNBSP)
387         FRucsNBSP = FRucsNBSP and FRucsNBSP > 0
388         local FRdialect = has_attribute(item, FBdialect)
389         FRdialect = FRdialect and FRdialect > 0
390         local SIG = has_attribute(item, addGUILspace)
391         SIG = SIG and SIG >0
392         if FRspacing and fid > 0 then
393             if FB_punct_left[char] then
394                 local prev = item.prev
395                 local prev_id, prev_subtype, prev_char
396                 if prev then
397                     prev_id = prev.id
398                     prev_subtype = prev.subtype
399                     if prev_id == GLYPH then
400                         prev_char = prev.char
401                     end
402                 end

```

If the previous node is a glue, check its natural width, only positive glues (actually glues > 1 sp, for tabular 'l' columns) are to be replaced by a non-breaking space.

```

403         local is_glue = prev_id == GLUE
404         local glue_wd
405         if is_glue then
406             glue_wd = prev.width
407         end
408         local realglue = is_glue and glue_wd > 1

```

For characters for which FB\_punct\_thin or FB\_punct\_thick is *true*, the amount of spacing to be typeset before them is controlled by commands \FBthinspace and \FBcolonspace respectively. Two options: if a space has been typed in before (turned into *glue* in the node list), we remove the *glue* and add a nobreak penalty and the required *glue*. Otherwise (auto option), the penalty and the required *glue* are inserted if attribute \FB@addDPspace is set, unless any of these four conditions is met: a) node is ':' and the next one is of type GLYPH (avoids spurious spaces in http://mysite, C:\ or 10:35); b) the previous character is part of type FB\_punct\_null (avoids spurious spaces in strings like (!) or ??); c) a null glue (actually <= 1 sp for tabulars, possibly < 0) preceeds the punctuation character (for tabulars and listings); d) the punctuation character starts a paragraph or an \hbox{}.

When option **UnicodeNoBreakSpaces** is set to **true**, a Unicode character U+00A0 or U+202F is inserted instead of penalty and glue.

```

409         if FB_punct_thin[char] or FB_punct_thick[char] then
410             local SBDP = has_attribute(item, addDPspace)
411             local auto = SBDP and SBDP > 0
412             if FB_punct_thick[char] and auto then
413                 local next = item.next

```

```

414         local next_id
415         if next then
416             next_id = next.id
417         end
418         if next_id and next_id == GLYPH then
419             auto = false
420         end
421     end
422     if auto then
423         if (prev_char and FB_punct_null[prev_char]) or
424             (is_glue and glue_wd <= 1) or
425             (prev_id == HLIST and prev_subtype == 3) or
426             (prev_id == TEMP) then
427                 auto = false
428             end
429         end
430         local fbglue
431         local t
432         if FB_punct_thick[char] then
433             if FRdialect then
434                 t = FBsp.colon.gl.ac
435                 nbspace.char = FBsp.colon.ch.ac
436             else
437                 t = FBsp.colon.gl.fr
438                 nbspace.char = FBsp.colon.ch.fr
439             end
440         else
441             if FRdialect then
442                 t = FBsp.thin.gl.ac
443                 nbspace.char = FBsp.thin.ch.ac
444             else
445                 t = FBsp.thin.gl.fr
446                 nbspace.char = FBsp.thin.ch.fr
447             end
448         end
449         fbglue = new_glue_scaled(fid, t)

```

In case new\_glue\_scaled fails (returns nil) the node list remains unchanged.

```

450             if (realglue or auto) and fbglue then
451                 if realglue then
452                     head = remove_node(head, prev, true)
453                 end
454                 if (FRucsNBSP) then
455                     nbspace.font = fid
456                     nbspace.attr = attr
457                     insert_node_before(head, item, copy_node(nbspace))
458                 else
459                     nobreak.attr = attr
460                     fbglue.attr = attr
461                     insert_node_before(head, item, copy_node(nobreak))
462                     insert_node_before(head, item, copy_node(fbglue))
463                 end
464             end

```

Let's consider '»' now (the only remaining glyph of FB\_punct\_left class): we just have

to remove any *glue* possibly preceding '»', then to insert the nobreak penalty and the proper *glue* (controlled by \FBguillspace). This is done only if French quotes have been 'activated' by options **og=<**, **fg=>** in \frenchsetup{} and can be denied locally with \NoAutoSpacing (this is controlled by the SIG flag). If either a) the preceding glyph is member of FB\_guil\_null, or b) '»' is the first glyph of an \hbox{} or a paragraph, nothing is done, this is controlled by the addgl flag.

```

465           elseif SIG then
466             local addgl = (prev_char and
467               not FB_guil_null[prev_char])
468             or
469             (not prev_char and
470               prev_id ~= TEMP and
471               not (prev_id == HLIST and
472                 prev_subtype == 3))
473           )

```

Correction for tabular 'c' (glue 0 plus 1 fil) and 'l' (glue 1sp) columns:

```

474   if is_glue and glue_wd <= 1 then
475     addgl = false
476   end
477   local t = FBsp.guill.gl.fr
478   nbspace.char = FBsp.guill.ch.fr
479   if FRdialect then
480     t = FBsp.guill.gl.ac
481     nbspace.char = FBsp.guill.ch.ac
482   end
483   local fbglue = new_glue_scaled(fid, t)
484   if addgl and fbglue then
485     if is_glue then
486       head = remove_node(head, prev, true)
487     end
488     if (FRucsNBSP) then
489       nbspace.font = fid
490       nbspace.attr = attr
491       insert_node_before(head, item, copy_node(nbspace))
492     else
493       nobreak.attr = attr
494       fbglue.attr = attr
495       insert_node_before(head, item, copy_node(nobreak))
496       insert_node_before(head, item, copy_node(fbglue))
497     end
498   end
499 end

```

Similarly, for '«' (unique member of the FB\_punct\_right class): unless either a) the next glyph is member of FB\_guil\_null, or b) '«' is the last glyph of an \hbox{} or a paragraph (then the addgl flag is false, nothing is done), we remove any *glue* possibly following it and insert first the proper *glue* then a nobreak penalty so that finally the penalty precedes the *glue*.

```

500   elseif SIG then
501     local next = item.next
502     local next_id, next_subtype, next_char, nextnext, kern_wd
503     if next then

```

```

504         next_id = next.id
505         next_subtype = next.subtype
506         if next_id == GLYPH then
507             next_char = next.char

```

A kern0 might hide a glue, so look ahead if next is a kern (this occurs with « \texttt{a} »):

```

508         elseif next_id == KERN then
509             kern_wd = next.kern
510             if kern_wd == 0 then
511                 nextnext = next.next
512                 if nextnext then
513                     next = nextnext
514                     next_id = nextnext.id
515                     next_subtype = nextnext.subtype
516                     if next_id == GLYPH then
517                         next_char = nextnext.char
518                     end
519                 end
520             end
521         end
522     end
523     local is_glue = next_id == GLUE
524     if is_glue then
525         glue_wd = next.width
526     end
527     local addgl = (next_char and not FB_guil_null[next_char])
528             or (next and not next_char)

```

Correction for tabular ‘c’ columns. For ‘r’ columns, a final ‘‘’ character needs to be coded as \mbox{“} for proper spacing (\NoAutoSpacing is another option).

```

529         if is_glue and glue_wd == 0 then
530             addgl = false
531         end

596     end
597 }%
598 }
599 \fi

```

End of specific code for punctuation with LuaTeX engines.

### 2.2.2 Punctuation with XeTeX

If `\XeTeXinterchartokenstate` is available, we use the “inter char” mechanism to provide correct spacing in French before the four characters ; ! ? and :. The basis of the following code was borrowed from the `polyglossia` package, see `gloss-french.1df`. We use the same mechanism for French quotes (« and »), when automatic spacing for quotes is required by options `og=<` and `fg=>` in `\frenchsetup{}` (see section 2.11).

The default value for `\XeTeXcharclass` is 0 for characters tokens and `\FB@nonchar` for all other tokens (glues, kerns, math and box boundaries, etc.). These defaults should not be changed otherwise the spacing before the ‘high punctuation’ characters and inside quotes might not be correct.

We switch `\XeTeXinterchartokenstate` to 1 and change the `\XeTeXcharclass` values of ; ! ? : ( ] « and » when entering French. Special care is taken to restore them to their initial values when leaving French.

The following part holds specific code for punctuation with XeTeX engines.

```

600 \ifFB@xetex@punct
601   \ifLaTeXe
602     \PackageInfo{french.1df}{No need for active punctuation
603                               characters\MessageBreak with this
604                               version of XeTeX!\MessageBreak reported}
605   \else
606     \fb@info{No need for active punctuation characters\
607               with this version of XeTeX!}
608   \fi

```

Six new character classes are defined for `babel-french`.

```

609   \newXeTeXintercharclass\FB@punctthick
610   \newXeTeXintercharclass\FB@punctthin
611   \newXeTeXintercharclass\FB@punctnul
612   \newXeTeXintercharclass\FB@guilo
613   \newXeTeXintercharclass\FB@guilf
614   \newXeTeXintercharclass\FB@guilnul

```

As `\babel@savevariable` doesn’t work inside a `\bbl@for` loop, we define a variant to save the `\XeTeXcharclass` values which will be modified in French.

```

615   \def\FBsavevariable@loop#1#2{\begingroup
616     \toks@\expandafter{\originalTeX #1}%
617     \edef\x{\endgroup
618       \def\noexpand\originalTeX{\the\toks@ #2=\the#1#2\relax}}%
619     \x}

```

`\FB@charlist` holds the all list of characters which have their `\XeTeXcharclass` value modified in French: the first set includes high punctuation, French quotes, opening

delimiters and no-break spaces

"21	"3A	"3B	"3F	"AB	"BB	"28	"5B	"A0	"202F
!	:	;	?	«	»	(	[		

the second one holds those which need resetting in French when `xeCJK.sty` is in use

"29	"5D	"7B	"7D	"2C	"2D	"2E	"22	"25	"27	"60	"2019
)	]	{	}	,	-	.	"	%	'	'	'

```
620 \def\FB@charlist{"21,"3A,"3B,"3F,"AB,"BB,"28,"5B,"A0,"202F,%
621 "29,"5D,"7B,"7D,"2C,"2D,"2E,"22,"25,"27,"60,"2019}
```

`\FB@xetex@punct@french` The following command will be executed when entering French, it first saves the values to be modified, then fits them to our needs. It also redefines `\shorthandoff` and `\shorthandon` (locally) to avoid error messages with XeTeX-based engines.

```
622 \newcommand*\FB@xetex@punct@french{}%
623 \babel@savevariable{\XeTeXinterchartokenstate}%
624 \babel@save{\shorthandon}%
625 \babel@save{\shorthandoff}%
626 \bb@for\FB@char\FB@charlist
627 {\FB@savevariable@loop{\XeTeXcharclass}{\FB@char}}%
628 \def\shorthandoff##1{%
629   \ifx\PackageWarning@\undefined
630     \fb@warning{\noexpand\shorthandoff{;:!?} is helpless with
631       XeTeX,\` use \noexpand\NoAutoSpacing
632       *inside a group* instead.}%
633   \else
634     \PackageWarning{french.ldf}{\protect\shorthandoff{;:!?}
635       is helpless with XeTeX,\MessageBreak
636       use \protect\NoAutoSpacing\space *inside a group*
637       instead;\MessageBreak reported}%
638   \fi}%
639 \def\shorthandon##1{}}
```

Let's now set the classes and interactions between classes. When false, the flag `\iffB@spacing` switches off any interaction between classes (this flag is controlled by user-level command `\NoAutoSpacing`; this flag is also set to false when the current font is a typewriter font).

```
640 \XeTeXinterchartokenstate=1
641 \XeTeXcharclass `\: = \FB@punctthick
642 \XeTeXinterchartoks \z@ \FB@punctthick = {%
643   \iffB@spacing\ifhmode\FDP@colonspace\fi\fi}%
644 \XeTeXinterchartoks \FB@gulft \FB@punctthick = {%
645   \iffB@spacing\FDP@colonspace\fi}%
```

Small glues such as “glue 1sp” in tabular ‘l’ columns or “glue 0 plus 1 fil” in tabular ‘c’ columns or `lstlisting` environment should not trigger any extra space; they will still do when `AutoSpacePunctuation` is true: `\XeTeXcharclass=\FB@nonchar` isn't specific to glue tokens (this class includes box and math boundaries f.i.), so the `\else` part cannot be omitted.

```
646 \XeTeXinterchartoks \FB@nonchar \FB@punctthick = {%
647   \iffB@spacing
648   \ifhmode
649     \ifdim\lastskip>1sp
```

```

650          \unskip\penalty@M\FBcolonspace
651          \else
652              \FDP@colonspace
653          \fi
654      \fi
655  \fi}%
656  \bbbl@for\FB@char
657      {\`;,\`!,`\?}%
658      {\XeTeXcharclass\FB@char=\FB@punctthin}%
659  \XeTeXinterchartoks \z@\FB@punctthin = {%
660      \ifFB@spacing\ifhmode\FDP@thinspace\fi\fi}%
661  \XeTeXinterchartoks \FB@guilf \FB@punctthin = {%
662      \ifFB@spacing\FDP@thinspace\fi}%
663  \XeTeXinterchartoks \FB@nonchar \FB@punctthin = {%
664      \ifFB@spacing
665          \ifhmode
666              \ifdim\lastskip>1sp
667                  \unskip\penalty@M\FBthinspace
668              \else
669                  \FDP@thinspace
670              \fi
671          \fi
672      \fi}%
673  \XeTeXinterchartoks \FB@guilo \z@ = {%
674      \ifFB@spacing\FB@guillspace\fi}%
675  \XeTeXinterchartoks \FB@guilo \FB@nonchar = {%
676      \ifFB@spacing\FB@guillspace\ignorespaces\fi}%
677  \XeTeXinterchartoks \z@\FB@guilf = {%
678      \ifFB@spacing\FB@guillspace\fi}%
679  \XeTeXinterchartoks \FB@punctthin \FB@guilf = {%
680      \ifFB@spacing\FB@guillspace\fi}%
681  \XeTeXinterchartoks \FB@nonchar \FB@guilf = {%
682      \ifFB@spacing\unskip\FB@guillspace\fi}%

```

This will avoid spurious spaces in (!), [?] and with Unicode non-breaking spaces (U+00A0, U+202F):

```

683  \bbbl@for\FB@char
684      {\`[,`\{,"A0,"202F}%
685      {\XeTeXcharclass\FB@char=\FB@punctnul}%

```

These characters have their class changed by xeCJK.sty, let's reset them to 0 in French.

```

686  \bbbl@for\FB@char
687      {\`{,`\.,`\.,`\-,`\),`\],`\},`\%,`22,`27,`60,`2019}%
688      {\XeTeXcharclass\FB@char=\z@}%
689  }
690  \addto\extrasfrench{\FB@xetex@punct@french}

```

End of specific code for punctuation with modern XeTeX engines.

```
691 \fi
```

### 2.2.3 Punctuation with standard (pdf)TeX

In standard (pdf)TeX we need to make the four characters ; ! ? and : ‘active’ and provide their definitions. Before doing so, we have to save some definitions involving ::.

```

692 \newif\iffB@koma
693 \ifLaTeXe
694   \@ifclassloaded{scrartcl}{\FB@komatrue}{}%
695   \@ifclassloaded{scrbook}{\FB@komatrue}{}%
696   \@ifclassloaded{scrreprt}{\FB@komatrue}{}%
697   \iffB@koma\def\FB@std@capsep{:\ } \fi
698   \@ifclassloaded{beamer}{\def\FB@std@capsep{:\ }}{}%
699   \@ifclassloaded{memoir}{\def\FB@std@capsep{:\ }}{}%
700 \fi
701 \ifFB@active@punct
702   \initiate@active@char{::}%
703   \initiate@active@char{; }%
704   \initiate@active@char{! }%
705   \initiate@active@char{? }%

```

We first tune the amount of space before ; ! ? and ::. This should only happen in horizontal mode, hence the test \ifhmode.

In horizontal mode, if a space has been typed before ';' we remove it and put a non-breaking \FBthinspace instead. If no space has been typed, we add \FDP@thinspace which will be defined, up to the user’s wishes, as a non-breaking \FBthinspace or as \@empty.

```

706 \declare@shorthand{french}{}{%
707   \iffB@spacing
708   \ifhmode
709     \ifdim\lastskip>1sp
710       \unskip\penalty\@M\FBthinspace
711     \else
712       \FDP@thinspace
713     \fi
714   \fi
715 \fi

```

Now we can insert a ; character.

```
716 \string{;
```

The next three definitions are very similar.

```

717 \declare@shorthand{french}{}{!
718   \iffB@spacing
719   \ifhmode
720     \ifdim\lastskip>1sp
721       \unskip\penalty\@M\FBthinspace
722     \else
723       \FDP@thinspace
724     \fi
725   \fi
726   \fi
727   \string{!}
728 \declare@shorthand{french}{}{?

```

```

729     \ifFB@spacing
730         \ifhmode
731             \ifdim\lastskip>lsp
732                 \unskip\penalty\@M\FBthinspace
733             \else
734                 \FDP@thinspace
735             \fi
736         \fi
737     \fi
738     \string?}
739 \declare@shorthand{french}{:}{%
740     \ifFB@spacing
741         \ifhmode
742             \ifdim\lastskip>lsp
743                 \unskip\penalty\@M\FBcolonspace
744             \else
745                 \FDP@colonspace
746             \fi
747         \fi
748     \fi
749     \string:}

```

When the active characters appear in an environment where their French behaviour is not wanted they should give an ‘expected’ result. Therefore we define shorthands at system level as well.

```

750 \declare@shorthand{system}{:}{\string:}
751 \declare@shorthand{system}{!}{\string!}
752 \declare@shorthand{system}{?}{\string?}
753 \declare@shorthand{system}{;}{\string;}

```

We specify that the French group of shorthands should be used when switching to French.

```
754 \addto\extrasfrench{\languageshorthands{french}%

```

These characters are ‘turned on’ once, later their definition may vary. Don’t misunderstand the following code: they keep being active all along the document, even when leaving French.

```

755     \bbl@activate{:}\bbl@activate{;}{%
756     \bbl@activate{!}\bbl@activate{?}{%
757 }
758 \addto\noextrasfrench{%
759     \bbl@deactivate{:}\bbl@deactivate{;}{%
760     \bbl@deactivate{!}\bbl@deactivate{?}{%
761 }
762 \fi

```

#### 2.2.4 Punctuation switches common to all engines

A new ‘if’ `\ifFBAutoSpacePunctuation` needs to be defined now to control the two possible ways of dealing with ‘high punctuation’. its default value is true, but it can be set to false by `\frenchsetup{AutoSpacePunctuation=false}` for finer control.

```
763 \newif\ifFBAutoSpacePunctuation \FBAutoSpacePunctuationtrue
```

\AutoSpaceBeforeFDP \autospace@beforeFDP and \noautospace@beforeFDP are internal commands. \NoAutoSpaceBeforeFDP \autospace@beforeFDP defines \FDP@thinspace and \FDP@colonspace as non-breaking spaces and sets LuaTeX attribute \FB@addDPspace to 1 (true), while \noautospace@beforeFDP lets these spaces empty and sets flag \FB@addDPspace to 0 (false). User commands \AutoSpaceBeforeFDP and \NoAutoSpaceBeforeFDP do the same and take care of the flag \ifFBAutoSpacePunctuation in  $\text{\TeX}$ .

Set the default now for Plain (done later for LaTeX).

```

764 \def\autospace@beforeFDP{%
765   \ifFB@luatex@punct\FB@addDPspace=1 \fi
766   \def\FDP@thinspace{\penalty@\M\FBthinspace}%
767   \def\FDP@colonspace{\penalty@\M\FBcolonspace}%
768 \def\noautospace@beforeFDP{%
769   \ifFB@luatex@punct\FB@addDPspace=0 \fi
770   \let\FDP@thinspace\@empty
771   \let\FDP@colonspace\@empty}
772 \ifLaTeXe
773   \def\AutoSpaceBeforeFDP{\autospace@beforeFDP
774                           \FBAutoSpacePunctuationtrue}
775   \def\NoAutoSpaceBeforeFDP{\noautospace@beforeFDP
776                           \FBAutoSpacePunctuationfalse}
777   \AtEndOfPackage{\AutoSpaceBeforeFDP}
778 \else
779   \let\AutoSpaceBeforeFDP\autospace@beforeFDP
780   \let\NoAutoSpaceBeforeFDP\noautospace@beforeFDP
781   \AutoSpaceBeforeFDP
782 \fi

```

\rmfamilyFB In LaTeX2e \ttfamily (and hence \texttt) will be redefined ‘AtBeginDocument’ as \sffamilyFB \ttfamilyFB so that no space is added before the four ; : ! ? characters, even if \ttfamilyFB AutoSpacePunctuation is **true**. When AutoSpacePunctuation is **false**, the eventually typed spaces are left unchanged (not turned into thin spaces, no penalty added). \rmfamily and \sffamily need to be redefined also (\ttfamily is not always used inside a group, its effect can be cancelled by \rmfamily or \sffamily).

These redefinitions can be canceled if necessary, for instance to recompile older documents, see option **OriginalTypewriter** below.

To be consistent with what is done for the ; : ! ? characters, \ttfamilyFB also switches off insertion of spaces inside French guillemets *when they are typed in as characters* with the ‘og’/‘fg’ options in \frenchsetup{}. This is also a workaround for the weird behaviour of these characters in verbatim mode.

```

783 \ifLaTeXe
784   \DeclareRobustCommand\ttfamilyFB{\FB@spacing@off \ttfamilyORI}
785   \DeclareRobustCommand\rmfamilyFB{\FB@spacing@on \rmfamilyORI}
786   \DeclareRobustCommand\sffamilyFB{\FB@spacing@on \sffamilyORI}
787 \fi

```

\NoAutoSpacing The following command disables automatic spacing for high punctuation and French quote characters; it also switches off active punctuation characters (if any). It is engine independent (works for TeX, LuaTeX and XeTeX based engines) and is meant to be used inside a group.

```

788 \DeclareRobustCommand*{\NoAutoSpacing}{%
789   \FB@spacing@off
790   \ifFB@active@punct\shorthandoff{;!:!?\}\fi
791 }

```

## 2.3 Commands for French quotation marks

**\guillemotleft** pdfLaTeX users are supposed to use 8-bit output encodings (T1, LY1,...) to typeset French, those who still stick to OT1 should load `aeguill` or a similar package. In both **\textquotedblleft** cases the commands `\guillemotleft` and `\guillemotright` will print the French opening and closing quote characters from the output font. For XeLaTeX and LuaLaTeX, `\guillemotleft` and `\guillemotright` are defined by package `fontspec` (v. 2.5d and up).

We provide the following definitions for non-LaTeX users only as fall-back, they are welcome to change them for anything better.

```

792 \ifLaTeXe
793 \else
794   \ifFBunicode
795     \def\guillemotleft{{\char"00AB}}
796     \def\guillemotright{{\char"00BB}}
797     \def\textquotedblleft{{\char"201C}}
798     \def\textquotedblright{{\char"201D}}
799   \else
800     \def\guillemotleft{\leavevmode\raise0.25ex
801                           \hbox{\$scriptscriptstyle ll\$}}
802     \def\guillemotright{\raise0.25ex
803                           \hbox{\$scriptscriptstyle gg\$}}
804     \def\textquotedblleft{'`}
805     \def\textquotedblright{''}
806   \fi
807   \let\xspace\relax
808 \fi

```

**\FBgspchar** The next step is to provide correct spacing after ‘‘’ and before ‘’’; no line break is allowed neither *after* the opening one, nor *before* the closing one. French quotes (including spacing) are printed by `\FB@og` and `\FB@fg`, the expansion of the top level commands `\og` and `\fg` is different in and outside French.

`\FB@og` and `\FB@fg` are now designed to work in bookmarks.

```

809 \providecommand\texorpdfstring[2]{#1}
810 \newcommand*\FB@og{\texorpdfstring{@FB@og}{\guillemotleft\space}}
811 \newcommand*\FB@fg{\texorpdfstring{@FB@fg}{\space\guillemotright}}

```

The internal definitions `\@FB@og` and `\@FB@fg` need some engine-dependent tuning: for LuaTeX, `\FB@spacing` is set to 0 locally to prevent the quotes characters from adding space when option `og=<, fg=>` is set.

```

812 \newcommand*\FB@guillspace{\penalty@M\FBguillspace}
813 \newcommand*\FBgspchar{\char"A0\relax}
814 \newif\ifFBucsNBSP
815 \iffB@luatex@punct

837          \guillemotright}
838 \fi

```

**\og** The user level macros for quotation marks are named `\og` (“ouvrez guillemets”) and **\fg** `\fg` (“fermez guillemets”). Another option for typesetting quotes in French is to use the command `\frquote` (see below). Dummy definition of `\og` and `\fg` just to ensure that this commands are not yet defined.

```

839 \newcommand*{\og}{\emptyset}
840 \newcommand*{\fg}{\emptyset}

```

The definitions of `\og` and `\fg` for quotation marks are switched on and off through the `\extrasfrench` `\noextrasfrench` mechanism. Outside French, `\og` and `\fg` will typeset standard English opening and closing double quotes. We'll try to be smart to users of David Carlisle's `xspace` package: if this package is loaded there will be no need for `{}` or `\`  to get a space after `\fg`, otherwise `\xspace` will be defined as `\relax` (done at the end of this file).

```

841 \ifLaTeXe
842  \def\bbl@frenchguillemets{%
843          \renewcommand*{\og}{\FB@og}%
844          \renewcommand*{\fg}{\FB@fg\xspace}}
845  \renewcommand*{\og}{\textquotedblleft}
846  \renewcommand*{\fg}{\ifdim\lastskip>\z@\unskip\fi
847          \textquotedblright\xspace}
848 \else
849  \def\bbl@frenchguillemets{\let\og\FB@og
850          \let\fg\FB@fg}
851  \def\og{\textquotedblleft}
852  \def\fg{\ifdim\lastskip>\z@\unskip\fi\textquotedblright}
853 \fi
854 \addto\extrasfrench{\babel@save\og \babel@save\fg
855          \bbl@frenchguillemets}

```

**\frquote** Another way of entering French quotes relies on \frquote{} with supports up to two levels of quotes. Let's define the default quote characters to be used for level one or two of quotes...

```

856 \newcommand*{\ogi}{\FB@og}
857 \newcommand*{\fgi}{\FB@fg}
858 \newcommand*{\@ogi}{\ifmmode\hbox{\ogi}\else\ogi\fi}
859 \newcommand*{\@fgi}{\ifmmode\hbox{\fgi}\else\fgi\fi}
860 \newcommand*{\ogii}{\textquotedblleft}
861 \newcommand*{\fgii}{\textquotedblright}
862 \newcommand*{\@ogii}{\ifmmode\hbox{\ogii}\else\ogii\fi}
863 \newcommand*{\@fgii}{\ifmmode\hbox{\fgii}\else\fgii\fi}
```

and the needed technical stuff to handle options:

```

864 \newcount\FBguill@level
865 \newtoks\FBold@everypar
```

\FB@addquote@everypar was borrowed from csquotes.sty.

```

866 \def\FB@addquote@everypar{%
867   \let\FBnew@everypar\everypar
868   \FBold@everypar=\expandafter{\the\everypar}%
869   \FBnew@everypar={\the\FBold@everypar\FBeverypar@quote}%
870   \let\everypar\FBold@everypar
871   \let\FB@addquote@everypar\relax
872 }
873 \newif\ifFBcloseguill \FBcloseguilltrue
874 \newif\ifFBInnerGuillSingle
875 \def\FBguillopen{\bgroup\NoAutoSpacing\guillemotleft\egroup}
876 \def\FBguillclose{\bgroup\NoAutoSpacing\guillemotright\egroup}
877 \let\FBguillnone\empty
878 \let\FBeveryparguill\FBguillopen
879 \let\FBeverylanguill\FBguillnone
880 \let\FBeverypar@quote\relax
881 \let\FBeverylanguote\empty
```

The main command \frquote accepts (in LaTeX2e only) a starred version which suppresses the closing quote; it is meant to be used for inner quotations which end together with the outer one, then only one closing guillemet (the outer one) should be printed. \frquote (without star) is now designed to work in bookmarks too.

```

882 \ifLaTeXe
883   \DeclareRobustCommand\frquote{%
884     \texorpdfstring{@ifstar{\FBcloseguillfalse\fr@quote}%
885       {\FBcloseguilltrue \fr@quote}}{%
886         {\bm@fr@quote}}%
887   }
888   \newcommand{\bm@fr@quote}[1]{%
889     \guillemotleft\space #1\space\guillemotright}
890 \else
891   \newcommand\frquote[1]{\fr@quote{#1}}
892 \fi
```

The internal command \fr@quote takes one (long) argument: the quotation text.

```

893 \newcommand{\fr@quote}[1]{%
894   \leavevmode
895   \advance\FBguill@level by \@ne
```

```

896 \ifcase\FBguill@level
897 \or

```

This for level 1 (outer) quotations: set \FBeverypar@quote for level 1 quotations and add it to \everypar using \FB@addquote@everypar, then print the quotation:

```

898 \ifx\FBeveryparguill\FBguillnone
899 \else
900   \def\FBeverypar@quote{\FBeveryparguill\FB@guillspace}%
901   \FB@addquote@everypar
902 \fi
903 \@ogi #1\@fgi
904 \or

```

This for level 2 (inner) quotations: Omega's command \localleftbox included in LuaTeX, is convenient for repeating guillemets at the beginning of every line.

```

905 \ifx\FBeverylineguill\FBguillopen
906   \def\FBeveryline@quote{\FB@addGUILspace=0 \guillemotleft
907   \FB@guillspace}%
908   \localleftbox{\FBeveryline@quote}%
909   \let\FBeverypar@quote\relax
910   \@ogi #1\iffBcloseguill\@fgi\fi
911 \else
912   \ifx\FBeverylineguill\FBguillclose
913     \def\FBeveryline@quote{\FB@addGUILspace=0 \guillemotright
914     \FB@guillspace}%
915     \localleftbox{\FBeveryline@quote}%
916     \let\FBeverypar@quote\relax
917     \@ogi #1\iffBcloseguill\@fgi\fi
918 \else

```

otherwise we need to redefine \FBeverypar@quote (and eventually \ogii, \fgii) for level 2 quotations:

```

919   \let\FBeverypar@quote\relax
920   \iffBInnerGuillSingle
921     \def\ogii{\leavevmode
922       \guilsinglleft\FB@guillspace}%
923     \def\fgii{\ifdim\lastskip>\z@\unskip\fi
924       \FB@guillspace\guilsinglright}%
925     \ifx\FBeveryparguill\FBguillopen
926       \def\FBeverypar@quote{\guilsinglleft\FB@guillspace}%
927     \fi
928     \ifx\FBeveryparguill\FBguillclose
929       \def\FBeverypar@quote{\guilsinglright\FB@guillspace}%
930     \fi
931   \fi
932   \@ogi #1\iffBcloseguill \@fgii \fi
933 \fi
934 \fi
935 \else

```

Warn if \FBguill@level > 2:

```

936 \ifx\PackageWarning@undefined
937   \fb@warning{\noexpand\frquote\space handles up to
938   two levels.\ Quotation not printed.}%
939 \else

```

```

940      \PackageWarning{french.ldf}{%
941          \protect\frquote\space handles up to two levels.
942          \MessageBreak Quotation not printed. Reported}
943      \fi
944  \fi

```

Closing: step down \FBguill@level and clean on exit. Changes made global in case \frquote{} ends inside an environment.

```

945  \global\advance\FBguill@level by \m@ne
946  \ifcase\FBguill@level \global\let\FBeverypar@quote\relax
947  \or \gdef\FBeverypar@quote{\FBeveryparguill\FB@guillspace}%
948  \global\let\FBeveryline@quote\empty
949  \ifx\FBeverylineguill\FBguillnone\else\localleftbox{}\fi
950 \fi
951 }

```

The next command is intended to be used in list environments to suppress quotes which might be added by \FBeverypar@quote after items for instance.

```
952 \newcommand*{\NoEveryParQuote}{\let\FBeveryparguill\FBguillnone}
```

## 2.4 Date in French

**\frenchtoday** The following code creates a macro \datefrench which in turn defines command \frenchdate \frenchtoday (\today is defined as \frenchtoday in French). The corresponding \datefrench commands for the French dialect, \dateacadian and \acadiantoday are also created btw. This new implementation relies on commands \SetString and \SetStringLoop, therefore requires Babel 3.10 or newer.

Explicitly defining \BabelLanguages as the list of all French dialects defines *both* \datefrench and \dateacadian; this is required as french.ldf is read only once even if both language options french and acadian are supplied to Babel. Coding \StartBabelCommands\*{french,acadian} would *only* define \date\CurrentOption, leaving the second language undefined in Babel's sens.

```

953 \def\BabelLanguages{french,acadian}
954 \StartBabelCommands*{\BabelLanguages}{date}
955     [unicode, fontenc=TU EU1 EU2, charset=utf8]
956     \SetString\monthiiname{février}
957     \SetString\monthviiiname{août}
958     \SetString\monthxiiname{décembre}
959 \StartBabelCommands*{\BabelLanguages}{date}
960     \SetStringLoop{month#\lname}{%
961         janvier,f\'evrier,mars,avril,mai,juin,juillet,%
962         ao\^ut,septembre,octobre,novembre,d\`ecembre}
963     \SetString\today{\FB@date{\year}{\month}{\day}}
964 \EndBabelCommands

```

\frenchdate (which produces an unbreakable string) and \frenchtoday (breakable) both rely on \FB@date, the inner group is needed for \hbox.

```

965 \newcommand*{\FB@date}[3]{%
966     {{\number#3}\ifnum1=#3{\ier}\fi\FBdatespace
967     \csname month\romannumeral#2name\endcsname
968     \ifx#1\empty\else\FBdatespace\number#1\fi}}
969 \newcommand*{\FBdatebox}{\hbox}

```

```

970 \newcommand*{\FBdatespace}{\space}
971 \newcommand*{\frenchdate}{\FBdatebox\FB@date}
972 \newcommand*{\acadiandate}{\FBdatebox\FB@date}

```

## 2.5 Extra utilities

Let's provide the French user with some extra utilities.

\up \up eases the typesetting of superscripts like '1<sup>er</sup>'. Up to version 2.0 of babel-\french \up was just a shortcut for \textsupscript in LaTeX2e, but several users complained that \textsupscript typesets superscripts too high and too big, so we now define \up as an attempt to produce better looking superscripts. \up is defined as \up but \frenchsetup{FrenchSuperscripts=false} redefines \up as \textsupscript for compatibility with previous versions.

When a font has built-in superscripts, the best thing to do is to just use them, otherwise \up has to simulate superscripts by scaling and raising ordinary letters. Scaling is done using package scalefnt which will be loaded at the end of Babel's loading (babel-french being an option of Babel, it cannot load a package while being read).

```

973 \newif\ifFB@poorman
974 \newdimen\FB@Mht
975 \ifLaTeXe
976   \AtEndOfPackage{\RequirePackage{scalefnt}}

```

\FB@up@fake holds the definition of fake superscripts. The scaling ratio is 0.65, raising is computed to put the top of lower case letters (like 'm') just under the top of upper case letters (like 'M'), precisely 12% down. The chosen settings look correct for most fonts, but can be tuned by the end-user if necessary by changing \FBsupR and \FBsupS commands.

\FB@lc is defined as \MakeLowercase to inhibit the uppercasing of superscripts (this may happen in page headers with the standard classes but is wrong); \FB@lc can be re-defined to do nothing by option LowercaseSuperscripts=false of \frenchsetup{}.

```

977 \newcommand*{\FBsupR}{-0.12}
978 \newcommand*{\FBsupS}{0.65}
979 \newcommand*{\FB@lc}[1]{\MakeLowercase{#1}}
980 \DeclareRobustCommand*{\FB@up@fake}[1]{%
981   \settoheight{\FB@Mht}{M}%
982   \addtolength{\FB@Mht}{\FBsupR \FB@Mht}%
983   \addtolength{\FB@Mht}{-\FBsupS ex}%
984   \raisebox{\FB@Mht}{\scalefont{\FBsupS}{\FB@lc{#1}}}}%
985 }

```

The only packages I currently know to take advantage of real superscripts are a) realscripts used in conjunction with XeLaTeX or LuaLaTeX and OpenType fonts having the font feature 'VerticalPosition=Superior' and b) fourier (from version 1.6) when Expert Utopia fonts are available.

\FB@up checks whether the current font is a Type1 'Expert' (or 'Pro') font with real superscripts or not (the code works currently only with fourier-1.6 but could work with any Expert Type1 font with built-in superscripts, see below), and decides to use real or fake superscripts. It works as follows: the content of \f@family (family name of the current font) is split by \FB@split into two pieces, the first three characters

('fut' for Fourier, 'ppl' for Adobe's Palatino, ...) stored in \FB@firstthree and the rest stored in \FB@suffix which is expected to be 'x' or 'j' for expert fonts.

```
986  \def\FB@split#1#2#3#4@nil{\def\FB@firstthree{#1#2#3}%
987  %                                \def\FB@suffix{#4}}
988  \def\FB@x{x}
989  \def\FB@j{j}
990  \DeclareRobustCommand*\FB@up{[1]{%
991    \bgroup \FB@poormantrue
992    \expandafter\FB@split\f@family\@nil
```

Then \FB@up looks for a .fd file named t1fut-sup.fd (Fourier) or t1ppl-sup.fd (Palatino), etc. supposed to define the subfamily (fut-sup or ppl-sup, etc.) giving access to the built-in superscripts. If the .fd file is not found by \IfFileExists, \FB@up falls back on fake superscripts, otherwise \FB@suffix is checked to decide whether to use fake or real superscripts.

```
993  \edef\reserved@a{\lowercase{%
994    \noexpand\IfFileExists{\f@encoding\FB@firstthree -sup.fd}}}%
995  \reserved@a
996  {\ifx\FB@suffix\FB@x \FB@poormanfalse\fi
997  \ifx\FB@suffix\FB@j \FB@poormanfalse\fi
998  \iffB@poorman \FB@up@fake{#1}%
999  \else \FB@up@real{#1}%
1000 \fi}%
1001 {\FB@up@fake{#1}}%
1002 \egroup}
```

\FB@up@real just picks up the superscripts from the subfamily (and forces lowercase).

```
1003 \newcommand*\FB@up@real{[1]{\bgroup
1004   \fontfamily{\FB@firstthree -sup}\selectfont \FB@lc{#1}\egroup}}
```

\fup is defined as \FB@up unless \realsuperscript is defined by *realscripts.sty*. \fup just prints its argument in bookmarks.

```
1005 \DeclareRobustCommand*\fup{[1]{%
1006   \texorpdfstring{\ifx\realsuperscript@\undefined
1007     \FB@up{#1}%
1008   \else
1009     \bgroup\let\fakesuperscript\FB@up@fake
1010     \realsuperscript{\FB@lc{#1}}\egroup
1011   \fi
1012 }{#1}}%
```

Let's provide a temporary definition for \up (redefined 'AtBeginDocument' as \fup or \textsuperscript according to \frenchsetup{} options).

```
1014 \providecommand*\up{\fup}
Poor man's definition of \up for Plain.
```

```
1015 \else
1016 \providecommand*\up{[1]{\leavevmode\raisebox{\severrm #1}{}
1017 \fi}
```

**\ieme** Some handy macros for those who don't know how to abbreviate ordinals:

```
\ier 1018 \def\ieme{\up{e}\xspace}
\iere 1019 \def\iemes{\up{es}\xspace}
\iemes
\iers
\ieres
```

```

1020 \def\ier{\up{er}\xspace}
1021 \def\iers{\up{ers}\xspace}
1022 \def\iere{\up{re}\xspace}
1023 \def\ieres{\up{res}\xspace}

\FBmedkern
\FBthickkern
1024 \newcommand*\FBmedkern{\kern+.2em}
1025 \newcommand*\FBthickkern{\kern+.3em}

\primo Some support macros relying on \up for numbering,
\fprimo 1026 \newcommand*\FrenchEnumerate[1]{%
\nos 1027   #1\texorpdfstring{\up{o}}{FBthickkern}{\textdegree\space}}
\Nos 1028 \newcommand*\FrenchPopularEnumerate[1]{%
\No 1029   #1\texorpdfstring{\up{o}}{FBthickkern}{\textdegree\space}}
\No 1030 Typing \primo should result in ‘°’ (except in bookmarks where \textdegree is used
instead of o-superior),
1031 \def\primo{\FrenchEnumerate1}
1032 \def\secundo{\FrenchEnumerate2}
1033 \def\tertio{\FrenchEnumerate3}
1034 \def\quarto{\FrenchEnumerate4}
1035 while typing \fprimo gives ‘°’) (except in bookmarks where \textdegree is used
instead),.
1036 \def\fprimo{\FrenchPopularEnumerate1}
1037 \def\fsecundo{\FrenchPopularEnumerate2}
1038 \def\ftertio{\FrenchPopularEnumerate3}
1039 \def\fquarto{\FrenchPopularEnumerate4}

Let's provide four macros for the common abbreviations of “Numéro”. In bookmarks
° is used instead of o-superior.
1040 \DeclareRobustCommand*\No{%
1041   \texorpdfstring{N\up{o}}{FBmedkern}{\textdegree\space}}
1042 \DeclareRobustCommand*\Nos{%
1043   \texorpdfstring{N\up{os}}{FBmedkern}{\textdegree\space}}
1044 \DeclareRobustCommand*\nos{%
1045   \texorpdfstring{n\up{os}}{FBmedkern}{\textdegree\space}}

\bsc As family names should be written in small capitals and never be hyphenated, we
provide a command (its name comes from Boxed Small Caps) to input them easily.
Note that this command has changed with version 2 of babel-french: a \kern0pt
is used instead of \hbox because \hbox would break microtype's font expansion;
as a (positive?) side effect, composed names (such as Dupont-Durand) can now be
hyphenated on explicit hyphens. Usage: Jean-\bsc{Duchemin}.
1046 \ifLaTeXe
1047   \DeclareRobustCommand*\bsc[1]{%
1048     \texorpdfstring{\leavevmode\begingroup\kern0pt \scshape #1\endgroup}{%
1049       {\textsc{#1}}}}
1050 }
1051 \else

```

```

1052 \newcommand*{\bsc}[1]{\leavevmode\begingroup\kern0pt #1\endgroup}
1053 \fi

```

Some definitions for special characters. We won't define `\tilde` as a Text Symbol not to conflict with the macro `\tilde` for math mode and use the name `\tild` instead. Note that `\boi` may *not* be used in math mode, its name in math mode is `\backslash`. `\degre` can be accessed by the command `\r{}` for ring accent.

```

1054 \ifFBunicode
1055   \providecommand*{\textbackslash}{\char"005C}
1056   \providecommand*{\textasciicircum}{\char"005E}
1057   \providecommand*{\textasciitilde}{\char"007E}
1058   \newcommand*{\FB@degre}{\textcircled{0}}
1059 \else
1060   \ifLaTeXe
1061     \newcommand*{\FB@degre}{\r{}}
1062   \fi
1063 \fi
1064 \DeclareRobustCommand*{\boi}{\textbackslash}
1065 \DeclareRobustCommand*{\circonflexe}{\textasciicircum}
1066 \DeclareRobustCommand*{\tild}{\textasciitilde}
1067 \DeclareRobustCommand*{\degre}{%
1068   \texorpdfstring{\FB@degre}{\textdegree}}
1069 \newcommand*{\at}{@}

```

**\degrees** We now define a macro `\degrees` for typesetting the abbreviation for 'degrees' (as in 'degrees Celsius'). As the bounding box of the character 'degree' has very different widths in CM/EC and PostScript fonts, we fix the width of the bounding box of `\degrees` to 0.3em, this lets the symbol 'degree' stick to the preceding (e.g., `45\degrees`) or following character (e.g., `20~\degrees C`). `\degrees` works in math-mode (angles). If T<sub>E</sub>X Companion fonts are available (`textcomp.sty`), we pick up `\textdegree` from them instead of emulating 'degrees' from the `\r{}` accent. Otherwise we advise the user (once only) to use TS1-encoding.

```

1070 \DeclareRobustCommand*{\degrees}{\degre}
1071 \ifLaTeXe
1072   \AtBeginDocument{%
1073     \@ifpackageloaded{fontspec}{}{%
1074       \ifdefined\DeclareEncodingSubset
1075         \DeclareRobustCommand*{\degrees}{%
1076           \texorpdfstring{\hbox{\UseTextSymbol{TS1}{\textdegree}}}{\textdegree}}%
1077           \textdegree}%
1078     \else
1079       \def\Warning@degree@TSone{\FBWarning
1080         {Degrees would look better in TS1-encoding:%
1081           \MessageBreak add \protect
1082             \usepackage{textcomp} to the preamble.%
1083             \MessageBreak Degrees used}}
1084       \DeclareRobustCommand*{\degrees}{%
1085         \texorpdfstring{\hbox to 0.3em{\hss\degre\hss}}{%

1087             \global\let\Warning@degree@TSone\relax}%
1088           \textdegree}%
1089     \fi

```

```

1090      }%
1091  }
1092 \fi

```

## 2.6 Formatting numbers

\StandardMathComma As mentioned in the *TeXbook* p. 134, the comma is of type `\mathpunct` in math mode: \\DecimalMathComma it is automatically followed by a thin space. This is convenient in lists and intervals but unpleasant when the comma is used as a decimal separator in French: it has to be entered as `{,}`. \\DecimalMathComma makes the comma be an ordinary character (of type `\mathord`) in French (or Acadian) *only* (no space added); \\StandardMathComma switches back to the standard behaviour of the comma.

Unfortunately, \\newcount inside \\if breaks Plain formats.

```

1093 \newif\iffB@icomma
1094 \newcount\mc@charclass
1095 \newcount\mc@charfam
1096 \newcount\mc@charslot

**\nombre** The command `\nombre` is now borrowed from `numprint.sty` for LaTeX2e. There is no point to maintain the former tricky code when a package is dedicated to do the same job and more. For Plain based formats, `\nombre` no longer formats numbers, it prints them as is and issues a warning about the change.

Fake command `\nombre` for Plain based formats, warning users of `babel-french v. 1.x.` about the change:

```

1157 \newcommand*{\nombre}[1]{{#1}\fb@warning{*** \noexpand\nombre
1158   no longer formats numbers\string! ***}}

```

Let's activate LuaTeX punctuation if necessary (LaTeX or Plain) so that `\FBsetspace` commands can be used in the preamble, then cleanup and exit without loading any `.cfg` file in case of Plain formats.

```

1192 }

1193 \newcommand*{\FBthousandsep}{\kern \fontdimen2\font \relax}

```

## 2.7 Caption names

The next step consists in defining the French equivalents for the *LaTeX* caption names.

**\captionsfrench** Let's first define `\captionsfrench` which sets all strings used in the four standard document classes provided with *LaTeX*.

`\figurename` and `\tablename` are printed in small caps in French, unless either `SmallCapsFigTabCaptions` is set to `false` or a class or package loaded before `babel-french` defines `\FBfigtabshape` as `\relax`.

```
1194 \providecommand*{\FBfigtabshape}{\scshape}
```

New implementation for caption names( requires Babel's 3.10 or newer).

```

1195 \StartBabelCommands*{\BabelLanguages}{captions}
1196     [unicode, fontenc=TU EU1 EU2, charset=utf8]
1197     \SetString{\refname}{Références}
1198     \SetString{\abstractname}{Résumé}
1199     \SetString{\prefacename}{Préface}
1200     \SetString{\contentsname}{Table des matières}
1201     \SetString{\ccname}{Copie à }
1202     \SetString{\proofname}{Démonstration}
1203     \SetString{\partfirst}{Première}
1204     \SetString{\partsecond}{Deuxième}
1205     \SetStringLoop{ordinal#1}{%
1206         \frenchpartfirst,\frenchpartsecond,Troisième,Quatrième,%

```

```

1207     Cinquième,Sixième,Septième,Huitième,Neuvième,Dixième,Onzième,%
1208     Douzième,Treizième,Quatorzième,Quinzième,Seizième,%
1209     Dix-septième,Dix-huitième,Dix-neuvième,Vingtième}
1210 \StartBabelCommands*\{BabelLanguages}{captions}
1211   \SetString{\refname}{R\'ef\`erences}
1212   \SetString{\abstractname}{R\'esum\'e}
1213   \SetString{\bibname}{Bibliographie}
1214   \SetString{\prefacename}{Pr\'eface}
1215   \SetString{\chaptername}{Chapitre}
1216   \SetString{\appendixname}{Annexe}
1217   \SetString{\contentsname}{Table des mati\`eres}

1244       \csname ordinal\romannumeral\value{part}\endcsname\space
1245       \partnameord\FB@emptypart
1246     \else
1247       Partie%
1248     \fi}%
1249   }
1250   \SetString{\partname}{\FB@partname}
1251 \EndBabelCommands

```

`\figurename` and `\tablename` no longer include font commands; to print them in small caps in French (the default), we now customise `\fnum@figure` and `\fnum@table` when available (not in `beamer.cls` f.i.).

```
1252 \AtBeginDocument{%
```

```

1253 \ifx\FBfigtabshape\relax
1254 \else
1255   \ifdefined\fnum@figure
1256     \let\fnum@figure0RI\fnum@figure
1257     \renewcommand{\fnum@figure}{{\ifFBfrench\FBfigtabshape\fi
1258                               \fnum@figure0RI}}%
1259   \fi
1260   \ifdefined\fnum@table
1261     \let\fnum@table0RI\fnum@table
1262     \renewcommand{\fnum@table}{{\ifFBfrench\FBfigtabshape\fi
1263                               \fnum@table0RI}}%
1264   \fi
1265 \fi
1266 }

```

## 2.8 Figure and table captions

**\FBWarning** \FBWarning is an alias of \PackageWarning{french.ldf} which can be made silent by option **SuppressWarning**.

```
1267 \newcommand{\FBWarning}[1]{\PackageWarning{french.ldf}{#1}}
```

**\CaptionSeparator** Let's consider now captions in figures and tables. In French, captions in figures and tables should never be printed as 'Figure 1:' which is the default in standard LaTeX2e classes (a space should precede the colon in French). This flaw may occur with pdfLaTeX as ':' is made active too late. With LuaTeX and XeTeX, this glitch doesn't occur, you get 'Figure 1:' which is correct in French. With pdfTeX *babel-french* provides the following workaround.

The standard definition of \@makecaption (e.g., the one provided in article.cls, report.cls, book.cls which is frozen for LaTeX2e according to Frank Mittelbach), is saved in \STD@makecaption. 'AtBeginDocument' we compare it to its current definition (some classes like memoir, koma-script classes, AMS classes, ua-thesis.cls... change it). If they are identical, *babel-french* just adds a hook called \FBCaption@Separator to \@makecaption; \FBCaption@Separator defaults to ':' as in the standard \@makecaption and will be changed to ':' in French 'AtBeginDocument'; it can be also set to \CaptionSeparator ('-') using **CustomiseFigTabCaptions**.

While saving the standard definition of \@makecaption we have to make sure that characters ':' and '>' have \catcode 12 (*babel-french* makes ':' active and *spanish.ldf* makes '>' active).

```

1268 \bgroup
1269   \catcode`:=12 \catcode`>=12 \relax
1270   \long\gdef\STD@makecaption#1#2{%
1271     \vskip\abovecaptionskip
1272     \sbox\@tempboxa{#1: #2}%
1273     \ifdim \wd\@tempboxa >\hsize
1274       #1: #2\par
1275     \else
1276       \global \minipagefalse
1277       \hb@xt@\hsize{\hfil\box\@tempboxa\hfil}%
1278     \fi
1279     \vskip\belowcaptionskip}
1280 \egroup

```

No warning is issued for SMF and AMS classes as their layout of captions is compatible with French typographic standards.

With memoir and koma-script classes, babel-french customises \captiondelim or \captionformat in French (unless option `CustomiseFigTabCaptions` is set to `false`) and issues no warning.

When \makecaption has been changed by another class or package, a warning is printed in the .log file.

Enable the standard warning only if high punctuation is active.

```
1281 \newif\if@FBwarning@capsep
1282 \iffB@active@punct\@FBwarning@capseptrue\fi
1283 \newcommand*{\CaptionSeparator}{\space\textendash\space}
1284 \def\FBCaption@Separator{::}
1285 \long\def\FB@makecaption#1#2{%
1286   \vskip\abovecaptionskip
1287   \sbox\@tempboxa{\#1\FBCaption@Separator #2}%
1288   \ifdim \wd\@tempboxa >\hsize
1289     #1\FBCaption@Separator #2\par
1290   \else
1291     \global \minipagetrue
1292     \hb@xt@\hsize{\hfil\box\@tempboxa\hfil}%
1293   \fi
1294   \vskip\belowcaptionskip}
```

Disable the standard warning with AMS and SMF classes.

```
1295 \@ifclassloaded{amsart}{\@FBwarning@capsepfalse}{}
1296 \@ifclassloaded{amsbook}{\@FBwarning@capsepfalse}{}
1297 \@ifclassloaded{amsdtx}{\@FBwarning@capsepfalse}{}
1298 \@ifclassloaded{amsldoc}{\@FBwarning@capsepfalse}{}
1299 \@ifclassloaded{amproc}{\@FBwarning@capsepfalse}{}
1300 \@ifclassloaded{smfart}{\@FBwarning@capsepfalse}{}
1301 \@ifclassloaded{smfbk}{\@FBwarning@capsepfalse}{}
```

Disable the standard warning for some classes that do not use ':' as caption separator.

```
1302 \@ifclassloaded{IEEEconf}{\@FBwarning@capsepfalse}{}
1303 \@ifclassloaded{IEEEtran}{\@FBwarning@capsepfalse}{}
1304 \@ifclassloaded{revtex4-2}{\@FBwarning@capsepfalse}{}
1305 \@ifclassloaded{svjour3}{\@FBwarning@capsepfalse}{}
```

No warning with memoir or koma-script classes: they change \makecaption but we will manage to customise them in French later on (see below after executing \FBprocess@options)

```
1306 \@ifclassloaded{memoir}{\@FBwarning@capsepfalse}{}
1307 \ifFB@koma \@FBwarning@capsepfalse \fi
```

No warning with the beamer class which defines \beamer@makecaption (customised below) instead of \makecaption. No warning either if \makecaption is undefined (i.e. letter).

```
1308 \@ifclassloaded{beamer}{\@FBwarning@capsepfalse}{}
1309 \ifdefined\makecaption\else\@FBwarning@capsepfalse\fi
```

First check the definition of \makecaption, change it or issue a warning in case it has been changed by a class or package not (yet) compatible with babel-french; then change the definition of \FBCaption@Separator, taking care that the colon is typeset correctly in French (*not* 'Figure 1: légende').

```

1310 \AtBeginDocument{%
1311   \ifx\@makecaption\STD@makecaption
1312     \global\let\@makecaption\FB@makecaption

## 2.9 Dots...

**\FBtextellipsis** Unless a ready-made character is available in the current font, LaTeX's default definition of \textellipsis includes a \kern at the end; this space is not wanted in some cases (before a closing brace for instance) and \kern breaks hyphenation of the next word. We define \FBtextellipsis for French (in LaTeX only) the same way but without the last \kern.

LY1 has a ready made character for \textellipsis, it should be used in French. The same is true for Unicode fonts in use with XeTeX and LuaTeX.

```

1338 \iffBunicode
1339 \else
1340   \DeclareTextSymbol{\FBtextellipsis}{LY1}{133}
1341   \DeclareTextCommand{\FBtextellipsis}{PU}{\textellipsis}

1378           BEFORE babel/french; reported}%
1379   \fi
1380 }

```

## 2.11 Setup options: keyval stuff

All setup options are handled by command `\frenchsetup{}` using the keyval syntax. A list of flags is defined and set to a default value which will possibly be changed 'AtEnd-

OfPackage' if French is the main language. After this, `\frenchsetup{}` eventually modifies the preset values of these flags.

Option processing can occur either in `\frenchsetup{}`, but *only for options explicitly set by `\frenchsetup{}`*, or 'AtBeginDocument'; any option affecting `\extrasfrench{}` *must* be processed by `\frenchsetup{}`: when French is the main language, `\extrasfrench{}` is executed by Babel when it switches the main language and this occurs *before* reading the stuff postponed by babel-french 'AtBeginDocument'. Reexecuting `\extrasfrench{}` is an option which was used up to v2.6h, it has been dropped in v3.0a because of its side-effects (f.i. `\babel@save` and `\babel@savevariable` did not work for French).

**\frenchsetup** Let's now define this command which reads and sets the options to be processed either immediately (i.e. just after setting the key) or later (at `\begin{document}`) by `\FBprocess@options`. `\frenchsetup{}` can only be called in the preamble.

```
1381 \newcommand*{\frenchsetup}[1]{%
1382   \setkeys{FB}{#1}%
1383 }%
1384 @onpreamble\frenchsetup
```

Keep the former name `\frenchbsetup` working for compatibility.

```
1385 \let\frenchbsetup\frenchsetup
1386 @onpreamble\frenchbsetup
```

We define a collection of conditionals with their defaults (true or false).

```

The defaults values of these flags have been chosen so that babel-french does not change anything regarding the global layout. `\bbl@main@language`, set by the last

option of Babel, controls the global layout of the document. ‘AtEndOfPackage’ we check the main language in `\bbl@main@language`; if it is French (or a French dialect) the values of some flags have to be changed to ensure a French looking layout for the whole document (even in parts written in languages other than French); the end-user will then be able to customise the values of all these flags with `\frenchsetup{}`. The following patch is for koma-script classes: the `\partformat` command, defined as `\partname~\thepart\autodot`, is incompatible with our redefinition of `\partname`.

```

1413 \iffB@koma
1414   \ifdefined\partformat
1415     \def\FB@partformat@fix{%
1416       \iffBPartNameFull
1417         \babel@save\partformat
1418         \renewcommand*{\partformat}{\partname}%
1419       \fi}
1420     \addto\extrasfrench{\FB@partformat@fix}%
1421   \fi
1422 \fi

```

Our list customisation conflicts with the beamer class and with the beamerarticle package. The patch provided in `beamerbasecompatibility` solves the conflict except in case of language changes, so we provide our own patch. When the beamer is loaded, lists are not customised at all to ensure compatibility. The beamerarticle package needs to be loaded *before* Babel, a warning is issued otherwise, see section 2.10; a light customisation is compatible with the beamerarticle package.

```

1640 }%

```

Inputting French quotes as *single characters* when they are available on the keyboard (through a compose key for instance) is more comfortable than typing \og and \fg. Life is simple here with modern LuaTeX or XeTeX engines: we just have to activate the \FB@addGUILspace attribute for LuaTeX or set \XeTeXcharclass of quotes to the proper value for XeTeX.

With pdfTeX (or old LuaTeX and XeTeX engines), quote characters are made active

and expand to `\og\ignorespaces` and `{\fg}` respectively if the current language is French, and to `\guillemotleft` and `\guillemotright` otherwise (think of German quotes), this is done by `\FB@{og}` and `\FB@{fg}`; thus correct non-breaking spaces will be added automatically to French quotes. The quote characters typed in depend on the input encoding, it can be single-byte (latin1, latin9, applemac,...) or multi-bytes (utf-8, utf8x); the next command is meant for checking whether a character is single-byte (`\FB@second` is empty) or not.

```
1641 \def\FB@parse#1#2\endparse{\def\FB@second{#2}}%
1642 \define@key{FB}{og}%
1643     {\iffBunicode
```

LuaTeX or XeTeX in use, first try modern LuaTeX: we just need to set LuaTeX's attribute `\FB@addGUILspace` to 1,

```
1644     \iffB@luatex@punct
1645         \FB@addGUILspace=1 \relax
1646     \fi
```

then with XeTeX it is a bit more tricky:

```
1647     \iffB@xetex@punct
```

`\XeTeXinterchartokenstate` is defined, we just need to set `\XeTeXcharclass` to `\FB@guilo` for the French opening quote in T1 and Unicode encoding (see subsection 2.2).

```
1648     \XeTeXcharclass"13 = \FB@guilo
1649     \XeTeXcharclass"AB = \FB@guilo
1650     \XeTeXcharclass"A0 = \FB@guilnul
1651     \XeTeXcharclass"202F = \FB@guilnul
1652     \fi
```

Issue a warning with older Unicode engines requiring active characters.

```
1653     \iffB@active@punct
1654         \FBWarning{Option og=< not supported with this version
1655                     of\MessageBreak LuaTeX/XeTeX; reported}%
1656     \fi
1657     \else
```

This is for conventional TeX engines:

```
1658 \newcommand*{\FB@og}{%
1659     \iffB@french
1660         \iffB@spacing\FB@og\ignorespaces
1661         \else\guillemotleft
1662         \fi
1663         \else\guillemotleft\fi}%
1664 \AtBeginDocument{%
1665     \ifdefined\uc@dclc
```

Package `inputenc` with utf8x (ucs) encoding loaded, use `\uc@dclc`:

```
1666     \uc@dclc{171}{default}{\FB@og}%
1667     \else
```

if encoding is not utf8x, check if the argument of `og` is a single-byte character:

```
1668     \FB@parse#1\endparse
1669     \ifx\FB@second\empty
```

This means 8-bit character encoding. Package MULEenc (from CJK) defines \mule@def to map characters to control sequences.

```

`\FBprocess@options` `\FBprocess@options` will be executed at `\begin{document}`: it first checks about packages loaded in the preamble (possibly after Babel) which customise lists: currently `enumitem`, `paralist` and `enumerate`; then it processes the options as set by `\frenchsetup{}` or forced for compatibility with packages loaded in the preamble. When French is the main language, `\extrasfrench` and `\captionsfrench` have already been processed by Babel at `\begin{document}` before `\FBprocess@options`.

```
1733 \newcommand*{\FBprocess@options}{%
```

Update flags if a package customising lists has been loaded, currently: enumitem, paralist, enumerate.

```
1734  %@ifpackageloaded{enumitem}{%

1918     \fi
1919   \endgroup
1920 }

```

## 2.12 French lists

`\listFB` Vertical spacing in lists should be shorter in French texts than the defaults provided `\listORI` by LaTeX. Note that the easy way, just changing values of vertical spacing parameters `\FB@listVsettings`

when entering French and restoring them to their defaults on exit would not work; so we define the command `\FB@listVsettings` to hold the settings to be used by the French variant `\listFB` of `\list`. Note that switching to `\listFB` reduces vertical spacing in *all* environments built on `\list`: `itemize`, `enumerate`, `description`, but also `abstract`, `quotation`, `quote` and `verse`...

The amount of vertical space before and after a list is given by `\topsep + \parskip` (+ `\partopsep` if the list starts a new paragraph). IMHO, `\parskip` should be added *only* when the list starts a new paragraph, so I subtract `\parskip` from `\topsep` and add it back to `\partopsep`; this will normally make no difference because `\parskip`'s default value is `0pt`, but will be noticeable when `\parskip` is *not* null.

```
1921 \let\listORI\list
1922 \let\endlistORI\endlist
1923 \def\FB@listVsettings{%
1924     \setlength{\itemsep}{0.4ex plus 0.2ex minus 0.2ex}%
1925     \setlength{\parsep}{0.4ex plus 0.2ex minus 0.2ex}%
1926     \setlength{\topsep}{0.8ex plus 0.4ex minus 0.4ex}%
1927     \setlength{\partopsep}{0.4ex plus 0.2ex minus 0.2ex}%
```

`\parskip` is of type 'skip', its mean value only (*not the glue*) should be subtracted from `\topsep` and added to `\partopsep`, so convert `\parskip` to a 'dimen' using `\@tempdima`.

```
1928     \@tempdima=\parskip
1929     \addtolength{\topsep}{-\@tempdima}%
1930     \addtolength{\partopsep}{\@tempdima}%
1931 }
1932 \def\listFB#1#2{\listORI{#1}{\FB@listVsettings #2}}
1933 \let\endlistFB\endlist
```

Let's now consider French `itemize`-lists. They differ from those provided by the standard LaTeX classes:

- The '•' is never used in French `itemize`-lists, an emdash '—' or an endash '–' is preferred for all levels. The item label to be used in French, stored in `\FrenchLabelItem`, defaults to '—' and can be changed using `\frenchsetup{}` (see section 2.11).
- Vertical spacing between items, before and after the list, should be *null* with *no glue* added;
- In French the labels of `itemize`-lists are vertically aligned as shown p. 6.

`\FrenchLabelItem` Default labels for French `itemize`-lists (same label for all levels):

```
\Frlabelitemi 1934 \newcommand*{\FrenchLabelItem}{\textemdash}
\Frlabelitemii 1935 \newcommand*{\Frlabelitemi}{\FrenchLabelItem}
\Frlabelitemiii 1936 \newcommand*{\Frlabelitemii}{\FrenchLabelItem}
\Frlabelitemiv 1937 \newcommand*{\Frlabelitemiii}{\FrenchLabelItem}
1938 \newcommand*{\Frlabelitemiv}{\FrenchLabelItem}
```

`\listindentFB` Let's define four dimens `\listindentFB`, `\descindentFB`, `\labelindentFB` and `\descindentFB` `\labelwidthFB` to customise lists' horizontal indentations. They are given silly negative values here in order to eventually enable their customisation in the preamble.

They will get reasonable defaults later when entering French (see `\setlabelitemsFB` and `\setlistindentFB`) unless they have been customised.

```

1939 \newdimen\listindentFB
1940 \setlength{\listindentFB}{-1pt}
1941 \newdimen\descindentFB
1942 \setlength{\descindentFB}{-1pt}
1943 \newdimen\labelindentFB
1944 \setlength{\labelindentFB}{-1pt}
1945 \newdimen\labelwidthFB
1946 \setlength{\labelwidthFB}{-1pt}
```

`\leftmarginFB` `\FB@listHsettings` holds the new horizontal settings chosen for French lists `itemize`, `\FB@listHsettings` `enumerate` and `description` (two possible layouts).

```

1947 \newdimen\leftmarginFB
1948 \def\FB@listHsettings{%
1949   \ifFBListItemsAsPar
```

Optional layout: lists' items are typeset as paragraphs with indented labels.

```

1950   \itemindent=\labelindentFB
1951   \advance\itemindent by \labelwidthFB
1952   \advance\itemindent by \labelsep
1953   \leftmargini\z@

2027         \setlength{\descindentFB}{\listindentFB}%
2028     \fi
2029 \fi
2030 }

```

**\enumerateFB** The definition of \enumerateFB, new to version 2.6a, follows the one of \enumerate in standard LaTeX classes (see *ltlists.dtx*), vertical spaces are customised (or not) via \list (= \listFB or \listORI) and horizontal spaces (leftmargins) are borrowed from itemize lists via \FB@listHsettings.

```

2031 \def\enumerateFB{%
2032     \ifnum \@enumdepth >\thr@@\@toodeep\else
2033         \advance\@enumdepth by \@ne
2034         \edef\@enumctr{enum\romannumeral\the\@enumdepth}%
2035         \expandafter
2036         \list
2037             \csname label\@enumctr\endcsname
2038             {\FB@listHsettings
2039                 \usecounter\@enumctr\def\makelabel##1{\hss\llap{##1}}}}
2040     \fi
2041 }
2042 \let\endenumerateFB\endlistORI

```

**\descriptionFB** Same tuning for the description environment (see *classes.dtx* for the original definition). Customisable dimen \descindentFB, which defaults to \listindentFB, is added to \itemindent (first level only). When \descindentFB=0pt (1rst level labels start at the left margin), \leftmargini is reduced to \listindentFB instead of \listindentFB + \leftmarginFB.

When option *ListItemsAsPar* is turned to *true*, the description items are also displayed as paragraphs; \descindentFB=0pt can be used to push labels to the left margin.

```

2043 \def\descriptionFB{%
2044     \list{}{\FB@listHsettings
2045         \labelwidth=\z@
2046         \iffBListItemsAsPar

2063 }
2064 \let\enddescriptionFB\endlistORI

```

`\update@frenchlists` `\update@frenchlists` will set up lists according to the final options (default or part `\bbl@frenchlistlayout` of `\frenchsetup{}` eventually overruled in `\FBprocess@options`).

```
2065 \def\update@frenchlists{%
2066   \setlistindentFB
2067   \ifFBStandardListSpacing
2068   \else \let\list\listFB \fi
2069   \ifFBStandardItemizeEnv
2070   \else \let\itemize\itemizeFB \fi
2071   \ifFBStandardItemLabels
2072   \else \setlabelitemsFB \fi
2073   \ifFBStandardEnumerateEnv
2074   \else \let\enumerate\enumerateFB \let\description\descriptionFB \fi
2075 }
```

If `GlobalLayoutFrench=true`, nothing has to be done at language's switches regarding lists. Otherwise, `\extrasfrench` saves the standard settings for lists and then executes `\update@frenchlists`. In both cases, there is nothing to do for lists in `\noextrasfrench`.

In order to ensure compatibility with packages customising lists, the command `\update@frenchlists` should not be included in the first call to `\extrasfrench` which occurs *before* the relevant flags are finally set, so we define `\FB@ufl` as `\relax`, it will be redefined later 'AtBeginDocument' by `\FBprocess@options` as `\update@frenchlists`, see p. 62.

```
2076 \def\FB@ufl{\relax}
2077 \def\bbl@frenchlistlayout{%
2078   \ifFBGlobalLayoutFrench
2079   \else
2080     \babel@save\list      \babel@save\itemize
2081     \babel@save\enumerate \babel@save\description
2082     \babel@save\labelitemi \babel@save\labelitemii
2083     \babel@save\labelitemii \babel@save\labelitemiv
2084     \FB@ufl
2085   \fi
2086 }
2087 \addto\extrasfrench{\bbl@frenchlistlayout}
```

## 2.13 French indentation of sections

`\bbl@frenchindent` In French the first paragraph of each section should be indented, this is another difference with US-English. This is controlled by the flag `\if@afterindent`.

We will need to save the value of the flag `\if@afterindent` 'AtBeginDocument' before eventually changing its value.

```
2088 \def\bbl@frenchindent{%
2089   \ifFBGlobalLayoutFrench
2090   \else
2091     \babel@save\@afterindentfalse
2092   \fi
2093   \ifFBIndentFirst
2094     \let\@afterindentfalse\@afterindenttrue
2095     \@afterindenttrue
2096   \fi}
2097 \def\bbl@nonfrenchindent{%
```

```

2098 \ifFBGlobalLayoutFrench
2099   \ifFBIndentFirst
2100     \@afterindenttrue
2101   \fi
2102 \fi}
2103 \addto\extrasfrench{\bb@frenchindent}
2104 \addto\noextrasfrench{\bb@nonfrenchindent}

```

## 2.14 Formatting footnotes

The bigfoot package deeply changes the way footnotes are handled. When bigfoot is loaded, we just warn the user that babel-french will drop the customisation of footnotes.

The layout of footnotes is controlled by two flags `\iffBAutoSpaceFootnotes` and `\iffBFrenchFootnotes` which are set by options of `\frenchsetup{}` (see section 2.11). The layout of footnotes *does not depend* on the current language (just think of two footnotes on the same page looking different because one was called in a French part, the other one in English!).

We save the original definition of `\@footnotemark` at the `\begin{document}` in order to include any customisation that packages might have done; we define a variant `\@footnotemarkFB` which just adds a thin space before the number or symbol calling a footnote (any space typed in is removed first). The choice between the two definitions (valid for the whole document) is controlled by flag `\iffBAutoSpaceFootnotes`.

```

2105 \AtBeginDocument{@ifpackageloaded{bigfoot}%
2106   {\PackageInfo{french.ldf}{%
2107     {bigfoot package in use.\MessageBreak
2108       babel-french will NOT customise footnotes;%
2109       \MessageBreak reported}}%
2110   {\let\@footnotemarkORI\@footnotemark
2111     \def\@footnotemarkFB{\leavevmode\unskip\unkern
2112       ,\@footnotemarkORI}%
2113     \iffBAutoSpaceFootnotes
2114       \let\@footnotemark\@footnotemarkFB
2115     \fi}%
2116   }

```

**\@makefntextFB** We then define `\@makefntextFB`, a variant of `\@makefntext` which is responsible for the layout of footnotes, to match the specifications of the French ‘Imprimerie Nationale’: footnotes will be indented by `\parindentFFN`, numbers (if any) typeset on the baseline (instead of superscripts), right aligned on `\parindentFFN` and followed by a dot and an half quad kern. Whenever symbols are used to number footnotes (as in `\thanks` for instance), we switch back to the standard layout (the French layout of footnotes is meant for footnotes numbered by arabic or roman digits).

The value of `\parindentFFN` will be redefined at the `\begin{document}`, as the maximum of `\parindent` and `1.5em` *unless* it has been set in the preamble (the weird value `10in` is just for testing whether `\parindentFFN` has been set or not).

```

2117 \newdimen\parindentFFN
2118 \parindentFFN=10in

```

`\FBfindent` will be set ‘`\AtBeginDocument`’ to the width of the box holding the footnote mark, `\dotFFN` and `\kernFFN` (flushed right). It is used by `memoir` and `koma-script`

classes.

```

2119 \newcommand*\dotFFN}{.}
2120 \newcommand*\kernFFN}{\kern .5em}
2121 \newdimen\FBfnindent

```

\@makefntextFB's definition is now tuned according to the document's class for better compatibility.

Koma-script classes provide \deffootnote, a handy command to customise the footnotes' layout (see English manual *scrguien.pdf*); it redefines \@makefntext and \@makefnmark. First, save the original definitions.

```

2122 \iffBF@koma
2123   \let\@makefntextORI\@makefntext
2124   \let\@makefnmarkORI\@makefnmark

```

\@makefntextFB and \@makefnmarkFB are used when option **FrenchFootnotes** is **true**.

```

2125   \deffootnote[\FBfnindent]{0pt}{\parindentFFN}%
2126     {\thefootnotemark\dotFFN\kernFFN}
2127   \let\@makefntextFB\@makefntext
2128   \let\@makefnmarkFB\@makefnmark

```

\@makefntextTH and \@makefnmarkTH are meant for the \thanks command used by \maketitle when **FrenchFootnotes** is **true**.

```

2129   \deffootnote[\parindentFFN]{0pt}{\parindentFFN}%
2130     {\textsuperscript{\thefootnotemark}}
2131   \let\@makefntextTH\@makefntext
2132   \let\@makefnmarkTH\@makefnmark

```

Restore the original definitions.

```

2133   \let\@makefntext\@makefntextORI
2134   \let\@makefnmark\@makefnmarkORI
2135 \fi

```

Definitions for the memoir class:

```

2136 @ifclassloaded{memoir}

```

(see original definition in *memman.pdf*)

```

2137   {\newcommand{\@makefntextFB}[1]{%
2138     \def\footscript##1{##1\dotFFN\kernFFN}%
2139     \setlength{\footmarkwidth}{\FBfnindent}%
2140     \setlength{\footmarksep}{-\footmarkwidth}%
2141     \setlength{\footparindent}{\parindentFFN}%
2142     \makefootmark #1}%
2143   }{}

```

Definitions for the beamer class:

```

2144 @ifclassloaded{beamer}

```

(see original definition in *beamertbaseframecomponents.sty*), note that for the beamer class footnotes are LR-boxes, not paragraphs, so \parindentFFN is irrelevant. class.

```

2145   {\def\@makefntextFB#1{%
2146     \def\insertfootnotetext{\#1}%
2147     \def\insertfootnotemark{\insertfootnotemarkFB}%
2148     \usebeamertemplate***{footnote}}%
2149   \def\insertfootnotemarkFB{%
2150     \usebeamercolor[fg]{footnote mark}}%

```

```

2151      \usebeamerfont*{footnote mark}%
2152      \llap{@thefnmark}\dotFFN\kernFFN}%
2153  }{}}

```

Now the default definition of `\@makefntextFB` for standard LaTeX and AMS classes. The next command prints the footnote mark according to the specifications of the French ‘Imprimerie Nationale’. Keep in mind that `\@thefnmark` might be empty (i.e. in AMS classes’ titles)!

```

2154 \providecommand*{\insertfootnotemarkFB}{%
2155   \parindent=\parindentFFN
2156   \rule{z@\footnotesep}
2157   \setbox\@tempboxa\hbox{@thefnmark}%
2158   \ifdim\wd\@tempboxa>z@
2159     \llap{@thefnmark}\dotFFN\kernFFN
2160   \fi}
2161 \providecommand{\makefntextFB}[1]{\insertfootnotemarkFB #1}

```

The rest of `\@makefntext`’s customisation is done at the `\begin{document}`. We save the original definition of `\@makefntext`, and then redefine `\@makefntext` according to the value of flag `\ifFBFrenchFootnotes` (true or false). Koma-script classes require a special treatment.

The LuaTeX command `\localleftbox` and `\FBeverypar@quote` used by `\frquote{}` have to be reset inside footnotes; done for LaTeX based formats only.

```

2162 \providecommand{\localleftbox}[1]{}
2163 \AtBeginDocument{%
2164   \ifpackageloaded{bigfoot}{}{%
2165     \ifdim\parindentFFN<10in
2166     \else
2167       \parindentFFN=\parindent
2168       \ifdim\parindentFFN<1.5em \parindentFFN=1.5em \fi
2169     \fi
2170     \settowidth{\FBfnindent}{\dotFFN\kernFFN}%
2171     \addtolength{\FBfnindent}{\parindentFFN}%
2172     \let\@makefntextORI\@makefntext
2173     \ifFB@koma

```

Definition of `\@makefntext` for koma-script classes: running `makefntextORI` inside a group to reset `\localleftbox{}` and `\FBeverypar@quote` would mess up the layout of footnotes whenever the first mandatory argument of `\deffootnote{}` (used as `\leftskip`) is non-nil (default is 1em, Opt in French).

```

2174   \let\@makefnmarkORI\@makefnmark
2175   \long\def\@makefntext#1{%
2176     \localleftbox{}%

2207         \fi
2208     \fi
2209 }{}%

```

Definition of \@@makefntext for all other classes:

```

2210     \long\def\@@makefntext#1{%
2211         \localleftbox{}%
2212         \let\FBeverypar@save\FBeverypar@quote
2213         \let\FBeverypar@quote\relax
2214         \@ifFFBFootnotes
2215             \@@makefntextFB{\#1}%
2216         \else
2217             \@@makefntext0RI{\#1}%
2218         \fi
2219         \let\FBeverypar@quote\FBeverypar@save
2220         \localleftbox{\FBeveryline@quote}%
2221     \fi
2222 }%
2223 }

```

For compatibility reasons, we provide definitions for the commands dealing with the layout of footnotes in babel-french version 1.6. \frenchsetup{} (see in section 2.11) should be preferred for setting these options. \StandardFootnotes may still be used locally (in minipages for instance), that's why the test \ifFFBFootnotes is done inside \@@makefntext.

```

2224 \newcommand*\AddThinSpaceBeforeFootnotes{\FBAutoSpaceFootnotestrue}
2225 \newcommand*\FrenchFootnotes{\FBFrenchFootnotestrue}
2226 \newcommand*\StandardFootnotes{\FBFrenchFootnotesfalse}

```

## 2.15 Clean up and exit

Final cleaning. The macro `\ldf@finish` takes care for setting the main language to be switched on at `\begin{document}` and resetting the category code of @ to its original value. `\loadlocalcfg` is redefined locally in order not to load any .cfg file for French.

```
2227 \FBclean@on@exit
2228 \ldf@finish\CurrentOption
2229 \let\loadlocalcfg\FB@llc
2230 </french>
```

## 2.16 Files `frenchb.ldf`, `francais.ldf`, `canadien.ldf` and `adian.ldf`

Babel now expects a `<lang>.ldf` file for each `<lang>`. So we create portmanteau .ldf files for options canadien, francais, frenchb and acadian. These files themselves only load `french.ldf` which does the real work. Warn users about options canadien, frenchb and francais being deprecated and force recommended options acadian or french.

```
2231 <*acadian>
2232 \PackageInfo{acadian}{%

### 3 Change History

Changes are listed in reverse order (latest first) and limited to `babel-french v3`.

#### v3.5m

`\FBtextellipsis`: No longer redefine  
  `\dots`, only `\textellipsis`'s  
  default definition is changed in  
  French. . . . .

51

leave caption delimiter unchanged  
  if it has been user customised. . . . .

63

#### v3.5i

General: No warning about  
  `\@makecaption` for more classes. . . . .  
`\captionsfrench`: Redefine  
  `\fnum@figure` and `\fnum@table`  
  separately. . . . .

50      47

`frenchb.lua`: Added glues and  
  penalties should inherit attributes

from the related punctuation  
  character; this is mandatory for  
  Lua-UL to underline and highlight  
  them. Thanks to Marcel Krüger for  
  providing the fix. . . . .

24

Code reorganised for better  
  efficiency. . . . .

24

#### v3.5k

General: `\degree`, `\degrees`,  
  `\circonflexe`, `\tild`, `\boi` and  
  `\at` are now safe in bookmarks. . . . .  
`\pdfstringdefDisableCommands`  
  dropped. . . . .

44      65

Reorganise warnings about ':' in  
  captions, according to  
  enhancements in `caption.sty` v3.5a. . . . .

50

`\bsc`: `\bsc` now relies on  
  `\texorpdfstring` to be safe in  
  bookmarks. . . . .

43

`\captionsfrench`: Small caps  
  removed in `\figurename` and  
  `\tablename`, use `\fnum@figure`  
  and `\fnum@table` instead. . . . .

47

`\FB@fg`: `\FB@og` and `\FB@fg` now rely  
  on `\texorpdfstring` to be safe in  
  bookmarks. . . . .

36

`\frquote`: `\frquote` now relies on  
  `\texorpdfstring` to be safe in  
  bookmarks. . . . .

38

`\fup`: `\up` and `\fup` now rely on  
  `\texorpdfstring` to be safe in  
  bookmarks. . . . .

41

`\no`: `\no`, `\nos`, `\No`, `\Nos`, `\primo`,  
  `\fprimo`, now rely on  
  `\texorpdfstring` to be safe in  
  bookmarks. . . . .

43

leave caption delimiter unchanged  
  if it has been user customised. . . . .

63

`frenchb.lua`: Added glues and  
  penalties should inherit attributes

from the related punctuation  
  character; this is mandatory for  
  Lua-UL to underline and highlight  
  them. Thanks to Marcel Krüger for  
  providing the fix. . . . .

24

Code reorganised for better  
  efficiency. . . . .

24

#### v3.5g

`frenchb.lua`: The kerning callback is  
  a bit specific: adding code with  
  `add_to_callback` actually deletes  
  the legacy kerning as pointed out  
  by Marcel Krüger on SE. . . . .

24

#### v3.5f

General: `\l@canadian` was defined  
  too early in file 'canadian.ldf':  
  `\l@acadian` might not be defined. . . . .

15

`\selectlanguage{canadian}`  
  allowed again only for backward  
  compatibility (deprecated). . . . .

75

`\DecimalMathComma`: Fixed bug with  
  the acadian language. Warning  
  added if used with the `icomma`  
  package. . . . .

45

#### v3.5e

`\frenchsetup`: StandardLayout and  
  GlobalLayoutFrench options can no  
  longer be toggled when French is  
  not the main language. . . . .

54

`\frquote`: Make resettings global on  
  exit. . . . .

40

new command `\NoEveryParQuote`. . . . .  
reset `\FB@addGUILspace` attribute  
  inside `\localleftbox` (LuaTeX). . . . .

39

#### v3.5d

`\frenchsetup`: ReduceListSpacing  
  option deprecated: see  
  StandardListSpacing. . . . .

53

#### v3.5c

General: Remove grouping inside  
  `\@makefntext`, `\localleftbox`  
  and `\FBeverypar@quote` saved  
  and restored instead. . . . .

73

\frquote: \FBeverypar@quote's value now properly reset across level changes. ....	39	New attribute \FB@dialect for the French dialect acadian. ....	20
\noextrasfrench: \lccode of quote 0x27 changed from 0x2019 to 0x27 for Unicode engines. ....	16	New command \FBsetspace to fine tune spacing independently in French and in French dialects. ....	18
<b>v3.5b</b>		Shrink/stretch removed in \FBthousandsep. ....	47
General: Reset \FBeverypar@quote locally inside \@makefntext. Needed by \frquote. ....	73	Toks \FBcolonsp, \FBthinsp and \FBguillsp removed. ....	18
\frquote: New command \FB@addquote@everypar to manage \everypar: \frquote failed when used immediately after a sectionning command. ....	38	frenchb.lua: Global 'FBsp' table added; local function 'get_glue' changed into global 'FBget_glue'. ....	23
<b>v3.5a</b>		\datefrench: Specific code for Plain finally removed (babel bug reported). ....	40
General: New optional layout for lists: lists' items can be typeset as paragraphs with indented labels while the default leaves the labels hanging into the left margin. ....	67	\extrasfrench: Change \(\no)extras\CurrentOption to \(\no)extrasfrench. \(\no)extrasacadian will be defined as \(\no)extrasfrench in file acadian.ldf. ....	16
\descriptionFB: ListItemsAsPar option taken into account for description lists. ....	69	\frenchsetup: Patch for koma-script classes moved here, after \iffFBPartNameFull is defined, so that it applies to \extrasacadian too: \AtEndOfPackage is too late. ....	54
\frenchsetup: New option ListItemsAsPar for displaying lists' items "as paragraphs". ....	53	<b>v3.3d</b>	
<b>v3.4d</b>		frenchb.lua: In default mode, for `:' only, check if next node is a glyph or not. If it is, turn the 'auto' flag to false (avoids spurious spaces in URLs, MSDOS paths or 10:35). ....	25
\frenchsetup: New test for deciding about utf8 encoding for keys og and fg (the former one fails with LaTeX 2018 release). ....	58	<b>v3.3c</b>	
<b>v3.4c</b>		General: LaTeX 2017-04-15 defines TU encoding for Unicode engines, fontspec is no longer required. ....	65
\ifFBXeTeX: Reverting to former test, beware of \XeTeXrevision left as \relax by careless testing. ....	16	New command \FBthousandsep to customise numprint. ....	47
<b>v3.4b</b>		New configurable kerns \FBmedkern, and \FBthickkern suitable for HTML translation. ....	43
\datefrench: Do not redefine \date as \frenchdate in French. ....	40	Reorganise warnings when the caption, subcaption or floatrow packages are loaded before babel/french. ....	50
<b>v3.4a</b>		Reset \localleftbox locally inside \@makefntext. Needed by \frquote with LuaTeX. ....	73
General: \LdfInit checks \FBclean@on@exit instead of \captionsfrench (undefined in PLAIN). Prevents loading french.ldf again with acadian option. ....	14	frenchb.lua: Function 'get_glue' robustified. 'french_punctuation' can insert Unicode characters instead of glues. ....	22
babel-french now requires eTeX. ...	14	\frenchsetup: New option	
Lua function token.get_meaning requires LaTeX 1.0. ....	21		
New \FBgspchar to customise the space character to be used for \og and\fg with the UnicodeNoBreakSpaces option. ...	36		

'UnicodeNoBreakSpaces' for html translators (LuaLaTeX only). . . . .	58	Warn when wrong values are provided to options EveryParGuill or EveryLineGuill. . . . .	57
<b>v3.3b</b>		\frquote: Default options of \frquote are no longer engine-dependent. . . . .	38
General: Generate portmanteau files acadian.ldf, canadien.ldf, frenchb.ldf, and francais.ldf and warn about deprecated options. . . . .	75	<b>v3.2f</b>	
New 'if' \ifFBf french to replace \iflanguage test which is based on patterns. . . . .	16	\DecimalMathComma: Fixed conflict with the icomma package. . . . .	45
<b>v3.3a</b>		<b>v3.2e</b>	
General: Compatibility code for pre 2015/10/01 LaTeX release removed, see lnews23.tex. . . . .	20	General: Add missing redefinitions for \leftmarginv, \leftmarginvi. Suggested by J.F. Burnol. . . . .	67
Skip \FBguillskip for LuaTeX replaced by toks \FBguillsp. . . .	18	\DecimalMathComma: \DecimalMathComma didn't work with LuaTeX. Fixed now. . . . .	45
\captionsfrench: Commands \frenchpartfirst, \frenchpartsecond and \frenchpartnameord added. . . .	47	<b>v3.2d</b>	
\FBthinspace: Skips \FBcolonskip and \FBthinskip replaced by toks \FBcolonsp and \FBthinsp. . . .	17	\descriptionFB: Changed \listindentFB to \descindentFB which defaults to \listindentFB. \leftmargini reduced when \descindentFB is null. . . . .	69
\frenchsetup: \frenchbsetup is now an alias for \frenchsetup. . . . .	53	<b>v3.2c</b>	
Options INGuillSpace, ThinColonSpace no longer delayed AtBeginDocument. . . . .	53	General: New LaTeX attribute \FB@spacing. . . . .	20
\frquote: \FB@quotespace (kern), changed into \FB@guillspace. . .	38	Newif \iffB@spacing and new commands \FB@spacingon, \FB@spacingoff to control space tuning in French. . . . .	20
<b>v3.2h</b>		Switch \iffB@spacing added to the four French shorthands. . . . .	33
@makefntextFB: With beamer.cls, add \llap to \@thefnmark for notes numbered over 99. . . . .	72	\FB@xetex@punct@french: Switch \iffB@spacing added to all \XeTeXinterchartoks commands. . . . .	31
\bbl@frenchlistlayout: Execute \update@frenchlists only if GlobalLayoutFrench is false. Delete stuff for lists in \noextrasfrench. .	70	\FBthinspace: Change .16667em to .5\fontdimen2\font to get in XeTeX and pdfTeX the same spacing as in LaTeX. . . . .	17
\frenchsetup: Option GlobalLayoutFrench skipped when French is not the main language.	54	\frenchsetup: Add a warning about options og/fg for old XeTeX or LuaTeX engines requiring active characters. . . . .	58
<b>v3.2g</b>		\NoAutoSpacing: New definition based on \FB@spacing@off common to all engines. . . . .	35
General: Changed Unicode definition of \boi. . . . .	44	\ttfamilyFB: New definitions of \ttfamilyFB and co, common to all engines, based on \FB@spacing@off and \FB@spacing@on. . . . .	35
fontspec defines TU encoding now and no longer loads xunicode.sty. Test changed. . . . .	65	<b>v3.2b</b>	
Issue a warning if beamerarticle.sty is loaded after babel. . . . .	52	General: Load lluatex.tex for plain	
\frenchsetup: Minimal list customisation when beamerarticle.sty is loaded. . . . .	54		

LuaTeX to ensure \newattribute is defined. ....	20	v3.1k	General: (pdfTeX shorthands) test on \lastskip changed from 0pt to 1sp for active punctuation for consistency with XeTeX and LuaTeX. ....	33
Warning added when the subcaption package is loaded before babel/french. ....	50	\FB@xetex@punct@french: Thin glues (less than 1sp) should not trigger space insertion before high punctuation. Add a check on \lastskip. ....	31	
frenchb.lua: glue_spec removed; starting with LuaTeX 0.95, glue specifications fit in glue. ....	24	v3.1j	General: Loading luatexbase.sty is no longer needed with LaTeX release 2015/10/01 or later. ....	20
\ifFB@xetex@punct: New counter \FB@nonchar needed for non characters: its value will be 4095 for new engines and 255 for older ones. ....	17	\frquote: \fr@quote completely rewritten: \leavevmode added and explicitly save/restore \everypar and \localleftbox instead of using a group in order to ensure compatibility with package wrapfig. ....	38	
\NoAutoSpacing: \NoAutoSpacing made robust. ....	35	\PackageWarning is undefined in Plain, use \fb@warning instead. ....	38	
<b>v3.2a</b>		v3.1i	General: \nombre command changed when numprint.sty is not loaded: only one warning, no error. ....	47
\@makefntextFB: beamer.cls requires a specific definition of \@makefntextFB (pointed out by DB). The same is true for memoir and koma-script classes (done). .	71	Remove restriction about loading numprint.sty after babel. ....	52	
\fg: \xspace moved from \FB@fg to \fg: \xspace messes up \frquote, pointed out by Sonia Labetoulle. As a side effect \xspace is now active in \fg in and outside French. ....	37	\frquote: \luatexlocalleftbox changed to \localleftbox by new LaTeX release 2015/10/01. ....	39	
<b>v3.1m</b>		v3.1h	General: french.cfg from e-french conflicts with babel-french. Do NOT load it (no need for .cfg files with babel-french anyway). ....	75
frenchb.lua: new_glue_scaled returns nil in case of invalid font table (i.e. Icircle1.pfb). In such cases babel-french leaves the node list unchanged. ....	24	v3.1g	General: Lua function french_punctuation is now inserted at the end of the 'kerning' callback (no priority) instead of 'hpack_filter' and 'pre_linebreak_filter'. ....	29
<b>v3.1l</b>		Use Babel defined loops \bb@for instead of \for borrowed from file ltcntrl.dtx (\for is undefined in Plain). ....	30	
General: Add a variant of \babel@savevariable to save \XeTeXcharclass(es) in a loop. .	30	frenchb.lua: Flag addgl set to false for « at the end of an \hbox or a paragraph or when followed by a null glue (i.e. springs). ....	27	
frenchb.lua: font.getfont(fid) possibly returns nil even for a positive fid (i.e. AMS Icircle1.pfb). Reported by François Legendre. .	24	flag addgl set to false for » at the beginning of an \hbox or a		
\FB@luatex@punct@french: Use \babel@save to save and restore \shorthandon and \shorthandoff. ....	29			
\FB@xetex@punct@french: Save and restore \XeTeXinterchartokenstate, \shorthandon, \shorthandoff using \babel@savevariable and \babel@save, \XeTeXcharclass(es) using \FB@savevariable@loop. ....	31			

paragraph or a tabular ‘l’ and ‘c’ columns. ....	27	\captionsfrench: Change \scshape to customisable \FBfigtabshape for \figurename and \tablename.	47
Node HLIST added; node TEMP added for the first node of \hboxes.	22	\frenchsetup: New option SmallCapsFigTabCaptions. ....	53
\captionsfrench: \partname’s definition depends now on flag PartNameFull. No need to redefine it in \frenchbsetup. ....	47	\ieres: Removed \lowercase from definitions of \ieme and co: \up already does the conversion. ....	42
\frenchsetup: Bug fix for koma-scripts classes: a spurious dot was added by the \partformat command. ....	54	\no: Removed \lowercase from definitions of \FrenchEnumerate, ... \No and co: \up already does the conversion. ....	43
PartNameFull now just sets the flag, nothing to add to \captionsfrench when false. ....	53		
<b>v3.1f</b>		<b>v3.1a</b>	
General: \FBCaption@Separator changed when option CustomiseFigTabCaptions is set to false. ....	50	General: fontspec is not required for T1 fonts used with the luainputenc.sty package. ....	65
\FBprocess@options: Bug fix for the beamer class: figure and table captions are now consistent with babel-french’s documentation. Pointed out by Denis Bitouzé. ....	63	Misplaced \fi for plain formats. ....	20
Definition of \captionformat and \captiondelim changed when option CustomiseFigTabCaptions is set to false. ....	63	New command \frquote for imbedded or long French quotations. ....	38
\FBthinspace: \FBthinspace is no longer a kern but a skip (babel-french adds a nobreak penalty before it). ....	17	frenchb.lua: Added flag addgl which must also be true when prev or next is not a char (i.e. \kern0 in «\texttt{a}»). ....	27
<b>v3.1e</b>		Codes 0x13 and 0x14 added for French quotes in T1-encoding. ....	22
\frenchsetup: Corrected typo: SmallCapsFigTabcaptions instead of SmallCapsFigTabCaptions. Pointed out by Céline Chevalier. ....	53	Look ahead when next is a kern (i.e. in «\texttt{a}»). ....	27
<b>v3.1d</b>		\frenchsetup: Codes 0x13 and 0x14 added for French quotes in T1-encoding. Support for older versions of LuaTeX and XeTeX dropped. ....	58
General: New section: issue warnings if packages listings, numprint and natbib are loaded too early or too late vs babel. ....	52	New options InnerGuillSingle, EveryParGuill and EveryLineGuill to control \frquote. ....	53
<b>v3.1c</b>		<b>v3.0c</b>	
frenchb.lua: Previous bug fix for null glues (v3.0c) did not work properly. Fixed now (I hope!). Pointed out by Jacques André. ....	25	General: babel-french requires babel-3.9i. ....	14
<b>v3.1b</b>		Just load luatexbase.sty instead of luafotfloat.sty with plain formats. ....	20
frenchb.lua: Add a check for null fid in french_punctuation (Tikz \nullfont). Bug pointed out by Paul Gaborit. ....	24	No need to define \l@french as \lang@french, babel.def (3.9j) takes care for this. ....	15
		frenchb.lua: Null glues should not trigger space insertion before high punctuation. Bug pointed out by Benoit Rivet for the ‘lstlisting’ environment of the listings package. ....	25
		\frenchsetup: New option INGuillSpace. ....	53

No list customisation when beamer class is loaded. ....	54	for SMF classes. ....	50
<b>v3.0b</b>		Options processing completely reorganised, now \babel@save and\babel@savevariable are usable for French. ....	52
General: frenchb.lua was not found by Lua function dofile (not kpathsea aware). Call function kpse.find_file first, as suggested by Paul Gaborit.	29	Support for options frenchb, francais, canadien, acadian changed. ....	14
Require luatexbase with LaTeXe in case fontspec has not been loaded before babel. ....	20	Test \ifXeTeX changed to \ifFBunicode and 'xltextra' changed to 'fontspec'. ....	65
<b>v3.0a</b>		\CaptionSeparator: Remove \FBCaption@Separator0RI, use \babel@save instead. ....	49
General: \bbl@nonfrenchguillemets deleted, use \babel@save instead.	37	\captionsfrench: Take advantage of babel's \SetString commands for captionnames. ....	47
\LdfInit checks \captionsfrench instead of \datefrench to avoid a conflict with papertex.cls which loads datetime.sty. ....	14	\datefrench: Take advantage of babel's \SetString commands for \datefrench. Doesn't work with Plain (yet?). ....	40
french.cfg will be loaded (if found) instead of frenchb.cfg. NO NEED for .cfg files in French anyway. ....	75	\descriptionFB: Added \listindentFB to \itemindent. Suggested by Denis Bitouzé. ....	69
In Plain, provide a substitute for \PackageWarning and \PackageInfo. ....	14	\extrasfrench: Take advantage of babel's \babel@savevariable to handle apostrophe's \lccode. ....	16
Merging of \captionsfrenchb, \captionsfrancais with \captionsfrench deleted in favor of new babel 3.9 syntax. ....	49	\FB@fg: Definitions of \FB@og and \FB@fg now depend on punctuation handling (LuaTeX / XeTeX / active). ....	36
More informative, less TeXnical warning about \@makecaption. ....	50	\FBprocess@options: With koma-script and memoir class, customise \captionformat and \captiondelim. ....	63
New flag \ifFB@luatex@punct for 'high punctuation' management with LaTeX engines. ....	17	\frenchsetup: New options OldFigTabCaptions and CustomiseFigTabCaptions. ....	53
New handling of 'high punctuation' through callbacks with LaTeX engines. ....	20		
No warning about \@makecaption
