# Introduction

This document provides the documented sources for the oxref bibliography styles:

- `oxnotes`: a style similar to the standard `verbose` and its variants, intended for use with footnotes;
- `oxnum`: a style similar to the standard `numeric`, intended for use with numeric in-text citation labels;
- `oxalph`: a style similar to the standard `alphabetic`, intended for use with alphabetic in-text citation labels;
- `oxyyear`: a style similar to the standard `authoryear`, intended for use with parenthetical in-text citations.

## 1.1 Quick start

The styles are self-contained, so you can load them with `biblatex`:

<pre>1 \usepackage[style=oxnotes]{biblatex}</pre>	<pre>1 \usepackage[style=oxalph]{biblatex}</pre>
<pre>1 \usepackage[style=oxnum]{biblatex}</pre>	<pre>1 \usepackage[style=oxyyear]{biblatex}</pre>

For further information, including some additional options you can set, please refer to the separate documentation files `oxnotes-doc.pdf`, `oxnum-doc.pdf`, `oxalph-doc.pdf`, and `oxyyear-doc.pdf` respectively.

## 1.2 Installation

### 1.2.1 Dependencies

To compile the documentation you will need to have the `minted` package working, which in turn relies on Python 2.6+ and Pygments. See the documentation of that package for details.

### 1.2.2 Managed way

The latest stable release of the `biblatex-oxref` bundle has been packaged for TeX Live and MiKTeX. If you are running TeX Live and have `tlmgr` installed, you can install the bundle simply by running `tlmgr install biblatex-oxref`. If you are running MiKTeX, you can install the bundle

by running `mpm --install=biblatex-oxref`. Both `tlmgr` and `mpm` have GUI versions that you might find friendlier.

### 1.2.3 AUTOMATED WAY

A makefile is provided which you can use with the Make utility on UNIX-like systems:

- Running `make source` generates the derived files
  - `README.md`
  - `oxref.bbx`, `oxnotes.bbx`, `oxnotes-ibid.bbx`, `oxnotes-note.bbx`, `oxnotes-inote.bbx`, `oxnotes-trad1.bbx`, `oxnotes-trad2.bbx`, `oxnotes-trad3.bbx`, `oxyear.bbx`, `oxnum.bbx`, `oxalph.bbx`
  - `oxnotes.cbx`, `oxnotes-ibid.cbx`, `oxnotes-note.cbx`, `oxnotes-inote.cbx`, `oxnotes-trad1.cbx`, `oxnotes-trad2.cbx`, `oxnotes-trad3.cbx`, `oxyear.cbx`, `oxnum.cbx`, `oxalph.cbx`
  - `american-oxref.lbx`, `british-oxref.lbx`, `english-oxref.lbx`
  - `oxnotes.dbx`, `oxnotes-ibid.dbx`, `oxnotes-note.dbx`, `oxnotes-inote.dbx`, `oxnotes-trad1.dbx`, `oxnotes-trad2.dbx`, `oxnotes-trad3.dbx`, `oxyear.dbx`, `oxnum.dbx`, `oxalph.dbx`
  - `oxref.bib`
  - `oxref.ins`
  - `oxnotes-doc.tex`, `oxyear-doc.tex`, `oxnum-doc.tex`, `oxalph-doc.tex`
- Running `make` generates the above files and also `oxref.pdf`, `oxnotes-doc.pdf`, `oxyear-doc.pdf`, `oxnum-doc.pdf` and `oxalph-doc.pdf`.
- Running `make inst` installs the files in the user’s TeX tree. You can undo this with `make uninst`.
- Running `make install` installs the files in the local TeX tree. You can undo this with `make uninstall`.
- Running `make clean` removes auxiliary files from the working directory.
- Running `make distclean` removes the generated files from the working directory as well.

### 1.2.4 MANUAL WAY

To install the bundle from scratch, follow these instructions. If you have downloaded the zip file from the Releases page on GitHub, you can skip the first two steps.

1. Run `lualatex oxref.dtx` to generate the source files. (You can safely skip this step if you are confident about step 2.)
2. Compile `oxref.dtx`, `oxnotes-doc.tex`, `oxyear-doc.tex`, and `oxnum-doc.tex` with LuaLaTeX and Biber to generate the documentation. You will need to enable shell escape so that minted can typeset the listings.
3. Move the files to your TeX tree as follows:
  - `source/latex/biblatex-oxref`: `oxref.dtx`, `(oxref.ins)`
  - `tex/latex/biblatex-oxref`: `american-oxref.lbx`, `british-oxref.lbx`, `english-oxref.lbx`, `oxalph.bbx`, `oxalph.cbx`, `oxalph.dbx`, `oxnotes.bbx`, `oxnotes.cbx`, `oxnotes.dbx`, `oxnotes-ibid.bbx`, `oxnotes-ibid.cbx`, `oxnotes-ibid.dbx`, `oxnotes-inote.bbx`, `oxnotes-inote.cbx`, `oxnotes-inote.dbx`, `oxnotes-note.bbx`, `oxnotes-note.cbx`, `oxnotes-note.dbx`, `oxnotes-trad1.bbx`, `oxnotes-trad1.cbx`, `oxnotes-trad1.dbx`, `oxnotes-trad2.bbx`, `oxnotes-trad2.cbx`, `oxnotes-trad2.dbx`, `oxnotes-trad3.bbx`, `oxnotes-trad3.cbx`, `oxnotes-trad3.dbx`, `oxnum.bbx`, `oxnum.cbx`, `oxnum.dbx`, `oxref.bbx`, `oxyear.bbx`, `oxyear.cbx`, `oxyear.dbx`

- doc/latex/biblatex-oxref: README.md, oxalph-doc.pdf, oxalph-doc.tex, oxnotes-doc.pdf, oxnotes-doc.tex, oxnum-doc.pdf, oxnum-doc.tex, oxref.bib, oxref.pdf, oxyear-doc.pdf, oxyear-doc.tex
4. You may then have to update your installation's file name database before TeX and friends can see the files.

# Bibliography styles

## 2.1 Base style: oxref.bbx

### 2.1.1 LOADING DEPENDENCIES, SETTING UP LANGUAGES, APPLYING OPTIONS

Dependencies:

- For ease of maintenance, we will patch some definitions with xpatch instead of writing out our own in full.
- We will manipulate strings with xstring.
- We will use graphicx for stretching \bibnamedashes

```
20 \RequirePackage{etoolbox}
21 \RequirePackage{xpatch}
22 \RequirePackage{xstring}
23 \RequirePackage{graphicx}
```

Language support may be widened in future, but for now we support British and American English. Adapted language files have the following suffix.

```
24 \DeclareLanguageMappingSuffix{-oxref}
```

We provide some additional bibliography strings:

- roles expressed as functions;

```
25 \NewBibliographyString{%
26   director, performer, reader, conductor, serieseditor, holder, editorcm,
27   directors, performers, readers, conductors, serieseditors, holders, editorcms,
```

- roles expressed as actions;

```
28 bydirector, byperformer, byreader, byconductor, byserieseditor, byholder, byeditorcm,
```

- publication details;

```
29 facsimile, revised, revisedenlarged, revisedreprint, suppto, equals, original,
```

- publication state;

30 impressin,

- pagination;

31 book, books, canto, cantos, stanza, stanzas, act, acts, scene, scenes, folio, folios,  
 32 article, articles, clause, clauses, regulation, regulations, rule, rules,  
 33 booktotal, booktotals, cantototal, cantototals, stanzatotal, stanzatotals,  
 34 acttotal, acttotals, scenetotal, scenetotals, foliototal, foliototals,  
 35 articletotal, articletotals, clausetotal, clausetotals, regulationtotal,  
 36 regulationtotals, ruletotal, ruletotals,

- types;

37 facebook, tweet, podcast, clip, webcast, poster,

- miscellaneous;

38 nolocation, modified, recorded, uploaded, filed, issued,

- labels;

39 anon, pseudo, urldown,

- country names, patents, and patent requests;

40 countryjp, patentjp, patreqjp,

- borrowed from other styles.

41 1column, 2column, inflayer, suplayer, paper, papyrus, parchment,  
 42 eucase, eujoinedcases, commissiondecision, application,  
 43 order, bill, draft, opened, signed, adopted, inforce,  
 44 }

We base our styles on the standard on the principle of least surprise (and to aid with maintenance in the face of new biblatex versions). We set some defaults different to the standard ones, but the author can still override them.

```
45 \RequireBibliographyStyle{standard}
46 \ExecuteBibliographyOptions{urldate=comp,pagetracker,timezeros=false,time=12h,isbn=false}
```

Here are the new default punctuation conventions. The new `\relatedtypepunct` is for before the `relatedtype` localization string, while `\recordseriespunct` is used for audiovisual resources.

```
47 \renewcommand*{\labelnamepunct}{\addcomma\space}
48 \renewcommand*{\newunitpunct}{\addcomma\space}
49 \renewcommand*{\subtitlepunct}{\addcolon\space}
50 \renewcommand*{\intitlepunct}{\nopunct\space}
51 \renewcommand*{\bibnamedash}{\resizebox{2em}{\height}{\textemdash}\addthinspace}
52 \newcommand*{\recordseriespunct}{\addcomma\space}
53 \newcommand*{\relatedtypepunct}{\addsemicolon\space}
54 \renewcommand*{\relateddelim}{\addsemicolon\space}
```

```

55 \DeclareDelimFormat*{revsdnamedelim}{\addcomma}
56 \DeclareDelimFormat*{authortypedelim}{\addspace}
57 \DeclareDelimFormat*{editortypedelim}{\addspace}
58 \DeclareDelimFormat*{translatortypedelim}{\addspace}

```

## 2.1.2 NAMES

We declare some new name formats so that authors/editors/others who appear mid-reference can be handled differently from those that appear at the head of the reference.

```

59 \DeclareNameAlias{bookauthor}{default}
60 \DeclareNameAlias{bookeditor}{default}

```

Traditionally, Oxford style (for the humanities) prints author names in small capitals in the bibliography, but in normal case in citations. This is falling out of fashion, so we introduce it as an option.

```

61 \newtoggle{blx@ox@scnames}
62 \DeclareBibliographyOption{scnames}[true]{%
63   \settoggle{blx@ox@scnames}{#1}
64 }

```

The style manuals prefer to omit titles but accept they may need to be included in some circumstances. There are some titles that are only used with full names and some that may be used with initials, so we provide an option for manually switching them off.

```

65 \newtoggle{blx@ox@nametitle}\toggletrue{blx@ox@nametitle}%
66 \DeclareBibliographyOption{usenametitles}[true]{%
67   \settoggle{blx@ox@nametitle}{#1}%
68 \DeclareTypeOption{usenametitles}[true]{%
69   \settoggle{blx@ox@nametitle}{#1}%
70 \DeclareEntryOption{usenametitles}[true]{%
71   \settoggle{blx@ox@nametitle}{#1}%

```

We provide some additional macros for formatting names with titles. Here is the one for natural name order.

```

72 \newbibmacro*{name:title-given-family}[5]{%
73   \usebibmacro{name:delim}{#2#3#1}%
74   \usebibmacro{name:hook}{#2#3#1}%
75   \ifdefvoid{#5}{}{\iftoggle{blx@ox@nametitle}{\mkbibnametitle{#5}\isdot\bibnamedelimd}{}}%

82   \mkbibnamefamily{#1}\isdot
83   \ifdefvoid{#4}{}{\ifnumeral{#4}{\addcomma}\bibnamedelimd\mkbibnamesuffix{#4}\isdot}}

```

Here is the one for inverted name order.

```

```

Oxford style (for the humanities) is to write author names surname first in the bibliography, but in natural order in citations. We implement this, along with the case changing option, in the following name format. We also add a second hash for checking if names (e.g. author and authoraddon) are the same.

Pseudonyms are printed after the main name, enclosed in parentheses (OGS) or brackets (NHR). Biblatex provides the nameaddon field for this use case, but it is a literal field (it doesn’t format the name provided).

```

We provide an alternative method that uses new name fields authoraddon and editoraddon. To do this, we define a bibmacro that reimplements the loopcode logic of `\printnames`, but operates

on two name lists simultaneously; we use saveboxes to extract the hashes, and only print the alternative name if it has a different hash. The same technique is used by oxyyear below to pair up names with the short form used in references, so this bibmacro is written to handle both cases.

The namepairs bibmacro takes two arguments: the data fields holding the main name and alternative name respectively.

## 2.1.6 PUBLISHERS

The *Oxford Guide to Style* says it is fine to omit publisher names uniformly from bibliographic information. This is odd, but we can support it with a simple option.

```

700 \DeclareBibliographyOption{nopublisher}[true]{%
701   \DeclareFieldInputHandler{publisher}{\def\NewValue{}}

```

The style guides are less forgiving about omitting the place of publication. We provide a bibliography option that fills in such gaps with the nolocation localization string for selected entry

types. It works using a source map, which is a clean solution but cannot easily be switched off again or used on a per-type basis.

```

703 \DeclareBibliographyOption{nolocation}[true]{%

### 2.1.7 URLs

The OGS recommends the ISO convention of enclosing URLs in angle brackets, but NHR recommends leaving URLs bare so as not to interfere with text-mining. The latter is the default.

```

OGS consistently prints dates of newspapers and magazines bare, but those of academic journals in parentheses. NHR seems to favour printing dates in parentheses regardless, but notes that some publishing houses take the OGS approach.

We provide an option for switching between the two approaches. If active and an issue has no volume or issue numbers (first block), the season and date are printed bare. Otherwise (second block) they are printed in parentheses just as in the standard version of the macro.

### 2.1.10 BOOKS AND WORKS IN BOOKS

By default, editors do not appear before the title in book or reference entries.

```
1080 \ExecuteBibliographyOptions[book,mvbook,reference,mvreference]{useeditor=false,usetranslator=false}

The titles of books that have been collected into an anthology are treated like regular chapters and set in quotes. Poems and plays, however, are set in italics.

### 2.1.11 WORKS PRESENTED AT MEETINGS

By default, editors do not appear before the title in proceedings entries.

```
1821 \ExecuteBibliographyOptions[proceedings,mvproceedings]{useeditor=false,usetranslator=false}
```

In our version of the event+venue+date macro, the venue and date are set off with commas respectively instead of parentheses.

```
1822 \renewbibmacro*{event+venue+date}{%
1823   \printfield{eventtitle}%
1824   \newunit
1825   \printfield{eventtitleaddon}%

1827   \printfield{venue}%
1828   \newunit%
1829   \printeventdate%
1830   \newunit}
```

The changes to the proceedings driver compared to the standard style are as follows:

- We support the concept of an author before the title, which is usually the organization;
- editor comes after the title, not before;
- volume/part is processed just after maintitle+title;
- note is moved to before series;
- series to date information is delegated to a separate macro;

As in the (inherited) standard style, mvproceedings is an alias for this driver, since it is unlikely that the proceedings of a single meeting will be split into long series of independently published volumes!

```

Direct use of the manual entry type is not encouraged, but it serves as a basis for other entry types, notably standards, datasets, and software. The main change to the manual driver compared to the standard style is that type, series, number, edition and organization are moved into the publication information block with publisher, location and date. ### 2.1.13 AUDIOVISUAL MATERIALS

The publication block for audiovisual resources is quite different from the normal, as the type, series and number come between the publisher and date. The punctuation or otherwise between elements depends on the combination present. The date and time of recording is given before the block if a number is provided (indicating a published recording) but within it otherwise.

## 2.1.14 DIGITAL MEDIA

### Website articles and social media

The titles of web pages and similar intrinsically online resources are written in roman text within quotes.

```

2573 \DeclareFieldFormat[online,image]{title}{%
2574   \def\currentfield{title}%
2575   \iffieldannotation{descriptor}{#1}{\mkbibquote{#1\isdot}}%

```

We provide an `onlinetype` macro for clarifying the type of online material. It is triggered by appropriate values of `entrysubtype`.

```

2577 \newbibmacro*{onlinetype}{%
2578   \ifboolexpr{
2579     test {\iffieldundef{url}}
2580     or

2584       \printtext[brackets]{\bibstring{\thefield{entrysubtype}}}%
2585     }{}}

```

The changes to the `online` driver compared to the standard style are as follows:

- We support the use of `maintitle` for, say, the title of the website in which the web page is located. This comes after `title`.
- We insert the aforementioned `onlinetype` macro after `maintitle`.
- The date is wrapped in parentheses if present.

- We support displaying a publisher after the date; this is a legacy feature based on examples that are now deprecated.

Reviews

```

We take advantage of the Biber-specific mechanism of relating items in order to handle reviews. Compared to the default code, this is simpler in that we don't check for repeated authors/editors (it would be a rather biased review!), we directly set the author format, and we don't nullify the date+extradate macro.

### 2.1.19 SOURCE MAPS

We use the source mapping capabilities of Biber to fix the following issues.

```

3998 \DeclareStyleSourcemap{%
3999   \maps[datatype=bibtex]{%

```

## Sort order

proceedings and mvproceedings entries allow an organization to be printed in the author position.

```
4000 \map{
4001   \pertype{proceedings}
4002   \pertype{mvproceedings}
4003   \step[notfield=author,
4004     fieldsource=organization,
4005     fieldtarget=author]
4006 }
```

## Descriptors

This map provides a helpful descriptor field that can simplify the provision of descriptors, being notes that can act as titles.

```
4007 \map[overwrite=false]{
4008   \step[fieldsource=descriptor, final]
4009   \step[notfield=title,
4010     fieldset=title+an,
4011     fieldvalue={=descriptor}]
4012   \step[notfield=title,
4013     fieldsource=descriptor,
4014     fieldtarget=title]
4015   \step[fieldsource=descriptor,
4016     fieldtarget=note]
4017 }
```

## Pseudonyms and inferred authorship

These help ensure compatibility with biblatex-realauthor.

```
4018 \map[overwrite=false]{
4019   \step[fieldsource=realauthor, final]
4020   \step[notfield=author,
4021     fieldset=author+an,
4022     fieldvalue={=inferred}]
4023   \step[notfield=author,
4024     fieldsource=realauthor,
4025     fieldtarget=author]
4026   \step[fieldsource=realauthor,
4027     fieldtarget=authoraddon]
4028 }
4029 \map[overwrite=false]{
4030   \step[fieldsource=realeditor, final]
4031   \step[notfield=editor,
4032     fieldset=editor+an,
4033     fieldvalue={=inferred}]
4034   \step[notfield=editor,
4035     fieldsource=realeditor,
4036     fieldtarget=editor]
4037   \step[fieldsource=realeditor,
4038     fieldtarget=editoraddon]
4039 }
```

## Editors as joint authors

This map provides a more portable interface for declaring a translator or revisor to be a joint author.

```

4040   \map[overwrite=false]{
4041     \step[fieldsource=editor+an,
4042       match=\regexp{=jointauthor},
4043       final]
4044     \step[fieldsource=editor,
4045       fieldtarget=jointauthor]
4046     \step[fieldsource=editortype,
4047       fieldtarget=jointauthortype]
4048   }
4049   \map[overwrite=false]{
4050     \step[fieldsource=translator+an,
4051       match=\regexp{=jointauthor},
4052       final]
4053     \step[fieldsource=translator,
4054       fieldtarget=jointauthor]
4055     \step[fieldset=jointauthortype,
4056       fieldvalue={=translator}]
4057 }
```

## Standards

The purpose of this map is to move the number to the head of the reference in the absence of an author, and try to fix the sorting accordingly.

```

4058   \map[overwrite=false]{
4059     \pertype{standard}
4060     \step[notfield=author,
4061       fieldsource=number,
4062       final]
4063     \step[fieldset=sortkey,
4064       origfieldval]
4065 }
```

## Audiovisual materials

For audiovisual materials, origdatetype defaults to ‘recorded’.

```

4066   \map[overwrite=false]{
4067     \pertype{audio}
4068     \pertype{music}
4069     \pertype{movie}
4070     \pertype{video}
4071     \pertype{inaudio}
4072     \pertype{inmusic}
4073     \pertype{inmovie}
4074     \pertype{invideo}
4075     \step[fieldset=origdatetype,fieldvalue={recorded}]
4076 }
```

## Legal references

These help ensure compatibility with oscola.

```

4077 \map[overwrite=false]{
4078   \pertype{jurisdiction}
4079   \step[fieldsource=reporter,
4080     fieldtarget=journaltitle]
4081   \step[fieldsource=court,
4082     fieldtarget=institution]
4083   \step[fieldsource=additionalreports,
4084     fieldtarget=listb]
4085   \step[fieldsource=ecli,
4086     fieldtarget=verba]
4087 }
4088 \map[overwrite=false]{
4089   \pertype{legal}
4090   \step[fieldsource=reporter,
4091     fieldtarget=journaltitle]
4092 }
4093 \map[overwrite=true]{
4094   \pertype{legal}
4095   \step[fieldsource=parties,
4096     fieldtarget=institution]
4097   \step[fieldsource=execution,
4098     fieldtarget=lista]
4099 }
```

This is how oscola removes dots from entries.

```

We ensure the printing of the anon localization string matches.

## 2.4 Author–year style: `oxyear.bbx`

### 2.4.1 PRELIMINARIES

First we load the common `oxref` features.

```

20 \RequireBibliographyStyle{oxref}

```

Here we set some defaults different to the standard ones. The author can still override them.

```
21 \ExecuteBibliographyOptions{giveninits,labeldateparts,sorting=nyt,pagetracker,maxcitenames=2}
```

### 2.4.2 DATE MERGING OPTION

We provide the `mergedate` option from the `authoryear` style. In case it isn't clear from the standard documentation, the purpose of this option is twofold: it determines whether the date printed at the head of the reference is the same as or different from `labeldate` as used in the citations, and to what extent the date information at the head of the reference is repeated later on. The OGS and NHR consistently use a variant that is between the basic and compact options, in that the year is always moved to the head of the reference (matching `labeldate`) but the month and day are never moved; this is implemented as the `year` value.

```
22 \DeclareBiblatexOption{global,type,entry}{mergedate}[true]{%
23   \ifcsdef{bbx@opt@mergedate@#1}%
24     {\csuse{bbx@opt@mergedate@#1}}%
25     {\PackageError{biblatex-oxref}%
26       {Invalid option 'mergedate=#1'}%
27       {Valid values are 'maximum', 'compact', 'basic', 'minimum', \MessageBreak
28        'year', 'true' (=year), and 'false'.}}}}
```

The various values affect the definition of the following macro, used at the head of the reference, for which we coin the `datelabel` field format.

```
29 \providebibmacro*{date+extradate}{}
30 \DeclareFieldFormat{datelabel}{\mkbibparens{\#1}}
31 \DeclareFieldFormat{labeldate}{%
32   \iflabeldateisdate{%
33     \def\currentfield{date}%
34   }%
35   \iflabeldateisanydate{%
36     \def\currentfield{\thefield{labeldatesource}date}%
37   }%
38   \def\currentfield{\thefield{labeldatesource}}%
39   \iffieldannotation{inferred}{\mkbibbrackets{\#1}\#1}%
40   \undef\currentfield}
```

On a related note, the `labeldate` uses the `origdate` if provided in preference to `date`, and falls back to `pubstate` if provided.

```
41 \DeclareLabeldate{%
42   \field{origdate}%
43   \field{date}%
44   \field{year}%
45   \field{eventdate}%
46   \field{pubstate}%
47   \literal{nodate}%
48 }
```

The `extradate` string should be printed bare.

```
49 \DeclareFieldFormat{extradate}{%
50   \iffieldundef{\thefield{labeldatesource}}{%
51     \iffieldnums{\thefield{labeldatesource}year}{\sim}{%
52   }%
53     \iffieldnums{\thefield{labeldatesource}}{\sim}{%
54   }%
55   \mkbibemph{\mknumalph{\#1}}}}
```

We provide tests similar to `\labeldateisdate` to tell if the `labeldate` is (a) any type of date, and (b) neither a date nor pubstate.

```

56 \def\iflabeldateisanydate{%
57   \ifboolexpr{%
58     \togl{blx@labeldateparts}
59     and not test {\iffieldundef{labeldatesource}}}
60     and (
61       test {\iffieldequalstr{labeldatesource}{year}}
62       or not test {\iffieldundef{\thefield{labeldatesource}year}}
63     )}}
64 \def\iflabeldateispubstate{%
65   \ifboolexpr{%
66     not test {\iffieldundef{labeldatesource}}
67     and test {\iffieldequalstr{labeldatesource}{pubstate}}}}

```

We also provide a wrapper around `\printlabeldateextra` that does nothing if the label date is the ‘`nodate`’ literal *and* `sortyear` is defined. Sadly `sortyear` is consumed before we get to this point, so we need a proxy toggle.

```

68 \newtoggle{blx@ox@nonodate}
69 \DeclareBibliographyOption[nodate][true]{%
70   \settoggle{blx@ox@nonodate}{#1}}
71 \DeclareTypeOption[nodate][true]{%
72   \settoggle{blx@ox@nonodate}{#1}}
73 \DeclareEntryOption[nodate][true]{%
74   \settoggle{blx@ox@nonodate}{#1}}
75 \newbibmacro*[labeldate]{%
76   \ifboolexpr{%
77     test {\iffieldequalstr{labeldatesource}{nodate}}
78     and
79     toglob{blx@ox@nonodate}
80   }{}{\printtext[date]{\printlabeldateextra}}}

```

Here we provide the various possible definitions. The `authoryear` implementation does it by clearing, changing or restoring the normal definitions of the date and `issue+date` macros. This is not so great for us as our versions of those macros are quite complex (too much to keep repeating). There are additional complications that arise from us using `origdate` in preference to `date` for the label year, and from our option that requires us to print some dates without years. Conceptually it is more straightforward to clear the data fields instead.

- `true` is the same as `year` (see below).

```
81 \def\bbx@opt@mergedate@true{\bbx@opt@mergedate@year}
```

- `maximum` merges the `issue` and the whole date with the date label. Therefore, we clear year, month, and day from the date used for the label, as well as the `issue` field.

```

The problem with moving years but leaving months and days behind is that the regular date range macros in `biblatex.sty` do nothing at all if no year is printed. We therefore need to patch the macros with extra routines for printing year-free date ranges: the rather extravagantly named `\mknoyeardaterangefull` and `\mknoyeardaterangetrunc`.

```
181 \newrobustcmd*{\mknoyeardaterangefull}[2]{%

200   \}{\}
201     \csuse{mkbibseasondate#1}{\}{#2endseason}\%
202   \enddateuncertainprint}}}}
```

There is a potential problem for `\mknoyeardaterangetrunc`, in that if the year and endyear are missing, it cannot tell if they are the same, so if the months are the same but the years are different, the range would be erroneously compressed. However, the only reason the year should be missing is that it is in the label, so we test `labelyear` instead.

```
203 \newrobustcmd*{\mknoyeardaterangetrunc}[2]{%
204   \iffieldundef{#2month}{\}{%
205     \datecircaprint

## 2.4.4 NAME AND DATE FORMATTING

We set up hashing just as in authoryear.

530     \addcolon\space
531   }{%

```

### 2.4.6 MANUSCRIPTS

537   \field{title}
538   \field{maintitle}
539   \field{library}
540 }
```

### 2.4.7 SOURCE MAPS

We use the source mapping capabilities of Biber to fix the following issues.

```

541 \DeclareStyleSourcemap{%
542   \maps[datatype=bibtex]{%
```

#### Suppressing a ‘`nodate`’ label

Unless already set, the `nonodate` option is inserted if `sortyear` is used. We accomplish this with source maps; the first one works where options (not including `nonodate`) have been set, the second where no options have been set.

```

543 \map[overwrite=true]{%
544   \step[notmatch=\regexp{nonodate}, fieldsource=options, final]
545   \step[fieldsource=sortyear, final]
546   \step[fieldset=options, append, fieldvalue={,nonodate}]
547 }
548 \map[overwrite=true]{%
549   \step[notfield=options, final]
550   \step[fieldsource=sortyear, final]
551   \step[fieldset=options, fieldvalue={nonodate}]
552 }
```

#### Standards

The purpose of this map is to change the number into a label in the absence of an author, so that the citations come out right and the date is positioned correctly.

```

553   \map[overwrite=false]{
554     \pertype{standard}
555     \step[notfield=author,
556           fieldsource=number,
557           fieldtarget=label]
558   }
559 }
```

## 2.5 Alphabetic style: oxalph.bbx

### 2.5.1 PRELIMINARIES

This style is based on oxyear.

```
20 \RequireBibliographyStyle{oxyear}
```

### 2.5.2 SUPPRESSING LABELEXTRA

Since the label codes do all the disambiguation, it is not necessary for the date at the head of the reference to have a disambiguation component.

#### 2.5.4 LABEL CODES: GENERATING

The standard labels are generated from the `labelname` and `year`. We widen the net a bit, so that if there is no `labelname`, we fall back to the `shortlabeltitle` or `labeltitle`; also we use `labelyear` in place of `year`. The `shortlabeltitle` is generated from all the capital letters in the title and subtitle, with the help of a source map.

```

75 \DeclareStyleSourcemap{%
76   \maps[datatype=bibtex]{%
77     \map[overwrite=false]{%
78       \step[fieldsource=title, final]
79       \step[fieldset=shortlabeltitle, origfieldval]
80       \step[fieldsource=subtitle]
81       \step[fieldset=shortlabeltitle, origfieldval, append=true]
82       \step[fieldsource=shortlabeltitle,
83           match=\regexp{[^\\p{Lu}]},
84           replace=\regexp{}]
85     }})
86 \DeclareLabelalphaTemplate{%
87   \labelelement{
88     \field[final]{shorthand}
89     \field[label]
90     \field[strwidth=3,strside=left,ifnames=1]{labelname}
91     \field[strwidth=1,strside=left]{labelname}
92     \field[strwidth=3,strside=left]{shortlabeltitle}
93     \field[strwidth=4,strside=left]{labeltitle}
94   }
95   \labelelement{
96     \field[strwidth=2,strside=right]{labelyear}
97   }
98 }

```

## Citation styles

### 3.1 Notes style: oxnotes.cbx

The standard verbose style is a close match for what we need.

```
20 \RequireCitationStyle{verbose}
```

Variants are also provided that load the respective variant of verbose at this point.

The main difference is that the `citepages` option from these styles needs to be `separate` by default, and the `\postnotedelim` before the bibliography string `thiscite` ('at') is replaced by a simple space.

```
21 \newbibmacro*{cite:postnote:pages}{%
22   \setunit{\addspace}%
23   \bibstring{thiscite}%
24   \setunit{\addspace}%
25   \printfield{postnote}%
26   \ExecuteBibliographyOptions{citepages=separate}}
```

### 3.2 Numeric style: oxnum.cbx

The standard numeric style works, needing only a little configuration.

```
20 \RequireCitationStyle{numeric-comp}
```

Compressed citations are delimited with a semicolon, just like non-compressed citations.

```
21 \renewcommand*{\multicitedelim}{\addsemicolon\space}
22 \renewcommand*{\compcitedelim}{\addsemicolon\space}
```

The page reference postnote is given after a colon.

```
23 \renewcommand*{\postnotedelim}{\addcolon\space}
```

### 3.3 Author–year style: oxyear.cbx

The standard authoryear-comp style is a close match for what we need.

```
20 \RequireCitationStyle{authoryear-comp}
```

This sets `uniquename` to `full`, but that conflicts with `giveninits` set by the bibliography style, so we set it to `init` instead. If left alone, biblatex would do this anyway, but if we do it explicitly, we avoid the warning message.

```
21 \ExecuteBibliographyOptions{uniquename=init}
```

We provide a slightly different `labeldate` macro that obeys the `nonodate` option.

```
22 \newbibmacro*{cite:labeldate+extradate}{%
23   \ifboolexpr{%
24     test {\iffieldundef{labelyear}}%
25     or%
26     ( test {\iffieldequalstr{labeldatesource}{nodate}}%
27       and%
28       \togl {blx@ox@nonodate} )%
29   }{\printtext[bibhyperref]{\printlabeldateextra}}}
```

We insert anonymous author handling into `cite`.

```
30 \xpatchbibmacro{cite}{%
31   \printnames{labelname}%
32 }{%
33   \ifboolexpr{%
34     test {\iffieldequalstr{labelnamesource}{author}}%
35     and%
36     \togl {blx@ox@autoanon}%
37     and%
38     test {\iffielddequals{rawauthor}{\oxrefanon}}%
39   }{%
40     \iftoggle{blx@ox@abbranon}{\bibcpsstring{anon}}{\bibcplstring{anon}}%
41   }{%
42     \printnames{labelname}%
43   }%
44 }{\wlog{WARNING: biblatex-oxref (oxyear) failed to patch cite}}
```

The name and year are usually separated by a space, but if the date is replaced by a word (e.g. ‘forthcoming’, ‘n.d.’), they are separated by a comma.

```
45 \DeclareDelimFormat{nameyeardelim}{%
46   \iflabeldateisanydate{%
47     {\addspace}%
48     {\addcomma\space}}}
49 \DeclareDelimFormat{nonameyeardelim}{%
50   \iflabeldateisanydate{%
51     {\addspace}%
52     {\addcomma\space}}}
```

Compressed citations are delimited with a semicolon, just like non-compressed citations.

```
53 \renewcommand*{\multicitedelim}{\addsemicolon\space}
54 \renewcommand*{\compcitedelim}{\addsemicolon\space}

The page reference postnote is given after a colon.

```
55 \renewcommand*{\postnotedelim}{\addcolon\space}

### 3.4 Alphabetic style: oxalph.cbx

The standard alphabetic style works, needing only a little configuration.

```
20 \RequireCitationStyle{alphabetic}
```

Compressed citations are delimited with a semicolon, just like non-compressed citations.

```
21 \renewcommand*{\multicitedelim}{\addsemicolon\space}
22 \renewcommand*{\compcitedelim}{\addsemicolon\space}
```

The page reference postnote is given after a colon.

```
23 \renewcommand*{\postnotedelim}{\addcolon\space}
```

### 3.5 Common citation fixes

This code is appended to all the citation style files.

Just in case someone loaded this without loading `oxref.bbx`, we ensure the necessary definitions are in place.

```
1 \RequirePackage{etoolbox}
2 \RequirePackage{xpatch}
3 \providetoggle{blx@ox@autoanon}
4 \providetoggle{blx@ox@abbranon}
```

We fix the `textcite` macro so if the `anon` option is set to `long` or `short`, a value of ‘Anonymous’ is replaced by the bibliography string `anon`.

```
5 \xpatchbibmacro{textcite}{%
6   \printnames{labelname}%
7 }{%
8   \ifboolexpr{
9     test {\iffieldequalstr{labelnamesource}{author}}%
10    and
11    \togg{blx@ox@autoanon}
12    and
13    test {\iffieldequals{rawauthor}{\oxrefanon}}%
14  }{%
15    \iftoggle{blx@ox@abbranon}{\bibcpsstring{anon}}{\bibcplstring{anon}}%
16  }{%
17    \printnames{labelname}%
18  }%
19 }{\wlog{WARNING: biblatex-oxref failed to patch textcite}}
```

## Data model adjustments

### 4.1 oxnotes.dbx, oxyear.dbx, oxnum.dbx, and oxalph.dbx

We provide an additional name part for handling titles.

```
20 \DeclareDatamodelConstant[type=list]{nameparts}{prefix,family,suffix,given,title}
```

The datatype and origdatatype fields are used for prefixing the date with a description.

```
21 \DeclareDatamodelFields[type=field,datatype=literal]{datetype,origdatatype}
```

The authoraddon and editoraddon fields are used for handling pseudonyms. The serieseditor field is used for the editor of a book series, as opposed to the editor of the particular cited work.

```
22 \DeclareDatamodelFields[type=list,datatype=name]{authoraddon,editoraddon,serieseditor}
```

The jointauthor and jointauthortype fields are used internally for handling editors/translators who can be considered joint authors.

```
23 \DeclareDatamodelFields[type=list,datatype=name]{jointauthor}
24 \DeclareDatamodelFields[type=field,datatype=literal]{jointauthortype}
```

The rawauthor field is used internally for checking whether an the name given in the author field is a keyword meaning ‘anonymous’.

```
25 \DeclareDatamodelFields[type=field,datatype=literal]{rawauthor}
26 \DeclareDatamodelEntryfields{datetype,origdatatype,authoraddon,editoraddon,%
27   serieseditor,jointauthor,jointauthortype,rawauthor}
```

We provide a shortlabeltitle field to contain our custom reduction of the labeltitle.

```
28 \DeclareDatamodelFields[type=field,datatype=literal]{shortlabeltitle}
```

This data model is borrowed from biblatex-manuscripts-philology.

```
29 \DeclareDatamodelEntrytypes{manuscript}
30 \DeclareDatamodelFields[type=field,datatype=literal]{catalog,dating,%
31   shortlibrary,columns, collection,shortcollection,usualtitle,shelfmark,%
32   sortshelfmark,support,columns,layer}
33 \DeclareDatamodelFields[type=list,datatype=name]{scribe,owner}
```

```
34 \DeclareDatamodelFields[type=list,datatype=literal]{origin}
35 \DeclareDatamodelEntryfields[manuscript]{catalog,dating,shortlibrary,%
36   shortcollection,columns,languages,collection,usualtitle,shelfmark,%
37   sortshelfmark,support,columns,origin,scribe,owner}
```

This data model helps with legal citations.

```
38 \DeclareDatamodelFields[type=field,datatype=date]{pardate}
39 \DeclareDatamodelFields[type=field,datatype=literal]{parreporter,parseries}
40 \DeclareDatamodelFields[type=field,datatype=integer]{parvolume}
41 \DeclareDatamodelFields[type=field,datatype=range]{parpages}
42 \DeclareDatamodelEntryfields[jurisdiction]{pardate,parreporter,parseries,%
43   parvolume,parpages}

## Localization modules

### 5.1 English: english-oxref.lbx

Here we set some language-specific punctuation and date formatting.

```

20 \InheritBibliographyExtras{english}
21 \DeclareBibliographyExtras{%
22   \def\finalandcomma{\addcomma}%
23   \protected\def\mkusbibordinal#1{%
24     \begingroup
25       \atempcnta#1\relax\number\atempcnta
26       \whilenum{\atempcnta>100}{\do{\advance\atempcnta-100\relax}%
27       \ifnum\atempcnta>20
28         \whilenum{\atempcnta>9}{\do{\advance\atempcnta-10\relax}%

30       \ifcase\atempcnta th\or st\or d\or d\else th\fi
31     \endgroup}%
32   }

```

We load the standard set of localization strings, then add our adjustments.

The roles expressed as functions do not need adjusting. The roles expressed as actions do not typically end in 'by' when abbreviated; the 'with' parts go first when abbreviated if there is more than one editorial role (at least, that is one way of interpreting the examples).

## 5.2 British English: british-oxref.lbx

Here we set some language-specific punctuation and date formatting.

```
20 \InheritBibliographyExtras{british}
21 \DeclareBibliographyExtras{%
```

The only difference from the standard British date format is that we print it ‘clean’, with a cardinal instead of an ordinal day.

```
22 \protected\def\mkbibdatelong#1#2#3{%
23   \iffieldundef{#3}
24     {}
25     {\stripzeros{\thefield{#3}}%
26      \iffieldundef{#2}{}{\nobreakspace}}%
27   \iffieldundef{#2}
28     {}
29     {\mkbibmonth{\thefield{#2}}%
30      \iffieldundef{#1}{}{\space}}%
31   \iffieldbibstring{#1}
32     {\bibstring{\thefield{#1}}%
33      {\dateeraprintpre{#1}\stripzeros{\thefield{#1}}}}%
```

As you’d expect from an Oxford style, we use the Oxford comma, and use a period as the time separator.

```
34 \def\finalandcomma{\addcomma}%
35 \def\bibtimesep{\addperiod}%
36 }
```

We use the British abbreviations for 12-hour clock times.

```
37 \DeclareBibliographyStrings{%
38   inherit      = {english},
39   am           = {{a\adddot m\adddot}{a\adddot m\adddot}},
40   pm           = {{p\adddot m\adddot}{p\adddot m\adddot}},
41 }
```

### 5.3 American English: american-oxref.lbx

```
20 \InheritBibliographyExtras{english}
21 \DeclareBibliographyExtras{\uspunctuation}
22 \InheritBibliographyStrings{english}
```

### 5.4 Other languages

Currently oxref only supports British and American English explicitly, but if there is demand more languages may be added. If you would like to contribute support for your language, a list of the non-standard bibliography strings requiring definition may be found in section 2.1.1.
