The *changes*-package

Manual change markup — version 4.1.0

May 30, 2021

Ekkart Kleinod

1 Introduction

This package provides means for manual change markup.

Any comments, thoughts or improvements are welcome. The package is maintained at *gitlab*, please see

https://edgesoft.de/projects/changes/

for links to source code access, bug and feature tracker, etc. If you want to contact me directly, please send an email to ekleinod@edgesoft.de. Please start your email subject with [changes].

The changes-package allows the user to manually markup changes of text, such as additions, deletions, or replacements. Changed text is shown in a different color; deleted text is striked out. Additionally, text can be highlighted and/or commented. The package allows free definition of additional authors and their associated color. It also allows you to change the markup of changes, authors, highlights or comments.

Here is a short example of change markup:

[EK 1] missing wordThis is newtext. In this sentence, I replace a goodbadEK word. And, to sumup the text changes, there is another obsoleteup the text changes, there is another obsoleteEK word to delete. Furthermore,text can be highlightedEK or just commented.

the fun of it. Parallel to this manual is a folder "examples" which contains an extensive collection of example files, both &TEX and PDF files. Please refer to these examples for inspiration and first problem solving.

2 Using the *changes*-package

In this section a typical use case of the *changes*-package is described. You can find the detailed description of the package options and new commands in Section 4.

We start with the text you want to change. You want to markup the changes for each author individually. Such a change markup is well-known in WYSIWYG text processors such as *LibreOffice*, *OpenOffice*, or *Word*.

The *changes*-package was developed in order to support such change markup. The package provides commands for defining authors, and for marking text as added, deleted, or replaced. Additionally, text can be highlighted or commented. In order to use the package, you should follow these steps:

- 1. use changes-package
- 2. define authors
- 3. markup text changes
- 4. highlight and comment text
- 6. output list of changes
- 7. remove markup

Use *changes*-package

In order to activate change management, use the *changes*-package as follows:

```
\usepackage{changes}
```

respectively

```
\usepackage[<options>]{changes}
```

You can use the options for defining the layout of the change markup. You can change the layout after using the *changes*-package as well.

For detailed information please refer to Section 4.1 and Section 4.6.

Define authors

The *changes*-package provides a default anonymous author. If you want to track your changes depending on the author, you have to define the needed authors as follows:

\definechangesauthor[name=<name>, color=<color>]{<id>}

Every author is uniquely identified through his or her id. You can give every author an optional name and/or color.

For detailed information please refer to Section 4.5.

Markup text changes

Now everything is set to markup the changed text. Please use the following commands according to your change:

for added text:

```
\added[id=<id>, comment=<comment>]{<new text>}
```

for deleted text:

```
\deleted[id=<id>, comment=<comment>]{<old text>}
```

for replaced text:

```
\replaced[id=<id>, comment=<comment>]{<new text>}{<old text>}
```

Stating the author's id and/or a comment is optional.

For detailed information please refer to Section 4.2.

Highlight and comment text

Maybe you want to highlight orcomment some text?

highlight text:

```
\highlight[id=<id>, comment=<comment>]{<text>}
```

comment text:

```
\comment[id=<id>]{<comment>}
```

Stating the author's id and/or a comment for highlights is optional.

For detailed information please refer to Section 4.3.

Typeset the document with LATEX

After marking your changes in the text you are able to display them in the generated document by processing it as usual with $\[mathbb{ET}_{E}X$. By processing your document the changed text is layouted as you stated by the corresponding options and/or special commands.

Output list of changes

You can print a list of changes using:

\listofchanges[style=<style>, title=<title>, show=<type>]

The list is meant to be the analogon to the list of tables, or the list of figures.

Stating the style is optional, default is style=list. In order to print a quick overview of the number and kind of changes of every author, use the option style=summary or style=compactsummary. Show only specific changes by using the show option.

By running \[EX] the data of the list is written into an auxiliary file. This data is used in the next [[EX] run for typesetting the list of changes. Therefore, two [[EX] runs are needed after every change in order to typeset an up-to-date list of changes.

For detailed information please refer to Section 4.4.

Remove markup

Often you want to remove the change markup after acknowledging or rejecting the changes. You can suppress the output of changes with:

\usepackage[final]{changes}

In order to remove the markup from the $\&T_EX$ files, you have to remove the commands by hand or use the script by Yvon Cui. You find the script pyMergeChanges.py in the directory:

<texpath>/scripts/changes/

The script removes all markups either keeping or rejecting the change. You can select or deselect markup from removal using the interactive mode by starting the script without options.

For detailed information please refer to Section 5.

3 Limitations and possible enhancements

The *changes*-package was carefully programmed and tested. Yet the possibility of errors in the package exists, you might encounter problem during use, or you might miss functionality.

You can find a list of the most important known problems and possible solutions in Section 6. Please refer to the section first if your problem is known and is a solution exists. More errors, problems, and solutions are provided at:

https://edgesoft.de/projects/changes/

or

https://gitlab.com/ekleinod/changes/-/issues

You can write me an email too, please send it to ekleinod@edgesoft.de. In that case, please start your email subject with [changes].

Change markup of texts works well, it is possible to markup whole paragraphs. You cannot markup:

- figures
- tables
- headings
- some commands
- multiple paragraphs (sometimes)

You can try putting such text in an extra file and include in with input. This works sometimes, give it a try. Kudos to Charly Arenz for this tip.

If you experience errors about already defined macros, please see option commandnameprefix, Section 4.1.3.

4 User interface of the *changes*-package

This section describes the user interface of the *changes*-package, i.e. all options and commands of the package. Every option and new command is described. If you want to see the options and commands in action, please refer to the examples in

<texpath>/doc/latex/changes/examples/

The example files are named with the used option respectively command.

4.1 Package Options

```
\usepackage[<options>]{changes}
```

The package options control the behavior of the overall package, i. e. all markup commands.

The following options are defined:

draft	10
final	10
commandnameprefix	10
markup	11
addedmarkup	12
deletedmarkup	12
highlightmarkup	13
commentmarkup	13
authormarkup	14
authormarkupposition	15
authormarkuptext	15
defaultcolor	15
todonotes	16
truncate	16
ulem	16
xcolor	17
	final commandnameprefix markup addedmarkup deletedmarkup highlightmarkup commentmarkup authormarkupposition authormarkuptext defaultcolor todonotes truncate

4.1.1 draft

\usepackage[draft]{changes} ~ \usepackage{changes}

The draft-option enables markup of changes. The list of changes is available via *listofchanges*. This option is the default option, if no other option is selected.

The *changes* package reuses the declaration of draft in \documentclass. The local declaration of final overrules the declaration of draft in \documentclass.

4.1.2 final

```
\usepackage[final]{changes}
```

The final-option disables markup of changes, only the correct text will be shown. The list of changes is disabled, too.

The *changes* package reuses the declaration of final in \documentclass. The local declaration of draft overrules the declaration of final in \documentclass.

4.1.3 commandnameprefix

\usepackage[commandnameprefix=<strategy>]{changes}

The commandnameprefix option sets the prefixing strategy for the markup commands. This is useful if another package already defined commands, e.g. \comment or \highlight.

Per default an error is raised if a command is already defined and no prefixing takes place (option not given or set to none).

If a prefix strategy is set, the command in question is prefixed with "ch". The strategy determines which commands are prefixed.

This option only provides prefixed names for the markup commands:

- \deleted \rightarrow \chdeleted
- \replaced \rightarrow \chreplaced
- $highlight \rightarrow \chhighlight$
- \land comment \rightarrow \land chcomment

The following strategies for *commandnameprefix* are provided:

none no prefix, a command already defined raises an error (default strategy)

ifneeded	if a command is already defined, <i>changes</i> prefixes this command and
	raises a warning. Depending on the commands already defined, the
	document will contain a mix of prefixed and not prefixed markup
	commands. This is mostly used if only \comment or \highlight are
	already defined and you mainly want to use the change commands
	<pre>\added, \deleted, and \replaced.</pre>
always	all commands are prefixed an according message is written to the log

always all commands are prefixed, an according message is written to the log

Examples

```
\usepackage[commandnameprefix=none]{changes} ~ \usepackage{changes}
\usepackage[commandnameprefix=ifneeded]{changes}
\usepackage[commandnameprefix=always]{changes}
```

4.1.4 markup

\usepackage[markup=<markup>]{changes}

The markup option chooses a predefined visual markup of changed text. The default markup is chosen if no explicit markup is given. The markup chosen with markup can be overwritten with the more special markup options addedmarkup, deletedmarkup, commentmarkup, or highlightmarkup.

The following values for *markup* are defined:

default	default markup for added and deleted text, comments and highlighted
	text (default markup)
underlined	underlined for added text, wavy underlined for highlighted text, default
	for deleted text, and comments
bfit	bold added text, italic deleted text, default for comments and high-
	lighted text
nocolor	no colored markup, underlined for added text, wavy underlined for
	highlighted text, default for deleted text and comments

Examples

```
\usepackage[markup=default]{changes} ~ \usepackage{changes}
\usepackage[markup=underlined]{changes}
\usepackage[markup=bfit]{changes}
\usepackage[markup=nocolor]{changes}
```

When changing from color markup to markup without color and vice versa, some errors occur if an auxiliary file exists. Please ignore the errors, they vanish in the second run.

4.1.5 addedmarkup

\usepackage[addedmarkup=<addedmarkup>]{changes}

The addedmarkup option chooses a predefined visual markup of added text. The default markup is chosen if no explicit markup is given. The option addedmarkup overwrites the markup chosen with markup.

The following values for *addedmarkup* are defined:

colored	no text markup, just coloring – example (default)
uline	underlined text – <u>example</u>
uuline	double underlined text – <u>example</u>
uwave	wavy underlined text – example
dashuline	dashed underlined text – example
dotuline	dotted underlined text – example
bf	bold text – example
it	italic text – <i>example</i>
sl	slanted text – example
em	emphasized text – example

The output of replaced text is a combination of added and deleted text, thus any change in their layout influences the layout of replaced text.

Examples

```
\usepackage[addedmarkup=colored]{changes} ~ \usepackage{changes}
\usepackage[addedmarkup=uline]{changes}
\usepackage[addedmarkup=bf]{changes}
```

4.1.6 deletedmarkup

\usepackage[deletedmarkup=<deletedmarkup>]{changes}

The deletedmarkup option chooses a predefined visual markup of deleted texty. The default markup is chosen if no explicit markup is given. The option deletedmarkup overwrites the markup chosen with markup.

The following values for *deletedmarkup* are defined:

sout	striked out text – example (default)
xout	crossed out text – example
colored	no text markup, just coloring – example
uline	underlined text – <u>example</u>
uuline	double underlined text – <u>example</u>
uwave	wavy underlined text – example

dashuline	dashed underlined text – example
dotuline	dotted underlined text – example
bf	bold text – example
it	italic text – <i>example</i>
sl	slanted text – <i>example</i>
em	emphasized text – <i>example</i>

The output of replaced text is a combination of added and deleted text, thus any change in their layout influences the layout of replaced text.

Examples

```
\usepackage[deletedmarkup=sout]{changes} ~ \usepackage{changes}
\usepackage[deletedmarkup=xout]{changes}
\usepackage[deletedmarkup=uwave]{changes}
```

4.1.7 highlightmarkup

\usepackage[highlightmarkup=<highlightmarkup>]{changes}

The highlightmarkup option chooses a predefined visual markup for highlighted text. The default markup is chosen if no explicit markup is given. The option highlightmarkup overwrites the markup chosen with markup.

The following values for *highlightmarkup* are defined:

background	markup by background color –	example	(default)
uuline	double underlined text - examp		
uwave	wavy underlined text - example	e	

Examples

```
\usepackage[highlightmarkup=background]{changes} ~ \usepackage{
    changes}
\usepackage[highlightmarkup=uuline]{changes}
```

4.1.8 commentmarkup

\usepackage[commentmarkup=<commentmarkup>]{changes}

The commentmarkup option chooses a predefined visual markup for comments. The default markup is chosen if no explicit markup is given. The option commentmarkup overwrites the markup chosen with markup.

The following values for *commentmarkup* are defined:

example	todo	comment as todo note, which is not added to list of todos (default)
comment	margin	comment in margin
example	footnote	comment as footnote ¹
comment	uwave	wavy underlined text – example comment

Examples

```
\usepackage[commentmarkup=todo]{changes} ~ \usepackage{changes}
\usepackage[commentmarkup=footnote]{changes}
\usepackage[commentmarkup=uwave]{changes}
```

4.1.9 authormarkup

\usepackage[authormarkup=<authormarkup>]{changes}

The authormarkup option chooses a predefined visual markup of the author's identification. The default markup is chosen if no explicit markup is given.

The following values for authormarkup are defined:

superscript	superscripted text – text ^{author} (default)
subscript	subscripted text – text _{author}
brackets	text in brackets – text(author)
footnote	text in footnote – text ²
none	no author identification

Examples

```
\usepackage[authormarkup=superscript]{changes} ~ \usepackage{
    changes}
\usepackage[authormarkup=brackets]{changes}
\usepackage[authormarkup=none]{changes}
```

¹ example comment

² author

4.1.10 authormarkupposition

\usepackage[authormarkupposition=<authormarkupposition>]{changes}

The authormarkupposition option chooses the position of the author's identification. The default value is chosen if no explicit markup is given.

The following values for *authormarkupposition* are defined:

rightright of the text - text^{author} (default)leftleft of the text - ^{author}text

Examples

```
\usepackage[authormarkupposition=right]{changes} ~ \usepackage{
    changes}
\usepackage[authormarkupposition=left]{changes}
```

4.1.11 authormarkuptext

\usepackage[authormarkuptext=<authormarkuptext>]{changes}

The authormarkuptext option chooses the text that is used for the author's identification. The default value is chosen if no explicit markup is given.

The following values for *authormarkuptext* are defined:

id author's id – text^{id} (default) name author's name – text^{authorname}

Examples

```
\usepackage[authormarkuptext=id]{changes} ~ \usepackage{changes}
\usepackage[authormarkuptext=name]{changes}
```

4.1.12 defaultcolor

```
\usepackage[defaultcolor=<color>]{changes}
```

The defaultcolor option defines the default color for authors, including the color for the default (anonymous) author. You can use colors of the *xcolor* package.

The default color is *blue*.

Examples

```
\usepackage[defaultcolor=blue]{changes} ~ \usepackage{changes}
\usepackage[defaultcolor=magenta]{changes}
```

4.1.13 todonotes

\usepackage[todonotes=<options>]{changes}

Options for the *todonotes* package can be specified as parameters of the todonotes-option. Several options or options with special characters have to be put in curly brackets.

Examples

\usepackage[todonotes={textsize=tiny}]{changes}

4.1.14 truncate

\usepackage[truncate=<options>]{changes}

Options for the *truncate* package can be specified as parameters of the truncate-option. Several options or options with special characters have to be put in curly brackets.

Examples

\usepackage[truncate=hyphenate]{changes}

4.1.15 ulem

\usepackage[ulem=<options>]{changes}

Options for the *ulem* package can be specified as parameters of the *ulem*-option. Several options or options with special characters have to be put in curly brackets.

Examples

```
\usepackage[ulem=UWforbf]{changes}
\usepackage[ulem={normalem,normalbf}]{changes}
```

4.1.16 xcolor

\usepackage[xcolor=<options>]{changes}

Options for the *xcolor* package can be specified as parameters of the *xcolor*-option. Several options or options with special characters have to be put in curly brackets.

Examples

```
\usepackage[xcolor=dvipdf]{changes}
\usepackage[xcolor={dvipdf,gray}]{changes}
```

4.2 Change management

4.2.1	\added	17
4.2.2	\deleted	18
4.2.3	\replaced	18

4.2.1 \added

\added[id=<id>, comment=<comment>]{<new text>}

The command \added marks newly added text. The new text is given in curly braces.

The optional argument contains key-value-pairs for author-id and comment. The authorid has to be defined using \definechangesauthor. If the comment contains special characters or spaces, use curly brackets to enclose the comment.

If a comment is given, the direct author markup at the changes text is omitted, because the author is printed in the comment.

Examples

```
This is \added{new} text.
This is \added[id=EK]{new} text too.
This is more \added[id=EK, comment={has to be in it}]{new} text.
This is the last \added[comment=anonymous]{new} text.
```

Result

 [EK 3] has
 This is new text. This is new EK text too. This is more new text. This is the last new text.

 [1] anonymous
 [1] anonymous

4.2.2 \deleted

```
\deleted[id=<id>, comment=<comment>]{<old text>}
```

The command \deleted marks deleted text. The deleted text is given in curly braces.

For the optional arguments see $\$ (Section 4.2.1).

Examples

```
This is \deleted{old} text.
This is \deleted[id=EK]{old} text too.
This is more \deleted[id=EK, comment={too old}]{old} text.
This is the last \deleted[comment=away]{old} text.
```

Result

This is old text. This is old^{EK} text too. This is more old text. This is the last [EK 4] too old text.

[2] away

old

4.2.3 \replaced

```
\replaced[id=<id>, comment=<comment>]{<new text>}{<old text>}
```

The command \replaced marks replaced text. The new and the replaced text are given in this order in curly braces.

For the optional arguments see \del{added} (Section 4.2.1).

The output of replaced text is a combination of added and deleted text, thus any change in their layout influences the layout of replaced text.

Examples

```
This is \replaced{new}{replaced} text.
This is \replaced[id=EK]{new}{replaced} text too.
This is more \replaced[id=EK, comment={better}]{new}{replaced} text
This is the last \replaced[comment=improved]{new}{replaced} text.
```

Result

This is newreplaced text. This is newreplaced^{EK} text too. This is more new replaced text. This is the last newreplaced text.

[3] improved

ter

[EK 5] bet-

4.3 Highlighting and Comments

4.3.1	\highlight	19	9
4.3.2	\comment	1	9

4.3.1 \highlight

\highlight[id=<id>, comment=<comment>]{<text>}

The command \highlight highlights text. The highlighted text is given in curly braces.

For the optional arguments see \added (Section 4.2.1).

Examples

```
This is \highlight{highlighted} text.
This is \highlight[id=EK]{highlighted} text too.
This is more \highlight[id=EK, comment={Good one.}]{highlighted}
    text.
This is the last \highlight[comment=remember]{highlighted} text.
```

Result

This ishighlightedtext.This ishighlightedEKtext too.This is more[EK 6] Goodhighlightedtext.This is the lasthighlightedtext.

[4] remem-

one.

ber

4.3.2 \comment

```
\comment[id=<id>]{<comment>}
```

The command \comments adds a comment to the document. The comment is given in curly braces.

The command has only one optional argument: a key-value-pair for the author-id. The author-id has to be defined using \definechangesauthor.

The comments are numbered automatically, the number is printed in the comment.

Examples

```
This is \comment{Sure}commented text.
This is \comment[id=EK]{Correct.}commented text too.
```

Result

rect.

 [5] Sure
 This is commented text. This is commented text too.

 [EK 7] Cor

4.4 Overview of changes

4.4.1 \listofchanges

\listofchanges[style=<style>, title=<title>, show=<type>]

The command <code>listofchanges</code> outputs a list or summary of changes. The first $\&T_EX$ -run creates an auxiliary file, the second run uses the data of this file. Therefore you need two $\&T_EX$ -runs for an up-to-date list of changes.

There are three optional arguments:

style	list style
title	individual title
show	markup types

style The style argument defines the layout of the list of changes. Three styles are defined:

list	prints the list of changes like a list of figures (default)
summary	prints the number of changes grouped by author
compactsummary	same as summary but entries with count 0 are omitted

title The title argument is used to change the title for the list. If you want to use special characters or spaces in the title, enclose it in curly braces.

show The show argument defines which types of change markup are shown in the list of changes. You can combine the values using the | character. For example if you want to show all additions and deletions, use show=added|deleted.

The following values are defined:

all	show all types (default)
added	show only additions
deleted	show only deletions
replaced	show only replacements
highlight	show only highlights
comment	show only comments

Examples

4.5 Author management

4.5.1 \definechangesauthor

\definechangesauthor[name=<name>, color=<color>]{<id>}

The command \definechangesauthor defines a new author for changes. You have to define a unique author's id, special characters or spaces are not allowed within the author's id.

You may define a corresponding color and the author's name. If you do not define a color, blue is used.

The author's name is used in the list of changes and in the markup if you set the corresponding option.

The package predefines one anonymous author without id.

Examples

```
\definechangesauthor{EK}
\definechangesauthor[color=orange]{EK}
\definechangesauthor[name={Ekkart Kleinod}]{EK}
\definechangesauthor[name={Ekkart Kleinod}, color=orange]{EK}
```

4.6 Adaptation of the output

4.6.1	Values for markup command definitions	22
4.6.2	\setaddedmarkup	22
4.6.3	\setdeletedmarkup	23
4.6.4	\sethighlightmarkup	23
4.6.5	\setcommentmarkup	24

4.6.6	\setauthormarkup	24
4.6.7	\setauthormarkupposition	25
4.6.8	\setauthormarkuptext	25
4.6.9	\settruncatewidth	25
4.6.10	\setsummarywidth	26
4.6.11	\setsummarytowidth	26
4.6.12	\setlocextension	26
4.6.13	\setsocextension	27

4.6.1 Values for markup command definitions

If you want to adapt the markup output, you can use any $\mathbb{E}T_{E}X$ -commands and special values resp. macros of the *changes* package. Some values or macros are specific for each command, they are described in the corresponding sections.

The following values and macros can be used in each command:

- any LTEX-commands
- author's color can be used with color "authorcolor"
- boolean test if colored change output is needed "\IfIsColored"

I do not provide full access to all elements of the markup for every command in order to keep the macros simple. For example, the author's id is only available for \setcomment-markup.

The output of replaced text is a combination of added and deleted text.

4.6.2 \setaddedmarkup

```
\setaddedmarkup{<definition>}
```

The command \setaddedmarkup defines the layout of added text. The default markup is colored text, or the markup set with the option markup respectively addedmarkup.

Values for definition:

- added text can be used with "#1"

The output of replaced text is a combination of added and deleted text, thus any change in their layout influences the layout of replaced text.

Examples

```
\setaddedmarkup{\emph{#1}}
\setaddedmarkup{+++: #1}
```

4.6.3 \setdeletedmarkup

\setdeletedmarkup{<definition>}

The command \setdeletedmarkup defines the layout of deleted text. The default markup is striked-out, or the markup set with the option markup respectively deletedmarkup.

Values for definition:

- deleted text can be used with "#1"

The output of replaced text is a combination of added and deleted text, thus any change in their layout influences the layout of replaced text.

Examples

```
\setdeletedmarkup{\emph{#1}}
\setdeletedmarkup{---: #1}
```

4.6.4 \sethighlightmarkup

```
\sethighlightmarkup{<definition>}
```

The command \sethighlightmarkup defines the layout of highlighted text. The default markup is via a background color, or the markup set with the option markup respectively highlightmarkup.

Values for definition:

- highlighted text can be used with "#1"

Examples

```
\sethighlightmarkup{\emph{#1}}
\sethighlightmarkup{{\IfIsColored{\color{authorcolor}}{}||: #1}}
```

4.6.5 \setcommentmarkup

\setcommentmarkup{<definition>}

The command \setcommentmarkup defines the layout of comments. The default markup is a margin note, or the markup set with the option markup respectively commentmarkup.

Values for definition:

- comment can be used with "#1"
- author's id can be used with "#2"
- author output (id or name) can be used with "#3"
- comment count of the autor can be used with counter "authorcommentcount"
- boolean test if author is anonymous "\IfIsAnonymous"

Examples

```
\setcommentmarkup{-- #1 --}
\setcommentmarkup{{\IfIsColored{\color{authorcolor}}{}#1}}
\setcommentmarkup{\IfIsAnonymous{#2}{}{\textbf{#3: }}#1}
\setcommentmarkup{[\arabic{authorcommentcount}] #1}
```

4.6.6 \setauthormarkup

```
\setauthormarkup{<definition>}
```

The command \setauthormarkup defines the layout of the author's markup in the text. The default markup is a superscripted author's text.

Values for definition:

```
- author output (id or name) can be used with "#1"
```

Examples

```
\setauthormarkup{(#1)}
\setauthormarkup{(#1)~--~}
\setauthormarkup{\marginpar{#1}}
```

4.6.7 \setauthormarkupposition

\setauthormarkupposition{<authormarkupposition>}

The command \setauthormarkupposition defines the position of the author's markup relative to the changed text. The default position is right of the changed text.

The following values for *authormarkupposition* are defined:

right	right of the text – text ^{author} (default)
left	left of the text – ^{author} text

Examples

```
\setauthormarkupposition{right}
\setauthormarkupposition{left}
```

4.6.8 \setauthormarkuptext

\setauthormarkuptext{<authormarkuptext>}

The command \setauthormarkuptext defines the text for the author's markup. The default markup is the author's id.

The following values for *authormarkuptext* are defined:

id	author's id – text ^{id} (default)
name	author's name – text ^{authorname}

Examples

```
\setauthormarkuptext{id}
\setauthormarkuptext{name}
```

4.6.9 \settruncatewidth

\settruncatewidth{<width>}

The command \settruncatewidth sets the width of the truncation in the list of changes to the given width. The default width is 0.6\textwidth.

Examples

```
\settruncatewidth{5cm}
\settruncatewidth{.3\textwidth}
```

4.6.10 \setsummarywidth

```
\setsummarywidth{<width>}
```

The command \setsummarywidth sets the width of the list of changes in summary style to the given width. The default width is 0.3\textwidth.

Examples

```
\setsummarywidth{3cm}
\setsummarywidth{.5\textwidth}
```

4.6.11 \setsummarytowidth

```
\setsummarytowidth{<text>}
```

The command \setsummarytowidth sets the width of the list of changes in summary style to the width of the given text.

Examples

```
\setsummarytowidth{Highlighted \qquad}
\setsummarytowidth{The longest text imaginable for the summary.}
```

4.6.12 \setlocextension

```
\setlocextension{<extension>}
```

The command \setlocextension sets the extension of the auxiliary file for the list of changes (loc-file³). The default extension is "loc".

In the example, the loc-file for "foo.tex" would be named "foo.listofchanges" resp. "foo.lochg" instead of the default name "foo.loc".

Examples

```
\setlocextension{listofchanges}
\setlocextension{lochg}
```

Do not use a \mathbb{M}_{EX} standard file extension, such as "toc" or "lof", as this would collide with the normal \mathbb{M}_{EX} run.

```
<sup>3</sup> "loc" stands for "list of changes".
```

4.6.13 \setsocextension

```
\setsocextension{<extension>}
```

The command \setsocextension sets the extension of the auxiliary file for the summary of changes (soc-file⁴). The default extension is "soc".

In the example, the soc-file for "foo.tex" would be named "foo.changes" resp. "foo.chg" instead of the default name "foo.soc".

Examples

```
\setsocextension{changes}
\setsocextension{chg}
```

Do not use a \mathbb{M}_{EX} standard file extension, such as "toc" or "lof", as this would collide with the normal \mathbb{M}_{EX} run.

4.7 Used packages

The *changes*-package uses already existing packages for it's functions. You will find detailed description of the packages in their distributions.

The following packages are always required and have to be installed for the *changes*-package:

etoolbox	provides an enhanced \if-commands, <i>bools</i> , or list operations
truncate	truncation of texts (used for list of changes)
xkeyval	provides key-value-lists for parameters
xstring	improves string operations

The following packages are sometimes required and have to be installed if used by the corresponding option:

todonotes	loaded if comments are layouted as todo notes (default markup)
ulem	loaded if text has to be striked, wavylined or exed out (default markup)
xcolor	loaded if colored text is used for markup (default markup)

⁴ "soc" stands for "summary of changes".

5 Remove markup from file

In order to remove the markup from the LATEX files, you have to remove the commands by hand or use the script by Yvon Cui. You find the script in the directory:

<texpath>/scripts/changes/

The script removes all markups either keeping or rejecting the change. You can select or deselect markup from removal using the interactive mode by starting the script without options.

The script requires *python3*.

Use the script as follows:

Run the script with no options and files for a short help text:

python pyMergeChanges.py

Known issues:

- removes only markup that is used in one line, not markup that spans multiple lines

6 Known problems and solutions

This section contains known problems and their solutions as far as I know some. If your problem is not listed here, please see the issue tracker on gitlab if it contains your problem (a search exists):

https://gitlab.com/ekleinod/changes/issues

If your problem is not listed, please open a new issue for your problem. Describe your problem as specific as possible, if possible, include a small example file with the problematic behavior.

6.1 Special content

Change markup of texts works well, it is possible to markup whole paragraphs. You cannot markup:

- figures
- tables
- headings
- some commands
- several paragraphs (sometimes)

You can try putting such text in an extra file and include in with input. This works sometimes, give it a try. Kudos to Charly Arenz for this tip.

6.2 Footnotes and margin notes

There is a problem of typesetting footnotes or margin notes in special environments, such as tables or the *tabbing* environment. Avoid this type of markup when using these environments.

6.3 The *ulem* package

I am using the *ulem* package for striking out text as default. This causes problems with some commands and environments, e.g.

- in math mode
- when using the *siunitx* package
- when using the \citet or \citep command

In that case there are few good options, the best is to define the markup for deletions yourself and avoid the ulem package. See

- Section 4.1.6

- Section 4.6.3

6.4 Command already defined

Some packages use the same names for their commands as the *changes* package, in particular \comment and \highlight are not originally named commands.

In this case, *changes* may prefix its commands to avoid naming collisions. This is controlled by the commandnameprefix option, see Section 4.1.3 for the documentation.

In order for this to work, the *changes* package has to be loaded after the other packages or commandnameprefix=always must be selected.

7 Authors

Several authors contributed to the *changes*-package. Many bugs and problems were solved or their solution inspired via de.comp.text.tex. Thanks.

The authors are (in alphabetical order):

- Chiaradonna, Silvano
- Cui, Yvon
- Fischer, Ulrike
- Giovannini, Daniele
- Kleinod, Ekkart
- Mittelbach, Frank
- Richardson, Alexander
- Voss, Herbert
- Wölfel, Philipp
- Wolter, Steve

8 Versions

For a list of versions and the changes within these version, please refer to https://gitlab.com/ekleinod/changes/blob/master/changelog.md Here you too find the implemented but not released changes for the new version. If you are interested in planned new features, please see https://gitlab.com/ekleinod/changes/milestones
