# Chapter 1

## Package Interfaces

### 1.1 Introduction

Codehigh package uses `l3regex`<sup>1</sup> package in L<sup>A</sup>T<sub>E</sub>X3 Programming Layer to parse and highlight source codes and demos. It is more powerful than `listings` package, and more easy to use than `minted` package. But it is slower than both of them. Therefore in LuaTeX the package provides another way to highlight code: using `LPeg`<sup>2</sup>. `LPeg` is much more powerful and faster than `l3regex`.

### 1.2 Highlighting Code

There are several predefined languages: `latex`, `latex/latex2`, `latex/latex3`, `latex/math` and `latex/table`. The following example is typeset by `codehigh` environment with default option `language=latex`.

```
\documentclass{article}
\usepackage[a4paper,margin=2cm]{geometry}
\usepackage{codehigh}
\usepackage{hyperref}
\newcommand*\myversion{2021C}
\newcommand*\mydate[Version \myversion\ (\the\year-\mylenum{month}-\mylenum{day})}
\newcommand*\mylenum[1]{\ifnum#1<10 0\the#1\else\the#1\fi}
\setlength{\abc}{1}
\begin{document}
% some comment
\section{Section Name}
\subsection{Section Name}
Math $a+b$.
\end{document}
```

The following example is typeset by `codehigh` environment with option `language=latex/latex2`.

```
\def\abcd#1#2{
% some comment
\unskip
\setlength{\parindent}{0pt}%
\setlength{\parskip}{0pt}%
\setcounter{choice}{0}%
\let\item=\my@item@temp
\settowidth{\my@item@len}{\vbox{\halign{##1\hfil\cr BODY\cr\cr}}}% 
\setcounter{choice}{0}%
}
```

---

<sup>1</sup><https://www.ctan.org/pkg/l3regex>

<sup>2</sup><http://www.inf.puc-rio.br/~roberto/lpeg/>

This language is for highlighting LaTeX2 classes and packages. It highlights private commands and public commands with different colors.

The following example is typeset by `codehigh` environment with option `language=latex/latex3`.

```
\cs_new_protected:Npn \__codehigh_typeset_demo:
{
  \__codehigh_build_code:
  \__codehigh_build_demo:
  \dim_set:Nn \l_tmpa_dim { \box_wd:N \g__codehigh_code_box }
  \dim_set:Nn \l_tmpb_dim { \box_wd:N \g__codehigh_demo_box }
  \par\addvspace{0.5em}\noindent
  % more code
}
```

This language is for highlighting LaTeX3 classes and packages. It highlights private commands/variables and public commands/variables with different colors.

The following example is typeset by `codehigh` environment with option `language=latex/math`.

```
\begin{align}
\pi\left[\frac{1}{3}z^3\right]\sin(2x+1)_0^4 = \frac{64}{3}\pi
\end{align}
```

The following example is typeset by `codehigh` environment with option `language=latex/table`.

```
\begin{tabular}[b]{|l c | r| }
\hline
One & Two & Three \\
\hline
Four & Five & Six \\
\hline\hline
Seven & Eight & Nine \\
\hline
\end{tabular}
```

### 1.3 Highlighting Demo

The followings are typeset by `demohigh` environment with option `language=latex/table`.

```
\begin{tabular}{lcccr}
\hline
Alpha & Beta & Gamma & Delta \\
\hline
Epsilon & Zeta & Eta & Theta \\
\hline
Iota & Kappa & Lambda & Mu \\
\hline
\end{tabular}
```

Alpha	Beta	Gamma	Delta
Epsilon	Zeta	Eta	Theta
Iota	Kappa	Lambda	Mu

```
\begin{tabular}{llccrr}
\hline
Alpha & Beta & Gamma & Delta & Epsilon & Zeta \\
\hline
Eta & Theta & Iota & Kappa & Lambda & Mu \\
\hline
\end{tabular}
```

Alpha	Beta	Gamma	Delta	Epsilon	Zeta
Eta	Theta	Iota	Kappa	Lambda	Mu

Note that `demohigh` environment will measure the width of source lines. When it is too large, the result will be put below.

## 1.4 Highlighting File

Using `\dochighinput` command, you can input and highlight some file. The last chapter of this manual is typeset with the following code line:

```
\dochighinput[language=latex/latex3]{codehigh.sty}
```

In reading an input file, lines starting with `%%%` will be omitted, and lines starting with `%>` will be extracted and typeset as normal text.

## 1.5 Customization

The following example changes default background colors with `\CodeHigh` command:

```
\CodeHigh[language=latex/table,style/main=yellow9,style/code=red9,style/demo=azure9]
```

Note that `codehigh` package will load `ninecolors`<sup>3</sup> package for proper color contrast.

```
\begin{tabular}{lccr}
\hline
Alpha & Beta & Gamma & Delta \\
\hline
Epsilon & Zeta & Eta & Theta \\
\hline
Iota & Kappa & Lambda & Mu \\
\hline
\end{tabular}
```

Alpha	Beta	Gamma	Delta
Epsilon	Zeta	Eta	Theta
Iota	Kappa	Lambda	Mu

To modify or add languages and themes, please read the source files `codehigh.sty` and `codehigh.lua` for reference.

## 2.7 Add CodeHigh Themes

```
\keys_define:nn {codehigh}
{
  theme .tl_set:N = \l__codehigh_theme_name_tl,
  theme .initial:n = default,
  style/main .code:n = \SetCodeHighStyle{main}{#1},
  style/code .code:n = \SetCodeHighStyle{code}{#1},
  style/demo .code:n = \SetCodeHighStyle{demo}{#1},
}

%% #1: theme name; #2: rule type; #3: styles
```

```
\NewDocumentCommand \SetCodeHighStyle {O{default} m m}
{
  \tl_set:cn {l__codehigh_style_#1_#2_tl} {#3}
}

\NewDocumentCommand \GetCodeHighStyle {O{default} m}
{
  \colorlet{codehigh@bg}{\tl_use:c {l__codehigh_style_#1_#2_tl}}
}

\SetCodeHighStyle [default]{main}{gray9}
\SetCodeHighStyle [default]{code}{gray9}
\SetCodeHighStyle [default]{demo}{white}

\SetCodeHighStyle [default]{0}{black}
\SetCodeHighStyle [default]{1}{brown3}
\SetCodeHighStyle [default]{2}{yellow3}
\SetCodeHighStyle [default]{3}{olive3}
\SetCodeHighStyle [default]{4}{teal3}
\SetCodeHighStyle [default]{5}{azure3}
\SetCodeHighStyle [default]{6}{blue3}
\SetCodeHighStyle [default]{7}{violet3}
\SetCodeHighStyle [default]{8}{purple3}
\SetCodeHighStyle [default]{9}{gray3}
```

## 2.8 Parse and Highlight Code

```
\int_new:N \l__codehigh_item_count_int
\tl_new:N \l__codehigh_code_to_parse_tl
\tl_new:N \l__codehigh_regex_match_type_tl
