

eolang: L^AT_EX Package for Formulas and Graphs of EO Programming Language and φ -calculus*

Yegor Bugayenko
yegor256@gmail.com

2023-01-30, 0.11.0

NB! You must run T_EX processor with `--shell-escape` option and you must have [Perl](#) installed. This package doesn't work on Windows.

1 Introduction

This package helps you print formulas of φ -calculus, which is a formal foundation of [EO](#) programming language. The calculus was introduced by Bugayenko (2021) and later formalized by Kudasov et al. (2022). Here is how you render a simple expression:

<pre> app ↪ [] ρ ↪ ξ.b.ρ², α₀ t ↪ TRUE, b ↪ [α_* ↪ fn(56), φ ↪ Φ.hello.bye(ξ), Δ ↪ 01-FE-C3], x ↪ [λ ↪ ∅]. </pre>	<pre> 1 \documentclass{minimal} 2 \usepackage{eolang} 3 \begin{document} 4 \begin{phiquation*} 5 app -> [[% it's abstract! 6 ^ !-> \$. b . ^{~2}, 0 / t ~> TRUE, 7 b -> [[*-> fn(56), 8 @ -> Q . hello . bye(\$), 9 D > 01-FE-C3]]], \\ 10 x -> [[\lambda .. > ?]]. 11 \end{phiquation*} 12 \end{document} </pre>
---	--

`phiquation(env)` The environment `phiquation` lets you write a φ -calculus expressions using simple plain-text notation, where:

*The sources are in GitHub at [objectionary/eolang.sty](#)

- “@” maps to “ φ ” (`\varphi`),
- “~” maps to “ ρ ” (`\rho`),
- “\$” maps to “ ξ ” (`\xi`),
- “&” maps to “ σ ” (`\sigma`),
- “?” maps to “ \emptyset ” (`\varnothing`),
- “Q” maps to “ Φ ” (`\Phi`),
- “->” maps to “ \mapsto ” (`\mapsto`),
- “~>” maps to “ \rightsquigarrow ” (`\phiWave`),
- “!->” maps to “ \rightarrowtail ” (`\phiConst`),
- “..>” maps to “ \rightarrowtail ” (`\phiDotted`),
- “D>” maps to “ $\Delta \rightarrowtail$ ” (`\Delta ..>`),
- “L>” maps to “ $\lambda \rightarrowtail$ ” (`\lambda ..>`),
- “[[” maps to “[[” (`\llbracket`),
- ”]]” maps to ”]]” (`\rrbracket`),
- “==” maps to “ \equiv ” (`\equiv`),
- “|abc|” maps to “ abc ” (`\texttt{abc}`).

Also, a few symbols are supported for φ PU architecture:

- “<<” maps to “ \langle ” (`\langleangle`),
- “>>” maps to “ \rangle ” (`\rangleangle`),
- “-abc>” maps to “ $\xrightarrow{\text{abc}}$ ” (`\phiSlot{abc}`),
- “:=” maps to “ \models ” (`\vDash`).

Before any arrow you can put a number, which will be rendered as `\alpha` with an index, for example `\phiiq{0->x}` will render “ $\alpha_0 \mapsto x$ ”. Instead of a number you can use asterix too.

You can append a slash and a title to the number of an attribute, such as `0/g->x`. this will render as $\alpha_0|g \mapsto x$. You can use fixed-width words too, for example `\phiiq{0/|f|->x}` will render as “ $\alpha_0|f \mapsto x$ ”. It’s also possible to use an asterix instead of a number, such that `\phiiq{*|g->x}` renders as “ $\alpha_*|g \mapsto x$ ”

Numbers are automatically converted to fixed-width font, no need to always decorate them with vertical bars.

`TRUE` and `FALSE` are automatically converted to fixed-width font too.

Object names are automatically converted to fixed-width font too, if they have more than one letter.

Texts in double quotes are automatically converted to fixed-width font too.

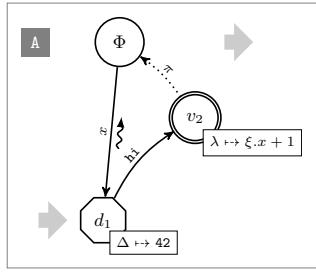

`\phiiq` The command `\phiiq` lets you inline a φ -calculus expressions using the same simple plain-text notation. You can use dollar sign directly too:

A simple object $x \mapsto [\varphi \mapsto y]$
is a decorator of the data object
 $y \mapsto [\Delta \mapsto 42]$.

```

4 | \begin{document}
5 | A simple object
6 | \phi{x -> [[@ -> y]]} \\
7 | is a decorator of
8 | the data object \\
9 | $y -> [[\Delta ..> 42]]$.
10| \end{document}
```

sodg (*env.*) The environment `sodg` allows you to draw a **SODG** graph:

```

1 | \documentclass{standalone}
2 | \usepackage{eolang}
3 | \begin{document}
4 | \begin{sodg}
5 | v0 \\ v0==> \\ v0!!!A
6 | v1 xy:v0,-.8,2.8 data:42 tag:d_1
7 | v0->v1 a:x rho \\ =>v1
8 | v2 xy:v0,+1,+1 atom:\xi.x+1
9 | v1->v2 a:|hi| bend:-15
10| v2->v0 pi bend:10 % a comment
11| \end{sodg}
12| \end{document}
```

The content of the environment is parsed line by line. Markers in each line are separated by a single space. The first marker is either a unique name of a vertex, like “`v1`” in the example above, or an edge, like “`v0->v1`. All other markers are either unary like “`rho`” or binary like “`atom:$\xi.x+1$`. Binary markers have two parts, separated by colon.

The following markers are supported for a vertex:

- “`tag:<math>`” puts a custom label `<math>` into the circle,
- “`data:[<box>]`” makes it a data vertex with an optional attached “`<box>`” (the content of the box may only be numeric data),
- “`atom:[<box>]`” makes it an atom with an optional attached “`<box>`” (the content of the box is a math formula),
- “`box:<txt>`” attaches a “`<box>`” to it,
- “`xy:<v>,<r>,<d>`” places this vertex in a position relative to the vertex “`<v>`”, shifting it right by “`<r>`” and down by “`<d>`” centimetres.
- “`+:<v>`” makes a copy of an existing vertex and all its kids.

The following markers are supported for an edge:

- “`rho`” places a backward snake arrow to the edge,
- “`bend:<angle>`” bend it right by the amount of “`<angle>`,”
- “`a:<txt>`” attaches label “`<txt>`” to it,
- “`pi`” makes it dotted, with π label.

It is also possible to put transformation arrows to the graph, with the help of “`v0=>v1`” syntax. The arrow will be placed exactly between two vertices. You can also put an arrow

from a vertex to the right, saying for example “v3=>”, or from the left to the vertex, by saying for example “=>v5.” If you want the arrow to stay further away from the vertex than usually, use a few “=” symbols, for example “==>v0.”

You can also put a marker at the left side of a vertex, using “v5!A” syntax, where “v5” is the vertex and “A” is the text in the marker. They are useful when you put a few graphs on a picture explaining how one graph is transformed to another one and so forth. You can make a distance between the vertex and the marker a bit larger by using a few exclamation marks, for example “v5!!!A” will make a distance three times bigger.

You can make a clone of an existing vertex together with all its dependants, by using this syntax: “v0+a.” Here, we make a copy of “v0” and call it “v0a.” See the example below.

Be aware, unrecognized markers are simply ignored, without any error reporting.

\eolang There is also a no-argument command \eolang to help you print the name of EO \phic language. It understands the anonymous package option and prints itself differently, to \xmir double-blind your paper. There is also \phic command to print the name of φ -calculus, also sensitive to anonymous mode. The macro \xmir prints "XMIR".

In our research we use XYZ, an experimental object-oriented dataflow language, α -calculus, as its formal foundation, and XML⁺ – its XML-based presentation.

```

3 | \usepackage[anonymous]{eolang}
4 | \begin{document}
5 | In our research we use \eolang{}, \\
6 | an experimental object-oriented \\
7 | dataflow language, \phic{}, as its \\
8 | formal foundation, and \xmir{} --- \\
9 | its XML-based presentation.
10| \end{document}
```

Without the anonymous option there will be no orange color:

In our research we use EO, an experimental object-oriented dataflow language, φ -calculus, as its formal foundation, and XMIR – its XML-based presentation.

```

3 | \usepackage{eolang}
4 | \begin{document}
5 | In our research we use \eolang{}, \\
6 | an experimental object-oriented \\
7 | dataflow language, \phic{}, as its \\
8 | formal foundation, and \xmir{} --- \\
9 | its XML-based presentation.
10| \end{document}
```

\phiConst A few simple commands are defined to help you render arrows. It is recommended \phiWave not to use them directly, but use !-> instead. However, if you want to use \phiConst, \phiDotted wrap it in \mathrel for better display:

If x is an identifier and y is an object, then $x \rightarrowtail y$ makes y a constant, $x \rightsquigarrow y$ makes it a decoratee of an arbitrary number of objects, while $x \mapsto y$ makes it a special attribute.

```

6 | If $x$ is an identifier and $y$ is
7 | an object, then $x \phiConst y$ makes
8 | $y$ a constant,
9 | $x \phiWave y$ makes it a decoratee
10| of an arbitrary number of objects,
11| while $x \phiDotted y$ makes it
12| a special attribute.
```

\phiOset If you want to put a text over an arrow or under it, use \phiOset and \phiUset \phiUset respectively:

When the names of attributes and their values don't matter, we use an arrow with a star, for example:

$\llbracket \xrightarrow{*} \rrbracket$.

```

6 | When the names of attributes and their
7 | values don't matter, we use an arrow
8 | with a star, for example:
9 | \begin{phiquation*}
10| [[ \phiiset{*}{\rightarrow} ]].
11| \end{phiquation*}
```

\phiMany Sometimes you may need to simplify the way you describe an object (the typesetting is a bit off, but this is not because of us, but because of [this](#)):

The expression $\llbracket \alpha_1 \rightarrow x_1, \alpha_2 \rightarrow x_2, \dots, \alpha_n \rightarrow x_n \rrbracket$ and expression $\llbracket \alpha_i \stackrel{n}{\rightarrow} x_i \rrbracket$ are syntactically different but semantically equivalent.

```

6 | The expression
7 | \phiiq{\llbracket 1 \rightarrow x_1,
8 |   2 \rightarrow x_2, \dots,
9 |   \alpha_n \rightarrow x_n \rrbracket}
10| and expression
11| \phiiq{\llbracket \alpha_i
12|   \phiMany{\rightarrow}{i=1}{n} x_i \rrbracket}
13| are syntactically different but
14| semantically equivalent.
```

\phiSaveTo If you want to use `phiquation` or `sodg` environments inside `tabular` or any other **\sodgSaveTo** environment or command, you won't be able to do this, because `phiquation` and `sodg` are “verbatim” environments. `\phiSaveTo` and `\sodgSaveTo` commands will help you in this situation. You use them right before `\begin{phiquation}` or `\begin{sodg}` respectively — the content of the equation or the graph won't be rendered, but instead saved to the file. Later, inside `tabular`, you can use it through the `\input` macro (don't forget the `\parbox`):

Free:	$\llbracket x \mapsto \emptyset \rrbracket$
Bound:	$\llbracket x \mapsto \llbracket \Delta \mapsto 42 \rrbracket \rrbracket$

```

5 | \phiSaveTo{a}
6 | \begin{phiquation*}
7 | [[ x \rightarrow [[D>42]] ]]
8 | \end{phiquation*}
9 | \begin{tabular}{p{.5in}l}
10| Free: & $[[x \rightarrow ?]]$ \\
11| Bound: & \parbox{1in}{\input{a}} \\
12| \end{tabular}
```

\eoAnon You may want to hide some of the content with the help of the `anonymous` package option. The command `\eoAnon` may help you with this. It has two parameters: one mandatory and one optional. The mandatory one is the content you want to show and the optional one is the substitution we will render if the `anonymous` package option is set.

2 Package Options

tmpdir The default location of temp files is `_eolang`. You can change this with the help of the `tmpdir` package option:

```
\usepackage[tmpdir=/tmp/foo]{eolang}
```

nodollar You may disable the special treatment of the dollar sign by using the `nodollar`

package option:

```
\usepackage[nodollar]{eolang}
```

`anonymous` You may anonymize `\eolang`, `\XMR`, and `\phic` commands by using `anonymous` package option (they all use the `\eoAnon` command mentioned earlier):

```
\usepackage[anonymous]{eolang}
```

3 More Examples

The `phiuation` environment treats ends of line as signals to start new lines in the formula. If you don't want this to happen and want to parse the next line as the a continuation of the current line, you can use a single backslash as it's done here:

$\frac{x \mapsto [\varphi \mapsto y] \quad y \mapsto [z \mapsto 42]}{x.z \mapsto 42} R1$	<pre> 6 \begin{phiuation*} 7 \dfrac { 8 {x->[@>y]} \quad y->[z->42]]} \ 9 {x.z -> 42} \ 10 \text{\sffamily R1} 11 \end{phiuation*}</pre>
--	---

This is how you can use `\dfrac` from [amsmath](#) for large inference rules, with the help of `\begin{split}` and `\end{split}`:

$\frac{x \mapsto [\varphi \mapsto y, z \mapsto 42, \alpha_0 g \mapsto \emptyset, \alpha_1 foo \mapsto 42]}{x \mapsto [\varphi \mapsto y, z \mapsto \emptyset, f \rightsquigarrow \pi(\alpha_0 \mapsto [\psi \mapsto \text{hello}(12)], \alpha_1 \mapsto 42)]} R2.$	<pre> 6 \begin{phiuation*} 7 \dfrac{\begin{split} 8 {x->[@>y, z->42,} 9 {0/g->?, 1/foo->42]} 10 \end{split}}{\begin{split} 11 {x->[@>y, z->?, f ~> \pi (} 12 {0->[\ [\psi !-> \text{hello} (12)],} 13 {1->42)]}} 14 \end{split}}\text{R2}. 15 \end{phiuation*}</pre>
--	---

You can use the `matrix` environment too, in order to group a few lines:

$x \mapsto \left\{ \begin{array}{c} \emptyset \\ [\lambda \mapsto \rho \times \xi.\alpha_0] \\ [\Delta \mapsto 42] \end{array} \right\}$	<pre> 5 \begin{phiuation*} 6 x -> \left\{ \begin{array}{l} 7 ? \\ 8 [[L> ^ \times \\$.\alpha_0]] \\ 9 [[D> 42]] \\ 10 \end{array} \right\} \right\} 11 \end{phiuation*}</pre>
--	--

The `cases` environment works too:

$$\beta \models \left\{ \begin{array}{l} [v_2, \varphi \xrightarrow{\text{DTZD}} 42] \\ [v_{33}] \end{array} \right.$$

```

5 \begin{phiquation*}
6 \beta := \begin{cases} \
7 [ v_2, @ -dtzd> 42 ] \\
8 [ v_{33} ] \
9 \end{cases}
10 \end{phiquation*}
11 \end{document}

```

The phiquation environment may be used together with the [acmart](#) package:

$$x \mapsto [] \\ y \mapsto [] \\ z \mapsto \xi, f \mapsto \emptyset]], \\ \beta_1 \models [\psi \xrightarrow{\text{WAIT}} \emptyset].$$

```

1 \documentclass{acmart}
2 \usepackage{eolang}
3 \thispagestyle{empty}
4 \begin{document}
5 \begin{phiquation*}
6 x -> [[
7     y -> [[
8         z !-> $, f ..> ? ]]]], \\
9 \beta_1 := [ \psi -wait> ? ].
10 \end{phiquation*}
11 \end{document}

```

It's possible to use \label inside the phiquation environment (pay attention to how you can disable our custom parsing of math formulas by means of curled brackets around the "4" number):

Discriminant can be calculated using the following simple formula:

$$D = b^2 - 4ac. \quad (1)$$

Eq. 1 is also widely used in number theory and polynomial factoring.

```
6 Discriminant can be calculated using  
7 the following simple formula:  
8 \begin{equation}  
9 D = b^2 - 4ac.  
10 \label{d}  
11 \end{equation}  
12 Eq.  $\sim$ \ref{d} is also widely used in  
13 number theory and polynomial factoring.
```

You can add comments to your equations, using the `&&` command (pay attention, the text inside `\text{...}` is not processed and treated like a plain text):

$\llbracket \alpha_0 \mapsto x \rrbracket$	This is formation
$\llbracket \alpha_0 \mapsto \emptyset \rrbracket$	Abstraction
$x(\Delta \mapsto 42)$	Application

```
6 \begin{phiquation*}
7 [[ 0->x ]] && \text{This is formation}
8 [[ 0->? ]] && \text{Abstraction}
9 x(D>42) && \text{Application}
10 \end{phiquation*}
```

If you don't use `nodollar` package option, you can still use normal parsing of the dollar sign, by means of `\(...\)` syntax:

The object formation $[\alpha_0 \mapsto x]$ may be replaced with a formula $Q \times a^2$.

6 The object formation $\$[[0->x]]\$$
7 may be replaced with a formula
8 $\backslash(\backslash Q \backslash \times a^2 \backslash).$

The phiquation environment will automatically align formulas by the first arrow, if there are only left-aligned formulas:

```

x( $\pi$ ) $\mapsto$   $[\lambda \mapsto f_1]$ ,
x( $a, b, c$ ) $\mapsto$   $[\alpha_0 \mapsto \emptyset, \varphi \mapsto \text{hello}(\xi), x \mapsto \text{FALSE}]$ ,
 $\Delta = 43\text{-}09$ ,
x( $y$ )  $\equiv$  x( $\alpha_0 \mapsto y$ ).

```

```

5 | \begin{phiquation*}
6 | x(\pi) \mapsto [[\lambda \mapsto f_1]],
7 | x(a,b,c) \mapsto [[ \alpha_0 \rightarrow ?, \varphi \rightarrow \text{hello}(\xi), x \rightarrow \text{FALSE} ]], \\
8 | @ \rightarrow \text{hello}($), x \rightarrow \text{FALSE} ]], \\
9 | \Delta = 43\text{-}09,
10 | x(y) == x(0 \rightarrow y).
11 | \end{phiquation*}

```

If not a single line is indented in phiquation, all formulas will be centered:

```

 $[b \mapsto \emptyset],$ 
 $[\varphi \mapsto \text{TRUE}, \Delta \mapsto 42]$ ,
 $\psi = \langle \pi, 42 \rangle.$ 

```

```

5 | \begin{phiquation*}
6 | [[ b \rightarrow ? ]],
7 | [[ @ \rightarrow \text{TRUE}, \Delta \rightarrow 42 ]], \\
8 | \psi = << \pi, 42 >>.
9 | \end{phiquation*}

```

You can make a copy of a vertex together with its kids:

```

5 | \begin{sodg}
6 | v0 \\ v0!!A
7 | v1 xy:v0,.7,1
8 | v0->v1 a:x bend:-10
9 | v2 xy:v1,-1.3,.8
10 | v1->v2 a:|foo| bend:-20
11 | v0+a xy:v0,3,0
12 | v3a xy:v0a,-.7,1
13 | v0a->v3a a:e bend:-15
14 | v0=>v0a \\ v0a!B
15 | \end{sodg}

```

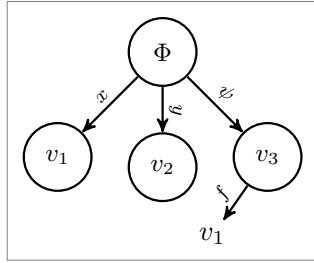

You can make a copy from a copy:

```

5 | \begin{sodg}
6 | v0
7 | v1 xy:v0,.7,1
8 | v0->v1 a:x bend:-10 rho
9 | v0+a xy:v0,3,0 \\ v0=>v0a
10 | v2a xy:v1a,-.8,1.3
11 | v1a->v2a a:e
12 | v0a+b xy:v0a,3,0 \\ v0a=>v0b
13 | v3b xy:v2b,-1,-1
14 | v2b->v3b a:\psi{} rho
15 | \end{sodg}

```

You can have “broken” edges, using “break” attribute of an edge. The attribute must have a value, which is the percentage of the path between vertices that the arrow should take (can’t be more than 80 and less than 20). This may be convenient when you can’t fit all edges into the graph, for example:

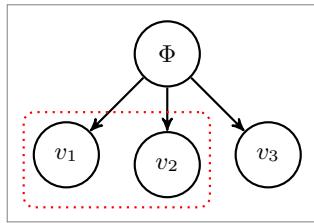

```

5 \begin{sodg}
6 v0
7 v1 xy:v0,-1,1
8 v0->v1 a:x
9 v2 xy:v0,0,1
10 v0->v2 a:y
11 v3 xy:v0,1,1
12 v0->v3 a:\psi{}
13 v3->v1 a:f bend:-75 break:30
14 \end{sodg}

```

You can add [TikZ](#) commands to `sodg` graph, for example:

```

6 \begin{sodg}
7 v0
8 v1 xy:v0,-1,1 \\ v0->v1
9 v2 xy:v0,0,1 \\ v0->v2
10 v3 xy:v0,1,1 \\ v0->v3
11 \node[draw=red,rounded corners,
12 dotted,fit=(v1) (v2)] {};
13 \end{sodg}

```

4 Implementation

First, we include a few packages. We need [stmaryrd](#) for `\llbracket` and `\rrbracket` commands:

```
1 \RequirePackage{stmaryrd}
```

We need [amsmath](#) for `equation*` environment:

```
2 \RequirePackage{amsmath}
```

We need [amssymb](#) for `\varnothing` command. We disable `\Bbbk` because it may conflict with some packages from [acmart](#):

```
3 \let\Bbbk\relax\RequirePackage{amssymb}
```

We need [fancyvrb](#) for `\VerbatimEnvironment` command:

```
4 \RequirePackage{fancyvrb}
```

We need [iexec](#) for executing Perl scripts:

```
5 \RequirePackage{iexec}
```

Then, we process package options:

```

6 \RequirePackage{pgfopts}
7 \RequirePackage{ifluatex}
8 \RequirePackage{ifxetex}
9 \pgfkeys{
10   /eolang/.cd,
11   tmpdir/.store in=\eolang@tmpdir,
12   tmpdir/.default=_eolang\ifxetex-xe\else\ifluatex-lua\fi\fi,
13   nocomments/.store in=\eolang@nocomments,
14   anonymous/.store in=\eolang@anonymous,
15   tmpdir

```

```

16 }
17 \ProcessPgfPackageOptions{/eolang}

```

Then, we make a directory where all temporary files will be kept:

```

18 \iexec[null]{mkdir -p "\eolang@tmpdir/\jobname"}%

```

\eolang@lineno Then, we define an internal counter to protect line number from changing:

```

19 \makeatletter\newcounter{eolang@lineno}\makeatother

```

\eolang@mdfive Then, we define a command for MD5 hash calculating of a file:

```

20 \RequirePackage{pdftexcmds}
21 \makeatletter
22 \newcommand{\eolang@mdfive}[1]{\pdf@filemdfivesum{#1}}
23 \makeatother

```

eolang-phi.pl Then, we create a Perl script for phiuation processing using VerbatimOut environment from [fancyvrb](#):

```

24 \makeatletter
25 \begin{VerbatimOut}{\eolang@tmpdir/eolang-phi.pl}
26 $macro = $ARGV[0];
27 open(my $fh, '<', $ARGV[1]);
28 my $tex; { local $/; $tex = <$fh>; }
29 print '% This file is auto-generated', "\n";
30 print '% There are ', length($tex),
31   ' chars in the input: ', $ARGV[1], "\n";
32 print '% ---', "\n";
33 if (index($tex, "\t") > 0) {
34   print "TABS are prohibited!";
35   exit 1;
36 }
37 my @lines = split (/\\n/g, $tex);
38 foreach my $t (@lines) {
39   print '% ', $t, "\n";
40 }
41 print '% ---', "\n";
42 $tex =~ s/.*/\\n/g;
43 $tex =~ s/^\\s+|\\s+$/g;
44 my $gathered = (0 == $tex =~ /\\n\\s+/g);
45 if ($gathered) {
46   print '% The "gathered" is used since all lines are left-aligned' . "\n";
47 }
48 my $align = 0;
49 print '% The "align" is NOT used by default' . "\n";
50 if (index($tex, '=&') >= 0) {
51   $macro =~ s/equation/align/g;
52   $align = 1;
53   print '% The "align" is used because of && seen in the text' . "\n";
54 }
55 if ($macro ne 'phiq') {
56   $tex =~ s/\\\\\\n\\n/g;
57   $tex =~ s/\\\\\\n\\s*/g;
58   $tex =~ s/\\n*(\\label\\{[^\\}]\\}+\\})\\n*/\\1/g;
59   $tex =~ s/\\n{3,}/\\n\\n/g;
60 }

```

```

61 my @texts = ();
62 sub trep {
63     my ($s) = @_;
64     my $open = 0;
65     my $p = 0;
66     for (; $p < length($s); $p++) {
67         $c = substr($s, $p, 1);
68         if ($c eq '}') {
69             if ($open eq 0) {
70                 last;
71             }
72             $open--;
73         }
74         if ($c eq '{') {
75             $open++;
76         }
77     }
78     push(@texts, substr($s, 0, $p));
79     return '{TEXT' . (0+@texts - 1) . '}' . substr($s, $p + 1);
80 }
81 $tex =~ s/\text\{(.+)/trep("$1")/ge;
82 $tex =~ s/(?<!{&})&(?!{&})/\sigma{}/g;
83 $tex =~ s/([^\{a-z0-9]|\^)Q(?![a-z0-9])/1\Phi{}/g;
84 $tex =~ s/([^\{a-z0-9]|\^)D>/1\Delta{...}>/g;
85 $tex =~ s/([^\{a-z0-9]|\^)L>/1\lambda{...}>/g;
86 $tex =~ s/"(["]+)"/"\1"/g;

177 \message{eolang: File with Perl script
178   '\eolang@tmpdir/eolang-phi.pl' saved^{^J}}%
179 \makeatother

```

\phiSaveTo Then, we define the \phiSaveTo command to instruct the phiquation environment that the output should not be sent to the document but saved to the file instead:

```

180 \makeatletter
181 \newcommand\phiSaveTo[1]{\def\eolang@phiSaveTo{\#1}}
182 \makeatother

```

phiquation Then, we define the phiquation and the phiquation* environments through a supplementary \eolang@process command:

```

183 \makeatletter\newcommand\eolang@process[1]{
184   \def\hash{\eolang@mdfive
185     {\eolang@tmpdir/\jobname/phiquation.tex}}%
186   \iexec>null]{cp "\eolang@tmpdir/\jobname/phiquation.tex"
187     "\eolang@tmpdir/\jobname/\hash.tex"}%
188   \message{Start parsing 'phi' at line no. \the\inputlineno^{^J}}
189   \iexec[trace,stdout=\eolang@tmpdir/\jobname/\hash-post.tex]{
190     perl "\eolang@tmpdir/eolang-phi.pl"
191     '#1'
192     "\eolang@tmpdir/\jobname/\hash.tex"
193     \ifdefined\eolang@nocomments | perl -pe 's/.*(\n|$)//g'\fi
194     \ifdefined\eolang@phiSaveTo > \eolang@phiSaveTo\fi}%
195   \setcounter{FancyVerbLine}{\value{eolang@lineno}}%
196   \def\eolang@phiSaveTo{\relax}%
197 }
198 \newenvironment{phiquation*}%
199 {\catcode`|=12 \VerbatimEnvironment%
200 \setcounter{eolang@lineno}{\value{FancyVerbLine}}%
201 \begin{VerbatimOut}
202   {\eolang@tmpdir/\jobname/phiquation.tex}%
203 {\end{VerbatimOut}\eolang@process{equation*}}%
204 \newenvironment{phiquation}%
205 {\catcode`|=12 \VerbatimEnvironment%
206 \setcounter{eolang@lineno}{\value{FancyVerbLine}}%
207 \begin{VerbatimOut}
208   {\eolang@tmpdir/\jobname/phiquation.tex}%
209 {\end{VerbatimOut}\eolang@process{equation}}%
210 \makeatother

```

\phiq Then, we define \phiq command:

```

211 \RequirePackage{xstring}
212 \makeatletter\newcommand\phiq[1]{%
213 \StrSubstitute{\detokenize{\#1}}{'}{{}}[\clean]%
214   \iexec[log,trace,quiet,stdout=\eolang@tmpdir/\jobname/phiq.tex]{%

```

```

215      /bin/echo '\clean'%
216      \def\hash{\eolang@mdfive
217          {\eolang@tmpdir/\jobname/phiq.tex}%
218      \iexec[null]{cp "\eolang@tmpdir/\jobname/phiq.tex"
219          "\eolang@tmpdir/\jobname/\hash.tex"}%
220      \ifdefined\eolang@nodollar\else\catcode`\$=3 \fi%
221      \iexec[trace,stdout=\eolang@tmpdir/\jobname/\hash-post.tex]{
222          perl \eolang@tmpdir/eolang-phi.pl 'phiq'
223          "\eolang@tmpdir/\jobname/\hash.tex"
224      \ifdefined\eolang@nocomments | perl -pe 's/\%.*(\\n|$)//g'\fi}%
225      \ifdefined\eolang@nodollar\else\catcode`\$\active\fi%
226 }\makeatother

```

`nodollar` Then, we redefine dollar sign:

```

227 \ifdefined\eolang@nodollar\else
228     \begingroup
229     \catcode`\$=\active
230     \protected\gdef$#1${\phiq{#1}}
231     \endgroup
232     \AtBeginDocument{\catcode`\$=\active}
233 \fi

```

`eolang-sodg.pl` Then, we create a Perl script for `sodg` graphs processing using `VerbatimOut` from [fancyvrb](#):

```

234 \makeatletter
235 \begin{VerbatimOut}{\eolang@tmpdir/eolang-sodg.pl}

486     print $opts{'box'}, '}';
487 }
488 } else {
489     print $cmd;
490 }
491 print ";\n";
492 }
493 print '\end{phicture}', "\n";
494 print "% --- after processing:\n%";
495 foreach my $c (@cmds) {
496     print '% ', $c, "\n";
497 }
498 print '% --- (' . (0+@cmds) . " lines)\n";
499 print '\endinput';
500 \end{VerbatimOut}
501 \message{eolang: File with Perl script
502   '\eolang@tmpdir/eolang-sodg.pl' saved^{^J}%
503 \makeatother

```

FancyVerbLine Then, we reset the counter for [fancyvrb](#), so that it starts counting lines from zero when the document starts rendering:

```
504 \setcounter{FancyVerbLine}{0}
```

tikz Then, we include [tikz](#) package and its libraries:

```

505 \RequirePackage{tikz}
506 \usetikzlibrary{arrows}
507 \usetikzlibrary{shapes}
508 \usetikzlibrary{decorations}
509 \usetikzlibrary{decorations.pathmorphing}
510 \usetikzlibrary{decorations.pathreplacing}
511 \usetikzlibrary{positioning}
512 \usetikzlibrary{calc}
513 \usetikzlibrary{math}
514 \usetikzlibrary{arrows.meta}

```

phicture Then, we define internal environment `phicture`:

```

515 \newenvironment{phicture}%
516   {\noindent\begin{tikzpicture}[
517     ->,>=stealth',node distance=0,thick,
518     pics/parallel arrow/.style={%
519       code={\draw[-latex,phi-rho] (#1) -- (-##1);}}]}%
520   {\end{tikzpicture}}
521 \tikzstyle{phi-arrow} = [fill=white!80!black, single arrow,
522   minimum height=0.5cm, minimum width=0.5cm,
523   single arrow head extend=2mm]
524 \tikzstyle{phi-marker} = [inner sep=0pt, minimum height=1.4em,
525   minimum width=1.4em, font={\small\color{white}\ttfamily},
526   fill=gray]

```

```

527 \tikzstyle{phi-thing} = [thick,inner sep=0pt,minimum height=2.4em,
528   draw,font=\small]
529 \tikzstyle{phi-object} = [phi-thing,circle]
530 \tikzstyle{phi-data} = [phi-thing,regular polygon,
531   regular polygon sides=8]
532 \tikzstyle{phi-empty} = [phi-object]
533 \tikzset{%
534   phi-rho/.style={%
535     postaction={%
536       decoration={%
537         show path construction,
538         curveto code={%
539           \tikzmath{
540             coordinate \I, \F, \v;
541             \I = (\tikzinputsegmentfirst);
542             \F = (\tikzinputsegmentlast);
543             \v = ($(\I) - (\F)$);
544             real \d, \a, \r, \t;
545             \d = 0.8;
546             \t = atan2(\vy, \vx);
547             if \vx<0 then { \a = 90; } else { \a = -90; };
548             {
549               \draw[arrows={-latex}, decorate,
550                 decoration={%
551                   snake, amplitude=.4mm,
552                   segment length=2mm,
553                   post length=1mm
554                 }];
555             ($(\F)! .5! (\I) +(\t: -\d em) +(\t +\a: 1ex)$)
556             -- ++(\t: 2*\d em);
557             };
558           }
559         },
560         lineto code={%
561           \tikzmath{
562             coordinate \I, \F, \v;
563             \I = (\tikzinputsegmentfirst);
564             \F = (\tikzinputsegmentlast);
565             \v = ($(\I) - (\F)$);
566             real \d, \a, \r, \t;
567             \d = 0.8;
568             \t = atan2(\vy, \vx);
569             if \vx<0 then { \a = 90; } else { \a = -90; };
570             {
571               \draw[arrows={-latex}, decorate,
572                 decoration={%
573                   snake, amplitude=.4mm,
574                   segment length=2mm,
575                   post length=1mm}]
576             ($(\F)! .5! (\I) +(\t: -\d em) +(\t +\a: 1ex)$)
577             -- ++(\t: 2*\d em);
578             };
579           }
580         }
581       }
582     }
583   }
584 }
```

```

581     },
582     decorate
583   }
584 }
585 }
586 \tikzstyle{phi-pi} = [draw,dotted]
587 \tikzstyle{phi-atom} = [phi-object,double]
588 \tikzstyle{phi-box} = [xshift=-5pt,yshift=3pt,draw,fill=white,
589   rectangle,thin,minimum width=1.2em,anchor=north west,
590   font={\scriptsize}]
591 \tikzstyle{phi-attr} = [midway,sloped,inner sep=0pt,
592   above=2pt,sloped/.append style={transform shape},
593   font={\scriptsize},color=black]

```

\sodgSaveTo Then, we define the `\sodgSaveTo` command to instruct the `sodg` environment that the output should not be sent to the document but saved to the file instead:

```

594 \makeatletter
595 \newcommand{\sodgSaveTo}[1]{\def\eolang@sodgSaveTo{\#1}}
596 \makeatother

```

sodg Then, we create a new environment `sodg`, as suggested [here](#):

```

597 \makeatletter\newenvironment{sodg}%
598 {\catcode`\|=12 \VerbatimEnvironment%
599 \setcounter{eolang@lineno}{\value{FancyVerbLine}}%
600 \begin{VerbatimOut}%
601 {\eolang@tmpdir/\jobname/sodg.tex}%
602 \end{VerbatimOut}%
603 \def\hash{\eolang@mdfive
604 {\eolang@tmpdir/\jobname/sodg.tex}}%
605 \iexec>null]{cp "\eolang@tmpdir/\jobname/sodg.tex"
606 "\eolang@tmpdir/\jobname/\hash.tex"}%
607 \catcode`\$=3 %
608 \message{Start parsing ‘sodg’ at line no. \the\inputlineno^^J}
609 \iexec[trace,stdout=\eolang@tmpdir/\jobname/\hash-post.tex]{
610 perl "\eolang@tmpdir/eolang-sodg.pl"
611 "\eolang@tmpdir/\jobname/\hash.tex"
612 \ifdefined\eolang@nocomments | perl -pe 's/\%.*(\\n|$)//g'\fi%
613 \ifdefined\eolang@sodgSaveTo > \eolang@sodgSaveTo\fi}%
614 \catcode`\$\active%
615 \setcounter{FancyVerbLine}{\value{eolang@lineno}}%
616 \def\eolang@sodgSaveTo{\relax}%
617 }\makeatother

```

\eoAnon Then, we define a supplementary command to help us anonymize some content.

```

618 \RequirePackage{hyperref}
619 \pdfstringdefDisableCommands{%
620   \def\({}%
621   \def\){}%
622   \def\alpha{\alpha}%
623   \def\varphi{\phi}%
624 }%
625 \makeatletter
626 \NewExpandableDocumentCommand{\eoAnon}{O{ANONYMIZED}m}{%
627   \ifdefined\eolang@anonymous%

```

```

628 \textcolor{orange}{\#1}%
629 \else%
630 #2%
631 \fi%
632 }\makeatother

\eolang Then, we define a simple supplementary command to help you print EO, the name of our language.
633 \newcommand{\eolang}{%
634 \eoAnon[XYZ]{\sffamily EO}}}

\phic Then, we define a simple supplementary command to help you print  $\varphi$ -calculus, the name of our formal apparatus.
635 \newcommand{\phic}{%
636 \eoAnon[(\alpha)-cal-cu-lus]{(\varphi)-cal-cu-lus}}}

\xmir Then, we define a simple supplementary command to help you print XMIR, the name of our XML-based format of program representation.
637 \newcommand{\xmir}{%
638 \eoAnon[XML(^+)]{XMIR}}}

\phiConst Then, we define a command to render an arrow for a constant attribute, as suggested here:
639 \newcommand{\phiConst}{%
640 \mathrel{\hspace{.15em}}\mapstochar\mathrel{\hspace{-.15em}}}
641 \mapstochar\mathrel{\hspace{-.15em}}\mapsto}

\phiWave Then, we define a command to render an arrow for a multi-layer attribute, as suggested here:
642 \newcommand{\phiWave}{%
643 \mapstochar\mathrel{\mspace{0.45mu}}\leadsto}

\phiSlot Then, we define a command to render an arrow for a slot in a basket:
644 \newcommand{\phiSlot}[1]{%
645 \xrightarrow{\text{\sffamily scshape #1}}}

\phi0set Then, we define two commands to position a text over and under an arrow, as suggested here:
646 \makeatletter
647 \newcommand{\phi0set}[2]{%
648 \mathrel{\mathop{\#2}\limits^{\vbox to 0ex{\kern-2ex@}}\mathrel{\mathop{\#2}\limits_{\hbox{$\scriptscriptstyle\#1$\vss}}}}}
649 \mathrel{\mathop{\#2}\limits^{\vbox to 0ex{\kern-6.3ex@}}\mathrel{\mathop{\#2}\limits_{\hbox{$\scriptscriptstyle\#1$\vss}}}}
650 \newcommand{\phiUset}[2]{%
651 \mathrel{\mathop{\#2}\limits^{\vbox to 0ex{\kern-2ex@}}\mathrel{\mathop{\#2}\limits_{\hbox{$\scriptscriptstyle\#1$\vss}}}}}
652 \mathrel{\mathop{\#2}\limits^{\vbox to 0ex{\kern-6.3ex@}}\mathrel{\mathop{\#2}\limits_{\hbox{$\scriptscriptstyle\#1$\vss}}}}
653 \makeatother

\phiMany Then, we define a command for an arrow with iterating indecies:
656 \newcommand{\phiMany}[3]{%
657 \phi0set{\#3}{\phiUset{\#2}{\#1}}}

```

\phiEOL Then, we define a command for line breaks in formulas:

```
658 \newcommand{\phiEOL}{\\[-4pt]}
```

\phiDotted Then, we define a command to render an arrow for a special attribute, as suggested [here](#):

```
659 \RequirePackage{trimclip}
660 \RequirePackage{amsfonts}
661 \makeatletter
662 \newcommand{\phiDotted}{%
663   \mapstochar{\mathrel{\mathpalette\phiDotted@\relax}}
664 \newcommand{\phiDotted@}[2]{%
665   \begingroup%
666   \settowidth{\dimen\z@}{$\m@th#1\rightarrow$}%
667   \settoheight{\dimen\tw@}{$\m@th#1\rightarrow$}%
668   \sbox\z@{%
669     \makebox[\dimen\z@][s]{%
670       \clipbox{0 0 {0.4\width} 0}%
671       {\resizebox{\dimen\z@}{\height}%
672        {$\m@th#1\dashrightarrow$}}%
673     \hss}%
674     \clipbox[{0.69\width} {-0.1\height} 0
675      {-\height}]{\m@th#1\rightarrow}%
676   }%
677 }%
678 \ht\z@=\dimen\tw@ \dp\z@=\z@%
679 \box\z@%
680 \endgroup%
681 }%
682 \makeatother
```

Change History

0.0.1	General: First draft.	9	0.2.0	eolang-phi.pl: Numbers automatically render as <code>\texttt{}</code> . No need to use vertical bars around them anymore.	10
0.0.2	sodg: The environment <code>phigure</code> renamed to <code>sodg</code> for the sake of better semantic. The graph in the picture is solely a SODG graph, that's why the name <code>sodg</code> is better. <code>eolang-phi.pl:</code> New symbol added for basket slots	21	eolang-sodg.pl: The content of the atom and the data boxes is parsed automatically as formulas and numbers, respectively.	14	
	Parsing of the symbols “ <code>G</code> ”, “ <code>^</code> ”, and “ <code>&</code> ” enabled (<code>\varphi</code> , <code>\rho</code> , and <code>\sigma</code>)	10	\xmir: New command <code>\xmir</code> prints XMIR in both normal and the anonymous mode of <code>acmart</code>	22	
	The symbols “[” and ”]” replaced with “[[” and ”]]” for abstract object brackets, because they conflicted with normal square brackets	10	\eolang@lineno: New counter for protecting lineno.	10	
	eolang-sodg.pl: The Perl file now has a fixed name, which doesn't depend on the name of the TeX job. This file may be shared among jobs, no need to make it uniquely named. <code>\phiq:</code> Parsing of additional symbols enabled.	14	eolang-phi.pl: New arrow added, that looks like <code>\leadsto</code>	10	
0.1.0	General: Parsing of package options introduced.	9	\phiWave: New command <code>\phiWave</code> added to denote a link to a multi-layer attribute.	22	
	\eolang: New command <code>\eolang</code> added to print the name of the language in both normal and the anonymous mode of <code>acmart</code>	22	0.3.0		
	\eolang@mdfive: New supplementary command added to calculate MD5 sum of a file.	10	eolang-sodg.pl: Labels on the edges are automatically printed as math formulas. Also, boxes are prefixed with the <code>\Delta</code> and the <code>\lambda</code> commands.	14	
	eolang-phi.pl: A new Perl script “ <code>eolang-phi.pl</code> ” added for parsing of phi expressions.	10	Relative positioning of vertices fixed.	14	
	eolang-sodg.pl: There are two Perl scripts now: one for <code>phiuation</code> , another one for <code>sodg</code>	14	0.4.0		
	\phic: New command <code>\phic</code> prints the name of φ -calculus in both normal and the anonymous mode of <code>acmart</code>	22	eolang-phi.pl: Automated formatting of <code>TRUE</code> and <code>FALSE</code> added.	10	
	\phiConst: New command <code>\phiConst</code> added to denote a link to a constant attribute.	22	eolang-sodg.pl: It is possible to use TikZ commands inside the <code>sodg</code> environment.	14	
	\phiDotted: New command <code>\phiDotted</code> added to denote a link to a special attribute.	23	New syntax introduced that allows to make clones of vertices and all their dependants.	14	
			Now edges may have the <code>break</code> attribute, to make them shorter.	14	
			\phiMany: New command <code>\phiMany</code> enables iterating over an arrow.	22	
			\phiSlot: New command <code>\phiSlot</code> added to denote a link to a slot in a basket.	22	
			0.6.0		
			General: Package option <code>nocomments</code> added in order to enable comments suppression in temporary <code>.tex</code> files (may be pretty important for <code>.dtx</code> documents).	9	

eolang-sodg.pl: The <code>rrho</code> attribute is retired, now <code>rho</code> works just fine in all situations.	14
0.7.0	
nodollar: Now it is possible to use dollar sign instead of the <code>\phiq</code> command.	14
eolang-phi.pl: New syntax sugar for Φ , just using capital “Q” is enough. 10 Object names are automatically converted to <code>\texttt{t}</code> , provided their names include two or more symbols.	10
Text in quotes is automatically converted to <code>\texttt{t}</code>	10
0.8.0	
General: The <code>anonymous</code> package option added.	9
eolang-phi.pl: Inside <code>\phiquation</code> any text inside the <code>\text</code> macro is	
0.9.0	
not processed.	10
eolang-sodg.pl: The <code>tag</code> attribute is introduced for changing labels inside a vertex circle.	14
<code>\phiIset</code> : New commands <code>\phiIset</code> and <code>\phiUset</code> help position text over and under an arrow.	22
<code>\phiISaveTo</code> : The output of the <code>\phiquation</code> environment can be redirected to a file.	13
<code>\sodgSaveTo</code> : The output of the <code>sodg</code> environment can be redirected to a file.	21
<code>\eoAnon</code> : New command <code>\eoAnon</code> added.	21
eolang-phi.pl: Proper handling of the <code>matrix</code> environment.	10
<code>\phiIEOL</code> : New command <code>\phiIEOL</code> added, instead of <code>\[-4pt]</code>	23

Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; numbers in roman refer to the code lines where the entry is used.
