## Abstract

L<sup>A</sup>T<sub>E</sub>X3 package defining commands built around `expl3`[1]. For example, `\erw_compose` implements the mathematical concept  $f_1 \circ f_2 \cdots \circ f_n$ .

## Conventions

The naming conventions are (loosely) those of L<sup>A</sup>T<sub>E</sub>X3. For example,  $\langle cs \rangle$  stands for *control sequence*, which is described in [1, Part l3basics].

## Requirement

Have `erw-13.sty` is in the path of the L<sup>A</sup>T<sub>E</sub>X engine.

## Part I Usage

In the preamble of `\documentclass`, put:

```
\usepackage[<options>]{erw-13}
```

# Part IV Other

## 1 Support

This package is available from <https://www.ctan.org/pkg/erw-13> (release) or <https://github.com/rogard/erw-13> (development) where you can report issues.

## 2 To do

- Missing variants of `\erw_compose`
- `\erw_map_indexed`. See Listing 15
- Need to give some thought to ‘protected’
