User's guide to `fontsize`

A small package to change the font size

v0.4 – 2021/01/25

Ivan Valbusa

ivan dot valbusa at gmail dot com

Abstract

The `fontsize` package allows you to set arbitrary sizes for the main font of the document and to adjust the line spacing accordingly. You can also generate your own `.clo` file for better tuning.

Contents

1 Usage	3	2 An example of font settings	5
1.1 Options	4	3 The Code	7
1.2 Commands	4	References	18

Credits

The code is an excerpt of the `scrextend` and `scrfontsizes` packages (Neukam et al. 2020), with few minor changes to make it completely independent of the KOMA-script bundle and with a couple of new features. The package is updated to version 3390 2019-11-18 17:09:35Z of the `scrkernel-fonst.dtx` file.

Caveat

Although effective with any value for the `\fontsize` (as long as the font is scalable), the package is meant for small font size changes. For truly optimal results you should (re)define your own `.clo` file. Indeed note that the file generated with `\generateclofile`, as well as the macros redefined via `\changefontsize`, are a subset of the standard `.clo` files.

1 Usage

The package can be loaded, as usual, with:

```
\usepackage[options]{fontsize}
```

1.1 Options

`fontsize = <fontsize>` default: 10pt

Sets the normal size to $\langle fontsize \rangle$ and the normal line spacing to $1.2\langle fontsize \rangle$. The other sizes ($\text{\tiny}, \text{\scriptsize}, \text{\small}$, ecc.) and line spacings are set proportionally. You can use any unit recognized by TeX and you can omit the unit as well (in which case it defaults to pt). If a file named $\langle name \rangle\langle fontsize \rangle.\text{clo}$ exists it is used to setup the font sizes. This file can be generated through the `\generateclofile` command (see below).

`cloname = <name>` default: custom

Sets to $\langle name \rangle$ the name prefix of the .clo file generated by the `\generateclofile` command (see below).

1.2 Commands

`\changefontsize[<baselineskip>]{<fontsize>}` iff $\langle baselineskip \rangle \geq \langle fontsize \rangle$

Sets the normal size to $\langle fontsize \rangle$ and the normal line spacing to $\langle baselineskip \rangle$. The other sizes ($\text{\tiny}, \text{\scriptsize}, \text{\small}$, ecc.) and line spacings are set proportionally. If the first optional argument is omitted the command has the same effect of the `fontsize` option. You can use any unit recognized by TeX and you can omit the unit as well (in which case it defaults to pt). For example: `\changefontsize[13.5pt]{11.5pt}`.

`\generateclofile{<name>}[<baselineskip>]{<fontsize>}` iff $\langle baselineskip \rangle \geq \langle fontsize \rangle$

Generates a file named $\langle name \rangle\langle fontsize \rangle.\text{clo}$ in which the normal size is $\langle fontsize \rangle$ and the normal line spacing is $\langle baselineskip \rangle$. The other sizes ($\text{\tiny}, \text{\scriptsize}, \text{\small}$, ecc.) and line spacings are set proportionally. You can use any unit recognized by TeX and you can omit the unit as well (in which case it defaults to pt). If `cloname=<name>` and `fontsize=<fontsize>` the generated file will be automatically used to setup the main font sizes.

 In fact the .clo file is only needed if you intend to modify it. In this case remember to comment the command, otherwise the edited file will be overwritten

```
\usepackage[fontsize=11.5pt]{fontsize} % loads custom11.5pt.clo
\generateclofile{custom}[13.5pt]{11.5pt} % generates custom11.5pt.clo

\usepackage[fontsize=11.5pt,cloname=fs]{fontsize} % loads fs11.5pt.clo
\generateclofile{fs}[13.5pt]{11.5pt} % generates fs11.5pt.clo
```

`\printfontsize[<baselineskip>]{<fontsize>}` iff $\langle baselineskip \rangle \geq \langle fontsize \rangle$

A command thought to test the `fontsize` settings. It prints a text sample for every sizing commands, showing the value of the normal size and line spacing. The section 2 below is generated by this command.

2 An example of font settings

This section shows the values of the standard font sizing commands corresponding to `\changefontsize[13]{11}`, which sets the normal size and line spacing, respectively, to 11 pt and 13 pt. The other sizes are scaled proportionally.

\tiny: 5.5pt on 6.48996pt As any dedicated reader can clearly see, the Ideal of practical reason is a representation of, as far as I know, the things in themselves; as I have shown elsewhere, the phenomena should only be used as a canon for our understanding. The paralogisms of practical reason are what first give rise to the architectonic of practical reason. As will be shown, reason would thereby be made to contradict.

alogisms of practical reason are what first give rise to the architectonic of practical reason. As will be shown, reason would thereby be made to contradict.

\huge: 22.81406pt on 26.92041pt As any dedicated reader can clearly see, the Ideal of practical reason is a representation of, as far as I know, the things in themselves; as I have shown elsewhere, the phenomena should only be used as a canon for our understanding. The paralogisms of practical reason are what first give rise to the architectonic of practical reason. As will be shown, reason would thereby be made to contradict.

\Huge: 27.36807pt on 32.29411pt As any dedicated reader can clearly see, the Ideal of practical reason is a representation of, as far as I know, the things in themselves; as I have shown elsewhere, the phenomena should only be used as a canon for our understanding. The paralogisms of practical reason are what first give rise to the architectonic of practical reason. As will be shown, reason would thereby be made to contradict.

3 The Code

The parts added to the basic structure of `scrextend` and `scrfontsizes` are highlighted in blue. All the options of the package are defined via `xkeyval`, while `etoolbox` is required to execute `\AtEndOfPackage`. It is probably not necessary but for the moment I prefer to take advantage of it.

```
1 \ifpackageloaded{xkeyval}{}{\RequirePackage{xkeyval}}
2 \ifpackageloaded{etoolbox}{}{\RequirePackage{etoolbox}}
```

Here we define the only new package option `cloname`:

```
3 \DeclareOptionX{cloname}[custom]{\def\@fontsizefilebase{\#1}}
```

Excerpt from `scrextend.sty` Here the `scrextend` code begins. Only a few names have been changed. The value of `\@fontsizefilebase` is set to `custom` instead of `scrsize`.

```
4 \DeclareOptionX{fontsize}[10]{%
5   \expandafter\@defaultunits\expandafter\atempdima#1 pt\relax\@nnil
6   \edef\@tempa{\#1}%
7   \setlength{\@tempdimb}{\@tempdima}%
8   \edef\@tempb{\strip@pt\@tempdimb}%
9   \addtolength{\@tempdimb}{-10\p@}%
10  \edef\@ptsize{\strip@pt\@tempdimb}%
11  \edef\@tempa{%
12    \noexpand\makeatletter
13    \noexpand\InputIfFileExists{\@fontsizefilebase\@tempa.clo}{%
14      \noexpand\PackageInfo{fontsize}{%
15        File '\@fontsizefilebase\@tempa.clo' used to setup font sizes}%
16    }{%
17      \noexpand\InputIfFileExists{\@fontsizefilebase\@tempb pt.clo}{%
18        \noexpand\PackageInfo{fontsize}{%
19          File '\@fontsizefilebase\@tempb pt.clo' used instead of%
20          \noexpand\MessageBreak
21          file '\@fontsizefilebase\@tempa.clo' to setup font sizes}%
22      }{%
23        \noexpand\changefontsize{\#1}%
24      }%
25    }%
26  }%
27  \expandafter\AtEndOfPackage\expandafter{\@tempa}%
28 }
```

Now we can execute and process the new options defined above. As `cloname` is responsible for defining `\@fontsizefilebase` it must precede `fontsize` which uses this command. The `\ctm@setlength` and `\changefontsize` commands are simply new names, respectively, for `\scr@setlength` and `\changefontsizes` used in `scrextend.sty`.

```
29 \ExecuteOptionsX{cloname,fontsize}
30 \ProcessOptionsX*\relax

```

The KOMA files do not define `\parindent` and other lengths related to the page dimensions (`\textheight`, `\headheight`, `\headsep`, etc.) Anyway I think that some of these lengths are strictly linked to the font rather than to the page and text dimensions. Particularly `\headheight`, whose value may cause a well known warning if `fancyhdr` is loaded. So we define the following new lengths:

```

165 \setlength\parindent{\f@size pt}%
166 \setlength\headheight{\dimexpr(\f@size pt+2pt)}%

```

For these other lengths, all values are calculated proportionally to the main font. I took the `bk11.clo` file as a reference point. Note that the differences of these lengths in the files `bk10.clo` `bk11.clo` and `bk12.clo` only affect `\headsep`, `\topskip` and `\footskip`, which are not redefined here.

```

167 \setlength\smallskipamount{\dimexpr((\f@size pt+1pt)/4) \plus 1\p@ \minus 1\p@}%
168 \setlength\medskipamount{\dimexpr((\f@size pt+1pt)/2) \plus 2\p@ \minus 2\p@}%
169 \setlength\bigskipamount{\dimexpr(\f@size pt+1pt) \plus 4\p@ \minus 4\p@}%

```

The following table shows the values of some specific lengths defined by the package, relative to some significant settings of the main font and line spacing. The values are expressed in pt and rounded to the second decimal place.

Normal size	10	10.1	10.2	10.3	10.4	10.5	10.6	10.7	10.8	10.9	11
Line spacing	12	12.12	12.24	12.36	12.48	12.6	12.72	12.84	12.96	13.08	13.2
<code>\headheight</code>	12	12.1	12.2	12.3	12.4	12.5	12.6	12.7	12.8	12.9	13

Excerpt from `scrfontsizes.sty` Here is a portion of the `scrfontsizes` package. It simply provides the `\generateclofile` command, without the KOMA-related definitions. There are no reserved names for the `.clo` files. The command name is a new name for the KOMA `\generatefontfile`. In fact, what the command generates, is a `.clo` file.

```

296 \newcommand*{\generateclofile}[1]{%
297   \kernel@ifnextchar [ {\@generatefontfile{#1}}{\@generatefontfile{#1}}%
298 }
299 \newcommand*{\@generatefontfile}{}%
300 \def\@generatefontfile#1[#2]#3{%
301   \begingroup

```

At least starting with version 3.31 of the `scrfontsizes` package the code of the `\@generatefontfile` and `\@@generatefontfile` commands sets the `\parskip` value to `0pt`. We also use `[#2]` in place of `[[#2]]` for the optional argument of `\changefontsize` used immediately below.

```

302   \setlength{\parskip}{0pt}%
303   \changefontsize[#2]{#3}%
304   \generate@fontfile{#1}{#3}%
305   \endgroup
306 }
307 \newcommand\@@generatefontfile[2]{%
308   \begingroup
309   \setlength{\parskip}{0pt}%
310   \changefontsize{#2}%
311   \generate@fontfile{#1}{#2}%
