

Creating icon appearances for form buttons using **pdf_latex**, **lua_latex**, and **xel_latex**

D. P. Story

Icon appearance images for the buttons of this document were produced by pdf_lAT_EX.

1. Push Buttons

We produce two push buttons, the second one is a re-scaling of the first.

The push buttons are properly produced for all drivers (`pdflatex`, `lualatex`, and `xelatex`) and can be viewed, with full functionality, in Acrobat, Adobe Reader, PDF-XChange Viewer, and PDF-XChange Editor. All buttons, including the ones on the next page can be viewed in SumatraPDF, without any functionality.
