

The `letterswitharrows` package

Max Teegen
tex@jmteegen.eu

2019/11/21

This package does provides math-mode commands for setting left and right arrows over mathematical symbols, so that the arrows dynamically scale with the symbols. Here is a sample:

$$\vec{s} \leq \vec{t} \in \vec{U}_{\vec{r}} \quad |\overrightarrow{AB}| = |\overleftarrow{AB}| \quad A \overleftarrow{\rangle} B$$

Somehow embellishments don't work in the documentation!? While it is possible to set arrows over longer strings of symbols, the focus lies on single characters.

Only PDF output is supported. Output to PS is implemented, but rarely tested. For a wider range of formats there is pgf-based output.

1 Usage

The package provides the general-purpose `\arrowoverset` command, as well as some sets of predefined shorthand commands.

1.1 Presets

The presets are selected by passing them as options to the `presets` package option. For instance, to define the `abc` and the `vec-cev` sets of commands you would load the package like so:

```
\usepackage[presets={abc,vec-cev}]{letterswitharrows}
```

By default, the `abc`, `ABC` and `cAcBcC` presets are loaded.

abc Passing `abc` to the `presets` option allows you to use the `\v<char>` and `\<char>v` commands for all the lower-case letters `a` through `z` except for `v`.

`\v<char>` For the letter `v` the commands `\vleft` and `\vright` are provided.

`\<char>v`

$\vec{a}, \vec{b}, \vec{c}, \vec{d}, \overline{m}, F_{\vec{t}}$

`\vleft`

`\vright`

`\[\va, \vb, \vc, \dv, \mv, F_\tv \]`

ABC Passing `ABC` to the `presets` option allows you to use the `\v<CHAR>` and `\<CHAR>v` commands for all the upper-case letters `A` through `Z`.

```
\v<CHAR>
\<CHAR>v
```

$$\vec{A}, \vec{B}, \vec{C}, \overline{D}, \overleftarrow{E}, F_{\overline{G}}$$

```
\[ \vA, \vB, \vC, \Dv, \Ev, F_\Gv \]
```

cAcBcC

Passing `cAcBcC` to the `presets` option allows you to use the `\vc<CHAR>` and `\c<CHAR>v` commands for all the upper-case letters A through Z to set arrows over `\mathcal`-letters.

```
\vc<CHAR>
\c<CHAR>v
```

$$\vec{A}, \vec{B}, \vec{C}, \overline{D}, \overleftarrow{E}, F_{\overline{G}}$$

```
\[ \vcA, \vcB, \vcC, \cDv, \cEv, F_\cGv \]
```

vec-cev

Passing `vec-cev` to the `presets` option (re)defines the `\vec` and `\cev` commands.

```
\vec
\cev
```

Unlike the other commands these do not automatically consume subsequent subscripts or `'` tokens.

$$\vec{x} := \overrightarrow{AB} \quad \langle \vec{w}, \vec{v} \rangle = 42$$

```
\[ \vec{\mathbf{x}} := \cev{AB} \qquad \langle \vec{w}, \vec{v} \rangle = 42 \]
```

1.2 The `\arrowoverset` command

```
\arrowoverset
\arrowoverset*
```

```
\arrowoverset [⟨xoffset⟩] [⟨xscale⟩] [⟨yoffset⟩] {⟨math⟩}
\arrowoverset* [⟨xoffset⟩] [⟨xscale⟩] [⟨yoffset⟩] {⟨math⟩}
```

This command sets a right (or left if `\arrowoverset*` is used) arrow over `⟨math⟩`. The base length of the arrow is the width of the `⟨math⟩` multiplied by `⟨xscale⟩`, which must be specified as a fraction `⟨num⟩/⟨denom⟩`. The arrow is offset by `⟨xoffset⟩` to the right, which must be a math skip expression, and by `⟨yoffset⟩` to the top, which must be a skip expression.

This command consumes subsequent subscripts or up to two primes `'`. The former does not affect the length of the arrow.

1.3 Other package options

pgf

If you specify the `pgf` option, every arrow is drawn as a `pgfpicture`. This requires the `pgf` package, and slow in its current implementation.

TEXhackers note: You can set up custom arrow drawing code by redefining `__jmt_lwa_arrow_draw:mnn`. The command is expected to draw an arrow with its head at the current position. Its length should be `#1` and it should be drawn at a font size of `#2pt`. If `#3` is `-` if the arrow should point rightwards and empty otherwise.

tweaks

Specifying the `tweaks` option applies per-letter scaling adjustments to some of the single-letter shorthands. This is enabled by default. These are specific to Latin Modern Math and subject to be changed on a whim. If you wish a more stable behaviour specify `tweaks=false`

2 Implementation

```
1 \NeedsTeXFormat{LaTeX2e}
2 \RequirePackage{expl3}
3 \ProvidesExplPackage {letterswitharrows} {2019-11-21} {} {Draw arrows over math letters.}
4 \RequirePackage{xparse, l3keys2e, mathtools}
5 % TODO: I just use mathtools for mathrlap; replace.
