

The `pdfmanagement-firstaid` package – temporary patches and package replacements \LaTeX PDF management testphase bundle

The \LaTeX Project*

Version 0.95g, released 2021-07-21

1 `pdfmanagement-firstaid` documentation

This code is temporary! It tries to patch commands of other packages or even replace package which are incompatible with the pdfmanagement, to remove clashes and test if everything works as expected. This code should disappear when packages adapt to the central interfaces.

The package contains an number of sections for various packages. Every section can be disabled in (the first) `\DeclareDocumentMetadata` with `firstaidoff={name1,name2,...}`.

```
1  {*package}
2  \ProvidesExplPackage{pdfmanagement-firstaid}{2021-07-21}{0.95g}
3    {LaTeX PDF management testphase bundle / firstaid-patches}
4
5  (@=pdfmanagement)
6  \clist_map_inline:nn {pgf,transparent,hyperxmp,pdflscape,xcolor,color,beamer}

17   }
18 \msg_new:nnn  { pdfmanagement } { firstaid }
19           { loading~pdfmanagement-firstaid~code~for~#1 }
```

1.1 beamer

`beamer` makes use of the now unsupported syntax `linkbordercolor={.5 .5 .5}`. To avoid an error we define this color as a name.

```
20 \bool_if:NT \g__pdfmanagement_firstaid_beamer_bool
```

*E-mail: latex-team@latex-project.org

```

21   {
22     \color_set:nnn{.5~.5~.5}{rgb}{0.5,0.5,0.5}
23   }

```

1.2 color

color is not incompatible, but the new `hyperref` driver makes use of `l3color` to set the colors. It is therefore necessary to patch some internal `color` commands, so that colors defined with its `\definecolor` command are known to `l3color` and so `hyperref`. This only supports the color models from `l3color` (which covers all standard model of the `color` package). The `named` model is mapped to `\color_set:nn`.

This patch serves also as test to check if this change can be safely added to `color` later.

```

24 \bool_if:NT \g__pdfmanagement_firstaid_color_bool
25   {
26     \declare@file@substitution{color.sty}{color-ltx.sty}
27   }

```

1.3 xcolor

`xcolor` is not incompatible, but the new `hyperref` driver makes use of `l3color` to set the colors. It is therefore necessary to patch `xcolor`, so that colors defined with its `\definecolor` command are known to `l3color` and so `hyperref`. This only supports the color model from `l3color`. Colors defined with the models `cmy` and `tHsb` are silently ignored.

The `named` model is mapped to `\color_set:nn`.

```

28 \bool_if:NT \g__pdfmanagement_firstaid_xcolor_bool
29   {
30     \AddToHook{package/after/xcolor}
31     {\RequirePackage{xcolor-patches-tmp-ltx}\XC@@names}
32   }

```

1.4 pgf

In `pgf`, resource management is set up in the file `pgfutil-common.tex`. This then provides three functions for adding to the resources, all of which are objects:

- `\pgfutil@addpdfresource@extgs`: Extended graphics state
- `\pgfutil@addpdfresource@colorspaces`: Color spaces
- `\pgfutil@addpdfresource@patterns`: Patterns

These resource dictionaries are used by adding entries in a cumulative sense; the macro layer deals with ensuring that each entry is only given once. Note that the objects themselves must be given only once for each page.

To support these functions, there are a series of set-up macros which install these resources. That has to take place for every page: the exact route therefore depends on the driver.

For the `pdfmanagement` project we need to avoid that `pgf` interferes in `ExtGState`, `ColorSpace` and `Pattern` (`Shadings` are added to the `xform` resources and so probably unproblematic for now). The actual patch is in a file hook guarded by the boolean, the rest of the code is always defined.

```

117

```

1.5 transparent

We simply replace by the new version.

```

118 \bool_if:NT \g__pdfmanagement_firstaid_transparent_bool
119 {
120     \declare@file@substitution{transparent.sty}{transparent-ltx.sty}
121 }

```

1.6 pdflscape

We simply replace by the new version.

```

122 \bool_if:NT \g__pdfmanagement_firstaid_pdflscape_bool
123 {
124     \declare@file@substitution{pdflscape.sty}{pdflscape-ltx.sty}
125 }

```

1.7 hyperxmp

We add some code at the end of hyperxmp.sty.

```

126 \bool_if:NT \g__pdfmanagement_firstaid_hyperxmp_bool
127 {

```

```

128   \AddToHook
129     {file/after/hyperxmp.sty}
130     {\RequirePackage{hyperxmp-patches-tmp-ltx}}
131   }
132 
```

1.8 colorspace

This is rather difficult as no real places to inject patches at first a try to avoid that its ExtGState is missing: it can not be avoided to recreate the objects (and so to get duplicates) as colorspace uses temporary macros whose contents is lost.

```
