## Lemma's disambiguation

## Summarium

This file provides an example of lemma's disambuigation.

All word which can potentially be twice (or more) in a same line is marked by an \sameword. *reledmac* print the word rank only if the word is effectively printed twice (or more) time in the same line.

For use with  $\label{lemma}$ , please read the handbook.

- Leo aut ursus aut oryx aut ricinus aut equus aut lupus aut canis aut felix aut asinus
- 2 aut burricus.
