## 2 Introduction

This file contains all the macros for typesetting *TUGboat* with both plain T<sub>E</sub>X and L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub>.

### 2.1 Summary of control sequences

Abbreviations. Just a listing with indications of expansion where that may not be obvious. For full definitions, see real code below (Section 3.4).

\AllTeX	(L <sup>A</sup> )T <sub>E</sub> X
\AMS	American Mathematical Society
\AmSTeX	
\aw	A-W (abbreviation for Addison-Wesley)
\API	
\AW	Addison-Wesley
\BibTeX	
\CandT	Computers & Typesetting
\ConTeXt	ConTeXt
\Cplusplus	C++
\DTD	
\DVD	
\DVI	
\DVIPDFMx	DVIPDFM <sub>x</sub>
\DVIToVDU	DVIToVDU
\ECMA	
\EPS	
\eTeX	$\varepsilon$ -T <sub>E</sub> X
\ExTeX	$\varepsilon_x$ T <sub>E</sub> X
\Ghostscript	
\Hawaii	Hawai‘i
\HTML	
\ISBN	ISBN
\ISO	
\ISSN	ISSN
\JTeX	
\JoT	The Joy of T <sub>E</sub> X
\LaTeX	
\LyX	
\Mac OSX	Mac OS X
\MathML	
\Mc	M with raised c
\MF	METAFONT
\mf	METAFONT
\MFB	The Metafontbook
\MP	METAPOST
\mp	MetaPost (in text only: still ‘ $\mp$ ’ in math)
\OMEGA	Omega ‘logo’ ( $\Omega$ )
\OCP	Omega compiled process
\OOXML	
\OTP	Omega translation process
\mtex	multilingual T <sub>E</sub> X
\NTS	New Typesetting System
\pcMF	pcMF
\PCTeX	
\pcTeX	

\Pas	Pascal
\PiCTeX	
\plain	plain (in typewriter font)
\POBox	P. O. Box
\PS	PostScript (with hyphenation)
\SC	Steering Committee
\SGML	SGML
\SliTeX	
\slMF	Metafont, slanted: deprecated: use \textsl instead
\stTeX	T <small>E</small> X for the Atari ST
\SVG	
\TANGLE	
\TB	The T <small>E</small> Xbook
\TeX	(Although nearly every package defines this, most, including plain, are missing the spacefactor adjustment)
\TeXhax	
\TeXMaG	(defunct)
\TeXtures	
\TeXxeT	
\Thanh	
\TFM	TFM
\TUB	<i>TUGboat</i>
\TUG	T <small>E</small> X Users Group
\UNIX	
\VAX	
\VnTeX	
\VorTeX	
\XeT	
\XeTeX	reflected and lowered first ‘E’
\XeLaTeX	with extra space before ‘L’
\XML	
\WEB	
\WEAVE	
\WYSIWYG	

Macros for things that are slightly more significant.

\NoBlackBoxes	turns off marginal rules marking overfull boxes
\BlackBoxes	turns them back on
\newline	horizontal glue plus a break
\ifundefined#1	checks argument with \csname against \relax
\topsmash	smashes above baseline (from AMSTeX)
\botsmash	smashes below baseline (from AMSTeX)
\smash	smashes both (from plain)

\ulap	lap upwards
\dlap	lap downwards
\xlap	reference point at center horizontally; 0 width
\ylap	reference point at center vertically; 0 height, depth
\zlap	combination \xlap and \ylap
\basezero	to avoid insertion of baselineskip and lineskip glue
\nullhrule	empty \hrule
\nullvrule	empty \vrule
\makestrut [#1;#2]	ad hoc struts; #1=height, #2=depth
\today	today's date
\SetTime	converts \time to hours, minutes
\now	displays time in hours and minutes
\Now	shows current date and time
\ifPrelimDraft	flag to indicate status as preliminary draft
\rttitle	<i>TUGboat</i> volume and number info for running head
\midrttitle	information for center of running head
\rttitlenexttopage	next to page number in running head
\HorzR@gisterRule	pieces of registration marks ('trimmarks')
\DownShortR@gisterRule	
\UpShortR@gisterRule	
\ttopregister	top registration line with 'T' in center
\tbotregister	bottom registration line with inverted 'T' in center
\topregister	register actually used
\botregister	
\raggedskip	
\raggedstretch	
\raggedparfill	
\raggedspaces	
\raggedright	
\raggedleft	
\raggedcenter	
\normalspaces	
\raggedbottom	
\bull	square bullet
\cents	'cents' sign
\Dag	superscripted dagger
\careof	c/o
\sfrac	slashed fraction (arguments optionally separated by a slash)
\cs	control sequence name
\env	\cs{name}→\name environment name \env{name}→\begin{name}

\meta	meta-argument name \meta{name}→⟨name⟩
\dash	en-dash surrounded by thinspace; only breakable AFTER
\Dash	em-dash, as above
\hyph	permit automatic hyphenation after an actual hyphen
\slash	‘breakable’ slash
\nth	for obtaining ‘1 <sup>st</sup> ’, ‘2 <sup>nd</sup> ’, 3 <sup>rd</sup> , etc.
\tubissue	gets \TUB followed by volume and issue numbers
\xEdNote	Editor’s Note:
\Review:	Review: (for title of book review article)
\reviewitem	begin data for item being reviewed
\revauth	with one argument, author(s) of item being reviewed
\revtitle	with one argument, title of ...
\revpubinfo	with one argument, other info pertaining to ...
\endreviewitem	end data for item being reviewed
\booktitle	with one argument, format book title as straight text
\Input	\input with some other bookkeeping for case where multiple articles are put together
\TBremark	reminder to <i>TUGboat</i> editorial staff
\TBEnableRemarks	enable \TBremarks (normally suppressed)
\pagexref	used to write out page numbers to screen and external files
\pagexrefON	
\pagexrefOFF	
\xrefto	used for symbolic cross-reference to other pages in <i>TUGboat</i>
\xreftoON	
\xreftoOFF	
\TBdriver	marks code which only takes effect when articles are run together in a driver file
\signaturemark	items for signatures
\signaturewidth	

### 3 L<sup>A</sup>T<sub>E</sub>X 2 <sub>$\varepsilon$</sub> *TUGboat* class file

#### 3.1 Setup and options

Check for reloading. Hmm... Does this happen with L<sup>A</sup>T<sub>E</sub>X 2 <sub>$\varepsilon$</sub>  classes? Probably, in fact, as well that it doesn’t, since the \tugstyinit referenced here doesn’t exist; however, it’s possible that we might need a similar mechanism in the future, so we retain its skeleton, without fleshing out the \tugstyinit bones.

22 ⟨\*tugboatcls  
23 \csname tugstyloaded@\endcsname

```
24 \def\tugstyloaded{@\tugstyinit\endinput}
```

Acquire a name for this class if we don't already have one (by virtue of having been loaded by `tugproc.cls`). This name will be used in error messages and the like.

```
25 \providecommand{\@tugclass}{\tugboat}
```

Warnings/error messages/information messages—if we're using L<sup>A</sup>T<sub>E</sub>X 2 <sub>$\epsilon$</sub>  we can use the `\Class*` commands:

```
26 \def\TBInfo{\ClassInfo{\@tugclass}}
27 \def\TBError{\ClassError{\@tugclass}}
28 \def\TBWarning{\ClassWarning{\@tugclass}}
29 \def\TBWarningNL{\ClassWarningNoLine{\@tugclass}}
```

draft vs. preprint vs. final.

```
30 \newif\ifpreprint
31 \def\preprint{\preprinttrue}
32 \DeclareOption{draft}{%
33   \AtEndOfClass{%
34     \setcounter{page}{901}%
35     %
36     % Put a question mark into the page number in draft mode.
37     \let\tuborigthe\page = \the\page
38     \def\the\page{%
39       \ifnum\value{page}>900
40         \textsl{?\texorpdfstring{,}{}}\arabic{\numexpr\the\c@page-900\relax}%
41       \else
42         \arabic{page}%
43       \fi}%
44     %
45     \BlackBoxes
46     \def\MakeRegistrationMarks{}%
47     \PrelimDrafttrue
48   }%
49 }
50 \DeclareOption{preprint}{%
51   \preprinttrue
52 }
53 \DeclareOption{final}{%
54   \AtEndOfClass{%
55     \let\the\page=\tuborigthe\page
56     \NoBlackBoxes
57     % Insert draft date into the header even with [final], if we are not
58     % doing a production run. (tugboat.dates sets up page numbers
59     % above 900 in such pseudo-draft mode.) We use [final] in the first
60     % place for this case because draft can change page layout, wrt
61     % registration marks, etc.
62     \ifnum\value{page}>900 \PrelimDrafttrue \else \PrelimDraftfalse \fi
63     \tubrunningfull
64   }%
```

```
65 }
```

We want to use `hyperref`'s `\texorpdfstring`, e.g., in the `draft` option above. If `hyperref` is not loaded, define our own trivial fallback to expand to the `TEX` (first) argument.

```
66 \AtBeginDocument{%
67   \ifx\undefined\texorpdfstring
68     \DeclareRobustCommand{\texorpdfstring}[2]{#1}%
69   \fi
70 }
```

*TUGboat* uses only 10pt for the main text.

```
71 \DeclareOption{11pt}{%
72   \TBTWarning{The \c@tugclass\space class only supports 10pt fonts:
73   \MessageBreak option \CurrentOption\space ignored}%
74 }
75 \DeclareOption{12pt}{\csname ds@11pt\endcsname}
```

Similarly, ignore one/two-side options.

```
76 \DeclareOption{oneside}{\TBTWarning{Option \CurrentOption\space ignored}}
77 \DeclareOption{twoside}{\ds@oneside}
```

There are these people who seem to think `tugproc` is an option rather than a class... (Note that it's already been filtered out if we were calling from `ltugproc`.)

```
78 \DeclareOption{tugproc}{%
79   \TBTWarning{Option \CurrentOption\space ignored: use class ltugproc
80   instead of \c@tugclass}%
81 }
```

Option `rawcite` (the default) specifies the default citation mechanism (as built-in to L<sup>A</sup>T<sub>EX</sub>); option `harvardcite` specifies the author-date citation mechanism defined in section 3.24 below.

```
82 \DeclareOption{rawcite}{\let\if@Harvardcite\iffalse}
83 \DeclareOption{harvardcite}{\let\if@Harvardcite\iftrue}
```

Option `extralabel` (the default) specifies that the publication years of two successive references with otherwise identical labels will be tagged with distinguishing letters; option `noextralabel` causes those letters to be suppressed. Note that (a) no two references will in any case have the same labels in the default (plain) `rawcite` setup, and that (b) the distinguishing letters appear in the labels themselves; the reader can work out the correspondence one with the other...

```
84 \DeclareOption{extralabel}{\let\UseExtraLabel\@firstofone}
85 \DeclareOption{noextralabel}{\let\UseExtraLabel\gobble}
```

The section-numbering style, so that we can allow the same heading layout as in the plain macros.

```
86 \DeclareOption{numbersec}{\let\if@numbersec\iftrue}
87 \DeclareOption{nonumber}{\let\if@numbersec\iffalse}
```

Minimal running headers/footers contain just the TUGboat volume/issue identification and page numbers. ‘runningfull’ is the default, and includes title and author. ‘runningoff’ makes both headers and footers empty.

```
88 \DeclareOption{runningoff}{\AtEndOfClass{\@tubrunningoff}}
89 \DeclareOption{runningminimal}{\AtEndOfClass{\@tubrunningminimal}}
90 \DeclareOption{runningfull}{\AtEndOfClass{\@tubrunningfull}}
```

`\if@tubtwocolumn` Occasionally (`tb107jackowski`, and past conference preprints), we need the option `onecolumn`. For alternative approaches to one-column articles, see `tb92hagen-euler` and `tb78milo`.

```
91 \newif\if@tubtwocolumn \tubtwocolumntrue
92 \DeclareOption{onecolumn}{\tubtwocolumnfalse}
```

Any other options, we pass on to `article.cls` before we load it:

```
93 \DeclareOption*{\PassOptionsToClass{\CurrentOption}{article}}
```

Request default options (draft mode, standard citation, numbered sections, etc.), process all options, and then get the base document class on top of which we reside, namely `article`. Always call `article` with the `twoside` option, since we want the ability to have odd/even headers/footers.

```
94 \ExecuteOptions{draft,extralabel,numbersec,rawcite,runningminimal}
95 \ProcessOptions
96 \LoadClass[twoside]{article}
```

Various fonts used throughout. Some effort has been made to suppress these things with explicit sizes in the macro name (`\tensl` is an example below), but keeping in step with the documentation is one thing that restricts such a move.

```
97 \def\sectitlefont{\fontfamily{sfdefault}\fontseries{bx}\fontshape{n}%
98   \fontsize@xviipt\stbaselineskip\selectfont}
99 \def\tensl{\fontseries{m}\fontshape{sl}\fontsize@\xipt@\xiipt
100  \selectfont}
```

This font selection command is used *only* for the ‘Editor’s Note’ introduction to notes; sadly it makes explicit reference to CMR, and Barbara Beeton has agreed that the reference may be constructed to use the current family such that, if no upright italic is defined, ordinary italics are used. A project for later...

```
101 \def\EdNoteFont{\fontfamily{cmr}\fontseries{m}\fontshape{ui}%
102   \selectfont}
103 </ltugboatcls>
```

If Ulrik Vieth’s `mflogo.sty` is around, we’ll use it. Otherwise (pro tem, at least) we’ll warn the user and define the absolute minimum of machinery that *TUGboat* requires (that which was used prior to the invention of L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub>).

```
104 <*common>
105 \IfFileExists{mflogo.sty}%
106   {\RequirePackage{mflogo}}%
107 <!/tugcomn> {\TBWarning
108 <!/tugcomn> {\PackageWarning{ltugcomn}}
```

```

109 {Package mflogo.sty not available --\MessageBreak
110   Proceeding to emulate mflogo.sty}
111 \DeclareRobustCommand{\logofamily}{%
112   \not@math@\alpha lphabet\logofamily\relax
113   \fontencoding{U}\fontfamily{logo}\selectfont
114 \DeclareTextFontCommand{\textlogo}{\logofamily}
115 \def\MF{\textlogo{META}\-\textlogo{FONT}\@}
116 \def\MP{\textlogo{META}\-\textlogo{POST}\@}
117 \DeclareFontFamily{U}{logo} {}
118 \DeclareFontShape{U}{logo}{m}{n}{%

128 }{}%
129 }

```

### 3.2 Resetting at start of paper

\ResetCommands  
 \AddToResetCommands  
 \StartNewPaper

We store a set of commands that should be executed at the start of each paper, before any paper-specific customisation. These commands (stored in the token register \ResetCommands) include things such as resetting section and footnote numbers, re-establishing default settings of typesetting parameters, and so on. The user (or more typically, editor) may execute the commands by using the command \StartNewPaper. Things I've not yet thought of may be added to the list of commands, by

```

130 \newtoks\ResetCommands
131 \ResetCommands{%
132   \setcounter{part}{0}%
133   \setcounter{section}{0}%
134   \setcounter{footnote}{0}%
135   \authornumber\z@
136 }
137 \newcommand{\AddToResetCommands}[1]{%
138   \AddToResetCommands\expandafter{\AddToResetCommands#1}%
139 }

```

### 3.3 Helpful shorthands (common code with Plain styles)

\makeescape, ..., \makecomment allow users to change the category code of a single character a little more easily. These require that the character be addressed as a control sequence: e.g., \makeescape\ will make ‘/’ an escape character.

```
140 <!*!latex>
```

```

141 \def\makeescape#1{\catcode`#1=0 }
142 \def\makebgroup#1{\catcode`#1=1 }
143 \def\makeegroup#1{\catcode`#1=2 }
144 \def\makemath #1{\catcode`#1=3 }
145 </!latex>
146 <*latex>
147 \def\makeescape#1{\catcode`#1=\z@}
148 \def\makebgroup#1{\catcode`#1=@ne}
149 \def\makeegroup#1{\catcode`#1=\tw@}
150 \def\makemath #1{\catcode`#1=thr@@}
151 </latex>
152 \def\makealign #1{\catcode`#1=4 }
153 \def\makeeol #1{\catcode`#1=5 }
154 \def\makeparm #1{\catcode`#1=6 }
155 \def\makesup #1{\catcode`#1=7 }
156 \def\makesub #1{\catcode`#1=8 }
157 \def\makeignore#1{\catcode`#1=9 }
158 \def\makespace #1{\catcode`#1=10 }
159 \def\makeletter#1{\catcode`#1=11 }
160 \chardef\other=12
161 \let\makeother\@makeother
162 \def\makeactive#1{\catcode`#1=13 }
163 \def\makecomment#1{\catcode`#1=14 }

```

\savecat#1 and \restorecat#1 will save and restore the category of a given character. These are useful in cases where one doesn't wish to localize the settings and therefore be required to globally define or set things.

```

164 \def\savecat#1{%
165   \expandafter\xdef\csname\string#1savedcat\endcsname{\the\catcode`#1}}
166 \def\restorecat#1{\catcode`#1=\csname\string#1savedcat\endcsname}
167 <!latex>\savecat@
168 <!latex>\makeletter@

```

\SaveCS#1 and \RestoreCS#1 save and restore ‘meanings’ of control sequences. Again this is useful in cases where one doesn't want to localize or where global definitions clobber a control sequence which is needed later with its ‘old’ definition.

```

169 \def\SaveCS#1{\expandafter\let\csname saved@@#1\expandafter\endcsname
170   \csname#1\endcsname}
171 \def\RestoreCS#1{\expandafter\let\csname#1\expandafter\endcsname
172   \csname saved@@#1\endcsname}

```

To distinguish between macro files loaded

```

173 \def\plaintubstyle{plain}
174 \def\latextubstyle{latex}

```

Control sequences that were first defined in L<sup>A</sup>T<sub>E</sub>X 2 <sub>$\varepsilon$</sub>  of 1995/06/01 (or later), but which we merrily use. Only define if necessary:

```

175 \providecommand\hb@xt@{\hbox to}
176 \providecommand\textsuperscript[1]{\ensuremath{\m@th

```

```

177           ^{\mbox{\scriptsize\sf@size\z@}}\\
178           \selectfont #1}}}}

```

(Note that that definition of `\textsuperscript` isn't robust, but probably doesn't need to be... What's more, it doesn't appear in the mythical 2.09 version of the package.)

### 3.4 Abbreviations and logos

Font used for the METAFONT logo, etc.

```

179 \DeclareRobustCommand{\AllTeX}{(\La{kern-.075em}\kern-.075em\TeX}
180 \def\AMS{American Mathematical Society}
181 \def\AmS{$\mathcal{A} $\kern-.1667em\lower.5ex\hbox{$\mathcal{M}$}\kern-.125em$\mathcal{S}$}
182 \def\AmSLaTeX{\AmS-\LaTeX}
183 \def\AmSTeX{\AmS-\TeX}
184 \def\ANSI{\acro{ANSI}}
185 \def\API{\acro{API}}

266       A$}%

```

```

267           \vss}%
268       }}

```

We started with the intention that we wouldn't redefine `\LaTeX` when we're running under it, so as not to trample on an existing definition. However, this proves less than satisfactory; a single logo may be OK for the run of documents, but for *TUGboat*, we find that something noticeably better is necessary; see section 3.12.

XeTeX requires reflecting the first E, hence we complain if the graphics package is not present. (For plain documents, this can be loaded via Eplain.) Also, at Barbara's suggestion, if the current font is slanted, we rotate by 180 instead of reflecting so there is at least a chance to look ok. (The magic values here seem more or less ok for cmsl and cmti.)

```

411   \noexpand\exhyphenpenalty\the\exhyphenpenalty\relax}
412 \def\nohyphens{\hyphenpenalty\@M\exhyphenpenalty\@M}
```

### 3.6 Utility registers and definitions

We define a few scratch registers (and the like) for transient use; they're all paired: an internal one (`\T@st*`) and an external one (`\Test*`).

*Comment:* Exercise for an idle day: find whether all these are necessary, or whether we can use the L<sup>A</sup>T<sub>E</sub>X temporaries for some (or all) of the `\T@st*` ones.

*Comment:* (bb) All these registers are used in the plain version, `tugboat.sty`.

```

```

### 3.7 Ragged right and friends

`\raggedskip` Plain TeX's definition of `\raggedright` doesn't permit any stretch, and results in too many overfull boxes. We also turn off hyphenation. This code lies somewhere between that of Plain TeX and of L<sup>A</sup>T<sub>E</sub>X.

`\raggedstretch` 467 `\newdimen\raggedskip \raggedskip=\z@`  
           468 `\newdimen\raggedstretch \raggedstretch=5em % ems of font set now (10pt)`  
           469 `\newskip\raggedparfill \raggedparfill=\z@\@plus 1fil`  
           470 `\def\raggedspaces{\spaceskip=.3333em \relax \xspaceskip=.5em \relax }`

`\raggedright` Some applications may have to add stretch, in order to avoid all overfull boxes.  
`\raggedleft` We define the following uses of the above skips, etc.

`\raggedcenter` 471 `\def\raggedright{%`  
`\normalspaces` 472   `\nohyphens`  
           473   `\rightskip=\raggedskip\@plus\raggedstretch \raggedspaces`  
           474   `\parfillskip=\raggedparfill`  
           475 }  
         476 `\def\raggedleft{%`  
           477   `\nohyphens`  
           478   `\leftskip=\raggedskip\@plus\raggedstretch \raggedspaces`  
           479   `\parfillskip=\z@skip`  
           480 }  
         481 `\def\raggedcenter{%`  
           482   `\nohyphens`  
           483   `\leftskip=\raggedskip\@plus\raggedstretch`  
           484   `\rightskip=\leftskip \raggedspaces`  
           485   `\parindent=\z@ \parfillskip=\z@skip`  
           486 }  
         487 `\def\normalspaces{\spaceskip\z@skip \xspaceskip\z@skip}`

### 3.8 Assorted user-level markup

L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub> defines a robust `\,,` but that we provide a new definition of `~` by redefining `\`` (`\DeclareRobustCommand` doesn't mind redefinition, fortunately). This is based on the version in AMS-TeX—the L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub> version (`ltxspace.dtx`) has `\leavevmode` and does not do anything with the surrounding space(s). Our version messes up with the `\pfill` used in `doc`-generated indexes ([github.com/latex3/latex2e/issues/75](https://github.com/latex3/latex2e/issues/75)), but later (2018++) versions of `doc` should be protected against our redefinition.

```

488 \let\latexnobreakspace=\nobreakspace
489 \DeclareRobustCommand{\nobreakspace}{\unskip\nobreak\ \ignorespaces}

Plain TeX defines \newbox as \outer. We solemnly preserve the following,
which removes the \outerness; of course, we carefully exclude it from what we
generate... (\outerness is a spawn of the devil, is it not? Barbara Beeton re-
sponded to the previous sentence “\outerness has its place: it avoids register
buildup, hence running out of memory”. In another context, David Carlisle re-
marked that an error control mechanism that causes more confusing errors than it
prevents is rather a poor one. This is perhaps not the place to conduct a serious
debate...)

618 \def\booktitle#1{{\slshape#1\}}}

```

### 3.10 Dates, volume and issue numbers, etc.

Dates and other items which identify the volume and issue. `\issueseqno` is a sequential issue number starting from the first issue published; volume 15,4 has `\issueseqno=45`.

`\vol 19, 1.`

To use: `\issdate March 1998.`

`\issueseqno=58`

Starting with volume 23 (nominal 2002), we have `\issyear` instead of `\issdate`, because issues don't have months any more.

For production, these are set in a separate file, `tugboat.dates`, which is issue-specific.

*Comment:* I would like to make the code read a file `tugboat.dates` in the current directory or its parent. This is easy except under 'odd' operating systems (VMS is an example that springs to mind, RISCos may be even worse) whose syntax is out of the ordinary.

```

619 \newcount\issueseqno           \issueseqno=-1
620 \def\v@lx{\gdef\volx{Volume~\volno~(\volyr), No.~\issno}}

```

In L<sup>A</sup>T<sub>E</sub>X 2<sub>E</sub>, `twoside` option is forced on when `article.cls` is loaded.

### 3.12 Messing about with the L<sup>A</sup>T<sub>E</sub>X logo

Barbara Beeton's pleas for L<sup>A</sup>T<sub>E</sub>X logos that look right in any font shape provoked me to generate the following stuff that is configurable.

Here's the command for the user to define a new version. The arguments are font family, series and shape, and then the two kern values used in placing the raised 'A' of L<sup>A</sup>T<sub>E</sub>X.

```
799 \newcommand{\DeclareLaTeXLogo}[5]{\expandafter\def  
800   \csname @LaTeX@#1/#2/#3\endcsname{[#4]{#5}}}
```

The default values are as used in the source of L<sup>A</sup>T<sub>E</sub>X itself:

```
801 \def\@LaTeX@default{{.36}{.15}}
```

More are defined in the initial version, for bold CM sans (which is used as `\SecTitleFont`), and CM italic medium and bold, and Bitstream Charter (which Nelson Beebe likes to use). Duplicate for Latin Modern.

```
802 \DeclareLaTeXLogo{cmss}{bx}{n}{.3}{.15}  
803 \DeclareLaTeXLogo{lmss}{bx}{n}{.3}{.15}  
804 %  
805 \DeclareLaTeXLogo{cmr}{m}{it}{.29}{.2}  
806 \DeclareLaTeXLogo{lmr}{m}{it}{.29}{.2}  
807 %  
808 \DeclareLaTeXLogo{cmr}{m}{s1}{.29}{.15}  
809 \DeclareLaTeXLogo{lmr}{m}{s1}{.29}{.15}  
810 %  
811 \DeclareLaTeXLogo{cmr}{bx}{it}{.29}{.2}  
812 \DeclareLaTeXLogo{lmr}{bx}{it}{.29}{.2}  
813 %  
814 \DeclareLaTeXLogo{cmr}{bx}{s1}{.29}{.2}  
815 \DeclareLaTeXLogo{lmr}{bx}{s1}{.29}{.2}  
816 %  
817 \DeclareLaTeXLogo{bch}{m}{n}{.2}{.08}  
818 \DeclareLaTeXLogo{bch}{m}{it}{.2}{.08}
```

Redefine `\LaTeX` to choose the parameters for the current font, or to use the default value otherwise:

```
819 \ DeclareRobustCommand{\LaTeX}{\expandafter\let\expandafter\reserved@a  
820   \csname @LaTeX@\f@family/\f@series/\f@shape\endcsname  
821   \ifx\reserved@a\relax\let\reserved@a\@LaTeX@default\fi  
822   \expandafter\@LaTeX\reserved@a}
```

Here's the body of what was originally `\LaTeX`, pulled out with its roots dripping onto the smoking ruin of original L<sup>A</sup>T<sub>E</sub>X, and then bits stuck in on the side.

`\@LaTeX@default` provides parameters as one finds in the original; other versions are added as needed.

```

823 \newcommand{\@LaTeX}[2]{%
824   \%wlog{latex logo family=\f@family/\f@series/\f@shape -> #1, #2.}%
825   L\kern-#1em
826   {\sbox\z@\kern-#1em T}%
827   \vbox to\ht0{\hbox{$\m@th$%
828     \csname S@\f@size\endcsname
829     \fontsize\sf@size\z@
830     \math@fontsfalse\selectfont
831     A}%
832     \vss}%
833   }%
834   \kern-#2em%
835   \TeX}

```

### 3.13 Authors, contributors, addresses, signatures

An article may have several authors (of course), so we permit an `\author` command for each of them. The names are then stored in a set of `\csnames` called `\author1`, `\author2`, ... Similarly, there are several `\address<n>` and `\netaddress<n>` and `\PersonalURL<n>` and `\ORCID<n>` commands set up for each article.

*Comment:* I would like to make provision for several authors at the same address, but (short of preempting the `*` marker, which it would be nice to retain so as to preserve compatibility with the `plain` style) I'm not sure how one would signal it.

```

836 \def\theauthor#1{\csname theauthor#1\endcsname}
837 \def\theadress#1{\csname theaddress#1\endcsname}
838 \def\thenetaddress#1{\csname thenetaddress#1\endcsname}
839 \def\thePersonalURL#1{\csname thePersonalURL#1\endcsname}
840 \def\theORCID#1{\csname theORCID#1\endcsname}

```

The standard way of listing authors is to iterate from 1 to `\count0` and to pick the author names as we go.

```

841 {!!\def\newcount{\tempcnta}
842 \def\@defaultauthorlist{%
843   \getauthorlist\firstofone
844 }

```

`\getauthorlist` processes the author list, passing every bit of stuff that needs to be typeset to the macro specified as its argument.

```

845 \def\@getauthorlist#1{%
846   \count0\authornumber
847   \advance\count0 by -2
848   \tempcnta0

```

Loop to output the first  $n - 2$  of the  $n$  authors (the loop does nothing if there are two or fewer authors)

```

849 \loop

```

```

850      \ifnum\count@>0
851          \advance\@tempcnta by \cne
852          #1{\ignorespaces\theauthor{\number\@tempcnta}\unskip, }%
853          \advance\count@ by \m@ne
854      \repeat
855      \count@\authornumber
856      \advance\count@ by -\@tempcnta
857      \ifnum\authornumber>0

```

If there are two or more authors, we output the penultimate author's name here, followed by 'and'

```

858      \ifnum\count@>1
859          \count@\authornumber
860          \advance\count@ by \m@ne
861          #1{\ignorespaces\theauthor{\number\count@}\unskip\@tubauthorlastsep}%
862      \fi

```

Finally (if there were any authors at all) output the last author's name:

```

863      #1{\ignorespaces\theauthor{\number\authornumber}\unskip}
864      \fi
865 }
866 %
867 \def\@tubauthorlastsep{, }% until 2018, was: "\ and "

```

Signature blocks. The author can (in principle) define a different sort of signature block using `\signature`, though this could well cause the editorial group to have collective kittens (unless it had been discussed in advance...)

```

868 \def\signature#1{\def\@signature{#1}}
869 \def\@signature{\@defaultsignature}

```

`\@defaultsignature` loops through all the authors, outputting the details we have about that author, or (if we're in a sub-article) outputs the contributor's name and closes the group opened by `\contributor`. It is (as its name implies) the default body for `\makesignature`

```

870 \def\@defaultsignature{%
871     \let\thanks\@gobble

```

The idea here is that if multiple authors share affiliation information, we need only typeset the affiliation once. We separate by commas for the `\maketitle`, and put on separate lines in the `\makesignature`. Similarly, within `\netaddress`, `!tubmultipleaffilnet` separates with a space before and after the comma, while `.` (All this per bb.) See `tb122childstrotter.ltx` for an example.

```
926 \def\tubmultipleaffilauthor{\unskip, \ignorespaces}%
927 \def\tubmultipleaffilnet{\unskip\textrm{,}\, \ignorespaces}}
```

Now all the awful machinery of author definitions. `\authornumber` records the number of authors we have recorded to date.

```
928 \newcount\authornumber
929 \authornumber=0
```

`\author` ‘allocates’ another author name (by bumping `\authornumber`) and also sets up the address and netaddress for this author to produce a warning and to prevent oddities if they’re invoked. This last assumes that invocation will be in the context of `\signature` (`ltugboat.cls`) or `\maketitle` (`ltugproc.cls`); in both cases, invocation is followed by a line break (tabular line break `\`\\` in `ltugproc`, `\endgraf` in `\makesignature` in `ltugboat`).

```
930 \def\author{%
931   \global\advance\authornumber\@ne
932   \TB@author
933 }
```

`\contributor` is for a small part of a multiple-part article; it begins a group that will be ended in `\makesignature`.

```
934 \def\contributor{%
935   \begingroup
936   \authornumber\m@ne
937   \TB@author
938 }
```

Both ‘types’ of author fall through here to set up the author name and to initialise author-related things. `\EDITORno*` commands allow the editor to record that there’s good reason for an *address* or *netaddress* not to be there (the *personalURL* and *ORCID* are optional anyway).

```
939 \def\TB@author#1{%
940   \expandafter\def\csname theauthor\number\authornumber\endcsname

958 }

```

\address copies its argument into the \theaddress<n> for this author.

```

959 \def\address#1{%
960   \expandafter\def\csname theaddress\endcsname\number\authornumber\endcsname
961     {\leavevmode\ignorespaces#1\unskip}%

```

\network is for use within the optional argument of \netaddress; it defines the *name* of the network the user is on.

**Comment:** I think this is a fantasy, since everyone (in practice, nowadays) quotes an internet address. In principle, there are people who will quote X.400 addresses (but they're few and far between) and I have (during 1995!) seen an address with an UUCP bang-path component on `comp.text.tex`, but *really!*

```

962 \def\network#1{\def\@network{#1: }}

```

\netaddress begins a group, executes an optional argument (which should not, presumably, contain global commands) and then relays to \@relay@netaddress with both @ and % made active (so that they can be discretionary points in the address). If we're using L<sup>A</sup>T<sub>E</sub>X 2 <sub>$\varepsilon$</sub> , we use the default-argument form of \newcommand; otherwise we write it out in all its horribleness.

```

963 \newcommand{\netaddress}[1][\relax]{%
964   \begingroup
965     \def\@network{}%

```

Unfortunately, because of the catcode hackery, we have still to do one stage of relaying within our own code, even if we're using L<sup>A</sup>T<sub>E</sub>X 2 <sub>$\varepsilon$</sub> .

```

966   #1\@sanitize\makespace\ \makeactive\@%
967   \makeescape! \makebgroup[ \makeegroup]% seems more useful than literals
968   \makeactive\.\makeactive\%\@relay@netaddress}%

```

\@relay@netaddress finishes the job. It sets \thenetaddress for this author to contain the network name followed by the address. As a result of our kerfuffle above, @ and % are active at the point we're entered. We ensure they're active when \thenetaddress gets expanded, too. (**WOT?!**)

```

969 \def\@relay@netaddress#1{%
970   \ProtectNetChars
971   \expandafter\protected@xdef
972     \csname thenetaddress\endcsname\number\authornumber\endcsname
973     {\protect\leavevmode\textrm{\@network}}%
974     {\protect\NetAddrChars\net
975       \ignorespaces#1\unskip}%
976   \endgroup
977 }

```

`\personalURL` is in essence the same as `\netaddress`, apart from (1) the lack of the eccentric optional argument, and (2) the activation of ‘/’.

For general URLs, `url.sty` (with or without hyperref) suffices and is recommended.

```

978 \def\personalURL{\begingroup
979   \@sanitize\makespace\ \makeactive\@%
980   \makeactive\.\makeactive\%\makeactive\/\@personalURL}%
981 \def\@personalURL#1{%
982   \ProtectNetChars
983   \expandafter\protected@xdef

989     }%
990   }%
991 \endgroup
992 }
```

Define the activation mechanism for ‘@’, ‘%’, ‘.’ and ‘/’, for use in the above. Note that, since the code has ‘%’ active, we have ‘\*’ as a comment character, which has a tendency to make things look peculiar...

```

993 {%
994   \makecomment\*
995   \makeactive\@%
996   \gdef\netaddrat{\makeactive\@%
997     \def@\discretionary{\char"40}{\char"40}}%
998   \makeactive\%
999   \gdef\netaddrpercent{\makeactive\%*%
1000     \def%\discretionary{\char"25}{\char"25}}%
1001   \makeactive\.
1002   \gdef\netaddrdot{\makeactive\.*%
1003     \def.\discretionary{\char"2E}{\char"2E}}}
```

`\NetAddrChars` is what *we* use (we’re constrained to retain the old interface to this stuff, but it *is* clunky...). Since URLs are a new idea, we are at liberty not to define a separate `\netaddrslash` command, and we only have `\URLchars`.

```

1004 \gdef\NetAddrChars{\netaddrat \netaddrpercent \netaddrdot}
1005 \makeactive\/
1006 \gdef\URLchars{*%
1007   \NetAddrChars
1008   \makeactive\/*%
1009   \def/\discretionary{\char"2F}{\char"2F}}}
```

`\ProtectNetChars` includes protecting ‘/’, since this does no harm in the case of net addresses (where it’s not going to be active) and we thereby gain by not having yet another csname.

```
1010 \gdef\ProtectNetChars{*
```

```

1011     \def@{\protect@}*
1012     \def%{\protect%}*
1013     \def.{\protect.}*
1014     \def/{\protect/}*
1015   }
1016 }

```

$\text{\LaTeX}\ 2\varepsilon$  (in its wisdom) suppresses `\DeclareOldFontCommand` when in compatibility mode, so that in that circumstance we need to use a declaration copied from `latex209.def` rather than the way we would normally do the thing (using the command  $\text{\LaTeX}\ 2\varepsilon$  defines for the job).

```

1017 \if@compatibility
1018   \DeclareRobustCommand{\net}{\normalfont\ttfamily\mathgroup\symtypewriter}
1019 \else
1020   \DeclareOldFontCommand{\net}{\ttfamily\upshape\mdseries}{\mathtt}
1021 \fi
1022 \def\authorlist#1{\def\@author{#1}}
1023 \def\@author{\@defaultauthorlist}

```

`\ORCID` inserts ‘ORCID’ and then argument into the `\theORCID<n>` for this author. Also, we want `\small` for this.

```

1024 \def\ORCID#1{%
1025   \expandafter\def\csname theORCID\endcsname{\number\authornumber\endcsname
1026     {\leavevmode \ignorespaces {\SMC\ ORCID} #1\unskip}}

```

For the online re-publication (as of 2009) by Mathematical Sciences Publishers <http://mathscipub.org>, lots and lots of metadata is needed, much of it redundant with things we already do. They are flexible enough to allow us to specify it in any reasonable way, so let’s make one command `\mspmetavar` which takes two arguments. Example: `\mspmetavar{volumenumber}{30}`. For our purposes, it is just a no-op. And this initiative never came to anything, so it is not used at all.

```

\mspmetavar
1027 \def\mspmetavar#1#2{}

```

### 3.14 Article title

```

\if@articletitle \maketitle takes an optional “*”; if present, the operation is not defining the
  \maketitle title of a paper, merely that of a “business” section (such as the participants at
  \cr@maketitle a meeting) that has no credited author or other title. In this case, the command
  flushes out the latest \sectitle (or whatever) but does nothing else.

```

Provide machinery to skip extra space, even one or more full columns, above the top of an article to leave space to paste up a previous article that has finished on the same page. This is a fall back to accommodate the fact that multiple articles cannot yet be run together easily with  $\text{\LaTeX}\ 2\varepsilon$ .

```

1028 \newif\if@articletitle
1029 \def\maketitle{\@ifstar
1030   {\@articletitlefalse\cr@maketitle}%

```

```

1061 }

```

**\shortTitle** The `\rh*` commands are versions to be used in the running head of the article.  
**\ifshortAuthor** Normally, they are the same things as the author and title of the article, but in the  
**\shortAuthor** case that there are confusions therein, the text should provide substitutes, using  
the `\short*` commands.

```

1062 \def\shortTitle #1{\def\rhTitle{#1}}
1063 \newif\ifshortAuthor
1064 \def\shortAuthor #1{\def\rhAuthor{#1}\shortAuthortrue}

```

### 3.15 Section titles

The following macros are used to set the large *TUGboat* section heads (e.g. “General Delivery”, “Fonts”, etc.)

Define the distance between articles which are run together:

```
1065 \def\secsep{\vskip 5\baselineskip}
```

Note that `\stbaselineskip` is used in the definition of `\sectitlefont`, in  $\text{\LaTeX} 2_{\varepsilon}$ , so that it has (at least) to be defined before `\sectitlefont` is used (we do the whole job).

```
1066 \newdimen\stbaselineskip \stbaselineskip=18\p@  
1067 \newdimen\stfontheight  
1068 \settoheight{\stfontheight}{\sectitlefont 0}
```

Declaring section titles; the conditional `\ifSecTitle` records the occurrence of a `\sectitle` command. If (when) a subsequent `\maketitle` occurs, the section title box will get flushed out; as a result of this, one could in principle have a set of `\sectitle` commands in a semi-fixed steering file, and inclusions of files inserted only as and when papers have appeared. Only the last `\sectitle` will actually be executed.

```
1069 \newif\ifWideSecTitle  
1070 \newif\iftubtitlerulefullwidth  
1071 \newif\ifSecTitle \SecTitlefalse  
1072 \newcommand{\sectitle}{%  
1073   \SecTitletrue  
1074   \@ifstar  
1075     {\WideSecTitletrue\def\s@ctitle}{%  
1076     {\WideSecTitlefalse\def\s@ctitle}{%  
1077 }
```

`\PreTitleDrop` records the amount of column-space we need to eject before we start any given paper. It gets zeroed after that ejection has happened.

```
1078 \newdimen\PreTitleDrop \PreTitleDrop=\z@
```

The other parameters used in `\@sectitle`; I don't think there's the slightest requirement for them to be registers (since they're constant values, AFAIK), but converting them to macros would remove the essentially useless functionality of being able to change them using assignment, which I'm not about to struggle with just now...

`\AboveTitleSkip` and `\BelowTitleSkip` are what you'd expect; `\strulethickness` is the value to use for `\fboxrule` when setting the title, and for the rule above titles when there is no box.

```
1079 \newskip\AboveTitleSkip \AboveTitleSkip=12\p@  
1080 \newskip\BelowTitleSkip \BelowTitleSkip=8\p@  
1081 \newdimen\strulethickness \strulethickness=.6\p@
```

`\@sectitle` actually generates the section title (in a rather generous box). It gets called from `\maketitle` under conditional `\ifSecTitle`; by the time `\@sectitle` takes control, we already have `\SecTitlefalse`. This implementation uses  $\text{\LaTeX}$ 's `\framebox` command, on the grounds that one doesn't keep a dog and bark for oneself...

```
1082 \def\@sectitle #1{%
```

```

1083 \par
1084 \penalty-1000

```

### 3.16 Section headings

Redefine style of section headings to match plain *TUGboat*. Negative beforeskip suppresses following parindent. (So negate the stretch and shrink too).

These macros are called `\*head` in the plain styles.

Relaying via `\TB@startsection` detects inappropriate use of `\section*`. Of course, if (when) we use it, we need to avoid that relaying; this can be done by `\letting \TB@startsection to \TB@safec@startsection`, within a group.

First the version for use in the default case, when class option `NUMBERSEC` is in effect.

```

1195 \if@numbersec
1196   \def\section{\TB@startsection{{\section}}%
1197               1%
1198               \z@}
```

```

1199          {-8\p@ \oplus-2\p@ \ominus-2\p@}%
1200          {4\p@}%
1201          {\normalsize\bf\raggedright\hyphenpenalty=\OM}}}
1202 \def\subsection{\TB@startsection{{subsection}}%
1203          2%
1204          \z@%
1205          {-8\p@ \oplus-2\p@ \ominus-2\p@}%
1206          {4\p@}%
1207          {\normalsize\bf\raggedright\hyphenpenalty=\OM}}}
1208 \def\subsubsection{\TB@startsection{{subsubsection}}%
1209          3%
1210          \z@%
1211          {-8\p@ \oplus-2\p@ \ominus-2\p@}%
1212          {4\p@}%
1213          {\normalsize\bf\raggedright\hyphenpenalty=\OM}}}
1214 \def\paragraph{\TB@startsection{{paragraph}}%
1215          4%
1216          \z@%
1217          {4\p@ \oplus1\p@ \ominus1\p@}%
1218          {-1em}%
1219          {\normalsize\bf}}}

```

Now the version if class option NONUMBER is in effect, i.e., if `\if@numbersec` is false.

```

1220 \else
1221   \setcounter{secnumdepth}{0}
1222   \def\section{\TB@nolimelabel
1223     \TB@startsection{{section}}%
1224     1%
1225     \z@%
1226     {-8\p@ \oplus-2\p@ \ominus-2\p@}%
1227     {4\p@}%
1228     {\normalsize\bf\raggedright\hyphenpenalty=\OM}}}
1229 \def\subsection{\TB@nolimelabel
1230   \TB@startsection{{subsection}}%
1231   2%
1232   \z@%
1233   {-8\p@ \oplus-2\p@ \ominus-2\p@}%
1234   {-0.5em\oplus-\fontdimen3\font}%
1235   {\normalsize\bf\raggedright\hyphenpenalty=\OM}}}
1236 \def\subsubsection{\TB@nolimelabel
1237   \TB@startsection{{subsubsection}}%
1238   3%
1239   \parindent%
1240   {-8\p@ \oplus-2\p@ \ominus-2\p@}%
1241   {-0.5em\oplus-\fontdimen3\font}%
1242   {\normalsize\bf\raggedright\hyphenpenalty=\OM}}}
1243 \fi

```

`\TB@startsection` used to warn about \* versions of sectioning commands when numbering wasn't in effect. But that eventually seemed a useless complaint, since it can be useful to switch back and forth between numbered and unnumbered can be useful during article development. So now `\TB@startsection` is just a synonym for `\@startsection`.

```
1244 \def\TB@startsection#1{\@startsection#1}%
```

`\TB@safe@startsection` is to be used where `\section*` (etc.) appear in places where the request is OK (because it's built in to some macro we don't fiddle with).

```
1245 \def\TB@safe@startsection#1{\@startsection#1}
```

The `SafeSection` environment allows use of \*-forms of sectioning environments. It's not documented for the general public: it's intended as an editor's facility.

```
1246 \newenvironment{SafeSection}%
1247   {\let\TB@startsection\TB@safe@startsection}%
1248 {}
```

And now for the exciting sectioning commands that L<sup>A</sup>T<sub>E</sub>X defines but we don't have a definition for (whatever else, we don't want Lamport's originals, which come out 'like the blare of a bugle in a lullaby'<sup>1</sup>).

The three inappropriate ones are subparagraph (indistinguishable from paragraph), and chapter and part. The last seemed almost to be defined in an early version of these macros, since there was a definition of `\l@part`. I've not got down to where that came from (or why). If class option NONUMBER is in effect, we also suppress `\paragraph`, since it has no parallel in the plain style.

```
1249 \if@numbersec
1250   \def\subparagraph{\TB@nosection\subparagraph\paragraph}
1251 \else
1252   \def\paragraph{\TB@nosection\paragraph\subsubsection}
1253   \def\subparagraph{\TB@nosection\subparagraph\subsubsection}
1254 \fi
1255 \def\chapter{\TB@nosection\chapter\section}
1256 \def\part{\TB@nosection\part\section}
1257 \def\TB@nosection#1#2{\TBWarning{class does not support \string#1,
1258   \string#2\space used instead}#2}
```

`\l@<sectioning-name>` is for table of contents (of an article). We define new macros to allow easily changing the font used for toc entries (for *TUGboat*, we usually want roman, not bold), and the space between entries. Nelson Beebe and Frank Mittelbach's articles often have toc's (and few others). Also turn off microtype protrusion after

---

<sup>1</sup>Thurber, *The Wonderful O*

## Contents

or leaders get messed up.

```
1259 \def\TBtocsectionfont{\normalfont}
1260 \newskip\TBtocsectionspace \TBtocsectionspace=1.0ex\@plus\p@
1261 \def\l@section#1#2{\addpenalty{\@secpenalty}%
1262   \addvspace{\TBtocsectionspace}%
1263   \tempdima 1.5em
1264   \begingroup
1265     \parindent\z@ \rightskip\z@ % article style makes \rightskip > 0
1266     \parfillskip\z@
1267     \TBtocsectionfont
1268     \leavevmode\advance\leftskip\tempdima\hskip-\leftskip#1\nobreak\hfil
1269     \nobreak\hb@xt@\pnumwidth{\hss #2}\par
1270   \endgroup}
```

### 3.17 Appendices

Appendices (which are really just another sort of section heading) raise a problem: if the sections are unnumbered, we plainly need to restore the section numbering, which in turn allows labelling of section numbers again (`\TBNolimelabel` happens before the `\refstepcounter`, so its effects get lost ... what a clever piece of design that was). So here we go:

```
1271 \renewcommand{\appendix}{\par
1272   \renewcommand{\thesection}{\@Alph{c@section}}%
1273   \setcounter{section}{0}%
1274   \if@numbersec
1275   \else
1276     \setcounter{secnumdepth}{1}%
1277   \fi}
```

Now: is this the start of an appendix environment? This can be detected by looking at `\@currenvir`; if we are, we need to relay to `\@appendix@env` to pick up the optional argument.

```
1278 \def\@tempa{appendix}
1279 \ifx\@tempa\@currenvir
1280   \expandafter\@appendix@env
1281 \fi
1282 }
```

Here we deal with `\begin{appendix}[\langle app-name\rangle]`

```
1283 \newcommand{\app@prefix@section}{}%
1284 \newcommand{\@appendix@env}[1][Appendix]{%
1285   \renewcommand{\@seccntformat}[1]{\csname app@prefix##1\endcsname
1286     \csname the##1\endcsname\quad}%
1287   \renewcommand{\app@prefix@section}{#1 }%
1288 }
```

Ending an appendix environment is pretty trivial...

```
1289 \let\endappendix\relax
```

### 3.18 References

If the sections aren't numbered, the natural tendency of the author to cross-reference (which, after all, is one of the things L<sup>A</sup>T<sub>E</sub>X is for ever being advertised as being good at) can cause headaches.

The following command is used by each of the sectioning commands to make a following \ref command bloop at the author. Even if the author then ignores the complaint, the poor old editor may find the offending \label rather more easily.

(Note that macro name is to be read as "*noli me label*" (I don't know the mediæval Latin for 'label').

**Comment** To come (perhaps): detection of the act of labelling, and an analogue of \ifG@refundefined for this sort of label

```
1290 \def\TB@nolimelabel{%
1291   \def\@currentlabel{%
1292     \protect\TBWarning{%
1293       Invalid reference to numbered label on page \thepage
1294       \MessageBreak made%
1295     }%
1296     \textbf{?}%
1297   }%
1298 }
```

### 3.19 Title references

This is a first cut at a mechanism for referencing by the title of a section; it employs the delightfully simple idea Sebastian Rahtz has in the `nameref` package (which is part of `hyperref`). As it stands, it lacks some of the bells and whistles of the original, but they could be added; this is merely proof-of-concept.

The name label comes from the moveable bit of the section argument; we subvert the \@sect and \@ssect commands (the latter deals with starred section commands) to grab the relevant argument.

```
1299 \let\TB@@sect\@sect
1300 \let\TB@@ssect\@ssect
1301 \def\@sect#1#2#3#4#5#6[#7]{#8}{%
1302   \def\@currentlabelname{#7}{%
1303     \TB@@sect{#1}{#2}{#3}{#4}{#5}{#6}{[#7]}{#8}{%
1304   }%
1305   \def\@ssect#1#2#3#4#5{%
1306     \def\@currentlabelname{#5}{%
1307       \TB@@ssect{#1}{#2}{#3}{#4}{#5}{%
1308     }}
```

We output the name label as a second `\newlabel` command in the `.aux` file. That way, packages such as `variorref` which also read the `.aux` information can still work. So we redefine `\label` to first call the standard L<sup>A</sup>T<sub>E</sub>X `\label` and then write our named label as `nr<label>`.

```
1309 \let\@savelatexlabel=\label % so save original LaTeX command
1310 %
1311 \def\label#1{%
1312   \@savelatexlabel{#1}%
1313   \@bsphack
1314   \if@filesw
1315     \protected@write\@auxout{}{%
1316       {\string\newlabel{nr@#1}{{\@currentlabel}{\@currentlabelname}}}}%
1317   \fi
1318   \@esphack
1319 }
```

Of course, in the case of a sufficiently mad author, there will be no sectioning commands, so we need to

```
1320 \let\@currentlabelname\@empty
```

Getting named references is then just like getting page references in the L<sup>A</sup>T<sub>E</sub>X kernel (see `ltxref.dtx`).

```
1321 \DeclareRobustCommand{\nameref}[1]{\expandafter\@setref
1322   \csname r@nr@#1\endcsname\@secondoftwo{#1}}
```

### 3.20 Float captions

By analogy with what we've just done to section titles and the like, we now do our best to discourage hyphenation within captions. We also typeset them in `\small` (actually `\tubcaptionfonts`).

First, let's define a dimension by which we will indent full-page captions. We'll also use this to indent abstracts in proceedings style.

```
\@tubfullpageindent
1323 \newdimen\@tubfullpageindent
1324 \@tubfullpageindent = \if@tubtwocolumn 4.875pc \else 3.875pc \fi
1325 \let\tubcaptionleftglue=\hfil
```

One-line captions are normally centered, but sometimes we want to set them flush-left for consistency with other nearby figures.

```
\tubcaptionleftglue
1326 \let\tubcaptionleftglue=\hfil
      Ok, here is \@makecaption.
1327 \def\tubcaptionfonts{\small}%
1328 \long\def\@makecaption#1#2{%
1329   \vskip\abovecaptionskip
1330   \sbox{\tempboxa{\tubcaptionfonts \frenchspacing \tubmakecaptionbox{#1}{#2}}}% try in an hbox
```

```

1331 \ifdim \wd\@tempboxa > \hsize
1332   %% caption doesn't fit on one line; set as a paragraph.
1333   \tubcaptionfonts \raggedright \hyphenpenalty=\@M \parindent=1em
1334   % indent full-width captions {figure*}, but not single-column {figure}.
1335   \ifdim\hsize = \textwidth
1336     \leftskip=\@tubfullpageindent \rightskip=\leftskip
1337     \advance\rightskip by 0pt plus2em % increase acceptable raggedness
1338   \fi
1339   \noindent \tubmakecaptionbox{\#1}{\#2}\par}%
1340 \else
1341   % fits on one line; use the hbox, centered. Do not reset its glue.
1342   \global\@minipagetrue
1343   \hb@xt@\hsize{\tubcaptionleftglue\box\@tempboxa\hfil}%
1344 \fi
1345 \vskip\belowcaptionskip}
1346 %
1347 \def\tubmakecaptionbox{\#1\#2}{\#1:\#2} % allow overriding for a paper

```

Also use \tubcaptionfonts for the caption labels, and put the label itself (e.g., “Figure 1”) in bold.

```

1348 \def\fnum@figure{{\tubcaptionfonts \bf \figurename\nobreakspace\thefigure}}
1349 \def\fnum@table{{\tubcaptionfonts \bf \tablename\nobreakspace\thetable}}

```

Let’s reduce the default space above captions a bit, and give it some flexibility. The default is 10pt, which seems too much.

```

1350 \setlength\abovecaptionskip{6pt plus1pt minus1pt}

```

### 3.21 Size changing commands

Apart from their ‘normal’ effects, these commands change the glue around displays.

```

1351 \renewcommand{\normalsize}{%
1352   \@setfontsize\normalsize\@xipt\@xiipt
1353   \abovedisplayskip=3\p@ \plus 3\p@ \minus \p@
1354   \belowdisplayskip=\abovedisplayskip
1355   \abovedisplayshortskip=\z@ \plus 3\p@
1356   \belowdisplayshortskip=\p@ \plus 3\p@ \minus \p@
1357 }
1358
1359 \renewcommand{\small}{%
1360   \@setfontsize\small\@ixpt{11}%
1361   \abovedisplayskip=2.5\p@ \plus 2.5\p@ \minus \p@
1362   \belowdisplayskip=\abovedisplayskip
1363   \abovedisplayshortskip=\z@ \plus 2\p@
1364   \belowdisplayshortskip=\p@ \plus 2\p@ \minus \p@
1365 }
1366
1367 \renewcommand{\footnotesize}{%
1368   \@setfontsize\footnotesize\@viiipt{9.5}%

```

```

1369     \abovedisplayskip=3\p@+\p@-\p@
1370     \belowdisplayskip=\abovedisplayskip
1371     \abovedisplayshortskip=\z@+\p@-\p@
1372     \belowdisplayshortskip=\p@+\p@-\p@
1373 }

```

### 3.22 Lists and other text inclusions

```

1374 \def\@listi{%
1375   \leftmargin\leftmargini\parsep=\p@+\p@-\p@
1376   \itemsep=\parsep
1377   \listparindent=1em
1378 }
1379
1380 \def\@listii{%
1381   \leftmargin\leftmarginii
1382   \labelwidth=\leftmarginii \advance\labelwidth-\labelsep
1383   \topsep=2\p@+\p@-\p@
1384   \parsep=\p@+\p@-\p@
1385   \itemsep=\parsep
1386   \listparindent=1em
1387 }
1388
1389 \def\@listiii{%
1390   \leftmargin=\leftmarginiii
1391   \labelwidth=\leftmarginiii \advance\labelwidth-\labelsep
1392   \topsep=\p@+\p@-\p@
1393   \parsep=\z@
1394   \itemsep=\topsep
1395   \listparindent=1em
1396 }
1397 \def\quote{\list{}{\rightmargin.5\leftmargin}\item[]}

```

From Dominik Wujastyk's font article. First paragraph of a quotation will not be indented, and right margin is decreased for narrow columns.

```

1398 \renewcommand{\quotation}{\list{}{\listparindent 1.5em
1399   \rightmargin.5\leftmargin\parsep \z@+\p@\item[]}

```

The `compactitemize`, `compactenumerate`, and `compactdescription` environments, without space between the items.

```

1400 \newenvironment{compactitemize}%
1401   {\begin{itemize}%
1402    \setlength{\itemsep}{0pt}%
1403    \setlength{\parskip}{0pt}%
1404    \setlength{\parsep}{0pt}%
1405   }%
1406   {\end{itemize}%
1407 }%
1408 \newenvironment{compactenumerate}%
1409   {\begin{enumerate}%
1410    \setlength{\itemsep}{0pt}%

```

```

1411      \setlength{\parskip}{0pt}%
1412      \setlength{\parsep} {0pt}%
1413  }%
1414  {\end{enumerate}}
1415 %
1416 \newenvironment{compactdescription}%
1417  {\begin{description}%
1418  \setlength{\itemsep}{0pt}%
1419  \setlength{\parskip}{0pt}%
1420  \setlength{\parsep} {0pt}%
1421 }%
1422 {\end{description}}
1423 %

```

### 3.23 Some fun with verbatim

The `plain` *TUGboat* style allows [optional] arguments to its `\verb+` command. This will allow the author (or editor) to specify a range of exciting features; we would definitely like the numbered verbatim style for code (that facility is reserved for a future version of this package), and the present little bit of code imposes the `\ruled` option on the built-in `\verb+` environment. (Note that we don't yet deal with `\verb+*`, which is in itself an option to the `plain` original.)

We start by saving various bits and bobs whose operation we're going to subvert.

```

1424 \%let\@TB@\verb+\@verbatim+
1425 \let\@TB\verb+\verb+
1426 \let\@TB\end\verb+\end\verb+

```

Impose an optional argument on the environment.

We start the macro with `\par` to avoid a common error: if the optional argument is `\small`, and the document has no blank line before the verbatim block, we don't want that preceding paragraph to be set with `\small`'s line spacing.

(`\obeylines` added to prevent the `\futurelet` from propagating into the body of the verbatim, thus causing lines that start with odd characters (like `#` or even `\`) to behave peculiarly.)

```

1427 \def\verb+\@par\obeylines
1428   \futurelet\reserved@a\@switch@sqbverbatim}
1429 %
1430 \def\@switch@sqbverbatim{\ifx\reserved@a[%
1431   \expandafter\@sbverbatim\else
1432   \def\reserved@b{\@sbverbatim[]}\expandafter\reserved@b\fi}
1433 %
1434 \def\@sbverbatim[#1]{%

```

The optional argument consists entirely of functions that modify the appearance of the environment. Following the `plain` style, we define the functions we can execute in the optional argument here.

The command `\ruled` tells us that there should be rules above and below the verbatim block.

```

1435 \def\ruled{\let\if@ruled\iftrue}%
The command \makevmeta says to make !...; do <...>.
1436 \def\makevmeta{\makeescape! \let<\tubverb@meta \tubverb@clearliglist}
1437 \def\tubverb@meta##1>{\meta{##1}}

```

The default verbatim defines “;,- as active characters to do stop ligatures; remove ; from the list so we get normal characters. Just hope that the CM ; ligatures aren’t used.

```

1438 \def\tubverb@clearliglist{%
1439   \def\verbatim@nolig@list{\do\`{\do\,\do\`{\do\-\}}%
1440 }

```

Then we execute the arguments we’ve got, and relay to a (hacked) copy of the L<sup>A</sup>T<sub>E</sub>X verbatim environment.

```
1441 #1\@TBverbatim}
```

The built-in environment itself relays to \verbatim, which we’ve subverted to impose our views on appearance.

```
1442 \def\@verbatim{%
```

First, we deal with \ruled:

```
1443 \if@ruled\trivlist\item\hrule\kern5\p@\nobreak\fi
```

Now, the code out of the original verbatim environment:

```

1444 \trivlist \item\relax
1445 \if@minipage\else\vskip\parskip\fi
1446 \leftskip\@totalleftmargin\rightskip\z@skip
1447 \parindent\z@\parfillskip\@flushglue\parskip\z@skip
1448 \@@par
1449 \tempswafalse
1450 \def\par{%
1451   \if@tempswa
1452     \leavevmode \null \@@par\penalty\interlinepenalty
1453   \else
1454     \tempswatrue
1455     \ifhmode\@@par\penalty\interlinepenalty\fi
1456   \fi}%
1457 \obeylines \verbatim@font \noligs
1458 \let\do\@makeother \dospecials
1459 \everypar \expandafter{\the\everypar \unpenalty}%
1460 }% end |\@sqbverbatim|

```

To end the environment, we do everything in reverse order: relay via the copy we made of \endverbatim, and then finish off the option changes (again \ruled only, so far).

```

1461 \def\endverbatim{\@TBendverbatim
1462 \if@ruled\kern5\p@\hrule\endtrivlist\fi}

```

Define the \if used by the \ruled option:

```
1463 \let\if@ruled\iffalse
```

Finally, if `microtype` is loaded, we want it to be deactivated in verbatim blocks. It often manipulates a leading \ rather too much, and messes with the visible fixed-width alignment.

```
1464 \AtBeginDocument{%
1465   \@ifpackageloaded{microtype}%
1466     {\g@addto@macro\@verbatim{\microtypesetup{activate=false}}}{}
1467 }
```

### 3.24 Bibliography

This is more or less copied verbatim from Glenn Paulley's *chicago.sty* (`gnpaulle@bluebox.uwaterloo.ca`). It produces an author-year citation style bibliography, using output from the `BIBTEX` style file based on that by Patrick Daly. It needs extra macros beyond those in standard `LATEX` to function properly. The form of the bibitem entries is:

```
\bibitem[\protect\citetitle{Jones, Baker, and Smith}%
{Jones et al.}{1990}{key}...]
```

The available citation commands are:

<code>\cite{key}</code>	→ (Jones, Baker, and Smith 1990)
<code>\citeA{key}</code>	→ (Jones, Baker, and Smith)
<code>\citeNP{key}</code>	→ Jones, Baker, and Smith 1990
<code>\citeANP{key}</code>	→ Jones, Baker, and Smith
<code>\citeN{key}</code>	→ Jones, Baker, and Smith (1990)
<code>\shortcite</code>	→ (Jones et al. 1990)
<code>\citeyear</code>	→ (1990)
<code>\citeyearNP</code>	→ 1990

First of all (after checking that we're to use Harvard citation at all), make a copy of `LATEX`'s default citation mechanism.

```
1468 \if@Harvardcite
1469 \let\@internalcite\cite
```

Normal forms.

```
1470 \def\cite{\def\@citeseppen{-1000}%
1471   \def\@cite##1##2{##1\if@tempswa , ##2\fi) }%
1472   \def\citetitle##1##2##3{##1, ##3}\@internalcite%
1473 \def\citeNP{\def\@citeseppen{-1000}%

```

\thebibliography If the user's asked to use L<sup>A</sup>T<sub>E</sub>X's default citation mechanism (using the `rawcite` option), we still need to patch `\sloppy` to support justification of the body of the bibliography. We kludge in a call to `\frenchspacing` too, since there is no reason to change only period's `\sfcode`, as L<sup>A</sup>T<sub>E</sub>X's original `thebibliography` (in `classes.dtx`) does.

By the way, `amsgen.sty` changes `\frenchspacing` to set the `\sfcode` of punctuation character to successively decreasing integers ending at 1001 for comma. Thus its 1006 for period is overwritten to 1000 for `thebibliography`, making `amsgen`'s `\@addpunct` ineffective. Don't know what that means in practice, if anything.

Back here, we also play with `The TEXbook@startsection` since we always have, though that is no longer needed.

```

1569 \else % not harvardcite
1570 \let\TB@origthebibliography\thebibliography
1571 \def\thebibliography{%
1572   \let\TB@startsection\TB@safe@startsection
1573   \def\sloppy{\frenchspacing\BibJustification}%
1574   \TB@origthebibliography} % latex's thebibliography now reads args.
1575 \fi % not harvardcite

```

\BibJustification \BibJustification defines how the bibliography is to be justified. The Lamport \SetBibJustification default is simply “`\sloppy`”, but we regularly find some sort of ragged right setting \TB@@sloppy is appropriate. (`\BibJustification` is nevertheless reset to its default value at the start of a paper.)

```

### 3.27 Output routine

Modified to alter `\brokenpenalty` across columns

*Comment* We're playing with fire here: for example, `\outputdblcol` has changed in L<sup>A</sup>T<sub>E</sub>X 2<sub><</sub> for 1995/06/01 (with the use of `\hb@xt@`). This time there's no semantic change, but...

```

1648 \def\@outputdblcol{\if@firstcolumn \global\@firstcolumnfalse
1649   \global\setbox\@leftcolumn\box\@outputbox
1650   \global\brokenpenalty10000
1651 \else \global\@firstcolumntrue
1652   \global\brokenpenalty100
1653   \setbox\@outputbox\vbox{\hb@xt@\textwidth{\hb@xt@\columnwidth
1654     {\box\@leftcolumn \hss}\hfil \vrule \width\columnsep\hfil
1655     \hb@xt@\columnwidth{\box\@outputbox \hss}}}\@combinedblfloats
1656   \outputpage \begingroup \@dblfloatplacement \@startdblcolumn
1657   \@whiles\if\fcolmade \fi{\@outputpage\@startdblcolumn}\endgroup
1658   \fi}

```

### 3.28 Font-related definitions and machinery

These are mostly for compatibility with plain `tugboat.sty`

```

1659 \newif\ifFirstPar      \FirstParfalse
1660 \def\smc{\sc}
1661 \def\ninepoint{\small}
1662 \classe{clastail}

```

`\SMC` isn't small caps—Barbara Beeton says she thinks of it as “big small caps”. She says (modulo capitalisation of things...):

For the things it's used for, regular small caps are not appropriate—they're too small. Real small caps are appropriate for author names

(and are so used in continental bibliographies), section headings, running heads, and, on occasion, words to which some emphasis is to be given. `\SMC` was designed to be used for acronyms and all-caps abbreviations, which look terrible in small caps, but nearly as bad in all caps in the regular text size. The principle of using “one size smaller” than the text size is similar to the design of caps in German—where they are smaller relative to lowercase than are caps in fonts intended for English, to improve the appearance of regular text in which caps are used at the heads of all nouns, not just at the beginnings of sentences.

We define this in terms of the memory of the size currently selected that’s maintained in `\@currsize`: if the user does something silly re. selecting fonts, we’ll get the wrong results. The following code is adapted from an old version of `relsize.sty` by Donald Arseneau and Matt Swift. (The order of examination of `\@currsize` is to get the commonest cases out of the way first.)

```

1663 <*common>
1664 \DeclareRobustCommand{\SMC}{%
1665   \ifx\@currsize\normalsize\small\else
1666   \ifx\@currsize\small\footnotesize\else
1667   \ifx\@currsize\footnotesize\scriptsize\else
1668   \ifx\@currsize\large\normalsize\else
1669   \ifx\@currsize\Large\large\else
1670   \ifx\@currsize\LARGE\Large\else
1671   \ifx\@currsize\scriptsize\tiny\else
1672   \ifx\@currsize\tiny\tiny\else
1673   \ifx\@currsize\huge\LARGE\else
1674   \ifx\@currsize\Huge\huge\else
1675   \small\SMC@unknown@warning
1676 \fi\fi\fi\fi\fi\fi\fi\fi
1677 }
1678 \newcommand{\SMC@unknown@warning}{\TBWarning{\string\SMC: nonstandard
1679   text font size command -- using \string\small}}
1680 \newcommand{\textSMC}[1]{\SMC #1}

```

The `\acro` command uses `\SMC` as it was originally intended. Since these things are uppercase-only, it fiddles with the spacefactor after inserting its text.

```

1681 \newcommand{\acro}[1]{\textSMC{#1}\@}
1682 </common>

```

### 3.29 Miscellaneous definitions

`\EdNote` allows the editor to enter notes in the text of a paper. If the command is given something that appears like an optional argument, the entire text of the note is placed in square brackets. (Yes, it really is!)

```

1683 <*classestail>

### 3.30 Initialization

If we're going to use Harvard-style bibliographies, we set up the bibliography style: the user doesn't get any choice.

```

1738 \if@Harvardcite
1739   \AtBeginDocument{%
1740     \bibliographystyle{ltugbib}%
1741   }
1742 \fi
1743 \authornumber{z@}
1744 \let\@signature\@defaultsignature
1745 \InputIfFileExists{ltugboat.cfg}{\TBInfo{Loading ltugboat
1746                                     configuration information}}{%
1747   </classtail>}
```

## 4 L<sup>A</sup>T<sub>E</sub>X 2 <sub>$\varepsilon$</sub> Proceedings class

`\@tugclass` Make the code of `ltugboat.cls` (when we load it) say it's really us:

```

1748 <!*tugprocls>
1749 \def\@tugclass{ltugproc}
```

`\if@proc@sober` TUG'96 proceedings switched to more sober headings still; so the `tug95` option  
`\if@proc@numerable` establishes the original state. In the absence of any other guidance, we use the '96  
for TUG'97 proceedings, but also allow numbering of sections.

```

1750 \newif\if@proc@sober
1751 \newif\if@proc@numerable
1752 \DeclareOption{tug95}{%
1753   \if@proc@soberfalse
1754   \if@proc@numerablefalse
1755   \fi
1756 \DeclareOption{tug96}{%
1757   \if@proc@sobertrue
1758   \if@proc@numerablefalse
1759   \fi
1760 \DeclareOption{tug97}{%
1761   \if@proc@sobertrue
1762   \if@proc@numerabletrue
```

```

1763 }
1764 \DeclareOption{tug2002}{%
1765   \c@proc@sobertrue
1766   \c@proc@numerabletrue
1767   \let\if@cproc@numbersec\iftrue
1768   \PassOptionsToClass{numbersec}{ltugboat}%
1769 }

```

**\if@cproc@numbersec** If we're in a class that allows section numbering (the actual check occurs after `\ProcessOptions`, we can have the following:

```

1770 \DeclareOption{numbersec}{\let\if@cproc@numbersec\iftrue
1771   \PassOptionsToClass{numbersec}{ltugboat}%
1772 }
1773 \DeclareOption{nonumber}{\let\if@cproc@numbersec\iffalse
1774   \PassOptionsToClass{nonumber}{ltugboat}%
1775 }

```

**\ifTB@title** If we have a paper for which we want to create a detached title, with an editor's note, and then set the paper separately, we use option `notitle`.

```

1776 \newif\ifTB@title
1777 \DeclareOption{title}{\TB@titletrue}
1778 \DeclareOption{notitle}{\TB@titlefalse
1779   \AtBeginDocument{\stepcounter{page}}}

```

There are these people who seem to think `tugproc` is an option as well as a class...

```

1780 \DeclareOption{tugproc}{%
1781   \ClassWarning{\@tugclass}{Option \CurrentOption\space ignored}%
1782 }

```

All other options are simply passed to `ltugboat`...

```
1783 \DeclareOption*{\PassOptionsToClass{\CurrentOption}{ltugboat}}
```

If there's a `tugproc` defaults file, input it now: it may tell us which year we're to perform for... (Note: this code *is* millennium-proof. It's not terribly classy for years beyond 2069, but then I'm not going to be around then—this will be an interesting task for a future `TEXie`...)

```

1784 \InputIfFileExists{@tugclass.cfg}{\ClassInfo{ltugproc}%
1785   {Loading ltugproc configuration information}{}}
1786 \@ifundefined{TUGprocExtraOptions}%
1787   {\let\TUGprocExtraOptions\empty}%
1788   {\edef\TUGprocExtraOptions{\TUGprocExtraOptions}}

```

**\tugProcYear** Now work out what year it is

```

1789 \tempcnta\year
1790 \ifnum\tempcnta<2000
1791   \divide\tempcnta by100
1792   \multiply\tempcnta by100
1793   \advance\tempcnta-\year

```

```
1794  \tempcnta-\tempcnta
1795 \fi
```

And use that for calculating a year for us to use.

```
1796 \edef\tempa{\noexpand\providecommand\noexpand\tugProcYear
1797           {\ifnum10>\tempcnta0\fi\the\tempcnta}}
1798 \tempa
1799 \ClassInfo{ltugproc}{Class believes year is
1800   \expandafter\ifnum\tugProcYear<2000 19\fi\tugProcYear
1801   \gobble}
```

Check that this is a “sensible year” (one for which we have a class option defined). If not, make it a ‘suitable’ year, in particular, one that allows numbering sections.

```
1802 \expandafter\ifx\csname ds@tug\tugProcYear\endcsname\relax
1803   \def\tugProcYear{2002}\fi
```

Now execute the default ‘year’ option and get on with processing. Note that this command gets ignored if the configuration file specifies a silly year.

```
1804 \ExecuteOptions{tug\tugProcYear,title\TUGprocExtraOptions}
1805 \ProcessOptions
1806 \if@proc@numbersec
1807   \if@proc@enumerable
1808   \else
1809     \ClassWarning{\@tugclass}{This year's proceedings may not have
1810       numbered sections}%
1811   \fi
1812 \fi
```

Call `ltugboat`, adding whichever section numbering option is appropriate

```
1813 \LoadClass[\if@proc@numbersec numbersec\else nonumber\fi]{ltugboat}
```

## 4.1 Proceedings titles

`\maketitle` There’s no provision for ‘section titles’ in proceedings issues, as there are in *TUG-boat*. `\ifTB@madetitle` boat proper. Note the tedious L<sup>A</sup>T<sub>E</sub>X bug-avoidance in the `\@TB@test@document` macro.

```
1814 \def\maketitle{%
1815   \begingroup
```

first, a bit of flim-flam to generate an initial value for `\rhAuthor` (unless the user’s already given one with a `\shortAuthor` command).

```

```

**abstract** Save the contents of the abstract environment in the token register `\abstract@toks`.  
**\if@abstract** We need to do this, as otherwise it may get ‘typeset’ (previously, it got put in a box) before `\begin{document}`, and experiments prove that this means our shiny new `\SMC` doesn’t work in this situation.

If you need to understand the ins and outs of this code, look at the place I lifted it from: `tabularx.dtx` (in the tools bundle). The whole thing pivots on having stored the name of the ‘abstract’ environment in `\@abstract@`

```

1889 \newtoks\abstract@toks \abstract@toks={}
1890 \let\if@abstract\iffalse
1891 \def\abstract{%

## 4.2 Section divisions

Neither sections nor subsections are numbered by default in the proceedings style: note that this puts a degree of stress on authors' natural tendency to reference

sections, which is a matter that needs attention. The class option NUMBERSEC once again numbers the sections (and noticeably changes the layout).

```

1969 \if@proc@numbersec
1970 \else
1971   \setcounter{secnumdepth}{0}
1972 \fi

```

Otherwise, the `\section` command is pretty straightforward. However, the `\subsection` and `\subsubsection` are run-in, and we have to remember to have negative stretch (and shrink if we should in future choose to have one) on the `\afterskip` parameter of `\@startsection`, since the whole skip is going to end up getting negated. We use `\TB@startsection` to detect inappropriate forms.

```
