## 2 Introduction

This file contains all the macros for typesetting *TUGboat* with both plain T<sub>E</sub>X and L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub>.

### 2.1 Summary of control sequences

Abbreviations. Just a listing with indications of expansion where that may not be obvious. For full definitions, see real code below (Section 3.4).

\AllTeX (L<sup>A</sup>)T<sub>E</sub>X

\AMS	American Mathematical Society
\AmSTeX	
\aw	A-W (abbreviation for Addison-Wesley)
\API	
\AW	Addison-Wesley
\BibTeX	
\CandT	Computers & Typesetting
\ConTeXt	ConTeXt
\Cplusplus	C++
\DTD	
\DVD	
\DVI	
\DVIPDFMx	DVIPDFM $x$
\DVItoVDU	DVItoVDU
\ECMA	
\EPS	
\eTeX	$\varepsilon$ -TeX
\ExTeX	$\varepsilon_x$ TeX
\Ghostscript	
\Hawaii	Hawai‘i
\HTML	
\ISBN	ISBN
\ISO	
\ISSN	ISSN
\JTeX	
\JoT	The Joy of TeX
\LaTeX	
\LyX	
\macOS	mac OS
\Mac OSX	Mac OS X
\MathML	
\Mc	M with raised c
\MF	METAFONT
\mf	METAFONT
\MFB	The Metafontbook
\MP	METAPOST
\mp	MetaPost (in text only: still ‘ $\mp$ ’ in math)
\OMEGA	Omega ‘logo’ ( $\Omega$ )
\OCP	Omega compiled process
\OOXML	
\OTP	Omega translation process
\mtex	multilingual TeX
\NTS	New Typesetting System
\pcMF	pcMF
\PCTeX	
\pcTeX	

\Pas	Pascal
\PiCTeX	
\plain	plain (in typewriter font)
\POBox	P. O. Box
\PS	PostScript (with hyphenation)
\SC	Steering Committee
\SGML	SGML
\SliTeX	
\sLMF	Metafont, slanted: deprecated: use \textsl instead
\stTeX	T <small>E</small> X for the Atari ST
\SVG	
\TANGLE	
\TB	The T <small>E</small> Xbook
\TeX	(Although nearly every package defines this, most, including plain, are missing the spacefactor adjustment)
\TeXhax	
\TeXMaG	(defunct)
\TeXtures	
\TeXXeT	
\Thanh	
\TFM	TFM
\TUB	<i>TUGboat</i>
\TUG	T <small>E</small> X Users Group
\UNIX	
\VAX	
\VnTeX	
\VorTeX	
\XeT	
\XeTeX	reflected and lowered first ‘E’
\XeLaTeX	with extra space before ‘L’
\XML	
\WEB	
\WEAVE	
\WYSIWYG	

Macros for things that are slightly more significant.

\NoBlackBoxes	turns off marginal rules marking overfull boxes
\BlackBoxes	turns them back on
\newline	horizontal glue plus a break
\ifundefined#1	checks argument with \csname against \relax
\topsmash	smashes above baseline (from AMSTeX)
\botsmash	smashes below baseline (from AMSTeX)
\smash	smashes both (from plain)

\ulap	lap upwards
\dlap	lap downwards
\xlap	reference point at center horizontally; 0 width
\ylap	reference point at center vertically; 0 height, depth
\zlap	combination \xlap and \ylap
\basezero	to avoid insertion of baselineskip and lineskip glue
\nullhrule	empty \hrule
\nullvrule	empty \vrule
\makestrut[#1;#2]	ad hoc struts; #1=height, #2=depth
\today	today's date
\SetTime	converts \time to hours, minutes
\now	displays time in hours and minutes
\Now	shows current date and time
\ifPrelimDraft	flag to indicate status as preliminary draft
\rttitle	TUGboat volume and number info for running head
\midrttitle	information for center of running head
\rttitlenexttopage	next to page number in running head
\HorzR@gisterRule	pieces of registration marks ('trimmarks')
\DownShortR@gisterRule	
\UpShortR@gisterRule	
\ttopregister	top registration line with 'T' in center
\tbotregister	bottom registration line with inverted 'T' in center
\topregister	register actually used
\botregister	
\raggedskip	
\raggedstretch	parameters used for ragged settings
\raggedparfill	
\raggedspaces	
\raggedright	
\raggedleft	
\raggedcenter	
\normalspaces	
\raggedbottom	
\bull	square bullet
\cents	'cents' sign
\Dag	superscripted dagger
\careof	c/o
\sfrac	slashed fraction (arguments optionally separated by a slash)
\cs	control sequence name
\env	\cs{name}→\name environment name \env{name}→\begin{name}

\meta	meta-argument name \meta{name}→⟨name⟩
\dash	en-dash surrounded by thinspace; only breakable AFTER
\Dash	em-dash, as above
\hyph	permit automatic hyphenation after an actual hyphen
\slash	'breakable' slash
\nth	for obtaining '1 <sup>st</sup> ', '2 <sup>nd</sup> ', 3 <sup>rd</sup> , etc.
\tubissue	gets \TUB followed by volume and issue numbers
\xEdNote	Editor's Note:
\Review:	Review: (for title of book review article)
\reviewitem	begin data for item being reviewed
\revauth	with one argument, author(s) of item being reviewed
\revtitle	with one argument, title of ...
\revpubinfo	with one argument, other info pertaining to ...
\endreviewitem	end data for item being reviewed
\booktitle	with one argument, format book title as straight text
\Input	\input with some other bookkeeping for case where multiple articles are put together
\TBremark	reminder to <i>TUGboat</i> editorial staff
\TBEnableRemarks	enable \TBmarks (normally suppressed)
\pagexref	used to write out page numbers to screen and external files
\pagexrefON	
\pagexrefOFF	
\xrefto	used for symbolic cross-reference to other pages in <i>TUGboat</i>
\xreftoON	
\xreftoOFF	
\TBdriver	marks code which only takes effect when articles are run together in a driver file
\signaturemark	items for signatures
\signaturewidth	

### 3 L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub> *TUGboat* class file

#### 3.1 Setup and options

Check for reloading. Hmm... Does this happen with L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub> classes? Probably, in fact, as well that it doesn't, since the \tugstyinit referenced here doesn't exist; however, it's possible that we might need a similar mechanism in the future, so we retain its skeleton, without fleshing out the \tugstyinit bones.

```
19 (*!tugboatcls)
20 \csname tugstyloaded@\endcsname
```

```
21 \def\tugstyloaded@{\tugstyinit\endinput}
```

Acquire a name for this class if we don't already have one (by virtue of having been loaded by `tugproc.cls`). This name will be used in error messages and the like.

```
22 \providecommand{\@tugclass}{\tugboat}
```

Warnings/error messages/information messages—if we're using L<sup>A</sup>T<sub>E</sub>X 2 <sub>$\varepsilon$</sub>  we can use the `\Class*` commands:

```
23 \def\TBInfo{\ClassInfo{\@tugclass}}
24 \def\TBErro{\ClassError{\@tugclass}}
25 \def\TBWarning{\ClassWarning{\@tugclass}}
26 \def\TBWarningNL{\ClassWarningNoLine{\@tugclass}}
```

draft vs. preprint vs. final.

```
27 \DeclareOption{draft}{%
28   \AtEndOfClass{%
29     \setcounter{page}{901}%
30     %
31     % Put a question mark into the page number in draft mode.
32     \let\tuborigthepage=\thepage
33     \def\thepage{%
34       \ifnum\value{page}>900
35         \textsl{?\texorpdfstring{,\,}{\,}\arabic{\numexpr\the\c@page-900\relax}}%
36       \else
37         \arabic{page}%
38       \fi}%
39     %
40     \BlackBoxes
41     \def\MakeRegistrationMarks{}%
42     \PrelimDrafttrue
43   }%
44 }
45
46 \newif\ifpreprint
47 \def\preprint{\preprinttrue}
48 \DeclareOption{preprint}{%
49   \preprinttrue
50 }
51
52 \newif\iftubfinaloption % [final]
53 \DeclareOption{final}{%
54   \tubfinaloptiontrue
55   \AtEndOfClass{%
56     \let\thepage=\tuborigthepage
57     \NoBlackBoxes
58     % Insert draft date into the header even with [final], if we are not
59     % doing a production run. (tugboat.dates sets up page numbers
60     % above 900 in such pseudo-draft mode.) We use [final] in the first
61     % place for this case because draft can change page layout, wrt
```

```

62      % registration marks, etc.
63      \ifnum\value{page}>900 \PrelimDrafttrue \else \PrelimDraftfalse \fi
64      \@tubrunningfull
65  }%
66 }

```

We want to use `hyperref`'s `\texorpdfstring`, e.g., in the `draft` option above. If `hyperref` is not loaded, define our own trivial fallback to expand to the `TEX` (first) argument.

```

67 \AtBeginDocument{%
68   \ifx\undefined\texorpdfstring
69     \DeclareRobustCommand{\texorpdfstring}[2]{#1}%
70   \fi
71 }

```

*TUGboat* uses only 10pt for the main text.

```

72 \DeclareOption{11pt}{%
73   \TWarning{The \@tugclass\space class only supports 10pt fonts:}
74   \MessageBreak option \CurrentOption\space ignored}%
75 }
76 \DeclareOption{12pt}{\csname ds@11pt\endcsname}

```

Similarly, ignore one/two-side options.

```

77 \DeclareOption{oneside}{\TWarning{Option \CurrentOption\space ignored}}
78 \DeclareOption{twoside}{\ds@oneside}

```

There are these people who seem to think `tugproc` is an option rather than a class... (Note that it's already been filtered out if we were calling from `ltugproc`.)

```

79 \DeclareOption{tugproc}{%
80   \TWarning{Option \CurrentOption\space ignored: use class ltugproc
81   instead of \@tugclass}%
82 }

```

Option `rawcite` (the default) specifies the default citation mechanism (as built-in to `LATEX`); option `harvardcite` specifies the author-date citation mechanism defined in section 3.24 below.

```

83 \DeclareOption{rawcite}{\let\if@Harvardcite\iffalse}
84 \DeclareOption{harvardcite}{\let\if@Harvardcite\iftrue}

```

Option `extralabel` (the default) specifies that the publication years of two successive references with otherwise identical labels will be tagged with distinguishing letters; option `noextralabel` causes those letters to be suppressed. Note that (a) no two references will in any case have the same labels in the default (plain) `rawcite` setup, and that (b) the distinguishing letters appear in the labels themselves; the reader can work out the correspondence one with the other...

```

85 \DeclareOption{extralabel}{\let\UseExtraLabel\@firstofone}
86 \DeclareOption{noextralabel}{\let\UseExtraLabel\gobble}

```

The section-numbering style, so that we can allow the same heading layout as in the plain macros.

```
87 \DeclareOption{numbersec}{\let\if@numbersec\iftrue}
88 \DeclareOption{nonumber}{\let\if@numbersec\iffalse}
```

Minimal running headers/footers contain just the TUGboat volume/issue identification and page numbers. ‘runningfull’ is the default, and includes title and author. ‘runningoff’ makes both headers and footers empty.

```
89 \DeclareOption{runningoff}{\AtEndOfClass{\@tubrunningoff}}
90 \DeclareOption{runningminimal}{\AtEndOfClass{\@tubrunningminimal}}
91 \DeclareOption{runningfull}{\AtEndOfClass{\@tubrunningfull}}
```

Usually we want to print the doi if [final], else not. But sometimes we want to omit it even if [final], namely when we’re posting a review or other item early.

```
92 \newif\iftubomitdoioption
93 \DeclareOption{omitdoi}{%
94   \tubomitdoioptiontrue
95 }
```

**\if@tubtwocolumn** Occasionally (`tb107jackowski`, and past conference preprints), we need the option `onecolumn`. For alternative approaches to one-column articles, see `tb92hagen-euler` and `tb78milo`.

```
96 \newif\iftubtwocolumn \tubtwocolumntrue
97 \DeclareOption{onecolumn}{\tubtwocolumnfalse}
```

**\ifsecondcolstart** Occasionally, we need to start an article in the second column of a page, due to splicing with a previous article. Let’s try declaring that. Then, before `\maketitle`, we’ll force the move to the second column.

```
98 \newif\iftubsecondcolstart
99 \DeclareOption{secondcolstart}{\tubsecondcolstarttrue}
```

Any other options, we pass on to `article.cls` before we load it:

```
100 \DeclareOption*{\PassOptionsToClass{\CurrentOption}{article}}
```

Request default options (draft mode, standard citation, numbered sections, etc.), process all options, and then get the base document class on top of which we reside, namely `article`. Always call `article` with the `twoside` option, since we want the ability to have odd/even headers/footers.

```
101 \ExecuteOptions{draft,extralabel,numbersec,rawcite,runningminimal}
102 \ProcessOptions
103 \LoadClass[twoside]{article}
```

Various fonts used throughout. Some effort has been made to suppress these things with explicit sizes in the macro name (`\tensl` is an example below), but keeping in step with the documentation is one thing that restricts such a move.

```
104 \def\sectitlefont{\fontfamily{sfdefault}\fontseries{bx}\fontshape{n}%
105   \fontsize{10pt}\stbaselineskip\selectfont}
106 \def\tensl{\fontseries{m}\fontshape{sl}\fontsize{10pt}\selectfont
107   \selectfont}
```

This font selection command is used *only* for the ‘Editor’s Note’ introduction to notes; sadly it makes explicit reference to CMR, and Barbara Beeton has agreed that the reference may be constructed to use the current family such that, if no upright italic is defined, ordinary italics are used. A project for later...

```
108 \def\EdNoteFont{\fontfamily{cmr}\fontseries{m}\fontshape{ui}%
109     \selectfont}
110 {/ltugboatcls}
```

If Ulrik Vieth’s `mflogo.sty` is around, we’ll use it. Otherwise (pro tem, at least) we’ll warn the user and define the absolute minimum of machinery that *TUGboat* requires (that which was used prior to the invention of  $\text{\LaTeX} 2_{\varepsilon}$ ).

```
111 {*common}

```

### 3.2 Resetting at start of paper

<code>\ResetCommands</code> <code>\AddToResetCommands</code> <code>\StartNewPaper</code>	<p>We store a set of commands that should be executed at the start of each paper, before any paper-specific customisation. These commands (stored in the token register <code>\ResetCommands</code>) include things such as resetting section and footnote numbers, re-establishing default settings of typesetting parameters, and so on. The user (or more typically, editor) may execute the commands by using the command <code>\StartNewPaper</code>. Things I’ve not yet thought of may be added to the list of commands, by</p>
--	--

```
137 \newtoks\ResetCommands
```

```

138 \ResetCommands{%
139   \setcounter{part}{0}%
140   \setcounter{section}{0}%
141   \setcounter{footnote}{0}%
142   \authornumber\z@%
143 }
144 \newcommand{\AddToResetCommands}[1]{%
145   \AddToResetCommands\expandafter{\AddToResetCommands#1}%
146 }

```

### 3.3 Helpful shorthands (common code with Plain styles)

`\makeescape`, ..., `\makecomment` allow users to change the category code of a single character a little more easily. These require that the character be addressed as a control sequence: e.g., `\makeescape\`` will make ‘`\``’ an escape character.

```

147 <!*!latex>
148 \def\makeescape#1{\catcode`\#1=0 }
149 \def\makebgroup#1{\catcode`\#1=1 }
150 \def\makeegroup#1{\catcode`\#1=2 }
151 \def\makemath #1{\catcode`\#1=3 }
152 </!*!latex>
153 <!*!latex>
154 \def\makeescape#1{\catcode`\#1=\z@}
155 \def\makebgroup#1{\catcode`\#1=@ne}
156 \def\makeegroup#1{\catcode`\#1=\tw@}
157 \def\makemath #1{\catcode`\#1=\thr@@}
158 </!*!latex>
159 \def\makealign #1{\catcode`\#1=4 }
160 \def\makeeol #1{\catcode`\#1=5 }
161 \def\makeparam #1{\catcode`\#1=6 }
162 \def\makesup #1{\catcode`\#1=7 }
163 \def\makesub #1{\catcode`\#1=8 }
164 \def\makeignore#1{\catcode`\#1=9 }
165 \def\makespace #1{\catcode`\#1=10 }
166 \def\makeletter#1{\catcode`\#1=11 }
167 \chardef\other=12
168 \let\makeother\@makeother
169 \def\makeactive#1{\catcode`\#1=13 }
170 \def\makecomment#1{\catcode`\#1=14 }

```

`\savecat#1` and `\restorecat#1` will save and restore the category of a given character. These are useful in cases where one doesn’t wish to localize the settings and therefore be required to globally define or set things.

```

171 \def\savecat#1{%
172   \expandafter\xdef\csname/string#1\endcsname{\the\catcode`\#1}%
173 \def\restorecat#1{\catcode`\#1=\csname/string#1\endcsname}%
174 <!*!latex>\savecat\@%
175 <!*!latex>\makeletter\@%

```

`\SaveCS#1` and `\RestoreCS#1` save and restore ‘meanings’ of control sequences. Again this is useful in cases where one doesn’t want to localize or where global definitions clobber a control sequence which is needed later with its ‘old’ definition.

```
176 \def\SaveCS#1{\expandafter\let\csname saved@@#1\expandafter\endcsname
177   \csname#1\endcsname}
178 \def\RestoreCS#1{\expandafter\let\csname#1\expandafter\endcsname
179   \csname saved@@#1\endcsname}
```

To distinguish between macro files loaded

```
180 \def\plaintubestyle{plain}
181 \def\latextubestyle{latex}
```

Control sequences that were first defined in L<sup>A</sup>T<sub>E</sub>X 2<sub>E</sub> of 1995/06/01 (or later), but which we merrily use. Only define if necessary:

```
182 \providecommand\hb@xt@{\hbox to}
183 \providecommand\textsuperscript[1]{\ensuremath{\m@th
184   ^{\hbox{\scriptsize\sf@size\z@\selectfont #1}}}}
```

(Note that that definition of `\textsuperscript` isn’t robust, but probably doesn’t need to be... What’s more, it doesn’t appear in the mythical 2.09 version of the package.)

### 3.4 Abbreviations and logos

Font used for the METAFONT logo, etc.

```
186 \DeclareRobustCommand{\AllTeX}{(\La\kern-.075em)\kern-.075em\TeX}
187 \def\AMS{American Mathematical Society}
188 \def\AmS{$\mathcal{A}$}\kern-.1667em\lower.5ex\hbox

```

We started with the intention that we wouldn't redefine \LaTeX when we're running under it, so as not to trample on an existing definition. However, this proves less than satisfactory; a single logo may be OK for the run of documents, but for *TUGboat*, we find that something noticeably better is necessary; see section 3.12.

XeTeX requires reflecting the first E, hence we complain if the graphics package is not present. (For plain documents, this can be loaded via `miniltx` or `Eplain`.) Also, at Barbara's suggestion, if the current font is slanted, we rotate by 180 instead of reflecting so there is a better chance to look ok. (The magic values here seem more or less ok for `cmsl` and `cmti`.)

```

Hyphen control: first, we save the hyphenpenalties in `\allowhyphens`. This allows us to permit hyphens temporarily in things like `\netaddresses`, which typically occur when `\raggedright` is set, but which need to be allowed to break at their artificial discretionaries.

```

428 \edef\allowhyphens{\noexpand\hyphenpenalty\the\hyphenpenalty\relax
429   \noexpand\exhyphenpenalty\the\exhyphenpenalty\relax}
430 \def\nohyphens{\hyphenpenalty\@M\exhyphenpenalty\@M}

```

### 3.6 Utility registers and definitions

We define a few scratch registers (and the like) for transient use; they're all paired: an internal one (`\T@st*`) and an external one (`\Test*`).

*Comment:* Exercise for an idle day: find whether all these are necessary, or whether we can use the L<sup>A</sup>T<sub>E</sub>X temporaries for some (or all) of the `\T@st*` ones.

*Comment:* (bb) All these registers are used in the plain version, `tugboat.sty`.

```
431 \newbox\T@stBox           \newbox\TestBox
432 \newcount\T@stCount       \newcount\TestCount
433 \newdimen\T@stDimen        \newdimen\TestDimen
434 \newif\ifT@stIf           \newif\ifTestIf
```

Control sequence existence test, stolen from T<sub>E</sub>Xbook exercise 7.7 (note that this provides functionality that in some sense duplicates something within L<sup>A</sup>T<sub>E</sub>X).

```
435 \def\ifundefined#1{\expandafter\ifx\csname#1\endcsname\relax }
```

L<sup>A</sup>T<sub>E</sub>X conventions which are also useful here.

```

### 3.7 Ragged right and friends

\raggedskip Plain *TeX*'s definition of \raggedright doesn't permit any stretch, and results in too many overfull boxes. We also turn off hyphenation. This code lies somewhere between that of Plain *TeX* and of *L<sup>A</sup>T<sub>E</sub>X*.

\raggedstretch 486 \newdimen\raggedskip \raggedskip=\z@

\raggedparfill 487 \newdimen\raggedstretch \raggedstretch=5em % ems of font set now (10pt)

\raggedspaces 488 \newskip\raggedparfill \raggedparfill=\z@\oplus 1fil

489 \def\raggedspaces{\spaceskip=.3333em \relax \xspaceskip=.5em \relax }

```

\raggedright Some applications may have to add stretch, in order to avoid all overfull boxes.
\raggedleft We define the following uses of the above skips, etc.
\raggedcenter 490 \def\raggedright{%
\normalspaces 491   \nohyphens
492   \rightskip=\raggedskip\@plus\raggedstretch \raggedspaces
493   \parfillskip=\raggedparfill
494 }
495 \def\raggedleft{%
496   \nohyphens

503   \rightskip=\leftskip \raggedspaces
504   \parindent=\z@ \parfillskip=\z@skip
505 }
506 \def\normalspaces{\spaceskip\z@skip \xspaceskip\z@skip}

```

### 3.8 Assorted user-level markup

$\text{\LaTeX} 2_{\varepsilon}$  defines a robust `\,`, but that we provide a new definition of `\~` by redefining `\`` (`\DeclareRobustCommand` doesn't mind redefinition, fortunately). This is based on the version in AMS-T<sub>E</sub>X—the  $\text{\LaTeX} 2_{\varepsilon}$  version (`ltspace.dtx`) has `\leavevmode` and does not do anything with the surrounding space(s). Our version messes up with the `\pfill` used in doc-generated indexes ([github.com/latex3/latex2e/issues/75](https://github.com/latex3/latex2e/issues/75)), but later (2018++) versions of doc should be protected against our redefinition.

```

507 \let\latexnobreakspace=\nobreakspace
508 \DeclareRobustCommand{\nobreakspace}{\unskip\nobreak\ignorespaces}

```

Plain T<sub>E</sub>X defines `\newbox` as `\outer`. We solemnly preserve the following, which removes the `\outerness`; of course, we carefully exclude it from what we generate... (`\outerness` is a spawn of the devil, is it not? Barbara Beeton responded to the previous sentence “`\outerness` has its place: it avoids register buildup, hence running out of memory”. In another context, David Carlisle remarked that an error control mechanism that causes more confusing errors than it prevents is rather a poor one. This is perhaps not the place to conduct a serious debate...)

### 3.10 Dates, volume and issue numbers, etc.

Dates and other items which identify the volume and issue. `\issuenum` is a sequential issue number starting from the first issue published; volume 15,4 has `\issuenum=45`.

```

    \vol 19, 1.
To use: \issdate March 1998.
\issueseqno=58
Starting with volume 23 (nominal 2002), we have \issyear instead of
\issdate, because issues don't have months any more.
For production, these are set in a separate file, tugboat.dates, which is
issue-specific.

643 \newcount\issueseqno \issueseqno=-1
644 \def\v@lx{\gdef\volx{Volume~`volno`(\volyr), No.~`\issno`}

832 \newdimen\headmargin     \headmargin=3.5pc
```

In  $\text{\LaTeX} 2_{\varepsilon}$ , `twoside` option is forced on when `article.cls` is loaded.

### 3.12 Messing about with the $\text{\LaTeX}$ logo

Barbara Beeton's pleas for  $\text{\LaTeX}$  logos that look right in any font shape provoked me to generate the following stuff that is configurable.

Here's the command for the user to define a new version. The arguments are font family, series and shape, and then the two kern values used in placing the raised 'A' of L<sup>A</sup>T<sub>E</sub>X.

```
833 \newcommand{\DeclareLaTeXLogo}[5]{\expandafter\def
834   \csname @LaTeX@#1/#2/#3\endcsname{{#4}{#5}}}
```

The default values are as used in the source of L<sup>A</sup>T<sub>E</sub>X itself:

```
835 \def\@LaTeX@default{{.36}{.15}}
```

More are defined in the initial version, for bold CM sans (which is used as \SecTitleFont), and CM italic medium and bold, and Bitstream Charter (which Nelson Beebe likes to use). Duplicate for Latin Modern.

```
836 \DeclareLaTeXLogo{cmss}{bx}{n}{.3}{.15}
837 \DeclareLaTeXLogo{lmss}{bx}{n}{.3}{.15}
838 %
839 \DeclareLaTeXLogo{cmr}{m}{it}{.29}{.2}
840 \DeclareLaTeXLogo{lmr}{m}{it}{.29}{.2}
841 %
842 \DeclareLaTeXLogo{cmr}{m}{sl}{.29}{.15}
843 \DeclareLaTeXLogo{lmr}{m}{sl}{.29}{.15}
844 %
845 \DeclareLaTeXLogo{cmr}{bx}{it}{.29}{.2}
846 \DeclareLaTeXLogo{lmr}{bx}{it}{.29}{.2}
847 %
848 \DeclareLaTeXLogo{cmr}{bx}{sl}{.29}{.2}
849 \DeclareLaTeXLogo{lmr}{bx}{sl}{.29}{.2}
850 %
851 \DeclareLaTeXLogo{bch}{m}{n}{.2}{.08}
852 \DeclareLaTeXLogo{bch}{m}{it}{.2}{.08}
```

Redefine \LaTeX to choose the parameters for the current font, or to use the default value otherwise:

```
853 \DeclareRobustCommand{\LaTeX}{\expandafter\let\expandafter\reserved@a
854   \csname @LaTeX@\f@family/\f@series/\f@shape\endcsname
855   \ifx\reserved@a\relax\let\reserved@a\@LaTeX@default\fi
856   \expandafter\@LaTeX\reserved@a}
```

Here's the body of what was originally \LaTeX, pulled out with its roots dripping onto the smoking ruin of original L<sup>A</sup>T<sub>E</sub>X, and then bits stuck in on the side.

\@LaTeX@default provides parameters as one finds in the original; other versions are added as needed.

```
857 \newcommand{\@LaTeX}[2]{%
858   \%wlog{latex logo family=\f@family/\f@series/\f@shape -> #1, #2.}%
859   L\kern-#1em
860   {\sbox\z@\T%
861    \vbox to\ht0{\hbox{$\m@th$%
862      \csname S@\f@size\endcsname
863      \fontsize\sf@size\z@%
```

```

864           \math@fontsfalse\selectfont
865           A}%
866           \vss}%
867   }%
868   \kern-#2em%
869   \TeX}

```

### 3.13 Authors, contributors, addresses, signatures

An article may have several authors (of course), so we permit an `\author` command for each of them. The names are then stored in a set of `\csnames` called `\author1`, `\author2`, ... Similarly, there are several `\address<n>` and `\netaddress<n>` and `\PersonalURL<n>` and `\ORCID<n>` commands set up for each article.

*Comment:* I would like to make provision for several authors at the same address, but (short of preempting the `*` marker, which it would be nice to retain so as to preserve compatibility with the `plain` style) I'm not sure how one would signal it.

```

870 \def\theauthor#1{\csname theauthor#1\endcsname}
871 \def\theaddress#1{\csname theaddress#1\endcsname}
872 \def\thenetaddress#1{\csname thenetaddress#1\endcsname}
873 \def\thePersonalURL#1{\csname thePersonalURL#1\endcsname}
874 \def\theORCID#1{\csname theORCID#1\endcsname}

```

The standard way of listing authors is to iterate from 1 to `\count0` and to pick the author names as we go.

```

875  $\langle !\text{latex}\rangle \newcount\@tempcnta$ 
876 \def\@defaultauthorlist{%
877   \@getauthorlist\@firstofone
878 }

```

`\@getauthorlist` processes the author list, passing every bit of stuff that needs to be typeset to the macro specified as its argument.

```

879 \def\@getauthorlist#1{%
880   \count@\authornumber
881   \advance\count@ by -2
882   \atempcnta0

```

Loop to output the first  $n - 2$  of the  $n$  authors (the loop does nothing if there are two or fewer authors)

```

883   \loop
884     \ifnum\count@>0
885       \advance\atempcnta by \cne
886       #1{\ignorespaces\theauthor{\number\atempcnta}\unskip, }%
887       \advance\count@ by \m@cne
888     \repeat
889   \count@\authornumber
890   \advance\count@ by -\atempcnta
891   \ifnum\authornumber>0

```

If there are two or more authors, we output the penultimate author's name here, followed by 'and'

```

892     \ifnum\count@>1
893         \count@\authornumber
894         \advance\count@ by \m@ne
895         #1{\ignorespaces\theauthor{\number\count@}\unskip\@tubauthorlastsep}%
896     \fi

```

Finally (if there were any authors at all) output the last author's name:

```

897     #1{\ignorespaces\theauthor{\number\authornumber}\unskip}
898     \fi
899 }
900 %
901 \def\@tubauthorlastsep{, }% until 2018, was: "\ and "

```

Signature blocks. The author can (in principle) define a different sort of signature block using `\signature`, though this could well cause the editorial group to have collective kittens (unless it had been discussed in advance...)

```

902 \def\signature#1{\def\@signature{#1}}
903 \def\@signature{\@defaultsignature}

```

`\@defaultsignature` loops through all the authors, outputting the details we have about that author, or (if we're in a sub-article) outputs the contributor's name and closes the group opened by `\contributor`. It is (as its name implies) the default body for `\makesignature`

```

904 \def\@defaultsignature{{%
905     \let\thanks\@gobble
906     \frenchspacing
907     %
908     \ifnum\authornumber<0

```

if `\authornumber < 0`, we are in a contributor's section

```

909     \medskip
910     \signaturemark
911     \theauthor{\number\authornumber} \\
912     \theaddress{\number\authornumber} \\
913     \allowhyphens
914     \thenetaddress{\number\authornumber} \\
915     \thePersonalURL{\number\authornumber} \\
916     \theORCID{\number\authornumber} \\
917     \else

```

`\authornumber ≥ 0`, so we are in the body of an ordinary article

```

918     \count@=0
919     \loop
920     \ifnum\count@<\authornumber
921         \medskip
922         \advance\count@ by \c@ne
923         \signaturemark
924         \theauthor{\number\count@} \\

```

```

958 }
959 \def\signaturemark{\leavevmode\llap{$\diamond$}\enspace}}

```

The idea here is that if multiple authors share affiliation information, we need only typeset the affiliation once. We separate by commas for the `\maketitle`, and put on separate lines in the `\makesignature`. Similarly, within `\netaddress`, `\tubmultipleaffilnet` separates with a space before and after the comma, while `.` (All this per bb.) See `tb122childstrotter.ltx` for an example.

```

960 \def\tubmultipleaffilauthor{\unskip, \ignorespaces}%
961 \def\tubmultipleaffilnet{\unskip\textrm{, , }\ignorespaces}%

```

Now all the awful machinery of author definitions. `\authornumber` records the number of authors we have recorded to date.

```
962 \newcount\authornumber  
963 \authornumber=0
```

`\author` ‘allocates’ another author name (by bumping `\authornumber`) and also sets up the address and netaddress for this author to produce a warning and to prevent oddities if they’re invoked. This last assumes that invocation will be in the context of `\signature` (`ltugboat.cls`) or `\maketitle` (`ltugproc.cls`); in both cases, invocation is followed by a line break (tabular line break `\`` in `ltugproc`, `\endgraf` in `\makesignature` in `ltugboat`).

```
964 \def\author{  
965   \global\advance\authornumber\@ne  
966   \TB@author  
967 }
```

`\contributor` is for a small part of a multiple-part article; it begins a group that will be ended in `\makesignature`.

```
968 \def\contributor{  
969   \begingroup  
970   \authornumber\m@ne  
971   \TB@author  
972 }
```

Both ‘types’ of author fall through here to set up the author name and to initialise author-related things. `\EDITORno*` commands allow the editor to record that there’s good reason for an *address* or *netaddress* not to be there (the *personalURL* and *ORCID* are optional anyway).

```
973 \def\TB@author#1{  
974   \expandafter\def\csname theauthor\#1\authornumber\endcsname  
975     {\ignorespaces#1\unskip}  
976   \expandafter\def\csname theaddress\#1\authornumber\endcsname  
977     {\TBWarningNL{Address for #1\space missing}\@gobble}  
978   \expandafter\def\csname thenetaddress\#1\authornumber\endcsname  
979     {\TBWarningNL{Net address for #1\space missing}\@gobble}

981     \@gobble  
982   \expandafter\let\csname theORCID\#1\authornumber\endcsname  
983     \@gobble  
984 }  
985 \def\EDITORnoaddress{  
986   \expandafter\let\csname theaddress\#1\authornumber\endcsname  
987     \@gobble  
988 }  
989 \def\EDITORnonetaddress{  
990   \expandafter\let\csname thenetaddress\#1\authornumber\endcsname  
991     \@gobble  
992 }
```

\address copies its argument into the \theaddress<n> for this author.

```
993 \def\address#1{%
994   \expandafter\def\csname theaddress\number\authornumber\endcsname
995     {\leavevmode\ignorespaces#1\unskip}}
```

\network is for use within the optional argument of \netaddress; it defines the *name* of the network the user is on.

**Comment:** I think this is a fantasy, since everyone (in practice, nowadays) quotes an internet address. In principle, there are people who will quote X.400 addresses (but they're few and far between) and I have (during 1995!) seen an address with an UUCP bang-path component on `comp.text.tex`, but *really!*

```
996 \def\network#1{\def\@network{#1: }}
```

\netaddress begins a group, executes an optional argument (which should not, presumably, contain global commands) and then relays to \@relay@\netaddress with both @ and % made active (so that they can be discretionary points in the address). If we're using L<sup>A</sup>T<sub>E</sub>X 2<sub>&</sub>, we use the default-argument form of \newcommand; otherwise we write it out in all its horribleness.

```
997 \newcommand{\netaddress}[1][\relax]{%
998   \begingroup
999     \def\@network{}}
```

Unfortunately, because of the catcode hackery, we have still to do one stage of relaying within our own code, even if we're using L<sup>A</sup>T<sub>E</sub>X 2<sub>&</sub>.

```
1000 #1\@sanitize\makespace\ \makeactive\@%
1001 \makeescape! \makebgroup[ \makeegroup]%
1002 \makeactive.\ \makeactive\%\@relay@\netaddress\%
```

\@relay@\netaddress finishes the job. It sets \thenetaddress for this author to contain the network name followed by the address. As a result of our kerfuffle above, @ and % are active at the point we're entered. We ensure they're active when \thenetaddress gets expanded, too. (**WOT?!**)

```
1003 \def\@relay@\netaddress#1{%
1004   \ProtectNetChars
1005   \expandafter\protected@xdef
1006     \csname thenetaddress\number\authornumber\endcsname
1007     {\protect\leavevmode\textrm{\@network}%
1008       {\protect\NetAddrChars\net
1009         \ignorespaces#1\unskip}\}%
1010   \endgroup
1011 }
```

\personalURL is in essence the same as \netaddress, apart from (1) the lack of the eccentric optional argument, and (2) the activation of '/'.

For general URLs, `url.sty` (with or without hyperref) suffices and is recommended.

```
1012 \def\personalURL{\begingroup
```

```

1013  \@sanitize\makespace\ \makeactive@%
1014  \makeactive.\.\makeactive\%\makeactive\/@personalURL}%
1015 \def@personalURL#1{%
1016   \ProtectNetChars
1017   \expandafter\protected@xdef
1018   \csname thePersonalURL\#1\authornumber\endcsname{%
1019     \protect\leavevmode
1020   }%
1021   \protect\URLchars\net
1022   \ignorespaces#1\unskip
1023 }%
1024 }%
1025 \endgroup
1026 }

```

Define the activation mechanism for ‘@’, ‘%’, ‘.’ and ‘/’, for use in the above. Note that, since the code has ‘%’ active, we have ‘\*’ as a comment character, which has a tendency to make things look peculiar...

```

1027 {%
1028   \makecomment/*
1029   \makeactive@%
1030   \gdef\netaddrat{\makeactive@*
1031     \def@\{\discretionary{\char"40}\{\}\{\char"40\}\}}
1032   \makeactive%
1033   \gdef\netaddrpercent{\makeactive\%*
1034     \def%\{\discretionary{\char"25}\{\}\{\char"25\}\}}
1035   \makeactive\.
1036   \gdef\netaddrdot{\makeactive\.*%
1037     \def.\{\discretionary{\char"2E}\{\}\{\char"2E\}\}}

```

\NetAddrChars is what *we* use (we’re constrained to retain the old interface to this stuff, but it *is* clunky...). Since URLs are a new idea, we are at liberty not to define a separate \netaddrslash command, and we only have \URLchars.

```

1038   \gdef\NetAddrChars{\netaddrat \netaddrpercent \netaddrdot}
1039   \makeactive\/
1040   \gdef\URLchars{*%
1041     \NetAddrChars
1042     \makeactive\/*%
1043     \def/\{\discretionary{\char"2F}\{\}\{\char"2F\}\}}

```

\ProtectNetChars includes protecting ‘/’, since this does no harm in the case of net addresses (where it’s not going to be active) and we thereby gain by not having yet another csname.

```

1044   \gdef\ProtectNetChars{%
1045     \def@\{\protect@\}%
1046     \def%\{\protect%\}%
1047     \def.\{\protect.\}%
1048     \def/\{\protect/\}%
1049   }
1050 }

```

$\text{\LaTeX} 2_{\varepsilon}$  (in its wisdom) suppresses `\DeclareOldFontCommand` when in compatibility mode, so that in that circumstance we need to use a declaration copied from `latex209.def` rather than the way we would normally do the thing (using the command  $\text{\LaTeX} 2_{\varepsilon}$  defines for the job).

```
1051 \if@compatibility
1052   \DeclareRobustCommand{\net}{\normalfont\ttfamily\mathgroup\symtypewriter}
1053 \else
1054   \DeclareOldFontCommand{\net}{\ttfamily\upshape\mdseries}{\mathhtt}
1055 \fi
1056 \def\authorlist#1{\def\@author{#1}}
1057 \def\@author{\@defaultauthorlist}
```

`\ORCID` inserts ‘ORCID’ and then argument into the `\theORCID<n>` for this author. Also, we want `\small` for this.

```
1058 \def\ORCID#1{%
1059   \expandafter\def\csname theORCID\endcsname
1060     {\leavevmode \ignorespaces {\SMC ORCID} #1\unskip}}
```

For the online re-publication (as of 2009) by Mathematical Sciences Publishers <http://mathscipub.org>, lots and lots of metadata is needed, much of it redundant with things we already do. They are flexible enough to allow us to specify it in any reasonable way, so let’s make one command `\mspmetavar` which takes two arguments. Example: `\mspmetavar{volumenumber}{30}`. For our purposes, it is just a no-op. And this initiative never came to anything, so it is not used at all.

```
\mspmetavar
1061 \def\mspmetavar#1#2{}
```

### 3.14 Article title

```
\if@articletitle \maketitle takes an optional “*”; if present, the operation is not defining the
  \maketitle title of a paper, merely that of a “business” section (such as the participants at
\or@maketitle a meeting) that has no credited author or other title. In this case, the command
flushes out the latest \sectitle (or whatever) but does nothing else.
```

Provide machinery (`\PreTitleDrop` to skip extra space, even one or more full columns, above the top of an article to leave space to paste up a previous article that has finished on the same page. This is a fall back to accommodate the fact that multiple articles cannot yet be run together easily with  $\text{\LaTeX} 2_{\varepsilon}$ .

In addition, if the `secondcolstart` option was specified, do `\null\newpage` to move over. This is separate from `\PreTitleDrop`, for no particular reason.

```
1062 \newif\if@articletitle
1063 \def\maketitle{\@ifstar
1064   {\@articletitlefalse\@r@maketitle}%
1065   {\@articletiteltrue\@r@maketitle}%
1066 }
1067 \def\@r@maketitle{\par
1068 \ifdim\PreTitleDrop > \z@
```

```

1069   \loop
1070   \ifdim \PreTitleDrop > \textheight
1071     \vbox{}\vfil\eject
1072     \advance\PreTitleDrop by -\textheight
1073   \repeat
1074   \vbox to \PreTitleDrop{}
1075   \global\PreTitleDrop=\z@
1076 \fi
1077 \iftubseccolstart \null\newpage\fi
1078 \begingroup
1079 \setcounter{footnote}{0}
1080 \global\@topnum\z@ % disallow floats above the title
1081 \def\thefootnote{\fnsymbol{footnote}}
1082 \maketitle
1083 \thanks
1084 \endgroup
1085 \setcounter{footnote}{0}
1086 \gdef\thanks{}
1087 }

```

**\title** We redefine the `\title` command, so as to set the `\rhTitle` command at the same time. While we're at it, we redefine it to have optional arguments for use as ‘short’ versions, thus obviating the need for users to use the `\shortTitle` command.

```

1088 \def\rhTitle{}% avoid error if no author or title
1089 \renewcommand{\title}{\@dblarg\TB@title}
1090 \def\TB@title[#1]#2{\gdef\@title{#2}%
1091   \bgroup

1093   \def\\{\unskip\space\ignorespaces}%
1094   \protected\@xdef\rhTitle{#1}%
1095 \egroup
1096 }

```

**\shortTitle** The `\rh*` commands are versions to be used in the running head of the article.  
**\ifshortAuthor** Normally, they are the same things as the author and title of the article, but in the  
**\shortAuthor** case that there are confusions therein, the text should provide substitutes, using  
the `\short*` commands.

```

1097 \def\shortTitle #1{\def\rhTitle{#1}}
1098 \newif\ifshortAuthor
1099 \def\shortAuthor #1{\def\rhAuthor{#1}\shortAuthortrue}

```

### 3.15 Section titles

The following macros are used to set the large *TUGboat* section heads (e.g. “General Delivery”, “Fonts”, etc.)

Define the distance between articles which are run together:

```
1100 \def\secsep{\vskip 5\baselineskip}
```

Note that `\stbaselineskip` is used in the definition of `\sectitlefont`, in L<sup>A</sup>T<sub>E</sub>X 2 <sub>$\varepsilon$</sub> , so that it has (at least) to be defined before `\sectitlefont` is used (we do the whole job).

```
1101 \newdimen\stbaselineskip          \stbaselineskip=18\p@
1102 \newdimen\stfontheight
1103 \settoheight{\stfontheight}{\sectitlefont 0}
```

Declaring section titles; the conditional `\ifSecTitle` records the occurrence of a `\sectitle` command. If (when) a subsequent `\maketitle` occurs, the section title box will get flushed out; as a result of this, one could in principle have a set of `\sectitle` commands in a semi-fixed steering file, and inclusions of files inserted only as and when papers have appeared. Only the last `\sectitle` will actually be executed.

```
1104 \newif\ifWideSecTitle
1105 \newif\iftubtitlerulefullwidth
1106 \newif\ifSecTitle \SecTitlefalse
1107 \newcommand{\sectitle}{%
1108   \SecTitletrue
1109   \@ifstar
1110     {\WideSecTitletrue\def\s@ctitle}%
1111     {\WideSecTitlefalse\def\s@ctitle}%
1112 }
```

`\PreTitleDrop` records the amount of column-space we need to eject before we start any given paper. It gets zeroed after that ejection has happened.

```
1113 \newdimen\PreTitleDrop \PreTitleDrop=\z@
```

The other parameters used in `\@sectitle`; I don't think there's the slightest requirement for them to be registers (since they're constant values, AFAIK), but converting them to macros would remove the essentially useless functionality of being able to change them using assignment, which I'm not about to struggle with just now...

`\AboveTitleSkip` and `\BelowTitleSkip` are what you'd expect; `\strulethickness` is the value to use for `\fboxrule` when setting the title, and for the rule above titles when there is no box.

```
1114 \newskip\AboveTitleSkip \AboveTitleSkip=12\p@
1115 \newskip\BelowTitleSkip \BelowTitleSkip=8\p@
1116 \newdimen\strulethickness \strulethickness=.6\p@
```

`\@sectitle` actually generates the section title (in a rather generous box). It gets called from `\maketitle` under conditional `\ifSecTitle`; by the time `\@sectitle` takes control, we already have `\SecTitlefalse`. This implementation uses L<sup>A</sup>T<sub>E</sub>X's `\framebox` command, on the grounds that one doesn't keep a dog and bark for oneself...

```
1117 \def\@sectitle #1{%
1118   \par
1119   \penalty-1000
```

If we’re setting a wide title, the stuff will be at the top of a page (let alone a column) but inside a box, so that the separator won’t be discardable: so don’t create the separator in this case.

```

1120  \ifWideSecTitle\else\secsep\fi
1121  {%
1122    \fboxrule\strulethickness
1123    \fboxsep\z@%

### 3.16 Section headings

Redefine style of section headings to match plain *TUGboat*. Negative beforeskip suppresses following parindent. (So negate the stretch and shrink too).

These macros are called `\*head` in the plain styles.

Relaying via `\TB@startsection` detects inappropriate use of `\section*`. Of course, if (when) we use it, we need to avoid that relaying; this can be done by letting `\TB@startsection` to `\TB@safestartsection`, within a group.

First the version for use in the default case, when class option `NUMBERSEC` is in effect.

```

1230 \def\tubsechook{}
1231 \if@numbersec
1232   \def\section{\TB@startsection{{\section}}%
1233           1%
1234           \z@
1235           {-8\p@ \oplus -2\p@ \ominus -2\p@}%

```

```

1236                               {4\p@}%
1237   {\normalsize\bf\raggedright\hyphenpenalty\OM\tubsechook}}}
1238 \def\subsection{\TB@startsection{{subsection}}%
1239           2%
1240           \z@%
1241           {-8\p@ \oplus-2\p@ \ominus-2\p@}%
1242           {4\p@}%
1243   {\normalsize\bf\raggedright\hyphenpenalty\OM\tubsechook}}}
1244 \def\subsubsection{\TB@startsection{{subsubsection}}%
1245           3%
1246           \z@%
1247           {-8\p@ \oplus-2\p@ \ominus-2\p@}%
1248           {4\p@}%
1249   {\normalsize\bf\raggedright\hyphenpenalty\OM\tubsechook}}}
1250 \def\paragraph{\TB@startsection{{paragraph}}%
1251           4%
1252           \z@%
1253           {4\p@ \oplus1\p@ \ominus1\p@}%
1254           {-1em}%
1255           {\normalsize\bf\tubsechook}}}

```

Now the version if class option NONUMBER is in effect, i.e., if `\if@numbersec` is false.

```

1256 \else
1257   \setcounter{secnumdepth}{0}
1258   \def\section{\TB@nolimelabel
1259     \TB@startsection{{section}}%
1260     1%
1261     \z@%
1262     {-8\p@ \oplus-2\p@ \ominus-2\p@}%
1263     {4\p@}%
1264     {\normalsize\bf\raggedright\hyphenpenalty\OM\tubsechook}}}
1265 \def\subsection{\TB@nolimelabel
1266     \TB@startsection{{subsection}}%
1267     2%
1268     \z@%
1269     {-8\p@ \oplus-2\p@ \ominus-2\p@}%
1270     {-0.5em\oplus-\fontdimen3\font}%
1271     {\normalsize\bf\raggedright\hyphenpenalty\OM\tubsechook}}}
1272 \def\subsubsection{\TB@nolimelabel
1273     \TB@startsection{{subsubsection}}%
1274     3%
1275     \parindent%
1276     {-8\p@ \oplus-2\p@ \ominus-2\p@}%
1277     {-0.5em\oplus-\fontdimen3\font}%
1278     {\normalsize\bf\raggedright\hyphenpenalty\OM\tubsechook}}}
1279 \fi

```

`\TB@startsection` used to warn about \* versions of sectioning commands when numbering wasn't in effect. But that eventually seemed a useless complaint,

since it can be useful to switch back and forth between numbered and unnumbered can be useful during article development. So now `\TB@startsection` is just a synonym for `\@startsection`.

```
1280 \def\TB@startsection#1{\@startsection#1}%
    \TB@safe@startsection is to be used where \section* (etc.) appear in
    places where the request is OK (because it's built in to some macro we don't
    fiddle with).
```

```
1281 \def\TB@safe@startsection#1{\@startsection#1}
```

The `SafeSection` environment allows use of \*-forms of sectioning environments. It's not documented for the general public: it's intended as an editor's facility.

```
1282 \newenvironment{SafeSection}%
1283   {\let\TB@startsection\TB@safe@startsection}%
1284   {}
```

And now for the exciting sectioning commands that L<sup>A</sup>T<sub>E</sub>X defines but we don't have a definition for (whatever else, we don't want Lamport's originals, which come out 'like the blare of a bugle in a lullaby'<sup>1</sup>).

The three inappropriate ones are subparagraph (indistinguishable from paragraph), and chapter and part. The last seemed almost to be defined in an early version of these macros, since there was a definition of `\l@part`. I've not got down to where that came from (or why). If class option NONUMBER is in effect, we also suppress `\paragraph`, since it has no parallel in the plain style.

```
1285 \if@numbersec
1286   \def\subparagraph{\TB@nosection\subparagraph\paragraph}
1287 \else
1288   \def\paragraph{\TB@nosection\paragraph\subsubsection}
1289   \def\subparagraph{\TB@nosection\subparagraph\subsubsection}
1290 \fi
1291 \def\chapter{\TB@nosection\chapter\section}
1292 \def\part{\TB@nosection\part\section}
1293 \def\TB@nosection#1#2{\TBWarning{class does not support \string#1,
1294   \string#2\space used instead}#2}
```

`\l@<sectioning-name>` is for table of contents (of an article). We define new macros to allow easily changing the font used for toc entries (for *TUGboat*, we usually want roman, not bold), and the space between entries. Nelson Beebe and Frank Mittelbach's articles often have toc's (and few others). Also turn off microtype protrusion after

## Contents

or leaders get messed up.

---

<sup>1</sup>Thurber, *The Wonderful O*

```

1295 \def\TBtocsectionfont{\normalfont}
1296 \newskip\TBtocsectionspace \TBtocsectionspace=1.0ex\@plus\p@
1297 \def\l@section#1#2{\addpenalty{\@secpenalty}%
1298   \addvspace{\TBtocsectionspace}%
1299   \tempdima 1.5em
1300   \begingroup
1301     \parindent\z@ \rightskip\z@ % article style makes \rightskip > 0
1302     \parfillskip\z@ 
1303     \TBtocsectionfont
1304     \leavevmode\advance\leftskip\tempdima\hskip-\leftskip#1\nobreak\hfil
1305     \nobreak\hb@xt@0\pnumwidth{\hss #2}\par
1306   \endgroup}

```

### 3.17 Appendices

Appendices (which are really just another sort of section heading) raise a problem: if the sections are unnumbered, we plainly need to restore the section numbering, which in turn allows labelling of section numbers again (`\TBnolimelabel` happens before the `\refstepcounter`, so its effects get lost ... what a clever piece of design that was). So here we go:

```

1307 \renewcommand{\appendix}{\par
1308   \renewcommand{\thesection}{\@Alph{c@section}}%
1309   \setcounter{section}{0}%
1310   \if@numbersec
1311   \else
1312     \setcounter{secnumdepth}{1}%
1313   \fi

```

Now: is this the start of an appendix environment? This can be detected by looking at `\@currenvir`; if we are, we need to relay to `\@appendix@env` to pick up the optional argument.

```

1314   \def\@tempa{appendix}
1315   \ifx\@tempa\@currenvir
1316     \expandafter\@appendix@env
1317   \fi
1318 }

```

Here we deal with `\begin{appendix}[\langle app-name\rangle]`

```

1319 \newcommand{\app@prefix@section}{}
1320 \newcommand{\@appendix@env}[1][Appendix]{%
1321   \renewcommand{\csecntformat}[1]{\csname app@prefix@\#\#1\endcsname
1322     \csname the##1\endcsname\quad}%
1323   \renewcommand{\app@prefix@section}{#1 }%
1324 }

```

Ending an appendix environment is pretty trivial...

```
1325 \let\endappendix\relax
```

## 3.18 References

If the sections aren't numbered, the natural tendency of the author to cross-reference (which, after all, is one of the things L<sup>A</sup>T<sub>E</sub>X is for ever being advertised as being good at) can cause headaches.

The following command is used by each of the sectioning commands to make a following \ref command bloop at the author. Even if the author then ignores the complaint, the poor old editor may find the offending \label rather more easily.

(Note that macro name is to be read as “*noli me label*” (I don't know the mediæval Latin for ‘label’).

*Comment* To come (perhaps): detection of the act of labelling, and an analogue of \ifG@refundefined for this sort of label

```
1326 \def\TB@nolimelabel{%
1327   \def\@currentlabel{%
1328     \protect\TBWarning{%
1329       Invalid reference to numbered label on page \thepage
1330       \MessageBreak made%
1331     }%
1332     \textbf{? ! ?}%
1333   }%
1334 }
```

## 3.19 Title references

This is a first cut at a mechanism for referencing by the title of a section; it employs the delightfully simple idea Sebastian Rahtz has in the `nameref` package (which is part of `hyperref`). As it stands, it lacks some of the bells and whistles of the original, but they could be added; this is merely proof-of-concept.

The name label comes from the moveable bit of the section argument; we subvert the \@sect and \@ssect commands (the latter deals with starred section commands) to grab the relevant argument.

```
1335 \let\TB@@sect\@sect
1336 \let\TB@@ssect\@ssect
1337 \def\@sect#1#2#3#4#5#6[#7]#8{%
1338   \def\@currentlabelname{#7}%
1339   \TB@@sect{#1}{#2}{#3}{#4}{#5}{#6}[{#7}]{#8}%
1340 }
1341 \def\@ssect#1#2#3#4#5{%
1342   \def\@currentlabelname{#5}%
1343   \TB@@ssect{#1}{#2}{#3}{#4}{#5}%
1344 }
```

We output the name label as a second \newlabel command in the .aux file. That way, packages such as `varioref` which also read the .aux information can still work. So we redefine \label to first call the standard L<sup>A</sup>T<sub>E</sub>X \label and then write our named label as nr<label>.

```

1345 \let\@savelatexlabel=\label % so save original LaTeX command
1346 %
1347 \def\label#1{%
1348   \@savelatexlabel{#1}%
1349   \@bsphack
1350   \if@filesw
1351     \protected@write\@auxout{}{%
1352       {\string\newlabel{nr@#1}{\@currentlabel}{\@currentlabelname}}%
1353   \fi
1354   \@esphack
1355 }

```

Of course, in the case of a sufficiently mad author, there will be no sectioning commands, so we need to

```
1356 \let\@currentlabelname\@empty
```

Getting named references is then just like getting page references in the L<sup>A</sup>T<sub>E</sub>X kernel (see `ltxref.dtx`).

```

1357 \DeclareRobustCommand{\nameref}[1]{\expandafter\@setref
1358   \csname r@nr@#1\endcsname\@secondoftwo{#1}}

```

### 3.20 Float captions

By analogy with what we've just done to section titles and the like, we now do our best to discourage hyphenation within captions. We also typeset them in `\small` (actually `\tubcaptionfonts`).

First, let's define a dimension by which we will indent full-page captions. We'll also use this to indent abstracts in proceedings style.

```
\@tubfullpageindent
1359 \newdimen\@tubfullpageindent
1360 \@tubfullpageindent = \if@tubtwocolumn 4.875pc \else 3.875pc \fi
```

One-line captions are normally centered, but sometimes we want to set them flush left for consistency with other nearby figures.

```
\tubcaptionleftglue
1361 \let\tubcaptionleftglue=\hfil
```

For *TUGboat*, we like 9pt captions to help differentiate from the main text.

```
1362 \def\tubcaptionfonts{\small}%
```

Ok, here is `\@makecaption`.

```

1363 \long\def\@makecaption#1#2{%
1364   \vskip\abovecaptionskip
1365   % try in an hbox:
1366   \sbox\@tempboxa{\tubcaptionfonts \frenchspacing \tubmakecaptionbox{#1}{#2}}%
1367   \ifdim \wd\@tempboxa > \hsize
1368     %% caption doesn't fit on one line; set as a paragraph.
1369     \tubcaptionfonts \raggedright \hyphenpenalty=\@M \parindent=1em

```

```

1370      % indent full-width captions {figure*}, but not single-column {figure}.
1371      \ifdim\hsize = \textwidth
1372          \leftskip=\@tubfullpageindent \rightskip=\leftskip
1373          \advance\rightskip by 0pt plus2em % increase acceptable raggedness
1374      \fi
1375      \noindent \tubmakecaptionbox{\#1}{\#2}\par}%
1376 \else
1377     % fits on one line; use the hbox, usually centered. Do not reset its glue.
1378     \global\@minipagetrue
1379     \hb@xt@\hsize{\tubcaptionleftglue\box\@tempboxa\hfil}%
1380 \fi
1381 \vskip\belowcaptionskip}
1382 %
1383 \def\tubmakecaptionbox#1#2{\#1:\#2}%
1384 \def\fnum@figure{{\tubcaptionfonts \bf \figurename\nobreakspace\thefigure}}
1385 \def\fnum@table{{\tubcaptionfonts \bf \tablename\nobreakspace\thetable}}

```

Also use `\tubcaptionfonts` for the caption labels, and put the label itself (e.g., “Figure 1”) in bold.

```

1386 \setlength\abovecaptionskip{6pt plus1pt minus1pt}

```

### 3.21 Size changing commands

Apart from their ‘normal’ effects, these commands change the glue around displays.

```

1387 \renewcommand{\normalsize}{%
1388     \@setfontsize\normalsize\@xipt\@xipt
1389     \abovedisplayskip=3\p@+\p@-\p@
1390     \belowdisplayskip=\abovedisplayskip
1391     \abovedisplayshortskip=\z@+\p@-\p@
1392     \belowdisplayshortskip=\p@+\p@-\p@
1393 }
1394
1395 \renewcommand{\small}{%
1396     \@setfontsize\small\@ixipt{11}%
1397     \abovedisplayskip=2.5\p@+\p@-\p@
1398     \belowdisplayskip=\abovedisplayskip
1399     \abovedisplayshortskip=\z@+\p@-\p@
1400     \belowdisplayshortskip=\p@+\p@-\p@
1401 }
1402
1403 \renewcommand{\footnotesize}{%
1404     \@setfontsize\footnotesize\@viiipt{9.5}%
1405     \abovedisplayskip=3\p@+\p@-\p@
1406     \belowdisplayskip=\abovedisplayskip
1407     \abovedisplayshortskip=\z@+\p@-\p@

```

```

1408     \belowdisplayshortskip=\p@+\p@+3\p@-\p@
1409 }

```

### 3.22 Lists and other text inclusions

```

1410 \def\@listi{%
1411   \leftmargin\leftmargini\parsep=\p@+\p@-\p@
1412   \itemsep\parsep
1413   \listparindent=1em

1456     \setlength{\parsep}{0pt}%
1457   }%
1458   {\end{description}}
1459 %

```

### 3.23 Some fun with verbatim

The *plain TUGboat* style allows [optional] arguments to its `\verb+atim` command. This will allow the author (or editor) to specify a range of exciting features; we would definitely like the numbered verbatim style for code (that facility is reserved for a future version of this package), and the present little bit of code imposes the `\ruled` option on the built-in `verbatim` environment. (Note that we don't yet deal with `verbatim*`, which is in itself an option to the *plain* original.)

We start by saving various bits and bobs whose operation we're going to subvert.

```

1460 \%let\@TB@verbatim@\@verbatim
1461 \let\@TVerbatim\verbatim
1462 \let\@TBendverbatim\endverbatim

```

Impose an optional argument on the environment.

We start the macro with `\par` to avoid a common error: if the optional argument is `\small`, and the document has no blank line before the verbatim block, we don't want that preceding paragraph to be set with `\small`'s line spacing.

(`\obeylines` added to prevent the `\futurelet` from propagating into the body of the verbatim, thus causing lines that start with odd characters (like `#` or even `\`) to behave peculiarly.)

```

1463 \def\verbatim{\par\obeylines
1464   \futurelet\reserved@a\@switch@sqbverbatim}
1465 %
1466 \def\@switch@sqbverbatim{\ifx\reserved@a[%]
1467   \expandafter\@sbverbatim\else
1468   \def\reserved@b{\@sbverbatim[]}\expandafter\reserved@b\fi}
1469 %
1470 \def\@sbverbatim[#1]{%

```

The optional argument consists entirely of functions that modify the appearance of the environment. Following the *plain* style, we define the functions we can execute in the optional argument here.

The command `\ruled` tells us that there should be rules above and below the verbatim block.

```
1471 \def\ruled{\let\if@ruled\iftrue}%
```

The command `\makevmeta` says to make `!j...; do <...>`.

```
1472 \def\makevmeta{\makeescape\! \let<\tubverb@meta \tubverb@clearliglist}
1473 \def\tubverb@meta##1>{\meta{##1}}
```

The default verbatim defines “*lj*,- as active characters to stop ligatures; remove *lj* from the list so we get normal characters. Just hope that the CM *lj* ligatures aren't used.

```
1474 \def\tubverb@clearliglist{%
1475   \def\verbatim@nolig@list{\do\`{\do\,\do\'}\do\-\}%
1476 }
```

Then we execute the arguments we've got, and relay to a (hacked) copy of the L<sup>A</sup>T<sub>E</sub>X verbatim environment.

```
1477 #1\@TBverbatim}
```

The built-in environment itself relays to `\@verbatim`, which we've subverted to impose our views on appearance.

```
1478 \def\@verbatim{%
```

First, we deal with `\ruled`:

```
1479 \if@ruled\trivlist\item\hrule\kern5\p@\nobreak\fi
```

Now, the code out of the original `verbatim` environment:

```
1480 \trivlist \item\relax
1481 \if@minipage\else\vskip\parskip\fi
1482 \leftskip\@totalleftmargin\rightskip\z@skip
1483 \parindent\z@\parfillskip\@flushglue\parskip\z@skip
1484 \@@par
1485 \tempswafalse
1486 \def\par{%
1487   \if@tempswa
1488     \leavevmode \null \@@par\penalty\interlinepenalty
1489   \else
1490     \tempswatrue
1491     \ifhmode\@@par\penalty\interlinepenalty\fi
1492   \fi}%
1493 \obeylines \verbatim@font \noligs
1494 \let\do\@makeother \dospecials
1495 \everypar \expandafter{\the\everypar \unpenalty}%
1496 }% end |\@sbverbatim|
```

To end the environment, we do everything in reverse order: relay via the copy we made of `\endverbatim`, and then finish off the option changes (again `\ruled` only, so far).

```
1497 \def\endverbatim{\@TBendverbatim
1498 \if@ruled\kern5\p@\hrule\endtrivlist\fi}
```

Define the `\if` used by the `\ruled` option:

```
1499 \let\if@ruled\iffalse
```

Finally, if `microtype` is loaded, we want it to be deactivated in verbatim blocks. It often manipulates a leading \ rather too much, and messes with the visible fixed-width alignment.

```
1500 \AtBeginDocument{%
1501   \@ifpackageloaded{microtype}%
1502     {\g@addto@macro\@verbatim{\microtypesetup{activate=false}}}{}
1503 }
```

### 3.24 Bibliography

This is more or less copied verbatim from Glenn Paulley's *chicago.sty* (`gnpaulle@bluebox.uwaterloo.ca`). It produces an author-year citation style bibliography, using output from the BIBTEX style file based on that by Patrick Daly. It needs extra macros beyond those in standard L<sup>A</sup>T<sub>E</sub>X to function properly. The form of the bibitem entries is:

```
\bibitem[\protect\citeauthoryear{Jones, Baker, and Smith}%
       {Jones et al.}{1990}{key}...]
```

The available citation commands are:

\citef{key}	→ (Jones, Baker, and Smith 1990)
\citeA{key}	→ (Jones, Baker, and Smith)
\citeNP{key}	→ Jones, Baker, and Smith 1990
\citeANP{key}	→ Jones, Baker, and Smith
\citeN{key}	→ Jones, Baker, and Smith (1990)
\shortcite	→ (Jones et al. 1990)
\citeyear	→ (1990)
\citeyearNP	→ 1990

First of all (after checking that we're to use Harvard citation at all), make a copy of L<sup>A</sup>T<sub>E</sub>X's default citation mechanism.

```
1504 \if@Harvardcite
1505 \let\@internalcite\cite
```

Normal forms.

```

```

\thebibliography If the user's asked to use L<sup>A</sup>T<sub>E</sub>X's default citation mechanism (using the `rawcite` option), we still need to patch `\sloppy` to support justification of the body of the bibliography. We kludge in a call to `\frenchspacing` too, since there is no reason to change only period's `\sfcode`, as L<sup>A</sup>T<sub>E</sub>X's original `thebibliography` (in `classes.dtx`) does.

By the way, `amsgen.sty` changes `\frenchspacing` to set the `\sfcode` of punctuation character to successively decreasing integers ending at 1001 for comma. Thus its 1006 for period is overwritten to 1000 for `thebibliography`, making `amsgen`'s `\caddpunct` ineffective. Don't know what that means in practice, if anything.

Back here, we also play with *The T<sub>E</sub>Xbook*@startsection since we always have, though that is no longer needed.

```

1605 \else % not harvardcite
1606 \let\TB@origthebibliography\thebibliography
1607 \def\thebibliography{%
1608   \let\TB@startsection\TB@safe@startsection
1609   \def\sloppy{\frenchspacing\BibJustification}%
1610   \TB@origthebibliography} % latex's thebibliography now reads args.
1611 \fi % not harvardcite

```

\BibJustification \BibJustification defines how the bibliography is to be justified. The Lamport \SetBibJustification default is simply “`\sloppy`”, but we regularly find some sort of ragged right setting \TB@@sloppy is appropriate. (`\BibJustification` is nevertheless reset to its default value at the start of a paper.)

```

```

Typeset the doi. The format we decided on looks like: <https://doi.org/10.47397/tb/41-3/tb12> where the last element is the \jobname.

We put this below the footnote. The footer definitions above specify that it is always called, even if the regular footer is empty.

If the article started in the second column (option [secondcolstart]), we manually move the doi over.

We do not check for validity of \volno, \issno, \jobname. For testing, etc., seems simpler to just typeset what we've got. Other scripts will verify consistency.

```

```

### 3.27 Output routine

Modified to alter `\brokenpenalty` across columns

*Comment* We're playing with fire here: for example, `\outputdblcol` has changed in L<sup>A</sup>T<sub>E</sub>X 2<sub>&</sub> for 1995/06/01 (with the use of `\hb@xt@`). This time there's no semantic change, but...

```
1705 \def\@outputdblcol{\if@firstcolumn \global\@firstcolumnfalse
1706   \global\setbox\@leftcolumn\box\@outputbox
1707   \global\brokenpenalty10000
1708 \else \global\@firstcolumntrue
1709   \global\brokenpenalty100
1710   \setbox\@outputbox\vbox{\hb@xt@\textwidth{\hb@xt@\columnwidth
1711     {\box\@leftcolumn \hss}\hfil \vrule \@width\columnsep\hfil
1712     \hb@xt@\columnwidth{\box\@outputbox \hss}}}\@combinedblfloats
1713   \outputpage \begingroup \@dblfloatchannel \@startdblcolumn
1714   \@whilew\if@fcolmade \fi{\@outputpage\@startdblcolumn}\endgroup
1715 \fi}
```

### 3.28 Font-related definitions and machinery

These are mostly for compatibility with plain `tugboat.sty`

```
1716 \newif\ifFirstPar \FirstParfalse
1717 \def\smc{\sc}
1718 \def\ninepoint{\small}
1719 </clastail>
```

`\SMC` *isn't* small caps—Barbara Beeton says she thinks of it as “big small caps”. She says (modulo capitalisation of things...):

For the things it's used for, regular small caps are not appropriate—they're too small. Real small caps are appropriate for author names (and are so used in continental bibliographies), section headings, running heads, and, on occasion, words to which some emphasis is to be given. `\SMC` was designed to be used for acronyms and all-caps abbreviations, which look terrible in small caps, but nearly as bad in all caps in the regular text size. The principle of using “one size smaller” than the text size is similar to the design of caps in German—where they are smaller relative to lowercase than are caps in fonts intended for English, to improve the appearance of regular text in which caps are used at the heads of all nouns, not just at the beginnings of sentences.

We define this in terms of the memory of the size currently selected that's maintained in `\@currsize`: if the user does something silly re. selecting fonts, we'll get the wrong results. The following code is adapted from an old version of `relsize.sty` by Donald Arseneau and Matt Swift. (The order of examination of `\@currsize` is to get the commonest cases out of the way first.)

```
1720 <*common>
```

```

1721 \DeclareRobustCommand{\SMC}{%
1722   \ifx\@currsize\normalsize\small\else
1723     \ifx\@currsize\small\footnotesize\else
1724       \ifx\@currsize\footnotesize\scriptsize\else
1725         \ifx\@currsize\large\normalsize\else
1726           \ifx\@currsize\Large\large\else
1727             \ifx\@currsize\LARGE\Large\else
1728               \ifx\@currsize\scriptsize\tiny\else
1729                 \ifx\@currsize\tiny\tiny\else
1730                   \ifx\@currsize\huge\LARGE\else
1731                     \ifx\@currsize\Huge\huge\else
1732                       \small\SMC@unknown@warning
1733 \fi\fi\fi\fi\fi\fi\fi
1734 }
1735 \newcommand{\SMC@unknown@warning}{\TBWarning{\string\SMC: nonstandard
1736   text font size command -- using \string\small}}
1737 \newcommand{\textSMC}[1]{{\SMC #1}}

```

The `\acro` command uses `\SMC` as it was originally intended. Since these things are uppercase-only, it fiddles with the spacefactor after inserting its text.

```

1738 \newcommand{\acro}[1]{\textSMC{#1}\@}
1739 </common>

```

### 3.29 Miscellaneous definitions

`\EdNote` allows the editor to enter notes in the text of a paper. If the command is given something that appears like an optional argument, the entire text of the note is placed in square brackets. (Yes, it really is!)

```

1740 <*classtail>

## 4 L<sup>A</sup>T<sub>E</sub>X 2 <sub>$\epsilon$</sub> Proceedings class

\@tugclass Make the code of `ltugboat.cls` (when we load it) say it's really us:

```

1805 {*ltugprocls}
1806 \def\@tugclass{ltugproc}

```

\if@proc@sober TUG'96 proceedings switched to more sober headings still; so the `tug95` option  
\if@proc@enumerable establishes the original state. In the absence of any other guidance, we use the '96  
for TUG'97 proceedings, but also allow numbering of sections.

```

1807 \newif\if@proc@sober
1808 \newif\if@proc@enumerable
1809 \DeclareOption{tug95}{%
1810   \if@proc@soberfalse
1811   \if@proc@enumerablefalse
1812 }
1813 \DeclareOption{tug96}{%
1814   \if@proc@sobertrue
1815   \if@proc@enumerablefalse
1816 }
1817 \DeclareOption{tug97}{%
1818   \if@proc@sobertrue
1819   \if@proc@enumerabletrue
1820 }
1821 \DeclareOption{tug2002}{%
1822   \if@proc@sobertrue
1823   \if@proc@enumerabletrue
1824   \let\if@proc@numbersec\iftrue
1825   \PassOptionsToClass{numbersec}{ltugboat}%
1826 }

```

\if@proc@numbersec If we're in a class that allows section numbering (the actual check occurs after  
\ProcessOptions, we can have the following:

```

1827 \DeclareOption{numbersec}{\let\if@proc@numbersec\iftrue
1828   \PassOptionsToClass{numbersec}{ltugboat}%
1829 }
1830 \DeclareOption{nonumber}{\let\if@proc@numbersec\iffalse
1831   \PassOptionsToClass{nonumber}{ltugboat}%

```

```

1832 }

\ifTB@title If we have a paper for which we want to create a detached title, with an editor's
note, and then set the paper separately, we use option notitle.

1833 \newif\ifTB@title
1834 \DeclareOption{title}{\TB@titletrue}
1835 \DeclareOption{notitle}{\TB@titlefalse}
1836 \AtBeginDocument{\stepcounter{page}}

```

There are these people who seem to think `tugproc` is an option as well as a class...

```

1837 \DeclareOption{tugproc}{%
1838   \ClassWarning{\@tugclass}{Option \CurrentOption\space ignored}%
1839 }

```

All other options are simply passed to `ltugboat`...

```
1840 \DeclareOption*{\PassOptionsToClass{\CurrentOption}{ltugboat}}
```

If there's a `tugproc` defaults file, input it now: it may tell us which year we're to perform for... (Note: this code is millenium-proof. It's not terribly classy for years beyond 2069, but then I'm not going to be around then—this will be an interesting task for a future TeXie...)

```

1841 \InputIfFileExists{@tugclass.cfg}{\ClassInfo{ltugproc}%
1842   {Loading ltugproc configuration information}}{}%
1843 \@ifundefined{TUGprocExtraOptions}%
1844   {\let\TUGprocExtraOptions\empty}%
1845   {\edef\TUGprocExtraOptions{\TUGprocExtraOptions}}

```

`\tugProcYear` Now work out what year it is

```

1846 \@tempcnta\year
1847 \ifnum@\tempcnta<2000
1848   \divide@\tempcnta by100
1849   \multiply@\tempcnta by100
1850   \advance@\tempcnta-\year
1851   \@tempcnta-\@tempcnta
1852 \fi

```

And use that for calculating a year for us to use.

```

1853 \edef\@tempa{\noexpand\providecommand\noexpand\tugProcYear
1854           {\ifnum10>@\tempcnta0\fi\the@\tempcnta}%
1855 \atempa
1856 \ClassInfo{ltugproc}{Class believes year is
1857   \expandafter\ifnum\tugProcYear<2000 19\fi\tugProcYear
1858   \gobble}

```

Check that this is a “sensible year” (one for which we have a class option defined). If not, make it a ‘suitable’ year, in particular, one that allows numbering sections.

```

1859 \expandafter\ifx\csname ds@tug\tugProcYear\endcsname\relax
1860   \def\tugProcYear{2002}\fi

```

Now execute the default ‘year’ option and get on with processing. Note that this command gets ignored if the configuration file specifies a silly year.

```

1861 \ExecuteOptions{tug\procYear,title\TUGprocExtraOptions}
1862 \ProcessOptions
1863 \if@proc@numbersec
1864   \if@proc@numerable
1865   \else
1866     \ClassWarning{\@tugclass}{This year's proceedings may not have
1867       numbered sections}%
1868   \fi
1869 \fi

```

Call `\tugboat`, adding whichever section numbering option is appropriate

```

1870 \LoadClass[\if@proc@numbersec numbersec\else nonumber\fi]{\tugboat}

```

## 4.1 Proceedings titles

`\maketitle` There’s no provision for ‘section titles’ in proceedings issues, as there are in *TUG-boat* proper. Note the tedious L<sup>A</sup>T<sub>E</sub>X bug-avoidance in the `\@TB@test@document` macro.

```

1871 \def\maketitle{%
1872   \begingroup
1873     \ifshortAuthor \else
1874       \global\let\rhAuthor\empty
1875       \def\g@addto@rhAuthor##1{%
1876         \begingroup
1877           \toks@\expandafter{\rhAuthor}%
1878           \let\thanks\gobble
1879           \protected@xdef\rhAuthor{\the\toks##1}%
1880         \endgroup
1881       }%
1882       \getauthorlist\g@addto@rhAuthor
1883     \fi

```

now, the real business of setting the title

```

1884   \ifTB@title
1885     \setcounter{footnote}{0}%
1886     \renewcommand{\thefootnote}{\@fnsymbol\c@footnote}%
1887     \if@tubtwocolumn
1888       \twocolumn[\@maketitle]%
1889     \else

1945   }

```

**abstract** Save the contents of the abstract environment in the token register `\abstract@toks`.  
**\if@abstract** We need to do this, as otherwise it may get ‘typeset’ (previously, it got put in a  
**\abstract@toks** box) before `\begin{document}`, and experiments prove that this means our shiny  
new `\SMC` doesn’t work in this situation.

If you need to understand the ins and outs of this code, look at the place I  
lifted it from: `tabularx.dtx` (in the tools bundle). The whole thing pivots on  
having stored the name of the ‘abstract’ environment in `\@abstract@`

```

1946 \newtoks\abstract@toks \abstract@toks={}
1947 \let\if@abstract\iffalse
1948 \def\abstract{%

```

we now warn unsuspecting users who provide an `abstract` environment *after*  
the `\maketitle` that would typeset it...

```

1949 \ifTB@madetitle
1950   \TBWarning{abstract environment after \string\maketitle}
1951 \fi
1952 \def\@abstract@{\abstract}%
1953 \ifx\@currenvir\@abstract@
1954 \else
1955   \TBEerror{\string\abstract\space is illegal:}
1956   \MessageBreak
1957   use \string\begin{\@abstract@} instead}%
1958   {\@abstract@\space may only be used as an environment}
1959 \fi
1960 \global\let\if@abstract\iftrue
1961 {\ifnum0='}\fi
1962 \@abstract@getbody}
1963 \let\endabstract\relax

```

`\@abstract@getbody` gets chunks of the body (up to the next occurrence of  
`\end`) and appends them to `\abstract@toks`. It then uses `\@abstract@findend`  
to detect whether this `\end` is followed by `{abstract}`

```

1964 \long\def\@abstract@getbody#1\end{%
1965   \global\abstract@toks\expandafter{\the\abstract@toks#1}%
1966   \@abstract@findend}

```

Here we've got to `\end` in the body of the abstract. `\@abstract@findend` takes the ‘argument’ of the `\end` do its argument.

```
1967 \def\@abstract@findend#1{%
1968   \def\@tempa{#1}%
```

If we've found an ‘end’ to match the ‘begin’ that we started with, we're done with gathering the abstract up; otherwise we stuff the end itself into the token register and carry on.

```
1969   \ifx\@tempa\@abstract@
1970     \expandafter\@abstract@end
1971   \else
```

It's not `\end{abstract}`—check that it's not `\end{document}` either (which signifies that the author's forgotten about ending the abstract)

```
1972   \def\@tempb{document}%
1973   \ifx\@tempa\@tempb
1974     \TBE{\string\begin{\@abstract@}}
1975     ended by \string\end{\@tempb}%
1976     {You've forgotten \string\end{\@abstract@}}
1977   \else
1978     \global\abstract@toks\expandafter{\the\abstract@toks\end{#1}%
1979     \expandafter\expandafter\expandafter\@abstract@getbody
1980   \fi
1981 \fi}
```

In our case, the action at the ‘proper’ `\end` is a lot simpler than what appears in `tabularx.dtx`... don't be surprised!

```
1982 \def\@abstract@end{\ifnum0='{\fi}%
1983   \expandafter\end\expandafter{\@abstract@}}
```

`\makesignature` `\makesignature` is improper in proceedings, so we replace it with a warning (and a no-op otherwise)

```
1984 \renewcommand{\makesignature}{\TBWarning
1985   {\string\makesignature\space is invalid in proceedings issues}}
```

`\ps@TBprocitle` Now we define the running heads in terms of the `\rh*` commands.

## 4.2 Section divisions

Neither sections nor subsections are numbered by default in the proceedings style: note that this puts a degree of stress on authors' natural tendency to reference sections, which is a matter that needs attention. The class option NUMBERSEC once again numbers the sections (and noticeably changes the layout).

```

2026 \if@proc@numbersec
2027 \else
2028   \setcounter{secnumdepth}{0}
2029 \fi

```

Otherwise, the `\section` command is pretty straightforward. However, the `\subsection` and `\subsubsection` are run-in, and we have to remember to have negative stretch (and shrink if we should in future choose to have one) on the `afterskip` parameter of `\@startsection`, since the whole skip is going to end up getting negated. We use `\TB@startsection` to detect inappropriate forms.

```

2030 \if@proc@numbersec
2031 \else
2032   \if@proc@sober
2033     \def\section
2034       {\TB@nolimelabel
