2 Introduction

This file contains all the macros for typesetting *TUGboat* with both plain T_EX and L^AT_EX 2_ε.

2.1 Summary of control sequences

Abbreviations. Just a listing with indications of expansion where that may not be obvious. For full definitions, see real code below (Section 3.4).

\AllTeX (L^A)T_EX

\XeLaTeX	with extra space before ‘L’
\XML	
\WEB	
\WEAVE	
\WYSIWYG	

Macros for things that are slightly more significant.

\NoBlackBoxes	turns off marginal rules marking overfull boxes
\BlackBoxes	turns them back on
\newline	horizontal glue plus a break
\ifundefined#1	checks argument with \csname against \relax
\topsmash	smashes above baseline (from AMSTeX)
\botsmash	smashes below baseline (from AMSTeX)
\smash	smashes both (from plain)

\ulap	lap upwards
\dlap	lap downwards
\xlap	reference point at center horizontally; 0 width
\ylap	reference point at center vertically; 0 height, depth
\zlap	combination \xlap and \ylap
\basezero	to avoid insertion of baselineskip and lineskip glue
\nullhrule	empty \hrule
\nullvrule	empty \vrule
\makestrut[#1;#2]	ad hoc struts; #1=height, #2=depth
\today	today's date
\SetTime	converts \time to hours, minutes
\now	displays time in hours and minutes
\Now	shows current date and time
\ifPrelimDraft	flag to indicate status as preliminary draft
\rttitle	TUGboat volume and number info for running head
\midrttitle	information for center of running head
\rttitlenexttopage	next to page number in running head
\HorzR@gisterRule	pieces of registration marks ('trimmarks')
\DownShortR@gisterRule	
\UpShortR@gisterRule	
\ttopregister	top registration line with 'T' in center
\tbotregister	bottom registration line with inverted 'T' in center
\topregister	register actually used
\botregister	
\raggedskip	
\raggedstretch	parameters used for ragged settings
\raggedparfill	
\raggedspaces	
\raggedright	
\raggedleft	
\raggedcenter	
\normalspaces	
\raggedbottom	
\bull	square bullet
\cents	'cents' sign
\Dag	superscripted dagger
\careof	c/o
\sfrac	slashed fraction (arguments optionally separated by a slash)
\cs	control sequence name
\env	\cs{name}→\name environment name \env{name}→\begin{name}

\meta	meta-argument name \meta{name}→⟨name⟩
\dash	en-dash surrounded by thinspace; only breakable AFTER
\Dash	em-dash, as above
\hyph	permit automatic hyphenation after an actual hyphen
\slash	'breakable' slash
\nth	for obtaining '1 st ', '2 nd ', 3 rd , etc.
\tubissue	gets \TUB followed by volume and issue numbers
\xEdNote	Editor's Note:
\Review:	Review: (for title of book review article)
\reviewitem	begin data for item being reviewed
\revauth	with one argument, author(s) of item being reviewed
\revtitle	with one argument, title of ...
\revpubinfo	with one argument, other info pertaining to ...
\endreviewitem	end data for item being reviewed
\booktitle	with one argument, format book title as straight text
\Input	\input with some other bookkeeping for case where multiple articles are put together
\TBremark	reminder to <i>TUGboat</i> editorial staff
\TBEnableRemarks	enable \TBremarks (normally suppressed)
\pagexref	used to write out page numbers to screen and external files
\pagexrefON	
\pagexrefOFF	
\xrefto	used for symbolic cross-reference to other pages in <i>TUGboat</i>
\xreftoON	
\xreftoOFF	
\TBdriver	marks code which only takes effect when articles are run together in a driver file
\signaturemark	items for signatures
\signaturewidth	

3 L^AT_EX 2_ε *TUGboat* class file

3.1 Setup and options

Check for reloading. Hmm... Does this happen with L^AT_EX 2_ε classes? Probably, in fact, as well that it doesn't, since the \tugstyinit referenced here doesn't exist; however, it's possible that we might need a similar mechanism in the future, so we retain its skeleton, without fleshing out the \tugstyinit bones.

```
19 (*!tugboatcls)
20 \csname tugstyloaded@\endcsname
```

```
21 \def\tugstyloaded@{\tugstyinit\endinput}
```

Acquire a name for this class if we don't already have one (by virtue of having been loaded by `tugproc.cls`). This name will be used in error messages and the like.

```
22 \providecommand{\@tugclass}{\tugboat}
```

Warnings/error messages/information messages—if we're using L^AT_EX 2 _{ε} we can use the `\Class*` commands:

```
23 \def\TBInfo{\ClassInfo{\@tugclass}}
24 \def\TBErro{\ClassError{\@tugclass}}
25 \def\TBWarning{\ClassWarning{\@tugclass}}
26 \def\TBWarningNL{\ClassWarningNoLine{\@tugclass}}
```

draft vs. preprint vs. final.

```
27 \DeclareOption{draft}{%
28   \AtEndOfClass{%
29     \setcounter{page}{901}%
30     %
31     % Put a question mark into the page number in draft mode.
32     \let\tuborigthepage=\thepage
33     \def\thepage{%
34       \ifnum\value{page}>900
35         \textsl{?\texorpdfstring{,\,}{\,}\arabic{\numexpr\the\c@page-900\relax}}%
36       \else
37         \arabic{page}%
38       \fi}%
39     %
40     \BlackBoxes
41     \def\MakeRegistrationMarks{}%
42     \PrelimDrafttrue
43   }%
44 }
45
46 \newif\ifpreprint
47 \def\preprint{\preprinttrue}
48 \DeclareOption{preprint}{%
49   \preprinttrue
50 }
51
52 \newif\iftubfinaloption % [final]
53 \DeclareOption{final}{%
54   \tubfinaloptiontrue
55   \AtEndOfClass{%
56     \let\thepage=\tuborigthepage
57     \NoBlackBoxes
58     % Insert draft date into the header even with [final], if we are not
59     % doing a production run. (tugboat.dates sets up page numbers
60     % above 900 in such pseudo-draft mode.) We use [final] in the first
61     % place for this case because draft can change page layout, wrt
```

```

62      % registration marks, etc.
63      \ifnum\value{page}>900 \PrelimDrafttrue \else \PrelimDraftfalse \fi
64      \@tubrunningfull
65  }%
66 }

```

We want to use `hyperref`'s `\texorpdfstring`, e.g., in the `draft` option above. If `hyperref` is not loaded, define our own trivial fallback to expand to the `TEX` (first) argument.

Similarly, disable if we have `hyperref`, commonly used in sections.

```

67 \AtBeginDocument{%
68   \ifx\undefined\texorpdfstring
69     \DeclareRobustCommand{\texorpdfstring}[2]{#1}%
70   \fi
71   %
72   \ifx\undefined\pdfstringdefDisableCommands\else
73     \pdfstringdefDisableCommands{%
74       \let\acro\relax
75       % lots more could be added.
76     }%
77   \fi
78 }

```

TUGboat uses only 10pt for the main text.

```

79 \DeclareOption{11pt}{%
80   \TBWarning{The \@tugclass\space class only supports 10pt fonts:
81   \MessageBreak option \CurrentOption\space ignored}%
82 }
83 \DeclareOption{12pt}{\csname ds@11pt\endcsname}

```

Similarly, ignore one/two-side options.

```

84 \DeclareOption{oneside}{\TBWarning{Option \CurrentOption\space ignored}}
85 \DeclareOption{twoside}{\ds@oneside}

```

There are these people who seem to think `tugproc` is an option rather than a class... (Note that it's already been filtered out if we were calling from `ltugproc`.)

```

86 \DeclareOption{tugproc}{%
87   \TBWarning{Option \CurrentOption\space ignored: use class ltugproc
88   instead of \@tugclass}%
89 }

```

Option `rawcite` (the default) specifies the default citation mechanism (as built-in to `LATEX`); option `harvardcite` specifies the author-date citation mechanism defined in section 3.24 below.

```

90 \DeclareOption{rawcite}{\let\if@Harvardcite\iffalse}
91 \DeclareOption{harvardcite}{\let\if@Harvardcite\iftrue}

```

Option `extralabel` (the default) specifies that the publication years of two successive references with otherwise identical labels will be tagged with distinguishing letters; option `noextralabel` causes those letters to be suppressed. Note

that (a) no two references will in any case have the same labels in the default (plain) `rawcite` setup, and that (b) the distinguishing letters appear in the labels themselves; the reader can work out the correspondence one with the other...

```
92 \DeclareOption{extralabel}{\let\UseExtraLabel\@firstofone}
93 \DeclareOption{noextralabel}{\let\UseExtraLabel\@gobble}
```

The section-numbering style, so that we can allow the same heading layout as in the plain macros.

```
94 \DeclareOption{numbersec}{\let\if@numbersec\iftrue}
95 \DeclareOption{nonumber}{\let\if@numbersec\iffalse}
```

Minimal running headers/footers contain just the TUGboat volume/issue identification and page numbers. ‘runningfull’ is the default, and includes title and author. ‘runningoff’ makes both headers and footers empty.

```
96 \DeclareOption{runningoff}{\AtEndOfClass{\@tubrunningoff}}
97 \DeclareOption{runningminimal}{\AtEndOfClass{\@tubrunningminimal}}
98 \DeclareOption{runningfull}{\AtEndOfClass{\@tubrunningfull}}
```

Usually we want to print the doi if [final], else not. But sometimes we want to omit it even if [final], namely when we’re posting a review or other item early.

```
99 \newif\iftubomitdoioption
100 \DeclareOption{omitdoi}{%
101   \tubomitdoioptiontrue
102 }
```

`\if@tubtwocolumn` Occasionally (`tb107jackowski`, and past conference preprints), we need the option `onecolumn`. For alternative approaches to one-column articles, see `tb92hagen-euler` and `tb78milo`.

```
103 \newif\iftubtwocolumn \tubtwocolumntrue
104 \DeclareOption{onecolumn}{\tubtwocolumnfalse}
```

`\ifsecondcolstart` Occasionally, we need to start an article in the second column of a page, due to splicing with a previous article. Let’s try declaring that. Then, before `\maketitle`, we’ll force the move to the second column.

```
105 \newif\iftubsecondcolstart
106 \DeclareOption{secondcolstart}{\tubsecondcolstarttrue}
```

Any other options, we pass on to `article.cls` before we load it:

```
107 \DeclareOption*{\PassOptionsToClass{\CurrentOption}{article}}
```

Request default options (draft mode, standard citation, numbered sections, etc.), process all options, and then get the base document class on top of which we reside, namely `article`. Always call `article` with the `twoside` option, since we want the ability to have odd/even headers/footers.

```
108 \ExecuteOptions{draft,extralabel,numbersec,rawcite,runningminimal}
109 \ProcessOptions
110 \LoadClass[twoside]{article}
```

Various fonts used throughout. Some effort has been made to suppress these things with explicit sizes in the macro name (`\tensl` is an example below), but keeping in step with the documentation is one thing that restricts such a move.

```
111 \def\sectitlefont{\fontfamily{sfdefault}\fontseries{bx}\fontshape{n}%
112     \fontsize@xviipt\stbaselineskip\selectfont}
113 \def\tensl{\fontseries{m}\fontshape{s1}\fontsize@xpt@\xiipt
114     \selectfont}
```

This font selection command is used *only* for the ‘Editor’s Note’ introduction to notes; sadly it makes explicit reference to CMR, and Barbara Beeton has agreed that the reference may be constructed to use the current family such that, if no upright italic is defined, ordinary italics are used. A project for later...

```
115 \def\EdNoteFont{\fontfamily{cmr}\fontseries{m}\fontshape{ui}%
116     \selectfont}
117 /ltugboatcls
```

If Ulrik Vieth’s `mflogo.sty` is around, we’ll use it. Otherwise (pro tem, at least) we’ll warn the user and define the absolute minimum of machinery that *TUGboat* requires (that which was used prior to the invention of $\text{\LaTeX} 2_{\varepsilon}$).

```
118 (*common)
119 \IfFileExists{mflogo.sty}%
120   {\RequirePackage{mflogo}}%
121 {(!tugcomm) {\TBWarning
122 {tugcomm} {\PackageWarning{tugcomm}

138     <10><10.95><12><14.4><17.28><20.74><24.88>logos110%
139   }{}}
140   \DeclareFontShape{U}{logo}{m}{it}{%
141     <->ssub*logo/m/s1%
142   }{}}
143 }
```

3.2 Resetting at start of paper

\ResetCommands
\AddToResetCommands
\StartNewPaper We store a set of commands that should be executed at the start of each paper, before any paper-specific customisation. These commands (stored in the token register \ResetCommands) include things such as resetting section and footnote numbers, re-establishing default settings of typesetting parameters, and so on. The user (or more typically, editor) may execute the commands by using the command \StartNewPaper. Things I've not yet thought of may be added to the list of commands, by

```
144 \newtoks\ResetCommands
145 \ResetCommands{%
146   \setcounter{part}{0}%
147   \setcounter{section}{0}%
148   \setcounter{footnote}{0}%
149   \authornumber\z@%
150 }
151 \newcommand{\AddToResetCommands}[1]{%
152   \AddToResetCommands\expandafter{\AddToResetCommands#1}%
153 }
```

3.3 Helpful shorthands (common code with Plain styles)

\makeescape, ..., \makecomment allow users to change the category code of a single character a little more easily. These require that the character be addressed as a control sequence: e.g., \makeescape\` will make ‘`’ an escape character.

```
154 <!*!latex>
155 \def\makeescape#1{\catcode`\#1=0 }
156 \def\makebgroup#1{\catcode`\#1=1 }
157 \def\makeegroup#1{\catcode`\#1=2 }
158 \def\makemath #1{\catcode`\#1=3 }
159 </!*!latex>
160 <!*!latex>
161 \def\makeescape#1{\catcode`\#1=\z@}
162 \def\makebgroup#1{\catcode`\#1=\@ne}
163 \def\makeegroup#1{\catcode`\#1=\tw@}
164 \def\makemath #1{\catcode`\#1=\thr@@}
165 </!*!latex>
166 \def\makealign #1{\catcode`\#1=4 }
167 \def\makeeol #1{\catcode`\#1=5 }
168 \def\makeparm #1{\catcode`\#1=6 }
169 \def\makesup #1{\catcode`\#1=7 }
170 \def\makesub #1{\catcode`\#1=8 }
171 \def\makeignore#1{\catcode`\#1=9 }
172 \def\makespace #1{\catcode`\#1=10 }
173 \def\makeletter#1{\catcode`\#1=11 }
174 \chardef\other=12
175 \let\makeother\@makeother
176 \def\makeactive#1{\catcode`\#1=13 }
177 \def\makecomment#1{\catcode`\#1=14 }
```

`\savecat#1` and `\restorecat#1` will save and restore the category of a given character. These are useful in cases where one doesn't wish to localize the settings and therefore be required to globally define or set things.

`\SaveCS#1` and `\RestoreCS#1` save and restore ‘meanings’ of control sequences. Again this is useful in cases where one doesn’t want to localize or where global definitions clobber a control sequence which is needed later with its ‘old’ definition.

```
183 \def\SaveCS#1{\expandafter\let\csname saved@#1\expandafter\endcsname  
184   \csname#1\endcsname}  
185 \def\RestoreCS#1{\expandafter\let\csname#1\expandafter\endcsname  
186   \csname saved@#1\endcsname}
```

To distinguish between macro files loaded

```
187 \def\plaintubestyle{plain}
188 \def\latextubestyle{latex}
```

Control sequences that were first defined in L^AT_EX 2 ε of 1995/06/01 (or later), but which we merrily use. Only define if necessary:

```
189 \providecommand{\hbox@xt@{\hbox to}
190 \providecommand\textsuperscript[1]{\ensuremath{^{\m@th
191 ^{\mbox{\tiny\fontsize\sf@size\z@\vphantom{#1}}}}\selectfont #1}}}
192 }
```

(Note that that definition of \textsuperscript isn't robust, but probably doesn't need to be... What's more, it doesn't appear in the mythical 2.09 version of the package.)

3.4 Abbreviations and logos

Font used for the METAFONT logo, etc.

```

193 \DeclareRobustCommand{\AllTeX}{(\La\kern-.075em)\kern-.075em\TeX}

```

We started with the intention that we wouldn’t redefine `\LaTeX` when we’re running under it, so as not to trample on an existing definition. However, this proves less than satisfactory; a single logo may be OK for the run of documents, but for *TUGboat*, we find that something noticeably better is necessary; see section 3.12.

XeTEX requires reflecting the first E, hence we complain if the graphics package is not present. (For plain documents, this can be loaded via `miniltx` or `Eplain`.) Also, at Barbara's suggestion, if the current font is slanted, we rotate by 180 instead of reflecting so there is a better chance to look ok. (The magic values here seem more or less ok for `cmsl` and `cmti`.)

3.6 Utility registers and definitions

We define a few scratch registers (and the like) for transient use; they're all paired: an internal one (`\T@st*`) and an external one (`\Test*`).

Comment: Exercise for an idle day: find whether all these are necessary, or whether we can use the L^AT_EX temporaries for some (or all) of the `\T@st*` ones.

Comment: (bb) All these registers are used in the plain version, `tugboat.sty`.

<pre> 439 \newbox\T@stBox 440 \newcount\T@stCount 441 \newdimen\T@stDimen 442 \newif\ifT@stIf </pre>	<pre> \newbox\TestBox \newcount\TestCount \newdimen\TestDimen \newif\ifTestIf </pre>
--	--

Control sequence existence test, stolen from T_EXbook exercise 7.7 (note that this provides functionality that in some sense duplicates something within L^AT_EX).

```

513 }
514 \def\normalspaces{\spaceskip\z@skip \xspaceskip\z@skip}
```

3.8 Assorted user-level markup

L^AT_EX 2_ε defines a robust \,, but that we provide a new definition of ~ by redefining \ (\\DeclareRobustCommand doesn't mind redefinition, fortunately). This is based on the version in AMS-T_EX—the L^AT_EX 2_ε version (*ltxspace.dtx*) has \leavevmode and does not do anything with the surrounding space(s). Our version messes up with the \pfill used in doc-generated indexes (github.com/latex3/latex2e/issues/75), but later (2018++) versions of doc should be protected against our redefinition.

```
515 \let\latexnobreakspace=\nobreakspace
516 \DeclareRobustCommand{\nobreakspace}{\unskip\nobreak\ignorespaces}
```

Plain TeX defines \newbox as \outer. We solemnly preserve the following, which removes the \outerness; of course, we carefully exclude it from what we generate... (\outerness is a spawn of the devil, is it not? Barbara Beeton responded to the previous sentence “\\outerness has its place: it avoids register buildup, hence running out of memory”. In another context, David Carlisle remarked that an error control mechanism that causes more confusing errors than it

prevents is rather a poor one. This is perhaps not the place to conduct a serious debate...)

```

In L^AT_EX 2 _{ε} , `twoside` option is forced on when `article.cls` is loaded.

3.12 Messing about with the L^AT_EX logo

Barbara Beeton's pleas for L^AT_EX logos that look right in any font shape provoked me to generate the following stuff that is configurable.

Here's the command for the user to define a new version. The arguments are font family, series and shape, and then the two kern values used in placing the raised 'A' of L^AT_EX.

```
864 \newcommand{\DeclareLaTeXLogo}{[5]{\expandafter\def  
865   \csname @LaTeX@#1/#2/#3\endcsname{[#4]#5}}}
```

The default values are as used in the source of L^AT_EX itself:

866 \def\@LaTeX@default{{.36}{.15}}

More are defined in the initial version, for bold CM sans (which is used as \SecTitleFont), and CM italic medium and bold, and Bitstream Charter (which Nelson Beebe likes to use). Duplicate for Latin Modern.

```
867 \DeclareLaTeXLogo{cmss}{\bx}{n}{.3}{.15}
868 \DeclareLaTeXLogo{lmss}{\bx}{n}{.3}{.15}
869 %
870 \DeclareLaTeXLogo{cmr}{m}{it}{.29}{.2}
871 \DeclareLaTeXLogo{lmr}{m}{it}{.29}{.2}
872 %
```

```

873 \DeclareLaTeXLogo{cmr}{m}{s1}{.29}{.15}
874 \DeclareLaTeXLogo{lmr}{m}{s1}{.29}{.15}
875 %
876 \DeclareLaTeXLogo{cmr}{bx}{it}{.29}{.2}
877 \DeclareLaTeXLogo{lmr}{bx}{it}{.29}{.2}
878 %
879 \DeclareLaTeXLogo{cmr}{bx}{s1}{.29}{.2}
880 \DeclareLaTeXLogo{lmr}{bx}{s1}{.29}{.2}
881 %
882 \DeclareLaTeXLogo{bch}{m}{n}{.2}{.08}
883 \DeclareLaTeXLogo{bch}{m}{it}{.2}{.08}

```

Redefine `\LaTeX` to choose the parameters for the current font, or to use the default value otherwise:

```

884 \DeclareRobustCommand{\LaTeX}{\expandafter\let\expandafter\reserved@a
885   \csname @LaTeX@\f@family/\f@series/\f@shape\endcsname
886   \ifx\reserved@a\relax\let\reserved@a\@LaTeX@default\fi
887   \expandafter\@LaTeX\reserved@a}

```

Here's the body of what was originally `\LaTeX`, pulled out with its roots dripping onto the smoking ruin of original L^AT_EX, and then bits stuck in on the side.

`\@LaTeX@default` provides parameters as one finds in the original; other versions are added as needed.

```

888 \newcommand{\@LaTeX}[2]{%
889   \%wlog{latex logo family=\f@family/\f@series/\f@shape -> #1, #2.}%
890   L\kern-#1em
891   {\sbox{z@ T}%
892    \vbox to\ht0{\hbox{$\m@th$%
893      \csname S@\f@size\endcsname
894      \fontsize\sf@size z@%
895      \math@fontsfalse\selectfont
896      A}%
897      \vss}%
898   }%
899   \kern-#2em%
900   \TeX}

```

3.13 Authors, contributors, addresses, signatures

An article may have several authors (of course), so we permit an `\author` command for each of them. The names are then stored in a set of `\csnames` called `\author1`, `\author2`, ... Similarly, there are several `\address<n>` and `\netaddress<n>` and `\PersonalURL<n>` and `\ORCID<n>` commands set up for each article.

Comment: I would like to make provision for several authors at the same address, but (short of preempting the `*` marker, which it would be nice to retain so as to preserve compatibility with the `plain` style) I'm not sure how one would signal it.

```

901 \def\theauthor#1{\csname theauthor#1\endcsname}
902 \def\theaddress#1{\csname theaddress#1\endcsname}
903 \def\thenetaddress#1{\csname thenetaddress#1\endcsname}
904 \def\thePersonalURL#1{\csname thePersonalURL#1\endcsname}
905 \def\theORCID#1{\csname theORCID#1\endcsname}

```

The standard way of listing authors is to iterate from 1 to `\count@` and to pick the author names as we go.

```

906 <!latex> \newcount\@tempcnta
907 \def\@defaultauthorlist{%
908   \@getauthorlist\@firstofone
909 }

```

`\@getauthorlist` processes the author list, passing every bit of stuff that needs to be typeset to the macro specified as its argument.

```

910 \def\@getauthorlist#1{%
911   \count@\authornumber
912   \advance\count@ by -2
913   \atempcnta0

```

Loop to output the first $n - 2$ of the n authors (the loop does nothing if there are two or fewer authors)

```

914   \loop
915     \ifnum\count@>0
916       \advance\atempcnta by \one

The idea here is that if multiple authors share affiliation information, we need only typeset the affiliation once. We separate by commas for the `\maketitle`, and put on separate lines, also with commas, in the `\makesignature`.

Similarly, within `\netaddress`, `!tubmultipleaffilnet` separates with a space before and after the comma. (All this per bb.) See `tb122childstrotter.ltx`, `tb131sojka-czech.ltx` for examples.

1026   {\leavevmode\ignorespaces#1\unskip}%

```

\network is for use within the optional argument of \netaddress; it defines the *name* of the network the user is on.

Comment: I think this is a fantasy, since everyone (in practice, nowadays) quotes an internet address. In principle, there are people who will quote X.400 addresses (but they’re few and far between) and I have (during 1995!) seen an address with an UUCP bang-path component on *comp.text.tex*, but *really!*

```

1027 \def\network#1{\def\@network{#1: }}

\netaddress begins a group, executes an optional argument (which should
not, presumably, contain global commands) and then relays to \@relay@netaddress
with both @ and % made active (so that they can be discretionary points in the ad-
dress). If we’re using LATEX 2&, we use the default-argument form of \newcommand;
otherwise we write it out in all its horribleness.

```

```

1028 \newcommand{\netaddress}[1][]{\relax}%
1029   \begingroup
1030   \def\@network{}%

```

Unfortunately, because of the catcode hackery, we have still to do one stage of relaying within our own code, even if we're using L^AT_EX 2 _{ε} .

```

1031 #1\@sanitize\makespace\ \makeactive\@%
1032 \makeescape! \makebgroup[ \makeegroup]% seems more useful than literals
1033 \makeactive.\.\makeactive\%\@\relax\@netaddress}%

```

\@relay@netaddress finishes the job. It sets \thenetaddress for this author to contain the network name followed by the address. As a result of our kerfuffle above, @ and % are active at the point we're entered. We ensure they're active when \thenetaddress gets expanded, too. (**WOT?!**)

```

1034 \def\@relay@netaddress#1{%

1090   \expandafter\def\csname theORCID\number\authornumber\endcsname
1091     {\leavevmode \ignorespaces {\SMC ORCID} #1\unskip}}

```

For the online re-publication (as of 2009) by Mathematical Sciences Publishers <http://mathscipub.org>, lots and lots of metadata is needed, much of it redundant with things we already do. They are flexible enough to allow us to specify it in any reasonable way, so let's make one command `\mspmetavar` which takes two arguments. Example: `\mspmetavar{volumenumber}{30}`. For our purposes, it is just a no-op. And this initiative never came to anything, so it is not used at all.

```
1091 \mspmetavar
1092 \def\mspmetavar#1#2{}
```

3.14 Article title

```
1093 \if@articletitle \maketitle takes an optional “*”; if present, the operation is not defining the
1094   \maketitle title of a paper, merely that of a “business” section (such as the participants at
1095   \or@maketitle a meeting) that has no credited author or other title. In this case, the command
1096   flushes out the latest \sectitle (or whatever) but does nothing else.
```

Provide machinery (`\PreTitleDrop` to skip extra space, even one or more full columns, above the top of an article to leave space to paste up a previous article that has finished on the same page. This is a fall back to accommodate the fact that multiple articles cannot yet be run together easily with L^AT_EX 2 _{ϵ} .

In addition, if the `secondcolstart` option was specified, do `\null\newpage` to move over. This is separate from `\PreTitleDrop`, for no particular reason.

```
1093 \newif\if@articletitle

```

3.15 Section titles

The following macros are used to set the large *TUGboat* section heads (e.g. “General Delivery”, “Fonts”, etc.)

Define the distance between articles which are run together:

```
1131 \def\secsep{\vskip 5\baselineskip}
```

Note that \stbaselineskip is used in the definition of \sectitlefont, in L^AT_EX 2 _{ε} , so that it has (at least) to be defined before \sectitlefont is used (we do the whole job).

```

1132 \newdimen\stbaselineskip          \stbaselineskip=18\p@
1133 \newdimen\stfontheight
1134 \settoheight{\stfontheight}{\sectitlefont 0}
```

Declaring section titles; the conditional \ifSecTitle records the occurrence of a \sectitle command. If (when) a subsequent \maketitle occurs, the section title box will get flushed out; as a result of this, one could in principle have a set of \sectitle commands in a semi-fixed steering file, and inclusions of files inserted only as and when papers have appeared. Only the last \sectitle will actually be executed.

```

1135 \newif\ifWideSecTitle
1136 \newif\iftubtitlerulefullwidth
1137 \newif\ifSecTitle \SecTitlefalse
1138 \newcommand{\sectitle}{%
1139   \SecTitletrue
1140   \@ifstar
1141     {\WideSecTitletrue\def\s@ctitle}{%
```

```
1142     {\WideSecTitlefalse\def\s@ctitle}%
1143 }
```

\PreTitleDrop records the amount of column-space we need to eject before we start any given paper. It gets zeroed after that ejection has happened.

```
1144 \newdimen\PreTitleDrop \PreTitleDrop=\z@
```

The other parameters used in \@sectitle; I don't think there's the slightest requirement for them to be registers (since they're constant values, AFAIK), but converting them to macros would remove the essentially useless functionality of being able to change them using assignment, which I'm not about to struggle with just now...

\AboveTitleSkip and \BelowTitleSkip are what you'd expect; \strulethickness is the value to use for \fboxrule when setting the title, and for the rule above titles when there is no box.

```
1145 \newskip\AboveTitleSkip \AboveTitleSkip=12\p@
1146 \newskip\BelowTitleSkip \BelowTitleSkip=8\p@
1147 \newdimen\strulethickness \strulethickness=.6\p@
```

\@sectitle actually generates the section title (in a rather generous box). It gets called from \maketitle under conditional \ifSecTitle; by the time \@sectitle takes control, we already have \SecTitlefalse. This implementation uses L^AT_EX's \framebox command, on the grounds that one doesn't keep a dog and bark for oneself...

```
1148 \def\@sectitle #1{%
1149   \par
1150   \penalty-1000
```

If we're setting a wide title, the stuff will be at the top of a page (let alone a column) but inside a box, so that the separator won't be discardable: so don't create the separator in this case.

```
1151 \ifWideSecTitle\else\secsep\fi

3.16 Section headings

Redefine style of section headings to match plain *TUGboat*. Negative beforeskip suppresses following parindent. (So negate the stretch and shrink too).

These macros are called `*head` in the plain styles.

Relaying via `\TB@startsection` detects inappropriate use of `\section*`. Of course, if (when) we use it, we need to avoid that relaying; this can be done by `\letting \TB@startsection to \TB@safe@startsection`, within a group.

First the version for use in the default case, when class option NUMBERSEC is in effect.

```

1261 \def\tubsechook{}
1262 \if@numbersec
1263   \def\section{\TB@startsection{{section}}%
1264           1%
1265           \z@%
1266           {-8\p@ \oplus -2\p@ \ominus -2\p@}%
1267           {4\p@}%
1268           {\normalsize\bf\raggedright\hyphenpenalty\OM\tubsechook}}}
1269 \def\subsection{\TB@startsection{{subsection}}%
1270           2%
1271           \z@%
1272           {-8\p@ \oplus -2\p@ \ominus -2\p@}%
1273           {4\p@}%
1274           {\normalsize\bf\raggedright\hyphenpenalty\OM\tubsechook}}}
1275 \def\subsubsection{\TB@startsection{{subsubsection}}%
1276           3%
1277           \z@%
1278           {-8\p@ \oplus -2\p@ \ominus -2\p@}%
1279           {4\p@}%
1280           {\normalsize\bf\raggedright\hyphenpenalty\OM\tubsechook}}}
1281 \def\paragraph{\TB@startsection{{paragraph}}%
1282           4%
1283           \z@%
1284           {4\p@ \oplus 1\p@ \ominus 1\p@}%
1285           {-1em}%
1286           {\normalsize\bf\tubsechook}}}

```

Now the version if class option NONUMBER is in effect, i.e., if `\if@numbersec` is false.

```

1287 \else
1288   \setcounter{secnumdepth}{0}
1289   \def\section{\TB@nolimelabel
1290     \TB@startsection{{section}}%
1291     1%
1292     \z@%
1293     {-8\p@ \oplus -2\p@ \ominus -2\p@}%

1309     {\normalsize\bf\raggedright\hyphenpenalty\OM\tubsechook}}}
1310 \fi

```

`\TB@startsection` used to warn about * versions of sectioning commands when numbering wasn't in effect. But that eventually seemed a useless complaint, since it can be useful to switch back and forth between numbered and unnumbered can be useful during article development. So now `\TB@startsection` is just a synonym for `\@startsection`.

```
1311 \def\TB@startsection#1{\@startsection#1}%
```

`\TB@safe@startsection` is to be used where `\section*` (etc.) appear in places where the request is OK (because it's built in to some macro we don't fiddle with).

```
1312 \def\TB@safe@startsection#1{\@startsection#1}
```

The `SafeSection` environment allows use of *-forms of sectioning environments. It's not documented for the general public: it's intended as an editor's facility.

```

1313 \newenvironment{SafeSection}%
1314   {\let\TB@startsection\TB@safe@startsection}%
1315   {}
```

And now for the exciting sectioning commands that L^AT_EX defines but we don't have a definition for (whatever else, we don't want Lamport's originals, which come out 'like the blare of a bugle in a lullaby'¹).

¹Thurber, *The Wonderful O*

The three inappropriate ones are subparagraph (indistinguishable from paragraph), and chapter and part. The last seemed almost to be defined in an early version of these macros, since there was a definition of `\l@part`. I've not got down to where that came from (or why). If class option NONUMBER is in effect, we also suppress `\paragraph`, since it has no parallel in the plain style.

```

1316 \if@numbersec
1317   \def\subparagraph{\TB@nosection\subparagraph\paragraph}
1318 \else
1319   \def\paragraph{\TB@nosection\paragraph\subsubsection}
1320   \def\subparagraph{\TB@nosection\subparagraph\subsubsection}
1321 \fi
1322 \def\chapter{\TB@nosection\chapter\section}
1323 \def\part{\TB@nosection\part\section}
1324 \def\TB@nosection#1#2{\TBWarning{class does not support \string#1,
1325   \string#2\space used instead}#2}

```

`\l@<sectioning-name>` is for table of contents (of an article). We define new macros to allow easily changing the font used for toc entries (for *TUGboat*, we usually want roman, not bold), and the space between entries. Nelson Beebe and Frank Mittelbach's articles often have toc's (and few others). Also turn off microtype protrusion after

Contents

or leaders get messed up.

```

1326 \def\TBtocsectionfont{\normalfont}
1327 \newskip\TBtocsectionspace \TBtocsectionspace=1.0ex\@plus\p@
1328 \def\l@section#1#2{\addpenalty{\@secpenalty}%
1329   \addvspace{\TBtocsectionspace}%
1330   \tempdima 1.5em
1331   \begingroup
1332     \parindent\z@ \rightskip\z@ % article style makes \rightskip > 0
1333     \parfillskip\z@%
1334   \TBtocsectionfont
1335   \leavevmode\advance\leftskip\tempdima\hspace{-\leftskip#1\nobreak\hfil
1336   \nobreak\hb@xt@\pnumwidth{\hss #2}\par
1337   \endgroup}

```

3.17 Appendices

Appendices (which are really just another sort of section heading) raise a problem: if the sections are unnumbered, we plainly need to restore the section numbering, which in turn allows labelling of section numbers again (`\TBnolimelabel` happens before the `\refstepcounter`, so its effects get lost . . . what a clever piece of design that was). So here we go:

```
1338 \renewcommand{\appendix}{\par
```

```

1339 \renewcommand{\thesection}{\@Alph\c@section}%
1340 \setcounter{section}{0}%
1341 \if@numbersec
1342 \else
1343 \setcounter{secnumdepth}{1}%
1344 \fi

```

Now: is this the start of an appendix environment? This can be detected by looking at `\@currenvir`; if we are, we need to relay to `\@appendix@env` to pick up the optional argument.

```

1345 \def\@tempa{appendix}
1346 \ifx\@tempa\@currenvir
1347 \expandafter\@appendix@env
1348 \fi
1349 }

```

Here we deal with `\begin{appendix} [<app-name>]`

```

1350 \newcommand{\app@prefix@section}{}
1351 \newcommand{\@appendix@env}[1][Appendix]{%
1352 \renewcommand{\cseccntformat}[1]{\csname app@prefix@\#1\endcsname
1353 \csname the\#1\endcsname\quad}%
1354 \renewcommand{\app@prefix@section}{#1 }%
1355 }

```

Ending an appendix environment is pretty trivial...

```
1356 \let\endappendix\relax
```

3.18 References

If the sections aren't numbered, the natural tendency of the author to cross-reference (which, after all, is one of the things L^AT_EX is for ever being advertised as being good at) can cause headaches.

The following command is used by each of the sectioning commands to make a following `\ref` command bloop at the author. Even if the author then ignores the complaint, the poor old editor may find the offending `\label` rather more easily.

(Note that macro name is to be read as “*noli me label*” (I don't know the mediæval Latin for ‘label’).

Comment To come (perhaps): detection of the act of labelling, and an analogue of `\ifG@refundefined` for this sort of label

```

1357 \def\TB@nolimelabel{%
1358 \def\@currentlabel{%
1359 \protect\TBWarning{%
1360 Invalid reference to numbered label on page \thepage
1361 \MessageBreak made%
1362 }%
1363 \textbf{?!?}}%
1364 }%
1365 }

```

3.19 Title references

This is a first cut at a mechanism for referencing by the title of a section; it employs the delightfully simple idea Sebastian Rahtz has in the `nameref` package (which is part of `hyperref`). As it stands, it lacks some of the bells and whistles of the original, but they could be added; this is merely proof-of-concept.

The name label comes from the moveable bit of the section argument; we subvert the `\@sect` and `\@ssect` commands (the latter deals with starred section commands) to grab the relevant argument.

```
1366 \let\TB@@sect\@sect
1367 \let\TB@@ssect\@ssect
1368 \def\@sect#1#2#3#4#5#6[#7]#8{%
1369   \def\@currentlabelname{#7}%
1370   \TB@@sect{#1}{#2}{#3}{#4}{#5}{#6}[{#7}]{#8}%
1371 }
1372 \def\@ssect#1#2#3#4#5{%
1373   \def\@currentlabelname{#5}%
1374   \TB@@ssect{#1}{#2}{#3}{#4}{#5}%
1375 }
```

We output the name label as a second `\newlabel` command in the `.aux` file. That way, packages such as `varioref` which also read the `.aux` information can still work. So we redefine `\label` to first call the standard L^AT_EX `\label` and then write our named label as `nr<label>`.

```
1376 \let\@savelatexlabel=\label % so save original LaTeX command
1377 %
1378 \def\label#1{%
1379   \@savelatexlabel{#1}%
1380   \@bsphack
1381   \if@filesw
1382     \protected@write\@auxout{%
1383       {\string\newlabel{nr@#1}{{\@currentlabelname}}}}%
1384   \fi
1385   \@esphack
1386 }
```

Of course, in the case of a sufficiently mad author, there will be no sectioning commands, so we need to

```
1387 \let\@currentlabelname\empty
```

Getting named references is then just like getting page references in the L^AT_EX kernel (see `ltxref.dtx`).

```
1388 \DeclareRobustCommand{\nameref}[1]{\expandafter\@setref
1389   \csname r@nr@#1\endcsname\@secondoftwo{#1}}
```

3.20 Float captions

By analogy with what we've just done to section titles and the like, we now do our best to discourage hyphenation within captions. We also typeset them in `\small` (actually `\tubcaptionfonts`).

First, let's define a dimension by which we will indent full-page captions. We'll also use this to indent abstracts in proceedings style.

```
\@tubfullpageindent
1390 \newdimen\@tubfullpageindent
1391 \@tubfullpageindent = \if@tubtwocolumn 4.875pc \else 3.875pc \fi
```

One-line captions are normally centered, but sometimes we want to set them flush left for consistency with other nearby figures.

```
\tubcaptionleftglue
1392 \let\tubcaptionleftglue=\hfil
```

For *TUGboat*, we like 9pt captions to help differentiate from the main text.

```
1393 \def\tubcaptionfonts{\small}%
```

Ok, here is \makecaption.

```
1394 \long\def\makecaption#1#2{%
1395   \vskip\abovecaptionskip
1396   % try in an hbox:
1397   \sbox\@tempboxa{\tubcaptionfonts \frenchspacing \tubmakecaptionbox{#1}{#2}}%
1398   \ifdim \wd\@tempboxa > \hsize
1399     {% caption doesn't fit on one line; set as a paragraph.
1400      \tubcaptionfonts \raggedright \hyphenpenalty=100 \parindent=1em
1401      % indent full-width captions {figure*}, but not single-column {figure}.
1402      \ifdim\hsize = \textwidth
1403        \leftskip=\@tubfullpageindent \rightskip=\leftskip
1404        \advance\rightskip by 0pt plus2em % increase acceptable raggedness
1405      \fi
1406      \noindent \tubmakecaptionbox{#1}{#2}\par}%
1407   \else
1408     % fits on one line; use the hbox, usually centered. Do not reset its glue.
1409     \global\minipagetrue
1410     \hb@xt@\hsize{\tubcaptionleftglue\box\@tempboxa\hfil}%
1411   \fi
1412   \vskip\belowcaptionskip
1413 }%
```

```
1414 \def\tubmakecaptionbox#1#2{\#1:\ #2}% allow overriding for a paper
```

Also use \tubcaptionfonts for the caption labels, and put the label (e.g., "Figure 1") in bold. If the *listings* package is being used, bold for its label too; this \def is too early, but maybe *listings* will play nice later.

```
1415 \def\fnum@figure{{\tubcaptionfonts \bf \figurename\nobreakspace\thefigure}}
1416 \def\fnum@table{{\tubcaptionfonts \bf \tablename\nobreakspace\thetable}}
1417 \def\lstlistingnamestyle{\bfseries}
```

Let's reduce the default space above captions a bit, and give it some flexibility.

The default is 10pt, which seems too much.

```
1418 \setlength\abovecaptionskip{6pt plus1pt minus1pt}
```

3.21 Size changing commands

Apart from their ‘normal’ effects, these commands change the glue around displays.

```
1419 \renewcommand{\normalsize}{%
1420   \@setfontsize\normalsize\@xipt\@xipt

1491 }%

```

3.23 Some fun with verbatim

The plain *TUGboat* style allows [optional] arguments to its `\verb+at+` command. This will allow the author (or editor) to specify a range of exciting features; we would definitely like the numbered verbatim style for code (that facility is reserved for a future version of this package), and the present little bit of code imposes the `\ruled` option on the built-in `verbatim` environment. (Note that we don't yet deal with `verbatim*`, which is in itself an option to the `plain` original.)

We start by saving various bits and bobs whose operation we're going to subvert.

```

1492 \%let\@TB@verbatim\@verbatim
1493 \let\@TBverbatim\verb+
1494 \let\@TBendverbatim\endverb+

```

Impose an optional argument on the environment.

We start the macro with `\par` to avoid a common error: if the optional argument is `\small`, and the document has no blank line before the verbatim block, we don't want that preceding paragraph to be set with `\small`'s line spacing.

(`\obeylines` added to prevent the `\futurelet` from propagating into the body of the verbatim, thus causing lines that start with odd characters (like `#` or even `\`) to behave peculiarly.)

```
1495 \def\verbatim{\par\obeylines
1496   \futurelet\reserved@a\@switch@sqbverbatim}
1497 %
1498 \def\@switch@sqbverbatim{\ifx\reserved@a[%]
1499   \expandafter\@sbverbatim\else
1500   \def\reserved@b{\@sbverbatim[]}\expandafter\reserved@b\fi}
1501 %
1502 \def\@sbverbatim[#1]{%
```

The optional argument consists entirely of functions that modify the appearance of the environment. Following the `plain` style, we define the functions we can execute in the optional argument here.

The command `\ruled` tells us that there should be rules above and below the verbatim block.

```
1503 \def\ruled{\let\if@ruled\iftrue}%

```

The command `\makevmeta` says to make `!j...i` do `<...>`.

```
1504 \def\makevmeta{\makeescape{!} \let<\tubverb@meta \tubverb@clearliglist}
1505 \def\tubverb@meta##1>{\meta{##1}}
```

The default verbatim defines “`j,-` as active characters to stop ligatures; remove `j,-` from the list so we get normal characters. Just hope that the CM `j,-` ligatures aren't used.

```
1506 \def\tubverb@clearliglist{%
1507   \def\verbatim@nolig@list{\do\` \do\,\do\-\}%
1508 }
```

Then we execute the arguments we've got, and relay to a (hacked) copy of the `LATEX` verbatim environment.

```
1509 #1\@TBverbatim}
```

The built-in environment itself relays to `\@verbatim`, which we've subverted to impose our views on appearance.

```
1510 \def\@verbatim{%
```

First, we deal with `\ruled`:

```
1511 \if@ruled\trivlist\item\hrule\kern5\p@\nobreak\fi
```

Now, the code out of the original `verbatim` environment:

```
1512 \trivlist \item\relax
1513 \if@minipage\else\vskip\parskip\fi
1514 \leftskip\@totalleftmargin\rightskip\z@skip
```

```

1534     {\g@addto@macro\verbatim{\microtypesetup{activate=false}}}\{}%
1535 }

```

3.24 Bibliography

This is more or less copied verbatim from Glenn Paulley's *chicago.sty* (gnpaulle.ca/bluebox.uwaterloo.ca). It produces an author-year citation style bibliography, using output from the BIBTEX style file based on that by Patrick Daly. It needs extra macros beyond those in standard LATEX to function properly. The form of the bibitem entries is:

```
\bibitem[\protect\citeauthoryear{Jones, Baker, and Smith}{Jones et al.}{1990}{key}...]
```

The available citation commands are:

```

\citef{key}      → (Jones, Baker, and Smith 1990)
\citeA{key}      → (Jones, Baker, and Smith)
\citeNP{key}     → Jones, Baker, and Smith 1990
\citeANP{key}    → Jones, Baker, and Smith
\citeN{key}      → Jones, Baker, and Smith (1990)
\shortcite     → (Jones et al. 1990)
\citeyear       → (1990)
\citeyearNP    → 1990

```

First of all (after checking that we're to use Harvard citation at all), make a copy of L^AT_EX's default citation mechanism.

```

1536 \if@Harvardcite
1537 \let\@internalcite\cite

```

Normal forms.

```

`\thebibliography` If the user's asked to use L^AT_EX's default citation mechanism (using the `rawcite` option), we still need to patch `\sloppy` to support justification of the body of the bibliography. We kludge in a call to `\frenchspacing` too, since there is no reason to change only period's `\sfcode`, as L^AT_EX's original `thebibliography` (in `classes.dtx`) does.

By the way, `amsgen.sty` changes `\frenchspacing` to set the `\sfcode` of punctuation character to successively decreasing integers ending at 1001 for comma. Thus its 1006 for period is overwritten to 1000 for `thebibliography`, making `amsgen`'s `\@addpunct` ineffective. Don't know what that means in practice, if anything.

Back here, we also play with `The TEXbook@startsection` since we always have, though that is no longer needed.

Typeset the doi. The format we decided on looks like: <https://doi.org/10.47397/tb/41-3/tb12> where the last element is the \jobname.

We put this below the footnote. The footer definitions above specify that it is always called, even if the regular footer is empty.

If the article started in the second column (option [secondcolstart]), we manually move the doi over.

We do not check for validity of \volno, \issno, \jobname. For testing, etc., seems simpler to just typeset what we've got. Other scripts will verify consistency.

```

3.28 Font-related definitions and machinery

These are mostly for compatibility with plain `tugboat.sty`

```
1750 \newif\ifFirstPar      \FirstParfalse
1751 \def\smc{\sc}
1752 \def\ninepoint{\small}
1753 </clastail>
```

`\SMC` *isn't* small caps—Barbara Beeton says she thinks of it as “big small caps”. She says (modulo capitalisation of things...):

For the things it's used for, regular small caps are not appropriate—they're too small. Real small caps are appropriate for author names (and are so used in continental bibliographies), section headings, running heads, and, on occasion, words to which some emphasis is to be given. `\SMC` was designed to be used for acronyms and all-caps abbreviations, which look terrible in small caps, but nearly as bad in all caps in the regular text size. The principle of using “one size smaller” than the text size is similar to the design of caps in German—where they are smaller relative to lowercase than are caps in fonts intended for English, to improve the appearance of regular text in which caps are used at the heads of all nouns, not just at the beginnings of sentences.

We define this in terms of the memory of the size currently selected that's maintained in `\@currsiz`: if the user does something silly re. selecting fonts, we'll get the wrong results. The following code is adapted from an old version of `rele-size.sty` by Donald Arseneau and Matt Swift. (The order of examination of `\@currsiz` is to get the commonest cases out of the way first.)

```
1754 (*common)
1755 \DeclareRobustCommand{\SMC}{%
1756   \ifx\@currsiz\normalsize\small\else
1757   \ifx\@currsiz\small\footnotesize\else

4 L^AT_EX 2 _{ϵ} Proceedings class

\@tugclass Make the code of `ltugboat.cls` (when we load it) say it’s really us:

```

1839 <*ltugproccls>
1840 \def\@tugclass{ltugproc}

```

\if@proc@sober TUG’96 proceedings switched to more sober headings still; so the `tug95` option establishes the original state. In the absence of any other guidance, we use the ’96 for TUG’97 proceedings, but also allow numbering of sections.

```

1841 \newif\if@proc@sober
1842 \newif\if@proc@enumerable
1843 \DeclareOption{tug95}{%
1844   \if@proc@soberfalse
1845   \if@proc@enumerablefalse
1846 }
1847 \DeclareOption{tug96}{%
1848   \if@proc@sobertrue
1849   \if@proc@enumerablefalse
1850 }
1851 \DeclareOption{tug97}{%
1852   \if@proc@sobertrue
1853   \if@proc@enumerabletrue
1854 }
1855 \DeclareOption{tug2002}{%
1856   \if@proc@sobertrue
1857   \if@proc@enumerabletrue
1858   \let\if@proc@numbersec\iftrue
1859   \PassOptionsToClass{numbersec}{ltugboat}%
1860 }

```

\if@proc@numbersec If we're in a class that allows section numbering (the actual check occurs after `\ProcessOptions`, we can have the following:

```

1861 \DeclareOption{numbersec}{\let\if@proc@numbersec\iftrue
1862   \PassOptionsToClass{numbersec}{ltugboat}%
1863 }
1864 \DeclareOption{nonumber}{\let\if@proc@numbersec\iffalse
1865   \PassOptionsToClass{nonumber}{ltugboat}%
1866 }

```

\ifTB@title If we have a paper for which we want to create a detached title, with an editor's note, and then set the paper separately, we use option `notitle`.

```

1867 \newif\ifTB@title
1868 \DeclareOption{title}{\ifTB@titletrue}
1869 \DeclareOption{notitle}{\ifTB@titlefalse
1870   \AtBeginDocument{\stepcounter{page}}}

```

There are these people who seem to think `tugproc` is an option as well as a class...

```

1871 \DeclareOption{tugproc}{%
1872   \ClassWarning{\@tugclass}{Option \CurrentOption\space ignored}%
1873 }

```

All other options are simply passed to `ltugboat`...

```
1874 \DeclareOption*{\PassOptionsToClass{\CurrentOption}{ltugboat}}
```

If there's a `tugproc` defaults file, input it now: it may tell us which year we're to perform for... (Note: this code *is* millenium-proof. It's not terribly classy for

years beyond 2069, but then I'm not going to be around then—this will be an interesting task for a future TEXie...)

```
1875 \InputIfFileExists{\@tugclass.cfg}{\ClassInfo{ltugproc}%
1876   {Loading ltugproc configuration information}{}}
1877 \@ifundefined{TUGprocExtraOptions}%
1878   {\let\TUGprocExtraOptions\empty}%
1879   {\edef\TUGprocExtraOptions{\TUGprocExtraOptions}}
```

\tugProcYear Now work out what year it is

```
1880 \@tempcnta\year
1881 \ifnum \@tempcnta<2000
1882   \divide\@tempcnta by100
1883   \multiply\@tempcnta by100
1884   \advance\@tempcnta-\year
1885   \@tempcnta-\@tempcnta
1886 \fi
```

And use that for calculating a year for us to use.

```
1887 \edef\@tempa{\noexpand\providecommand\noexpand\tugProcYear
1888   {\ifnum10>\@tempcnta0\fi\the\@tempcnta}}
1889 \@tempa
1890 \ClassInfo{ltugproc}{Class believes year is
1891   \expandafter\ifnum\tugProcYear<2000 19\fi\tugProcYear
1892   \@gobble}
```

Check that this is a “sensible year” (one for which we have a class option defined). If not, make it a ‘suitable’ year, in particular, one that allows numbering sections.

```
1893 \expandafter\ifx\csname ds@tug\tugProcYear\endcsname\relax
1894   \def\tugProcYear{2002}\fi
```

Now execute the default ‘year’ option and get on with processing. Note that this command gets ignored if the configuration file specifies a silly year.

```
1895 \ExecuteOptions{tug\tugProcYear,title\TUGprocExtraOptions}
1896 \ProcessOptions
1897 \if@proc@numbersec
1898   \if@proc@enumerable
1899   \else
1900     \ClassWarning{\@tugclass}{This year's proceedings may not have
1901       numbered sections}%
1902   \fi
1903 \fi
```

Call `ltugboat`, adding whichever section numbering option is appropriate

```
1904 \LoadClass[\if@proc@numbersec numbersec\else nonumber\fi]{ltugboat}
```

4.1 Proceedings titles

\maketitle There's no provision for 'section titles' in proceedings issues, as there are in *TUGboat* proper. Note the tedious L^AT_EX bug-avoidance in the \CTB@test@document macro.

```

abstract Save the contents of the abstract environment in the token register `\abstract@toks`.
\if@abstract We need to do this, as otherwise it may get ‘typeset’ (previously, it got put in a
`\abstract@toks`

box) before `\begin{document}`, and experiments prove that this means our shiny new `\SMC` doesn't work in this situation.

If you need to understand the ins and outs of this code, look at the place I lifted it from: `tabularx.dtx` (in the tools bundle). The whole thing pivots on having stored the name of the 'abstract' environment in `\@abstract@`

```
1980 \newtoks\abstract@toks \abstract@toks{}  
1981 \let\if@abstract\iffalse  
1982 \def\abstract{%
```

we now warn unsuspecting users who provide an `abstract` environment *after* the `\maketitle` that would typeset it...

```
1983 \ifTB@\madetitle  
1984   \TBWarning{abstract environment after \string\maketitle}  
1985 \fi  
1986 \def\@abstract@{\abstract}%  
1987 \ifx\currenvir\@abstract@  
1988 \else  
1989   \TBError{\string\abstract\space is illegal:%  
1990     \MessageBreak  
1991     use \string\begin{\@abstract@} instead}%  
1992     {\@abstract@\space may only be used as an environment}  
1993 \fi  
1994 \global\let\if@abstract\iftrue  
1995 {\ifnum0='}\fi  
1996 \@abstract@getbody}  
1997 \let\endabstract\relax
```

`\@abstract@getbody` gets chunks of the body (up to the next occurrence of `\end`) and appends them to `\abstract@toks`. It then uses `\@abstract@findend` to detect whether this `\end` is followed by `{abstract}`

```
1998 \long\def\@abstract@getbody#1\end{  
1999   \global\abstract@toks\expandafter{\the\abstract@toks#1}%  
2000   \@abstract@findend}
```

Here we've got to `\end` in the body of the abstract. `\@abstract@findend` takes the 'argument' of the `\end` do its argument.

```
2001 \def\@abstract@findend#1{  
2002   \def\@tempa{#1}%
```

If we've found an 'end' to match the 'begin' that we started with, we're done with gathering the abstract up; otherwise we stuff the end itself into the token register and carry on.

```
2003 \ifx\@tempa\@abstract@  
2004   \expandafter\@abstract@end  
2005 \else
```

It's not `\end{abstract}`—check that it's not `\end{document}` either (which signifies that the author's forgotten about ending the abstract)

```
2006 \def\@tempb{document}%
```

```

2007   \ifx\@tempa\@tempb
2008     \TError{\string\begin{\@abstract@}
2009       ended by \string\end{\@tempb}}%
2010       {You've forgotten \string\end{\@abstract@}}
2011   \else
2012     \global\abstract@toks\expandafter{\the\abstract@toks\end{#1}}%
2013     \expandafter\expandafter\expandafter\@abstract@getbody
2014   \fi
2015 \fi}

```

In our case, the action at the ‘proper’ `\end` is a lot simpler than what appears in `tabularx.dtx` ... don’t be surprised!

```

2016 \def\@abstract@end{\ifnum0='{\fi}%
2017   \expandafter\end\expandafter{\@abstract@}}

```

`\makesignature` `\makesignature` is improper in proceedings, so we replace it with a warning (and a no-op otherwise)

```

2018 \renewcommand{\makesignature}{\TBWarning
2019   {\string\makesignature\space is invalid in proceedings issues}}

```

`\ps@TBproctitle` Now we define the running heads in terms of the `\rh*` commands.

4.2 Section divisions

Neither sections nor subsections are numbered by default in the proceedings style: note that this puts a degree of stress on authors' natural tendency to reference sections, which is a matter that needs attention. The class option NUMBERSEC once again numbers the sections (and noticeably changes the layout).

```

2060 \if@proc@numbersec
2061 \else
2062   \setcounter{secnumdepth}{0}
2063 \fi

```

Otherwise, the `\section` command is pretty straightforward. However, the `\subsection` and `\subsubsection` are run-in, and we have to remember to have negative stretch (and shrink if we should in future choose to have one) on the `\afterskip` parameter of `\@startsection`, since the whole skip is going to end up getting negated. We use `\TB@startsection` to detect inappropriate forms.

```
