

More Titlepage Styles with Package `uni-titlepage`

Markus Kohm

v1.1a 2022/09/06

Abstract

Creation of title pages is something most authors should not have to do. But reality is not perfect, so a lot of authors have to do it. In 2009 KOMA started the title page project at <https://komascript.de/titlepage> to collect real title pages and implement them with a well defined interface. In 2021 the project has been moved to <https://github.com/komascript/uni-titlepage> and renamed.

Now, changing from one title page style to another would be very simple. Nevertheless implementation of a new title page style may be still difficult. But maybe the guys of the title page project would help you. Just ask!

4.2 The Package <code>scrbase</code>	26
4.3 The <code>titlepage</code> Drivers	38
4.4 The Examples and the Manual	57

1 Loading the Package

You may load this package like all the other package, simply using:

```
\usepackage{uni-titlepage}
```

This package declares several options for title page manipulation. We will describe all those options in the following. Most of the options are package options as well, but some are style options only. You may use every package option already as optional argument of `\usepackage` and even of `\documentclass`. But in most cases it would be better to use them as optional argument of `\TitlePageStyle` or `\maketitle`. We show this way below.

2 The Title Page Styles and their Options

`TitlePageStyle` Several title page styles are supported. You may select a title page style using:

```
\TitlePageStyle[<option>=<value>,...]{<style>}.
```

The available styles are shown at the following sub-sections. Options may be every package option and every style option.

`maketitle` After loading a style you may generate title pages using:

```
\maketitle[<option>=<value>,...].
```

Again, you may use every package option and every style option as optional argument.

`TitleOption` Another way to set an option is to use either

`TitleOptions`

```
\TitleOption{<option>}{<value>}
```

or

```
\TitleOptions[<option>=<value>,...].
```

You can set every package option an every option of already loaded title page styles.

For every main option, that expects a string argument exists a corresponding command with the same name. So you may set, e.g., the title either using `\TitleOptions{title={This is the Title}}` or `\TitleOption{title}{This is the Title}` or `\maketitle[title={This is the Title}]` or `\TitlePageStyle [title={This is the Title}]{...}` or `\title{This is the Title}`. The most robust way is to use the command `\title` instead of the option at one of the other commands. If you use the option you may need to add `\protect` in front of some commands inside the option value. But note: This is not valid for alias options like `student`, because alias options do not have a corresponding command!

<i>String Option</i>	<i>Styles</i>	<i>Common Meaning</i>
advisor	TU-DD, UKoLa	if your personal advisor differs from the advising professor, this is the name of the advisor
author	<i>every style</i>	the authors, with some styles (currently not with DHBW or UKoLa) you may separate multiple authors by \and
chair	TU-DD, KIT, WWUM, UKoLa	the chair or institute of the faculty of the university where you've made or presented your work
company	DHBW	some works are made not only at a university but in cooperation with a company; at Duale Hochschule Baden-Württemberg this is the default case
course	DHBW	the shortcut for your discipline or course
date	DHBW, KIT, KOMAScript, Markus-1, Markus-2, Spacer, TU-HH, TU-DD, JT-Typography, WWUM	the documents main date, this may be, e.g., the release date, the semester of a thesis or any other most valid date
dedication	KOMAScript, Markus-1, Markus-2, Spacer	sometimes it is nice to dedicate the work to someone, e.g., your wife, your children, your grandmother or your first love
academicgrade	DHBW, TU-HH, WUMM, UKoLa	the academic grade or degree you reach with the work
discipline	DHBW, TU-DD, WUMM	the discipline in which you've made your work or reach your academic grade
duration	DHBW	the processing time for your work
faculty	TU-DD, KIT, WUMM	the faculty of the university where you've made or presented your work
homepage	KIT	the www-address of the homepage

...

<i>String Option</i>	<i>Styles</i>	<i>Common Meaning</i>
<code>mainlogo</code>	DHBW, KIT, UKoLa	a logo at the main title (currently used for the DHBW or the KIT logo at the default of <code>titlehead</code> and the main logo of style <code>UKoLa</code>)
<code>secondlogo</code>	UKoLa	a secondary logo
<code>matriculationnumber</code>	DHBW, TU-DD	if you were a student while you've made the work, this is your number
<code>oralexaminationdate</code>	TU-HH, WUMM	sometimes the date of the oral examination is not the main date but has to be shown too
<code>place</code>	DHBW, TU-HH, JT-Geschichte, JT-Typography, WUMM, UKoLa	the place, in general the city, where you've made the work or where the Duale Hochschule or the publisher resides
<code>professor</code>	TU-DD, WUMM	the name of the professor who advised you during your work
<code>publisher</code>	KOMAScript, Markus-1, Markus-2, Spacer, JT-Aufsaetze, JT-Geschichte, JT-Typography	most written works have a publisher
<code>referee</code>	DHBW, TU-HH, UKoLa	every academic work will be referred; with some styles (currently TU-HH, WWUM, UKoLa) multiple referees may be separated with \and
<code>science</code>	WWUM	kind of science, e.g., "Naturwissenschaften"
<code>student</code>	<i>see author</i>	alias option to <code>author</code>
<code>subject</code>	<i>every style</i>	the kind of work, there are special predefined subjects; if you use one of <code>bachelor</code> , <code>academicgrade</code> , <code>diploma</code> , <code>master</code> , <code>project</code> , <code>seminar</code> , or <code>studentresearch</code> a language dependend replacement will be done; to avoid this, you may set the value in parenthesis

...

<i>String Option</i>	<i>Styles</i>	<i>Common Meaning</i>
<code>subtitle</code>	KOMAScript, Markus-1, Markus-2, Spacer, TU-HH	the sub-title of the document
<code>title</code>	<i>every style</i>	the main title of the document
<code>titlehead</code>	DHBW, KOMAScript, Markus-2, Spacer, KIT	page head over the main title of the document
<code>university</code>	DHBW, TU-DD, TU-HH, KIT, WWUM	the university where you've made or presented your work

Note: Depending on the used style some elements are mandatory. You will get an error message like

```
Package uni-titlepage Error: empty title element 'author'.
```

if such a mandatory element has not been set. In this case use either the option or the corresponding command to setup at least a dummy value, e.g.

```
\author{DON'T FORGET TO CHANGE THE AUTHOR}
```

before the corresponding `\maketitle`.

Let's have a look at the already defined title page styles. You should find an example L^AT_EX file for each of them at the documentation folder. If not, ask your distributor or administrator for those! But you may find the code of all examples in `docstrip` syntax even at [subsection 4.4](#) starting at [page 57](#). At the shown examples most variable contents have been made red.

2.1 Style DHBW

Josef Schmidbauer asked me for a title page usable for bachelor thesis at the “Duale Hochschulen Baden-Württemberg”. This is a only one title page style.

The page (in example `titlepage-DHBW.tex`)
is:

1. main title page with `titlehead`,
`mainlogo`, `title`, `subject`,
`academicgrade`, `discipline`,
`place`, `author`, `duration`,
`matriculationnumber`, `course`,
`company`, `referee`, `university`, and
`date`.

Note: The upper right corner is the logo placeholder. If you'd download the logo from the DHBW homepage <http://www.dhbw.de> and save it with the name `DHBW_d_MOS_195x95_rgb_300.jpg` it would be used automatically. The logo file is also available from https://de.wikipedia.org/wiki/Datei:DHBW_d_MOS_195x95_rgb_300.jpg. This original logo has a large white border, so it would be much smaller than the red box at the example. The example file also contains comments for an optional company logo at the upper left corner.

2.2 Style KOMAScript

This is a style similar to the title pages of KOMA-Script classes.

The pages (in twoside example `titlepage-KOMAScript.tex`) are:

1. defined by `extratitle`, which is not a package option but a style option. You may set it using `\TitleOption` or `\TitleOptions` after loading the style or with the optional argument of `\maketitle` or `\TitlePageStyle`.
2. empty and only in twoside mode with `extratitle` used.
3. main title page with `titlehead`, `subject`, `title`, `subtitle`, `author`, `date`, `plublisher`. You may use `\thanks` at any of these.

	<p>Das ist ein Schmutztitel im Stil KOMAScript</p>
	<p>Den Kopfbereich kann man auf diese Weise füllen. Eine Klassifizierung der Arbeit Titel im Stil KOMAScript Untertitel Einen Verlag kann man ebenfalls angeben</p>

<p>Oberer Bereich der Rückseite des Haupttitels im Stil KOMAScript.</p> <p>Unterer Bereich der Rückseite des Haupttitels im Stil KOMAScript.</p>	<p>Eine Widmung im Stil KOMAScript</p>

- 4. only in twoside mode defined by `uppertitleback` and `lowertitleback`, which are not package options but style options. You may set them using `\TitleOption` or `\TitleOptions` after loading the style or with the optional argument of `\maketitle` or `\TitlePageStyle`.
- 5. optional post title with `dedication`.
- 6. empty and only in twoside mode with `dedication` used.

2.3 Style Markus-1

This is a style similar to the one of the title of the KOMA-Script book.

The pages (in twoside example `titlepage-Markus-1.tex`) are:

1. defined by `publisher`; may be omitted by `publisher={}`.
2. only in twoside mode with `publisher` defined by `author`.
3. main title page with `subject`, `title`, `subtitle`, and `date`.

4. only in twoside mode defined by `uppertitleback` and `lowertitleback`, which are not package options but style options. You may set them using `\TitleOption` or `\TitleOptions` after loading the style or with the optional argument of `\maketitle` or `\TitlePageStyle`.
5. optional post title with `dedication`.
6. empty and only in twoside mode with `dedication` used.

2.4 Style Markus-2

This style is not a real live style, but similar styles are often used:

The pages (in twoside example `titlepage-Markus-2.tex`) are:

1. defined by `extratitle`.
2. empty and only in twoside mode with `extratitle` used.
3. main title page with `titlehead` placed at the page head (if this is to high, it might be put outside the page; if it is to deep, it might overwrite parts of the title), `rulewidth`, `rulesep` and `rulecolor` for the vertical rule (these aren't package options but style options), `subject`, `title`, `subtitle`, `author`, `date`, and `publisher`. Note: If you want to use option `rulecolor` you have to load a package, that defines `\color`, e.g., `color` or `xcolor`. Otherwise the color will be ignored.

4. only in twoside mode defined by `uppertitleback` and `lowertitleback`, which are not package options but style options. You may set them using `\TitleOption` or `\TitleOptions` after loading the style or with the optional argument of `\maketitle` or `\TitlePageStyle`.
5. optional post title with `dedication`.
6. empty and only in twoside mode with `dedication` used.

2.5 Style Spacer

This style is a variant of style Markus-2 from subsection 2.4. It was asked by spacer2012 at the original titlepage project on <https://komascript.de/titlepage>. In difference to Markus-2 the title head will not be placed at the page head but at the body.

The pages (in twoside example `titlepage-Spacer.tex`) are:

1. defined by `extratitle`.
2. empty and only in twoside mode with `extratitle` used.
3. main title page with `titlehead` placed at the page head, `rulewidth`, `rulesep` and `rulecolor` for the vertical rule (these aren't package options but style options), `subject`, `title`, `subtitle`, `author`, `date`, and `publisher`. Note: If you want to use option `rulecolor` you have to load a package, that defines `\color`, e.g., `color` or `xcolor`. Otherwise the color will be ignored.

	<p>Das ist ein Schmutztitel im Stil Spacer</p>
	<p>Eine Klassifizierung der Arbeit Markus Kohm Titel im Stil Spacer Untertitel Verlag</p>

4. only in twoside mode defined by `uppertitleback` and `lowertitleback`, which are not package options but style options. You may set them using `\TitleOption` or `\TitleOptions` after loading the style or with the optional argument of `\maketitle` or `\TitlePageStyle`.
5. optional post title with `dedication`.
6. empty and only in twoside mode with `dedication` used.

2.6 Style TU-DD

This style is used at the “Technische Universität Dresden”. I was asked for this several years ago. Only one title page is defined!

The page (in example `titlepage-TU-DD.tex`) is:

1. main title page with university, faculty, chair, professor, title, subject, author, discipline, matriculationnumber, advisor, place, and date.

But there is another variant. If option `blackborder` was set to true, a black border is put around the page:

The page (in example `titlepage-TU-DD.tex` with option `blackborder`) is:

1. main title page with university, faculty, chair, professor, title, subject, author, discipline, matriculationnumber, advisor, place, and date.

2.7 Style TU-HH

This style is used at the “Technische Universität Hamburg-Harburg”. I was asked for this several years ago. Only two title pages are defined!

The pages (in twoside example `titlepage-TU-HH.tex`) are:

1. main title page with `title`, `subtitle`, `university`, `academicgrade`, `subject`, `author`, `place`, and `date`. Some additional text depending on the selected language will be used also.

Vom Promotionsausschuss der
Technischen Universität Hamburg-Harburg
zur Erlangung des akademischen Grades
Doktor der Naturwissenschaften (Dr. rer. nat.)
genehmigte Dissertation

Titel im Stil TU-HH

von
Vorname und Name

aus
(Geburtsort)

(aktuelles Jahr)

2. only in twoside mode with `referee` and `oralexaminationdate`.

1. Gutachter: Name des ersten Gutachters
2. Gutachter: Name des zweiten Gutachters

Datum der mündlichen Prüfung: 29. Februar 2009

The output of style TU-HH differs, if you use option `final`, which is a style option, not a package option. You may set it using `\TitleOption` or `\TitleOptions` after loading the style or with the optional argument of `\maketitle` or `\TitlePageStyle`.

2.8 Style KIT

This style is used at the “KIT – University of the State of Baden-Württemberg and National Research Center of the Helmholtz Association”. I’ve made this because of the ugly L^AT_EX class and template made by the KIT itself. Only one title page is defined!

The page (in example `titlepage-KIT.tex`) is:

1. main title page with `titlehead`, `mainlogo`, `title`, `subject`, `author`, `referee`, `advisor`, `university`, `duration`, and `homepage`. Some additional text depending on the selected language will be used also.

If `titlehead` is empty or unused left aligned `mainlogo` will be used. If `mainlogo` is empty or unused, and if you have a logo file `KITLogo_RGB.pdf`, this will be used. As an alternative also `2560px-Logo_KIT.svg.png`, `2000px-Logo_KIT.svg.png`, `1280px-Logo_KIT.svg.png`, `1024px-Logo_KIT.svg.png`, `1000px-Logo_KIT.svg.png`, `800px-Logo_KIT.svg.png`, `640px-Logo_KIT.svg.png`, or `500px-Logo_KIT.svg.png` from https://de.wikipedia.org/wiki/Datei:Logo_KIT.svg would be auto-detected. Several other elements will be set to defaults too, if they are empty. So you don’t need to set all the elements, that has been set at the example file.

2.9 Style JT-Aufsaetze

The style is based on the front cover of “Jan Tschichold: Ausgewählte Aufsätze über Fragen der Gestalt des Buches und der Typographie, Birkhäuser Verlag Basel, 1975, ISBN: 3-7643-1946-1”. I’ve made this, because the book is a major book of classic typography. It seems to be old fashioned and indeed it is. Note, that the front cover of a book an the main title of a book are not the same! Nevertheless, here I’ve made a main title from a front cover. Currently only one title page is defined, but you may also use `extratitle`, `uppertitleback`, and `lowertitleback`.

The page (in example `titlepage-JT-Aufsaetze.tex`) is:

1. main title page with `author`, `title`, `publisher`, `rulewidth`, `rulesep` for width of the horizontal rules and the distance between them and `rulecolor` for the color of the rules (these aren’t package options but style options). Note: If you want to use option `rulecolor` you have to load a package, that defines `\color`, e.g., `color` or `xcolor`. Otherwise the color will be ignored.

2.10 Style JT-Geschichte

The style is based on “Jan Tschichold: Geschichte der Schrift in Bildern; Holbein-Verlag, 1947”. This is another major book of classic typography. It seems to be old fashioned and indeed it is. Currently only one title page is defined, but you may also use `extratitle`, `uppertitleback`, and `lowertitleback`.

The title page (in example `titlepage-JT-Geschichte.tex`) is:

1. main title page with `author`, `title`, `publisher`, `place`, `rulewidth` and `rulesep` for width of the horizontal rules and the distance between them and `rulecolor` for the color of them (these aren't package options but style options). Note: If you want to use option `rulecolor` you have to load a package, that defines `\color`, e.g., `color` or `xcolor`. Otherwise the color will be ignored.

Note, that the default for `titlepagefont` prints everything but the `title` with ad-hoc letterspacing in upper-case letters if `\lsstyle` is available and without letterspacing but in small capitals otherwise. Changing the default of `titlepagefont` will also change this automatism.

2.11 Style JT-Typography

The style is based on “Jan Tschichold: The New Typography; University of California Press, Berkley and Los Angeles, California 1995”. This is the English translation of another major book of classic typography. Some things like missing letterspacing at the upper-case title seems to be wrong. Currently only one title page is defined, but you may also use `extratitle`, `uppertitleback`, and `lowertitleback`.

The title page (in example `titlepage-JT-Geschichte.tex`) is:

1. main title page with `author`, `title`, `subtitle`, `place`, `date`, `publisher`.

2.12 Style WWUM

Tobias Südkamp asked me for that title for the Westfälischen Wilhelms-Universität Münster. The `professor` is more likely the `chairman`. Female referees should be prefixed by [f]. You can omit the examination date defining an empty `\examinationdate`.

	<p>The pages (in example <code>tilepage-WWUM.tex</code>) are:</p> <ol style="list-style-type: none">1. cover page with <code>author</code>, <code>title</code>, <code>\the\year</code>2. the backside of the cover page is empty if it exists3. main title page with <code>chair</code>, <code>title</code>, <code>subject</code>, <code>academicgrade</code>, <code>sience</code>, <code>discipline</code>, <code>faculty</code>4. main title back side with <code>professor</code>, <code>referee</code>, <code>oralexaminationdate</code> (normally empty)
	<p>Experimentelle Physik</p> <p>Titel der Arbeit</p> <p>Inaugural-Dissertation zur Erlangung des Doktorgrades der Naturwissenschaften im Fachbereich Physik der Mathematisch-Naturwissenschaftlichen Fakultät der Westfälischen Wilhelms-Universität Münster</p> <p>vorgelegt von Mein Name aus Geburtsort -2022</p> <p>Dokan/Dekanin: Klaus Naseschwarz Erster Gutachter: Peter Mustermann Zweite Gutachterin: Petra Musterfrau Datum der mündlichen Prüfung: Tag der Promotion:</p>

2.13 Style UKoLa

In 2007 several students asked me for the title of the Universität Koblenz-Landau. At that time, I've made a package for the title they asked for. The package has been published at <https://komascript.de/unikoblenzlandau> only. In 2021, after I've published [uni-titlepage](#), it was time to implement this title also as a title style definition. Note, this is not an official style of the University Koblenz-Landau. Several referees can be separated by \and. Female referees should be prefixed by [f].

The page (in example `titlepage-UKoLa.tex`) is:

1. main title page with `mainlogo`, `secondlogo`, `title`, `subject`, `academicgrade`, `chair`, `discipline`, `place`, `author`, `referee`, and `date`.

Note: The upper left corner is the logo placeholder. If you'd download the logo from <http://www.uni-koblenz-landau.de/logo.png> and save it with the name `uni-koblenz-landau.png`, it would be used automatically.

3 Additonal Commands

\NowButAfterBeginDocument Command

```
\NowButAfterBeginDocument{\code}
```

is something like \AtBeginDocument, but if you call it somewhere after \begin{document} argument `\code` will be used immediately. This command is used inside some of the title page styles, because you may load them either at the preamble or even after \begin{document}, but some code should not be executed before \begin{document}.

titlepage (*env.*) In oposite to the **titlepage** environment of the standard classes,

```
\begin{titlepage}[options]  
...  
\end{titlepage}
```

knows some options. These are **pagestyle**=`<style>` and **pagenumber**=`<number>`. The first one changes the page style of the generated title page to the given `<style>`. If the option is not set, the default **empty** will be used. The second one sets the logical page number of the generated title page to the given `<number>` and sets the counter **pagenumber** to this value. If the option is not used, the value of counter **pagenumber** will be increased by one and the result is used for the logical page number.

fullsizetitle (*env.*) Using

```
\begin{fullsizetitle}[options]  
...  
\end{fullsizetitle}
```

is almost the same like above. But **fullsizetitle** removes the margins from the generated title page. Nevertheless if binding correction (aka binding offset) of package **typearea** or **geometry** could be recognized, it will not be removed. Some of the title page styles use this environment instead of **titlepage** inside \maketitle. With this the margins of the title page do not depend on the type area of the document.

\usetitleelement Command

```
\usetitleelement{\code}
```

gives the content of the corresponding title `<element>`. Each main `<element>` defined by the package may be used. Those are currently: **advisor**, **author**, **chair**, **company**, **course**, **date**, **dedication**, **academicgrade**, **discipline**, **duration**, **faculty**, **homepage**, **mainlogo**, **matriculationnumber**, **oralexaminationdate**, **place**, **professor**, **publisher**, **referee**, **subject**, **subtitle**, **title**, **titlehead**, and **university**. Note: **student** isn't a main `<element>`, because it's only an alias for **author**.

\usenonemptytitleelement Command

```
\usenonemptytitleelement{\code}
```

is a variant of \usetitleelement that not only reports an error for a not existing `<element>` but also for an empty `<element>`. It should be used to print mandatory elements.

4 Implementation

Note: To generate all files, developers and beta testers should simply use the source from <https://github.com/komascript/uni-titlepage> and call

```
l3build unpack  
l3build doc
```

The resulting documentation will be placed in the main folder. The unpacked style file are in `build/unpacked`, You can use

```
l3build install
```

to install them in `TEXMFHOME`. See the manual of `l3build` for more information.

As an alternative you can use the source distribution from CTAN and run:

```
tex uni-titlepage.dtx
```

The documentation is usually part of the source distribution at CTAN. Note, that all the generated `tex` files are example files. Do not copy them to the run-time files but the documentation folder!

4.1 The Installation Driver ‘`uni-titlepage.ins`’

First of all we produce `uni-titlepage.ins`, the installation driver. It starts very common with loading `docstrip`, preamble declaration and start of generation.

```
1 \def\batchfile{uni-titlepage.dtx}  
2 \input docstrip.tex  
3 \ifToplevel{  
4   \Msg{*****}  
5   \Msg{*}  
6   \Msg{* Steps of uni-titlepage generation:}  
7   \Msg{* ======}  
8   \Msg{*}  
9   \Msg{* - Generation of all needed files:}  
10  \keepsilent  
11  \askforoverwritefalse  
12 }  
13

dedication (opt.) 296 \providecommand{\dedication}[1]{\gdef\@dedication{#1}}%
297 \DefineFamilyKey{title}{dedication}{\dedication{#1}\FamilyKeyStateProcessed}

```

\usetitleelement Users cannot simply use, e.g., \@title, \mainlogo etc. So we need a command \usetitleelement@error to get them:

```

298 \newcommand*\usetitleelement[1]{%
299   \scr@ifundefinedorrelax{#1}{%
300     \usetitleelement@error{#1}%
301   }{%
302     \scr@ifundefinedorrelax{#1}{%
303       \usetitleelement@error{#1}%
304     }{%
305       \nameuse{#1}%
306     }%
307   }%
308 }
309 \newcommand*\@usetitleelement@error[1]{%
310   \PackageError{uni-titlepage}{‘#1’ isn’t a title element}{%
311     You should use \string\usetitleelement\space for title elements
312     only!\MessageBreak
313     If you’ll continue, command will be ignored.}%
314 }

```

\usenonemptytitleelement Sometimes we want to use a title element that must not be empty.

```

315 \newcommand*\usenonemptytitleelement[1]{%
316   \expandafter\ifx\csname @#1\endcsname\empty
317   \PackageError{uni-titlepage}{empty title element ‘#1’}{%
318     Title element ‘#1’ is empty but mandatory for the used title page
319     style.\MessageBreak
320     So it must not be empty.\MessageBreak
321     Please see the manual for more information about assigning
322     values to\MessageBreak
323     main title elements via options or commands.\MessageBreak
324     If you’ll continue, a \string\strut\space will be used.}%
325   \strut
326 \else
327   \usetitleelement{#1}%
328 \fi
329 }

```

Some variables use their own configurable font:

```

titlepagefont (opt.)
@titlepagefont 330 \scr@ifundefinedorrelax{\newkomafont}{%
331   \newcommand*\@titlepagefont{}%
332 }{%
333   \newkomafont{titlepage}{}%
334 }
335 \DefineFamilyKey{title}{titlepagefont}{%
336   \renewcommand*\@titlepagefont{#1}%
}

```

```

337   \FamilyKeyStateProcessed
338 }

subjectfont (opt.)
\subject@font 339 \providecommand*\{\subject@font}{\bfseries}
340 \DefineFamilyKey{title}{subjectfont}{%
341   \renewcommand*\{\subject@font}{#1}%
342   \FamilyKeyStateProcessed
343 }

titlefont (opt.)
\title@font 344 \providecommand*\{\titlefont}{\bfseries}
345 \DefineFamilyKey{title}{titlefont}{%
346   \renewcommand*\{\titlefont}{#1}%
347   \FamilyKeyStateProcessed
348 }

subtitlefont (opt.)
\@subtitlefont 349 \providecommand*\{@subtitlefont}{\bfseries}
350 \DefineFamilyKey{title}{subtitlefont}{%
351   \renewcommand*\{@subtitlefont}{#1}%
352   \FamilyKeyStateProcessed
353 }

\TitlePageStyle Load a title page style from file
354 \newcommand*\{\TitlePageStyle}[2] []{%
355   \IfFileExists{title-#2.def}{%
356     \begingroup
357       \edef@\tempa{\endgroup

1904
1905 # ABSTRACT
1906
1907 \!\!\! README
1908 Creation of title pages is something most authors should not have to do.
1909 But reality is not perfect, so a lot of authors have to do it. In 2009
1910 \!\!\! README KOMA started the title page project at \url{https://komascript.de/titlepage}
1911 \!\!\! README KOMA started the title page project at <https://komascript.de/titlepage>
1912 to collect real title pages and implement them with a well defined interface.
1913 \!\!\! README In 2021 the project has been moved to \url{https://github.com/komascript/uni-titlepage}
1914 \!\!\! README In 2021 the project has been moved to <https://github.com/komascript/uni-titlepage>

```

```

1915 and renamed.
1916
1917 Now, changing from one title page style to another would be very
1918 simple. Nevertheless implementation of a new title page style may be still
1919 difficult. But maybe the guys of the title page project would help you. Just
1920 ask!
1921 <*README>
1922
1923 # Unpacking and Installation for Developers and Distributors
1924
1925 To unpack and install all files, you can download the source from github
1926 and then run:
1927
1928     l3build install
1929
1930 Afterwards you can build the manual and the PDFs of the examples using:
1931
1932     l3build doc
1933
1934 As an alternative you can use the CTAN source distribution. This already
1935 contains the user manual and the PDFs of the example files. So you only have
1936 to run
1937
1938     tex uni-titlepage.dtx
1939
1940 to generate the package file ‘uni-titlepage.sty’, the title definition files
1941 ‘title-*.def’ and the example titlepages ‘titlepage-*.tex’.
1942
1943 Please note, the ‘title-*.def’ files are run-time files. Together with
1944 ‘uni-titlepage.sty’ they have to be placed in ‘tex/latex/uni-titlepage’ inside
1945 a TDS tree. All files ‘titlepage-*.tex’ and ‘titlepage-*.pdf’ as well as
1946 ‘uni-titlepage.pdf’ are part of the documentation and should be placed in
1947 ‘doc/latex/uni-titlepage/’ of the TDS tree.
1948
1949 # Unpacking and Installation for Users
1950
1951 Users can use the installation described at [Unpacking and Installation for
1952 Developers and
1953 Distributors](#unpacking-and-installation-for-developers-and-distributors).
1954 However, if your TeX distributor already distributes a ready for installation
1955 package, you do not need and should not create files and copy them
1956 yourself. Just use the package manager of your TeX distribution to install the
1957 package.
1958
1959 # How to Contribute
1960
1961 If you have made a title definition that is not specific for a single project
1962 but could be of interest for other users, you can either
1963
1964 * make your own ‘uni-titlepage-FOO’ package with its own manual and [upload it
1965 to ctan](https://www.ctan.org/upload),
1966 * contribute in adding it to ‘uni-titlepage’.
1967
1968 The first option has the advantage, that you are free. There won’t be any code

```

1969 reviews by the ‘uni-titlepage’ developers. You don’t need to use the same
1970 coding style. There is not need to accept the license of ‘uni-titlepage’
1971 etc. But in this case you have to take care to keep it compatible with future
1972 releases of ‘uni-titlepage’ and it will not be presented in the
1973 ‘uni-titlepage’ manual.

1974

1975 The second option has the advantage, that after accepting your code, the
1976 ‘uni-titlepage’ developers will try to keep it working even if they change
1977 ‘uni-titlepage’. But there are several restrictions to your code, before it
1978 will be accepted. For example, you should always try to use general options,
1979 if possible. *Static text* (not handled by options) should be configurable via
1980 ‘\newcaptionname’, ‘\providetitlepage’ and ‘\renewcaptionname’ and should be
1981 available at least in English and German (but if we can, we help in
1982 translating them). The coding style and quality is also a criterion.

1983

```
1984 </README>
1985 <!*!README>
1986 \end{abstract}
1987 \DocInput{uni-titlepage.dtx}
1988 \end{document}
1989 <!README>
```

Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; numbers in roman refer to the code lines where the entry is used.
