## The amsxtra package

American Mathematical Society Michael Downes

Version v1.2c, 1999/11/15

This file is maintained by the LATEX Project team. Bug reports can be opened (category amslatex) at https://latex-project.org/bugs/.

## 1 Introduction

The amsxtra package contains a few rarely used commands that were present in version 1.1 of the amstex package: \fracwithdelims, accentedsymbol, \sphat, \spcheck, \sptilde, \spdot, \spddot, \spddot, \spbreve. If any of these commands were used in existing documents, the amsxtra package provides a way to get them. But for 99% of documents using the amstex package these commands are just wasted overhead.

\ProvidesPackage{amsxtra}[1999/11/15 v1.2c AMS extra commands]

We need to ensure that either the amstex package or the amsmath package is loaded. This means we need something a little more complicated than \RequirePackage.

```
\@ifpackageloaded{amstex}{}{%
    \RequirePackage{amsmath}[1996/10/01 v1.2]}
```

Superscripted accent characters.

```
\def\sphat{^{\mathchoice{}{%
    {\,\,\smash[b]{\hbox{\lower4\ex@\hbox{$\m@th\widehat{\null}$}}}%
    {\,\smash[b]{\hbox{\lower3\ex@\hbox{$\m@th\hat{\null}$}}}}
\def\spcheck{^\vee}
\def\sptilde{^\sim}
\def\spdot{^{\hbox{\raise\ex@\hbox{\normalfont .}}}}
\def\spddot{^{\hbox{\raise\ex@\hbox{\normalfont ..}}}}
\def\spddot{^{\hbox{\raise\ex@\hbox{\normalfont ..}}}}
\def\spbreve{^{\!\smash[b]{\hbox{\lower4\ex@\hbox{\ull}}}}
```

The \fracwithdelims command is skipped if the base package is amsmath; it is only needed if the base package is amstex.

```
\@ifpackageloaded{amstex}{%
\def\fracwithdelims#1#2{\new@ifnextchar[{\fracwithdelims@#1#2}%
    {\fracwithdelims@#1#2[\@empty]}}
```

```
\def\fracwithdelims@#1#2[#3]#4#5{\relax
   \ifx\@empty#3{#4\overwithdelims#1#2#5}\else
   {#4\abovewithdelims#1#2#3\relax#5}\fi}
}{
```

Perhaps \accentedsymbol should use \newsavebox, but I don't know of any compelling reason at the moment.[mjd,5-Sep-1994] \accentedsymbol can only produce a single size of the given symbol, so you'd need two different versions for main size and subscript size.

```
\def\accentedsymbol#1#2{%
  \expandafter\newbox
   \csname\expandafter\@gobble\string#1@box\endcsname
   \expandafter\setbox
   \csname\expandafter\@gobble\string#1@box\endcsname
        \hbox{$\m@th#2$}%
  \newcommand{#1}{%
        \expandafter\copy
        \csname\expandafter\@gobble\string#1@box\endcsname{}}%
}
```

Change the definition of  $\tilde{}$  to automatically remove a preceding space as well as a following space, if present.

\def~{\nobreakspace}

```
\DeclareRobustCommand{\nobreakspace}{\unskip\nobreak\ \ignorespaces}
```

The usual \endinput to ensure that random garbage at the end of the file doesn't get copied by docstrip.

\endinput
