

# The XePersian Package

Source documentation for version 24.5

*to my Master, Ferdowsi The Great*

If you want to report any bugs or typos and corrections in the documentation, or ask for any new features, or suggest any improvements, or ask any questions about the package, then please use the issue tracker:

<https://github.com/kvafa/xepersian/issues>

In doing so, please always explain your issue well enough, and always include a minimal working example showing the issue.

You may also have conversations, ask questions and post answers without opening issues using the Discussions space:

<https://github.com/kvafa/xepersian/discussions>

The announcements for the new releases of the package will also appear in the Discussions space under the Announcements category.

### 37 File kashida-xepersian.def

```

1560 \ProvidesFile{kashida-xepersian.def}[2020/05/16 v0.8 implementation of Kashida for xepersian
1561 %
1562 % The new changes is minimal and only cosmetic; To resolve the
1563 % issue properly, I will be studying TeX line breaking algorithms and
1564 % experiment to see how much of it I can mimic. The idea of using
1565 % a rule or even a box is awful and it breaks a lot of things. The ideal
1566 % solution is to insert Kashida without any rules or boxes or if
1567 % the font offers the alternative forms, it can be used for Kashida.
1568 % Unfortunately, computing the stretch using the \pdfsavepos and
1569 % \pdflastxpos primitives from the PDFTeX engine is bad and
1570 % impractical for several reasons. The process is extremely
1571 % slow and requires at least two runs of TeX. On a particular line,
1572 % we need to write to the aux file at least 10 times, on a page we
1573 % have on average around 10 lines and hence, for a 100 pages
1574 % document, we have to do this 10,000 times. These statistics are
1575 % very modest. On the other hand, if we reach max count (which is
1576 % very likely), then we have to do some devious things.
1577 %
