

Missing Spell Checker; March, 2022

Catalina and Notarization

In Apple's latest systems Catalina and Big Sur, install packages must be notarized. All applications, install packages, and command line programs in a notarized package must be signed by an Apple developer, timestamped, and adopt a hardened runtime. The T_EX aware spell checker cocoAspell has not been updated to meet these conditions, so it is impossible to include it in MacT_EX. The package can be downloaded from the following web site:
