1. MAC_{TE}X-FOR-DVD

There is no install package to build here. Instead the MacTeX-Install folder on the DVD is constructed from pieces made elsewhere.

Begin by editing the document “MacTeX Install Parts 1 and 2” in this location. Add to the folder the following install packages:

- Ghostscript-9.55-Full.pkg from the similarly named folder
- TeXDist-2022.pkg from the similarly named folder

Then copy from GUI-Applications/apps the latest versions of the following applications:

- BibDesk
- TeX Live Utility
- LaTeXiT
- TeXShop

Notice that this includes BibDesk even if it is not yet signed.

Finally, again from GUI-Applications/app, copy the folder “Docs and Spell Utilities” and put this copy in MacTeX-Install/TeX.
