RICHARD KOCH

1. MAC_{TE}X-2022

It is easy to construct the full MacTeX once the pieces have been constructed, but it takes a long time to upload the result to Apple for notarization.

Begin by putting copies of the following four files in MacTeX-2022/CreateInstallPackage:

- Ghostscript-9.55-Start.pkg
- Ghostscript-9.55-libgs-Start.pkg
- GUI-Applications-Start.pkg
- TeXLive-2022-Start.pkg

Then make sure the items in MyResources are up to date, and in Terminal change directory to CreateInstallPackage and

```
sudo sh productbuildscript.sh
sh signPackage.sh
cd NotarizePackage
sh sendnotarizerequest.sh
sh stapleresult.sh
```
