

# TUG-MACTEX-2012-DVD

RICHARD KOCH

## 1. MAC<sub>TE</sub>X-DVD

This is the portion of the TUG documentation which deals with making the MacTeX-2012-DVD package. This is the final product of the build directory, built for DVD distribution.

A clean package file will contain

- Files “buildPackage.sh” and “signPackage.sh”
- Files “background.jpg”, “License.rtf”, “ReadMe.rtf”, and “Welcome.rtf”
- scripts\_convert folder, containing files “postinstall”, “setloginpath”, and “settexpath”
- scripts\_ghostscript folder, containing files “postinstall” and “setloginpath”
- scripts\_gui folder, containing file “postinstall”
- scripts\_teliveDVD folder, containing files “Description.rtf”, “postinstall”, “setloginpath”, “setmanpath”, “texdist”, “TeXDist-description.rtf”, “TeXDistVersion”, “TeX-ManPath”, and “TeXPath” and PrefPane folder containing the file “Info.plist” and the “TeX Distribution” preference pane
- The MacTeXDVDMaker project file for PackageMaker
- “TUG” folder with this document
- “xzDVD” folder, used to make an xz file with the package to submit to TUG; this file contains the xz Universal Binary and an xzscript

This package is easy to maintain. To update the package for a new year, edit the three rtf files, changing the package name to reflect the new date and release date.

## 2. MAKING THE XZ FILE

This is an optional step, only needed if Karl asks for an xz file with MacTeX-2012-DVD.

Put MacTeX-2012-DVD.mpkg in the xzDVD folder. Then create the xz file using the command

```
sh xzscript
```

## 3. BUILDING TEXLIVE-2012-DVD WITH PACKAGEMAKER

Edit MacTeXDVDMaker, the Packagemaker project file, using the GUI interface, as follows.

- (1) Click the top item on the left. The right side will change to a view with three tabs. First select the Configuration tab. Edit so
  - (a) Title: MacTeX-2012-DVD
  - (b) User Sees: Easy and Custom Install
  - (c) Install Destination: System volume
  - (d) Certificate: Leave this blank. You might think that putting a certificate name here would correctly sign the package, but experiments show that it does not. The package needs to be signed after it is constructed.
  - (e) Description: Empty
- (2) The Actions tab entries for the top item can be left blank
- (3) Select the Requirements tab for the top item. Using the plus tab, add an item of the form “File Exists on System”. Set the file path to “/Volumes/TEXCOL2012/texlive”. In the Failure Message, set Title to “Install DVD Missing” and set Message to “The TUG TeX Collection DVD must be mounted to install TeX.”
- (4) Continuing with the Requirements tab, use the plus tab to add a second item of the form “Memory Available (Bytes)”. Fill in the next line to read “if: > 4294967295”. Set Title to “Disk Space Inadequate” and Message to “Not enough free disk space; MacTeX requires at least 4 gigabytes of free disk space.”

Click the entry TeXLive-2012 in the Contents section on the left. The right side will change to a view with two tabs.

- (1) Select the Configuration tab. Edit so
  - (a) Choice Name: TeXLive-2012
  - (b) Identifier: choice1
  - (c) Initial State: Selected and Enabled
  - (d) Destination: /
  - (e) Tooltip: Leave Blank
  - (f) Description: Leave Blank
- (2) The Requirements tab entries for this contents item can be left blank
- (3) Open the TeXLive-2012 entry in the bottom left column. This item should show an “texlive” directory, obtained by dragging ../TeXLive-2012/rootDVD/usr/local to the left column. The right side will change to a view with four tabs. It is not necessary to edit the items under the Contents or Components tabs. The items under the Configuration tab should be edited as follows:
  - (a) Install: ../TeXLive-2012/rootDVD/usr/local (The item on the right should have selected “Relative To Project”)
  - (b) Destination: /usr/local (The item on the right should have selected “Relative To Project”)
  - (c) Do not check “Allow custom location”
  - (d) Patch: No patch root selected
  - (e) Package Identifier: org.tug.mactex.texlive2012-dvd
  - (f) Package Version: 1.0
  - (g) Restart Action: None
  - (h) Check “Require admin authentication”
  - (i) PackageLocation: Self-Contained

The items under the Scripts tab should be edited to read

- (a) Scripts directory: scripts\_texliveDVD (The item on the right should have selected “Relative To Project”)
- (b) Preinstall: Leave Blank
- (c) Postinstall: scripts\_texliveDVD/postinstall (The item on the right should have selected “Relative To Project”)

Click the entry GUI-Applications in the Contents section on the left. The right side will change to a view with two tabs.

- (1) Select the Configuration tab. Edit so
  - (a) Choice Name: GUI-Applications
  - (b) Identifier: choice2
  - (c) Initial State: Selected and Enabled
  - (d) Destination: /
  - (e) Tooltip: Leave Blank
  - (f) Description: Leave Blank
- (2) The Requirements tab entries for this contents item can be left blank
- (3) Open the GUI-Applications entry in the bottom left column. This item should show an “Applications” directory, obtained by dragging ../GUI-Applications/root/Applications to the left column. The right side will change to a view with four tabs. It is not necessary to edit the items under the Contents or Components tabs. The items under the Configuration tab should be edited as follows:
  - (a) Install: ../GUI-Applications/root/Applications (The item on the right should have selected “Relative To Project”)
  - (b) Destination: /Applications (The item on the right should have selected “Relative To Project”)
  - (c) Do not check “Allow custom location”
  - (d) Patch: No patch root selected
  - (e) Package Identifier: org.tug.mactex.gui
  - (f) Package Version: 1.0
  - (g) Restart Action: None
  - (h) Check “Require admin authentication”
  - (i) PackageLocation: Self-Contained

The items under the Scripts tab should be edited to read

- (a) Scripts directory: scripts\_gui (The item on the right should have selected “Relative To Project”)
- (b) Preinstall: Leave Blank
- (c) Postinstall: scripts\_gui/postinstall (The item on the right should have selected “Relative To Project”)

Click the entry Ghostscript-9.05 in the Contents section on the left. The right side will change to a view with two tabs.

- (1) Select the Configuration tab. Edit so
  - (a) Choice Name: Ghostscript-9.05
  - (b) Identifier: choice3
  - (c) Initial State: Selected and Enabled
  - (d) Destination: /
  - (e) Tooltip: Leave Blank
  - (f) Description: Leave Blank
- (2) The Requirements tab entries for this contents item can be left blank
- (3) Open the Ghostscript-9.05 entry in the bottom left column. This item should show a “local” directory, obtained by dragging ../Ghostscript-9.05/root/usr/local to the left column. The right side will change to a view with four tabs. It is not necessary to edit the items under the Contents or Components tabs. The items under the Configuration tab should be edited as follows:
  - (a) Install: ../Ghostscript-9.05/root/usr/local (The item on the right should have selected “Relative To Project”)
  - (b) Destination: /usr/local (The item on the right should have selected “Relative To Project”)
  - (c) Do not check “Allow custom location”
  - (d) Patch: No patch root selected
  - (e) Package Identifier: org.tug.mactex.ghostscript9.05
  - (f) Package Version: 1.0
  - (g) Restart Action: None
  - (h) Check “Require admin authentication”
  - (i) PackageLocation: Self-Contained

The items under the Scripts tab should be edited to read

- (a) Scripts directory: scripts\_ghostscript (The item on the right should have selected “Relative To Project”)
- (b) Preinstall: Leave Blank
- (c) Postinstall: scripts\_ghostscript/postinstall (The item on the right should have selected “Relative To Project”)

Click the entry Convert-IM-6.7.6 in the Contents section on the left. The right side will change to a view with two tabs.

- (1) Select the Configuration tab. Edit so
  - (a) Choice Name: Convert-IM-6.7.6
  - (b) Identifier: choice4
  - (c) Initial State: Selected and Enabled
  - (d) Destination: /
  - (e) Tooltip: Leave Blank
  - (f) Description: Leave Blank
- (2) The Requirements tab entries for this contents item can be left blank
- (3) Open the Convert-IM-6.7.6 entry in the bottom left column. This item should show an “local” directory, obtained by dragging ../Convert-IM/rot/usr/local to the left column. The right side will change to a view with four tabs. It is not necessary to edit the items under the Contents or Components tabs. The items under the Configuration tab should be edited as follows:
  - (a) Install: ../Convert-IM/root/usr/local (The item on the right should have selected “Relative To Project”)
  - (b) Destination: /usr/local (The item on the right should have selected “Relative To Project”)
  - (c) Do not check “Allow custom location”
  - (d) Patch: No patch root selected
  - (e) Package Identifier: org.tug.mactex.imagemagick-convert-6.7.6-9
  - (f) Package Version: 1.0
  - (g) Restart Action: None
  - (h) Check “Require admin authentication”
  - (i) PackageLocation: Self-Contained

The items under the Scripts tab should be edited to read

- (a) Scripts directory: scripts\_convert (The item on the right should have selected “Relative To Project”)
- (b) Preinstall: Leave Blank
- (c) Postinstall: scripts\_convert/postinstall (The item on the right should have selected “Relative To Project”)

Click the entry Latin-Modern-Fonts in the Contents section on the left. The right side will change to a view with two tabs.

- (1) Select the Configuration tab. Edit so
  - (a) Choice Name: Latin-Modern-Fonts
  - (b) Identifier: choice5
  - (c) Initial State: Enabled
  - (d) Destination: /
  - (e) Tooltip: Leave Blank
  - (f) Description: Leave Blank
- (2) The Requirements tab entries for this contents item can be left blank
- (3) Open the Latin-Modern-Fonts entry in the bottom left column. This item should show a “Fonts” directory, obtained by dragging ../Latin-Modern-Fonts/root/Library/Fonts to the left column. The right side will change to a view with four tabs. It is not necessary to edit the items under the Contents or Components tabs. The items under the Configuration tab should be edited as follows:
  - (a) Install: ../Latin-Modern-Fonts/root/Library/Fonts (The item on the right should have selected “Relative To Project”)
  - (b) Destination: /Library/Fonts (The item on the right should have selected “Relative To Project”)
  - (c) Do not check “Allow custom location”
  - (d) Patch: No patch root selected
  - (e) Package Identifier: org.tug.mactex.latin-modern
  - (f) Package Version: 1.0
  - (g) Restart Action: None
  - (h) Check “Require admin authentication”
  - (i) PackageLocation: Self-Contained

The items under the Scripts tab should be left blank

Click the entry TeX-Gyre-Fonts in the Contents section on the left. The right side will change to a view with two tabs.

- (1) Select the Configuration tab. Edit so
  - (a) Choice Name: TeX-Gyre-Fonts
  - (b) Identifier: choice6
  - (c) Initial State: Enabled
  - (d) Destination: /
  - (e) Tooltip: Leave Blank
  - (f) Description: Leave Blank
- (2) The Requirements tab entries for this contents item can be left blank
- (3) Open the TeX-Gyre-Fonts entry in the bottom left column. This item should show a “Fonts” directory, obtained by dragging ../TeX-Gyre-Fonts/root/Library/Fonts to the left column. The right side will change to a view with four tabs. It is not necessary to edit the items under the Contents or Components tabs. The items under the Configuration tab should be edited as follows:
  - (a) Install: ../TeX-Gyre-Fonts/root/Library/Fonts (The item on the right should have selected “Relative To Project”)
  - (b) Destination: /Library/Fonts (The item on the right should have selected “Relative To Project”)
  - (c) Do not check “Allow custom location”
  - (d) Patch: No patch root selected
  - (e) Package Identifier: org.tug.mactex.tex-gyre
  - (f) Package Version: 1.0
  - (g) Restart Action: None
  - (h) Check “Require admin authentication”
  - (i) PackageLocation: Self-Contained

The items under the Scripts tab should be left blank

#### 4. BUILDING

After verifying all these items, build the install package by clicking the “Build” icon. When asked to select a name, choose “MacTeX-2012-DVD-Temp”.

Packagemaker will report a large number of warnings in the Ghostscript package, but all are incorrect permissions for links. I believe these permissions are actually correct; they agree with link permissions set by the TeX Live installer.

Packagemaker will also report warnings in the GUI-Applications package. Almost all of these say “Group ID 80 does not match 20 of root volume.” Experimentation involving changing the groups of these applications changes this to “Group ID 20 does not match 80 of root volume.” I do not believe this warning is important, but it would be nice to know more about it.

#### 5. SIGNING

After the package has been made, sign it by executing the following line in Terminal:

```
sh signPackage.sh
```

This script simply calls

```
productsign --sign "Developer ID Installer: Richard Koch" old-name new-name
```

where “old-name” is MacTeX-2012-DVD-Temp.pkg and “new-name” is MacTeX-2012-DVD.pkg.
