RICHARD KOCH

1. TEXDIST

The main purpose of this very small install package is to create the TeX Dist structure for an installation of TeX Live created by the Unix Install Script.

After reviewing the various scripts and the folders MyResources and Scripts,

```
sudo sh buildPackage.sh
cd CreateInstallPackage
sudo sh pkgbuildscript.sh
sudo sh productbuildscript.sh
sh signPackage.sh
cd NotarizePackage
sh sendnotarizerequest.sh
sh stapleresult.sh
```
