

NAME

zlib-flate – raw zlib compression program

SYNOPSIS

zlib-flate *-compress* | *-uncompress*

DESCRIPTION

The zlib-flate program is part of the qpdf package.

The zlib-flate program standard from input and writes to standard output either compressing or compressing its input using raw zlib compression. This program is provided primarily as a debugging tool. It can be used to uncompress or compress raw PDF streams.

This program should not be used as a general purpose compression tool. Use something like `gzip(1)` instead.

For details about qpdf, please see the qpdf manual, which can be found in `$TEXMF/doc/qpdf/qpdf-manual.html` or `$TEXMF/doc/qpdf/qpdf-manual.pdf`.
