

# Package `dantelogo`

## v. 0.01

Herbert Voß            Klaus Höppner

September 22, 2014

\dantelogo[<size>] which gives `dante`, can be used with all current TeX engines. There are Type1 and OTF versions of the font which includes only the five characters dante. The <size> is an optional parameter. The package itself tries to detect the running machine (`pdflatex`, `xelatex`, or `lualatex`) and then loads by default package `fontenc` for `pdflatex` or package `fontspec`, otherwise.

	<code>\dantelogo\Huge\dantelogo</code>
	<code>\dantelogo[20pt]\dantelogo</code>
	<code>\bfseries\dantelogo\Huge\dantelogo</code>
	<code>\itshape\dantelogo[20pt]\dantelogo</code>
	<code>\bfseries\itshape\dantelogo\Huge\dantelogo</code>

### The code
