

achemso — Support for submissions to American Chemical Society journals*

Joseph Wright[†]

Released 2018/09/15

Abstract

The `achemso` bundle provides a \LaTeX class file and \BibTeX style file in accordance with the requirements of the American Chemical Society (ACS). The files can be used for any documents, but have been carefully designed and tested to be suitable for submission to ACS journals.

The bundle also includes the `natmove` package. This package is loaded by `achemso`, and provides automatic moving of superscript citations after punctuation.

1 Introduction

Support for \BibTeX bibliography following the requirements of the American Chemical Society (ACS), along with a package to make these easy to have been

*This file describes version v3.12, last revised 2018/09/15.

[†]E-mail: joseph.wright@morningstar2.co.uk

available since version one of `achemso`. The re-write from version 1 to version 2 made a number of improvements to the package, and also added a number of new features. However, neither version one nor version two of the package was targeted directly at use for submissions to ACS journals. This new release of `achemso` addresses this issue.

The bundle consists of four parts. The first is a \LaTeX 2_{ϵ} class, intended for use in submissions. It is based on the standard `article` class, but makes various changes to facilitate ease of use. The second part is the \LaTeX package. The package contains the parts of the bundle which are appropriate for use with other document classes.¹ Thirdly, two \BibTeX style files are included. These are used by both the class and the package, but can be used directly if desired. Finally, an example document is included; this is intended to act a potential template for submission, and illustrates the use of the class file.

2 Installation

The package is supplied in `dtx` format and as a pre-extracted zip file, `achemso.tds.zip`. The later is most convenient for most users: simply unzip this in your local `texmf` directory and run `texhash` to update the database of file locations. If you want to unpack the `dtx` yourself, running `tex achemso.dtx` will extract the package whereas `latex achemso.dtx` will extract it and also typeset the documentation.

Typesetting the documentation requires a number of packages in addition to those needed to use the package. This is mainly because of the number of demonstration items included in the text. To compile the documentation without error, you will need the packages:

- `array`
- `booktabs`
- `hypdoc`
- `listings`
- `lmodern`
- `mathpazo`
- `microtype`

3 Requirements

The `achemso` class requires the following packages:

- `caption`
- `float`
- `geometry`

¹For example, when writing a thesis.

- natbib
- setspace
- xkeyval

These are normally present in the current major TeX distributions, but are also available from [The Comprehensive TeX Archive Network](#).

4 The class file

The class file has been designed for use in submitting journals to the ACS. It uses all of the modifications described here (those in the package as well as those in the class). The accompanying example manuscript can be used as a template for the correct use of the class file. It is intended to act as a model for submission.

When submitting communications to *J. Am. Chem. Soc.*, the class will automatically lay the document out in the publication style. This allows the author to judge the length of text submitted more accurately. Changing the manuscript in the demonstration document to `communication` will illustrate the effect.

4.1 Class options

journal	The class supports a limited number of options, which are specifically-targeted at submission. The class uses the keyval system for options, in the form <code>key=value</code> . The most important option is <code>journal</code> . This is the name of the target journal for the publication. The package is designed such that the choice of journal will set up the correct bibliography style and so on. The journals currently recognised by the package are summarised in Table 1. If an unknown journal is specified, the package will fall-back on the <code>journal=jacsat</code> option.
manuscript	The second option is the <code>manuscript</code> option. This specifies the type of paper in the manuscript. The values here are <code>article</code> , <code>note</code> , <code>communication</code> , <code>review</code> , <code>letter</code> and <code>perspective</code> . The valid values will depend on the value of <code>journal</code> . The <code>manuscript</code> option determines whether sections and an abstract are valid. The value <code>suppinfo</code> is also available for supporting information.
layout	The <code>achemso</code> class can produce drafts in two layout styles. The standard setting for the <code>layout</code> option is <code>traditional</code> , which produces a double-spaced single column manuscript. The alternative setting <code>twocolumn</code> will use single spacing and print the text in two columns. The second option is obviously more compact. If the journal requires a particular style this option may be ignored.
email	It may be desirable to omit e-mail addresses from the front page of a manuscript. The printing of e-mail addresses can be disabled using the <code>email</code> option, which takes Boolean values only. The default is to print e-mail addresses. Notice that phone and fax numbers are only printed if e-mail addresses are printed.

Other options are provided by the package, but when used with the class these are silently ignored. If you need to override the settings chosen by the class, include the settings *after* the `\documentclass` line using `\setkeys`:

```
\documentclass[journal = jacsat]{achemso}
\setkeys{acs}{articletitle = false}
```

Table 1: Values for journal option

4.2 Manuscript meta-data

`\author` Inspired by REVTeX, the `achemso` class alters the method for adding author information to the manuscript. Each author should be given as a separate `\author` command. These should be followed by an `\affiliation`, which applies to the preceding authors. The `\affiliation` macro takes an optional argument, for a short version of the affiliation.² At least one author should be followed by an `\email` macro, containing contact details. All authors with an e-mail address are automatically marked with a star. The example manuscript demonstrates the use of all of these macros. Notice that `\alsoaffiliation` is used when one (or more) authors work at multiple institutions, while `\altaffiliation` is intended for previous addresses (or other notes). Only `\affiliation` applies to multiple authors: both `\alsoaffiliation` and `\altaffiliation` are set on a per author basis.

```
\author{Author Person}
\author{Second Bloke}
\email{second.bloke@some.place}
\affiliation[University of Sometown]
    {University of Somewhere, Sometown, USA}
\altaffiliation
    {Previous address: Minute University, Nowhereville, USA}
\author{Indus Trialguy}
\email{i.trialguy@sponsor.co}
\affiliation[SponsoCo]
    {Research Department, SponsorCo, BigCity, USA}
\alsoaffiliation{University of Somewhere, Sometown, USA}
```

Repeated entries for `\affiliation` and `\alsoaffiliation` will result in only one address being printed in the address list and footnotes. Repeated `\altaffiliation` entries only produce a single footnote, and can therefore be used for entries such as

```
\author{First Coworker}
\altaffiliation{Contributed equally to this work}
\author{Second Coworker}
\altaffiliation{Contributed equally to this work}
```

if required.

`\fax` The class will recognise the optional information `\fax` and `\phone`, which will be printed along with the lead authors e-mail address. Note that this information is only used for authors who have an e-mail address supplied.

```
\author{Second Bloke}
\email{second.bloke@some.place}
\phone{+xxx (0)yyy zzzzzz}
\fax{+xxx (0)yyy wwwwww}
\affiliation[University of Sometown]
    {University of Somewhere, Sometown, USA}
```

`\and` The method used for setting the meta-data means that the normal `\and` and `\thanks` macros are not appropriate in the `pkgachemso` class. Both produce a warning if used.

`\title` The `\title` macro is extended to accept an optional argument. This is

²This will usually be the university or company name.

intended for a shortened version of the journal title suitable for running headers. Some journals require that authors supply this data: if it is needed then it will be printed in the appropriate place.

```
\title[Short running title]
      {Long title which would not fit in running headers}
```

The meta-data items should be given in the preamble to the L^AT_EX file, and no `\maketitle` macro is required in the document body. This is all handled by the class file directly. At least one author, affiliation and e-mail address must be specified.

4.3 Floats

scheme	The class defines three new floating environments: <code>scheme</code> , <code>chart</code> and <code>graph</code> .
chart	These can be used as expected to include graphical content. The placement of
graph	these new floats and the standard <code>table</code> and <code>figure</code> floats is altered to be “here” if possible. The contents of all floats is automatically horizontally centred on the page.

4.4 Section headers

\SectionNumbersOff	Some journals have no section numbering by default. This can be set up in the appropriate configuration file, but it may be that individual users need to change the decision. The macros <code>\SectionNumbersOff</code> and <code>\SectionNumbersOn</code> are therefore available: these should be given in the preamble.
\SectionNumbersOn	
\SectionsOff	More radically, the entire availability of sections can be turned on and of. This is functionality is available to the user <i>via</i> the <code>\SectionsOn</code> and <code>\SectionsOff</code> macros, which again are preamble-only. Similar functions are available for the abstract: <code>\AbstractOff</code> and <code>\AbstractOn</code> .
\SectionsOn	
\AbstractOff	
\AbstractOn	

4.5 Special sections

acknowledgement	The sections for acknowledgements and supporting information have dedicated environments available. These ensure that the section headings are generated, and that the text is sized corrected when using creating a Communication.
suppinfo	

```
\begin{acknowledgement}
  The authors thank A.N.-Other.
\end{acknowledgement}

\begin{suppinfo}
  Full characterization data for all new compounds.
\end{suppinfo}
```

tocentry	For generating an entry for the graphical table of content, required by some journals, the environment <code>tocentry</code> is available. This prints its content in an appropriately sized box on a separate page. In contrast to the rest of the manuscript, this section is intended to be “print ready” in appearance.
----------	---

```
\begin{tocentry}
  \includegraphics{toc-entry-graphic}
  Some text to explain the graphic.
\end{tocentry}
```

4.6 Miscellaneous commands

`\latin`

The command `\latin` is provided by the class to format Latin phrases such as “et al.” Most ACS journals do not make these italic, but some (for example *ACS Nano*) do. By providing a command, the formatting is left flexible.

`\doi`

The bibliography style prints any DOI values as the argument to the command `\doi`. The default definition will allow printing of special characters but does not create hyperlinks. A more sophisticated version of the command may be set up if `hyperref` is loaded, for example

```
\begin{tocentry}  
  \newcommand{\doi}[1]{\href{http://dx.doi.org/#1}{\nolinkurl{#1}}}  
\end{tocentry}
```

5 The package file

The `achemso` package is independent of the class file, and contains parts of the bundle useful outside of submission to the ACS.

5.1 Package options

As with the class options, the package uses the key–value method for option set up. These are used to control the output of citations and bibliographic data. The same options are used when creating journal configurations for the class: this is a task most users will not need to undertake!

`super`

The `super` option affects the handling of superscript reference markers. The option switches this behaviour on and off (and takes Boolean values: `super=true` and `super=false` are valid).

`articletitle`

The `articletitle` option is a Boolean, and sets whether the title of a paper referenced appears in the bibliography. The default is `articletitle=true`.

`doi`

The boolean `doi` option is provided to allow a DOI (Digital Object Identifier) to be included for bibliography entries even where other identification such as page numbers is available. The standard setting is `false`: setting it to `true` will cause DOI numbers to be printed if available.

`chaptertitle`

The boolean `chaptertitle` option is provided to allow flexibility for the inclusion of chapter titles for book and related entries. The standard setting is `false`: setting it to `true` will cause chapter titles to be included.

`etalmode`

`maxauthors`

Many journals require that long lists of authors are shortened using ‘et al.’ in the references section. The behaviour of the `BIBTEX` styles in this regard is controlled by two options, `etalmode` and `maxauthors`. There are two possible ways to shorten a long list of authors. Some journals require that only the first author is given, followed by ‘et al.’: for this behaviour, set `etalmode=firstonly`:

Jones, A.N. et al.

On the other hand, some journals request that the list of authors is truncated after n authors. This is set up by the `etalmode=truncate` option:

Jones, A.N.; Bloggs, F.; Nobacon, D. et al.

In both cases, the maximum number of authors permitted before introducing ‘et al.’ is governed by the `maxauthors` option. This option recognises the sentinel value 0, which indicates that no shortening should occur at all.

`biblabel` Redefining the formatting of the numbers used in the bibliography usually requires modifying internal \LaTeX macros. The `biblabel` option makes these changes more accessible: valid values are `plain` (use the number only), `brackets` (surround the number in brackets) and `period` or `fullstop` (follow the number by a full stop/period).

`biochem`
`biochemistry` Most ACS journals use the same bibliography style, with the only variation being the inclusion of article titles. However, a small number of journals use a rather different style; the journal *Biochemistry* is probably the most prominent. The `biochemistry` or `biochem` option uses the style of *Biochemistry* for the bibliography, rather than the normal ACS style.

5.2 Bibliography notes

`\bibnote`
`\bibnotemark`
`\bibnotetext` `achemso` provides the `\bibnote` macro. This is intended for addition of notes to the bibliography (references). The macro accepts a single argument, which is transferred to the bibliography by \BibTeX . In analogy to `\footnote`, the macros `\bibnotemark` and `\bibnotetext` are available for dividing up the marker for a note from the text.

Some text `\bibnote{This note text will be in the bibliography}`.
Some text.[?]

The functionality for bibnotes in `achemso` is based on that in the `notes2bib` package. The `notes2bib` package can be loaded with the `achemso` package, and no clash will occur. With the class file, `notes2bib` will be ignored if requested, to prevent issues on submission to the ACS.

6 The \BibTeX style files

`achemso` is supplied with two style files, `achemso.bst` and `biochem.bst`. The direct use of these without the `achemso` package file is not recommended, but is possible. The style files can be loaded in the usual way, with a `\bibliographystyle` command. The `natbib` package must be loaded by the \LaTeX file concerned, if the `achemso` package is not in use.

The style files are designed to use the `mciteplus` package if it is available, but to work even if it is not. When `mciteplus` is present, it is possible to automatically produce references of the form

(5) (a) Arduengo, A. J., III; Dias, H. V. R.; Harlow, R. L.; Kline, M. J. *Am. Chem. Soc.* **1992**, *114*, 5530–5534; (b) Appelhans, L. N.; Zuccaccia, D.; Kovacevic, A.; Chianese, A. R.; Miecznikowski, J. R.; Macchioni, A.; Clot, E.; Eisenstein, O.; Crabtree, R. H. *J. Am. Chem. Soc.* **2005**, *127*, 16299–16311; (c) Arduengo, A. J., III; Gamper, S. F.; Calabrese, J. C.; Davidson, F. J. *Am. Chem. Soc.* **1994**, *116*, 4391–4394.

as demonstrated in the example document. When `mciteplus` is not present, this functionality is not available but the style files will work normally.

The `BrTeX` style files implement the bibliographic style specified by the ACS in *The ACS Style Guide*.⁷ By default, article titles are not included in output using the `achemso.bst` file, but are with the `biochem.bst` file.

The style used by the ACS does not differentiate between `BrTeX` `book`, `inbook`, `collection` and `incollection` entries. As a result, the appearance of these entry types depends on the fields available. Named subdivisions of a book (for example, chapters where each has a named author) should be given in the `title` field, with the title of the book itself in the `booktitle` field. The `chapter` field should be used for a chapter number, and is printed as part of the pagination.

One frequently asked question is why some people see an empty first item in their bibliography when using the `achemso` package or class. This is usually because they have downloaded the `LaTeX` files and done a local installation without also updating the `BrTeX` style. The two must be from the same version of `achemso`: they are designed to work together.

7 The `natmove` package

The `natmove` package does only one job. It brings the ability to move punctuation after citations, using code borrowed from the `cite` package. Both the `achemso` class and package load `natmove` automatically.

```
Some text \cite{Coghill2006} some more text.\\
Some text ending a sentence \cite{Coghill2006}.
Some text? some more text.
Some text ending a sentence.?
```

This is deactivated for other citation types.

```
Some text \citeyear{Coghill2006}.\\
Some text \citeauthor{Coghill2006}.\\
Some text \citenum{Coghill2006}.
Some text ?.
Some text ?.
Some text ? .
```

The package does nothing if the `super` option has not been given to `natbib`. This means that the source can be written without needing to decide where citations will to appear, with the `super` option for `natbib` controlling the result.

`\natmovechars` One user macro is provided: `\natmovechars`. This contains the characters which are moved before superscript punctuation. The default contents is `,;:.` and can be set using `\renewcommand*`:

```
Some text? , more text.?
\renewcommand*\natmovechars{.}
Some text \cite{Coghill2006},
more text \cite{Coghill2006}.
```

8 Implementation

A lot of the work done by the package is also needed by the class. Loading the package and the class makes load-order awkward. Instead, the two parts are done in one place. Sandwiching the common code are two slices of dedicated

material for the class and the package. Some of this is needed “early”, before the common material, whilst the rest is “late”.

8.1 Early class-only code

So that there is no confusion, the base class is loaded early.

```

1 <*class>
2 \ProvidesClass{achemso}
3 [2018/09/15 v3.12 Submission to ACS journals]
4 \LoadClass[12pt,letter]{article}

```

\acs@warning The code for a warning is created so that it works for the package too.

```

5 \newcommand*\acs@warning{\ClassWarning{achemso}}
6 </class>

```

8.2 Early package-only code

The package and the class should not both be loaded, as the two use the same internal macro names. On the other hand, if the class is not in use a reminder is printed to use it if possible.

```

7 <*package>
8 \ProvidesPackage{achemso}
9 [2018/09/15 v3.12 Support for ACS journals]
10 \ifclassloaded{achemso}{%
11   \PackageInfo{achemso}{%
12     You have already loaded the ‘achemso’ class:\MessageBreak
13     loading the package will abort%
14   }%
15   \endinput
16 }{%
17   \PackageInfo{achemso}{%
18     When writing a submission to an ACS journal, please\MessageBreak
19     use the achemso document class%
20   }%
21 }

```

\acs@warning The code for a warning is created so that it works for the class too.

```

22 \newcommand*\acs@warning{\PackageWarning{achemso}}
23 </package>

```

8.3 Common code

\acs@ifundefined A non-expandable test for defined macros: does not add to the hash table.

```

24 <*package | class>
25 \newcommand*\acs@ifundefined[1]{%
26   \begingroup\expandafter\expandafter\expandafter\endgroup
27   \expandafter\ifx\csname #1\endcsname\relax
28     \expandafter\@firstoftwo
29   \else
30     \expandafter\@secondoftwo
31   \fi
32 }

```

The first stage needed is to read the package options given. Although xkeyval was perhaps not the best choice, changing this now would be rather risky.

```
33 \RequirePackage{xkeyval}
```

`\acs@keyval@bool` A support macro for making Boolean options: the xkeyval version is only available in newer releases.

```
34 \newcommand*\acs@keyval@bool[2]{%
35   \acs@ifundefined{acs@#1#2}{%
36     \acs@warning{Unknown option ‘#2’ for key #1}%
37   }{%
38     \@nameuse{acs@#1#2}%
39   }%
40 }
```

`\ifacs@abbreviations` These are all very trivial definitions: to avoid issues with older versions of xkeyval each definition is done directly.

```
\ifacs@articletitle
  \ifacs@biochem
\ifacs@chaptertitle
  \ifacs@doi
  \ifacs@email
\ifacs@hyperref
\ifacs@keywords
  \ifacs@super
41 \newif\ifacs@abbreviations
42 \newif\ifacs@articletitle
43 \newif\ifacs@biochem
44 \newif\ifacs@doi
45 \newif\ifacs@chaptertitle
46 \newif\ifacs@email
47 \newif\ifacs@hyperref
48 \newif\ifacs@keywords
49 \newif\ifacs@super
50 \define@key{acs}{abbreviations}[true]{%
51   \acs@keyval@bool{abbreviations}{#1}%
52 }
53 \define@key{acs}{articletitle}[true]{%
54   \acs@keyval@bool{articletitle}{#1}%
55 }
56 \define@key{acs}{biochem}[true]{%
57   \acs@keyval@bool{biochem}{#1}%
58 }
59 \define@key{acs}{doi}[true]{%
60   \acs@keyval@bool{doi}{#1}%
61 }
62 \define@key{acs}{chaptertitle}[true]{%
63   \acs@keyval@bool{chaptertitle}{#1}%
64 }
65 \define@key{acs}{email}[true]{%
66   \acs@keyval@bool{email}{#1}%
67 }
68 \define@key{acs}{hyperref}[true]{%
69   \acs@keyval@bool{hyperref}{#1}%
70 }
71 \define@key{acs}{keywords}[true]{%
72   \acs@keyval@bool{keywords}{#1}%
73 }
74 \define@key{acs}{super}[true]{%
75   \acs@keyval@bool{super}{#1}%
76 }
77 \define@key{acs}{usetitle}[true]{%
```

```

78 \acs@keyval@bool{articletitle}{#1}%
79 }

```

\acs@journal Trivial again: done without using xkeyval for the same reasons as before.

```

\acs@layout      80 \newcommand*\acs@journal{jacsat}
\acs@manuscript  81 \newcommand*\acs@layout{traditional}
\acs@maxauthors  82 \newcommand*\acs@manuscript{article}
                 83 \newcommand*\acs@maxauthors{15}
                 84 \define@key{acs}{journal}{%
                 85   \def\acs@journal{#1}%
                 86 }
                 87 \define@key{acs}{layout}{%
                 88   \def\acs@layout{#1}%
                 89 }
                 90 \define@key{acs}{manuscript}{%
                 91   \def\acs@manuscript{#1}%
                 92 }
                 93 \define@key{acs}{maxauthors}{%
                 94   \def\acs@maxauthors{#1}%
                 95 }

```

\ifacs@etal@truncate The setup for the etalmode option is quite simple: just look for the appropriate macros.

```

\acs@etal@firstonly
\acs@etal@truncate  96 \newif\ifacs@etal@truncate
                   97 \define@key{acs}{etalmode}{%
                   98   \acs@ifundefined{acs@etal@#1}{%
                   99     \acs@warning{%
100       Unknown value ‘#1’ for\MessageBreak etalmode option%
101     }%
102   }{%
103     \@nameuse{acs@etal@#1}%
104   }%
105 }
106 \newcommand*\acs@etal@firstonly{\acs@etal@truncatefalse}

8.4 Late class-only code

Most of the power of the class is now created. First, a few options are reset so that any given by the user are effectively ignored.

```

301 <*class>
302 \setkeys{acs}{
303   abbreviations = false,
304   articletitle  = true,
305   biblabel      = brackets,
306   biochem       = false,
307   doi           = false,
308   etalmode      = firstonly,
309   keywords      = false,
310   maxauthors    = 15,
311   super         = true
312 }

```

When using the class, notes2bib is always emulated. Other standard support packages can now be loaded.

```

313 \acs@niib@create
314 \RequirePackage[margin=2.54cm]{geometry}
315 \RequirePackage{
316   caption,
317   float,
318   graphicx,
319   setspace,
320   url
321 }

1417   \fi
1418 }
1419 \RequirePackage{natmove}
```

The mciteplus package allows the construction of lists of references with sub-letters. However, it might not be available, and so it is only loaded if available: the .bst files should work either way. There is also a patch to get cross-references correct with the modified \ref macro used here. The reason for ensuring that \@mciteNatbibCiteCmdList is defined is that it allows for the case where people prevent mciteplus being loaded using \ver@mciteplus.sty.

```
1420 \IfFileExists{mciteplus.sty}{%
1421   \RequirePackage{mciteplus}
1422   \providecommand*\@mciteNatbibCiteCmdList{}%
1423   \edef\@tempa{\noexpand\in@{\citenum}{\@mciteNatbibCiteCmdList}}%
1424   \@tempa
1425   \ifin@
1426   \else
```

```

1427 \edef\@mciteNatbibCiteCmdList{\@mciteNatbibCiteCmdList,citenum}%
1428 \fi
1429 \<!*package>
1430 \def\@mciteSubRef[##1]##2{\plainref{\@mcitereflabelprefix:##1:##2}}
1431 \</!package>
1432 }{}

```

`\acs@bibstyle` The next step is to sort out bibliography formatting. With both the package and the class, the bibliography style is determined without user intervention. The style is stored as it may need to be altered later.

```

1433 \newcommand*\acs@bibstyle{achemso}
1434 \ifacs@biochem
1435 \def\acs@bibstyle{biochem}
1436 \bibliographystyle{biochem}
1437 \else
1438 \bibliographystyle{achemso}
1439 \fi

```

`\acs@bibliographystyle` The original `\bibliographystyle` macro is now disabled: the underlying command is repeated otherwise problems cop up with `chapterbib`.

`\bibliographystyle`

```

1440 \newcommand*\acs@bibliographystyle{}
1441 \let\acs@bibliographystyle\bibliographystyle
1442 \def\bibliographystyle#1{%
1443 \acs@warning{\string\bibliographystyle\space ignored}%
1444 \expandafter\acs@bibliographystyle\expandafter{\acs@bibstyle}%
1445 }
1446 \</class | package>

```

8.6 Late package-only code

The `notes2bib` code may or may not be activated.

```

1447 \<!*package>
1448 \AtBeginDocument{%
1449 \@ifpackageloaded{notes2bib}{-}{%
1450 \acs@niib@create
1451 }%
1452 }
1453 \</package>

```

8.7 Moving citations with natbib

The code for moving citations is created as a separate package, as the code needed is the same in both cases.

```

1454 \<!*natmove>
1455 \ProvidesPackage{natmove}
1456 [2010/01/15 v1.1a Automatic citation moving with natbib]
1457 \RequirePackage{natbib}

```

`\nmv@ifmtarg` To keep down dependence on other packages, the very short code block from `ifmtarg` is copied here with an internal name.

`\nmv@xifmtarg`

```

1458 \newcommand*\nmv@ifmtarg{}
1459 \newcommand*\nmv@xifmtarg{}

```

```

1460 \begingroup
1461 \catcode'\Q 3\relax
1462 \long\gdef\nmv@ifmtarg#1{%
1463   \nmv@xifmtarg#1QQ\@secondoftwo\@firstoftwo\@nil
1464 }
1465 \long\gdef\nmv@xifmtarg#1#2Q#3#4#5\@nil{#4}
1466 \endgroup

```

`\ifnmv@cite` A flag is need to watch whether `\cite` or another macro is in use.

```

1467 \newif\ifnmv@cite

```

`\nmv@citex` Using the flag, either the new internal macro, or the natbib original, can be called.

```

1468 \newcommand*\nmv@citex{%
1469   \ifnmv@cite
1470     \expandafter\nmv@citex@moving
1471   \else
1472     \expandafter\nmv@citex@nat
1473   \fi
1474 }

```

`\nmv@after` Later, the argument for `\cite` will need to be saved.

```

1475 \newcommand*\nmv@after{}

```

`\nmv@citex@moving` The new version of `\@citex` is needed that looks ahead of the citation using `\futurelet`. There are three arguments to `\@citex` when using natbib. Other than that, the trick used here is similar to that in `cite`.

```

1476 \newcommand*\nmv@citex@moving{}
1477 \def\nmv@citex@moving[#1][#2]#3{%
1478   \leavevmode
1479   \skip@\lastskip\relax
1480   \unskip
1481   \begingroup
1482     \def\nmv@after{\nmv@citex@nat[#1][#2]{#3}}%
1483     \global\nmv@citefalse
1484     \nmv@citex@get@next\relax
1485 }

```

`\nmv@citex@end` To get things right at the end.

```

1486 \newcommand*\nmv@citex@end{%
1487   \nmv@after
1488   \endgroup
1489 }

```

`\nmv@citex@get@next` The next token on the input stack is saved into `\nmv@citex@next`, after gobbling up one token.

`\nmv@citex@next`

```

1490 \newcommand*\nmv@citex@get@next[1]{%
1491   \futurelet\nmv@citex@next\nmv@citex@punct
1492 }

```

`\nmv@citex@punct` The working macro for moving the punctuation. This is very much like `\@citey` in the `cite` package. The initial assumption is that the loop will terminate, and so the recursion call will simply do the finalisation.

`\nmv@citex@loop`

```

1493 \newcommand*\nmv@citex@punct{%

```

```

1494 \let\nmv@citex@loop\nmv@citex@end
1495 \ifx\nmv@citex@next.\relax
1496 \ifnum\spacefactor<\nmv@citex@sfac\else
1497 \expandafter\expandafter\expandafter\nmv@citex@punct@undouble
1498 \fi
1499 \fi
1500 \expandafter\nmv@citex@punct@aux\natmovechars\@nil
1501 \nmv@citex@loop
1502 }
1503 \newcommand*\nmv@citex@punct@undouble{%
1504 \let\nmv@citex@next\relax
1505 \let\nmv@citex@loop\nmv@citex@get@next
1506 }
1507 \newcommand*\nmv@citex@loop{}

```

\nmv@citex@punct@aux The final part of the punctuation moving system.

```

1508 \newcommand*\nmv@citex@punct@aux[1]{%
1509 \ifx\nmv@citex@next#1\@empty
1510 #1%
1511 \let\nmv@citex@loop\nmv@citex@get@next
1512 \fi
1513 \ifx#1\@nil\else
1514 \expandafter\nmv@citex@punct@aux
1515 \fi
1516 }

```

\nmv@citex@sfac The value of the spacing factor after a full stop is used to signal doubled punctuation. For French spacing, a bit of patching is needed.

```

1517 \mathchardef\nmv@citex@sfac3000\relax
1518 \expandafter\def\expandafter\frfrenchspacing\expandafter{%
1519 \frfrenchspacing
1520 \mathchardef\nmv@citex@sfac1001\relax
1521 \sfcode'\.\nmv@citex@sfac
1522 \sfcode'\?\nmv@citex@sfac
1523 \sfcode'\!\nmv@citex@sfac
1524 }
1525 \ifnum\sfcode'\.=\@m
1526 \frfrenchspacing
1527 \fi

```

\nmv@citex@nat The swap has to be done at the beginning of the document. The internal flag from natbib is used, but under the circumstances we should be safe. \cite is also patched to make the system active.

```

1528 \newcommand*\nmv@citex@nat{}
1529 \newcommand*\nmv@activate{%
1530 \let\nmv@citex@nat\@citex
1531 \let\@citex\nmv@citex
1532 \let\nmv@cite\cite
1533 \renewcommand*\cite}[2][{}]{%
1534 \nmv@ifmtarg{##1}{%
1535 \nmv@citetrue
1536 \nmv@cite{##2}%
1537 }{%
1538 \nmv@citefalse

```

```

1539     \nmv@cite[##1]{##2}}%
1540 }%
1541 }

```

`\nmv@natbib@detect` So that natbib options can be set without worrying about load order, natmove doesn't require natbib. So a test is needed to see if it is actually loaded. This is done as a macro so that the effect can be changed by achemso.

```

1542 \newcommand*\nmv@natbib@detect{%
1543   \@ifpackageloaded{natbib}{%
1544     \ifNAT@super
1545       \expandafter\nmv@activate
1546     \fi
1547   }{%
1548     \PackageInfo{natmove}{%
1549       The natbib package is not loaded.\MessageBreak
1550       Loading natmove will do nothing
1551     }%
1552   }%
1553 }
1554 \AtBeginDocument{\nmv@natbib@detect}

```

`\natmovechars` A user macro is needed for moving characters.

```

1555 \newcommand*\natmovechars{.,;:}
1556 \natmove

```

8.8 The configuration files

The configuration files for different journals are not very complex. Keeping everything separate simply helps with maintenance.

```

9 Change History

v1.0	General: Initial release of package by Mats Dahlgren	1	Update supplementary information text	1
v2.0	General: Re-write of package by Joseph Wright	1	v3.10i	General: Fix issue with \doi command
v3.0	General: 1			Style update for <i>Biochemistry</i> . . .
v3.1	General: 1			Updates for <i>Org. Lett.</i>
	Added \alsoaffiliation macro	1	v3.11	General: Print article titles for all journals
v3.10	General: Add starred (subs)sections to TOC	1	v3.11a	\acs@tocentry@text: Print abstract at full size
	Update address printing to reflect new ACS style	1	v3.11b	General: Correct handling of and others in bibliography
v3.10a	General: Add article titles for <i>Chem.</i> <i>Mater.</i> and <i>Chem. Rev.</i>	1	v3.11c	General: Further work on bibliography
v3.10b	\acs@tocentry@text: Define \acs@tocentry@text in all cases	37	v3.2	General: 1
v3.10c	General: Add support for ACS <i>Omega</i> and <i>ACS Energy Lett.</i> . . .	1		New tocentry section
v3.10d	General: Improve handling of DOI values	1	v3.2b	General: New email option
v3.10e	General: Tweak <i>Macromolecules</i> formatting	1	v3.2c	General: Added \fax macro
v3.10f	General: Various formatting updates	1		Added \phone macro
v3.10h	General: Add style for ACS <i>Biomater. Sci. Eng.</i>	1		Fix so that email option is turned on by default
	Add style for <i>ACS Earth Space</i> <i>Chem.</i>	1	v3.3	General: \altaffiliation macro checks for duplicate entries and uses only one footnote
	Add style for <i>ACS Infect. Dis.</i> . . .	1		New layout option
	Add style for <i>ACS Sensors</i>	1	v3.3a	General: New etalmode option . . .
	Style update for <i>J. Chem. Theory.</i> <i>Comput.</i>	1	v3.4	General: More detail on installation Require cleveref, dropping varioref use
			v3.5	General: New BibTeX style file

v3.5a	General: Modify JACS Communication to print abstract	1	v3.8g	General: Fix issue with <i>J. Phys.</i> <i>Chem.</i> formatting	1
v3.5c	General: Bug fix for \mciteSubRef macro	1	v3.8i	General: Fix issue with <i>Chem. Res.</i> <i>Toxicol.</i> formatting	1
	Update <i>Org. Lett.</i> style	1	v3.8j	General: Remove <i>Biotechnol. Prog.</i> configuration	1
v3.6	General: Drop cleverref use	1		Update article title requirements for all journals	1
v3.7	General: New chaptertitle option for bibliography	1		Update keyword requirements for all journals	1
	Rename usetitle option to articletitle	1	v3.8k	General: Format date correctly for in press bibliography entries . . .	1
v3.8	General: Extend journal list to current ACS range	1	v3.8l	General: Fix printing of phone/fax numbers	1
	Introduce \latin command to support ACS <i>Nano</i> requirements .	1	v3.8m	General: <i>J. Phys. Chem. Lett.</i> uses a non-standard size for the TOC graphic	53
v3.8a	General: Minor style improvements for some journals	1	v3.8n	General: Drop use of keywords for <i>J. Phys. Chem. A, B and C</i>	53
v3.8b	General: Improve output ordering for <i>J. Phys. Chem. Lett.</i>	1	v3.9	General: New doi option	1
v3.8c	General: Improve ACS <i>Photonics</i> style	1	v3.9a	General: Update style for ACS <i>Central Sci.</i>	1
v3.8d	General: Fix bug in keyword printing	1	v3.9b	\citenumfont: Allow for setting super after loading	41
v3.8e	General: Minor style changes for <i>J. Med. Chem.</i> and ACS <i>Appl. Mater.</i>	1		General: Update <i>J. Agric. Food Chem.</i> style	1

10 Index

Numbers written in *italics* refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; numbers in *roman* refer to the code lines where the entry is used.
