# 1 Introduction

Association for Computing Machinery is the world's largest educational and scientific computing society, which delivers resources that advance computing as a science and a profession<sup>1</sup>. It was one of the early adopters of  $\text{\TeX}$  for its typesetting.

It provided several different classes for a number of journal and conference proceedings. Unfortunately during the years since these classes were written, the code was patched many times, and the support of the different versions of the classes became difficult.

This package provides the uniform interface for all ACM publications. It is intended to replace all different classes and packages and provide an up to date  $\text{\LaTeX}$  package.

The package uses only free  $\text{\TeX}$  packages and fonts included in  $\text{\TeX}Live$ ,  $\text{MiK}\text{\TeX}$  and other popular  $\text{\TeX}$  distributions. It is intended to be published in these distributions itself, which minimizes users' efforts in the installation and support of the package.

I am grateful to Matthew Fluet, John Owens, Craig Rodkin, Bernard Rous, David Shamma, Stephen Spencer and many others for their invaluable help.

The development version of the package is available at <https://github.com/borisveytsman/acmart>.

## 2 User's guide

### 2.1 Installation

Most probably, you already have this package installed in your favorite  $\text{\TeX}$  distribution; if not, you may want to upgrade. You may need to upgrade it anyway since the package uses a number of relatively recent packages, especially the ones related to the fonts.

If you decide to install the package yourself, follow the standard rules:

1. Run `latex` on `acmart.ins`. This will produce the file `acmart.cls`.
2. Put the file `acmart.cls` and the bibliography files `*.bst` to the places where  $\text{\LaTeX}$  can find them (see [1] or the documentation for your  $\text{\TeX}$  system).
3. Update the database of file names. Again, see [1] or the documentation for your  $\text{\TeX}$  system for the system-specific details.
4. The file `acmart.pdf` provides the documentation for the package (this is the file you are probably reading now).

As an alternative to items 2 and 3 you can just put the files in the working directory where your `.tex` file is.

The class uses a number of other packages. They are included in all major  $\text{\TeX}$  distributions ( $\text{\TeX}Live$ ,  $\text{Mac}\text{\TeX}$ ,  $\text{MiK}\text{\TeX}$ ) of 2015 and later, so you probably have them installed. Just in case here is the list of these packages:

## 2.2 Invocation and options

To use the class put in the preamble of your document

```
\documentclass[<options>]{acmart}
```

There are several options corresponding to the type of the document and its general appearance. They are described below. Generally speaking, the options have key=value forms, for example

```
\documentclass[format=acmsmall, screen=true, review=false]{acmart}
```

The option `format` describes the format of the output. There are several possible values for this option, for example,

```
\documentclass[format=acmtog]{acmart}
```

Actually the words `format=` can be omitted, e.g.,

```
\documentclass[acmtog, review=false]{acmart}
```

The possible formats are listed in Table 1. Note that formats starting with `acm` are intended for journals and transactions, while formats starting with `sig` are intended for proceedings published as books.

There are several Boolean options which can take `true` or `false` values. They are listed in Table 2. The words `=true` can be omitted when setting the Boolean option, so instead of `screen=true` one can write just `screen`, for example,

```
\documentclass[acmsmall, screen, review]{acmart}
```

The option `review` is useful when combined with the `manuscript` format option: it provides a version suitable for reviewers and copyeditors.

The option `screen` may in the future involve additional features suitable for on-screen versions of the articles.

The option `natbib` is used when the corresponding BIB<sub>T</sub>E<sub>X</sub> style is based on `natbib`. In most cases you do not need to set it. See Section 2.10.

The option `anonymous` is used for anonymous review process: all author information becomes obscured.

Table 1: The possible values for the `format` option

| Value                   | Meaning  |
|-------------------------|--|
| <code>manuscript</code> | A manuscript. This is the default  |
| <code>acmsmall</code>   | Small single column format, used for CIE, CSUR, JACM, JDIQ, JEA, JERIC, JETC, TAAS, TACCESS, TACO, TALG, TALLIP (formerly TALIP), TCPS, TEAC, TECS, TIIS, TISSEC, TIST, TKDD, TMIS, TOCE, TOCHI, TOCL, TOCS, TOCT, TODAES, TODS, TOIS, TOIT, TOMACS, TOMM (formerly TOMCCAP), TOMPECS, TOMS, TOPC, TOPLAS, TOPS, TOS, TOSEM, TOSN, TRETS, TSAS, TSC, TSLP, TWEB. |
| <code>acmlarge</code>   | Large single column format, used for IMWUT, JOCH, PACMPL, TAP  |
| <code>acmtog</code>     | Large double column format, used for TOG   |
| <code>sigconf</code>    | Proceedings format for most of ACM conferences (with the exceptions listed below) and all ICPS volumes   |
| <code>siggraph</code>   | Proceedings format for SIGGRAPH and SIGGRAPH Asia conferences, published in ACM Transactions on Graphics journal issues  |
| <code>sigplan</code>    | Proceedings format for SIGPLAN conferences   |
| <code>sigchi</code>     | Proceedings format for SIGCHI conferences  |
| <code>sigchi-a</code>   | Format for SIGCHI extended abstract  |

Table 2: Boolean options

| Option                     | Default            | Meaning  |
|----------------------------|--------------------|--|
| <code>review</code>        | <code>false</code> | A review version: lines are numbered, hyperlinks are colored                                 |
| <code>screen</code>        | <code>false</code> | A screen version: hyperlinks are colored   |
| <code>natbib</code>        | <code>true</code>  | Whether to use <code>natbib</code> package (see Section 2.10)                                |
| <code>anonymous</code>     | <code>false</code> | Whether to make author(s) anonymous  |
| <code>authorversion</code> | <code>false</code> | Whether to generate a special version for authors' personal use or posting (see Section 2.3) |

## 2.3 Topmatter commands

A number of commands set up *top matter* information, or, in the computer science jargon, *metadata* for the article. They establish the publication name, article title, authors, doi and other data. Some of these commands, like `\title` or `\author`, should be put by the authors. Others, like `\acmVolume` or `\acmDOI`—by the editors. Below we describe these commands and mention who should issue them. These macros should be used *before* the `\maketitle` command. Note that in the previous versions of ACM classes some of these commands should be used before `\maketitle`, and some after it. Now they all must be used before `\maketitle`.

The class internally loads `amsart` class, so many top matter commands are inherited from `amsart` [2].

`\acmJournal` The macro `\acmJournal{<shortName>}` sets the name of the journal or transaction for journals and transactions. The argument is the short name of the publication *in uppercase*, for example,

```
\acmJournal{TOMS}
```

The currently recognized journals are listed in Table 3. Note that conference proceedings published in *book* form do not set this macro.

It is expected that this command is inserted by the author of the manuscript when she decides to which journal to submit the manuscript.

`\acmConference` The macro `\acmConference[<short name>]{<name>}{<date>}{<venue>}` is used for conference proceedings published in the book form. The arguments are the following:

**short name:** the abbreviated name of the conference (optional).

**name:** the name of the conference *or* the name of the book as set by the editor.

**date:** the date(s) of the conference.

**venue:** the place of the conference.

Examples:

```
\acmConference[TD'15]{Technical Data Conference}{November  
12--16}{Dallas, TX, USA}  
\acmConference[SA'15 Art Papers]{November 02--06, 2015}{Kobe, Japan}
```

Normally this command is entered either by the editor or by the typesetter.

`\title` The command `\title`, as in `amsart` class, has two arguments: one optional, and one mandatory:

```
\title[<ShortTitle>]{<FullTitle>}
```

The mandatory argument is the full title of the article. The optional argument, if present, defines the shorter version of the title for running heads. If the optional argument is absent, the full title is used instead.

It is expected that this command is inserted by the author of the manuscript.

Table 3: ACM publications and arguments of the \acmJournal command

| Abbreviation | Publication  |
|--------------|--|
| CIE          | ACM Computers in Entertainment   |

```
\subtitle    Besides title, ACM classes allow subtitle, set with the \subtitle{\langle subtitle\rangle} macro.  

\author     The commands for specification of authors are highly structured. The reason is, they  

\orcid      serve double duty: the authors' information is typeset in the manuscript, and is used by  

\affiliation the metadata extraction tools for indexing and cataloguing. Therefore it is very impor-  

\email      tant to follow the guidelines exactly.  

\author{...}  

\orcid{...}  

\affiliation{...}  

\email{...}
```

Do *not* use L<sup>A</sup>T<sub>E</sub>X \and macro! Each author deserves his or her own \author command.

Note that some formats do not typeset e-mails of ORCID identifiers. Do not worry: metadata tools will get them.

Sometimes an author has several affiliations. In this case the \affiliation command should be repeated:

```
\author{...}  

\orcid{...}  

\affiliation{...}  

\affiliation{...}  

\email{...}
```

Similarly you can repeat \email command.

You may have several authors with the same affiliation, different affiliations or overlapping affiliations (author  $A_1$  is affiliated with institutions  $I_1$  and  $I_2$ , while author  $A_2$  is affiliated with  $I_2$  only, and author  $A_3$  is affiliated with  $I_1$  and  $I_3$ , ...). The recommended solution is to put the \affiliation commands after each author, possibly repeating them:

```
\author{...}  

\orcid{...}  

\affiliation{...}  

\affiliation{...}  

\email{...}  

\author{...}  

\orcid{...}  

\affiliation{...}  

\email{...}  

\author{...}  

\orcid{...}  

\affiliation{...}  

\affiliation{...}  

\email{...}
```

In some cases when several authors share the same affiliation you may try to save the space using the format

```
\author{...}
\email{...}
\author{...}
\email{...}
\affiliation{...}
```

However, this format is not generally recommended.

The `\affiliation` command is further structured to interact with the metadata extraction tools. Inside the `\affiliation` command you should use `\position`, `\institution`, `\department`, `\city`, `\streetaddress`, `\state`, `\postcode` and `\country` macros to indicate the corresponding parts of the affiliation. Note that in some cases (for example, journals) these parts are not printed in the resulting copy, but they *are* necessary since they are used by the XML metadata extraction programs. Do *not* put commas or `\textbackslash` between the elements of `\affiliation`: they will be provided automatically.

An example of the author block:

```
\author{A. U. Thor}
\orcid{1234-4564-1234-4565}
\affiliation{%
    \institution{University of New South Wales}
    \department{School of Biomedical Engineering}
    \streetaddress{Samuels Building (F25), Kensington Campus}
    \city{Sidney}
    \state{NSW}
    \postcode{2052}
    \country{Australia}}
\email{author@nsw.au.edu}
\author{A. N. Other}
\affiliation{%
    \institution{University of New South Wales}
    \city{Sidney}
    \state{NSW}
    \country{Australia}}
\author{C. O. Respondent}
\orcid{1234-4565-4564-1234}
\affiliation{%
    \institution{University of Pennsylvania}
    \city{Philadelphia}
    \state{PA}
    \country{USA}}
\affiliation{%
    \institution{University of New South Wales}
    \city{Sidney}
    \state{NSW}
    \country{Australia}}
```

Note that old ACM conference formats did not allow for more than six authors and required some efforts from the authors to achieve alignment. The new format is much better in this.

Sometimes an author works in several departments within the same institution. There could be two situations: the departments are independent, or one department is within another. In the first case just repeat the command \department several times. To handle the second case the command has an optional numerical parameter. The departments with higher numbers are higher in the organizational chart. Compare

```
\affiliation{%
\department[0]{Department of Lunar Studies} % 0 is the default
\department[1]{John Doe Institute} % higher than 0
\institution{University of San Serriffe}
\country{San Serriffe}}
```

and

```
\affiliation{%
\department{Department of Lunar Studies} % Not within JD Inst!
\department{John Doe Institute}
\institution{University of San Serriffe}
\country{San Serriffe}}
```

It is expected that these commands are inserted by the author of the manuscript.

\thanks Like amsart (and unlike standard L<sup>A</sup>T<sub>E</sub>X), we allow \thanks only *outside* of commands \title and \author. Example:

```
\thanks{This work is supported by the Widget Corporation Grant
">#312-001.\\
Author's address: D. Pineo, Kingsbury Hall, 33 Academic Way, Durham,
N.H. 03824; email: dspineo@comcast.net; Colin Ware, Jere A. Chase
Ocean Engineering Lab, 24 Colovos Road, Durham, NH 03824; email:
cware@ccom.unh.edu;
Sean Fogarty, (Current address) NASA Ames Research Center, Moffett
Field, California 94035.}
```

It is expected that this command is inserted by the author of the manuscript.

\titlenote While the command \thanks generates a note without footnote mark, sometimes \subtitlenote the authors might need notes more tightly connected to the title, subtitle or author. The \authornote commands \titlenote, \subtitlenote and \authornote that follow the corresponding commands (\title, \subtitle and \author) generate such notes, for example

```
\title{This is a title}
\titlenote{This is a titlenote}
\author{A. U. Thor}
\authornote{This is an authornote}
```

`\acmVolume`      The macros `\acmVolume`, `\acmNumber`, `\acmArticle`, `\acmYear` and `\acmMonth` are inserted by the editor and set the journal volume, issue, article number, year and month correspondingly. The arguments of all these commands, including `\acmMonth` is numerical, including `\acmMonth`, for example,  
`\acmNumber`  
`\acmArticle`  
`\acmYear`  
`\acmMonth`  
`\acmVolume{9}`  
`\acmNumber{4}`  
`\acmArticle{39}`  
`\acmYear{2010}`  
`\acmMonth{3}`

`\acmArticleSeq`      The articles in the same issue of a journal have a *sequential number*. It is used to vertically position the black blob in some formats. By default it is the same as article number, but the command `\acmArticleSeq{<n>}` can be used to change it:

```

\acmArticle{39} % The sequence number will be 39 by default
\acmArticleSeq{5} % We redefine it to 5

```

`\acmPrice`      The macro `\acmPrice{<price>}` sets the price for the article (by default 15.00), for example,

```

\acmPrice{25.00}

```

`\acmISBN`      Book-like volumes have ISBN numbers attached to them. The macro `\acmISBN{<ISBN>}` sets it. Normally it is set by the typesetter, for example,

```

\acmISBN{978-1-4503-3916-2}

```

`\acmDOI`      The macro `\acmDOI{<DOI>}` sets the DOI number of the article, for example,

```

\acmDOI{10.1145/9999997.9999999}

```

It is normally set by the typesetter.

`\acmBadgeR`      Some conference articles get special distinction, for example, the artifact evaluation for PPoPP 2016 (see <http://ctuning.org/ae/ppopp2016.html>). These articles display special badges supplied by the conference organizers. The class provides commands to add these badges: `\acmBadgeR[<url>]{<graphics>}` and `\acmBadgeL[<url>]{<graphics>}`. The first command puts the badge to the right of the title, and the second one—to the left. The exception is the sigchi-a mode for SIGCHI Extended abstract, which puts the badges on the left margin. The argument have the following meaning: [<url>], if provided, sets the link to the badge authority in the screen version, while {<graphics>} sets the graphics file with the badge image. The file must be a cropped square, which is scaled to a standard size in the output. For example, if the badge image is ae-logo.pdf, the command is  
`\acmBadgeR[http://ctuning.org/ae/ppopp2016.html]{ae-logo}`

|                     |   |
|---------------------|---|
| \startPage          | The macro \startPage{\<page>} sets the first page of the article in the journal or book. It is used by the typesetter.  |
| \terms<br>\keywords | The macros \terms{\<term, term,...>} and \keywords{\<keyword, keyword,...>} set the main terms and the additional keywords for the article. Term and keywords must be separated by commas, for example,   |
|                     | \terms{wireless, interference}<br>\keywords{wireless sensor networks, media access control,<br>multi-channel, radio interference, time synchronization}   |
| CCSXML<br>\ccsdesc  | ACM publications are classified according to the ACM Computing Classification Scheme (CCS). CCS codes are used both in the typeset version of the publications <i>and</i> in the metadata in the various databases. Table 4: Parameters for \setcopyright command

| Parameter      | Meaning  |
|----------------|--|
| none           | The copyright and permission information is not typeset (this is the option for some ACM conferences). |
| acmcopyright   | The authors transfer the copyright to ACM (the “traditional” choice).                                  |
| acmlicensed    | The authors retain the copyright but license the publication rights to ACM.                            |
| rightsretained | The authors retain the copyright and publication rights to themselves or somebody else.                |
| usgov          | All the authors are employees of the US Government.  |
| usgovmixed     | Some authors are employees of the US Government.   |
| cagov          | All the authors are employees of the Canadian Government.  |
| cagovmixed     | Some authors are employees of the Canadian Government.   |

\setcopyright

There are several possibilities for the copyright of the papers published by ACM: the authors may transfer the rights to ACM, license them to ACM, some or all authors might be employees of the US or Canada Government, etc. Accordingly the command \setcopyright{...} is introduced. Its argument is the copyright status of the paper, for example, \setcopyright{acmcopyright}. The possible values for this command are listed in Table 4.

The ACM submission software should generate the right command for you to paste into your file.

\copyrightyear

Each copyright statement must have the year of copyright. By default it is the same as \acmYear, but you can override this decision using the macro \copyrightyear, e.g.,

```
\acmYear{2016}
\copyrightyear{2015}
```

There is a special case for a personal copy that the authors may be allowed to generate for their use or a posting on a personal site (check the instructions for the specific journal or conference for the details). The document option authorversion=true produces the special form of the copyright statement for this case. Note that you still need the \setcopyright command and (optionally) \copyrightyear command to tell  $\text{\TeX}$  about the copyright owner and year. Also, you should be aware that due to the different sizes of the permission blocks for the printed version and authors’ version the page breaks might be different between them.

abstract

The environment abstract must precede \maketitle command. Again, this is different from the standard  $\text{\TeX}$ .

teaserfigure

A special kind of figure is used for many two-column conference proceedings. This figure is placed just after the authors, but before the main text. The environment teaserfigure is used for these figures. This environment must be used before \maketitle, for example,

Table 5: Settings for `\settopmatter` command

| Parameter                | Values     | Meaning                                  |
|--------------------------|------------|--|
| <code>printccs</code>    | true/false | Whether to print CCS categories          |
| <code>printacmref</code> | true/false | Whether to print ACM bibliographic entry |
| <code>printfolios</code> | true/false | Whether to print page numbers (folios)   |

```
\begin{teaserfigure}
  \includegraphics[width=\textwidth]{sampleteaser}
  \caption{This is a teaser}
  \label{fig:teaser}
\end{teaserfigure}
```

`\settopmatter` Some information in the top matter is printed for certain journals or proceedings and suppressed for others. You may override these defaults using the command `\settopmatter{⟨settings⟩}`. The settings and their meanings are listed in Table 5. For example,

```
\settopmatter{printacmref=false, printccs=true, printfolios=true}
```

`\received` The command `\received[⟨stage⟩]{⟨date⟩}` sets the history of the publication. The [⟨stage⟩] argument is optional; the default is Received for the first date and revised for the subsequent ones. For example

```
\received{February 2007}
\received[revised]{March 2009}
\received[accepted]{June 2009}
```

`\maketitle` The macro `\maketitle` must be the last command in the top matter group: i.e., it must follow the commands defined in this section.

`\shortauthors` After the command `\maketitle` the macro `\shortauthors` stores the names of the authors for the running head. You may redefine it if the list of author's name is too long, e.g.,

```
\maketitle
\renewcommand{\shortauthors}{Zhou et al.}
```

## 2.4 Algorithms

There now several good packages for typesetting algorithms [3, 4, 5], and the authors are now free to choose their favorite one.

## 2.5 Figures and tables

New ACM styles use the standard L<sup>A</sup>T<sub>E</sub>X interface for figures and tables. There are some important items to be aware of, however.

1. The captions for figures must be entered *after* the figure bodies, and for the tables *before* the table bodies.

2. ACM uses the standard types for figures and types and adds several new ones. In total there are the following types:

**figure, table:** a standard figure or table, taking full text width in one-column formats and one column in two-column formats.

**figure\*, table\*** in two-column formats, a special figure or table taking full text width.

**teaserfigure:** a special figure before \maketitle.

**sidebar, marginfigure, margitable:** in the sigchi-a format, special sidebars, tables and figures on the margin.

3. Accordingly, when scaling the images, one should use the following sizes:

- (a) For figure in one-column mode, figure\* in two-column mode or teaserfigure—\textwidth (in the one-column you can also use \columnwidth, which coincides with \textwidth in this case).
- (b) For figure in two-column mode—\columnwidth.
- (c) For marginfigure—\marginparwidth.
- (d) For figure\* in SIGCHI Extended abstracts—\fulltextwidth.

It is strongly recommended to use the package booktabs [6] and follow its main principles of typography with respect to tables:

1. Never, ever use vertical rules.

2. Never use double rules.

It is also a good idea not to overuse horizontal rules.

For table *footnotes* you have several options described in TeX FAQ [1]. The simplest one is to use \minipage environment:

```
\begin{table}
\caption{Simulation Configuration}
\label{tab:conf}
\begin{minipage}{\columnwidth}
\begin{center}
\begin{tabular}{ll}
\toprule
TERRAIN\footnote{This is a table footnote. This is a table footnote. This is a table footnote.} &
\end{tabular}
\end{center}
\end{minipage}
```

```

(200\, ,m$\times$200\, ,m) Square\\
Node Number & 289\\
Node Placement & Uniform\\
Application & Many-to-Many/Gossip CBR Streams\\
Payload Size & 32 bytes\\
Routing Layer & GF\\
MAC Layer & CSMA/MMSN\\
Radio Layer & RADIO-ACCNOISE\\
Radio Bandwidth & 250Kbps\\
Radio Range & 20m--45m\\
\bottomrule
\end{tabular}
\end{center}
\bigskip
\footnotesize\emph{Source:} This is a table
sourcenote. This is a table sourcenote. This is a table
sourcenote.

\emph{Note:} This is a table footnote.
\end{minipage}
\end{table}

```

`sidebar` SIGCHI extended abstract extensively uses margin space. The package provides three environments for this with option captions:

**sidebar:** textual information on the margin

**marginfigure:** a figure on the margin

**margintable:** a table on the margin

Tables and figures (including margin tables and margin figures) are by default centered. However, in some cases (for example, when you use several subimages per figure) you may need to override this decision. A good way to do so is to put the contents into a `\minipage` of the width `\columnwidth`.

## 2.6 Theorems

ACM classes define two theorem styles and several pre-defined theorem environments:

**acmplain:** this is the style used for `theorem`, `conjecture`, `proposition`, `lemma`, `corollary`, and

**acmdefinition:** this is the style used for `example` and `definition`.

## 2.7 Online-only and offline-only material

`printonly` Some supplementary material in ACM publication is put online, but not in the printed  
`screenonly`

version. The text inside the environment `screenonly` will be typeset only when the option `screen` (see Section 2.2) is set to true. Conversely, the text inside the environment `printonly` is typeset only when this option is set to false. For example

```
\section{Supplementary materials}

\begin{printonly}
    This section is included in the online version of the paper.
\end{printonly}

\begin{screenonly}
    (The actual section).
\end{screenonly}
```

We use `comment` package for typesetting this code, so `\begin{...}` and `\end{...}` should start at the first positions of the lines of their own (no initial spaces etc.).

## 2.8 Note about anonymous mode

`anonsuppress` When the option `anonymous` is selected, TeX suppresses author information (including number of authors) for a blind review. However, sometimes the information identifying the authors may be present in the body of the paper

```
\begin{anonsuppress}
    This is the continuation of the previous work by the author
    \cite{prev1, prev2}.
\end{anonsuppress}
```

As for `printonly` and `screenonly` environments, `\begin{anonsuppress}` and `\end{anonsuppress}` should start the line of their own (no leading or trailing spaces).

## 2.9 Acknowledgments

The traditional “Acknowledgments” section is conventionally used to thank persons and granting agencies for their help and support. However, there are several important considerations about this section.

First, in the anonymous mode this section must be omitted: it gives too much information to the reviewers. Second, the data about the grants is extracted and stored separately by the postprocessing software. ACM classes provide facilities for both these tasks.

`acks` The environment `acks` starts an unnumbered section “Acknowledgments” unless the anonymous mode is chosen. Put all thanks inside this environment.

As for `printonly` and `screenonly` environments, `\begin{acks}` and `\end{acks}` should start the line of their own (no leading or trailing spaces).

`\grantsponsor` All the financial support *must* be listed using the commands `\grantsponsor` and `\grantnum`. These commands tell the postprocessing software about the granting organization and the grant. The format of the command is the following:

```
\grantsponsor{\langle sponsorID \rangle}{\langle name \rangle}{\langle url \rangle}
\grantnum[\langle url \rangle]{\langle sponsorID \rangle}{\langle number \rangle}.
```

Here  $\langle sponsorID \rangle$  is the unique ID used to match grants to sponsors,  $\langle name \rangle$  is the name of the sponsor,  $\langle url \rangle$  is its URL, and  $\langle number \rangle$  is the grant number. The  $\langle sponsorID \rangle$  of the `\grantnum` command must correspond to `\sponsorID` of a `\grantsponsor` command. Some awards have their own web pages, which you can include using the optional argument of `\grantnum` command.

At present  $\langle sponsorID \rangle$  is chosen by the authors and can be an arbitrary key, in the same way the label of `\cite` is arbitrarily chosen. There might be a change to this policy if ACM decides to create a global database of sponsoring organizations.

Example:

```
\begin{acks}
The authors would like to thank Dr. Yuhua Li for providing the
matlab code of the \textit{BEPSS} method.

The authors would also like to thank the anonymous referees for
their valuable comments and helpful suggestions. The work is
supported by the \grantsponsor{GS501100001809}{National Natural
Science Foundation of
China}{http://dx.doi.org/10.13039/501100001809} under Grant
No.: \grantnum{GS501100001809}{61273304}
and \grantnum[http://www.nnsf.cn/youngscientsts]{GS501100001809}{Young
Scientists' Support Program}.
\end{acks}
```

## 2.10 Bibliography

ACM uses the `natbib` package for formatting references and the style `ACM-Reference-Format.bst` for Bib<sub>T</sub>E<sub>X</sub> processing. You may disable loading of `natbib` by using the option `natbib=false` in `\documentclass`. However, it is not recommended, as well as the use of Bib<sub>T</sub>E<sub>X</sub> styles other than `ACM-Reference-Format.bst`, and may delay the processing of the manuscript.

`\citetstyle` If you use `natbib`, you can select one of two predefined citation styles: the author-year format `acmauthoryear` or the numeric format `acmnumeric` using the command `\citetstyle`, for example,

```
\citetstyle{acmauthoryear}
```

Note that numeric citations are the default mode for most formats.

`\setcitetstyle` You may further customize `natbib` using `\setcitetstyle` command, for example,

```
\setcitetstyle{numbers,sort&compress}
```

If you use `natbib`, then commands like `\citet` and `\citeauthor` are automatically supported. The command `\shortcite` is the same as `\cite` in numerical mode, and cites the year in the author-date mode.

There are several customized BIBTeX entries and fields in ACM style ACM-Reference-Format.  
bst you may want to be aware of.

The style supports fields doi and url, for example,

```
doi = "10.1145/1188913.1188915",
url = "http://ccrma.stanford.edu/~jos/bayes/bayes.pdf",
```

The style supports arXiv recommended fields eprint and (optionally) primaryclass, for example,

```
eprint      = "960935712",
primaryclass = "cs",
```

See the examples at <http://arxiv.org/hypertex/bibstyles/>.

There are special entries online and game for Web pages and games, for example,

```
@online{Thornburg01,
author = "Harry Thornburg",
year = "2001",
title = "Introduction to Bayesian Statistics",
url = "http://ccrma.stanford.edu/~jos/bayes/bayes.html",
month = mar,
lastaccessed = "March 2, 2005",
}
```

For these entries you can use the lastaccessed field to add the access date to the URL.

There are two ways to enter video and audio sources in the bibliography corresponding to two different possibilities. For standalone sources available on WWW you can use an online entry, setting there howpublished field, for example,

```
@online{Obama08,
author = "Barack Obama",
year = "2008",
title = "A more perfect union",
howpublished = "Video",
day = "5",
url = "http://video.google.com/videoplay?docid=6528042696351994555",
month = mar,
lastaccessed = "March 21, 2008",
}
```

For the sources available as attachments to conference proceedings and similar documents, you can use the usual inproceedings entry, again setting the howpublished field:

```
@Inproceedings{Novak03,
author = "Dave Novak",
```

```

title = "Solder man",
booktitle = {ACM SIGGRAPH 2003 Video Review on Animation theater
            Program},
year = "2003",
publisher = "ACM Press",
address = "New York, NY",
pages = "4",
month = "March 21, 2008",
doi = "99.9999/woot07-S422",
howpublished = "Video"
}

```

Sometimes you need to cite a complete issue of a journal. The entry `periodical` is intended for this:

```

@periodical{JCohen96,
key = "Cohen",
editor = "Jacques Cohen",
title = "Special issue: Digital Libraries",
journal = CACM,
volume = "39",
number = "11",
month = nov,
year = "1996",
}

```

## 2.11 Colors

While printed ACM publications are usually black and white, screen mode allows the use of colors. The ACM classes pre-define several colors according to [7]: `ACMBlue`, `ACMYellow`, `ACMOrange`, `ACMRed`, `ACMLightBlue`, `ACMGreen`, `ACMPurple`, `ACMDarkBlue`. You can use them in the color assignments.

## 2.12 Other notable packages and typographic remarks

Several other packages are recommended for specialized tasks.

The package `subcaption` [8] is recommended for complex figures with several subplots or subfigures that require separate subcaptioning. The packages `nomenc` [9] and `glossaries` [10] can be used for the automatic creation of the lists of symbols and concepts used.

By default `acmart` prevents all widows and orphans (i.e. lonely lines at the beginning and the end of the page) and hyphenation at the end of the page. This is done by rather strict settings

```
\widowpenalty=10000
\clubpenalty=10000
```

```
\brokenpenalty=10000
```

However, this may lead to frustrating results when the authors must obey a page limit. Setting these penalties to smaller values may help if you absolutely need to.

Another problem might be the too strict line breaking rules. Again, a strategically placed `\sloppy` command or putting the problematic paragraph inside `sloppypar` environment might help—but beware the results might be, well, sloppy.

## 3 Implementation

### 3.1 Identification

We start with the declaration who we are. Most .dtx files put driver code in a separate driver file .drv. We roll this code into the main file, and use the pseudo-guard <gobble> for it.

```
1 <class>\NeedsTeXFormat{LaTeX2e}
2 <*gobble>
3 \ProvidesFile{acmart.dtx}
4 </gobble>
5 <class>\ProvidesClass{acmart}
6 [2017/02/15 v1.30 Typesetting articles for Association of
7 Computing Machinery]
```

And the driver code:

```
8 <*gobble>
9 \documentclass{ltxdoc}
10 \usepackage{array,booktabs,amsmath,graphicx,fancyvrb,tabularx}
11 \usepackage[tt=false]{libertine}
12 \usepackage[varqu]{zi4}
13 \usepackage[libertine]{newtxmath}
14 \usepackage[tableposition=top]{caption}
15 \usepackage{hypdoc}
16 \PageIndex
17 \CodelineIndex
18 \RecordChanges
19 \EnableCrossrefs
20 \begin{document}
21   \DocInput{acmart.dtx}
22 \end{document}
23 </gobble>
24 <*class>
25 \def\@classname{acmart}
```

### 3.2 Options

We need xkeyval since some of our options may have values:

```
26 \RequirePackage{xkeyval}
```

**format** The possible formats

Footnotes require some consideration. We have several layers of footnotes: front-matter footnotes, “regular” footnotes and the special insert for bibstrip. In the old ACM classes bibstrip was a `@float`. The problem with floats is that they tend to, well, float—and we want the guarantee they stay.

We use `manyfoot` for layered footnotes instead.

SIGCHI extended abstract provides an interesting possibility to push into the margin.  

Here we use figure* and table* for this.

\fulltextwidth We define the width of the boxes as
575 \newdimen\fulltextwidth
576 \fulltextwidth=\dimexpr(\textwidth+\marginparwidth+\marginparsep)  

\dblfloat We redefine the double float command. First, we make the size bigger. Second, our  

default position is going to be tp (to give marginalia a chance)
577 \if@ACM@sigchiamode
578 \def\dblfloat{\bgroup\columnwidth=\fulltextwidth

583 \if@ACM@sigchiamode

### 3.12 Typesetting top matter

```

@mkttitle@bx Some of our formats use two column design, some use one column one. In all cases
we use wide title. Thus we typeset the top matter in a special box to be use in the
construction \twocolumn[<box>].
1262 \newbox@mkttitle@bx

\maketitle The (in)famous \maketitle. Note that in sigchi-a mode authors are not in the title box.
Another note: there is a subtle difference between author notes, title notes and
thankses. The latter refer to the paper itself, and therefore belong to the copy-
right/permission block. By the way, this was the default behavior of the old ACM classes.

\institution      Theoretically we can define the macros for \affiliation inside the \@mkauthors-style  
  \position commands. However, this would lead to a strange error if an author uses them outside  
  \department. Of course we can make them produce an error message, but...

\streetaddress      We follow the strange American tradition of no comma before zip code.

### 3.15 TOC Lists

\@dotsep Related to the \tableofcontents are all the horizontal fillers. Base L<sup>A</sup>T<sub>E</sub>X defines \@dottedtocline, which we should not disable. Yet, this command expects \@dotsep to be defined, but leaves this to the class implementation. Since amsart does not provide this, we copy the standard variant from article here.

### 3.18 Conditional typesetting

We use the comment package for conditional typesetting:

```
2153 \if@ACM@screen
2154   \includecomment{screenonly}
2155   \excludecomment{printonly}
2156 \else
2157   \excludecomment{screenonly}

2162   \excludecomment{acks}
2163 \else
2164   \includecomment{anonsuppress}
2165 \fi
```

### 3.19 Additional bibliography commands

```
\showeprint The command \showeprint has two arguments: the (optional) prefix and the eprint
number. Right now the only prefix we understand is the (lowercase) word ‘arxiv’ (see
http://arxiv.org/hyperx/bibstyles/.
2166 \newcommand\showeprint[2][arxiv]{%
