

L^AT_EX Class for the Association for Computing Machinery^{}*

Boris Veytsman[†]

2019/07/31, v1.62

Abstract

This package provides a class for typesetting publications of the Association for Computing Machinery.

3.24 End of Class	102

1 Introduction

The Association for Computing Machinery¹ is the world’s largest educational and scientific computing society, which delivers resources that advance computing as a science and a profession. It was one of the early adopters of \TeX for its typesetting.

It provided several different classes for a number of journals and conference proceedings. Unfortunately during the years since these classes were written, the code was patched many times, and supporting different versions of the classes became difficult.

This package provides the uniform interface for all ACM publications. It is intended to replace all the different classes and packages and provide an up-to-date \LaTeX package.

This package uses only free \TeX packages and fonts included in $\text{\TeX}Live$, Mik \TeX and other popular \TeX distributions. It is intended to be published in these distributions itself, which minimizes users’ efforts in the installation and support of this package.

I am grateful to Michael D. Adams, Leif Andersen, Dirk Beyer, Joachim Breitner, Benjamin Byholm, Nils Anders Danielsson, Michael Ekstrand, Matthew Fluet, Paolo G. Giarrusso, Ben Greenman, Enrico Gregorio, Jamie Davis, Peter Kemp, Luis Leiva, Ben Liblit, Rholais Lii, LianTze Lim, Kai Mindermann, Frank Mittelbach, Serguei Mokhov, Ross Moore, John Owens, Joel Nider, Tobias Pape, Philip Quinn, Mathias Rav, Andreas Reichenberger, Matteo Riondato, Craig Rodkin, Bernard Rous, David Shamma, Gabriel Scherer, Stephen Spencer, Daniel Thomas, Zack Weinberg, John Wickerson and many others for their invaluable help.

The development version of the package is available at <https://github.com/borisveytsman/acmart>.

2 User’s guide

This class uses many commands and customizaton options, so it might appear intimidating for a casual user. Do not panic! Many of these commands and options can be safely left with their default values or the values recommended by your conference or journal editors. If you have problems or questions, do not hesitate to ask me directly or the community at <https://github.com/borisveytsman/acmart>, <https://tex.stackexchange.com> or the closest \TeX Users Group. The world-wide \TeX Users Group is at <https://tug.org/>; please consider joining us if you use \TeX regularly.

2.1 Installation

Most probably, you already have this package installed in your favorite \TeX distribution; if not, you may want to upgrade. You may need to upgrade it anyway since this package uses a number of relatively recent packages, especially the ones related to fonts.

The latest released version of this package can be found on CTAN: <https://www.ctan.org/pkg/acmart>. The development version can be found on GitHub: <https://github.com/borisveytsman/acmart>. At this address you can file a bug report—or even contribute your own enhancement by making a pull request.

¹<http://www.acm.org/>

Please note that the version on Github is a development (or experimental) version: please download it for testing new features. The production version is the one on CTAN and ACM sites.

Most users should not attempt to install this package themselves but should rather rely on their \TeX distributions to provide it. If you decide to install the package yourself, follow the standard rules:

1. Run `latex acmart.ins`. This will produce the file `acmart.cls`
2. Put the files `acmart.cls` and `ACM-Reference-Format.bst` in places where \LaTeX can find them (see [1] or the documentation for your \TeX system).
3. Update the database of file names. Again, see [1] or the documentation for your \TeX system for the system-specific details.
4. The file `acmart.pdf` provides the documentation for the package. (This is probably the file you are reading now.)

As an alternative to items 2 and 3 you can just put the files in the working directory where your `.tex` file is.

This class uses a number of other packages. They are included in all major \TeX distributions ($\text{\TeX}Live$, $\text{Mac}\text{\TeX}$, $\text{MiK}\text{\TeX}$) of 2015 and later, so you probably have them installed. Just in case here is the list of these packages:

- `amscls`, <http://www.ctan.org/pkg/amscls>
- `amsfonts`, <http://www.ctan.org/pkg/amsfonts>
- `amsmath`, <http://www.ctan.org/pkg/amsmath>
- `binhex`, <http://www.ctan.org/pkg/binhex>
- `balance`, <http://www.ctan.org/pkg/balance>
- `booktabs`, <http://www.ctan.org/pkg/booktabs>
- `caption`, <http://www.ctan.org/pkg/caption>
- `comment`, <http://www.ctan.org/pkg/comment>
- `cm-super`, <http://www.ctan.org/pkg/cm-super>
- `cmap`, <http://www.ctan.org/pkg/cmap>
- `draftwatermark`, <http://www.ctan.org/pkg/draftwatermark>
- `environ`, <http://www.ctan.org/pkg/environ>
- `etoolbox`, <http://www.ctan.org/pkg/etoolbox>
- `fancyhdr`, <http://www.ctan.org/pkg/fancyhdr>
- `float`, <http://www.ctan.org/pkg/float>

- *fontaxes*, <http://www.ctan.org/pkg/fontaxes>
- *geometry*, <http://www.ctan.org/pkg/geometry>
- *graphics*, <http://www.ctan.org/pkg/graphics>
- *hyperref*, <http://www.ctan.org/pkg/hyperref>
- *ifluatex*, <http://www.ctan.org/pkg/ifluatex>
- *ifxetex*, <http://www.ctan.org/pkg/ifxetex>
- *inconsolata*, <http://www.ctan.org/pkg/inconsolata>

- *xcolor*, <http://www.ctan.org/pkg/xcolor>
- *xkeyval*, <http://www.ctan.org/pkg/xkeyval>
- *xstring*, <http://www.ctan.org/pkg/xstring>

2.2 Invocation and options

To use this class, put in the preamble of your document

```
\documentclass[<options>]{acmart}
```

There are several options corresponding to the type of the document and its general appearance. They are described below. Generally speaking, the options have key=value forms, for example,

```
\documentclass[format=acmsmall, screen=true, review=false]{acmart}
```

The option `format` describes the format of the output. There are several possible values for this option, for example,

```
\documentclass[format=acmtog]{acmart}
```

Actually the words `format=` can be omitted, e.g.,

```
\documentclass[acmtog, review=false]{acmart}
```

The possible formats are listed in Table 1. Note that formats starting with `acm` are intended for journals and transactions, while formats starting with `sig` are intended for proceedings published as books.

Note that sometimes conference proceedings are published as a special issue (or issues) of an ACM journal. In this case, you should use the journal format for a conference paper. Please contact your conference committee if in doubt.

There are several Boolean options that can take `true` or `false` values. They are listed in Table 2. The words `=true` can be omitted when setting a Boolean option, so instead of `screen=true` one can write just `screen`, for example,

```
\documentclass[acmsmall, screen, review]{acmart}
```

The option `review` is useful when combined with the `manuscript` format option. It provides a version suitable for reviewers and copy editors.

The default for the option `screen` depends on the publication. At present it is `false` for all publications *but* PACM, since PACM is now electronic-only. Thus PACM titles (see Table 5) set this option to `true`. In the future this option may involve additional features suitable for on-screen versions of articles.

The option `natbib` is used when the corresponding `BIBTEX` style is based on `natbib`. In most cases you do not need to set it. See Section 2.11.

The option `anonymous` is used for anonymous review processes and causes all author information to be obscured.

The option `timestamp` is used to include a time stamp in the footer of each page. When preparing a document, this can help avoid confusing different revisions. The footer also includes the page range of the document. This helps detect missing pages in hard copies.

Table 1: The possible values for the `format` option

Value	Meaning
<code>manuscript</code>	A manuscript. This is the default.
<code>acmsmall</code>	Small single-column format. Used for CIE, CSUR, DTRAP, HEALTH, JACM, JDIQ, JEA, JERIC, JETC, PACMCGIT, PACMHCI, PACMPL, TAAS, TACCESS, TACO, TALG, TALLIP (formerly TALIP), TCPS, TDS, TEAC, TECS, TELO, THRI, TIIS, TIOT, TISSEC, TIST, TKDD, TMIS, TOCE, TOCHI, TOCL, TOCS, TOCT, TODAES, TODS, TOIS, TOIT, TOMACS, TOMM (formerly TOMCCAP), TOMPECS, TOMS, TOPC, TOPLAS, TOPS, TOS, TOSEM, TOSN, TRETS, TSAS, TSC, TSLP and TWEB, including special issues.
<code>acmlarge</code>	Large single-column format. Used for IMWUT, JOCCH, POMACS and TAP, including special issues.
<code>acmtog</code>	Large double-column format. Used for TOG, including annual conference Technical Papers.
<code>sigconf</code>	Proceedings format for most ACM conferences (with the exceptions listed below) and all ICPS volumes.
<code>sigplan</code>	Proceedings format for SIGPLAN conferences.
<code>sigchi</code>	Proceedings format for SIGCHI conferences.
<code>sigchi-a</code>	Format for SIGCHI extended abstracts.

The option `authordraft` is intended for author’s drafts that are not intended for distribution. It typesets a copyright block to give the author an idea of its size and the overall size of the paper but overprints it with the phrase “Unpublished working draft. Not for distribution.”, which is also used as a watermark. This option sets `timestamp` and `review` to `true`, but these can be overridden by setting these options to `false` *after* setting `authordraft` to `true`.

The option `balance` determines whether the last page in the two column mode has balanced columns. By default it is `true`; however, it may lead to problems for some documents. Set it to `false` if you encounter compilation errors. Note that for one page documents `\balance` command might cause problems.

The option `urlbreakonhyphens` determines whether URLs can be split between lines after hyphens. By default it is `true`. Set it to `false` to disallow these breaks.

2.3 Top matter

A number of commands set up *top matter* or (in computer science jargon) *metadata* for an article. They establish the publication name, article title, authors, DOI and other data. Some of these commands, like `\title` and `\author`, should be put by the authors. Others, like `\acmVolume` and `\acmDOI`—by the editors. Below we describe these commands and mention who should issue them. These macros should be used *before* the `\maketitle` command. Note that in previous versions of ACM classes some of these commands should be used before `\maketitle`, and some after it. Now they all must be

Table 2: Boolean options

Option	Default	Meaning
review	false	A review version: lines are numbered and hyperlinks are colored
screen	see text	A screen version: hyperlinks are colored
natbib	true	Whether to use the natbib package (see Section 2.11)
anonymous	false	Whether to make author(s) anonymous
authorversion	false	Whether to generate a special version for the authors' personal use or posting (see Section 2.3)
nonacm	false	Use the class typesetting options for a non-ACM document, which will not include the conference/journal header and footers or permission statements
timestamp	false	Whether to put a time stamp in the footer of each page
authordraft	false	Whether author's-draft mode is enabled
acmthm	true	Whether to define theorem-like environments, see Section 2.7
balance	true	Whether to balance the last page in two column mode
urlbreakonhyphens	true	Whether to break urls on hyphens

used before `\maketitle`.

This class internally loads the `amsart` class, so many top-matter commands are inherited from `amsart` [2].

`\acmJournal` The macro `\acmJournal{<shortName>}` sets the name of the journal or transaction for journals and transactions. The argument is the short name of the publication *in uppercase*, for example,

```
\acmJournal{TOMS}
```

The currently recognized journals are listed in Table 5. Note that conference proceedings published in *book* form do not set this macro.

`\acmConference` The macro `\acmConference[<short name>]{<name>}{<date>}{<venue>}` is used for conference proceedings published in the book form. The arguments are the following:

short name: the abbreviated name of the conference (optional).

name: the name of the conference.

date: the date(s) of the conference.

venue: the place of the conference.

Examples:

```
\acmConference[TD'15]{Technical Data Conference}{November  
12--16}{Dallas, TX, USA}  
\acmConference{SA'15 Art Papers}{November 02--06, 2015}{Kobe, Japan}
```

`\acmBooktitle` By default we assume that conference proceedings are published in the book named *Proceedings of CONFERENCE*, where CONFERENCE is the name of the conference inferred from the command `\acmConference` above. However, sometimes the book title is different. The command `\acmBooktitle` can be used to set this title, for example,

```
\acmBooktitle{Companion to the first International Conference on the  
Art, Science and Engineering of Programming (Programming '17)}
```

An ACM paper should have either `\acmJournal` or `\acmConference` command. If it has both (or more) commands, the last one takes precedence. Note that if you have the command `\acmConference` in a journal format like `acmsmall`, the class will use conference format for bibstrip and reference citation formatting. In the samples directory there is a file `sample-acmsmall-conf.tex` with the example of this usage.

`\editor` In most cases, conference proceedings are edited. You can use the command `\editor{<editor>}` to set the editor of the volume. This command can be repeated, for example,

```
\editor{Jennifer B. Sartor}  
\editor{Theo D'Hondt}  
\editor{Wolfgang De Meuter}
```

\title The command \title, as in the `amsart` class, has two arguments: one optional, and one mandatory:

```
\title[<ShortTitle>]{<FullTitle>}
```

The mandatory argument is the full title of the article. The optional argument, if present, defines the shorter version of the title for running heads. If the optional argument is absent, the full title is used instead.

It is expected that this command is inserted by the author of the manuscript.

\subtitle Besides title, ACM classes allow a subtitle, set with the \subtitle{<subtitle>} macro.

The commands for specifying authors are highly structured. The reason is they serve double duty: the authors' information is typeset in the manuscript *and* is used by the metadata extraction tools for indexing and cataloguing. Therefore it is very important to follow the guidelines exactly.

\author The basic commands are \author, \orcid (for the researchers registered with ORCID, <http://www.orcid.org/>), \affiliation and \email. In the simplest case, you enter them in this order:

```
\author{...}
\orcid{...}
\affiliation{...}
\email{...}
```

Do *not* use the L^AT_EX \and macro or commas, or \\ between the authors! Each author deserves his or her own \author command. An attempt to list several authors or their e-mails in one command leads to a warning or an error. This is not a bug, but the expected behavior.

Note that some formats do not typeset e-mails or ORCID identifiers. Do not worry: the metadata tools will get them.

Sometimes an author has several affiliations. In this case, the \affiliation command should be repeated:

```
\author{...}
\orcid{...}
\affiliation{...}
\affiliation{...}
\email{...}
```

Similarly you can repeat the \email command.

You may have several authors with the same affiliation, different affiliations, or overlapping affiliations (author A_1 is affiliated with institutions I_1 and I_2 , while author A_2 is affiliated with I_2 only, author A_3 is affiliated with I_1 and I_3 , etc.). The recommended solution is to put the \affiliation commands after each author, possibly repeating them:

```
\author{...}
\orcid{...}
```

```
\affiliation{...}
\affiliation{...}
\email{...}
\author{...}
\orcid{...}
\affiliation{...}
\email{...}
\author{...}
\orcid{...}
\affiliation{...}
\affiliation{...}
\email{...}
```

In some cases, when several authors share the same affiliation, you can try to save space using the format

```
\author{...}
\email{...}
\author{...}
\email{...}
\affiliation{...}
```

However, this format is not generally recommended.

`\additionalaffiliation` In some cases, too many affiliations can take too much space. The command `\additionalaffiliation{<affiliation>}` creates a footnote after an author's name with the words "Also with {<affiliation>}". You should use this command only as a last resort. An example of usage is:

```
\author{G. Tobin}
\author{Ben Trovato}
\additionalaffiliation{%
    \institution{The Th{\o}rv{\aa}ld Group}
    \streetaddress{1 Th{\o}rv{\aa}ld Circle}
    \city{Hekla}
    \country{Iceland}}
\affiliation{%
    \institution{Institute for Clarity in Documentation}
    \streetaddress{P.O. Box 1212}
    \city{Dublin}
    \state{Ohio}
    \postcode{43017-6221}}
```

Here Trovato and Tobin share their affiliation with the Institute for Clarity in Documentation, but only Ben Trovato is affiliated with The Th{\o}rv{\aa}ld Group.

The `\affiliation` and `\additionalaffiliation` commands are further structured to interact with the metadata extraction tools. Inside these commands you should use the `\position`, `\institution`, `\department`, `\city`, `\streetaddress`, `\state`, `\postcode` and `\country`.

and \country macros to indicate the corresponding parts of the affiliation. Note that in some cases (for example, journals) these parts are not printed in the resulting copy, but they *are* necessary since they are used by the XML metadata extraction programs. Do *not* put commas or \\ between the elements of \affiliation. They will be provided automatically.

An example of the author block:

```
\author{A. U. Thor}
\orcid{1234-4564-1234-4565}
\affiliation{%
    \institution{University of New South Wales}
    \department{School of Biomedical Engineering}
    \streetaddress{Samuels Building (F25), Kensington Campus}
    \city{Sidney}
    \state{NSW}
    \postcode{2052}
    \country{Australia}}
\email{author@nsw.au.edu}
\author{A. N. Other}
\affiliation{%
    \institution{University of New South Wales}
    \city{Sidney}
    \state{NSW}
    \country{Australia}}
\author{C. O. Respondent}
\orcid{1234-4565-4564-1234}
\affiliation{%
    \institution{University of Pennsylvania}
    \city{Philadelphia}
    \state{PA}
    \country{USA}}
\affiliation{%
    \institution{University of New South Wales}
    \city{Sidney}
    \state{NSW}
    \country{Australia}}
```

Note that the old ACM conference formats did not allow more than six authors and required some effort from authors to achieve alignment. The new format is much better in this.

Sometimes an author works in several departments within the same institution. There could be two situations: the departments are independent, or one department is within another. In the first case, just repeat the command \department several times. To handle the second case the command has an optional numerical parameter. The departments with higher numbers are higher in the organizational chart. Compare

```
\affiliation{%
    \department[0]{Department of Lunar Studies} % 0 is the default
    \department[1]{John Doe Institute} % higher than 0
```

```
\institution{University of San Serriffe}
\country{San Serriffe}}
```

and

```
\affiliation{%
  \department{Department of Lunar Studies} % Not in the John Doe Institute!
  \department{John Doe Institute}
  \institution{University of San Serriffe}
  \country{San Serriffe}}
```

The command `\affiliation` formats its output according to American conventions. This might be wrong for some cases. Consider, for example, a German address. In Germany, the postcode is put before the city and is not separated by a comma. We can handle this order using

```
\affiliation{%
  \institution{Fluginstitut}
  \streetaddress{Sonnenallee 17}
  \postcode{123456}
  \city{Helm}
  \country{Germany}}
```

However, the comma after the postcode is unfortunate: the address will be typeset (in some formats) as

```
Fluginstitut
Sonenallee 17
123456, Helm, Germany
```

To overcome this problem, the command `\affiliation` has an optional parameter `obeypunctuation`, which can be `false` (the default) or `true`. If this parameter is `true`, `\affiliation` obeys the author's command. Thus

```
\affiliation[obeypunctuation=true]{%
  \institution{Fluginstitut} \\
  \streetaddress{Sonnenallee 17} \\
  \postcode{123456}
  \city{Helm},
  \country{Germany}}
```

will be typeset as

```
Fluginstitut
Sonenallee 17
123456 Helm, Germany
```

Note that you should *not* use this option for journals.
 It is expected that these commands are inserted by the author of the manuscript.
`\thanks` Like `amsart` (and unlike standard L^AT_EX), we allow `\thanks` only *outside* of the commands `\title` and `\author`. This command is obsolete and should *not* be used in most cases. Do not list your acknowledgments or grant sponsors here. Put this information in the `acks` environment (see Section 2.10).
`\authorsaddresses` In some formats, addresses are printed as a footnote on the first page. By default L^AT_EX typesets them itself using the information you give it. However, you can override its choice using the command `\authorsaddresses{<contact addresses>}`, for example,

```
\authorsaddresses{%
  Authors' addresses: G.~Zhou, Computer Science Department, College of
  William and Mary, 104 Jameson Rd, Williamsburg, PA 23185, US;
  V.~B'eranger, Inria Paris-Rocquencourt, Rocquencourt, France;
  A.~Patel, Rajiv Gandhi University, Rono-Hills, Doimukh, Arunachal
  Pradesh, India; H.~Chan, Tsinghua University, 30 Shuangqing Rd,
  Haidian Qu, Beijing Shi, China; T.~Yan, Eaton Innovation Center,
  Prague, Czech Republic; T.~He, C.~Huang, J.~A.~Stankovic University
  of Virginia, School of Engineering Charlottesville, VA 22903, USA;
  T. F. Abdelzaher, (Current address) NASA Ames Research Center,
  Moffett Field, California 94035.}
```

You can *suppress* printing authors' addresses by setting them to an empty string: `\authorsaddresses{}`.

While the command `\thanks` generates a note without a footnote mark, sometimes the authors might need notes more tightly connected to the title, subtitle or author. The commands `\titlenote`, `\subtitlenote` and `\authornote` that follow the corresponding commands (`\title`, `\subtitle` and `\author`) generate such notes. For example,

```
\title{This is a title}
\titlenote{This is a titlenote}
\author{A. U. Thor}
\authornote{This is an authornote}
```

Please never use a `\footnote` inside an `\author` or `\title` command since this confuses the metadata extraction software. (Actually these commands now produce errors.)

`\authornotemark` Sometimes one may need to have the same footnote connected to several authors. The command `\authornotemark[<number>]` adds just the footnote mark, for example,

```
\author{A. U. Thor}
\authornote{Both authors contributed equally to the paper}
...
\author{A. N. Other}
\authornotemark[1]
```

The correct numbering of these marks is the responsibility of the user.

`\acmVolume` The macros `\acmVolume`, `\acmNumber`, `\acmArticle`, `\acmYear` and `\acmMonth` are
`\acmNumber`
`\acmArticle`
`\acmYear`
`\acmMonth`

inserted by the editor and set the journal volume, issue, article number, year and month correspondingly. The arguments of all these commands, including `\acmMonth`, is numerical. For example,

```
\acmVolume{9}  
\acmNumber{4}  
\acmArticle{39}  
\acmYear{2010}  
\acmMonth{3}
```

Note that `\acmArticle` is used not only for journals but also for some conference proceedings.

`\acmArticleSeq`

The articles in the same issue of a journal have a *sequence number*. It is used to vertically position the black blob on the first page of some formats. By default it is the same as the article number, but the command `\acmArticleSeq{<n>}` can be used to change it:

```
\acmArticle{39} % The sequence number will be 39 by default  
\acmArticleSeq{5} % We redefine it to 5
```

Setting this number to zero suppresses the blob.

`\acmSubmissionID`

If your paper got a Submission ID from the Conference Management System, put it here:

```
\acmSubmissionID{123-A56-BU3}
```

`\acmPrice`

The macro `\acmPrice{<price>}` sets the price for the article, for example,

```
\acmPrice{25.00}
```

Note that you do not need to put the dollar sign here, just the amount. By default the price is \$15.00, unless the copyright is set to usgov, rightsretained, iw3c2w3, or iw3c2w3g, when it is suppressed. Note that to override the defaults you need to set the price *after* the `\setcopyright` command. Also, the command `\acmPrice{}` suppresses the printing of the price.

`\acmISBN`

Book-like volumes have ISBN numbers attached to them. The macro `\acmISBN{<ISBN>}` sets it. Normally it is set by the typesetter, for example,

```
\acmISBN{978-1-4503-3916-2}
```

Setting it to the empty string, as `\acmISBN{}`, suppresses printing the ISBN.

`\acmDOI`

The macro `\acmDOI{<DOI>}` sets the DOI of the article, for example,

```
\acmDOI{10.1145/9999997.9999999}
```

It is normally set by the typesetter. Setting it to the empty string, as `\acmDOI{}`, suppresses the DOI.

`\acmBadgeR` Some conference articles get special distinctions, for example, the artifact evaluation for PPoPP 2016 (see <http://ctuning.org/ae/ppopp2016.html>). These articles display special badges supplied by the conference organizers. This class provides commands to add these badges: `\acmBadgeR[⟨url⟩]{⟨graphics⟩}` and `\acmBadgeL[⟨url⟩]{⟨graphics⟩}`. The first command puts the badge to the right of the title, and the second one—to the left. The exception is the `sigchi`—a mode for SIGCHI extended abstracts, which puts the badges on the left margin. The arguments have the following meaning: [⟨url⟩], if provided, sets the link to the badge authority in the screen version, while {⟨graphics⟩} sets the graphics file with the badge image. The file must be a cropped square, which is scaled to a standard size in the output. For example, if the badge image is `ae-logo.pdf`, the command is

```
\acmBadgeR[http://ctuning.org/ae/ppopp2016.html]{ae-logo}
```

`\startPage` The macro `\startPage{⟨page⟩}` sets the first page of the article in a journal or book. It is used by the typesetter.

`\terms` The command `\keywords{⟨keyword, keyword,...⟩}` sets keywords for the article. `\keywords` They must be separated by commas, for example,

```
\keywords{wireless sensor networks, media access control,  
multi-channel, radio interference, time synchronization}
```

`CCSXML` ACM publications are classified according to the ACM Computing Classification Scheme (CCS). CCS codes are used both in the typeset version of the publications *and* in the metadata in various databases. Therefore you need to provide both TeX commands and XML metadata with the paper.

The tool at <http://dl.acm.org/ccs.cfm> can be used to generate CCS codes. After you select the topics, click on “Generate CCS codes” to get results like the following:

```
\begin{CCSXML}  
<ccs2012>  
  <concept>  
    <concept_id>10010520.10010553.10010562</concept_id>  
    <concept_desc>Computer systems organization~Embedded systems</concept_desc>  
    <concept_significance>500</concept_significance>  
  </concept>  
  <concept>  
    <concept_id>10010520.10010575.10010755</concept_id>  
    <concept_desc>Computer systems organization~Redundancy</concept_desc>  
    <concept_significance>300</concept_significance>  
  </concept>  
  <concept>  
    <concept_id>10010520.10010553.10010554</concept_id>  
    <concept_desc>Computer systems organization~Robotics</concept_desc>  
    <concept_significance>100</concept_significance>
```

```

</concept>
<concept>
<concept_id>10003033.10003083.10003095</concept_id>
<concept_desc>Networks~Network reliability</concept_desc>
<concept_significance>100</concept_significance>
</concept>
</ccs2012>
\end{CCSXML}

\ccsdesc[500]{Computer systems organization~Embedded systems}
\ccsdesc[300]{Computer systems organization~Redundancy}
\ccsdesc{Computer systems organization~Robotics}
\ccsdesc[100]{Networks~Network reliability}

```

You just need to copy this code and paste it in your paper anywhere before \maketitle.

\setcopyright

There are several possibilities for the copyright of the papers published by the ACM: the authors may transfer the rights to the ACM, license them to the ACM, some or all authors might be employees of the US or Canadian governments, etc. Accordingly the command \setcopyright{...} is introduced. Its argument is the copyright status of the paper, for example, \setcopyright{acmcopyright}. The possible values for this command are listed in Table 3. This command must be placed in the preamble, before \begin{document}.

The ACM submission software should generate the right command for you to paste into your file.

\copyrightyear

Each copyright statement must have the year of copyright. By default it is the same as \acmYear, but you can override this using the macro \copyrightyear, e.g.,

```

\acmYear{2016}
\copyrightyear{2015}

```

There is a special case for a personal copy that the authors may be allowed to generate for their use or a posting on a personal site (check the instructions for the specific journal or conference for the details). The document option authorversion=true produces a special form of the copyright statement for this case. Note that you still need the \setcopyright command and (optionally) \copyrightyear command to tell \TeX about the copyright owner and year. Also, you should be aware that due to the different sizes of the permission blocks for the printed version and authors' version, the page breaks might be different between them.

abstract

The environment abstract must precede the \maketitle command. Again, this is different from the standard \TeX .

teaserfigure

A special kind of figure is used for many two-column conference proceedings. This figure is placed just after the authors but before the main text. The environment teaserfigure is used for these figures. This environment must be used before \maketitle, for example,

```

\begin{teaserfigure}

```

Table 3: Parameters for the \setcopyright command

Parameter	Meaning
none	The copyright and permission information is not typeset. (This is the option for some ACM conferences.)
acmcopyright	The authors transfer the copyright to the ACM (the “traditional” choice).
acmlicensed	The authors retain the copyright but license the publication rights to ACM.
rightsretained	The authors retain the copyright and publication rights to themselves or somebody else.
usgov	All the authors are employees of the US government.
usgovmixed	Some authors are employees of the US government.
cagov	All the authors are employees of the Canadian government.
cagovmixed	Some authors are employees of the Canadian government.
licensedusgovmixed	Some authors are employees of the US government, and the publication rights are licensed to ACM.
licensedcagov	All the authors are employees of the Canadian government, and the publication rights are licensed to ACM.
licensedcagovmixed	Some authors are employees of the Canadian government, and the publication rights are licensed to ACM.
othergov	Authors are employees of a government other than the US or Canada.
licensedothergov	Authors are employees of a government other than the US or Canada, and the publication rights are licensed to ACM.
iw3c2w3	Special statement for conferences organized by IW3C2.
iw3c2w3g	Special statement for conferences organized by IW3C2, when some authors are approved Google employees.

Table 4: Settings for the \settopmatter command

Parameter	Values	Meaning
printccs	true/false	Whether to print CCS categories
printacmref	true/false	Whether to print the ACM bibliographic entry
printfolios	true/false	Whether to print page numbers (folios)
authorsperrow	numeric	Number of authors per row for the title page in conference proceedings formats

```
\includegraphics[width=\textwidth]{sampleteaser}
\caption{This is a teaser}
\label{fig:teaser}
\end{teaserfigure}
```

\settopmatter Some information in the top matter is printed for certain journals or proceedings and suppressed for others. You can override these defaults using the command \settopmatter{\{settings\}}. The settings and their meanings are listed in Table 4. For example,

```
\settopmatter{printacmref=false, printccs=true, printfolios=true}
```

The parameter authorsperrow requires some explanation. In conference proceedings authors' information is typeset in boxes, several boxes per row (see `sample-sigconf.pdf`, `sample-sigplan.pdf`, etc.). The number of boxes per row is determined automatically. If you want to override this, you can do it using this parameter, for example,

```
\settopmatter{authorsperrow=4}
```

However, in most cases you should *not* do this and should use the default settings. Setting authorsperrow to 0 will revert it to the default settings.

\received The command \received[\{stage\}]\{\{date\}\} sets the history of the publication. The [\{stage\}] argument is optional; the default is Received for the first date and revised for the subsequent ones. For example,

```
\received[February 2007]
\received[revised]{March 2009}
\received[accepted]{June 2009}
```

\maketitle The macro \maketitle must be the last command in the top-matter group. That is it must follow the commands defined in this section.

\shortauthors After the command \maketitle, the macro \shortauthors stores the names of the authors for the running head. You can redefine it if the list of author's name is too long, e.g.,

```
\maketitle
\renewcommand{\shortauthors}{Zhou et al.}
```

2.4 Algorithms

There are now several good packages for typesetting algorithms [3, 4, 5], and the authors are free to choose their favorite one.

2.5 Figures and tables

The new ACM styles use the standard L^AT_EX interface for figures and tables. There are some important items to be aware of, however.

1. The captions for figures must be entered *after* the figure bodies and for tables *before* the table bodies.
2. The ACM uses the standard types for figures and tables and adds several new ones. In total there are the following types:

figure, table: a standard figure or table taking a full text width in one-column formats and one column width in two-column formats.

figure*, table* in two-column formats, a special figure or table taking a full text width.

teaserfigure: a special figure before \maketitle.

sidebar, marginfigure, margintable: in the sigchi-a format, special sidebars, tables and figures in the margin.

3. Accordingly, when scaling images, one should use the following sizes:
 - (a) For **teaserfigure**, **figure** in one-column mode or **figure*** in two-column mode, use **\textwidth**. In one-column mode, you can also use **\columnwidth**, which coincides with **\textwidth** in this case.
 - (b) For **figure** in two-column mode, use **\columnwidth**.
 - (c) For **marginfigure**, use **\marginparwidth**.
 - (d) For **figure*** in SIGCHI extended abstracts, use **\fulltextwidth**.

It is strongly recommended to use the package **booktabs** [6] and follow its main principles of typography with respect to tables:

1. Never, ever use vertical rules.
2. Never use double rules.

It is also a good idea not to overuse horizontal rules.

For table *footnotes* you have several options described in the TeX FAQ [1]. The simplest one is to use a **\minipage** environment:

```
\begin{table}
\caption{Simulation Configuration}
\label{tab:conf}
\begin{minipage}{\columnwidth}
```

```

\begin{center}
\begin{tabular}{ll}
\toprule
TERRAIN\footnote{This is a table footnote. This is a  
table footnote. This is a table footnote.} &  
(200\,,m$\times$200\,,m) Square\\
Node Number & 289\\
Node Placement & Uniform\\
Application & Many-to-Many/Gossip CBR Streams\\
Payload Size & 32 bytes\\
Routing Layer & GF\\
MAC Layer & CSMA/MMSN\\
Radio Layer & RADIO-ACCNOISE\\
Radio Bandwidth & 250Kbps\\
Radio Range & 20m--45m\\
\bottomrule
\end{tabular}
\end{center}
\bigskip
\footnotesize\emph{Source:} This is a table  

sourcenote. This is a table sourcenote. This is a table  

sourcenote.

\emph{Note:} This is a table footnote.
\end{minipage}
\end{table}

```

sidebar SIGCHI extended abstracts use margin space extensively. This package provides three environments for this with optional captions:

marginfigure: textual information in the margin

margintable: a figure in the margin

margintable: a table in the margin

Tables and figures (including margin tables and margin figures) are by default centered. However, in some cases (for example, when you use several subimages per figure) you may need to override this. A good way to do so is to put the contents into a `\minipage` of the width `\columnwidth`.

2.6 Descriptions of images

\Description Some readers of ACM publications might be visually challenged. These readers might use a voice-over software to read aloud the papers. It is important to provide them a description of each image used in the paper.

The command `\Description[<short description>]{<long description>}` should be placed inside every `figure`, `teaserfigure` or `marginfigure` environment to provide

a description of the image(s) used in the figure. Unlike `\caption`, which is used alongside the image, `\Description` is intended to be used instead of the image, for example,

```
\begin{figure}
  \centering
  \includegraphics{voltage}
  \Description{A bell-like histogram centered at $0.5$~V with most
  measurements between $0.2$~V and $0.8$~V}
  \caption{Histogram of the measurements of voltage}
  \label{fig:voltage}
\end{figure}
```

At present the lack of descriptions generates a warning at compilation.

2.7 Theorems

The ACM classes define two theorem styles and several pre-defined theorem environments:

acmplain: this is the style used for `theorem`, `conjecture`, `proposition`, `lemma` and `corollary`, and

acmdefinition: this is the style used for `example` and `definition`.

These environments are defined by default. In the unusual circumstance that a user does not wish to have these environments defined, the option `acmthm=false` in the preamble will suppress them.

2.8 Online-only and offline-only material

`printonly` Some supplementary material in ACM publications is put online but not in the printed version. The text inside the environment `screenonly` will be typeset only when the option `screen` (see Section 2.2) is set to `true`. Conversely, the text inside the environment `printonly` is typeset only when this option is set to `false`. For example,

```
\section{Supplementary materials}

\begin{printonly}
  Supplementary materials are available in the online version of this paper.
\end{printonly}

\begin{screenonly}
  (The actual supplementary materials.)
\end{screenonly}
```

We use the `comment` package for typesetting this code, so `\begin{...}` and `\end{...}` should start on a line of their own with no leading or trailing spaces.

2.9 Note about anonymous mode

`anonsuppress` When the option `anonymous` is selected, TeX suppresses author information (including the number of authors) for a blind review. However, sometimes the information identifying the authors may be present in the body of the paper. For example,

```
\begin{anonsuppress}
  This is the continuation of the previous work by the author
  \cite{prev1, prev2}.
\end{anonsuppress}
```

As for the `printonly` and `screenonly` environments, `\begin{anonsuppress}` and `\end{anonsuppress}` should start on a line of their own with no leading or trailing spaces.

2.10 Acknowledgments

The traditional “Acknowledgments” section is conventionally used to thank persons and granting agencies for their help and support. However, there are several important considerations about this section.

First, in anonymous mode this section must be omitted: it gives too much information to reviewers. Second, data about grants is extracted and stored separately by the postprocessing software. ACM classes provide facilities for both these tasks.

The environment `acks` starts an unnumbered section “Acknowledgments” unless the anonymous mode is chosen. Put all thanks inside this environment.

As for the `printonly` and `screenonly` environments, `\begin{acks}` and `\end{acks}` should start on a line of their own with no leading or trailing spaces.

All financial support *must* be listed using the commands `\grantsponsor` and `\grantnum`. These commands tell the postprocessing software about the granting organization and grant. The format of these commands is the following:

```
\grantsponsor{\langle sponsorID \rangle}{\langle name \rangle}{\langle url \rangle}
\grantnum[\langle url \rangle]{\langle sponsorID \rangle}{\langle number \rangle}.
```

Here `\langle sponsorID \rangle` is the unique ID used to match grants to sponsors, `\langle name \rangle` is the name of the sponsor, `\langle url \rangle` is its URL, and `\langle number \rangle` is the grant number. The `\langle sponsorID \rangle` of the `\grantnum` command must correspond to the `\langle sponsorID \rangle` of a `\grantsponsor` command. Some awards have their own web pages, which you can include using the optional argument of the `\grantnum` command.

At present `\langle sponsorID \rangle` is chosen by the authors and can be an arbitrary key in the same way the label of a `\cite` is arbitrarily chosen. There might be a change to this policy if the ACM decides to create a global database of sponsoring organizations.

Example:

```
\begin{acks}
  The authors would like to thank Dr. Yuhua Li for providing the
  matlab code of the \textit{BEPS} method.
```

```

The authors would also like to thank the anonymous referees for
their valuable comments and helpful suggestions. This work is
supported by the \grantsponsor{GS501100001809}{National Natural
Science Foundation of
China}{https://doi.org/10.13039/501100001809} under Grant
No.:~\grantnum{GS501100001809}{61273304}
and~\grantnum[http://www.nnsf.cn/youngscientists]{GS501100001809}{Young
Scientists' Support Program}.
\end{acks}

```

2.11 Bibliography

The ACM uses the `natbib` package for formatting references and the Bib_T^EX style file `ACM-Reference-Format.bst` for Bib_T^EX processing. You can disable loading of `natbib` using the option `natbib=false` in `\documentclass`. However, it is not recommended, as well as the use of Bib_T^EX styles other than `ACM-Reference-Format.bst`, and may delay the processing of the manuscript.

`\citetstyle` If you use `natbib`, you can select one of two predefined citation styles using the command `\citetstyle`: the author-year format `acmauthoryear` or the numeric format `acmnumeric`. For example,

```
\citetstyle{acmauthoryear}
```

Note that numeric citations are the default mode for most formats.

`\setcitetstyle` You can further customize `natbib` using the `\setcitetstyle` command, for example,

```
\setcitetstyle{numbers,sort&compress}
```

One of the more common versions is

```
\setcitetstyle{nosort}
```

It is useful if you do not like the way `natbib` sorts citation lists.

If you use `natbib`, then commands like `\citet` and `\citeauthor` are automatically supported. The command `\shortcite` is the same as `\cite` in numerical mode and cites the year in author-date mode.

Note that before version 1.48 the command `\citeyear` put the year in parentheses. In version 1.48 and later it produces just the year; the command `\citeyearpar` can be used to emulate its old behavior.

There are several customized Bib_T^EX entry types and fields in the ACM style file `ACM-Reference-Format.bst` that you may want to be aware of.

The style supports the fields `doi` and `url`, for example,

```

doi =      "10.1145/1188913.1188915",
url =      "http://ccrma.stanford.edu/~jos/bayes/bayes.pdf",

```

The style supports the arXiv-recommended fields `eprint` and (optionally) `primaryclass`, for example,

```
eprint = "960935712",
primaryclass = "cs",
```

See the examples at <http://arxiv.org/hypertex/bibstyles/>.

There are several special entry types. Types `online` and `game` are used for Web pages and games, for example,

```
@online{Thornburg01,
author = "Harry Thornburg",
year = "2001",
title = "Introduction to Bayesian Statistics",
url = "http://ccrma.stanford.edu/~jos/bayes/bayes.html",
month = mar,
lastaccessed = "March 2, 2005",
}
```

Entry types `artifactsoftware`, `artifactdataset` (with synonyms `software` and `dataset`) can be used to cite software artifacts and datasets, for example,

```
@ArtifactSoftware{R,
title = {R: A Language and Environment for Statistical Computing},
author = {{R Core Team}},
organization = {R Foundation for Statistical Computing},
address = {Vienna, Austria},
year = {2019},
url = {https://www.R-project.org/},
}
@ArtifactDataset{UMassCitations,
author = {Sam Anzaroot and Andrew McCallum},
title = {{UMass} Citation Field Extraction Dataset},
year = 2013,
url =
{http://www.iesl.cs.umass.edu/data/data-umasscitationfield},
lastaccessed = {May 27, 2019}
}
```

For these entry types you can use the `lastaccessed` field to add the access date for the URL.

There are two ways to enter video or audio sources in the bibliography corresponding to two different possibilities. For standalone sources available online, you can use an `online` entry and set its `howpublished` field. For example,

```
@online{Obama08,
author = "Barack Obama",
year = "2008",
```

```

title = "A more perfect union",
howpublished = "Video",
day = "5",
url = "http://video.google.com/videoplay?docid=6528042696351994555",
month = mar,
lastaccessed = "March 21, 2008",
}

```

For sources available as attachments to conference proceedings and similar documents, you can use the usual `inproceedings` entry type and set its `howpublished` field:

```

@Inproceedings{Novak03,
author = "Dave Novak",
title = "Solder man",
booktitle = "ACM SIGGRAPH 2003 Video Review on Animation theater Program",
year = "2003",
publisher = "ACM Press",
address = "New York, NY",
pages = "4",
month = "March 21, 2008",
doi = "10.9999/woot07-S422",
howpublished = "Video",
}

```

Sometimes you need to cite a complete issue of a journal. The `periodical` entry type is intended for this:

```

@periodical{JCohen96,
key = "Cohen",
editor = "Jacques Cohen",
title = "Special issue: Digital Libraries",
journal = "Communications of the {ACM}",
volume = "39",
number = "11",
month = nov,
year = "1996",
}

```

If you do not know the year of publication, the style will add “[n. d.]” (for “no date”) to the entry.

If you do not know the author (this is often the case for online entries), use the `key` field to add a key for sorting and citations, for example,

```

@online{TUGInstmem,
key = {TUG},
year = 2017,
title = "Institutional members of the {\TeX} Users Group",
url = "http://wwtug.org/instmem.html",
}

```

```

lastaccessed = "May 27, 2017",
}

```

A note about sorting. The current ACM bibliography styles always sort the entries according to authors names and publication year. There is a controversy about sorting names with “von” or “van” part: should Ludwig van Beethoven be sorted under “V” or under “B”? The American practice is to use “van” in sorting, i.e. to file van Beethoven under “V”. However, some authorities recommend to sort Dutch persons according to their last names (see e.g. https://www.ifla.org/files/assets/cataloguing/pubs/names-of-persons_1996.pdf). While I do not want to take a part in this dispute, I would like to point to the old “noopsort” trick by Oren Patashnik. Add to the .bib file the line

```
@PREAMBLE{"\providecommand{\noopsort}[1]{}"}
```

and then encode the author as

```
author = {Ludwig {\noopsort{Beethoven}}van Beethoven},
```

This will make the author to be sorted as “Beethoven” rather than “van Beethoven”.

2.12 Colors

While printed ACM publications are usually black and white, screen mode allows the use of colors. The ACM classes pre-define several colors according to [7]: ACMBlue, ACMYellow, ACMOrange, ACMRed, ACMLightBlue, ACMGreen, ACMPurple and ACMDarkBlue. You can use them in color assignments.

The ACM provides the following recommendation on color use.

The most accessible approach would be to ensure that your article is still readable when printed in greyscale. The most notable reasons for this are:

1. The most common type of inherited Color Vision Deficiency (CVD) is red-green (in which similar-brightness colors that differ only in their amounts of red or green are often confused), and it affects up to 8% of males and 0.5% of females of Northern European descent.
2. The most common type of acquired Color Vision Deficiency (CVD) is blue-yellow (including mild cases for many older adults).
3. Most printing is in black and white.
4. Situational impairments (e.g., bright sunlight shining on a mobile screen) tend to reduce the entire color gamut, reducing color discriminability.

Note: It is *not* safe to encode information using only variations in color (i.e., only differences in hue and/or saturation) as there is bound to be someone affected!

To ensure that you are using the most accessible colors, the ACM recommends that you choose sets of colors to help ensure suitable variations in when printed in greyscale by using either of the following tools:

1. ColourBrewer: <http://colorbrewer2.org/>
2. ACE: The Accessible Colour Evaluator: <http://daprlab.com/ace/> for designing WCAG 2.0 compliant palettes.

2.13 Other notable packages and typographic remarks

Several other packages are recommended for specialized tasks.

The package `subcaption` [8] is recommended for complex figures with several subplots or subfigures that require separate subcaptioning. The packages `nomenc1` [9] and `glossaries` [10] can be used for the automatic creation of the lists of symbols and concepts used.

By default `acmart` prevents all widows and orphans (i.e., lonely lines at the beginning or end of the page) and hyphenation at the end of the page. This is done by the rather strict settings

```
\widowpenalty=10000
\clubpenalty=10000
\brokepenalty=10000
```

However, this may lead to frustrating results when the authors must obey a page limit. Setting these penalties to smaller values may help if you absolutely need to.

Another problem might be the too strict line breaking rules. Again, a strategically placed `\sloppy` command or putting the problematic paragraph inside `sloppypar` environment might help—but beware, the results might be, well, sloppy.

Note that the uppercasing in section titles is done using the `textcase` package [11], so the command `\NoCaseChange` inside the title may help to prevent extraneous uppercasing.

2.14 Disabled or forbidden commands

The goal of `acmart` package is to provide a uniform look and feel for ACM publications. Accordingly, a number of commands is forbidden or disabled in `acmart`.

You may *not* put several authors or several e-mails into a `\author` or `\email` command. This may lead to errors or warning.

You cannot change `\baselinestretch` in your document: this produces an error.

You should not abuse the command `\vspace`: this command may disturb the typesetting of ACM papers.

2.15 A note for wizards: `acmart-preload-hook.tex`

Sometimes you need to change the behavior of `acmart`. The usual way to do this is to redefine commands in the preamble. However, these definitions are executed *after* `acmart` is loaded and certain decisions are made. This presents a number of problems.

For example, one may want to use the `titletoc` package with `acmart`. This package should be loaded before `hyperref`. However, since `acmart` loads `hyperref` itself,

the line `\usepackage{titletoc}` in the preamble will lead to grief (see <http://tex.stackexchange.com/questions/357265/using-titletoc-with-acm-acmart-style>).

Another example is passing options to a package. Suppose you want to use the `dvipsnames` option of the `xcolor` package. Normally you cannot do this because `acmart` loads this package itself without options.

The file `acmart-preload-hook.tex` can be used to solve these problems. If this file exists, it will be processed before any other package. You can use this file to load packages or pass options to them. For example, if you put in this file

```
\let\LoadClassOrig\LoadClass
\renewcommand\LoadClass[2][]{\LoadClassOrig[#1]{#2}%
\usepackage{titletoc}}
```

then `titletoc` will be loaded before `hyperref`. If you put in this file

```
\PassOptionsToPackage{dvipsnames}{xcolor}
```

you will pass `dvipsnames` to `xcolor`.

Important note. This hook makes it too easy to create a manuscript that is not acceptable by the ACM. It is even easier to create a file that cannot be compiled. So please do not use it *unless you know what you are doing*. And if you use it, *do not ask for support*. If you decide to use this hook, you are on your own.

2.16 Currently supported publications

Table 5: ACM publications and arguments of the `\acmJournal` command

Abbreviation	Publication
CIE	ACM Computers in Entertainment
CSUR	ACM Computing Surveys
DTRAP	Digital Threats: Research and Practice
HEALTH	ACM Transactions on Computing for Healthcare

3 Implementation

3.1 Identification

We start with a declaration of who we are. Most .dtx files put driver code in a separate .drv driver file. We roll this code into the main file and use the pseudo-guard <gobble> for it.

```
1 \class{NeedsTeXFormat}{LaTeX2e}
2 {*gobble}
3 \ProvidesFile{acmart.dtx}
4 {/gobble}
5 \class{ProvidesClass}{acmart}
6 [2019/07/31 v1.62 Typesetting articles for the Association for Computing Machinery]
```

And the driver code:

```
7 {*gobble}
8 \documentclass{ltxdoc}
9 \usepackage{array,booktabs,amsmath,graphicx,fancyvrb,tabularx, longtable}
10 \usepackage[tt=false, type1=true]{libertine}
11 \usepackage[varqu]{zi4}
12 \usepackage[libertine]{newtxmath}
13 \usepackage[tableposition=top]{caption}
14 \usepackage{hypdoc}
15 \PageIndex
16 \CodelineIndex
17 \RecordChanges
18 \EnableCrossrefs
19 \begin{document}
20   \DocInput{acmart.dtx}
21 \end{document}
22 {/gobble}
23 {*class}
24 \def\@classname{acmart}
```

3.2 Preload hook

We preload acmart-preload-hook:

```
25 \InputIfFileExists{acmart-preload-hook.tex}{%
26   \ClassWarning{\@classname}{%
27     I am loading acmart-preload-hook.tex. You are fully responsible
28     for any problems from now on.}}{}
```

3.3 Options

We need xkeyval since some of our options may have values:

```
29 \RequirePackage{xkeyval}
We use xstring to check whether user input is valid
30 \RequirePackage{xstring}
```

`format` The possible formats

```
31 \define@choicekey*+{acmart.cls}{format}[\ACM@format\ACM@format@nr]{%
32   manuscript, acmsmall, acmlarge, acmtog, sigconf, siggraph,
33   sigplan, sigchi, sigchi-a}[manuscript]{()}%
34   \ClassError{\classname}{The option format must be manuscript,
35   acmsmall, acmlarge, acmtog, sigconf, siggraph,
36   sigplan, sigchi or sigchi-a}}%
37 \def\@DeclareACMFormat#1{\DeclareOptionX{#1}{\setkeys{acmart.cls}{format=#1}}}
38 \@DeclareACMFormat{manuscript}
39 \@DeclareACMFormat{acmsmall}
40 \@DeclareACMFormat{acmlarge}
41 \@DeclareACMFormat{acmtog}
42 \@DeclareACMFormat{sigconf}
43 \@DeclareACMFormat{siggraph}
44 \@DeclareACMFormat{sigplan}
45 \@DeclareACMFormat{sigchi}
46 \@DeclareACMFormat{sigchi-a}
47 \ExecuteOptionsX{format}
```

`\if@ACM@screen` Whether we use screen mode

```
48 \define@boolkey+{acmart.cls}[@ACM@]{screen}[true]{%
49   \if@ACM@screen
50     \PackageInfo{\classname}{Using screen mode}%
51   \else
52     \PackageInfo{\classname}{Not using screen mode}%
53   \fi} {\PackageError{\classname}{The option screen can be either true or
54   false}}
55 \ExecuteOptionsX{screen=false}
```

`\if@ACM@urlbreakonhyphens`

```
56 \define@boolkey+{acmart.cls}[@ACM@]{urlbreakonhyphens}[true]{%
57   \if@ACM@urlbreakonhyphens
58     \PackageInfo{\classname}{Using breaking urls on hyphens}%
59   \else
60     \PackageInfo{\classname}{Not breaking urls on hyphens}%
61   \fi} {\PackageError{\classname}{The option urlbreakonhyphens can be either true or
62   false}}
63 \ExecuteOptionsX{urlbreakonhyphens=true}
```

`\if@ACM@acmthm` Whether we define theorem-like environments.

```
64 \define@boolkey+{acmart.cls}[@ACM@]{acmthm}[true]{%
65   \if@ACM@acmthm
66     \PackageInfo{\classname}{Requiring acmthm}%
67   \else
68     \PackageInfo{\classname}{Suppressing acmthm}%
69   \fi} {\PackageError{\classname}{The option acmthm can be either true or
70   false}}
71 \ExecuteOptionsX{acmthm=true}
```

```

\if@ACM@review Whether we use review mode
72 \define@boolkey+{acmart.cls}[@ACM@]{review}[true]{%
73   \if@ACM@review
74     \PackageInfo{@classname}{Using review mode}%
75     \AtBeginDocument{@ACM@printfoliotrue}%
76   \else
77     \PackageInfo{@classname}{Not using review mode}%
78   \fi}{\PackageError{@classname}{The option review can be either true or
79   false}}
80 \ExecuteOptionsX{review=false}

\if@ACM@authorversion Whether we use author's-version mode
81 \define@boolkey+{acmart.cls}[@ACM@]{authorversion}[true]{%
82   \if@ACM@authorversion
83     \PackageInfo{@classname}{Using authorversion mode}%
84   \else
85     \PackageInfo{@classname}{Not using authorversion mode}%
86   \fi}{\PackageError{@classname}{The option authorversion can be either true or
87   false}}
88 \ExecuteOptionsX{authorversion=false}

\if@ACM@nonacm Special option for non-ACM publications using the ACM typesetting options.
89 \define@boolkey+{acmart.cls}[@ACM@]{nonacm}[true]{%
90   \if@ACM@nonacm
91     \PackageInfo{@classname}{Using nonacm mode}%
92     \AtBeginDocument{@ACM@printacmreffalse}%
93     % in 'nonacm' mode we disable the "ACM Reference Format"
94     % printing by default, but this can be re-enabled by the
95     % user using \settopmatter{printacmref=true}
96   \else
97     \PackageInfo{@classname}{Not using nonacm mode}%
98   \fi}{\PackageError{@classname}{The option nonacm can be either true or
99   false}}
100 \ExecuteOptionsX{nonacm=false}

\if@ACM@balance Whether to balance the last page
101 \define@boolkey+{acmart.cls}[@ACM@]{balance}[true]{}{%
102   \PackageError{@classname}{The option balance can be either true or
103   false}}
104 \ExecuteOptionsX{balance}

\if@ACM@natbib@override This macro is no longer used.

\if@ACM@natbib Whether we use natbib mode
105 \define@boolkey+{acmart.cls}[@ACM@]{natbib}[true]{%
106   \if@ACM@natbib
107     \PackageInfo{@classname}{Explicitly selecting natbib mode}%
108   \else
109     \PackageInfo{@classname}{Explicitly deselecting natbib mode}%

```

```

110  \fi}{\PackageError{@classname}{The option natbib can be either true or
111    false}}
112 \ExecuteOptionsX{natbib=true}

\if@ACM@anonymous Whether we use anonymous mode
113 \define@boolkey+{acmart.cls}[@ACM@]{anonymous}[true]{%
114   \if@ACM@anonymous
115     \PackageInfo{@classname}{Using anonymous mode}%
116   \else
117     \PackageInfo{@classname}{Not using anonymous mode}%
118   \fi}{\PackageError{@classname}{The option anonymous can be either true or
119    false}}
120 \ExecuteOptionsX{anonymous=false}

\if@ACM@timestamp Whether we use timestamp mode
121 \define@boolkey+{acmart.cls}[@ACM@]{timestamp}[true]{%
122   \if@ACM@timestamp
123     \PackageInfo{@classname}{Using timestamp mode}%
124   \else
125     \PackageInfo{@classname}{Not using timestamp mode}%
126   \fi}{\PackageError{@classname}{The option timestamp can be either true or
127    false}}
128 \ExecuteOptionsX{timestamp=false}

\if@ACM@authordraft Whether we use author-draft mode
129 \define@boolkey+{acmart.cls}[@ACM@]{authordraft}[true]{%
130   \if@ACM@authordraft
131     \PackageInfo{@classname}{Using authordraft mode}%
132     \@ACM@timestamptrue
133     \@ACM@reviewtrue
134   \else
135     \PackageInfo{@classname}{Not using authordraft mode}%
136   \fi}{\PackageError{@classname}{The option authordraft can be either true or
137    false}}
138 \ExecuteOptionsX{authordraft=false}

\ACM@fontsize The font size to pass to the base class
139 \def\ACM@fontsize{}
140 \DeclareOptionX{9pt}{\edef\ACM@fontsize{\CurrentOption}}
141 \DeclareOptionX{10pt}{\edef\ACM@fontsize{\CurrentOption}}
142 \DeclareOptionX{11pt}{\edef\ACM@fontsize{\CurrentOption}}
143 \DeclareOptionX{12pt}{\edef\ACM@fontsize{\CurrentOption}}

144 \DeclareOptionX{draft}{\PassOptionsToClass{\CurrentOption}{amsart}}
145 \DeclareOptionX{*}{\PassOptionsToClass{\CurrentOption}{amsart}}
146 \ProcessOptionsX
147 \ClassInfo{@classname}{Using format \ACM@format, number \ACM@format@nr}

```

3.4 Setting switches

\if@ACM@manuscript	Whether we use manuscript mode
148 \newif\if@ACM@manuscript	
\if@ACM@journal	There are two kinds of publications: journals and books
149 \newif\if@ACM@journal	
\if@ACM@journal@bibstrip	Sometimes ACM wants a journal-like publication to have conference information in the bibstrip and vice versa, so we have an additional switch.
150 \newif\if@ACM@journal@bibstrip	
\if@ACM@sigchiamode	The formatting of SIGCHI extended abstracts is quite unusual. We have a special switch for them.
151 \newif\if@ACM@sigchiamode	

Setting up switches

```
152 \ifnum\ACM@format@nr=5\relax % siggraph
153   \ClassWarning{@classname}{The format siggraph is now obsolete.
154   I am switching to sigconf.}
155   \setkeys{acmart.cls}{format=sigconf}
156 \fi
157 \ifnum\ACM@format@nr=0\relax
158   \@ACM@manuscripttrue
159 \else
160   \@ACM@manuscriptfalse
161 \fi
162 \@ACM@sigchiamodefalse
163 \ifcase\ACM@format@nr
164 \relax % manuscript
165   \@ACM@journaltrue
166 \or % acmsmall
167   \@ACM@journaltrue
168 \or % acmlarge
169   \@ACM@journaltrue
170 \or % acmtog
171   \@ACM@journaltrue
172 \or % sigconf
173   \@ACM@journalfalse
174 \or % siggraph
175   \@ACM@journalfalse
176 \or % sigplan
177   \@ACM@journalfalse
178 \or % sigchi
179   \@ACM@journalfalse
180 \or % sigchi-a
181   \@ACM@journalfalse
182   \@ACM@sigchiamodetrue
183 \fi
```

```

184 \if@ACM@journal
185   \@ACM@journal@bibstriptrue
186 \else
187   \@ACM@journal@bibstripfalse
188 \fi

```

3.5 Loading the base class and package

At this point we either have \ACM@fontsize or use defaults

```

189 \ifx\ACM@fontsize\empty
190   \ifcase\ACM@format@nr
191     \relax % manuscript
192     \def\ACM@fontsize{9pt}%
193   \or % acmsmall
194     \def\ACM@fontsize{10pt}%
195   \or % acmlarge
196     \def\ACM@fontsize{10pt}%
197   \or % acmtog
198     \def\ACM@fontsize{9pt}%
199   \or % sigconf
200     \def\ACM@fontsize{9pt}%
201   \or % siggraph
202     \def\ACM@fontsize{9pt}%
203   \or % sigplan
204     \def\ACM@fontsize{10pt}%
205   \or % sigchi
206     \def\ACM@fontsize{10pt}%
207   \or % sigchi-a
208     \def\ACM@fontsize{10pt}%
209   \fi
210 \fi
211 \ClassInfo{@classname}{Using fontsize \ACM@fontsize}
212 \LoadClass[\ACM@fontsize, reqno]{amsart}
213 \RequirePackage{microtype}

```

We need etoolbox for delayed code

```
214 \RequirePackage{etoolbox}
```

Booktabs is now the default

```
215 \RequirePackage{booktabs}
```

We need totpages to calculate the number of pages and refcount to use that number

```

216 \RequirePackage{refcount}
217 \RequirePackage{totpages}

```

The \collect@body macro in amsmath is defined using \def. We load environ to access the \long version of this command

```
218 \RequirePackage{environ}
```

We use `setspace` for double spacing

```
219 \if@ACM@manuscript  
220 \RequirePackage{setspace}  
221 \onehalfspacing  
222 \fi
```

We need `textcase` for better upcasing

```
223 \RequirePackage{textcase}
```

3.6 Citations

We patch `\setcitestyle` to allow, for example, `\setcitestyle{sort}` and `\setcitestyle{nosort}`. We patch `\citestyle` to warn about undefined citation styles.

```
224 \if@ACM@natbib  
225   \RequirePackage{natbib}  
226   \renewcommand{\bibsection}{%  
227     \section*\{\refname\%  
228     \phantomsection\addcontentsline{toc}{section}{\refname\%

```

- \normalparindent The amsart package defines the \normalparindent length and initializes it to 12pt (the value of \parindent in amsart). It is later used to set the \listparindent length in the quotation environment and the \parindent length in the \@footnotetext command. We set \normalparindent to the value of \parindent as selected by acmart for consistent paragraph indents.

```
612 \setlength\normalparindent{\parindent}
```

Footnotes require some consideration. We have several layers of footnotes: front-matter footnotes, “regular” footnotes and the special insert for the bibstrip. In the old ACM classes, the bibstrip was a \@float. The problem with floats is that they tend to, well, float—and we want the guarantee they stay.

We use manyfoot for layered footnotes instead.

- \copyrightpermissionfootnoterule This is the footnote rule that separates the bibstrip from the rest of the paper. It is a full width rule.

```

613 \def\copyrightpermissionfootnoterule{\kern-3\p@
614   \hrule \width \columnwidth \kern 2.6\p@}

615 \RequirePackage{manyfoot}

SIGCHI extended abstracts provide an interesting possibility to push into the margin.  

Here we use figure* and table* for this.

\fulltextwidth We define the width of the boxes as
769 \newdimen\fulltextwidth
770 \fulltextwidth=\dimexpr(\textwidth+\marginparwidth+\marginparsep)

\dblfloat We redefine the double-float command. First, we make the size bigger. Second, our  

default position is going to be tp (to give marginalia a chance)
771 \if@ACM@sighchiamode
772 \def\dblfloat{\bgroup\let\@vspace\@vspace@orig

```

The AMS uses generous margins for lists. Note that `amsart` defines `\leftmargin` values for list levels at the beginning of the document, so we must redefine them in the same manner. Also, note that `amsart` redefines the `enumerate` and `itemize` environments with a `\makelabel` command that uses `\llap`, so the `\labelwidth` value is (effectively) irrelevant; nonetheless, we follow `amsart` and set `\labelwidth` to `\leftmargin` minus `\labelsep`.

3.15 Typesetting top matter

```

\mkttitle@bx Some of our formats use a two-column design. Some use a one-column design. In all
cases we use a wide title. Thus we typeset the top matter in a special box to be used in
the construction \@twocolumn[<box>].
1669 \newbox\mkttitle@bx

```

\maketitle The (in)famous \maketitle. Note that in `sigchi-a` mode, authors are *not* in the title box.

Another note: there is a subtle difference between author notes, title notes and thanks. The latter two refer to the paper itself and therefore belong to the copyright/permission block. By the way, this was the default behavior of the old ACM classes.

```

3.17 Sectioning

\ACM@NRadjust Ross Moore's macro.

Initially \ACM@sect@format@ just passes through its #1 argument unchanged. When a sectioning macro such as \section occurs, the \ACM@NRadjust redefines \ACM@sect@format@ to expand into the styling commands; e.g., \@secfont. Then \Sectionformat is temporarily redefined to produce \realSectionformat{\ACM@sect@format{#1}}{#2}, which ultimately becomes \Sectionformat{@secfont{#1}}{#2}. This is done to allow \Sectionformat to be variable, as may be needed in particular circumstances. Its current expansion is saved as \realSectionformat which is used with the modified 1st argument, then \Sectionformat is reverted to its former expansion.

To style the section-number, the line #1{} is used at the end of \ACM@NRadjust. This imposes style-changing commands for fonts and sizes, but any \MakeUppercase acts on just the {}. It's a bit hacky, by essentially assuming that only numbers occur here, not letters to be case-changed. (This should be acceptable in a class-file, as it ought to be possible to change the case elsewhere, if that was ever desired.) Also, it can result in \@adddotafter being called too soon, so a slight adjustment is made, via \ACM@adddotafter, which now tests whether its argument is empty. But the coding has to allow for other packages to have also patched \@adddotafter.

```

3.18 TOC lists

\@dotsep Related to the \tableofcontents are all the horizontal fillers. Base L^AT_EX defines \@dottedtocline, which we should not disable. Yet, this command expects \@dotsep to be defined but leaves this to the class implementation. Since amsart does not provide this, we copy the standard variant from article here.

Delay defining the theorem environments until after other packages have been loaded. In particular, the `cleveref` package must be loaded before the theorem environments are defined in order to show the correct environment name (see <https://github.com/borisveytsman/acmart/issues/138>). The `acmthm` option is used to suppress the definition of any theorem environments. Also, to avoid obscure errors arising from these environment definitions conflicting with environments defined by the user or by user-loaded packages, we only define environments that have not yet been defined.

```

2782      \or % sigchi-a
2783          \global\@ACM@balancefalse
2784      \fi
2785  \fi
2786 }
2787 \AtEndDocument{%
2788   \if@ACM@balance
2789   \if@twocolumn
2790   \balance
2791   \fi\fi}

```

3.21 Acknowledgments

```

\acksname
2792 \newcommand\acksname{Acknowledgments}

\acks This is a comment-like structure
2793 \specialcomment\acks}{%
2794   \begingroup
2795   \section*\{\acksname}
2796   \phantomsection\addcontentsline{toc}{section}{\acksname}
2797 }{%
2798   \endgroup
2799 }

\grantsponsor We just typeset the name of the sponsor
2800 \def\grantsponsor#1#2#3{#2}

\grantnum
2801 \newcommand\grantnum[3][]{#3%
2802   \def\@tempa{#1}\ifx\@tempa\@empty\else\space(\url{#1})\fi}

```

3.22 Conditional typesetting

We use the `comment` package for conditional typesetting:

```

2803 \AtEndPreamble{%
2804 \if@ACM@screen
2805   \includecomment{screenonly}
2806   \excludecomment{printonly}
2807 \else
2808   \excludecomment{screenonly}
2809   \includecomment{printonly}
2810 \fi
2811 \if@ACM@anonymous
2812   \excludecomment{anonsuppress}
2813   \excludecomment{acks}

```

```

2814 \else
2815   \includecomment{anonsuppress}
2816 \fi}

```

3.23 Additional bibliography commands

- \showeprint The command \showeprint has two arguments: the (optional) prefix and the eprint number. Right now the only prefix we understand is the (lowercase) word ‘arxiv’ (see <http://arxiv.org/hyperref/bibstyles/>).

```

2817 \newcommand\showeprint[2][arxiv]{%
2818   \def\@tempa{\#1}%
2819   \ifx\@tempa\empty\def\@tempa{arxiv}\fi
2820   \def\@tempb{arxiv}%
2821   \ifx\@tempa\@tempb
2822     arXiv:\href{http://arxiv.org/abs/#2}{#2}\else arXiv:#2%
2823   \fi}

```

3.24 End of Class

- \vspace We do not disable \vspace, but add warning to it

```

2824 \let\@vspace@\orig=\@vspace
2825 \let\@vspacer@\orig=\@vspacer
2826 \apptocmd{\@vspace}{\ClassWarning{@classname}{\string\vspace\space should
2827   only be used to provide space above/below surrounding
2828   objects}}{}{}%
2829 \apptocmd{\@vspacer}{\ClassWarning{@classname}{\string\vspace\space should
2830   only be used to provide space above/below surrounding
2831   objects}}{}{}%

```

- \ACM@origbaselinestretch We produce an error if the user tries to change \baselinestretch

```

2832 \let\ACM@origbaselinestretch\baselinestretch
2833 \AtEndDocument{\ifx\baselinestretch\ACM@origbaselinestretch\else
2834   \ClassError{@classname}{An attempt to redefine
2835   \string\baselinestretch\space detected. Please do not do this for
2836   ACM submissions!}\fi}

```

```

2837 \normalsize\normalfont\frenchspacing
2838 
```

\num@authorgroups: Renamed	61	all formats
\orcid: Introduced macro	63	32
\position: Added macro	81	\@mkabstract: Include 'Abstract' in
\postcode: Added macro	81	PDF bookmarks (Matthew Fluet) . 87
\state: Added macro	81	\acks: Include 'Acknowledgements' in
\streetaddress: Added macro	81	PDF bookmarks (Matthew Fluet) 101
standardpagestyle: Better handling		General: Include 'Abstract',
of anonymous mode	90	'Acknowledgements', and
v1.16		'References' in PDF bookmarks
\@headfootfont: Added macro	90	(Matthew Fluet)
General: Formatting header/footer		32
(Matthew Fluet)	32	Include 'References' in PDF
standardpagestyle: Customize		bookmarks (Matthew Fluet)
header/footer text font	90	38
v1.17		\@mkabstract: Deleted spurious space 87
\@makefnmark: Redefined	43	General: Bug fixes for bst
\@mkauthors: TOG now uses the same		32
authors block as other journals ..	81	v1.21
\@mkauthors@ii: Deleted	83	\showeprint: Added macro
\@mkbibcitation: Added \nobreak	87	102
Changed format for sigs	87	v1.22
\acmArticle: The default is now		General: More bibliography changes
numerical	64	for Aptara
\acmMonth: The default must be		32
numerical. Closes #50.	64	v1.23
\acmNumber: The default is now		General: Add PACMPL journal option 32
numerical	64	v1.24
\acmVolume: The default is now		General: Add IMWUT journal option 54
numerical	64	v1.25
\acmYear: The default is now		General: Updated PACMPL
numerical	64	54
\description: Decreased indent ..	53	v1.26
\grantnum: Added url	101	General: Corrected \shortcite bug . 32
\grantsponsor: Renamed	101	Documentation typos fixed (thanks
\if@ACM@printacmref: Renamed		to Stephen Spencer)
from \if@ACM@printbib	66	32
General: Slightly decreased margins		v1.27
for sigs	45	\if@ACM@printccs: Typo corrected . 66
standardpagestyle: Added paper		
title to sigs	90	v1.28
\ccsdesc@parse: Change from \to to		
\textrightarrow (Matteo		
Riondato)		68
\@mkabstract: Removed spurious		
indentation (John Wickerson) .		87
\ccsdesc@parse: Add spacing after		
bullet and around rightarrow;		

semicolon separators no longer in bold/italic (John Wickerson)	68
General: Increased head to 13pt	45
standardpagestyle: Corrected printfolios (Matthew Fluet)	90
v1.30	
\department: Added optional parameter	81
General: Added \frenchspacing	102
Bibtex style now recognizes https:// in doi	32
Switched to T1: looks like libertine has problems with \l in OT1	49
Updated IMWUT and PACMPL	54
v1.31	
\@additionalaffiliation: Added macro	62
\@mkbibcitation: Disabled linebreak	87
\@startsection: Added \tochangmeasure	40
Redefined macro	42
\@textbottom: Redefined	48
\acmMonth: The default now is the current month (Matteo Riondato)	64
\acmYear: The default now is the current year (Matteo Riondato)	64
\additionalaffiliation: Added macro	62
\l@subsection: Redefined macro	42
\l@subsubsection: Redefined macro	42
General: Documentation changes	32
v1.32	
\@formatdoi: New doi format	70
General: Added POMACS journal option	32
Format siggraph is now obsolete	32
v1.33	
\@ACM@addtoaddress: Added obeypunctuation code	80
\@mkauthors@i: Added obeypunctuation code	83
\@mkauthors@iii: Added obeypunctuation code	84
\@mkauthors@iv: Added obeypunctuation code	85

	\ACM@linecountR: Rulers now are continuous	89	v1.40	\@copyrightowner: Added new copyright version: licensedcagov . .	70
	\maketitle: Added date to the bibstrip in conf proceedings . . .	74		\@copyrightpermission: Added new copyright version: licensedcagov . .	70
	Deleted 'DOI' from doi numbers .	74		\@mkauthors@i: Switched to MakeTextUppercase	83
	Rearranged bibstrip	74		\@parfont: Switched to MakeTextUppercase	96
	The \terms command is now obsolete	74		\ACM@linecount@bx: Work around a bug in xcolor: looks like cmyk colors in boxes do not work . . .	89
	\terms: The \terms command now just produces a warning	65		\ccdesc@parse@finish: Added macro	68
v1.35	\bibstyle@acmauthoryear: Square brackets for author-year style . .	39		\city: We now do not print this even in SIG	81
	General: BibTeX bug fixed: et al. . .	32		\country: Fixed bugs with extra spaces	81
	If the copyright is set to usgov or rightsretained, the price is suppressed	68		\l@subsection: Redefined macro . .	42
v1.36	\@ACM@authorsperrow: Added macro	66		\postcode: We now do not print this even in SIG	81
	\@mkauthors@iii: Added authorsperrow override	84		\state: We now do not print this even in SIG	81
	\@mkauthors@iv: Added authorsperrow override	85		\streetaddress: We now do not print this even in SIG	81
	\if@ACM@authordraft: Corrected typo, thanks to bargteil	35		General: Added 'textcase' package . .	38
	General: Added PACMHCI journal options	54		Added heightrounded to geometry . .	45
	Added the possibility to adjust number of author boxes per row in conference formats	32		Added new copyright version: licensedcagov	32
v1.37	\description: Reduce list indentation (Matthew Fluet) . . .	53		Added package cleveref	32
	\descriptionlabel: Reduce list indentation (Matthew Fluet) . . .	53		Added Ross Moore code for glyptounicode	48
	\normalparindent: Set \normalparindent (Matthew Fluet)	47		Bibliography changes	32
	General: Reduce list indentation (Matthew Fluet)	52	v1.41	General: Added new badges	32
	Set \normalparindent; Reduce list indentation (Matthew Fluet) . . .	32	v1.42	General: Deleted ACM badges . . .	32
			v1.43	\@startsection: Added \makeatletter	42
				\country: Added comma before country for journals	81
			v1.44	\@acmBooktitle: Added macro . .	60

\@acmEditors: Added macro	60	\if@ACM@acmthm: Modified description	33
\@editorsAbbrev: Added macro	60	\liningnums: Workaround for compatibility with fontspec	49
\@folioblob: Suppress the blob if acmArticleSeq is empty	92	\maketitle: Added authors' addresses	74
\@mkbibcitation: If the paper has just one page, use 'page' instead of 'pages'	87	Thankses go before authors' addresses	74
\ACM@restore@pagestyle: Added macro	88	\num@authors: Introduced macro	61
\acmArticle: The default is now empty	64	General: Added etoolbox	32
\acmArticleSeq: Now acmArticle might be empty	64	Bst file bug fixes: label width is calculated correctly	32
\acmBooktitle: Added macro	60	Delayed hypersetup since journal options may change screen mode	43
\editor: Added macro	60	PACM now set screen to true	54
\if@ACM@acmthm: Added macro	33	Restore theorem defs to class file	32
\maketitle: Empty DOI or ISBN are not printed (by Michael Ekstrand)	74	v1.47	
General: Added package refcount	32	General: New journal: THRI	32
Deleted package cleveref	32	v1.48	
Put theorem defs in a separate style	32	\@headfootfont: Deleted unnecessary switch (Michael D. Adams)	90
v1.45		\@mkabstract: Removed spurious indentation if abstract is followed by an empty line	87
\@folioblob: Switched \bfseries\sffamily to \sffamily\bfseries	92	\ACM@timestamp: Fromatting change (Michael D. Adams)	89
\@parfont: Switched \bfseries\sffamily to \sffamily\bfseries	96	\if@ACM@review: Review mode now switches on folios	34
\@titlefont: Switched \bfseries\sffamily to \sffamily\bfseries	78	\maketitle: Added acmart and version info to pdfcreator tag	74
v1.46		Added language and doctitle attributes to PDF (Andreas Reichinger)	74
\@mkauthorsaddresses: Introduced macro	86	Suppressed empty DOI (Serguei Mokhov)	74
\@mkbibcitation: Added subtitle	87	General: \citeyear no longer behaves like \citeyearpar	44
\@printendtopmatter: Made it \par\bigskip uniformly	88	Code prettying (Michael D. Adams)	32
\@printtopmatter: Deleted rule	77	Initial support for Biblatex (Daniel Thomas)	32
\@setauthorsaddresses: Introduced macro	88	Misc entries in the bibliography no longer produce a separate date	32
\ACM@linecount@bx: Rearranged the code to get rid of spurious underfull messages (Benjamin Byholm)	89	Typos fixed (Jamie Davis)	32
\author: Started counting authors	61	v1.50	
\authorsaddresses: Introduced macro	63	\@copyrightpermission: New copyright statements for iw3c2w3[g]	70
\country: Corrected spacing for institution	81	v1.51	
		General: Corrected the bug with price suppression	68

Suppress price if the copyright is set to iw3c2w3 or iw3c2w3g	68
XeTeX now uses OTF fonts (Joachim Breitner)	49
firstpagestyle: We now use journal abbreviation for footers	93
standardpagestyle: We now use journal abbreviation for footers	90
v1.52	
\@copyrightowner: Rewording of licenses	70
\@copyrightpermission: Another rewording of copyright statements for iw3c2w3[g]	70
v1.53	
General: Added PACMCGIT, TIOT, TDSCI	54
v1.54	
\@mkbibcitation: Bug corrected (Ross Moore)	87
\@shortauthors: Added submission id in anonymous mode	90
\ACM@NR@adjustedSectionformat: Added macro	95
\ACM@NRadjust: Added macro	94
\ACM@adddotafter: Added macro	95
\author: Added submission id in anonymous mode	61
\if@ACM@nonacm: Added macro	34
General: Added Ross's patch for sectioning	95
Deleted indent for subsubsection	95
XeTeX now uses T1 encoding	49
v1.55	
\@mkbibcitation: Bug corrected	87
\maketitle: Fixes topnum	74
General: Now we use purple color for links	43
Table captions for SIGCHI now use the same font size as figure captions (Luis Leiva)	50
Typo corrected (Zack Weinberg)	38
v1.56	
\@marginfigure: Added checking for description	51
\@mkteasers: Added check for description	87
\Description: Added macro	49
\acksname: Added macro (Philip Quinn)	101
v1.57	
\ccsdesc@parse: End the concepts list with a period (Philip Quinn)	68
\if@Description@present: Added macro	49
\if@undescribed@images: Added macro	49
General: Looks like XeTeX requires explicit monotype font declaration	49
Make two-column layouts flush (Philip Quinn)	45
v1.58	
\@dblfloat: Deleted spurious \vspace warning	51
\@marginfigure: Deleted spurious \vspace warning	51
\@marginable: Deleted spurious \vspace warning	51
\@mkbibcitation: Deleted spurious \vspace warning	87
\@printendtopmatter: Deleted spurious \vspace warning	88
\@sidebar: Deleted spurious \vspace warning	51
\maketitle: Original \vspace inside \maketitle	74
\vspace: Preserved old versions as \vspace@orig and \vspace@orig	102
General: Added HEALTH. TDSCI is renamed to TDS	54
Suppressed \addtocounter in pdf subject	43
v1.59	
\acmConference: Setting \ACM@journal@bibstrip	60
\acmJournal: Setting \ACM@journal@bibstrip	60
\if@ACM@journal@bibstrip: Introduced macro	36

firstpagestyle: Added logic for conference papers using journal format	93	v1.60	Moved page styles to \AtBeginDocument	90
Moved page styles to \AtBeginDocument	93	v1.61	\@headfootfont: Moved to footnotesize	90
standardpagestyle: Added logic for conference papers using journal format	90		\@typeset@author@bx: Added \normalbaselines	84

Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; numbers in roman refer to the code lines where the entry is used.
