

# **LATEX Class for the Association for Computing Machinery<sup>\*</sup>**

Boris Veytsman<sup>†</sup>

2019/05/27, v1.61

## **Abstract**

This package provides a class for typesetting publications of the Association for Computing Machinery.

## **Contents**

<b>1</b>	<b>Introduction</b>	<b>3</b>

3.22 Conditional typesetting . . . . .	101
3.23 Additional bibliography commands . . . . .	102
3.24 End of Class . . . . .	102

# 1 Introduction

The Association for Computing Machinery<sup>1</sup> is the world’s largest educational and scientific computing society, which delivers resources that advance computing as a science and a profession. It was one of the early adopters of  $\text{\TeX}$  for its typesetting.

It provided several different classes for a number of journals and conference proceedings. Unfortunately during the years since these classes were written, the code was patched many times, and supporting different versions of the classes became difficult.

This package provides the uniform interface for all ACM publications. It is intended to replace all the different classes and packages and provide an up-to-date  $\text{\LaTeX}$  package.

This package uses only free  $\text{\TeX}$  packages and fonts included in  $\text{\TeX}Live$ , Mik $\text{\TeX}$  and other popular  $\text{\TeX}$  distributions. It is intended to be published in these distributions itself, which minimizes users’ efforts in the installation and support of this package.

I am grateful to Michael D. Adams, Leif Andersen, Dirk Beyer, Joachim Breitner, Benjamin Byholm, Nils Anders Danielsson, Michael Ekstrand, Matthew Fluet, Paolo G. Giarrusso, Ben Greenman, Enrico Gregorio, Jamie Davis, Peter Kemp, Luis Leiva, Ben Liblit, Rholais Lii, LianTze Lim, Kai Mindermann, Frank Mittelbach, Serguei Mokhov, Ross Moore, John Owens, Joel Nider, Tobias Pape, Philip Quinn, Mathias Rav, Andreas Reichenberger, Matteo Riondato, Craig Rodkin, Bernard Rous, David Shamma, Gabriel Scherer, Stephen Spencer, Daniel Thomas, Zack Weinberg, John Wickerson and many others for their invaluable help.

The development version of the package is available at <https://github.com/borisveytsman/acmart>.

# 2 User’s guide

This class uses many commands and customization options, so it might appear intimidating for a casual user. Do not panic! Many of these commands and options can be safely left with their default values or the values recommended by your conference or journal editors. If you have problems or questions, do not hesitate to ask me directly or the community at <https://github.com/borisveytsman/acmart>, <https://tex.stackexchange.com> or the closest  $\text{\TeX}$  Users Group. The world-wide  $\text{\TeX}$  Users Group is at <https://tug.org/>; please consider joining us if you use  $\text{\TeX}$  regularly.

## 2.1 Installation

Most probably, you already have this package installed in your favorite  $\text{\TeX}$  distribution; if not, you may want to upgrade. You may need to upgrade it anyway since this package uses a number of relatively recent packages, especially the ones related to fonts.

The latest released version of this package can be found on CTAN: <https://www.ctan.org/pkg/acmart>. The development version can be found on GitHub: <https://github.com/borisveytsman/acmart>. At this address you can file a bug report—or even contribute your own enhancement by making a pull request.

---

<sup>1</sup><http://www.acm.org/>

Please note that the version on Github is a development (or experimental) version: please download it for testing new features. The production version is the one on CTAN and ACM sites.

Most users should not attempt to install this package themselves but should rather rely on their  $\text{\TeX}$  distributions to provide it. If you decide to install the package yourself, follow the standard rules:

1. Run `latex acmart.ins`. This will produce the file `acmart.cls`
2. Put the files `acmart.cls` and `ACM-Reference-Format.bst` in places where  $\text{\LaTeX}$  can find them (see [1] or the documentation for your  $\text{\TeX}$  system).
3. Update the database of file names. Again, see [1] or the documentation for your  $\text{\TeX}$  system for the system-specific details.
4. The file `acmart.pdf` provides the documentation for the package. (This is probably the file you are reading now.)

As an alternative to items 2 and 3 you can just put the files in the working directory where your `.tex` file is.

This class uses a number of other packages. They are included in all major  $\text{\TeX}$  distributions ( $\text{\TeX}Live$ ,  $\text{Mac}\text{\TeX}$ ,  $\text{MiK}\text{\TeX}$ ) of 2015 and later, so you probably have them installed. Just in case here is the list of these packages:

- `amscls`, <http://www.ctan.org/pkg/amscls>
- `amsfonts`, <http://www.ctan.org/pkg/amsfonts>
- `amsmath`, <http://www.ctan.org/pkg/amsmath>
- `binhex`, <http://www.ctan.org/pkg/binhex>
- `balance`, <http://www.ctan.org/pkg/balance>
- `booktabs`, <http://www.ctan.org/pkg/booktabs>
- `caption`, <http://www.ctan.org/pkg/caption>
- `comment`, <http://www.ctan.org/pkg/comment>
- `cm-super`, <http://www.ctan.org/pkg/cm-super>
- `cmap`, <http://www.ctan.org/pkg/cmap>
- `draftwatermark`, <http://www.ctan.org/pkg/draftwatermark>
- `environ`, <http://www.ctan.org/pkg/environ>
- `etoolbox`, <http://www.ctan.org/pkg/etoolbox>
- `fancyhdr`, <http://www.ctan.org/pkg/fancyhdr>
- `float`, <http://www.ctan.org/pkg/float>

- *fontaxes*, <http://www.ctan.org/pkg/fontaxes>
- *geometry*, <http://www.ctan.org/pkg/geometry>
- *graphics*, <http://www.ctan.org/pkg/graphics>
- *hyperref*, <http://www.ctan.org/pkg/hyperref>

- *xkeyval*, <http://www.ctan.org/pkg/xkeyval>
- *xstring*, <http://www.ctan.org/pkg/xstring>

## 2.2 Invocation and options

To use this class, put in the preamble of your document

```
\documentclass[<options>]{acmart}
```

There are several options corresponding to the type of the document and its general appearance. They are described below. Generally speaking, the options have key=value forms, for example,

```
\documentclass[format=acmsmall, screen=true, review=false]{acmart}
```

The option `format` describes the format of the output. There are several possible values for this option, for example,

```
\documentclass[format=acmtog]{acmart}
```

Actually the words `format=` can be omitted, e.g.,

```
\documentclass[acmtog, review=false]{acmart}
```

The possible formats are listed in Table 1. Note that formats starting with `acm` are intended for journals and transactions, while formats starting with `sig` are intended for proceedings published as books.

Note that sometimes conference proceedings are published as a special issue (or issues) of an ACM journal. In this case, you should use the journal format for a conference paper. Please contact your conference committee if in doubt.

There are several Boolean options that can take `true` or `false` values. They are listed in Table 2. The words `=true` can be omitted when setting a Boolean option, so instead of `screen=true` one can write just `screen`, for example,

```
\documentclass[acmsmall, screen, review]{acmart}
```

The option `review` is useful when combined with the `manuscript` format option. It provides a version suitable for reviewers and copy editors.

The default for the option `screen` depends on the publication. At present it is `false` for all publications *but* PACM, since PACM is now electronic-only. Thus PACM titles (see Table 5) set this option to `true`. In the future this option may involve additional features suitable for on-screen versions of articles.

The option `natbib` is used when the corresponding `BIBTEX` style is based on `natbib`. In most cases you do not need to set it. See Section 2.11.

The option `anonymous` is used for anonymous review processes and causes all author information to be obscured.

The option `timestamp` is used to include a time stamp in the footer of each page. When preparing a document, this can help avoid confusing different revisions. The footer also includes the page range of the document. This helps detect missing pages in hard copies.

Table 1: The possible values for the `format` option

Value	Meaning
<code>manuscript</code>	A manuscript. This is the default.
<code>acmsmall</code>	Small single-column format. Used for CIE, CSUR, DTRAP, HEALTH, JACM, JDIQ, JEA, JERIC, JETC, PACMCGIT, PACMHCI, PACMPL, TAAS, TACCESS, TACO, TALG, TALLIP (formerly TALIP), TCPS, TDS, TEAC, TECS, THRI, TIIS, TISSEC, TIST, TKDD, TMIS, TOCE, TOCHI, TOCL, TOCS, TOCT, TODAES, TODS, TOIS, TOIT, TOMACS, TOMM (formerly TOMCCAP), TOMPECS, TOMS, TOPC, TOPLAS, TOPS, TOS, TOSEM, TOSN, TRETS, TSAS, TSC, TSLP and TWEB, including special issues.
<code>acmlarge</code>	Large single-column format. Used for IMWUT, JOCCH, POMACS and TAP, including special issues.
<code>acmtog</code>	Large double-column format. Used for TOG, including annual conference Technical Papers.
<code>sigconf</code>	Proceedings format for most ACM conferences (with the exceptions listed below) and all ICPS volumes.
<code>sigplan</code>	Proceedings format for SIGPLAN conferences.
<code>sigchi</code>	Proceedings format for SIGCHI conferences.
<code>sigchi-a</code>	Format for SIGCHI extended abstracts.

The option `authordraft` is intended for author’s drafts that are not intended for distribution. It typesets a copyright block to give the author an idea of its size and the overall size of the paper but overprints it with the phrase “Unpublished working draft. Not for distribution.”, which is also used as a watermark. This option sets `timestamp` and `review` to `true`, but these can be overridden by setting these options to `false` *after* setting `authordraft` to `true`.

The option `balance` determines whether the last page in the two column mode has balanced columns. By default it is `true`; however, it may lead to problems for some documents. Set it to `false` if you encounter compilation errors. Note that for one page documents `\balance` command might cause problems.

The option `urlbreakonhyphens` determines whether URLs can be split between lines after hyphens. By default it is `true`. Set it to `false` to disallow these breaks.

### 2.3 Top matter

A number of commands set up *top matter* or (in computer science jargon) *metadata* for an article. They establish the publication name, article title, authors, DOI and other data. Some of these commands, like `\title` and `\author`, should be put by the authors. Others, like `\acmVolume` and `\acmDOI`—by the editors. Below we describe these commands and mention who should issue them. These macros should be used *before* the `\maketitle` command. Note that in previous versions of ACM classes some of these commands should be used before `\maketitle`, and some after it. Now they all must be

Table 2: Boolean options

Option	Default	Meaning
review	false	A review version: lines are numbered and hyperlinks are colored
screen	see text	A screen version: hyperlinks are colored
natbib	true	Whether to use the natbib package (see Section 2.11)
anonymous	false	Whether to make author(s) anonymous
authorversion	false	Whether to generate a special version for the authors' personal use or posting (see Section 2.3)
nonacm	false	Use the class typesetting options for a non-ACM document, which will not include the conference/journal header and footers or permission statements
timestamp	false	Whether to put a time stamp in the footer of each page
authordraft	false	Whether author's-draft mode is enabled
acmthm	true	Whether to define theorem-like environments, see Section 2.7
balance	true	Whether to balance the last page in two column mode
urlbreakonhyphens	true	Whether to break urls on hyphens

\acmJournal

used before \maketitle.

This class internally loads the amsart class, so many top-matter commands are inherited from amsart [2].

The macro \acmJournal{<shortName>} sets the name of the journal or transaction for journals and transactions. The argument is the short name of the publication *in uppercase*, for example,

```
\acmJournal{TOMS}
```

\acmConference

The currently recognized journals are listed in Table 5. Note that conference proceedings published in *book* form do not set this macro.

The macro \acmConference[<short name>]{<name>}{<date>}{<venue>} is used for conference proceedings published in the book form. The arguments are the following:

**short name:** the abbreviated name of the conference (optional).

**name:** the name of the conference.

**date:** the date(s) of the conference.

**venue:** the place of the conference.

Examples:

```
\acmConference[TD'15]{Technical Data Conference}{November  
12--16}{Dallas, TX, USA}  
\acmConference{SA'15 Art Papers}{November 02--06, 2015}{Kobe, Japan}
```

\acmBooktitle

By default we assume that conference proceedings are published in the book named *Proceedings of CONFERENCE*, where CONFERENCE is the name of the conference inferred from the command \acmConference above. However, sometimes the book title is different. The command \acmBooktitle can be used to set this title, for example,

```
\acmBooktitle{Companion to the first International Conference on the  
Art, Science and Engineering of Programming (Programming '17)}
```

\editor

An ACM paper should have either \acmJournal or \acmConference command. If it has both (or more) commands, the last one takes precedence. Note that if you have the command \acmConference in a journal format like acmsmall, the class will use conference format for bibstrip and reference citation formatting. In the samples directory there is a file sample-acmsmall-conf.tex with the example of this usage.

In most cases, conference proceedings are edited. You can use the command \editor{<editor>} to set the editor of the volume. This command can be repeated, for example,

```
\editor{Jennifer B. Sartor}  
\editor{Theo D'Hondt}  
\editor{Wolfgang De Meuter}
```

\title	The command \title, as in the <code>amsart</code> class, has two arguments: one optional, and one mandatory:
	<code>\title[&lt;ShortTitle&gt;]{&lt;FullTitle&gt;}</code>
	The mandatory argument is the full title of the article. The optional argument, if present, defines the shorter version of the title for running heads. If the optional argument is absent, the full title is used instead.
	It is expected that this command is inserted by the author of the manuscript.
\subtitle	Besides title, ACM classes allow a subtitle, set with the <code>\subtitle{&lt;subtitle&gt;}</code> macro.
	The commands for specifying authors are highly structured. The reason is they serve double duty: the authors' information is typeset in the manuscript <i>and</i> is used by the metadata extraction tools for indexing and cataloguing. Therefore it is very important to follow the guidelines exactly.
\author	The basic commands are <code>\author</code> , <code>\orcid</code> (for the researchers registered with ORCID, <a href="http://www.orcid.org/">http://www.orcid.org/</a> ), <code>\affiliation</code> and <code>\email</code> . In the simplest case, you enter them in this order:
\orcid	
\affiliation	
\email	
	<code>\author{...}</code> <code>\orcid{...}</code> <code>\affiliation{...}</code> <code>\email{...}</code>

Do *not* use the L<sup>A</sup>T<sub>E</sub>X `\and` macro or commas, or `\backslash` between the authors! Each author deserves his or her own `\author` command. An attempt to list several authors or their e-mails in one command leads to a warning or an error. This is not a bug, but the expected behavior.

Note that some formats do not typeset e-mails or ORCID identifiers. Do not worry: the metadata tools will get them.

Sometimes an author has several affiliations. In this case, the `\affiliation` command should be repeated:

```
\author{...}
\orcid{...}
\affiliation{...}
\affiliation{...}
\email{...}
```

Similarly you can repeat the `\email` command.

You may have several authors with the same affiliation, different affiliations, or overlapping affiliations (author  $A_1$  is affiliated with institutions  $I_1$  and  $I_2$ , while author  $A_2$  is affiliated with  $I_2$  only, author  $A_3$  is affiliated with  $I_1$  and  $I_3$ , etc.). The recommended solution is to put the `\affiliation` commands after each author, possibly repeating them:

```
\author{...}
\orcid{...}
```

```
\affiliation{...}
\affiliation{...}
\email{...}
\author{...}
\orcid{...}
\affiliation{...}
\email{...}
\author{...}
\orcid{...}
\affiliation{...}
\affiliation{...}
\email{...}
```

In some cases, when several authors share the same affiliation, you can try to save space using the format

```
\author{...}
\email{...}
\author{...}
\email{...}
\affiliation{...}
```

However, this format is not generally recommended.

`\additionalaffiliation` In some cases, too many affiliations can take too much space. The command `\additionalaffiliation{<affiliation>}` creates a footnote after an author's name with the words "Also with {<affiliation>}". You should use this command only as a last resort. An example of usage is:

```
\author{G. Tobin}
\author{Ben Trovato}
\additionalaffiliation{%
    \institution{The Th{\o}rv{\aa}ld Group}
    \streetaddress{1 Th{\o}rv{\aa}ld Circle}
    \city{Hekla}
    \country{Iceland}}
\affiliation{%
    \institution{Institute for Clarity in Documentation}
    \streetaddress{P.O. Box 1212}
    \city{Dublin}
    \state{Ohio}
    \postcode{43017-6221}}
```

Here Trovato and Tobin share their affiliation with the Institute for Clarity in Documentation, but only Ben Trovato is affiliated with The Th{\o}rv{\aa}ld Group.

The `\affiliation` and `\additionalaffiliation` commands are further structured to interact with the metadata extraction tools. Inside these commands you should use the `\position`, `\institution`, `\department`, `\city`, `\streetaddress`, `\state`, `\postcode` and `\country`.

and \country macros to indicate the corresponding parts of the affiliation. Note that in some cases (for example, journals) these parts are not printed in the resulting copy, but they *are* necessary since they are used by the XML metadata extraction programs. Do *not* put commas or \\ between the elements of \affiliation. They will be provided automatically.

An example of the author block:

```
\author{A. U. Thor}
\orcid{1234-4564-1234-4565}
\affiliation{%
    \institution{University of New South Wales}
    \department{School of Biomedical Engineering}
    \streetaddress{Samuels Building (F25), Kensington Campus}
    \city{Sidney}
    \state{NSW}
    \postcode{2052}
    \country{Australia}}
\email{author@nsw.au.edu}
\author{A. N. Other}
\affiliation{%
    \institution{University of New South Wales}
    \city{Sidney}
    \state{NSW}
    \country{Australia}}
\author{C. O. Respondent}
\orcid{1234-4565-4564-1234}
\affiliation{%
    \institution{University of Pennsylvania}
    \city{Philadelphia}
    \state{PA}
    \country{USA}}
\affiliation{%
    \institution{University of New South Wales}
    \city{Sidney}
    \state{NSW}
    \country{Australia}}
```

Note that the old ACM conference formats did not allow more than six authors and required some effort from authors to achieve alignment. The new format is much better in this.

Sometimes an author works in several departments within the same institution. There could be two situations: the departments are independent, or one department is within another. In the first case, just repeat the command \department several times. To handle the second case the command has an optional numerical parameter. The departments with higher numbers are higher in the organizational chart. Compare

```
\affiliation{%
    \department[0]{Department of Lunar Studies} % 0 is the default
    \department[1]{John Doe Institute} % higher than 0
```

```
\institution{University of San Serriffe}
\country{San Serriffe}}
```

and

```
\affiliation{%
  \department{Department of Lunar Studies} % Not in the John Doe Institute!
  \department{John Doe Institute}
  \institution{University of San Serriffe}
  \country{San Serriffe}}
```

The command `\affiliation` formats its output according to American conventions. This might be wrong for some cases. Consider, for example, a German address. In Germany, the postcode is put before the city and is not separated by a comma. We can handle this order using

```
\affiliation{%
  \institution{Fluginstitut}
  \streetaddress{Sonnenallee 17}
  \postcode{123456}
  \city{Helm}
  \country{Germany}}
```

However, the comma after the postcode is unfortunate: the address will be typeset (in some formats) as

```
Fluginstitut
Sonenallee 17
123456, Helm, Germany
```

To overcome this problem, the command `\affiliation` has an optional parameter `obeypunctuation`, which can be `false` (the default) or `true`. If this parameter is `true`, `\affiliation` obeys the author's command. Thus

```
\affiliation[obeypunctuation=true]{%
  \institution{Fluginstitut} \\
  \streetaddress{Sonnenallee 17} \\
  \postcode{123456}
  \city{Helm},
  \country{Germany}}
```

will be typeset as

```
Fluginstitut
Sonenallee 17
123456 Helm, Germany
```

Note that you should *not* use this option for journals.  
 It is expected that these commands are inserted by the author of the manuscript.  
`\thanks` Like `amsart` (and unlike standard L<sup>A</sup>T<sub>E</sub>X), we allow `\thanks` only *outside* of the commands `\title` and `\author`. This command is obsolete and should *not* be used in most cases. Do not list your acknowledgments or grant sponsors here. Put this information in the `acks` environment (see Section 2.10).  
`\authorsaddresses` In some formats, addresses are printed as a footnote on the first page. By default L<sup>A</sup>T<sub>E</sub>X typesets them itself using the information you give it. However, you can override its choice using the command `\authorsaddresses{<contact addresses>}`, for example,  

```
\authorsaddresses{%
  Authors' addresses: G.~Zhou, Computer Science Department, College of
  William and Mary, 104 Jameson Rd, Williamsburg, PA 23185, US;
  V.~B'eranger, Inria Paris-Rocquencourt, Rocquencourt, France;
  A.~Patel, Rajiv Gandhi University, Rono-Hills, Doimukh, Arunachal
  Pradesh, India; H.~Chan, Tsinghua University, 30 Shuangqing Rd,
  Haidian Qu, Beijing Shi, China; T.~Yan, Eaton Innovation Center,
  Prague, Czech Republic; T.~He, C.~Huang, J.~A.~Stankovic University
  of Virginia, School of Engineering Charlottesville, VA 22903, USA;
  T. F. Abdelzaher, (Current address) NASA Ames Research Center,
  Moffett Field, California 94035.}
```

You can *suppress* printing authors' addresses by setting them to an empty string: `\authorsaddresses{}`.

While the command `\thanks` generates a note without a footnote mark, sometimes the authors might need notes more tightly connected to the title, subtitle or author. The commands `\titlenote`, `\subtitlenote` and `\authornote` that follow the corresponding commands (`\title`, `\subtitle` and `\author`) generate such notes. For example,

```
\title{This is a title}
\titlenote{This is a titlenote}
\author{A. U. Thor}
\authornote{This is an authornote}
```

Please never use a `\footnote` inside an `\author` or `\title` command since this confuses the metadata extraction software. (Actually these commands now produce errors.)

`\authornotemark` Sometimes one may need to have the same footnote connected to several authors. The command `\authornotemark[<number>]` adds just the footnote mark, for example,

```
\author{A. U. Thor}
\authornote{Both authors contributed equally to the paper}
...
\author{A. N. Other}
\authornotemark[1]
```

The correct numbering of these marks is the responsibility of the user.

`\acmVolume` The macros `\acmVolume`, `\acmNumber`, `\acmArticle`, `\acmYear` and `\acmMonth` are  
`\acmNumber`  
`\acmArticle`  
`\acmYear`  
`\acmMonth`

inserted by the editor and set the journal volume, issue, article number, year and month correspondingly. The arguments of all these commands, including `\acmMonth`, is numerical. For example,

```
\acmVolume{9}  
\acmNumber{4}  
\acmArticle{39}  
\acmYear{2010}  
\acmMonth{3}
```

Note that `\acmArticle` is used not only for journals but also for some conference proceedings.

`\acmArticleSeq`

The articles in the same issue of a journal have a *sequence number*. It is used to vertically position the black blob on the first page of some formats. By default it is the same as the article number, but the command `\acmArticleSeq{<n>}` can be used to change it:

```
\acmArticle{39} % The sequence number will be 39 by default  
\acmArticleSeq{5} % We redefine it to 5
```

Setting this number to zero suppresses the blob.

`\acmSubmissionID`

If your paper got a Submission ID from the Conference Management System, put it here:

```
\acmSubmissionID{123-A56-BU3}
```

`\acmPrice`

The macro `\acmPrice{<price>}` sets the price for the article, for example,

```
\acmPrice{25.00}
```

Note that you do not need to put the dollar sign here, just the amount. By default the price is \$15.00, unless the copyright is set to usgov, rightsretained, iw3c2w3, or iw3c2w3g, when it is suppressed. Note that to override the defaults you need to set the price *after* the `\setcopyright` command. Also, the command `\acmPrice{}` suppresses the printing of the price.

`\acmISBN`

Book-like volumes have ISBN numbers attached to them. The macro `\acmISBN{<ISBN>}` sets it. Normally it is set by the typesetter, for example,

```
\acmISBN{978-1-4503-3916-2}
```

Setting it to the empty string, as `\acmISBN{}`, suppresses printing the ISBN.

`\acmDOI`

The macro `\acmDOI{<DOI>}` sets the DOI of the article, for example,

```
\acmDOI{10.1145/9999997.9999999}
```

It is normally set by the typesetter. Setting it to the empty string, as `\acmDOI{}`, suppresses the DOI.

`\acmBadgeR` Some conference articles get special distinctions, for example, the artifact evaluation for PPoPP 2016 (see <http://ctuning.org/ae/ppopp2016.html>). These articles display special badges supplied by the conference organizers. This class provides commands to add these badges: `\acmBadgeR[⟨url⟩]{⟨graphics⟩}` and `\acmBadgeL[⟨url⟩]{⟨graphics⟩}`. The first command puts the badge to the right of the title, and the second one—to the left. The exception is the `sigchi`—a mode for SIGCHI extended abstracts, which puts the badges on the left margin. The arguments have the following meaning: [⟨url⟩], if provided, sets the link to the badge authority in the screen version, while {⟨graphics⟩} sets the graphics file with the badge image. The file must be a cropped square, which is scaled to a standard size in the output. For example, if the badge image is `ae-logo.pdf`, the command is

```
\acmBadgeR[http://ctuning.org/ae/ppopp2016.html]{ae-logo}
```

`\startPage` The macro `\startPage{⟨page⟩}` sets the first page of the article in a journal or book. It is used by the typesetter.

`\terms` The command `\keywords{⟨keyword, keyword,...⟩}` sets keywords for the article. `\keywords` They must be separated by commas, for example,

```
\keywords{wireless sensor networks, media access control,  
multi-channel, radio interference, time synchronization}
```

`CCSXML` ACM publications are classified according to the ACM Computing Classification Scheme (CCS). CCS codes are used both in the typeset version of the publications *and* in the metadata in various databases. Therefore you need to provide both TeX commands and XML metadata with the paper.

The tool at <http://dl.acm.org/ccs.cfm> can be used to generate CCS codes. After you select the topics, click on “Generate CCS codes” to get results like the following:

```
\begin{CCSXML}  
<ccs2012>  
  <concept>  
    <concept_id>10010520.10010553.10010562</concept_id>  
    <concept_desc>Computer systems organization~Embedded systems</concept_desc>  
    <concept_significance>500</concept_significance>  
  </concept>  
  <concept>  
    <concept_id>10010520.10010575.10010755</concept_id>  
    <concept_desc>Computer systems organization~Redundancy</concept_desc>  
    <concept_significance>300</concept_significance>  
  </concept>  
  <concept>  
    <concept_id>10010520.10010553.10010554</concept_id>  
    <concept_desc>Computer systems organization~Robotics</concept_desc>  
    <concept_significance>100</concept_significance>
```

```

</concept>
<concept>
<concept_id>10003033.10003083.10003095</concept_id>
<concept_desc>Networks~Network reliability</concept_desc>
<concept_significance>100</concept_significance>
</concept>
</ccs2012>
\end{CCSXML}

\ccsdesc[500]{Computer systems organization~Embedded systems}
\ccsdesc[300]{Computer systems organization~Redundancy}
\ccsdesc{Computer systems organization~Robotics}
\ccsdesc[100]{Networks~Network reliability}

```

You just need to copy this code and paste it in your paper anywhere before \maketitle.

\setcopyright

There are several possibilities for the copyright of the papers published by the ACM: the authors may transfer the rights to the ACM, license them to the ACM, some or all authors might be employees of the US or Canadian governments, etc. Accordingly the command \setcopyright{...} is introduced. Its argument is the copyright status of the paper, for example, \setcopyright{acmcopyright}. The possible values for this command are listed in Table 3.

The ACM submission software should generate the right command for you to paste into your file.

\copyrightyear

Each copyright statement must have the year of copyright. By default it is the same as \acmYear, but you can override this using the macro \copyrightyear, e.g.,

```

\acmYear{2016}
\copyrightyear{2015}

```

There is a special case for a personal copy that the authors may be allowed to generate for their use or a posting on a personal site (check the instructions for the specific journal or conference for the details). The document option authorversion=true produces a special form of the copyright statement for this case. Note that you still need the \setcopyright command and (optionally) \copyrightyear command to tell  $\text{\TeX}$  about the copyright owner and year. Also, you should be aware that due to the different sizes of the permission blocks for the printed version and authors' version, the page breaks might be different between them.

abstract

The environment abstract must precede the \maketitle command. Again, this is different from the standard  $\text{\TeX}$ .

teaserfigure

A special kind of figure is used for many two-column conference proceedings. This figure is placed just after the authors but before the main text. The environment teaserfigure is used for these figures. This environment must be used before \maketitle, for example,

```

\begin{teaserfigure}
\includegraphics[width=\textwidth]{sampleteaser}

```

Table 3: Parameters for the \setcopyright command

Parameter	Meaning
none	The copyright and permission information is not typeset. (This is the option for some ACM conferences.)
acmcopyright	The authors transfer the copyright to the ACM (the “traditional” choice).
acmlicensed	The authors retain the copyright but license the publication rights to ACM.
rightsretained	The authors retain the copyright and publication rights to themselves or somebody else.
usgov	All the authors are employees of the US government.
usgovmixed	Some authors are employees of the US government.
cagov	All the authors are employees of the Canadian government.
cagovmixed	Some authors are employees of the Canadian government.
licensedusgovmixed	Some authors are employees of the US government, and the publication rights are licensed to ACM.
licensedcagov	All the authors are employees of the Canadian government, and the publication rights are licensed to ACM.
licensedcagovmixed	Some authors are employees of the Canadian government, and the publication rights are licensed to ACM.
othergov	Authors are employees of a government other than the US or Canada.
licensedothergov	Authors are employees of a government other than the US or Canada, and the publication rights are licensed to ACM.
iw3c2w3	Special statement for conferences organized by IW3C2.
iw3c2w3g	Special statement for conferences organized by IW3C2, when some authors are approved Google employees.

Table 4: Settings for the `\settopmatter` command

Parameter	Values	Meaning
<code>printccs</code>	true/false	Whether to print CCS categories
<code>printacmref</code>	true/false	Whether to print the ACM bibliographic entry
<code>printfolios</code>	true/false	Whether to print page numbers (folios)
<code>authorsperrow</code>	numeric	Number of authors per row for the title page in conference proceedings formats

```
\caption{This is a teaser}
\label{fig:teaser}
\end{teaserfigure}
```

`\settopmatter` Some information in the top matter is printed for certain journals or proceedings and suppressed for others. You can override these defaults using the command `\settopmatter{<settings>}`. The settings and their meanings are listed in Table 4. For example,

```
\settopmatter{printacmref=false, printccs=true, printfolios=true}
```

The parameter `authorsperrow` requires some explanation. In conference proceedings authors' information is typeset in boxes, several boxes per row (see `sample-sigconf.pdf`, `sample-sigplan.pdf`, etc.). The number of boxes per row is determined automatically. If you want to override this, you can do it using this parameter, for example,

```
\settopmatter{authorsperrow=4}
```

However, in most cases you should *not* do this and should use the default settings. Setting `authorsperrow` to 0 will revert it to the default settings.

`\received` The command `\received[<stage>]{<date>}` sets the history of the publication. The `[<stage>]` argument is optional; the default is Received for the first date and revised for the subsequent ones. For example,

```
\received{February 2007}
\received[revised]{March 2009}
\received[accepted]{June 2009}
```

`\maketitle` The macro `\maketitle` must be the last command in the top-matter group. That is it must follow the commands defined in this section.  
`\shortauthors` After the command `\maketitle`, the macro `\shortauthors` stores the names of the authors for the running head. You can redefine it if the list of author's name is too long, e.g.,

```
\maketitle
\renewcommand{\shortauthors}{Zhou et al.}
```

## 2.4 Algorithms

There are now several good packages for typesetting algorithms [3, 4, 5], and the authors are free to choose their favorite one.

## 2.5 Figures and tables

The new ACM styles use the standard L<sup>A</sup>T<sub>E</sub>X interface for figures and tables. There are some important items to be aware of, however.

1. The captions for figures must be entered *after* the figure bodies and for tables *before* the table bodies.
2. The ACM uses the standard types for figures and tables and adds several new ones. In total there are the following types:

**figure, table:** a standard figure or table taking a full text width in one-column formats and one column width in two-column formats.

**figure\*, table\*** in two-column formats, a special figure or table taking a full text width.

**teaserfigure:** a special figure before \maketitle.

**sidebar, marginfigure, margintable:** in the sigchi-a format, special sidebars, tables and figures in the margin.

3. Accordingly, when scaling images, one should use the following sizes:
  - (a) For **teaserfigure**, **figure** in one-column mode or **figure\*** in two-column mode, use **\textwidth**. In one-column mode, you can also use **\columnwidth**, which coincides with **\textwidth** in this case.
  - (b) For **figure** in two-column mode, use **\columnwidth**.
  - (c) For **marginfigure**, use **\marginparwidth**.
  - (d) For **figure\*** in SIGCHI extended abstracts, use **\fulltextwidth**.

It is strongly recommended to use the package **booktabs** [6] and follow its main principles of typography with respect to tables:

1. Never, ever use vertical rules.
2. Never use double rules.

It is also a good idea not to overuse horizontal rules.

For table *footnotes* you have several options described in the TeX FAQ [1]. The simplest one is to use a **\minipage** environment:

```
\begin{table}
\caption{Simulation Configuration}
\label{tab:conf}
\begin{minipage}{\columnwidth}
```

```

\begin{center}
\begin{tabular}{ll}
\toprule
TERRAIN\footnote{This is a table footnote. This is a  
table footnote. This is a table footnote.} &  
(200\,,m$\times$200\,,m) Square\\
Node Number & 289\\
Node Placement & Uniform\\
Application & Many-to-Many/Gossip CBR Streams\\
Payload Size & 32 bytes\\
Routing Layer & GF\\
MAC Layer & CSMA/MMSN\\
Radio Layer & RADIO-ACCNOISE\\
Radio Bandwidth & 250Kbps\\
Radio Range & 20m--45m\\
\bottomrule
\end{tabular}
\end{center}
\bigskip
\footnotesize\emph{Source:} This is a table  

sourcenote. This is a table sourcenote. This is a table  

sourcenote.

\emph{Note:} This is a table footnote.
\end{minipage}
\end{table}

```

**sidebar** SIGCHI extended abstracts use margin space extensively. This package provides three environments for this with optional captions:

**marginfigure**: textual information in the margin

**margintable**: a figure in the margin

**margintable**: a table in the margin

Tables and figures (including margin tables and margin figures) are by default centered. However, in some cases (for example, when you use several subimages per figure) you may need to override this. A good way to do so is to put the contents into a `\minipage` of the width `\columnwidth`.

## 2.6 Descriptions of images

**\Description** Some readers of ACM publications might be visually challenged. These readers might use a voice-over software to read aloud the papers. It is important to provide them a description of each image used in the paper.

The command `\Description[<short description>]{<long description>}` should be placed inside every `figure`, `teaserfigure` or `marginfigure` environment to provide

a description of the image(s) used in the figure. Unlike `\caption`, which is used alongside the image, `\Description` is intended to be used instead of the image, for example,

```
\begin{figure}
  \centering
  \includegraphics{voltage}
  \Description{A bell-like histogram centered at $0.5$~V with most
  measurements between $0.2$~V and $0.8$~V}
  \caption{Histogram of the measurements of voltage}
  \label{fig:voltage}
\end{figure}
```

At present the lack of descriptions generates a warning at compilation.

## 2.7 Theorems

The ACM classes define two theorem styles and several pre-defined theorem environments:

**acmplain:** this is the style used for `theorem`, `conjecture`, `proposition`, `lemma` and `corollary`, and

**acmdefinition:** this is the style used for `example` and `definition`.

These environments are defined by default. In the unusual circumstance that a user does not wish to have these environments defined, the option `acmthm=false` in the preamble will suppress them.

## 2.8 Online-only and offline-only material

`printonly` Some supplementary material in ACM publications is put online but not in the printed version. The text inside the environment `screenonly` will be typeset only when the option `screen` (see Section 2.2) is set to `true`. Conversely, the text inside the environment `printonly` is typeset only when this option is set to `false`. For example,

```
\section{Supplementary materials}

\begin{printonly}
  Supplementary materials are available in the online version of this paper.
\end{printonly}

\begin{screenonly}
  (The actual supplementary materials.)
\end{screenonly}
```

We use the `comment` package for typesetting this code, so `\begin{comment}` and `\end{comment}` should start on a line of their own with no leading or trailing spaces.

## 2.9 Note about anonymous mode

`anonsuppress` When the option `anonymous` is selected, TeX suppresses author information (including the number of authors) for a blind review. However, sometimes the information identifying the authors may be present in the body of the paper. For example,

```
\begin{anonsuppress}
  This is the continuation of the previous work by the author
  \cite{prev1, prev2}.
\end{anonsuppress}
```

As for the `printonly` and `screenonly` environments, `\begin{anonsuppress}` and `\end{anonsuppress}` should start on a line of their own with no leading or trailing spaces.

## 2.10 Acknowledgments

The traditional “Acknowledgments” section is conventionally used to thank persons and granting agencies for their help and support. However, there are several important considerations about this section.

First, in anonymous mode this section must be omitted: it gives too much information to reviewers. Second, data about grants is extracted and stored separately by the postprocessing software. ACM classes provide facilities for both these tasks.

The environment `acks` starts an unnumbered section “Acknowledgments” unless the anonymous mode is chosen. Put all thanks inside this environment.

As for the `printonly` and `screenonly` environments, `\begin{acks}` and `\end{acks}` should start on a line of their own with no leading or trailing spaces.

All financial support *must* be listed using the commands `\grantsponsor` and `\grantnum`. These commands tell the postprocessing software about the granting organization and grant. The format of these commands is the following:

```
\grantsponsor{\langle sponsorID \rangle}{\langle name \rangle}{\langle url \rangle}
\grantnum[\langle url \rangle]{\langle sponsorID \rangle}{\langle number \rangle}.
```

Here `\langle sponsorID \rangle` is the unique ID used to match grants to sponsors, `\langle name \rangle` is the name of the sponsor, `\langle url \rangle` is its URL, and `\langle number \rangle` is the grant number. The `\langle sponsorID \rangle` of the `\grantnum` command must correspond to the `\langle sponsorID \rangle` of a `\grantsponsor` command. Some awards have their own web pages, which you can include using the optional argument of the `\grantnum` command.

At present `\langle sponsorID \rangle` is chosen by the authors and can be an arbitrary key in the same way the label of a `\cite` is arbitrarily chosen. There might be a change to this policy if the ACM decides to create a global database of sponsoring organizations.

Example:

```
\begin{acks}
  The authors would like to thank Dr. Yuhua Li for providing the
  matlab code of the \textit{BEPS} method.
```

```

The authors would also like to thank the anonymous referees for
their valuable comments and helpful suggestions. This work is
supported by the \grantsponsor{GS501100001809}{National Natural
Science Foundation of
China}{https://doi.org/10.13039/501100001809} under Grant
No.:~\grantnum{GS501100001809}{61273304}
and~\grantnum[http://www.nnsf.cn/youngscientists]{GS501100001809}{Young
Scientists' Support Program}.
\end{acks}

```

## 2.11 Bibliography

The ACM uses the `natbib` package for formatting references and the Bib<sub>T</sub><sup>E</sup>X style file `ACM-Reference-Format.bst` for Bib<sub>T</sub><sup>E</sup>X processing. You can disable loading of `natbib` using the option `natbib=false` in `\documentclass`. However, it is not recommended, as well as the use of Bib<sub>T</sub><sup>E</sup>X styles other than `ACM-Reference-Format.bst`, and may delay the processing of the manuscript.

`\citetstyle` If you use `natbib`, you can select one of two predefined citation styles using the command `\citetstyle`: the author-year format `acmauthoryear` or the numeric format `acmnumeric`. For example,

```
\citetstyle{acmauthoryear}
```

Note that numeric citations are the default mode for most formats.

`\setcitetstyle` You can further customize `natbib` using the `\setcitetstyle` command, for example,

```
\setcitetstyle{numbers,sort&compress}
```

One of the more common versions is

```
\setcitetstyle{nosort}
```

It is useful if you do not like the way `natbib` sorts citation lists.

If you use `natbib`, then commands like `\citet` and `\citeauthor` are automatically supported. The command `\shortcite` is the same as `\cite` in numerical mode and cites the year in author-date mode.

Note that before version 1.48 the command `\citeyear` put the year in parentheses. In version 1.48 and later it produces just the year; the command `\citeyearpar` can be used to emulate its old behavior.

There are several customized Bib<sub>T</sub><sup>E</sup>X entry types and fields in the ACM style file `ACM-Reference-Format.bst` that you may want to be aware of.

The style supports the fields `doi` and `url`, for example,

```

doi =      "10.1145/1188913.1188915",
url =      "http://ccrma.stanford.edu/~jos/bayes/bayes.pdf",

```

The style supports the arXiv-recommended fields `eprint` and (optionally) `primaryclass`, for example,

```
eprint = "960935712",
primaryclass = "cs",
```

See the examples at <http://arxiv.org/hypertex/bibstyles/>.

There are several special entry types. Types `online` and `game` are used for Web pages and games, for example,

```
@online{Thornburg01,
author = "Harry Thornburg",
year = "2001",
title = "Introduction to Bayesian Statistics",
url = "http://ccrma.stanford.edu/~jos/bayes/bayes.html",
month = mar,
lastaccessed = "March 2, 2005",
}
```

Entry types `artifactsoftware`, `artifactdataset` (with synonyms `software` and `dataset`) can be used to cite software artifacts and datasets, for example,

```
@ArtifactSoftware{R,
title = {R: A Language and Environment for Statistical Computing},
author = {{R Core Team}},
organization = {R Foundation for Statistical Computing},
address = {Vienna, Austria},
year = {2019},
url = {https://www.R-project.org/},
}
@ArtifactDataset{UMassCitations,
author = {Sam Anzaroot and Andrew McCallum},
title = {{UMass} Citation Field Extraction Dataset},
year = 2013,
url =
{http://www.iesl.cs.umass.edu/data/data-umasscitationfield},
lastaccessed = {May 27, 2019}
}
```

For these entry types you can use the `lastaccessed` field to add the access date for the URL.

There are two ways to enter video or audio sources in the bibliography corresponding to two different possibilities. For standalone sources available online, you can use an `online` entry and set its `howpublished` field. For example,

```
@online{Obama08,
author = "Barack Obama",
year = "2008",
```

```

title = "A more perfect union",
howpublished = "Video",
day = "5",
url = "http://video.google.com/videoplay?docid=6528042696351994555",
month = mar,
lastaccessed = "March 21, 2008",
}

```

For sources available as attachments to conference proceedings and similar documents, you can use the usual `inproceedings` entry type and set its `howpublished` field:

```

@Inproceedings{Novak03,
author = "Dave Novak",
title = "Solder man",
booktitle = "ACM SIGGRAPH 2003 Video Review on Animation theater Program",
year = "2003",
publisher = "ACM Press",
address = "New York, NY",
pages = "4",
month = "March 21, 2008",
doi = "10.9999/woot07-S422",
howpublished = "Video",
}

```

Sometimes you need to cite a complete issue of a journal. The `periodical` entry type is intended for this:

```

@periodical{JCohen96,
key = "Cohen",
editor = "Jacques Cohen",
title = "Special issue: Digital Libraries",
journal = "Communications of the {ACM}",
volume = "39",
number = "11",
month = nov,
year = "1996",
}

```

If you do not know the year of publication, the style will add “[n. d.]” (for “no date”) to the entry.

If you do not know the author (this is often the case for online entries), use the `key` field to add a key for sorting and citations, for example,

```

@online{TUGInstmem,
key = {TUG},
year = 2017,
title = "Institutional members of the {\TeX} Users Group",
url = "http://wwtug.org/instmem.html",
}

```

```

lastaccessed = "May 27, 2017",
}

```

A note about sorting. The current ACM bibliography styles always sort the entries according to authors names and publication year. There is a controversy about sorting names with “von” or “van” part: should Ludwig van Beethoven be sorted under “V” or under “B”? The American practice is to use “van” in sorting, i.e. to file van Beethoven under “V”. However, some authorities recommend to sort Dutch persons according to their last names (see e.g. [https://www.ifla.org/files/assets/cataloguing/pubs/names-of-persons\\_1996.pdf](https://www.ifla.org/files/assets/cataloguing/pubs/names-of-persons_1996.pdf)). While I do not want to take a part in this dispute, I would like to point to the old “noopsort” trick by Oren Patashnik. Add to the .bib file the line

```
@PREAMBLE{"\providecommand{\noopsort}[1]{}"}
```

and then encode the author as

```
author = {Ludwig {\noopsort{Beethoven}}van Beethoven},
```

This will make the author to be sorted as “Beethoven” rather than “van Beethoven”.

## 2.12 Colors

While printed ACM publications are usually black and white, screen mode allows the use of colors. The ACM classes pre-define several colors according to [7]: ACMBlue, ACMYellow, ACMOrange, ACMRed, ACMLightBlue, ACMGreen, ACMPurple and ACMDarkBlue. You can use them in color assignments.

The ACM provides the following recommendation on color use.

The most accessible approach would be to ensure that your article is still readable when printed in greyscale. The most notable reasons for this are:

1. The most common type of inherited Color Vision Deficiency (CVD) is red-green (in which similar-brightness colors that differ only in their amounts of red or green are often confused), and it affects up to 8% of males and 0.5% of females of Northern European descent.
2. The most common type of acquired Color Vision Deficiency (CVD) is blue-yellow (including mild cases for many older adults).
3. Most printing is in black and white.
4. Situational impairments (e.g., bright sunlight shining on a mobile screen) tend to reduce the entire color gamut, reducing color discriminability.

**Note:** It is *not* safe to encode information using only variations in color (i.e., only differences in hue and/or saturation) as there is bound to be someone affected!

To ensure that you are using the most accessible colors, the ACM recommends that you choose sets of colors to help ensure suitable variations in when printed in greyscale by using either of the following tools:

1. ColourBrewer: <http://colorbrewer2.org/>
2. ACE: The Accessible Colour Evaluator: <http://daprlab.com/ace/> for designing WCAG 2.0 compliant palettes.

## 2.13 Other notable packages and typographic remarks

Several other packages are recommended for specialized tasks.

The package `subcaption` [8] is recommended for complex figures with several subplots or subfigures that require separate subcaptioning. The packages `nomenc1` [9] and `glossaries` [10] can be used for the automatic creation of the lists of symbols and concepts used.

By default `acmart` prevents all widows and orphans (i.e., lonely lines at the beginning or end of the page) and hyphenation at the end of the page. This is done by the rather strict settings

```
\widowpenalty=10000
\clubpenalty=10000
\brokepenalty=10000
```

However, this may lead to frustrating results when the authors must obey a page limit. Setting these penalties to smaller values may help if you absolutely need to.

Another problem might be the too strict line breaking rules. Again, a strategically placed `\sloppy` command or putting the problematic paragraph inside `sloppypar` environment might help—but beware, the results might be, well, sloppy.

Note that the uppercasing in section titles is done using the `textcase` package [11], so the command `\NoCaseChange` inside the title may help to prevent extraneous uppercasing.

## 2.14 Disabled or forbidden commands

The goal of `acmart` package is to provide a uniform look and feel for ACM publications. Accordingly, a number of commands is forbidden or disabled in `acmart`.

You may *not* put several authors or several e-mails into a `\author` or `\email` command. This may lead to errors or warning.

You cannot change `\baselinestretch` in your document: this produces an error.

You should not abuse the command `\vspace`: this command may disturb the typesetting of ACM papers.

## 2.15 A note for wizards: `acmart-preload-hook.tex`

Sometimes you need to change the behavior of `acmart`. The usual way to do this is to redefine commands in the preamble. However, these definitions are executed *after* `acmart` is loaded and certain decisions are made. This presents a number of problems.

For example, one may want to use the `titletoc` package with `acmart`. This package should be loaded before `hyperref`. However, since `acmart` loads `hyperref` itself,

the line `\usepackage{titletoc}` in the preamble will lead to grief (see <http://tex.stackexchange.com/questions/357265/using-titletoc-with-acm-acmart-style>).

Another example is passing options to a package. Suppose you want to use the `dvipsnames` option of the `xcolor` package. Normally you cannot do this because `acmart` loads this package itself without options.

The file `acmart-preload-hook.tex` can be used to solve these problems. If this file exists, it will be processed before any other package. You can use this file to load packages or pass options to them. For example, if you put in this file

```
\let\LoadClassOrig\LoadClass
\renewcommand\LoadClass[2][]{\LoadClassOrig[#1]{#2}%
\usepackage{titletoc}}
```

then `titletoc` will be loaded before `hyperref`. If you put in this file

```
\PassOptionsToPackage{dvipsnames}{xcolor}
```

you will pass `dvipsnames` to `xcolor`.

**Important note.** This hook makes it too easy to create a manuscript that is not acceptable by the ACM. It is even easier to create a file that cannot be compiled. So please do not use it *unless you know what you are doing*. And if you use it, *do not ask for support*. If you decide to use this hook, you are on your own.

## 3 Implementation

### 3.1 Identification

We start with a declaration of who we are. Most .dtx files put driver code in a separate .drv driver file. We roll this code into the main file and use the pseudo-guard <gobble> for it.

```
1 <class>\NeedsTeXFormat{LaTeX2e}
2 <*gobble>
3 \ProvidesFile{acmart.dtx}
4 </gobble>
5 <class>\ProvidesClass{acmart}
6 [2019/05/27 v1.61 Typesetting articles for the Association for
7 Computing Machinery]
```

And the driver code:

```
8 <*gobble>
9 \documentclass{ltxdoc}
10 \usepackage{array,booktabs,amsmath,graphicx,fancyvrb,tabularx, longtable}
11 \usepackage[tt=false, type1=true]{libertine}
12 \usepackage[varqu]{zi4}
13 \usepackage[libertine]{newtxmath}
14 \usepackage[tableposition=top]{caption}
15 \usepackage{hypdoc}
16 \PageIndex
17 \CodelineIndex
18 \RecordChanges
19 \EnableCrossrefs
20 \begin{document}
21   \DocInput{acmart.dtx}
22 \end{document}
23 </gobble>
24 <*class>
25 \def\@classname{acmart}
```

### 3.2 Preload hook

We preload acmart-preload-hook:

```
26 \InputIfFileExists{acmart-preload-hook.tex}{%
27   \ClassWarning{\@classname}{%
28     I am loading acmart-preload-hook.tex. You are fully responsible
29     for any problems from now on.}}{}
```

### 3.3 Options

We need xkeyval since some of our options may have values:

```
30 \RequirePackage{xkeyval}
We use xstring to check whether user input is valid
31 \RequirePackage{xstring}
```

`format` The possible formats

```
32 \define@choicekey*+{acmart.cls}{format}[\ACM@format\ACM@format@nr]{%
33   manuscript, acmsmall, acmlarge, acmtog, sigconf, siggraph,
34   sigplan, sigchi, sigchi-a}[manuscript]{()}%
35   \ClassError{\@classname}{The option format must be manuscript,
36   acmsmall, acmlarge, acmtog, sigconf, siggraph,
37   sigplan, sigchi or sigchi-a}}%
38 \def\@DeclareACMFormat#1{\DeclareOptionX{#1}{\setkeys{acmart.cls}{format=#1}}}%
39 \@DeclareACMFormat{manuscript}
40 \@DeclareACMFormat{acmsmall}
41 \@DeclareACMFormat{acmlarge}
42 \@DeclareACMFormat{acmtog}
43 \@DeclareACMFormat{sigconf}
44 \@DeclareACMFormat{siggraph}
45 \@DeclareACMFormat{sigplan}
46 \@DeclareACMFormat{sigchi}
47 \@DeclareACMFormat{sigchi-a}
48 \ExecuteOptionsX{format}
```

`\if@ACM@screen` Whether we use screen mode

```
49 \define@boolkey+{acmart.cls}[@ACM@]{screen}[true]{%
50   \if@ACM@screen
51     \PackageInfo{\@classname}{Using screen mode}%
52   \else
53     \PackageInfo{\@classname}{Not using screen mode}%
54   \fi}{\PackageError{\@classname}{The option screen can be either true or
55   false}}%
56 \ExecuteOptionsX{screen=false}
```

`\if@ACM@urlbreakonhyphens`

```
57 \define@boolkey+{acmart.cls}[@ACM@]{urlbreakonhyphens}[true]{%
58   \if@ACM@urlbreakonhyphens
59     \PackageInfo{\@classname}{Using breaking urls on hyphens}%
60   \else
61     \PackageInfo{\@classname}{Not breaking urls on hyphens}%
62   \fi}{\PackageError{\@classname}{The option urlbreakonhyphens can be either true or
63   false}}%
64 \ExecuteOptionsX{urlbreakonhyphens=true}
```

`\if@ACM@acmthm` Whether we define theorem-like environments.

```
65 \define@boolkey+{acmart.cls}[@ACM@]{acmthm}[true]{%
66   \if@ACM@acmthm
67     \PackageInfo{\@classname}{Requiring acmthm}%
68   \else
69     \PackageInfo{\@classname}{Suppressing acmthm}%
70   \fi}{\PackageError{\@classname}{The option acmthm can be either true or
71   false}}%
72 \ExecuteOptionsX{acmthm=true}
```

```

\if@ACM@review Whether we use review mode
73 \define@boolkey+{acmart.cls}[@ACM@]{review}[true]{%
74   \if@ACM@review
75     \PackageInfo{@classname}{Using review mode}%
76     \AtBeginDocument{@ACM@printfoliotrue}%
77   \else
78     \PackageInfo{@classname}{Not using review mode}%
79   \fi}{\PackageError{@classname}{The option review can be either true or
80   false}}
81 \ExecuteOptionsX{review=false}

\if@ACM@authorversion Whether we use author's-version mode
82 \define@boolkey+{acmart.cls}[@ACM@]{authorversion}[true]{%
83   \if@ACM@authorversion
84     \PackageInfo{@classname}{Using authorversion mode}%
85   \else
86     \PackageInfo{@classname}{Not using authorversion mode}%
87   \fi}{\PackageError{@classname}{The option authorversion can be either true or
88   false}}
89 \ExecuteOptionsX{authorversion=false}

\if@ACM@nonacm Special option for non-ACM publications using the ACM typesetting options.
90 \define@boolkey+{acmart.cls}[@ACM@]{nonacm}[true]{%
91   \if@ACM@nonacm
92     \PackageInfo{@classname}{Using nonacm mode}%
93     \AtBeginDocument{@ACM@printacmreffalse}%
94     % in 'nonacm' mode we disable the "ACM Reference Format"
95     % printing by default, but this can be re-enabled by the
96     % user using \settopmatter{printacmref=true}
97   \else
98     \PackageInfo{@classname}{Not using nonacm mode}%
99   \fi}{\PackageError{@classname}{The option nonacm can be either true or
100   false}}
101 \ExecuteOptionsX{nonacm=false}

\if@ACM@balance Whether to balance the last page
102 \define@boolkey+{acmart.cls}[@ACM@]{balance}[true]{}{%
103   \PackageError{@classname}{The option balance can be either true or
104   false}}
105 \ExecuteOptionsX{balance}

\if@ACM@natbib@override This macro is no longer used.

\if@ACM@natbib Whether we use natbib mode
106 \define@boolkey+{acmart.cls}[@ACM@]{natbib}[true]{%
107   \if@ACM@natbib
108     \PackageInfo{@classname}{Explicitly selecting natbib mode}%
109   \else
110     \PackageInfo{@classname}{Explicitly deselecting natbib mode}%

```

```

111 \fi}{\PackageError{@classname}{The option natbib can be either true or
112   false}}
113 \ExecuteOptionsX{natbib=true}

\if@ACM@anonymous Whether we use anonymous mode
114 \define@boolkey+{acmart.cls}[@ACM@]{anonymous}[true]{%
115   \if@ACM@anonymous
116     \PackageInfo{@classname}{Using anonymous mode}%
117   \else
118     \PackageInfo{@classname}{Not using anonymous mode}%
119   \fi}{\PackageError{@classname}{The option anonymous can be either true or
120   false}}
121 \ExecuteOptionsX{anonymous=false}

\if@ACM@timestamp Whether we use timestamp mode
122 \define@boolkey+{acmart.cls}[@ACM@]{timestamp}[true]{%
123   \if@ACM@timestamp
124     \PackageInfo{@classname}{Using timestamp mode}%

127   \fi}{\PackageError{@classname}{The option timestamp can be either true or
128   false}}
129 \ExecuteOptionsX{timestamp=false}

\if@ACM@authordraft Whether we use author-draft mode
130 \define@boolkey+{acmart.cls}[@ACM@]{authordraft}[true]{%
131   \if@ACM@authordraft
132     \PackageInfo{@classname}{Using authordraft mode}%
133     \@ACM@timestamptrue
134     \@ACM@reviewtrue
135   \else
136     \PackageInfo{@classname}{Not using authordraft mode}%
137   \fi}{\PackageError{@classname}{The option authordraft can be either true or
138   false}}
139 \ExecuteOptionsX{authordraft=false}

\ACM@fontsize The font size to pass to the base class
140 \def\ACM@fontsize{}
141 \DeclareOptionX{9pt}{\edef\ACM@fontsize{\CurrentOption}}
142 \DeclareOptionX{10pt}{\edef\ACM@fontsize{\CurrentOption}}
143 \DeclareOptionX{11pt}{\edef\ACM@fontsize{\CurrentOption}}
144 \DeclareOptionX{12pt}{\edef\ACM@fontsize{\CurrentOption}}

145 \DeclareOptionX{draft}{\PassOptionsToClass{\CurrentOption}{amsart}}
146 \DeclareOptionX{*}{\PassOptionsToClass{\CurrentOption}{amsart}}
147 \ProcessOptionsX
148 \ClassInfo{@classname}{Using format \ACM@format, number \ACM@format@nr}

```

### 3.4 Setting switches

\if@ACM@manuscript	Whether we use manuscript mode
149 \newif\if@ACM@manuscript	
\if@ACM@journal	There are two kinds of publications: journals and books
150 \newif\if@ACM@journal	
\if@ACM@journal@bibstrip	Sometimes ACM wants a journal-like publication to have conference information in the bibstrip and vice versa, so we have an additional switch.
151 \newif\if@ACM@journal@bibstrip	
\if@ACM@sigchiamode	The formatting of SIGCHI extended abstracts is quite unusual. We have a special switch for them.
152 \newif\if@ACM@sigchiamode	

#### Setting up switches

```
153 \ifnum\ACM@format@nr=5\relax % siggraph
154   \ClassWarning{@classname}{The format siggraph is now obsolete.
155   I am switching to sigconf.}
156   \setkeys{acmart.cls}{format=sigconf}
157 \fi
158 \ifnum\ACM@format@nr=0\relax
159   \@ACM@manuscripttrue
160 \else
161   \@ACM@manuscriptfalse
162 \fi
163 \@ACM@sigchiamodefalse
164 \ifcase\ACM@format@nr
165 \relax % manuscript
166   \@ACM@journaltrue
167 \or % acmsmall
168   \@ACM@journaltrue
169 \or % acmlarge
170   \@ACM@journaltrue
171 \or % acmtog
172   \@ACM@journaltrue
173 \or % sigconf
174   \@ACM@journalfalse
175 \or % siggraph
176   \@ACM@journalfalse
177 \or % sigplan
178   \@ACM@journalfalse
179 \or % sigchi
180   \@ACM@journalfalse
181 \or % sigchi-a
182   \@ACM@journalfalse
183   \@ACM@sigchiamodetrue
184 \fi
```

```

185 \if@ACM@journal
186   \@ACM@journal@bibstriptrue
187 \else
188   \@ACM@journal@bibstripfalse
189 \fi

```

### 3.5 Loading the base class and package

At this point we either have \ACM@fontsize or use defaults

```

190 \ifx\ACM@fontsize\empty
191   \ifcase\ACM@format@nr
192     \relax % manuscript
193     \def\ACM@fontsize{9pt}%
194   \or % acmsmall
195     \def\ACM@fontsize{10pt}%
196   \or % acmlarge
197     \def\ACM@fontsize{10pt}%
198   \or % acmtog
199     \def\ACM@fontsize{9pt}%
200   \or % sigconf
201     \def\ACM@fontsize{9pt}%
202   \or % siggraph
203     \def\ACM@fontsize{9pt}%
204   \or % sigplan
205     \def\ACM@fontsize{10pt}%
206   \or % sigchi
207     \def\ACM@fontsize{10pt}%
208   \or % sigchi-a
209     \def\ACM@fontsize{10pt}%
210   \fi
211 \fi
212 \ClassInfo{@classname}{Using fontsize \ACM@fontsize}
213 \LoadClass[\ACM@fontsize, reqno]{amsart}
214 \RequirePackage{microtype}

```

We need etoolbox for delayed code

```
215 \RequirePackage{etoolbox}
```

Booktabs is now the default

```
216 \RequirePackage{booktabs}
```

We need totpages to calculate the number of pages and refcount to use that number

```

217 \RequirePackage{refcount}
218 \RequirePackage{totpages}

```

The \collect@body macro in amsmath is defined using \def. We load environ to access the \long version of this command

```
219 \RequirePackage{environ}
```

We use `setspace` for double spacing

```
220 \if@ACM@manuscript
221 \RequirePackage{setspace}
222 \onehalfspacing
223 \fi
```

We need `textcase` for better upcasing

```
224 \RequirePackage{textcase}
```

### 3.6 Citations

We patch `\setcitestyle` to allow, for example, `\setcitestyle{sort}` and `\setcitestyle{nosort}`. We patch `\citestyle` to warn about undefined citation styles.

```
225 \if@ACM@natbib
226   \RequirePackage{natbib}
227   \renewcommand{\bibsection}{%
228     \section*\{\refname\}%
229     \phantomsection\addcontentsline{toc}{section}{\refname}%
230   }
231   \renewcommand{\bibfont}{\bibliofont}
232   \renewcommand\setcitestyle[1]{%
233     \@for\@tempa:=#1\do

```

The default is numeric:

```

316 \if@ACM@natbib
317 \citemstyle{acmnumeric}
318 \fi

```

@startsection Before we call hyperref, we redefine \startsection commands to their L<sup>A</sup>T<sub>E</sub>X defaults since the amsart ones are too AMS-specific. We need to do this early since we want hyperref to have a chance to redefine them again:

```

319 \def\@startsection#1#2#3#4#5#6{%
320   \if@noskipsec \leavevmode \fi
321   \par
322   \tempskipa #4\relax
323   \afterindenttrue
324   \ifdim \tempskipa <\z@
325     \tempskipa -\tempskipa \afterindentfalse
326   \fi
327   \if@nobreak
328     \everypar{}%
329   \else
330     \addpenalty\secpenalty\addvspace\tempskipa
331   \fi
332   \ifstar
333     {\@ssect{#3}{#4}{#5}{#6}}%
334     {\@dblarg{@sect{#1}{#2}{#3}{#4}{#5}{#6}}}
335 \def\@sect#1#2#3#4#5#6[#7]{#8{%
336   \edef\@toclevel{\ifnum#2=\z@ \else\number#2\fi}%
337   \ifnum #2>\c@sectiondepth

534 \fi
```

### 3.7 Paper size and paragraphing

We use `geometry` for dimensions. Note that the present margins do not depend on the font size option—we might need to change this. See <https://github.com/borisveytsman/acmart/issues/5#issuecomment-272881329>.

```
535 \RequirePackage{geometry}

611 \or % sigchi-a
612 \fi

```

- \normalparindent The amsart package defines the \normalparindent length and initializes it to 12pt (the value of \parindent in amsart). It is later used to set the \listparindent length in the quotation environment and the \parindent length in the \@footnotetext command. We set \normalparindent to the value of \parindent as selected by acmart for consistent paragraph indents.

```
613 \setlength\normalparindent{\parindent}
```

Footnotes require some consideration. We have several layers of footnotes: front-matter footnotes, “regular” footnotes and the special insert for the bibstrip. In the old ACM classes, the bibstrip was a \@float. The problem with floats is that they tend to, well, float—and we want the guarantee they stay.

We use manyfoot for layered footnotes instead.

- \copyrightpermissionfootnoterule This is the footnote rule that separates the bibstrip from the rest of the paper. It is a full width rule.

```

614 \def\copyrightpermissionfootnoterule{\kern-3\p@
615   \hrule \width \columnwidth \kern 2.6\p@}

616 \RequirePackage{manyfoot}
617 \SelectFootnoteRule[2]{copyrightpermission}
618 \DeclareNewFootnote{authorsaddresses}
619 \SelectFootnoteRule[2]{copyrightpermission}
620 \DeclareNewFootnote{copyrightpermission}

```

- \footnoterule Tschichold’s rules:

```

621 \def\footnoterule{\kern-3\p@
622   \hrule \width 4pc \kern 2.6\p@}

```

- \endminipage We do not use footnote rules in minipages

```

623 \def\endminipage{%
624   \par
625   \unskip
626   \ifvoid\@mpfootins\else
627     \vskip\skip\@mpfootins

652 \fi
```

### 3.8 Fonts

Somehow PDFTeX and XeTeX require different incantations to make a PDF compliant with the current Acrobat bugs. Xpdf is much better.

The code below is by Ross Moore.

```
653 \RequirePackage{iftex}  
654 \ifPDFTeX  
655   \input{glyptounicode}  
656   \pdfglyptounicode{f_f}{FB00}  
657   \pdfglyptounicode{f_f_i}{FB03}  
658   \pdfglyptounicode{f_f_1}{FB04}  
659   \pdfglyptounicode{f_i}{FB01}  
660   \pdfglyptounicode{t_t}{0074 0074}  
661   \pdfglyptounicode{f_t}{0066 0074}  
662   \pdfglyptounicode{T_h}{0054 0068}  
663 \pdfgentounicode=1  
664 \fi  
665 \RequirePackage{cmap}
```

```
\if@ACM@newfonts Whether we load the new fonts
```

```
666 \newif\if@ACM@newfonts  
667 \if@ACM@newfontstrue  
668 \IfFileExists{libertine.sty}{}{\ClassWarning{@classname}{You do not  
669   have the libertine package installed. Please upgrade your}}
```

```

670     TeX}\@ACM@newfontsfalse}
671 \IfFileExists{zi4.sty}{}{\ClassWarning{@classname}{You do not
672     have the zi4 package installed. Please upgrade your
673     TeX}\@ACM@newfontsfalse}
674 \IfFileExists{newtxmath.sty}{}{\ClassWarning{@classname}{You do not
675     have the newtxmath package installed. Please upgrade your
676     TeX}\@ACM@newfontsfalse}

```

We use Libertine throughout.

```

677 \if@ACM@newfonts
678   \RequirePackage[T1]{fontenc}
679 \ifxetex
680   \RequirePackage[tt=false]{libertine}
681   \setmonofont{inconsolata}
682 \else
683   \RequirePackage[tt=false, type1=true]{libertine}
684 \fi
685 \RequirePackage[varqu]{zi4}
686 \RequirePackage[libertine]{newtxmath}
687 \fi

```

\liningnums Libertine defines \liningnums, which makes fontspec unhappy. While we do not use fontspec, some users do.

```

688 \let\liningnums\undefined
689 \AtEndPreamble{%
690   \DeclareTextFontCommand{\liningnums}{\libertineLF}}

```

The SIGCHI extended abstracts are sans serif:

```

691 \if@ACM@sigchiamode
692   \renewcommand{\familydefault}{\sfdefault}
693 \fi

```

### 3.9 Image descriptions

\if@Description@present A local switch: whether there is a description in the given figure

```

694 \newif\if@Description@present
695 \if@Description@presenttrue

```

\if@undescribed@images A global switch whether some images were *not* described

```

696 \newif\if@undescribed@images
697 \if@undescribed@imagesfalse

```

\Description The Description macro right now just sets switches

```

698 \newcommand\Description[2][]{\global\if@Description@presenttrue\ignorespaces}

```

The global warning

```

699 \AtEndDocument{\if@undescribed@images
700   \ClassWarningNoLine{@classname}{Some images may lack descriptions}\fi}

```

## Hooks for figures and tables

```
701 \AtBeginEnvironment{figure}{\@Description@presentfalse
702   \let\@vspace\@vspace@orig
703   \let\@vspacer\@vspacer@orig}
704 \AtBeginEnvironment{figure*}{\@Description@presentfalse
705   \let\@vspace\@vspace@orig
706   \let\@vspacer\@vspacer@orig}
707 \AtEndEnvironment{figure}{\if@Description@present\else
708   \global\@undescribed@imagestrue
709   \ClassWarning{\@classname}{A possible image without description}\fi}
710 \AtEndEnvironment{figure*}{\if@Description@present\else
711   \global\@undescribed@imagestrue
712   \ClassWarning{\@classname}{A possible image without description}\fi}
713 \AtBeginEnvironment{table}{\let\@vspace\@vspace@orig
714   \let\@vspacer\@vspacer@orig}
715 \AtBeginEnvironment{table*}{\let\@vspace\@vspace@orig
716   \let\@vspacer\@vspacer@orig}
```

## 3.10 Floats

We use the caption package

```
717 \RequirePackage{caption, float}

SIGCHI extended abstracts provide an interesting possibility to push into the margin.  

Here we use figure* and table* for this.

\fulltextwidth We define the width of the boxes as
770 \newdimen\fulltextwidth
771 \fulltextwidth=\dimexpr(\textwidth+\marginparwidth+\marginparsep)

\dblfloat We redefine the double-float command. First, we make the size bigger. Second, our  

default position is going to be tp (to give marginalia a chance)
772 \if@ACM@sighchiamode
773 \def\dblfloat{\bgroup\let\@vspace\@vspace@orig

```

```

774 \let@\vspacer@\vspacer@orig\columnwidth=\fulltextwidth
775 \let@\endfloatbox@\endwidefloatbox
776 \def@\fpsadddefault{\def@\fps{tp}}%
777 \@float}
778 \fi

\end@dblfloat And the end. Just adding a \bgroup.
779 \if@ACM@sigchiamode
780 \def\end@dblfloat{%
781   \end@float\egroup}
782 \fi

\@endwidefloatbox This is the end of a wide box—we basically move everything to the left
783 \def\@endwidefloatbox{%
784   \par\vskip\z@skip
785   \minipagetrue
786   \outer\nobreak

805 \or % sigchi
806 \or % sigchi-a
807 \fi

```

The AMS uses generous margins for lists. Note that `amsart` defines `\leftmargin` values for list levels at the beginning of the document, so we must redefine them in the same manner. Also, note that `amsart` redefines the `enumerate` and `itemize` environments with a `\makelabel` command that uses `\llap`, so the `\labelwidth` value is (effectively) irrelevant; nonetheless, we follow `amsart` and set `\labelwidth` to `\leftmargin` minus `\labelsep`.

```

### 3.15 Typesetting top matter

```

\mkttitle@bx Some of our formats use a two-column design. Some use a one-column design. In all
cases we use a wide title. Thus we typeset the top matter in a special box to be used in
the construction \@twocolumn[<box>].
1665 \newbox\mkttitle@bx

\maketitle The (in)famous \maketitle. Note that in sigchi-a mode, authors are not in the title
box.

```

Another note: there is a subtle difference between author notes, title notes and thanks. The latter two refer to the paper itself and therefore belong to the copyright/permission block. By the way, this was the default behavior of the old ACM classes.

```

\@ACM@addtoaddress This macro adds an item to the address using the following rules:

1. If we start a paragraph, add the item
2. Otherwise, add a comma and the item

3. However, the comma is deleted if it is at the end of a line. We use the magic `\cleaders` trick for this.

```

### 3.17 Sectioning

\ACM@NRadjust Ross Moore's macro.

Initially \ACM@sect@format@ just passes through its #1 argument unchanged. When a sectioning macro such as \section occurs, the \ACM@NRadjust redefines \ACM@sect@format@ to expand into the styling commands; e.g., \@secfont. Then \Sectionformat is temporarily redefined to produce \realSectionformat{\ACM@sect@format{#1}}{#2}, which ultimately becomes \Sectionformat{@secfont{#1}}{#2}. This is done to allow \Sectionformat to be variable, as may be needed in particular circumstances. Its current expansion is saved as \realSectionformat which is used with the modified 1st argument, then \Sectionformat is reverted to its former expansion.

To style the section-number, the line #1{} is used at the end of \ACM@NRadjust. This imposes style-changing commands for fonts and sizes, but any \MakeUppercase acts on just the {}. It's a bit hacky, by essentially assuming that only numbers occur here, not letters to be case-changed. (This should be acceptable in a class-file, as it ought to be possible to change the case elsewhere, if that was ever desired.) Also, it can result in \@adddotafter being called too soon, so a slight adjustment is made, via \ACM@adddotafter, which now tests whether its argument is empty. But the coding has to allow for other packages to have also patched \@adddotafter.

```

### 3.18 TOC lists

\@dotsep Related to the \tableofcontents are all the horizontal fillers. Base L<sup>A</sup>T<sub>E</sub>X defines \@dottedtocline, which we should not disable. Yet, this command expects \@dotsep to be defined but leaves this to the class implementation. Since amsart does not provide this, we copy the standard variant from article here.

```

```

Make acmplain the default theorem style.

```
2706 \\theoremstyle{acmplain}
```

Delay defining the theorem environments until after other packages have been loaded. In particular, the `cleveref` package must be loaded before the theorem environments are defined in order to show the correct environment name (see <https://github.com/borisveytsman/acmart/issues/138>). The `acmthm` option is used to suppress the definition of any theorem environments. Also, to avoid obscure errors arising from these environment definitions conflicting with environments defined by the user or by user-loaded packages, we only define environments that have not yet been defined.

```

2707 \\AtEndPreamble{%
2708   \\if@ACM@acmthm

2758 }

```

### 3.20 Balancing columns

We need balancing only if the user did not disable it, and we use a two column format

```

2759 \AtEndPreamble{%
2760   \if@ACM@balance
2761     \ifcase\ACM@format@nr
2762       \relax % manuscript
2763         \global\@ACM@balancefalse
2764       \or % acmsmall
2765         \global\@ACM@balancefalse
2766       \or % acmlarge
2767         \global\@ACM@balancefalse
2768       \or % acmtog
2769         \RequirePackage{balance}%
2770       \or % sigconf
2771         \RequirePackage{balance}%
2772       \or % siggraph
2773         \RequirePackage{balance}%
2774       \or % sigplan
2775         \RequirePackage{balance}%

```

```

2776      \or % sigchi
2777      \RequirePackage{balance}%
2778      \or % sigchi-a
2779      \global\@ACM@balancefalse
2780      \fi
2781  \fi
2782 }
2783 \AtEndDocument{%
2784   \if@ACM@balance
2785   \if@twocolumn
2786   \balance
2787   \fi\fi}

```

### 3.21 Acknowledgments

```

\acksname
2788 \newcommand\acksname{Acknowledgments}

\acks This is a comment-like structure
2789 \specialcomment{acks}{%
2790   \begingroup
2791   \section*\{\acksname}
2792   \phantomsection\addcontentsline{toc}{section}{\acksname}
2793 }{%
2794   \endgroup
2795 }

\grantsponsor We just typeset the name of the sponsor
2796 \def\grantsponsor#1#2#3{#2}

\grantnum
2797 \newcommand\grantnum[3][]{\#3%
2798   \def\@tempa{#1}\ifx\@tempa\@empty\else\space(\url{#1})\fi}

```

### 3.22 Conditional typesetting

We use the `comment` package for conditional typesetting:

```

2799 \AtEndPreamble{%
2800 \if@ACM@screen
2801   \includecomment{screenonly}
2802   \excludecomment{printonly}
2803 \else
2804   \excludecomment{screenonly}
2805   \includecomment{printonly}
2806 \fi
2807 \if@ACM@anonymous
2808   \excludecomment{anonsuppress}
2809   \excludecomment{acks}

```

```

2810 \else
2811   \includecomment{anonsuppress}
2812 \fi}

```

### 3.23 Additional bibliography commands

- \showeprint The command \showeprint has two arguments: the (optional) prefix and the eprint number. Right now the only prefix we understand is the (lowercase) word ‘arxiv’ (see <http://arxiv.org/hyperref/bibstyles/>).

```

2813 \newcommand\showeprint[2][arxiv]{%
2814   \def\@tempa{\#1}%
2815   \ifx\@tempa\empty\def\@tempa{arxiv}\fi
2816   \def\@tempb{arxiv}%
2817   \ifx\@tempa\@tempb
2818     arXiv:\href{http://arxiv.org/abs/#2}{#2}\else arXiv:#2%
2819   \fi}

```

### 3.24 End of Class

- \vspace We do not disable \vspace, but add warning to it

```

2820 \let\@vspace@\orig=\@vspace
2821 \let\@vspacer@\orig=\@vspacer
2822 \apptocmd{\@vspace}{\ClassWarning{@classname}{\string\vspace\space should
2823   only be used to provide space above/below surrounding
2824   objects}}{}{}%
2825 \apptocmd{\@vspacer}{\ClassWarning{@classname}{\string\vspace\space should
2826   only be used to provide space above/below surrounding
2827   objects}}{}{}%

```

- \ACM@origbaselinestretch We produce an error if the user tries to change \baselinestretch

```

2828 \let\ACM@origbaselinestretch\baselinestretch
2829 \AtEndDocument{\ifx\baselinestretch\ACM@origbaselinestretch\else
2830   \ClassError{@classname}{An attempt to redefine
2831   \string\baselinestretch\space detected. Please do not do this for
2832   ACM submissions!}\fi}
2833 \normalsize\normalfont\frenchspacing
2834 
```

# Change History

1.48	General: Added prologue option to xcolor ..... 44	v1.02	General: Added TOPS and TSC (closes <a href="https://github.com/borisveytsman/acmart/issues/12">https://github.com/borisveytsman/acmart/issues/12</a> ) ..... 32
	Bib code cleanup (Zack Weinberg) 32		Documentation changes (closes <a href="https://github.com/borisveytsman/acmart/issues/13">https://github.com/borisveytsman/acmart/issues/13</a> ) ..... 32
1.49	General: Documentation update (siggraph) . 32	v1.03	\@formatdoi: Added macro ..... 70
1.53	General: New journal: DTRAP ..... 32		\if@ACM@authorversion: Added macro ..... 34
	General: New journals: PACMCGIT, TIOT, TDSCI ..... 32		\maketitle: Added special case of authorversion ..... 73
	Rearranged docs ..... 32		General: Added anonsuppress environment ..... 32
1.54	General: Moved footnote stuff before hyperref call (Ross Moore) ..... 32		Added authorversion option (closes <a href="https://github.com/borisveytsman/acmart/issues/9">https://github.com/borisveytsman/acmart/issues/9</a> ) ..... 32
1.56	General: Documented \Description ..... 32	v1.04	\acmArticleSeq: Name change by Matthew Fluet ..... 64
1.57	General: Booktabs package is now the default ..... 32		\acmDOI: Name change by Matthew Fluet ..... 65
1.58	General: Changes in samples (Enrico Gregorio) ..... 32		\acmISBN: Name change by Matthew Fluet ..... 64
	New journal: HEALTH. TDS is renamed to TDSCI ..... 32		General: Updated bibliography for siggraph ..... 32
1.60	\if@ACM@urlbreakonhyphens: introduced macro ..... 33	v1.05	General: Added processing doi numbers for acmsiggraph and doi numbers for sigproc.bib ..... 32
	General: New option: urlbreakonhyphens ..... 32		Patched \setcitestyle command; closes <a href="https://github.com/borisveytsman/acmart/issues/19">https://github.com/borisveytsman/acmart/issues/19</a> ..... 32
v1.00	General: First released version ..... 32	v1.06	\@ACM@badge@skip: Added macro .. 65
v1.01	General: Changed hyperref colors in screen mode (closes <a href="https://github.com/borisveytsman/acmart/issues/1">https://github.com/borisveytsman/acmart/issues/1</a> ) ..... 32		\@ACM@badge@width: Added macro .. 65
	Defined ACM colors ..... 32		\@ACM@title@width: Added macro .. 65
	Explicitly put draft option (closes <a href="https://github.com/borisveytsman/acmart/issues/4">https://github.com/borisveytsman/acmart/issues/4</a> ) ..... 35		\@mktitle@i: Added processing badges ..... 79
	Set headheight to 1pc for all formats (closes <a href="https://github.com/borisveytsman/acmart/issues/5">https://github.com/borisveytsman/acmart/issues/5</a> ) ..... 32		Made generic ..... 79
			\@mktitle@ii: Now this macro is obsolete ..... 80

\@mktitle@iii: Added processing badges .....	80	\if@ACM@newfonts: Added macro ..	48
Made more generic .....	80	\maketitle: Moved thankses to copyrightpermission box .....	73
\@mktitle@iv: Made more generic ..	80	\section@raggedright: Introduced macro .....	95
\@printtopmatter: Added processing badges .....	77	General: Added graceful behavior when libertine fonts are absent ..	48
\@subtitlefont: Added macro .....	78	Documentation updates .....	32
\@titlefont: Added macro .....	78	v1.13	
\acmBadgeL: Added macro .....	65	\@mpfootnotetext: Made minipage footnotes centered .....	43
\acmBadgeR: Added macro .....	65	\bibliographystyle: Redefined macro .....	44
\if@ACM@badge: Added macro .....	65	\bibstyle@acmauthoryear: Added macro .....	39
v1.07		\bibstyle@acmnumeric: Added macro .....	40
\maketitle: Corrected a bug with abstract footnotes .....	73	\if@ACM@printfolios: Added macro ..	66
Corrected a bug with permssion and footnotes order .....	73	General: Font adjustments for acmsmall .....	82
v1.08		Increased font size for ACM Large ..	37
General: SIGPLAN reformatting by Matthew Fluet .....	32	Print bibliographic information by default for the proceedings .....	66
Typos corrected (Tobias Pape) .....	32	standardpagestyle: Added headers for sigs .....	90
v1.09		Expanded headers for sigchi-a .....	90
General: Revert SIGPLAN caption rules .....	32	Suppressed folios if sig .....	90
v1.10		v1.14	
\maketitle: Corrected a bug with doi in manuscript and author vrtson, https://github.com/borisveytsman/acmart/issues/36 .....	73	\bibstyle@acmauthoryear: Moved def of \bibstyle@acmauthoryear before use .....	39
General: Changes of 'licensedothergov' wording .....	68	\bibstyle@acmnumeric: Moved def of \bibstyle@numeric before use ..	40
standardpagestyle: Reversed folios location .....	90	General: \citetstyle updates (Matthew Fluet) .....	32
v1.11		Patched \citetstyle .....	38
General: Customization of ACM theorem styles and proof environment by Matthew Fluet ..	32	v1.15	
v1.12		\@ACM@addtoaddress: Added macro ..	80
\@marginfigure: Now centering by default .....	51	\@mkauthors@iii: New authors system .....	84
\@margintable: Now centering by default .....	51	\@shortauthors: Introduced macro ..	90
\@parfont: Moved to \section@raggedright .....	96	\@typeset@author@bx: Moved to separate macro .....	84
\copyrightpermissionfootnoterule: Added macro .....	47	\acks: Added macro .....	101
\descriptionlabel: Redefined .....	53	\affiliation: Added code for author groups .....	62
\footnoterule: Made shorter .....	47	\author: Added code for author groups .....	61
\if@ACM@natbib@override: Added macro .....	34	\city: Added macro .....	81

Added the possibility to adjust number of author boxes per row in conference formats . . . . .	32	Added new copyright version: licensedcagov . . . . .	32
v1.37		Added package cleveref . . . . .	32
\description: Reduce list indentation (Matthew Fluet) . . . . .	53	Added Ross Moore code for glyptounicode . . . . .	48
\descriptionlabel: Reduce list indentation (Matthew Fluet) . . . . .	53	Bibliography changes . . . . .	32
\normalparindent: Set \normalparindent (Matthew Fluet) . . . . .	47	v1.41	
General: Reduce list indentation (Matthew Fluet) . . . . .	52	General: Added new badges . . . . .	32
Set \normalparindent; Reduce list indentation (Matthew Fluet) . . . . .	32	v1.42	
v1.38		General: Deleted ACM badges . . . . .	32
General: Increase default font size for SIGPLAN . . . . .	32, 37	v1.43	
		\@startsection: Added \makeatletter . . . . .	42
		\country: Added comma before country for journals . . . . .	81
		v1.44	
		\@acmBooktitle: Added macro . . . . .	60
		\@acmEditors: Added macro . . . . .	60
		\@editorsAbbrev: Added macro . . . . .	60

\@folioblob: Suppress the blob if acmArticleSeq is empty . . . . .	92	\liningnums: Workaround for compatibility with fontspec . . . . .	49
\@mkbibcitation: If the paper has just one page, use ‘page’ instead of ‘pages’ . . . . .	87	\maketitle: Added authors’ addresses . . . . .	73
\ACM@restore@pagestyle: Added macro . . . . .	88	Thankses go before authors’ addresses . . . . .	73
\acmArticle: The default is now empty . . . . .	64	\num@authors: Introduced macro . . . . .	61
\acmArticleSeq: Now acmArticle might be empty . . . . .	64	General: Added etoolbox . . . . .	32
\acmBooktitle: Added macro . . . . .	60	Bst file bug fixes: label width is calculated correctly . . . . .	32
\editor: Added macro . . . . .	60	Delayed hypersetup since journal options may change screen mode . . . . .	43
\if@ACM@acmthm: Added macro . . . . .	33	PACM now set screen to true . . . . .	54
\maketitle: Empty DOI or ISBN are not printed (by Michael Ekstrand)	73	Restore theorem defs to class file . . . . .	32
General: Added package refcount . . . . .	32	v1.47	
Deleted package cleveref . . . . .	32	General: New journal: THRI . . . . .	32
Put theorem defs in a separate style	32	v1.48	
v1.45		\headfootfont: Deleted unnecessary switch (Michael D. Adams) . . . . .	90
\@folioblob: Switched \bfseries\sffamily to \sffamily\bfseries . . . . .	92	\@mkabstract: Removed spurious indentation if abstract is followed by an empty line . . . . .	87
\@parfont: Switched \bfseries\sffamily to \sffamily\bfseries . . . . .	96	\ACM@timestamp: Fromatting change (Michael D. Adams) . . . . .	89
\@titlefont: Switched \bfseries\sffamily to \sffamily\bfseries . . . . .	78	\if@ACM@review: Review mode now switches on folios . . . . .	34
v1.46		\maketitle: Added acmart and version info to pdfcreator tag . . . . .	73
\@mkauthorsaddresses: Introduced macro . . . . .	86	Added language and doctitle attributes to PDF (Andreas Reichinger) . . . . .	73
\@mkbibcitation: Added subtitle . . . . .	87	Suppressed empty DOI (Serguei Mokhov) . . . . .	73
\@printendtopmatter: Made it \par\bigskip uniformly . . . . .	88	General: \citeyear no longer behaves like \citeyearpar . . . . .	44
\@printtopmatter: Deleted rule . . . . .	77	Code prettying (Michael D. Adams) . . . . .	32
\@setauthorsaddresses: Introduced macro . . . . .	88	Initial support for Biblatex (Daniel Thomas) . . . . .	32
\ACM@linecount@bx: Rearranged the code to get rid of spurious underfull messages (Benjamin Byholm) . . . . .	89	Misc entries in the bibliography no longer produce a separate date . . . . .	32
\author: Started counting authors . . . . .	61	Typos fixed (Jamie Davis) . . . . .	32
\authorsaddresses: Introduced macro . . . . .	63	v1.50	
\country: Corrected spacing for institution . . . . .	81	\copyrightpermission: New copyright statements for iw3c2w3[g] . . . . .	70
\if@ACM@acmthm: Modified description . . . . .	33	v1.51	
		General: Corrected the bug with price suppression . . . . .	68
		Suppress price if the copyright is set to iw3c2w3 or iw3c2w3g . . . . .	68

XeTeX now uses OTF fonts (Joachim Breitner) . . . . .	49	\if@Description@present: Added macro . . . . .	49
firstpagestyle: We now use journal abbreviation for footers . . . . .	93	\if@undescribed@images: Added macro . . . . .	49
standardpagestyle: We now use journal abbreviation for footers . .	90	General: Looks like XeTeX requires explicit monotype font declaration	49
v1.52		Make two-column layouts flush (Philip Quinn) . . . . .	45
\@copyrightowner: Rewording of licenses . . . . .	69	v1.57	
\@copyrightpermission: Another rewording of copyright statements for iw3c2w3[g] . . . . .	70	\ACM@origbaselinestretch: Added check whether the user changed \baselinestretch . . . . .	102
v1.53		\author: Added warning if \author has comma . . . . .	61
General: Added PACMCGIT, TIOT, TDSCI . . . . .	54	\email: Added warning if \author has comma . . . . .	62
v1.54		\if@ACM@balance: Added macro . . .	34
\@mkbibcitation: Bug corrected (Ross Moore) . . . . .	87	\vspace: Added warning . . . . .	102
\@shortauthors: Added submission id in anonymous mode . . . . .	90	v1.58	
\ACM@NR@adjustedSectionformat: Added macro . . . . .	95	\@dblfloat: Deleted spurious \vspace warning . . . . .	51
\ACM@NRadjust: Added macro . . .	94	\@marginfigure: Deleted spurious \vspace warning . . . . .	51
\ACM@adddotafter: Added macro . .	95	\@marginable: Deleted spurious \vspace warning . . . . .	51
\author: Added submission id in anonymous mode . . . . .	61	\@mkbibcitation: Deleted spurious \vspace warning . . . . .	87
\if@ACM@nonacm: Added macro . . .	34	\@printendtopmatter: Deleted spurious \vspace warning . . . .	88
General: Added Ross's patch for sectioning . . . . .	95	\@sidebar: Deleted spurious \vspace warning . . . . .	51
Deleted indent for subsubsection .	95	\maketitle: Original \vspace inside \maketitle . . . . .	73
XeTeX now uses T1 encoding . . .	49	\vspace: Preserved old versions as \@vspace@orig and \@vspace@orig . . . . .	102
v1.55		General: Added HEALTH. TDSCI is renamed to TDS . . . . .	54
\@mkbibcitation: Bug corrected . .	87	Suppressed \addtocounter in pdf subject . . . . .	43
\maketitle: Fixes topnum . . . . .	73	v1.59	
General: Now we use purple color for links . . . . .	43	\acmConference: Setting \@ACM@journal@bibstrip . . . .	60
Table captions for SIGCHI now use the same font size as figure captions (Luis Leiva) . . . . .	50	\acmJournal: Setting \@ACM@journal@bibstrip . . . .	60
Typo corrected (Zack Weinberg) .	38	\if@ACM@journal@bibstrip: Introduced macro . . . . .	36
v1.56		firstpagestyle: Added logic for conference papers using journal format . . . . .	93
\@marginfigure: Added checking for description . . . . .	51		
\@mkteasers: Added check for description . . . . .	87		
\Description: Added macro . . . . .	49		
\acksname: Added macro (Philip Quinn) . . . . .	101		
\ccsdesc@parse: End the concepts list with a period (Philip Quinn)	67		

Moved page styles to	v1.60	
\AtBeginDocument . . . . .	93	\@headfootfont: Moved to
standardpagestyle: Added logic for		footnotesize . . . . .
conference papers using journal		90
format . . . . .	90	
Moved page styles to	v1.61	
\AtBeginDocument . . . . .	90	\@typeset@author@bx: Added
		\normalbaselines . . . . .
		84

# Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; numbers in roman refer to the code lines where the entry is used.
