

LATEX Class for the Association for Computing Machinery^{*}

Boris Veytsman[†]

2018/07/16, v1.54

Abstract

This package provides a class for typesetting publications of the Association for Computing Machinery.

3.22 End of Class	96

1 Introduction

The Association for Computing Machinery¹ is the world’s largest educational and scientific computing society, which delivers resources that advance computing as a science and a profession. It was one of the early adopters of \TeX for its typesetting.

It provided several different classes for a number of journals and conference proceedings. Unfortunately during the years since these classes were written, the code was patched many times, and supporting different versions of the classes became difficult.

This package provides the uniform interface for all ACM publications. It is intended to replace all the different classes and packages and provide an up-to-date \LaTeX package.

This package uses only free \TeX packages and fonts included in $\text{\TeX}Live$, Mik \TeX and other popular \TeX distributions. It is intended to be published in these distributions itself, which minimizes users’ efforts in the installation and support of this package.

I am grateful to Michael D. Adams, Leif Andersen, Dirk Beyer, Joachim Breitner, Benjamin Byholm, Michael Ekstrand, Matthew Fluet, Paolo G. Giarrusso, Ben Greenman, Jamie Davis, LianTze Lim, Ben Liblit, Kai Mindermann, Frank Mittelbach, Serguei Mokhov, Ross Moore, John Owens, Joel Nider, Tobias Pape, Mathias Rav, Andreas Reichinger, Matteo Riondato, Craig Rodkin, Bernard Rous, David Shamma, Gabriel Scherer, Stephen Spencer, Daniel Thomas, Zack Weinberg, John Wickerson and many others for their invaluable help.

The development version of the package is available at <https://github.com/borisveytsman/acmart>.

2 User’s guide

This class uses many commands and customizaton options, so it might appear intimidating for a casual user. Do not panic! Many of these commands and options can be safely left with their default values or the values recommended by your conference or journal editors. If you have problems or questions, do not hesitate to ask me directly or the community at <https://github.com/borisveytsman/acmart>, <https://tex.stackexchange.com> or the closest \TeX Users Group. The world-wide \TeX Users Group is at <https://tug.org/>; please consider joining us if you use \TeX regularly.

2.1 Installation

Most probably, you already have this package installed in your favorite \TeX distribution; if not, you may want to upgrade. You may need to upgrade it anyway since this package uses a number of relatively recent packages, especially the ones related to fonts.

The latest released version of this package can be found on CTAN: <https://www.ctan.org/pkg/acmart>. The development version can be found on GitHub: <https://github.com/borisveytsman/acmart>. At this address you can file a bug report—or even contribute your own enhancement by making a pull request.

¹<http://www.acm.org/>

Please note that the version on Github is a development (or experimental) version: please download it for testing new features. The production version is the one on CTAN and ACM sites.

Most users should not attempt to install this package themselves but should rather rely on their \TeX distributions to provide it. If you decide to install the package yourself, follow the standard rules:

1. Run `latex acmart.ins`. This will produce the file `acmart.cls`
2. Put the files `acmart.cls` and `ACM-Reference-Format.bst` in places where \LaTeX can find them (see [1] or the documentation for your \TeX system).
3. Update the database of file names. Again, see [1] or the documentation for your \TeX system for the system-specific details.
4. The file `acmart.pdf` provides the documentation for the package. (This is probably the file you are reading now.)

As an alternative to items 2 and 3 you can just put the files in the working directory where your `.tex` file is.

This class uses a number of other packages. They are included in all major \TeX distributions ($\text{\TeX}Live$, $\text{Mac}\text{\TeX}$, $\text{MiK}\text{\TeX}$) of 2015 and later, so you probably have them installed. Just in case here is the list of these packages:

- `amscls`, <http://www.ctan.org/pkg/amscls>
- `amsfonts`, <http://www.ctan.org/pkg/amsfonts>
- `amsmath`, <http://www.ctan.org/pkg/amsmath>
- `binhex`, <http://www.ctan.org/pkg/binhex>
- `caption`, <http://www.ctan.org/pkg/caption>
- `comment`, <http://www.ctan.org/pkg/comment>
- `cm-super`, <http://www.ctan.org/pkg/cm-super>
- `cmap`, <http://www.ctan.org/pkg/cmap>
- `draftwatermark`, <http://www.ctan.org/pkg/draftwatermark>
- `environ`, <http://www.ctan.org/pkg/environ>
- `etoolbox`, <http://www.ctan.org/pkg/etoolbox>
- `fancyhdr`, <http://www.ctan.org/pkg/fancyhdr>
- `float`, <http://www.ctan.org/pkg/float>
- `fontaxes`, <http://www.ctan.org/pkg/fontaxes>
- `geometry`, <http://www.ctan.org/pkg/geometry>

- *graphics*, <http://www.ctan.org/pkg/graphics>
- *hyperref*, <http://www.ctan.org/pkg/hyperref>
- *ifluatex*, <http://www.ctan.org/pkg/ifluatex>
- *ifxetex*, <http://www.ctan.org/pkg/ifxetex>
- *inconsolata*, <http://www.ctan.org/pkg/inconsolata>
- *libertine*, <http://www.ctan.org/pkg/libertine>
- *manyfoot*, <http://www.ctan.org/pkg/manyfoot>

- *xkeyval*, <http://www.ctan.org/pkg/xkeyval>
- *xstring*, <http://www.ctan.org/pkg/xstring>

2.2 Invocation and options

To use this class, put in the preamble of your document

```
\documentclass[<options>]{acmart}
```

There are several options corresponding to the type of the document and its general appearance. They are described below. Generally speaking, the options have key=value forms, for example,

```
\documentclass[format=acmsmall, screen=true, review=false]{acmart}
```

The option `format` describes the format of the output. There are several possible values for this option, for example,

```
\documentclass[format=acmtog]{acmart}
```

Actually the words `format=` can be omitted, e.g.,

```
\documentclass[acmtog, review=false]{acmart}
```

The possible formats are listed in Table 1. Note that formats starting with `acm` are intended for journals and transactions, while formats starting with `sig` are intended for proceedings published as books.

Note that sometimes conference proceedings are published as a special issue (or issues) of an ACM journal. In this case, you should use the journal format for a conference paper. Please contact your conference committee if in doubt.

There are several Boolean options that can take `true` or `false` values. They are listed in Table 2. The words `=true` can be omitted when setting a Boolean option, so instead of `screen=true` one can write just `screen`, for example,

```
\documentclass[acmsmall, screen, review]{acmart}
```

The option `review` is useful when combined with the `manuscript` format option. It provides a version suitable for reviewers and copy editors.

The default for the option `screen` depends on the publication. At present it is `false` for all publications *but* PACM, since PACM is now electronic-only. Thus PACM titles (see Table 5) set this option to `true`. In the future this option may involve additional features suitable for on-screen versions of articles.

The option `natbib` is used when the corresponding `BIBTEX` style is based on `natbib`. In most cases you do not need to set it. See Section 2.10.

The option `anonymous` is used for anonymous review processes and causes all author information to be obscured.

The option `timestamp` is used to include a time stamp in the footer of each page. When preparing a document, this can help avoid confusing different revisions. The footer also includes the page range of the document. This helps detect missing pages in hard copies.

Table 1: The possible values for the `format` option

Value	Meaning
<code>manuscript</code>	A manuscript. This is the default.
<code>acmsmall</code>	Small single-column format. Used for CIE, CSUR, DTRAP, JACM, JDIQ, JEA, JERIC, JETC, PACMCGIT, PACMHCI, PACMPL, TAAS, TACCESS, TACO, TALG, TALLIP (formerly TALIP), TCPS, TDSCI, TEAC, TECS, THRI, TIIS, TIOT, TISSEC, TIST, TKDD, TMIS, TOCE, TOCHI, TOCL, TOCS, TOCT, TODAES, TODS, TOIS, TOIT, TOMACS, TOMM (formerly TOMCCAP), TOMPECS, TOMS, TOPC, TOPLAS, TOPS, TOS, TOSEM, TOSN, TRETS, TSAS, TSC, TSLP and TWEB, including special issues.
<code>acmlarge</code>	Large single-column format. Used for IMWUT, JOCCH, POMACS and TAP, including special issues.
<code>acmtog</code>	Large double-column format. Used for TOG, including annual conference Technical Papers.
<code>sigconf</code>	Proceedings format for most ACM conferences (with the exceptions listed below) and all ICPS volumes.
<code>sigplan</code>	Proceedings format for SIGPLAN conferences.
<code>sigchi</code>	Proceedings format for SIGCHI conferences.
<code>sigchi-a</code>	Format for SIGCHI extended abstracts.

The option `authordraft` is intended for author’s drafts that are not intended for distribution. It typesets a copyright block to give the author an idea of its size and the overall size of the paper but overprints it with the phrase “Unpublished working draft. Not for distribution.”, which is also used as a watermark. This option sets `timestamp` and `review` to `true`, but these can be overridden by setting these options to `false` *after* setting `authordraft` to `true`.

2.3 Top matter

A number of commands set up *top matter* or (in computer science jargon) *metadata* for an article. They establish the publication name, article title, authors, DOI and other data. Some of these commands, like `\title` and `\author`, should be put by the authors. Others, like `\acmVolume` and `\acmDOI`—by the editors. Below we describe these commands and mention who should issue them. These macros should be used *before* the `\maketitle` command. Note that in previous versions of ACM classes some of these commands should be used before `\maketitle`, and some after it. Now they all must be used before `\maketitle`.

This class internally loads the `amsart` class, so many top-matter commands are inherited from `amsart` [2].

`\acmJournal` The macro `\acmJournal{<shortName>}` sets the name of the journal or transaction for journals and transactions. The argument is the short name of the publication *in uppercase*, for example,

Table 2: Boolean options

Option	Default	Meaning
review	false	A review version: lines are numbered and hyperlinks are colored
screen	see text	A screen version: hyperlinks are colored
natbib	true	Whether to use the natbib package (see Section 2.10)
anonymous	false	Whether to make author(s) anonymous
authorversion	false	Whether to generate a special version for the authors' personal use or posting (see Section 2.3)
nonacm	false	Use the class typesetting options for a non-ACM document, which will not include the conference/journal header and footers or permission statements
timestamp	false	Whether to put a time stamp in the footer of each page
authordraft	false	Whether author's-draft mode is enabled
acmthm	true	Whether to define theorem-like environments, see Section 2.6

\acmJournal{TOMS}

The currently recognized journals are listed in Table 5. Note that conference proceedings published in *book* form do not set this macro.

It is expected that this command is inserted by the author of the manuscript when she decides to which journal to submit the manuscript.

The macro \acmConference[<short name>]{<name>}{<date>}{<venue>} is used for conference proceedings published in the book form. The arguments are the following:

short name: the abbreviated name of the conference (optional).

name: the name of the conference.

date: the date(s) of the conference.

venue: the place of the conference.

Examples:

```
\acmConference[TD'15]{Technical Data Conference}{November  
12--16}{Dallas, TX, USA}  
\acmConference{SA'15 Art Papers}{November 02--06, 2015}{Kobe, Japan}
```

\acmBooktitle By default we assume that conference proceedings are published in the book named *Proceedings of CONFERENCE*, where CONFERENCE is the name of the conference inferred from the command \acmConference above. However, sometimes the book title is different. The command \acmBooktitle can be used to set this title, for example,

```
\acmBooktitle{Companion to the first International Conference on the  
Art, Science and Engineering of Programming (Programming '17)}
```

\editor In most cases, conference proceedings are edited. You can use the command \editor{\langle editor\rangle} to set the editor of the volume. This command can be repeated, for example,

```
\editor{Jennifer B. Sartor}  
\editor{Theo D'Hondt}  
\editor{Wolfgang De Meuter}
```

\title The command \title, as in the `amsart` class, has two arguments: one optional, and one mandatory:

```
\title[⟨ShortTitle⟩]{⟨FullTitle⟩}
```

The mandatory argument is the full title of the article. The optional argument, if present, defines the shorter version of the title for running heads. If the optional argument is absent, the full title is used instead.

It is expected that this command is inserted by the author of the manuscript.

\subtitle Besides title, ACM classes allow a subtitle, set with the \subtitle{\langle subtitle\rangle} macro.

The commands for specifying authors are highly structured. The reason is they serve double duty: the authors' information is typeset in the manuscript *and* is used by the metadata extraction tools for indexing and cataloguing. Therefore it is very important to follow the guidelines exactly.

\author \orcid \affiliation \email The basic commands are \author, \orcid (for the researchers registered with ORCID, <http://www.orcid.org/>), \affiliation and \email. In the simplest case, you enter them in this order:

```
\author{...}  
\orcid{...}  
\affiliation{...}  
\email{...}
```

Do *not* use the L^AT_EX \and macro! Each author deserves his or her own \author command.

Note that some formats do not typeset e-mails or ORCID identifiers. Do not worry: the metadata tools will get them.

Sometimes an author has several affiliations. In this case, the \affiliation command should be repeated:

```
\author{...}  
\orcid{...}  
\affiliation{...}  
\affiliation{...}  
\email{...}
```

Similarly you can repeat the \email command.

You may have several authors with the same affiliation, different affiliations, or overlapping affiliations (author A_1 is affiliated with institutions I_1 and I_2 , while author A_2 is affiliated with I_2 only, author A_3 is affiliated with I_1 and I_3 , etc.). The recommended solution is to put the \affiliation commands after each author, possibly repeating them:

```
\author{...}
\orcid{...}
\affiliation{...}
\affiliation{...}
@email{...}
\author{...}
\orcid{...}
\affiliation{...}
@email{...}
\author{...}
\orcid{...}
\affiliation{...}
\affiliation{...}
@email{...}
```

In some cases, when several authors share the same affiliation, you can try to save space using the format

```
\author{...}
@email{...}
\author{...}
@email{...}
\affiliation{...}
```

However, this format is not generally recommended.

\additionalaffiliation
In some cases, too many affiliations can take too much space. The command \additionalaffiliation{\langle affiliation\rangle} creates a footnote after an author's name with the words "Also with {\langle affiliation\rangle}." You should use this command only as a last resort. An example of usage is:

```
\author{G. Tobin}
\author{Ben Trovato}
\additionalaffiliation{%
    \institution{The Th{\o}rv{\\"a}ld Group}
    \streetaddress{1 Th{\o}rv{\\"a}ld Circle}
    \city{Hekla}
    \country{Iceland}}
\affiliation{%
    \institution{Institute for Clarity in Documentation}
    \streetaddress{P.O. Box 1212}
    \city{Dublin}}
```

```

\state{Ohio}
\postcode{43017-6221}}

```

Here Trovato and Tobin share their affiliation with the Institute for Clarity in Documentation, but only Ben Trovato is affiliated with The Thørvald Group.

\position
\institution
\department
\streetaddress
\city
\state
\postcode
\country

The \affiliation and \additionalaffiliation commands are further structured to interact with the metadata extraction tools. Inside these commands you should use the \position, \institution, \department, \city, \streetaddress, \state, \postcode and \country macros to indicate the corresponding parts of the affiliation. Note that in some cases (for example, journals) these parts are not printed in the resulting copy, but they *are* necessary since they are used by the XML metadata extraction programs. Do *not* put commas or \\ between the elements of \affiliation. They will be provided automatically.

An example of the author block:

```

\author{A. U. Thor}
\orcid{1234-4564-1234-4565}
\affiliation{%
    \institution{University of New South Wales}
    \department{School of Biomedical Engineering}
    \streetaddress{Samuels Building (F25), Kensington Campus}
    \city{Sidney}
    \state{NSW}
    \postcode{2052}
    \country{Australia}}
\email{author@nsw.au.edu}
\author{A. N. Other}
\affiliation{%
    \institution{University of New South Wales}
    \city{Sidney}
    \state{NSW}
    \country{Australia}}
\author{C. O. Respondent}
\orcid{1234-4565-4564-1234}
\affiliation{%
    \institution{University of Pennsylvania}
    \city{Philadelphia}
    \state{PA}
    \country{USA}}
\affiliation{%
    \institution{University of New South Wales}
    \city{Sidney}
    \state{NSW}
    \country{Australia}}

```

Note that the old ACM conference formats did not allow more than six authors and required some effort from authors to achieve alignment. The new format is much better in this.

Sometimes an author works in several departments within the same institution. There could be two situations: the departments are independent, or one department is within another. In the first case, just repeat the command `\department` several times. To handle the second case the command has an optional numerical parameter. The departments with higher numbers are higher in the organizational chart. Compare

```
\affiliation{%
  \department[0]{Department of Lunar Studies} % 0 is the default
  \department[1]{John Doe Institute} % higher than 0
  \institution{University of San Serriffe}
  \country{San Serriffe}}
```

and

```
\affiliation{%
  \department{Department of Lunar Studies} % Not in the John Doe Institute!
  \department{John Doe Institute}
  \institution{University of San Serriffe}
  \country{San Serriffe}}
```

The command `\affiliation` formats its output according to American conventions. This might be wrong for some cases. Consider, for example, a German address. In Germany, the postcode is put before the city and is not separated by a comma. We can handle this order using

```
\affiliation{%
  \institution{Fluginstitut}
  \streetaddress{Sonnenallee 17}
  \postcode{123456}
  \city{Helm}
  \country{Germany}}
```

However, the comma after the postcode is unfortunate: the address will be typeset (in some formats) as

```
Fluginstitut
Sonnenallee 17
123456, Helm, Germany
```

To overcome this problem, the command `\affiliation` has an optional parameter `obeypunctuation`, which can be `false` (the default) or `true`. If this parameter is `true`, `\affiliation` obeys the author's command. Thus

```
\affiliation[obeypunctuation=true]{%
  \institution{Fluginstitut} \\
  \streetaddress{Sonnenallee 17} \\
  \postcode{123456}}
```

```
\city{Helm},  
\country{Germany}}
```

will be typeset as

```
Fluginstitut  
Sonenallee 17  
123456 Helm, Germany
```

Note that you should *not* use this option for journals.

It is expected that these commands are inserted by the author of the manuscript.

\thanks Like `amsart` (and unlike standard L^AT_EX), we allow `\thanks` only *outside* of the commands `\title` and `\author`. This command is obsolete and should *not* be used in most cases. Do not list your acknowledgments or grant sponsors here. Put this information in the `acks` environment (see Section 2.9).

\authorsaddresses In some formats, addresses are printed as a footnote on the first page. By default L^AT_EX typesets them itself using the information you give it. However, you can override its choice using the command `\authorsaddresses{<contact addresses>}`, for example,

```
\authorsaddresses{  
Authors' addresses: G.~Zhou, Computer Science Department, College of  
William and Mary, 104 Jameson Rd, Williamsburg, PA 23185, US;  
V.~B'eranger, Inria Paris-Rocquencourt, Rocquencourt, France;  
A.~Patel, Rajiv Gandhi University, Rono-Hills, Doimukh, Arunachal  
Pradesh, India; H.~Chan, Tsinghua University, 30 Shuangqing Rd,  
Haidian Qu, Beijing Shi, China; T.~Yan, Eaton Innovation Center,  
Prague, Czech Republic; T.~He, C.~Huang, J.~A.~Stankovic University  
of Virginia, School of Engineering Charlottesville, VA 22903, USA;  
T. F. Abdelzaher, (Current address) NASA Ames Research Center,  
Moffett Field, California 94035.)}
```

You can *suppress* printing authors' addresses by setting them to an empty string: `\authorsaddresses{}`.

\titlenote \subtitlenote \authornote While the command `\thanks` generates a note without a footnote mark, sometimes the authors might need notes more tightly connected to the title, subtitle or author. The commands `\titlenote`, `\subtitlenote` and `\authornote` that follow the corresponding commands (`\title`, `\subtitle` and `\author`) generate such notes. For example,

```
\title{This is a title}  
\titlenote{This is a titlenote}  
\author{A. U. Thor}  
\authornote{This is an authornote}
```

Please never use a `\footnote` inside an `\author` or `\title` command since this confuses the metadata extraction software. (Actually these commands now produce errors.)

\authornotemark Sometimes one may need to have the same footnote connected to several authors.

The command `\authornotemark[<number>]` adds just the footnote mark, for example,

```
\author{A. U. Thor}
\authornote{Both authors contributed equally to the paper}
...
\author{A. N. Other}
\authornotemark[1]
```

The correct numbering of these marks is the responsibility of the user.

The macros `\acmVolume`, `\acmNumber`, `\acmArticle`, `\acmYear` and `\acmMonth` are inserted by the editor and set the journal volume, issue, article number, year and month correspondingly. The arguments of all these commands, including `\acmMonth`, is numerical. For example,

```
\acmVolume{9}
\acmNumber{4}
\acmArticle{39}
\acmYear{2010}
\acmMonth{3}
```

Note that `\acmArticle` is used not only for journals but also for some conference proceedings.

The articles in the same issue of a journal have a *sequence number*. It is used to vertically position the black blob on the first page of some formats. By default it is the same as the article number, but the command `\acmArticleSeq{<n>}` can be used to change it:

```
\acmArticle{39} % The sequence number will be 39 by default
\acmArticleSeq{5} % We redefine it to 5
```

Setting this number to zero suppresses the blob.

If your paper got a Submission ID from the Conference Management System, put it here:

```
\acmSubmissionID{123-A56-BU3}
```

`\acmPrice` The macro `\acmPrice{<price>}` sets the price for the article, for example,

```
\acmPrice{25.00}
```

Note that you do not need to put the dollar sign here, just the amount. By default the price is \$15.00, unless the copyright is set to usgov, rightsretained, iw3c2w3, or iw3c2w3g, when it is suppressed. Note that to override the defaults you need to set the price *after* the `\setcopyright` command. Also, the command `\acmPrice{}` suppresses the printing of the price.

`\acmISBN` Book-like volumes have ISBN numbers attached to them. The macro `\acmISBN{<ISBN>}`

sets it. Normally it is set by the typesetter, for example,

```
\acmISBN{978-1-4503-3916-2}
```

Setting it to the empty string, as `\acmISBN{}, suppresses printing the ISBN.`

`\acmDOI` The macro `\acmDOI{\langle DOI \rangle}` sets the DOI of the article, for example,

```
\acmDOI{10.1145/9999997.9999999}
```

It is normally set by the typesetter. Setting it to the empty string, as `\acmDOI{}, suppresses the DOI.`

`\acmBadgeR` Some conference articles get special distinctions, for example, the artifact evaluation for PPoPP 2016 (see <http://ctuning.org/ae/ppopp2016.html>). These articles display special badges supplied by the conference organizers. This class provides commands to add these badges: `\acmBadgeR[\langle url \rangle]{\langle graphics \rangle}` and `\acmBadgeL[\langle url \rangle]{\langle graphics \rangle}`. The first command puts the badge to the right of the title, and the second one—to the left. The exception is the `sigchi-a` mode for SIGCHI extended abstracts, which puts the badges on the left margin. The arguments have the following meaning: `[\langle url \rangle]`, if provided, sets the link to the badge authority in the screen version, while `{\langle graphics \rangle}` sets the graphics file with the badge image. The file must be a cropped square, which is scaled to a standard size in the output. For example, if the badge image is `ae-logo.pdf`, the command is

```
\acmBadgeR[http://ctuning.org/ae/ppopp2016.html]{ae-logo}
```

`\startPage` The macro `\startPage{\langle page \rangle}` sets the first page of the article in a journal or book. It is used by the typesetter.

`\terms` The command `\keywords{\langle keyword, keyword, ... \rangle}` sets keywords for the article.

`\keywords` They must be separated by commas, for example,

```
\keywords{wireless sensor networks, media access control,

```

`\CCSXML` ACM publications are classified according to the ACM Computing Classification Scheme (CCS). CCS codes are used both in the typeset version of the publications *and* in the metadata in various databases. Therefore you need to provide both TeX commands and XML metadata with the paper.

The tool at <http://dl.acm.org/ccs.cfm> can be used to generate CCS codes. After you select the topics, click on “Generate CCS codes” to get results like the following:

```
\begin{CCSXML}  
<ccs2012>  
  <concept>  
    <concept_id>10010520.10010553.10010562</concept_id>  
    <concept_desc>Computer systems organization~Embedded systems</concept_desc>  
    <concept_significance>500</concept_significance>
```

```

</concept>
<concept>
<concept_id>10010520.10010575.10010755</concept_id>
<concept_desc>Computer systems organization~Redundancy</concept_desc>
<concept_significance>300</concept_significance>
</concept>
<concept>
<concept_id>10010520.10010553.10010554</concept_id>
<concept_desc>Computer systems organization~Robotics</concept_desc>
<concept_significance>100</concept_significance>
</concept>
<concept>
<concept_id>10003033.10003083.10003095</concept_id>
<concept_desc>Networks~Network reliability</concept_desc>
<concept_significance>100</concept_significance>
</concept>
</ccs2012>
\end{CCSXML}

\ccsdesc[500]{Computer systems organization~Embedded systems}
\ccsdesc[300]{Computer systems organization~Redundancy}
\ccsdesc{Computer systems organization~Robotics}
\ccsdesc[100]{Networks~Network reliability}

```

You just need to copy this code and paste it in your paper anywhere before `\maketitle`.

`\setcopyright`

There are several possibilities for the copyright of the papers published by the ACM: the authors may transfer the rights to the ACM, license them to the ACM, some or all authors might be employees of the US or Canadian governments, etc. Accordingly the command `\setcopyright{...}` is introduced. Its argument is the copyright status of the paper, for example, `\setcopyright{acmcopyright}`. The possible values for this command are listed in Table 3.

The ACM submission software should generate the right command for you to paste into your file.

`\copyrightyear`

Each copyright statement must have the year of copyright. By default it is the same as `\acmYear`, but you can override this using the macro `\copyrightyear`, e.g.,

```

\acmYear{2016}
\copyrightyear{2015}

```

There is a special case for a personal copy that the authors may be allowed to generate for their use or a posting on a personal site (check the instructions for the specific journal or conference for the details). The document option `authorversion=true` produces a special form of the copyright statement for this case. Note that you still need the `\setcopyright` command and (optionally) `\copyrightyear` command to tell `\TeX` about the copyright owner and year. Also, you should be aware that due to the different sizes of the permission blocks for the printed version and authors' version, the page breaks might be different between them.

Table 3: Parameters for the \setcopyright command

Parameter	Meaning
none	The copyright and permission information is not typeset. (This is the option for some ACM conferences.)
acmcopyright	The authors transfer the copyright to the ACM (the “traditional” choice).
acmlicensed	The authors retain the copyright but license the publication rights to ACM.
rightsretained	The authors retain the copyright and publication rights to themselves or somebody else.
usgov	All the authors are employees of the US government.
usgovmixed	Some authors are employees of the US government.
cagov	All the authors are employees of the Canadian government.
cagovmixed	Some authors are employees of the Canadian government.
licensedusgovmixed	Some authors are employees of the US government, and the publication rights are licensed to ACM.
licensedcagov	All the authors are employees of the Canadian government, and the publication rights are licensed to ACM.
licensedcagovmixed	Some authors are employees of the Canadian government, and the publication rights are licensed to ACM.
othergov	Authors are employees of a government other than the US or Canada.
licensedothergov	Authors are employees of a government other than the US or Canada, and the publication rights are licensed to ACM.
iw3c2w3	Special statement for conferences organized by IW3C2.
iw3c2w3g	Special statement for conferences organized by IW3C2, when some authors are approved Google employees.

Table 4: Settings for the `\settopmatter` command

Parameter	Values	Meaning
<code>printccs</code>	true/false	Whether to print CCS categories
<code>printacmref</code>	true/false	Whether to print the ACM bibliographic entry
<code>printfolios</code>	true/false	Whether to print page numbers (folios)
<code>authorsperrow</code>	numeric	Number of authors per row for the title page in conference proceedings formats

`abstract` The environment `abstract` must *precede* the `\maketitle` command. Again, this is different from the standard L^AT_EX.

`teaserfigure` A special kind of figure is used for many two-column conference proceedings. This figure is placed just after the authors but before the main text. The environment `teaserfigure` is used for these figures. This environment must be used *before* `\maketitle`, for example,

```
\begin{teaserfigure}
\includegraphics[width=\textwidth]{sampleteaser}
\caption{This is a teaser}
\label{fig:teaser}
\end{teaserfigure}
```

`\settopmatter` Some information in the top matter is printed for certain journals or proceedings and suppressed for others. You can override these defaults using the command `\settopmatter{\langle settings \rangle}`. The settings and their meanings are listed in Table 4. For example,

```
\settopmatter{printacmref=false, printccs=true, printfolios=true}
```

The parameter `authorsperrow` requires some explanation. In conference proceedings authors' information is typeset in boxes, several boxes per row (see `sample-sigconf.pdf`, `sample-sigplan.pdf`, etc.). The number of boxes per row is determined automatically. If you want to override this, you can do it using this parameter, for example,

```
\settopmatter{authorsperrow=4}
```

However, in most cases you should *not* do this and should use the default settings. Setting `authorsperrow` to 0 will revert it to the default settings.

`\received` The command `\received[\langle stage \rangle]{\langle date \rangle}` sets the history of the publication. The `[\langle stage \rangle]` argument is optional; the default is Received for the first date and revised for the subsequent ones. For example,

```
\received{February 2007}
\received[revised]{March 2009}
\received[accepted]{June 2009}
```

```
\maketitle  
\shortauthors
```

The macro `\maketitle` must be the last command in the top-matter group. That is it must follow the commands defined in this section.

After the command `\maketitle`, the macro `\shortauthors` stores the names of the authors for the running head. You can redefine it if the list of author's name is too long, e.g.,

```
\maketitle  
\renewcommand{\shortauthors}{Zhou et al.}
```

2.4 Algorithms

There are now several good packages for typesetting algorithms [3, 4, 5], and the authors are free to choose their favorite one.

2.5 Figures and tables

The new ACM styles use the standard L^AT_EX interface for figures and tables. There are some important items to be aware of, however.

1. The captions for figures must be entered *after* the figure bodies and for tables *before* the table bodies.
2. The ACM uses the standard types for figures and tables and adds several new ones. In total there are the following types:

figure, table: a standard figure or table taking a full text width in one-column formats and one column width in two-column formats.

figure*, table* in two-column formats, a special figure or table taking a full text width.

teaserfigure: a special figure before `\maketitle`.

sidebar, marginfigure, marginable: in the sigchi-a format, special sidebars, tables and figures in the margin.

3. Accordingly, when scaling images, one should use the following sizes:
 - (a) For `teaserfigure`, `figure` in one-column mode or `figure*` in two-column mode, use `\textwidth`. In one-column mode, you can also use `\columnwidth`, which coincides with `\textwidth` in this case.
 - (b) For `figure` in two-column mode, use `\columnwidth`.
 - (c) For `marginfigure`, use `\marginparwidth`.
 - (d) For `figure*` in SIGCHI extended abstracts, use `\fulltextwidth`.

It is strongly recommended to use the package `booktabs` [6] and follow its main principles of typography with respect to tables:

1. Never, ever use vertical rules.

2. Never use double rules.

It is also a good idea not to overuse horizontal rules.

For table *footnotes* you have several options described in the TeX FAQ [1]. The simplest one is to use a `\minipage` environment:

```
\begin{table}
\caption{Simulation Configuration}
\label{tab:conf}
\begin{minipage}{\columnwidth}
\begin{center}
\begin{tabular}{ll}
\toprule
TERRAIN\footnote{This is a table footnote. This is a table footnote. This is a table footnote.} & \\
(200\,m$\times$200\,m) Square\\
Node Number & 289\\
Node Placement & Uniform\\
Application & Many-to-Many/Gossip CBR Streams\\
Payload Size & 32 bytes\\
Routing Layer & GF\\
MAC Layer & CSMA/MMSN\\
Radio Layer & RADIO-ACCNOISE\\
Radio Bandwidth & 250Kbps\\
Radio Range & 20m--45m\\
\bottomrule
\end{tabular}
\end{center}
\end{minipage}
\bigskip
\footnotesize\emph{Source:} This is a table
sourcenote. This is a table sourcenote. This is a table
sourcenote.

\emph{Note:} This is a table footnote.
\end{table}
```

`sidebar` `SIGCHI` extended abstracts use margin space extensively. This package provides three environments for this with optional captions:

sidebar: textual information in the margin

marginfigure: a figure in the margin

margintable: a table in the margin

Tables and figures (including margin tables and margin figures) are by default centered. However, in some cases (for example, when you use several subimages per figure) you may need to override this. A good way to do so is to put the contents into a `\minipage` of the width `\columnwidth`.

2.6 Theorems

The ACM classes define two theorem styles and several pre-defined theorem environments:

acmplain: this is the style used for theorem, conjecture, proposition, lemma and corollary, and

acmdefinition: this is the style used for example and definition.

These environments are defined by default. In the unusual circumstance that a user does not wish to have these environments defined, the option `acmthm=false` in the preamble will suppress them.

2.7 Online-only and offline-only material

`printonly`
`screenonly` Some supplementary material in ACM publications is put online but not in the printed version. The text inside the environment `screenonly` will be typeset only when the option `screen` (see Section 2.2) is set to true. Conversely, the text inside the environment `printonly` is typeset only when this option is set to false. For example,

```
\section{Supplementary materials}

\begin{printonly}
    Supplementary materials are available in the online version of this paper.
\end{printonly}

\begin{screenonly}
    (The actual supplementary materials.)
\end{screenonly}
```

We use the `comment` package for typesetting this code, so `\begin{...}` and `\end{...}` should start on a line of their own with no leading or trailing spaces.

2.8 Note about anonymous mode

`anonsuppress` When the option `anonymous` is selected, TeX suppresses author information (including the number of authors) for a blind review. However, sometimes the information identifying the authors may be present in the body of the paper. For example,

```
\begin{anonsuppress}
    This is the continuation of the previous work by the author
    \cite{prev1, prev2}.
\end{anonsuppress}
```

As for the `printonly` and `screenonly` environments, `\begin{anonsuppress}` and `\end{anonsuppress}` should start on a line of their own with no leading or trailing spaces.

2.9 Acknowledgments

The traditional “Acknowledgments” section is conventionally used to thank persons and granting agencies for their help and support. However, there are several important considerations about this section.

First, in anonymous mode this section must be omitted: it gives too much information to reviewers. Second, data about grants is extracted and stored separately by the postprocessing software. ACM classes provide facilities for both these tasks.

The environment `acks` starts an unnumbered section “Acknowledgments” unless the anonymous mode is chosen. Put all thanks inside this environment.

As for the `printonly` and `screenonly` environments, `\begin{acks}` and `\end{acks}` should start on a line of their own with no leading or trailing spaces.

All financial support *must* be listed using the commands `\grantsponsor` and `\grantnum`. These commands tell the postprocessing software about the granting organization and grant. The format of these commands is the following:

```
\grantsponsor{\langle sponsorID \rangle}{\langle name \rangle}{\langle url \rangle}
\grantnum[\langle url \rangle]{\langle sponsorID \rangle}{\langle number \rangle}.
```

Here `\langle sponsorID \rangle` is the unique ID used to match grants to sponsors, `\langle name \rangle` is the name of the sponsor, `\langle url \rangle` is its URL, and `\langle number \rangle` is the grant number. The `\langle sponsorID \rangle` of the `\grantnum` command must correspond to the `\langle sponsorID \rangle` of a `\grantsponsor` command. Some awards have their own web pages, which you can include using the optional argument of the `\grantnum` command.

At present `\langle sponsorID \rangle` is chosen by the authors and can be an arbitrary key in the same way the label of a `\cite` is arbitrarily chosen. There might be a change to this policy if the ACM decides to create a global database of sponsoring organizations.

Example:

```
\begin{acks}
The authors would like to thank Dr. Yuhua Li for providing the
matlab code of the \textit{BEPs} method.

The authors would also like to thank the anonymous referees for
their valuable comments and helpful suggestions. This work is
supported by the \grantsponsor{GS501100001809}{National Natural
Science Foundation of
China}{\url{https://doi.org/10.13039/501100001809}} under Grant
No.: \grantnum{GS501100001809}{61273304}
and \grantnum[\url{http://www.nnsf.cn/youngscientists}]{GS501100001809}{Young
Scientists' Support Program}.
\end{acks}
```

2.10 Bibliography

The ACM uses the `natbib` package for formatting references and the Bib_TE_X style file `ACM-Reference-Format.bst` for Bib_TE_X processing. You can disable loading of `natbib` using the option `natbib=false` in `\documentclass`. However, it is not recommended,

as well as the use of Bib_TE_X styles other than ACM-Reference-Format.bst, and may delay the processing of the manuscript.

\citetyle
If you use natbib, you can select one of two predefined citation styles using the command \citetyle: the author-year format acmauthoryear or the numeric format acmnumeric. For example,

```
\citetyle{acmauthoryear}
```

Note that numeric citations are the default mode for most formats.

\setcitetyle
You can further customize natbib using the \setcitetyle command, for example,

```
\setcitetyle{numbers,sort&compress}
```

One of the more common versions is

```
\setcitetyle{nosort}
```

It is useful if you do not like the way natbib sorts citation lists.

If you use natbib, then commands like \citep and \citeauthor are automatically supported. The command \shortcite is the same as \cite in numerical mode and cites the year in author-date mode.

Note that before version 1.48 the command \citeyear put the year in parentheses. In version 1.48 and later it produces just the year; the command \citeyearpar can be used to emulate its old behavior.

There are several customized Bib_TE_X entry types and fields in the ACM style file ACM-Reference-Format.bst that you may want to be aware of.

The style supports the fields doi and url, for example,

```
doi = "10.1145/1188913.1188915",
url = "http://ccrma.stanford.edu/~jos/bayes/bayes.pdf",
```

The style supports the arXiv-recommended fields eprint and (optionally) primaryclass, for example,

```
eprint = "960935712",
primaryclass = "cs",
```

See the examples at <http://arxiv.org/hypertex/bibstyles/>.

There are the special entry types online and game for Web pages and games, for example,

```
@online{Thornburg01,
author = "Harry Thornburg",
year = "2001",
title = "Introduction to Bayesian Statistics",
url = "http://ccrma.stanford.edu/~jos/bayes/bayes.html",
```

```

month =      mar,
lastaccessed = "March 2, 2005",
}

```

For these entry types you can use the `lastaccessed` field to add the access date for the URL.

There are two ways to enter video or audio sources in the bibliography corresponding to two different possibilities. For standalone sources available online, you can use an `online` entry and set its `howpublished` field. For example,

```

@online{Obama08,
author =      "Barack Obama",
year =        "2008",
title =       "A more perfect union",
howpublished = "Video",
day =         "5",
url =         "http://video.google.com/videoplay?docid=6528042696351994555",
month =       mar,
lastaccessed = "March 21, 2008",
}

```

For sources available as attachments to conference proceedings and similar documents, you can use the usual `inproceedings` entry type and set its `howpublished` field:

```

@Inproceedings{Novak03,
author =      "Dave Novak",
title =       "Solder man",
booktitle =   "ACM SIGGRAPH 2003 Video Review on Animation theater Program",
year =        "2003",
publisher =   "ACM Press",
address =    "New York, NY",
pages =       "4",
month =       "March 21, 2008",
doi =         "10.9999/woot07-S422",
howpublished = "Video",
}

```

Sometimes you need to cite a complete issue of a journal. The `periodical` entry type is intended for this:

```

@periodical{JCohen96,
key =         "Cohen",
editor =      "Jacques Cohen",
title =       "Special issue: Digital Libraries",
journal =    "Communications of the {ACM}",
volume =     "39",
number =     "11",
month =       nov,
}

```

```

year = "1996",
}

```

If you do not know the year of publication, the style will add “[n. d.]” (for “no date”) to the entry.

If you do not know the author (this is often the case for online entries), use the key field to add a key for sorting and citations, for example,

```

@online{TUGInstmem,
key = {TUG},
year = 2017,
title = "Institutional members of the {\TeX} Users Group",
url = "http://wwtug.org/instmem.html",
lastaccessed = "May 27, 2017",
}

```

A note about sorting. The current ACM bibliography styles always sort the entries according to authors names and publication year. There is a controversy about sorting names with “von” or “van” part: should Ludwig van Beethoven be sorted under “V” or under “B”? The American practice is to use “van” in sorting, i.e. to file van Beethoven under “V”. However, some authorities recommend to sort Dutch persons according to their last names (see e.g. https://www.ifla.org/files/assets/cataloguing/pubs/names-of-persons_1996.pdf). While I do not want to take a part in this dispute, I would like to point to the old “noopsort” trick by Oren Patashnik. Add to the .bib file the line

```
@PREAMBLE{"\providecommand{\noopsort}[1]{}"}
```

and then encode the author as

```
author = {Ludwig {\noopsort{Beethoven}}van Beethoven},
```

This will make the author to be sorted as “Beethoven” rather than “van Beethoven”.

2.11 Colors

While printed ACM publications are usually black and white, screen mode allows the use of colors. The ACM classes pre-define several colors according to [7]: ACMBlue, ACMYellow, ACMOrange, ACMRed, ACMLightBlue, ACMGreen, ACMPurple and ACMDarkBlue. You can use them in color assignments.

The ACM provides the following recommendation on color use.

The most accessible approach would be to ensure that your article is still readable when printed in greyscale. The most notable reasons for this are:

1. The most common type of inherited Color Vision Deficiency (CVD) is red-green (in which similar-brightness colors that differ only in their amounts of red or green are often confused), and it affects up to 8% of males and 0.5% of females of Northern European descent.

2. The most common type of acquired Color Vision Deficiency (CVD) is blue-yellow (including mild cases for many older adults).
3. Most printing is in black and white.
4. Situational impairments (e.g., bright sunlight shining on a mobile screen) tend to reduce the entire color gamut, reducing color discriminability.

Note: It is *not* safe to encode information using only variations in color (i.e., only differences in hue and/or saturation) as there is bound to be someone affected!

To ensure that you are using the most accessible colors, the ACM recommends that you choose sets of colors to help ensure suitable variations in when printed in greyscale by using either of the following tools:

1. ColourBrewer: <http://colorbrewer2.org/>
2. ACE: The Accessible Colour Evaluator: <http://daprlab.com/ace/> for designing WCAG 2.0 compliant palettes.

2.12 Other notable packages and typographic remarks

Several other packages are recommended for specialized tasks.

The package `subcaption` [8] is recommended for complex figures with several subplots or subfigures that require separate subcaptioning. The packages `nomenc` [9] and `glossaries` [10] can be used for the automatic creation of the lists of symbols and concepts used.

By default `acmart` prevents all widows and orphans (i.e., lonely lines at the beginning or end of the page) and hyphenation at the end of the page. This is done by the rather strict settings

```
\widowpenalty=10000
\clubpenalty=10000
\brokepenalty=10000
```

However, this may lead to frustrating results when the authors must obey a page limit. Setting these penalties to smaller values may help if you absolutely need to.

Another problem might be the too strict line breaking rules. Again, a strategically placed `\sloppy` command or putting the problematic paragraph inside `sloppypar` environment might help—but beware, the results might be, well, sloppy.

Note that the uppercasing in section titles is done using the `textcase` package [11], so the command `\NoCaseChange` inside the title may help to prevent extraneous uppercasing.

2.13 A note for wizards: `acmart-preload-hook.tex`

Sometimes you need to change the behavior of `acmart`. The usual way to do this is to redefine commands in the preamble. However, these definitions are executed *after* `acmart` is loaded and certain decisions are made. This presents a number of problems.

For example, one may want to use the `titletoc` package with `acmart`. This package should be loaded before `hyperref`. However, since `acmart` loads `hyperref` itself, the line `\usepackage{titletoc}` in the preamble will lead to grief (see <http://tex.stackexchange.com/questions/357265/using-titletoc-with-acm-acmart-style>).

Another example is passing options to a package. Suppose you want to use the `dvipsnames` option of the `xcolor` package. Normally you cannot do this because `acmart` loads this package itself without options.

The file `acmart-preload-hook.tex` can be used to solve these problems. If this file exists, it will be processed before any other package. You can use this file to load packages or pass options to them. For example, if you put in this file

```
\let\LoadClassOrig\LoadClass
\renewcommand\LoadClass[2][]{\LoadClassOrig[#1]{#2}%
\usepackage{titletoc}}
```

then `titletoc` will be loaded before `hyperref`. If you put in this file

```
\PassOptionsToPackage{dvipsnames}{xcolor}
```

you will pass `dvipsnames` to `xcolor`.

Important note. This hook makes it too easy to create a manuscript that is not acceptable by the ACM. It is even easier to create a file that cannot be compiled. So please do not use it *unless you know what you are doing*. And if you use it, *do not ask for support*. If you decide to use this hook, you are on your own.

3 Implementation

3.1 Identification

We start with a declaration of who we are. Most .dtx files put driver code in a separate .drv driver file. We roll this code into the main file and use the pseudo-guard <gobble> for it.

```
1 <class>\NeedsTeXFormat{LaTeX2e}
2 <*gobble>
3 \ProvidesFile{acmart.dtx}
4 </gobble>
5 <class>\ProvidesClass{acmart}
6 [2018/07/16 v1.54 Typesetting articles for the Association for
7 Computing Machinery]
```

And the driver code:

```
8 <*gobble>
9 \documentclass{ltxdoc}
10 \usepackage{array,booktabs,amsmath,graphicx,fancyvrb,tabularx, longtable}
11 \usepackage[tt=false, type1=true]{libertine}
12 \usepackage[varqu]{zi4}
13 \usepackage[libertine]{newtxmath}
14 \usepackage[tableposition=top]{caption}
15 \usepackage{hypdoc}
16 \PageIndex
17 \CodelineIndex
18 \RecordChanges
19 \EnableCrossrefs
20 \begin{document}
21   \DocInput{acmart.dtx}
22 \end{document}
23 </gobble>
24 <*class>
25 \def\@classname{acmart}
```

3.2 Preload hook

We preload acmart-preload-hook:

```
26 \InputIfFileExists{acmart-preload-hook.tex}{%
27   \ClassWarning{\@classname}{%
28     I am loading acmart-preload-hook.tex. You are fully responsible
29     for any problems from now on.}}{}
```

3.3 Options

We need xkeyval since some of our options may have values:

```
30 \RequirePackage{xkeyval}

493   \fi}}
```

Graphics and color.

```
494 \RequirePackage{graphicx}
495 \RequirePackage[prologue]{xcolor}
```

We define ACM colors according to [7]:

```
496 \definecolor[named]{ACMBlue}{cmyk}{1,0.1,0,0.1}
497 \definecolor[named]{ACMYellow}{cmyk}{0,0.16,1,0}
498 \definecolor[named]{ACMOrange}{cmyk}{0,0.42,1,0.01}
499 \definecolor[named]{ACMRed}{cmyk}{0,0.90,0.86,0}
500 \definecolor[named]{ACMLightBlue}{cmyk}{0.49,0.01,0,0}
501 \definecolor[named]{ACMGreen}{cmyk}{0.20,0,1,0.19}
502 \definecolor[named]{ACMPurple}{cmyk}{0.55,1,0,0.15}
503 \definecolor[named]{ACMDarkBlue}{cmyk}{1,0.58,0,0.21}
```

Author-draft mode

```
504 \if@ACM@authordraft
505   \RequirePackage{draftwatermark}
506   \SetWatermarkFontSize{0.5in}
507   \SetWatermarkColor[gray]{.9}
508   \SetWatermarkText{\parbox{12em}{\centering
509     Unpublished working draft.\\
510     Not for distribution.}}
511 \fi
```

3.7 Paper size and paragraphing

We use `geometry` for dimensions. Note that the present margins do not depend on the font size option—we might need to change this. See <https://github.com/borisveytsman/acmart/issues/5#issuecomment-272881329>.

```

\normalparindent The amsart package defines the \normalparindent length and initializes it to 12pt (the value of \parindent in amsart). It is later used to set the \listparindent length in the quotation environment and the \parindent length in the \@footnotetext command. We set \normalparindent to the value of \parindent as selected by acmart for consistent paragraph indents.
590 \setlength{\normalparindent}{\parindent}

Footnotes require some consideration. We have several layers of footnotes: front-matter footnotes, “regular” footnotes and the special insert for the bibstrip. In the old ACM classes, the bibstrip was a \@float. The problem with floats is that they tend to, well, float—and we want the guarantee they stay.
We use manyfoot for layered footnotes instead.

\copyrightpermissionfootnoterule This is the footnote rule that separates the bibstrip from the rest of the paper. It is a full width rule.
591 \def\copyrightpermissionfootnoterule{\kern-3\p@

690 \newenvironment{margintable}{\Collect@Body@\margintable}{} 

\@margintable The processing of the saved text
691 \long\def\@margintable#1{\bgroup\captionsetup{type=table}%
692   \marginpar{\centering\small#1}\egroup}

SIGCHI extended abstracts provide an interesting possibility to push into the margin.  

Here we use figure* and table* for this.

\fulltextwidth We define the width of the boxes as
693 \newdimen\fulltextwidth
694 \fulltextwidth=\dimexpr(\textwidth+\marginparwidth+\marginparsep)

\@dblfloat We redefine the double-float command. First, we make the size bigger. Second, our  

default position is going to be tp (to give marginalia a chance)
695 \if@ACM@sigchiamode
696 \def\@dblfloat{\bgroup\columnwidth=\fulltextwidth
697   \let\@endfloatbox\@endwidefloatbox
698   \def\@fpsadddefault{\def\@fps{tp}}%
699   \@float}
700 \fi

```

```

\end@dblfloat And the end. Just adding a \bgroup.

701 \if@ACM@sighiamode
702 \def\end@dblfloat{%
703   \end@float\egroup}
704 \fi

\@endwidefloatbox This is the end of a wide box—we basically move everything to the left
705 \def\@endwidefloatbox{%
706   \par\vskip\z@skip
707   \@minipagetrue
708   \outer@nobreak
709   \egroup

728 \or % sigchi-a
729 \fi

```

The AMS uses generous margins for lists. Note that `amsart` defines `\leftmargin` values for list levels at the beginning of the document, so we must redefine them in the same manner. Also, note that `amsart` redefines the `enumerate` and `itemize` environments with a `\makelabel` command that uses `\llap`, so the `\labelwidth` value is (effectively) irrelevant; nonetheless, we follow `amsart` and set `\labelwidth` to `\leftmargin` minus `\labelsep`.

```

3.14 Typesetting top matter

\mkttitle@bx Some of our formats use a two-column design. Some use a one-column design. In all cases we use a wide title. Thus we typeset the top matter in a special box to be used in the construction \@twocolumn[<box>].

```
1570 \newbox\mkttitle@bx
```

\maketitle The (in)famous \maketitle. Note that in sigchi-a mode, authors are *not* in the title box.

Another note: there is a subtle difference between author notes, title notes and thanks. The latter two refer to the paper itself and therefore belong to the copyright/permission block. By the way, this was the default behavior of the old ACM classes.

```

2404 \AtBeginDocument{\ACM@restore@pagestyle}

```

3.16 Sectioning

\ACM@NRadjust Ross Moore's macro.

Initially \ACM@sect@format@ just passes through its #1 argument unchanged. When a sectioning macro such as \section occurs, the \ACM@NRadjust redefines \ACM@sect@format@ to expand into the styling commands; e.g., \@secfont. Then \Sectionformat is temporarily redefined to produce \realSectionformat{\ACM@sect@format{#1}}{#2}, which ultimately becomes \Sectionformat{\@secfont{#1}}{#2}. This is done to allow \Sectionformat to be variable, as may be needed in particular circumstances. Its current expansion is saved as \realSectionformat which is used with the modified 1st argument, then \Sectionformat is reverted to its former expansion.

To style the section-number, the line #1{} is used at the end of \ACM@NRadjust. This imposes style-changing commands for fonts and sizes, but any \MakeUppercase acts on just the {}. It's a bit hacky, by essentially assuming that only numbers occur here, not letters to be case-changed. (This should be acceptable in a class-file, as it ought to be possible to change the case elsewhere, if that was ever desired.) Also, it can result in \@adddotafter being called too soon, so a slight adjustment is made, via \ACM@adddotafter, which now tests whether its argument is empty. But the coding has to allow for other packages to have also patched \@adddotafter.

```

```

3.17 TOC lists

- \@dotsep Related to the \tableofcontents are all the horizontal fillers. Base L^AT_EX defines \@dottedtocline, which we should not disable. Yet, this command expects \@dotsep to be defined but leaves this to the class implementation. Since amsart does not provide this, we copy the standard variant from article here.

```
2508 \providecommand*\dotsep{4.5}
```

3.18 Theorems

\@acmplainbodyfont The font to typeset the body of the acmplain theorem style.
2509 \def\@acmplainbodyfont{\itshape}

\@acmplainindent The amount to indent the acmplain theorem style.
2510 \def\@acmplainindent{\parindent}

\@acmplainheadfont The font to typeset the head of the acmplain theorem style.
2511 \def\@acmplainheadfont{\scshape}

\@acmplainnotefont The font to typeset the note of the acmplain theorem style.
2512 \def\@acmplainnotefont{\emptyset}

Customization of the acmplain theorem style:

```

2569 \thmstyle{acmplain}

Make acmplain the default theorem style.
2569 \thmstyle{acmplain}

```

Delay defining the theorem environments until after other packages have been loaded. In particular, the `cleveref` package must be loaded before the theorem environments are defined in order to show the correct environment name (see <https://github.com/borisveytsman/acmart/issues/138>). The `acmthm` option is used to suppress the definition of any theorem environments. Also, to avoid obscure errors arising from these environment definitions conflicting with environments defined by

the user or by user-loaded packages, we only define environments that have not yet been defined.

```

2617   \item[\@proofindent\hspace{\labelsep}
2618         {\@proofnamefont #1 \@addpunct{.}}]\ignorespaces
2619 }{%
2620   \popQED\endtrivlist\endpefalse
2621 }

```

3.19 Acknowledgments

```

\acks This is a comment-like structure
2622 \specialcomment{acks}{%
2623   \begingroup
2624   \section*{Acknowledgments}
2625   \phantomsection\addcontentsline{toc}{section}{Acknowledgments}
2626 }{%
2627   \endgroup
2628 }

\grantsponsor We just typeset the name of the sponsor
2629 \def\grantsponsor#1#2#3{#2}

\grantnum
2630 \newcommand\grantnum[3][]{{#3}%
2631   \def\@tempa{#1}\ifx\@tempa\empty\else\space(\url{#1})\fi}

```

3.20 Conditional typesetting

We use the comment package for conditional typesetting:

```

2632 \AtEndPreamble{%
2633 \if@ACM@screen
2634   \includecomment{screenonly}
2635   \excludecomment{printonly}
2636 \else
2637   \excludecomment{screenonly}
2638   \includecomment{printonly}
2639 \fi
2640 \if@ACM@anonymous
2641   \excludecomment{anonsuppress}
2642   \excludecomment{acks}
2643 \else
2644   \includecomment{anonsuppress}
2645 \fi}

```

3.21 Additional bibliography commands

\showeprint The command \showeprint has two arguments: the (optional) prefix and the eprint number. Right now the only prefix we understand is the (lowercase) word ‘arxiv’ (see <http://arxiv.org/hyperref/bibstyles/>).

```
2646 \newcommand\showeprint[2][arxiv]{%
2647   \def\@tempa{#1}%
2648   \ifx\@tempa\empty\def\@tempa{arxiv}\fi
2649   \def\@tempb{arxiv}%
2650   \ifx\@tempa\@tempb
2651     arXiv:\href{http://arxiv.org/abs/#2}{#2}\else arXiv:#2%
2652   \fi}
```

3.22 End of Class

```
2653 \normalsize\normalfont\frenchspacing
2654 </class>
```

Change History

1.48	General: Added prologue option to xcolor 42	General: Added anonsuppress environment 30
	Bib code cleanup (Zack Weinberg) 30	Added authorversion option (closes https://github.com/borisveytsman/acmart/issues/9) 30
1.49	Documentation update (siggraph) 30	
1.49	General: New journal: DTRAP 30	v1.04
1.53	General: New journals: PACMCGIT, TIOT, TDSCI 30	\acmArticleSeq: Name change by Matthew Fluet 60
	Rearranged docs 30	\acmDOI: Name change by Matthew Fluet 60
1.54	General: Moved footnote stuff before hyperref call (Ross Moore) 30	\acmISBN: Name change by Matthew Fluet 60
		General: Updated bibliography for siggraph 30
v1.00	General: First released version 30	v1.05
v1.01	General: Changed hyperref colors in screen mode (closes https://github.com/borisveytsman/acmart/issues/1) 30	General: Added processing doi numbers for acmsiggraph and doi numbers for sigproc.bib 30
	Defined ACM colors 30	Patched \setcitestyle command; closes https://github.com/borisveytsman/acmart/issues/19 30
	Explicitly put draft option (closes https://github.com/borisveytsman/acmart/issues/4) 33	v1.06
	Set headheight to 1pc for all formats (closes https://github.com/borisveytsman/acmart/issues/5) 30	\@ACM@badge@skip: Added macro 60
v1.02	General: Added TOPS and TSC (closes https://github.com/borisveytsman/acmart/issues/12) 30	\@ACM@badge@width: Added macro 60
	Documentation changes (closes https://github.com/borisveytsman/acmart/issues/13) 30	\@ACM@title@width: Added macro 60
v1.03	\@formatdoi: Added macro 66	\@mktitle@i: Added processing badges 74
	\if@ACM@authorversion: Added macro 32	Made generic 74
	\maketitle: Added special case of authorversion 69	\@mktitle@ii: Now this macro is obsolete 75
		\@mktitle@iii: Added processing badges 75
		Made more generic 75
		\@mktitle@iv: Made more generic 76
		\@printtopmatter: Added processing badges 72
		\@subtitlefont: Added macro 74
		\@titlefont: Added macro 73
		\acmBadgeL: Added macro 61
		\acmBadgeR: Added macro 61
		\if@ACM@badge: Added macro 60
		v1.07
		\maketitle: Corrected a bug with abstract footnotes 69

Corrected a bug with permission and footnotes order	69	\bibstyle@acmauthoryear: Added macro	37
v1.08		\bibstyle@acmnumeric: Added macro	37
General: SIGPLAN reformatting by Matthew Fluet	30	\if@ACM@printfolios: Added macro	62
Typos corrected (Tobias Pape) . .	30	General: Font adjustments for acmsmall	77
v1.09		Increased font size for ACM Large Print bibliographic information by default for the proceedings	34
General: Revert SIGPLAN caption rules	30	standardpagestyle: Added headers for sigs	85
v1.10		Expanded headers for sigchi-a . . .	85
\maketitle: Corrected a bug with doi in manuscript and author version, https://github.com/borisveytsman/ acmart/issues/36	69	Suppressed folios if sig	85
General: Changes of 'licensedothergov' wording	64	v1.14	
standardpagestyle: Reversed folios location	85	\bibstyle@acmauthoryear: Moved def of \bibstyle@acmauthoryear before use	37
v1.11		\bibstyle@acmnumeric: Moved def of \bibstyle@numeric before use . . .	37
General: Customization of ACM theorem styles and proof environment by Matthew Fluet . .	30	General: \citetstyle updates (Matthew Fluet)	30
v1.12		Patched \citetstyle	35
\@marginfigure: Now centering by default	47	v1.15	
\@marginable: Now centering by default	47	@\ACM@addtoaddress: Added macro	76
\@parfont: Moved to \section@raggedright	90	@\mkauthors@iii: New authors system	79
\copyrightpermissionfootnoterule: Added macro	44	@\shortauthors: Introduced macro .	85
\descriptionlabel: Redefined . . .	49	@\typeset@author@bx: Moved to separate macro	79
\footnoterule: Made shorter	44	\acks: Added macro	95
\if@ACM@natbib@override: Added macro	32	\affiliation: Added code for author groups	57
\if@ACM@newfonts: Added macro . .	45	\author: Added code for author groups	57
\maketitle: Moved thankses to copyrightpermission box	69	\city: Added macro	76
\section@raggedright: Introduced macro	90	\country: Added macro	76
General: Added graceful behavior when libertine fonts are absent .	45	\department: Added macro	76
Documentation updates	30	\grantnum: Added macro	95
v1.13		\grantsponsor: Added macro	95
\@mpfootnotetext: Made minipage footnotes centered	40	\if@insideauthorgroup: Introduced macro	56
\bibliographystyle: Redefined macro	41	\institution: Added macro	76

standardpagestyle: Better handling of anonymous mode	85	Include 'References' in PDF bookmarks (Matthew Fluet)	35
v1.16		v1.20	
\@headfootfont: Added macro	85	\@mkabstract: Deleted spurious space	82
General: Formatting header/footer (Matthew Fluet)	30	General: Bug fixes for bst	30
standardpagestyle: Customize header/footer text font	85	v1.21	
v1.17		\showeprint: Added macro	96
\@makefnmark: Redefined	40	v1.22	
\@mkauthors: TOG now uses the same authors block as other journals . .	77	General: More bibliography changes for Aptara	30
\@mkauthors@ii: Deleted	79	v1.23	
\@mkbibcitation: Added \nobreak Changed format for sigs	83	General: Add PACMPL journal option	30
\acmArticle: The default is now numerical	59	v1.24	
\acmMonth: The default must be numerical. Closes #50.	60	General: Add IMWUT journal option	49
\acmNumber: The default is now numerical	59	v1.25	
\acmVolume: The default is now numerical	59	General: Updated PACMPL	49
\acmYear: The default is now numerical	60	v1.26	
\description: Decreased indent . . .	49	General: Corrected \shortcite bug .	30
\grantnum: Added url	95	Documentation typos fixed (thanks to Stephen Spencer)	30
\grantsponsor: Renamed	95	v1.27	
\if@ACM@printacmref: Renamed from \if@ACM@printbib	62	\if@ACM@printccs: Typo corrected .	61
General: Slightly decreased margins for sigs	42	v1.28	
standardpagestyle: Added paper title to sigs	85	\ccsdesc@parse: Change from \to to \textrightarrow (Matteo Riondato)	63
v1.18		General: Corrected option natbib behavior	37
\@mkauthors@i: Now we andify affiliations	78	Got rid of warnings in pdf keywords	40
\@typeset@author@line: Added macro	78	v1.29	
General: Natbib is now the default for all formats	30	\@mkabstract: Removed spurious indentation (John Wickerson) . . .	82
v1.19		\ccsdesc@parse: Add spacing after bullet and around rightarrow; semicolon separators no longer in bold/italic (John Wickerson) . . .	63
\@mkabstract: Include 'Abstract' in PDF bookmarks (Matthew Fluet) .	82	General: Increased head to 13pt . . .	42
\acks: Include 'Acknowledgements' in PDF bookmarks (Matthew Fluet) .	95	standardpagestyle: Corrected printfolios (Matthew Fluet)	85
General: Include 'Abstract', 'Acknowledgements', and 'References' in PDF bookmarks (Matthew Fluet)	30	v1.30	
		\department: Added optional parameter	76
		General: Added \frenchspacing . . .	96
		Bibtex style now recognizes https:// in doi	30
		Switched to T1: looks like libertine has problems with \l in OT1 . . .	46
		Updated IMWUT and PACMPL . . .	49

v1.31	\if@ACM@timestamp: Added macro (Michael D. Adams)	32
	\institution: Added obeypunctuation code	76
	\maketitle: Fixed the bug with figures on top and bottom of the title page, thanks to David Epstein	69
	\position: Added obeypunctuation code	76
	\postcode: Added obeypunctuation code	76
	\state: Added obeypunctuation code	76
	\streetaddress: Added obeypunctuation code	76
General:	Added acmart-preload-hook	30
	Added cmap and glyptounicode .	45
	BibTeX comma before articleno bug corrected	30
	BibTeX crossref bug corrected . .	30
	BibTeX numpages bug corrected .	30
	Documentation updates	30
	Moved \citemname definition for non-natbib bibliography, so a package may redefine it	41
	Switched to Type 1 fonts for libertine even if OTF-capable engine is used (Kai Mindermann)	46
firstpagestyle:	Added right linecount for two-column formats	87
	Added timestamp (Michael D. Adams)	87
standardpagestyle:	Added right linecount for two-column formats	85
	Added timestamp (Michael D. Adams)	85
v1.34	\@mkbibcitation: Deleted DOI from doi numbers	83
	\ACM@linecount@bx: Rulers now are continuous	84
	\ACM@linecountL: Rulers now are continuous	84
	\ACM@linecountR: Rulers now are continuous	84
	\maketitle: Added date to the bibstrip in conf proceedings . .	69
	Deleted 'DOI' from doi numbers .	69
	Rearranged bibstrip	69
	The \terms command is now obsolete	69
v1.32	\@formatdoi: New doi format . . .	66
General:	Added POMACS journal option	30
	Format siggraph is now obsolete .	30
v1.33	\@ACM@addtoaddress: Added obeypunctuation code	76
	\@mkauthors@i: Added obeypunctuation code	78
	\@mkauthors@iii: Added obeypunctuation code	79
	\@mkauthors@iv: Added obeypunctuation code	80
	\@subtitlefont: Added \normalsize	74
	\ACM@linecountL: Renamed macro .	84
	\ACM@linecountR: Added macro .	84
	\ACM@timestamp: Added current page number	84
	Added macro (Michael D. Adams) .	84
	Added submission id	84
	\acmSubmissionID: Added macro .	60
	\city: Added obeypunctuation code	76
	\country: Added obeypunctuation code	76
	\department: Added obeypunctuation code	76
	\if@ACM@affiliation@obeypunctuation: Added macro	58
	\if@ACM@authordraft: Added macro	33
	\if@ACM@natbib@override: Deleted macro	32

\terms: The \terms command now just produces a warning	61
v1.35	
\@bibstyle@acmauthoryear: Square brackets for author-year style	37
General: BibTeX bug fixed: et al.	30
If the copyright is set to usgov or rightsretained, the price is suppressed	64
v1.36	
\@ACM@authorsperrow: Added macro	62
\@mkauthors@iii: Added authorsperrow override	79
\@mkauthors@iv: Added authorsperrow override	80
\if@ACM@authordraft: Corrected typo, thanks to bargteil	33
General: Added PACMHCI journal options	49
Added the possibility to adjust number of author boxes per row in conference formats	30
v1.37	
\description: Reduce list indentation (Matthew Fluet)	49
\descriptionlabel: Reduce list indentation (Matthew Fluet)	49
\normalparindent: Set \normalparindent (Matthew Fluet)	44
General: Reduce list indentation (Matthew Fluet)	48
Set \normalparindent; Reduce list indentation (Matthew Fluet)	30
v1.38	
General: Increase default font size for SIGPLAN	30, 34
v1.39	
\@authornotemark: Added macro	82
\authornotemark: Added macro	59
v1.40	
\@copyrightowner: Added new copyright version: licensedcagov	65
\@copyrightpermission: Added new copyright version: licensedcagov	66
\@mkauthors@i: Switched to MakeTextUppercase	78
\@parfont: Switched to MakeTextUppercase	90
\ACM@linecount@bx: Work around a bug in xcolor: looks like cmyk colors in boxes do not work	84
\ccdesc@parse@finish: Added macro	63
\city: We now do not print this even in SIG	76
\country: Fixed bugs with extra spaces	76
\l@subsection: Redefined macro	39
\postcode: We now do not print this even in SIG	76
\state: We now do not print this even in SIG	76
\streetaddress: We now do not print this even in SIG	76
General: Added ‘textcase’ package	35
Added heightrounded to geometry	42
Added new copyright version: licensedcagov	30
Added package cleveref	30
Added Ross Moore code for glyptounicode	45
Bibliography changes	30
v1.41	
General: Added new badges	30
v1.42	
General: Deleted ACM badges	30
v1.43	
\@startsection: Added \makeatletter	39
\country: Added comma before country for journals	76
v1.44	
\@acmBooktitle: Added macro	56
\@acmEditors: Added macro	56
\@editorsAbbrev: Added macro	56
\@folioblob: Suppress the blob if acmArticleSeq is empty	87
\@mkbibcitation: If the paper has just one page, use ‘page’ instead of ‘pages’	83
\ACM@restore@pagestyle: Added macro	88
\acmArticle: The default is now empty	59
\acmArticleSeq: Now acmArticle might be empty	60
\acmBooktitle: Added macro	56
\editor: Added macro	56

\if@ACM@acmthm: Added macro	31	v1.47
\maketitle: Empty DOI or ISBN are not printed (by Michael Ekstrand)	69	v1.48
General: Added package refcount	30	\@headfootfont: Deleted unnecessary switch (Michael D. Adams)
Deleted package cleveref	30	\@mkabstract: Removed spurious indentation if abstract is followed by an empty line
Put theorem defs in a separate style	30	\ACM@timestamp: Fromatting change (Michael D. Adams)
v1.45		\if@ACM@review: Review mode now switches on folios
\@folioblob: Switched \bfseries\sffamily to \sffamily\bfseries	87	\maketitle: Added acmart and version info to pdfcreator tag
\@parfont: Switched \bfseries\sffamily to \sffamily\bfseries	90	Added language and doctitle attributes to PDF (Andreas Reichinger)
\@titlefont: Switched \bfseries\sffamily to \sffamily\bfseries	73	Suppressed empty DOI (Serguei Mokhov)
v1.46		General: \citeyear no longer behaves like \citeyearpar
\@mkauthorsaddresses: Introduced macro	82	Code prettying (Michael D. Adams)
\@mkbibcitation: Added subtitle	83	Initial support for Biblatex (Daniel Thomas)
\@printendtopmatter: Made it \par\bigskip uniformly	83	Misc entries in the bibliography no longer produce a separate date
\@printtopmatter: Deleted rule	72	Typos fixed (Jamie Davis)
\@setauthorsaddresses: Introduced macro	83	v1.50
\ACM@linecount@bx: Rearranged the code to get rid of spurious underfull messages (Benjamin Byholm)	84	\@copyrightpermission: New copyright statements for iw3c2w3[g]
\author: Started counting authors	57	v1.51
\authorsaddresses: Introduced macro	58	General: Corrected the bug with price suppression
\country: Corrected spacing for institution	76	Suppress price if the copyright is set to iw3c2w3 or iw3c2w3g
\if@ACM@acmthm: Modified description	31	XeTeX now uses OTF fonts (Joachim Breitner)
\liningnums: Workaround for compatibility with fontspec	46	firstpagestyle: We now use journal abbreviation for footers
\maketitle: Added authors' addresses	69	standardpagestyle: We now use journal abbreviation for footers
Thankses go before authors' addresses	69	v1.52
\num@authors: Introduced macro	56	\@copyrightowner: Rewording of licenses
General: Added etoolbox	30	\@copyrightpermission: Another rewording of copyright statements for iw3c2w3[g]
Bst file bug fixes: label width is calculated correctly	30	
Delayed hypersetup since journal options may change screen mode	40	
PACM now set screen to true	49	
Restore theorem defs to class file	30	

v1.53	
General: Added PACMCGIT, TIOT, TDSCI	49
v1.54	
\@mkbibcitation: Bug corrected (Ross Moore)	83
\@shortauthors: Added submission id in anonymous mode	85
\ACM@NR@adjustedSectionformat: Added macro	89
\ACM@NAdjust: Added macro	89
\ACM@adddotafter: Added macro . . .	90
\author: Added submission id in anonymous mode	57
\if@ACM@nonacm: Added macro	32
General: Added Ross's patch for sectioning	90
Deleted indent for subsubsection . .	90
XeTeX now uses T1 encoding	46

Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; numbers in roman refer to the code lines where the entry is used.
