

Sample APA-Style Document Using the `apa6` Package

Brian D. Beitzel
SUNY Oneonta

This demonstration paper uses the `apa6` L^AT_EX class to format the document in compliance with the 6th Edition of the American Psychological Association's *Publication Manual*. The references are managed using `biblatex`.

Keywords: APA style, demonstration

We begin with Shotton (1989). We can also cite this work in parenthesis, like this: (Shotton, 1989).

A three-author paper (e.g., Lassen, Steele, & Sailor, 2006) lists all three authors for the first citation, then only the first author on all subsequent citations (Lassen et al., 2006).

Note the use of five heading levels throughout this demonstration Method section.

Method

Participants

We had a lot of people in this study.

Materials

Several materials were used for this project. Some of them were already created for prior research.

Paper-and-Pencil Instrument. We used an instrument that we found to be highly successful.

Reliability. The reliability of this instrument is extraordinary.

Validity. We now discuss the validity of our instrument.

Face validity. The face validity is exceptionally strong. Everyone should be impressed.

Construct validity. Also very strong.

Design

This section describes the study's design.

Procedure

The procedure was fairly straightforward, yet required attention to detail.

Results

Table 1 contains some sample data. Our statistical prowess in analyzing these data is unmatched.

Table 1
A complex table

Distribution type	Percentage of targets with segment in		Total trials per participant
	Onset	Coda	
Categorical – onset	100	0	196
Probabilistic	80	20	200
	60	40	160
Categorical – coda	0	100	196

Discussion

This is a lengthy and erudite discussion. It demonstrates amazing skill in interpreting the results for the masses.
