ABSTRACT

This paper is an example and template for the `asmeconf` class. Papers typeset in this class will follow ASME Conference guidelines for margins, fonts, headings, captions, and reference formats. Standard \LaTeX commands are used. The class is compatible with the `hyperref` package. The class defines new environments for abstract and nomenclature. The optional argument of `\section` has been modified for manually setting pdf bookmarks when macros or complicated mathematics are included in section headings. The class is intended to be used with the `asmeconf.bst` \BibTeX style, which is part of this distribution. The class may be invoked with several options, most of which address math fonts. The class calls a number of packages, all of which are in \TeX LIVE and on CTAN (ctan.org).

Keywords: ASME, Paper, Template, \LaTeX , Research

INTRODUCTION

For ASME conference papers, the labels Figure and Equation should be abbreviated when they do not start a sentence, as in Fig. 1 and Eq. (2). Figure 1 is spelled out when it starts a sentence. Equation (2) is spelled out when it starts a sentence.

References are automatically numbered [1]. They should be inserted at the appropriate point using a `\cite{ref}` command [2, 3]. The references will be automatically sorted and

compressed as well if they are given in a set [1–7]. See the `asmeconf-sample.bib` file for examples of how to enter your references.

Equations are typeset in the usual way. The class file loads the `amsmath` and `mathtools` packages. Further, the `newtxmath` package used for the math fonts includes many additional features.

$$\vec{q} = -k\nabla T \quad (1)$$

ASME does not specify a standard nomenclature list. Be sure to put your symbols into the nomenclature list, including SI units.

Section headings and captions

ASME requires that section headings and captions be set in an uppercase, bold face, sans serif font. The class will do this automatically. You can place `\cite{.}`, `\ref{.}`, `\label{.}`, and into headings and captions directly, as you would in the main text. Do not enclose them braces, e.g. `{\cite{.}}`, which will cause errors. You can place `\footnote{.}` into headings, but not into captions.¹

Simple math can be used in either captions or section headings, but see the `asmeconf.tex` source file for examples of how to deal with more complicated expressions.

To get bold math, you can use the `\bm{.}` macro from the `bm` package, which is loaded by the class. To get sans serif math, you can use `\mathsf{.}`. So, you can write `\bm{\mathsf{A+B}}`

¹See `tex-stackexchange` for various approaches to footnotes in captions, if you really want to have them.

to put a bold, sans serif expression in a caption. The class file provides for sans serif greek letters by using `\sfa` and similar expressions (e.g. α , β , γ , δ . . .) for use in captions and headings (see Fig. 1).

For a section heading that includes more complicated math (and macros), you may use the optional argument of `\section[...]{...}` to create a pdf bookmark without losing characters or producing warnings or errors. See the `asmeconf.tex` source file for examples of this. These bookmarks should usually be text expressions, although some math is supported.

Text in section headings and captions will not be capitalized if enclosed in a `\NoCaseChange{...}` command.

Latin for layout. The rest of this text uses Latin to show layout and usage. Refer to the `.tex` file for further details. Quisque ullamcorper placerat ipsum. Cras nibh.
