

beamerswitch — Convenient mode selection in Beamer documents

Alex Ball

Class v1.6 — 2019/06/06

This class is a wrapper around the `beamer` class to make it easier to use the same document to generate the different forms of the presentation: the slides themselves, an abbreviated slide set for transparencies or online reference, an n-up handout version, and a transcript or set of notes using the `article` class.

To contact the author about this package, please visit the GitHub page where the code is hosted: <https://github.com/alex-ball/beamerswitch>.

1 Quick start guide

Here are the key facts:

- The `beamerswitch` class makes it easier to switch between `beamer` modes.
- It is aimed at you if you want to generate handouts from your presentation, whether printouts of your slides or something more like a paper or article.
- It is *not* a drop-in replacement for `beamer`.

If you have an existing `beamer` presentation and want convert it to use `beamerswitch` instead, here's what you need to do.

1. Have you specified class options other than `ignorenonframetext`? If so, start by rewriting your `\documentclass` line in terms of `\PassOptionsToClass` – note that the optional argument (in square brackets) becomes mandatory (in curly braces):

Before	After
<code>\documentclass[10pt]{beamer}</code>	<code>\PassOptionsToClass{10pt}{beamer}</code>

Then add ‘`\documentclass{beamerswitch}`’ directly below.

Otherwise, simply replace your `\documentclass` line with the `beamerswitch` one.

2. If you did *not* specify `ignorenonframetext` as one of your `beamer` options, add a ‘`\mode<all>`’ line directly after ‘`\begin{document}`’.

3. Wrap any preamble content intended only for your slides (like `\usetheme` or `\usepackage` commands) with ‘`\mode{...}`’ or something more specific, as required.

In summary, here is an example:

Before	After
<pre>\documentclass[10pt]{beamer} \usetheme{metropolis} \title{Test presentation} \begin{document} \maketitle \end{document}</pre>	<pre>\PassOptionsToClass{10pt}{beamer} \documentclass{beamerswitch} \mode<presentation>{% \usetheme{metropolis} } \title{Test presentation} \begin{document} \mode<all> \maketitle \end{document}</all></presentation></pre>

At this point the document should compile exactly as before.

If you intend to use article mode at all, I strongly suggest that you proceed by converting your document body so it that works without the ‘`\mode`’ line. That means making sure all slide content is in a `frame` environment, new command definitions are moved to the preamble, and so on.

Lastly, read through the rest of this manual and see what `beamerswitch` can do for you!

2 Introduction

With `beamer`, it is possible to typeset the same document code in different ways to get different effects. The result you get depends on a potentially confusing mix of options, modes, and indeed classes.

Beamer has five modes for typesetting content. There are three modes that produce regular slides:

- The `beamer` mode relates to the normal, default slide set.
- The `trans` class option switches to the mode of the same name. It is intended for transparencies, but is really just an alternative mode that ignores ‘bare’ overlay specifications.
- The `handout` class option switches to the mode of the same name. It is intended for print-friendly versions, but is really just another alternative mode that ignores ‘bare’ overlay specifications.

The `beamer` manual shows how to use `handout` mode in conjunction with `pgfpages` to get several slides on a single side of A4 (or Letter) paper.

Beamer can also produce a double-height or double-width slide set, with the intention that each half will be shown on a different display (e.g. one for the audience, one for the speaker). There are three variations of this, activated using `\setbeameroption`:

- `show notes on second screen` uses the second screen for text marked up using `\note{<text>}`.
- `second mode text on second screen` uses the second screen for showing the slide typeset in `second` mode rather than `beamer`. Unlike `trans` and `handout`, `second` responds to ‘bare’ overlay specifications.
- `previous slide on second screen`, uses the second screen either for showing the previous slide or, if the slide has the `typeset second` option set, for showing the current slide typeset in `second` mode.

The final variation is to use a different class altogether, such as `article`, in conjunction with `beamerarticle`. In this case the content is set free-flowing in `article` mode, without any of the frame furniture.

The `beamer` manual suggests coping with all these variations by having the document code in one file, and using it as input to other files that each set up a different mode of operation. This is fine but a bit of a fiddle. It would be nice to be able to get the same effect using a single file and, ideally, a single command invocation.

The `beamerswitch` class addresses this issue by acting as a wrapper around the various options, and providing a common interface for switching between modes. More specifically, it has three main functions:

1. To provide more choice of handout-mode layouts than `pgfpages` gives you out-of-the-box. Additionally, I hope you will find the method for selecting them more memorable.
2. To enable you to switch to `article` mode with a simple change of class option, instead of having to fiddle with commented-out `\documentclass` and `\usepackage` lines.
3. To allow you to override the `beamer` mode from the command line, by choosing a given jobname suffix. Primarily this is to allow you to generate the different versions programmatically. Indeed, the class provides facilities for generating multiple versions with a single command.

3 Dependencies

To use `beamerswitch`, you will need to have the following packages available and reasonably up to date on your system. All of these ship with recent TeX distributions.

- | | | |
|-------------------------|-------------------------|------------------------|
| • <code>beamer</code> | • <code>iftex</code> | • <code>xkeyval</code> |
| • <code>etoolbox</code> | • <code>pgf</code> | • <code>xstring</code> |
| • <code>hyperref</code> | • <code>shellesc</code> | |

One feature of the class uses `ltxmk` by default, though you can configure it to use something else if you need or want to.

4 Loading the class

The class is loaded in the usual way:

```
\documentclass[<options>]{beamerswitch}
```

The various options are described below.

4.1 Choosing the mode of the current run

The `beamerswitch` class, as explained above, does not do much itself but rather helps you to switch between `beamer` modes, specifically `article`, `beamer`, `trans` and `handout`. Note that it loads `beamer` with the `ignorenonframetext` option, so that text outside frames is only shown in `article` mode.

The normal way of choosing the mode is to use the respective class options.

article (no value, initially unset)

Switches to `article` mode, which uses the `article` class and resembles a normal article.

beamer (no value, initially set)

Switches to `beamer` mode, which uses the `beamer` class and resembles a normal slideshow.

handout (no value, initially unset)

Switches to `handout` mode, which uses the `beamer` class but uses a different series of overlay specifications. It resembles a set of printed pages with multiple slides shown on each page.

trans (no value, initially unset)

Switches to `trans` mode, which uses the `beamer` class and resembles a normal slideshow, but uses a different series of overlay specifications.

There is, however, a sneaky second way of setting the mode that overrides the first, and that is to use the `\jobname`. By default, this is the name of your `LATEX` file minus the `.tex` extension, but you can set it to something else when you run `LATEX`. If you set the `\jobname` to end in one of the following suffixes, the mode will automatically switch:

- `-article` will switch to `article` mode.
- `-handout` will switch to `handout` mode.
- `-slides` will switch to `beamer` mode.
- `-trans` will switch to `trans` mode.

The idea is that you can keep your source document the same, but by running `LATEX` with an alternative `\jobname`, you can get a different version out with a meaningfully different file name.

Of course, you may not want to use those suffixes. Perhaps you want them in German; perhaps your document's file name already ends in one of them; perhaps 'article' or 'trans' doesn't describe what you're using those modes for. The suffixes are provided by the following commands:

\ArticleSuffix

Holds the `\jobname` suffix that triggers `article` mode.

\BeamerSuffix

Holds the `\jobname` suffix that triggers `beamer` mode.

\HandoutSuffix

Holds the `\jobname` suffix that triggers `handout` mode.

\TransSuffix

Holds the `\jobname` suffix that triggers `trans` mode.

The CamelCase is an admittedly rather obscure signal to you that, if you want to change them to something else, you should do so via `\newcommand` before loading the class:

```
\newcommand*{\ArticleSuffix}{-script}
\documentclass{beamerswitch}
```

4.2 Using more than one mode at once

Another handy feature of the class is that it can spawn parallel compilations, so you could in theory generate all four versions from a single command. It achieves this magic by escaping to the shell and running `latexmk`. Thus for it to work you need to run `TeX` with shell escape enabled and you need `latexmk` to be installed.

alsoarticle (no value, initially unset)

Spawns a new compilation process in `article` mode.

alsobeamer (no value, initially unset)

Spawns a new compilation process in `beamer` mode.

alsohandout (no value, initially unset)

Spawns a new compilation process in `handout` mode.

alsotrans (no value, initially unset)

Spawns a new compilation process in `trans` mode.

also-{\<comma-separated list of modes>} (no default, initially empty)

Spawns compilation processes in each of the specified modes. Note that the list has to be wrapped in braces, and only the four aforementioned modes are recognized.

If you would rather use a tool other than `latexmk` to manage your spawned compilation processes, it is possible to do that. Bear in mind, though, that `beamerswitch` is not clever enough to spot if you have already compiled the other version on a previous run so you have to take care of that yourself. The command that does the business is this:

\BeamerswitchSpawn{\<suffix>}

Spawns a new compilation process with `<suffix>` appended to the `\jobname`.

By default, `\BeamerswitchSpawn` checks which `TeX` engine you are running, and then runs the matching one of `\SpawnedPDFTeX`, `\SpawnedXeTeX`, `\SpawnedLuaTeX`, or if all the tests fail, `\SpawnedTeX`, with the converted `\jobname`. These commands all add an engine-selecting option to a base command, `\SpawnedCompiler`, which by default is `latexmk` with `synctex` enabled, shell escape disabled and interaction set to batch mode. See the Implementation section below for details.

Any of these commands can be pre-defined to something else, depending on what you want to do. So, for example, if you want to change the base `latexmk` options, pre-define `\SpawnedCompiler` to `latexmk` plus your chosen options:

```
\newcommand*{\SpawnedCompiler}{%
    latexmk -silent -shell-escape -interaction=nonstopmode}
\documentclass{beamerswitch}
```

If you want to switch to using `rubber`, say, pre-define `\SpawnedPDFTeX` and friends accordingly (perhaps taking advantage of `\SpawnedCompiler` to reduce repetition):

```
\newcommand*{\SpawnedCompiler}{rubber -q --synctex}
\newcommand*{\SpawnedPDFTeX}{\SpawnedCompiler -m pdftex}
\newcommand*{\SpawnedXeTeX}{\SpawnedCompiler -m xelatex}
\documentclass{beamerswitch}
```

If you don't need the engine selection routine provided, simply pre-define `\BeamerswitchSpawn` to do whatever you need it to do:

```
\newcommand*{\BeamerswitchSpawn}[1]{%
    \ShellEscape{... -jobname=\jobname#1 \jobname}%
}
\documentclass{beamerswitch}
```

If you want to use `arara` to compile everything, the class options won't help you as `arara` does not let you change `\jobnames` on the command line. That's no problem, though, because you can do it manually within your list of directives:

```
% arara: lualatex
% arara: lualatex: { options: "-jobname beamerswitch-example-article" }
% arara: lualatex: { options: "-jobname beamerswitch-example-handout" }
% arara: lualatex: { options: "-jobname beamerswitch-example-trans" }
\documentclass{beamerswitch}
```

4.3 Improving compatibility

`nohyperref`

(no value, initially unset)

The `beamer` class loads `hyperref` for you, but when you switch to `article` mode, `beameralternate` doesn't, so it is easy for you to get caught out. To protect you from this, `beamerswitch` *does* load `hyperref` in `article` mode, with the pleasing side effect that `\subject` and `\keywords` then work as intended instead of throwing errors.

To achieve this, the class has to load `hyperref` quite early on, which can cause trouble with certain other packages. If you would rather load `hyperref` yourself at a different point, use this option.

`textinst`

(no value, initially unset)

In all modes, patches the `\inst` command so that it prints its argument using `\textsuperscript` instead of a mathematical superscript. This helps avoid unnecessary font changes.

5 Setting the layout of the handouts

The class provides a simplified interface to the `pgfpages` package. By default, it prints six slides to a side of A4 paper, but you can change this by using the following command in the preamble.

`\handoutlayout{<options>}`

Configures the layout of the page when using `handout` mode. It has no effect in other modes. The available `<options>` are listed below.

`paper=<paper size>` (no default, initially `a4paper`)

Selects the size of paper to use for `handout` mode. The value is passed directly to `pgfpages`, so consult the documentation of that package for the allowed values. You can find them under the documentation for the `resize to layout`.

`nup=2|3|3plus|4|4plus|6|8` (no default, initially `6`)

Selects how many slides are shown on a single page in `handout` mode. The ‘plus’ layouts leave blank space for recipients to make handwritten notes next to each slide. The effects of the various values are shown in Figure 1 on page 8. Note that the `2`, `3plus`, `4` and `6` layouts are intended for slides in the usual 4:3 aspect ratio, while the `3`, `4plus` and `8` layouts are intended for widescreen slides.

`pnos` (no value, initially unset)

Adds page numbers to the bottom of each page. The number appears at a distance of `\handoutpnobaseline` (initially 5mm) from the bottom edge of the page. You can change this before calling `\handoutlayout`, if you like, using the usual mechanisms (e.g. `\setlength`).

`border=<length>` (default 0.4pt, initially 0pt)

Puts a rectangular border of thickness `<length>` around each slide.

`margin=<length>` (default 0pt, initially 5mm)

Sets how much extra space to leave around each slide on the page. To achieve this it uses the `border shrink` option from `pgfpages`. If you add page numbers, this value will increase if necessary to prevent the number colliding with the slides, so treat it as a minimum.

`align` (no value, initially unset)

When `margin` is non-zero, the effective page margins are approximately half the size of the gaps between slides (some additional white space comes from preserving the aspect ratio of the slides). When set, this option tweaks the positions of the slides so that the page margins are approximately the same as the interior gaps.

6 Changing the look of article mode

Some additional options can be set by using the following command in the preamble.

`\articletlayout{<options>}`

Configures the appearance of `article` mode. It has no effect in other modes. The available `<options>` are listed below.

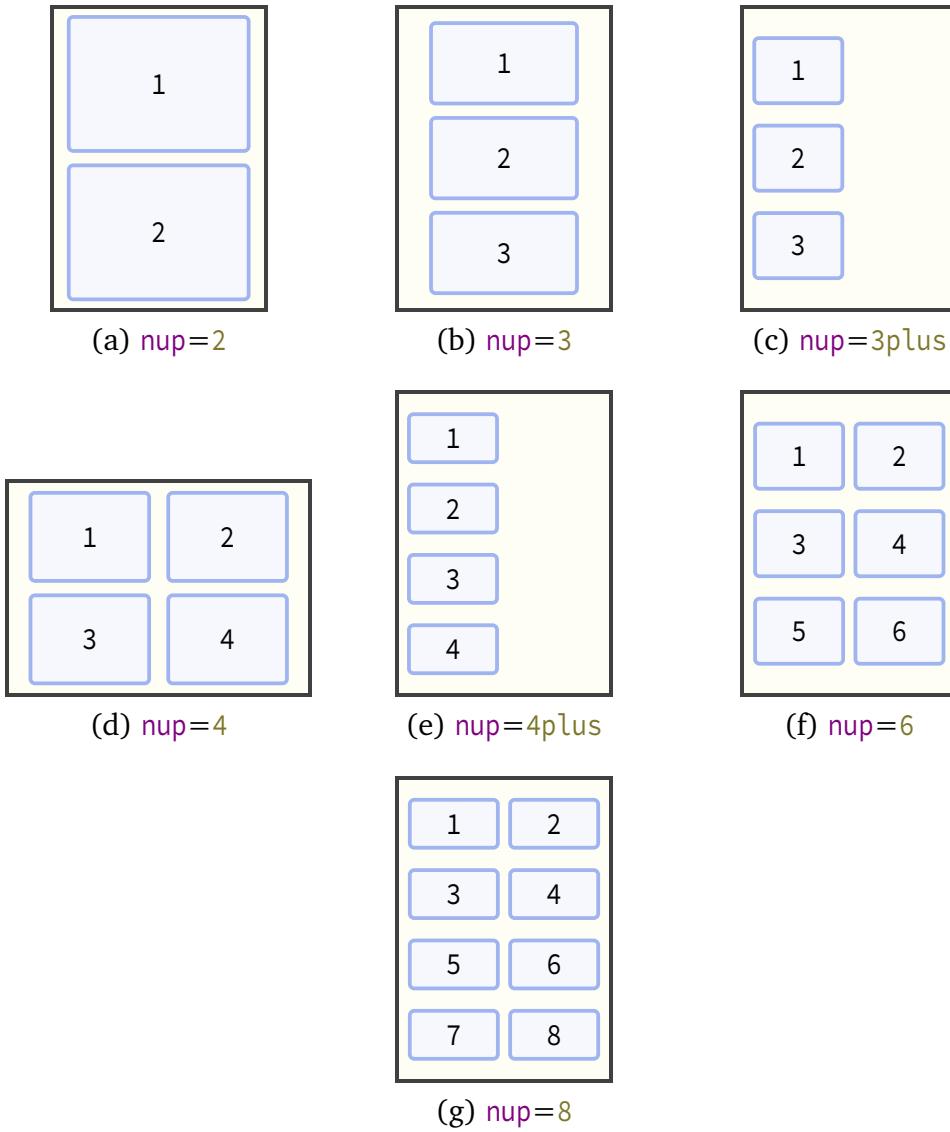

Figure 1: Handout layouts provided by `beamerswitch`

frametitles=`para`|`margin`|`none`

(no default, initially `para`)

In `article` mode, affects how frame titles are printed. By default, `beamerarticle` prints them as paragraph headings, represented by the value `para`. To have them printed in the margin (using `\marginpar`), use `margin`. To omit them altogether, use the value `none`.

maketitle

(no value, initially unset)

In `article` mode, adjusts the `\maketitle` routine:

- The title is printed closer to the top margin.
- The subtitle is shown joined to the title using a colon (rather than on a new line).
- The institute is shown directly beneath the author name, similar to the `beamer` layout, so you can use `\inst` just as in `beamer` to tie authors to their affiliations.

If you have `xparse` (and hence `expl3`) installed, the class will detect cases where your title ends in a character like '?' and will not add a colon to it in that case. You

can also suppress the colon manually with the following code (add it *after* using `\title` if automatic detection is in effect):

```
\toggletrue{titlepunct}
```

7 Tips for further configuration

There are some other ways to customize the behaviour of the various modes.

You can use the standard L^AT_EX methods for customizing how the `article` and `beamer` classes are loaded:

```
\PassOptionsToClass{a4paper,11pt}{article} % for article mode
\PassOptionsToClass{utf8}{beamer} % for beamer, handout, trans modes
\documentclass{beamerswitch}
```

And of course there is the standard `beamer` way of passing different options to different modes:

```
\documentclass{beamerswitch}
\mode

{
    \usepackage[utf8]{inputenc}
}
\mode{
    \setbeameroption{second mode text on second screen}
}

```

8 Feedback

I hope you find this class useful. Please report any bugs and add any suggestions for improvements or new features to the [Issue Tracker](#) on GitHub.

9 Implementation

9.1 Dependencies

We use the following packages:

- `xkeyval` with `xkvltxp` for setting options
- `etoolbox` for command patches and list processing
- `xstring` for comparisons
- `shellesc` for running parallel compilations
- `iftex` for determining which engine to use

```
19 \RequirePackage{xkeyval,xkvltxp,etoolbox,xstring,shellesc,iftex}
```

9.2 Class options

We recognize four main modes of operation: ‘beamer’, ‘trans’, ‘handout’, and ‘article’.

The `beamer` option triggers beamer mode.

```
20 \define@boolkey[DC]{beamerswitch}{beamer}[true]{%
21   \ifbool{DC@beamerswitch@beamer}{%
22     \setkeys[DC]{beamerswitch}{trans=false}
23     \setkeys[DC]{beamerswitch}{handout=false}
24     \setkeys[DC]{beamerswitch}{article=false}
25   }{}%
26 }
```

The `trans` option triggers trans mode.

```
27 \define@boolkey[DC]{beamerswitch}{trans}[true]{%
28   \ifbool{DC@beamerswitch@trans}{%
29     \setkeys[DC]{beamerswitch}{beamer=false}
30     \setkeys[DC]{beamerswitch}{handout=false}
31     \setkeys[DC]{beamerswitch}{article=false}
32   }{}%
33 }
```

The `handout` option triggers handout mode.

```
34 \define@boolkey[DC]{beamerswitch}{handout}[true]{%
35   \ifbool{DC@beamerswitch@handout}{%
36     \setkeys[DC]{beamerswitch}{beamer=false}
37     \setkeys[DC]{beamerswitch}{trans=false}
38     \setkeys[DC]{beamerswitch}{article=false}
39   }{}%
40 }
```

The `article` option triggers article mode.

```

41 \define@boolkey[DC]{beamerswitch}{article}[true]{%
42   \ifbool{DC@beamerswitch@article}{%
43     \setkeys[DC]{beamerswitch}{beamer=false}
44     \setkeys[DC]{beamerswitch}{trans=false}
45     \setkeys[DC]{beamerswitch}{handout=false}
46   }{}%
47 }

```

The `also` option allows the user to specify a set of alternative modes to typeset in parallel, in a comma-separated list. Alternatively, the user can specify the Boolean `also*` options directly.

```

48 \define@boolkey[DC]{beamerswitch}{alsobeamer}[true]{}
49 \define@boolkey[DC]{beamerswitch}{alsotrans}[true]{}
50 \define@boolkey[DC]{beamerswitch}{alsohandout}[true]{}
51 \define@boolkey[DC]{beamerswitch}{alsoarticle}[true]{}
52 \newcommand{\beamerswitch@SetAlso}[1]{%
53   \key@ifundefined[DC]{beamerswitch}{also#1}{%
54     \ClassWarning{beamerswitch}{`#1' is not a valid value for option `also'}%
55   }{%
56     \setkeys[DC]{beamerswitch}{also#1}%
57   }%
58 }
59 \define@key[DC]{beamerswitch}{also}{%
60   \forcsvlist{\beamerswitch@SetAlso}{#1}%
61 }

```

The `nohyperref` option stops the class from loading the `hyperref` package in article mode.

```
62 \define@boolkey[DC]{beamerswitch}{nohyperref}[true]{}
```

The `textinst` option adjusts the superscript used for institution markers.

```
63 \define@boolkey[DC]{beamerswitch}{textinst}[true]{}
```

The default behaviour is to use beamer mode only.

```

64 \setkeys[DC]{beamerswitch}{beamer=true,alsobeamer=false,alsotrans=false,%
65   alsohandout=false,alsoarticle=false}

```

Now we process the options given by the user.

```
66 \ProcessOptionsX[DC]<beamerswitch>
```

9.3 Jobname-based mode switching

We define some default values for the special suffixes.

```

67 \providecommand*\BeamerSuffix{-slides}
68 \providecommand*\TransSuffix{-trans}
69 \providecommand*\HandoutSuffix{-handout}

```

```
70 \providecommand*{\ArticleSuffix}{-article}
```

We provide a special routine for spawning new L^AT_EX processes. We allow for the possibility of the user overriding this routine with another one, perhaps using a different automation tool; it should take one argument, being the jobname suffix.

```
71 \providecommand{\SpawnedCompiler}{\latexmk -silent -synctex=1
72   → -interaction=batchmode }
73 \providecommand{\SpawnedTeX}{\SpawnedCompiler}
74 \providecommand{\SpawnedPDFTeX}{\SpawnedCompiler -pdf }
75 \providecommand{\SpawnedLuaTeX}{\SpawnedCompiler -pdflua }
76 \providecommand{\SpawnedXeTeX}{\SpawnedCompiler -pdfxe }
77 \providecommand{\BeamerswitchSpawn}[1]{%
78   \ifbool{PDFTeX}{%
79     \ShellEscape{\SpawnedPDFTeX -jobname=\jobname#1 \jobname}
80   }{%
81     \ifbool{LuaTeX}{%
82       \ShellEscape{\SpawnedLuaTeX -jobname=\jobname#1 \jobname}
83     }{%
84       \ifbool{XeTeX}{%
85         \ShellEscape{\SpawnedXeTeX -jobname=\jobname#1 \jobname}
86       }{%
87         \ShellEscape{\SpawnedTeX -jobname=\jobname#1 \jobname}
88       }%
89     }%
90   }%
```

We check for special jobnames and use them to override the above mode-related options. In certain circumstances, the jobname is wrapped in quote marks, so in that case we strip them off before running the tests.

```
91 \IfBeginWith*{\jobname}{"}{%
92   \IfEndWith*{\jobname}{"}{%
93     \StrGobbleLeft{\jobname}{1}[\JobName]%
94     \StrGobbleRight{\JobName}{1}[\JobName]%
95   }{\let\JobName\jobname}%
96 }{\let\JobName\jobname}
```

Now we run the tests. Note that the `also*` options are only acted upon if the all the tests fail.

```
97 \IfEndWith*{\JobName}{\BeamerSuffix}{%
98   \setkeys[DC]{beamerswitch}{beamer=true}
99 }{%
100 \IfEndWith*{\JobName}{\TransSuffix}{%
101   \setkeys[DC]{beamerswitch}{trans=true}
102 }{%
103 \IfEndWith*{\JobName}{\HandoutSuffix}{%
104   \setkeys[DC]{beamerswitch}{handout=true}
105 }{%
106 \IfEndWith*{\JobName}{\ArticleSuffix}{%
107   \setkeys[DC]{beamerswitch}{article=true}
108 }{%
109 \ifbool{DC@beamerswitch@alsobeamer}{%
```

```

110     \BeamerSwitchSpawn{\BeamerSuffix}%
111     }{%
112     \ifbool{DC@beamerswitch@alsotrans}{%
113         \BeamerSwitchSpawn{\TransSuffix}%
114     }{%
115     \ifbool{DC@beamerswitch@alsohandout}{%
116         \BeamerSwitchSpawn{\HandoutSuffix}%
117     }{%
118     \ifbool{DC@beamerswitch@alsoarticle}{%
119         \BeamerSwitchSpawn{\ArticleSuffix}%
120     }{%
121         }%
122     }%
123     }%
124 }

```

9.4 Setting up modes

For article mode, we load the `article` class and the `beamerarticle` support package. Apologies for anyone hoping for `scrartcl` or `memoir` alternatives.

```

125 \ifbool{DC@beamerswitch@article}{%
126     \LoadClass{article}%
127     \RequirePackage{beamerarticle}%

```

It seems as though `beamerarticle` expects `hyperref` to be loaded, but doesn't actually do it itself. So we oblige, using the default options specified by `beamer`.

```

128 \ifbool{DC@beamerswitch@nohyperref}{}{%
129     \RequirePackage[bookmarks=true,%%
130     bookmarksopen=true,%%
131     pdfborder={0 0 0},%
132     pdfhighlight={/N},%
133     linkbordercolor={.5 .5 .5}]{hyperref}%
134 }

```

While `beamer` takes care of adding presentation metadata to the PDF properties, `beamerarticle` misses the title and author properties. (It does manage to set the subject and keywords, though.) We achieve parity with some additional `\hypersetup`. Note that `beamerarticle` appends the subtitle to `\@title` with a linebreak and this does odd things in the context of `pdftitle`, so we fix it with `\pdfstringdefDisableCommands`.

```

135 \AtBeginDocument{%
136     \@ifpackageloaded{hyperref}{%
137         \pdfstringdefDisableCommands{\def\@#1#2{ - #2}}%
138         \begingroup
139         \hypersetup{pdftitle={\@title}}%
140         \def\and{\unskip, }%
141         \let\thanks=\gobble
142         \let\inst=\gobble
143         \hypersetup{pdfauthor={\@author}}%
144         \endgroup
145     }{%

```

```
146 }
147 }{%
```

For the presentation modes, we load the `beamer` class with appropriate options. Since we are targeting users wanting different versions of their presentations with the same code, we activate `ignorenonframetext`.

```
148 \ifbool{DC@beamerswitch@handout}{%
149   \LoadClass[ignorenonframetext,handout]{beamer}
```

Handout mode lays multiple slides out on a single page. For this we use `pgfpages`. The actual configuration is handled later.

```
150 \RequirePackage{pgfpages}
```

We also activate `ignorenonframetext` for the other two modes.

```
151 }{%
152   \ifbool{DC@beamerswitch@trans}{%
153     \LoadClass[ignorenonframetext,trans]{beamer}
154   }{%
155     \LoadClass[ignorenonframetext]{beamer}
156   }%
157 }
158 }
```

9.5 Mode-independent layout

We implement the option that formats institution markers in text mode rather than math mode.

```
159 \ifbool{DC@beamerswitch@textinst}{%
160   \def\beamer@insttitle#1{\textsuperscript{#1}}
161   \def\beamer@instinst#1{\textsuperscript{#1}\ignorespaces}
162 }
```

9.6 Handout layout

In theory it would be nice to anticipate the paper size that the article mode would use, and pass that as an option to `\pgfpagesuselayout` but as that's unlikely to be clean code, we settle here for setting it with an option.

```
163 \def\beamerswitch@handoutpaper{a4paper}
164 \define@key[HL]{beamerswitch}{paper}{%
165   \def\beamerswitch@handoutpaper{#1}%
166 }
```

The `nup` option specifies how many slides to include per page. The ‘plus’ keyword indicates a layout with additional gaps for writing.

```

167 \newcounter{beamerswitch@nupcase}
168 \setcounter{beamerswitch@nupcase}{5}
169 \define@choicekey+[HL]{beamerswitch}{nup}[\val\nr]{2, 3, 3plus, 4, 4plus, 6, 8}{%
170   \setcounter{beamerswitch@nupcase}{\nr}
171 }{%
172   \ClassWarning{beamerswitch}{Value of `nup' not recognized.
173     Allowed values are 2, 3, 3plus, 4, 4plus, 6, and 8.}%
174 }

```

The `borders` option switches on borders around the slides on handout pages (and gaps where slides would appear if there were enough). The value is used to set the width of the border.

This is implemented as a PGF drawing command, which is initially set up to do nothing but gets filled out if the option is selected. As part of this, we calculate the number of the current slide (`handoutpno` gives the current page number minus one; `\beamerswitch@nup` is the number of slides per page; and `\pgf@cpn` gives the count of the current slide on the current page). If this exceeds the total number of slides, we suppress the border.

```

175 \newcommand*\beamerswitch@Border{\relax}
176 \define@key[HL]{beamerswitch}{border}[0.4pt]{%
177   \RequirePackage{pgf}%
178   \ifdimcomp[#1]{>}{0pt}{%
179     \renewcommand*\beamerswitch@Border{%
180       \ifnumcomp{(\value{handoutpno} * \beamerswitch@nup) + \the\pgf@cpn}{%
181         {>}{\beamer@endpageofdocument}{%
182           \relax
183         }{%
184           \pgfsetlinewidth{\#1}\pgfstroke
185         }{%
186         }{%
187       }{%
188         \renewcommand*\beamerswitch@Border{\relax}%
189       }%
190     }

```

The `margin` option controls how much white space is added around each slide on handout pages. It corresponds to the `border shrink` option of `\pgfpagesuselayout`.

```

191 \newlength{\beamerswitch@margin}
192 \setlength{\beamerswitch@margin}{5mm}
193 \define@key[HL]{beamerswitch}{margin}[0pt]{%
194   \setlength{\beamerswitch@margin}{\#1}%
195 }

```

The `align` option chooses whether to rejig the positions of the slides on the page so that the effective page margin is the same as, rather than half, the space between adjacent slides.

```

196 \define@boolkey[HL]{beamerswitch}{align}[true]{}

```

The `pnos` option switches on page numbers for handout pages. The height at which the baseline of the number sits, relative to the bottom edge of the paper, is given by the length `\handoutpnbaseline`.

```

197 \newlength{\handoutpnobaseline}
198 \setlength{\handoutpnobaseline}{5mm}
199 \newcounter{handoutpno}
200 \define@boolkey[HL]{beamerswitch}{pnos}[true]{}

```

In order to implement the page numbers, we need to add a hook to the `pgfpages` `shipout` routine.

```

201 \def\beamerswitch@footer{}
202 \patchcmd{\pgfpages@buildshipoutbox}{%
203   \pgfsys@endpicture
204 }{%
205   \beamerswitch@footer\pgfsys@endpicture
206 }{}{}

```

We set up the `\handoutlayout` command for applying these options.

The hook `\beamerswitch@footer` is used to step the page number counter `handoutpno`; if page numbering is active, it also places the number on the page centered and `\handoutpnobaseline` up from the bottom.

The length `\beamerswitch@pnoadjust` is, conceptually, the height of the page number. When page numbers are active, the margin around slides is automatically increased to guarantee that the top of the page number will not be higher than the bottom of the lowest slide. Currently this does not account for extra whitespace arising from aspect ratio issues. When the `align` option is active, the margin at the bottom of the page is increased, but to save a register we make the adjustment to `\beamerswitch@pnoadjust` instead of a copy of `\beamerswitch@margin`.

```

207 \newlength{\beamerswitch@pnoadjust}
208 \newcommand*{\handoutlayout}[1]{%

Though pgfpages defines some perfectly fine layouts, we need to add configurability to the existing ones and provide some new ones.

The ‘1 by 2’ layout is similar to the normal `2 on 1` layout.

```

9.7 Article layout

We provide some options for configuring the appearance of article mode.

The `maketitle` option triggers adjustments in how the title block is printed.

```
1131 \define@boolkey[AL]{beamerswitch}{maketitle}[true]{}
```

One will be to join the title and subtitle with a colon. There is an edge case where, if the user provides a title that ends in ‘!’ or ‘?’ and provides a subtitle while this option is in effect, they will end up with clashing punctuation in the middle of the displayed title (‘!:’ or ‘?:’). We therefore introduce a toggle that, if set true, suppresses the additional colon.

```
1132 \newtoggle{titlepunct}
```

Of course, we would rather not bother the user with this, so we introduce a command for testing the title for final punctuation.

The only way I can seem to do this is by switching to `expl3` syntax. Rather than introduce extra hard dependencies to cope with what will probably be quite a rare issue, we make the dependency soft: it will only be applied if `xparse` is available. If there is demand for it, we could introduce a class option to switch this code on or off, but let’s see how we go.

```
1133 \IfFileExists{xparse.sty}{\@tempswatrue}{\@tempswafalse}
1134 \if@tempswa
1135   \RequirePackage{xparse}
1136   \ExplSyntaxOn
1137   \NewDocumentCommand{\bsw@punct@test}{m}{\l_bsw_punct_test:n {#1}}
1138   \cs_new_protected:Nn \l_bsw_punct_test:
1139   {
1140     \str_case_x:nnTF { \str_item:nn {#1} {-1} }
1141     {
1142       { , } { }
1143       { ; } { }
1144       { : } { }
1145       { . } { }
1146       { ! } { }
1147       { ? } { }
1148     }
1149     { \global\toggletrue{titlepunct} }
1150     { \global\togglefalse{titlepunct} }
1151   }
1152 \ExplSyntaxOff
```

We insert this test into the definitions for `\title` introduced by `beamer/beamerarticle`.

```
1153 \mode<article>{%
1154   \renewcommand{\title}[2][]{\beamer@origtitle{#2}\bsw@punct@test{#2}}
1155 }
1156 \mode<presentation>{%
1157   \long\def\beamer@title[#1]#2{%
1158     \def\inserttitle{#2}%
1159     \def\beamer@shorttitle{#1}%
1160     \bsw@punct@test{#2}%
1161   }
1162 }
1163 \else
1164   \wlog{Beamerswitch: Auto-detection of title punctuation not available.}
```

```
1165 \fi
```

We offer some alternatives for handling frame titles in article mode.

- `para` is what `beamerarticle` normally does.
- `margin` puts the frame titles in the margin.
- `none` gets rid of them entirely.

```
1166 \define@choicekey+[AL]{beamerswitch}{frametitles}{para, margin, none}{%
1167   \def\beamerswitch@articleframetitles{\#1}%
1168 }{%
1169   \ClassWarning{beamerswitch}{Value of `frametitles' not recognized.%
1170     Allowed values are para, margin, and none.}%
1171 }
```

We provide a command for setting these options.

```
1172 \newcommand{\articlelayou}[1]{%
1173   \setkeys[AL]{beamerswitch}{#1}%
}
```

The following options are mode specific.

```
1174 \mode

{%

```

Personally I find slide titles somewhat intrusive in article mode. They can easily end up duplicating section headings in running text, or captions in figures. You may have other ideas, so we keep this behaviour configurable.

The `margin` value is implemented using `\marginpar`.

```
1175 \ifcsstring{beamerswitch@articleframetitles}{margin}{%
1176   \setbeamertemplate{frametitle}{%
1177     \marginpar[%
1178       \raggedleft\noindent\emshape\textbf{\insertframetitle}\par
1179       \noindent\insertframesubtitle\par
1180     ]{%
1181       \raggedright\noindent\emshape\textbf{\insertframetitle}\par
1182       \noindent\insertframesubtitle\par
1183     }%
1184   }%
1185 }{%
1186   \ifcsstring{beamerswitch@articleframetitles}{none}{%
1187     \setbeamertemplate{frametitle}{}
1188   }{%
1189     \ifcsstring{beamerswitch@articleframetitles}{para}{%
1190       \setbeamertemplate{frametitle}[default]
1191     }{%
1192     }%
1193   }
}
```

This is where we make our adjustments to `\maketitle`. We start by joining the subtitle to the title by means of a colon instead of a newline.

```

1194 \ifbool{AL@beamer@switch@maketitle}{%
1195   \renewcommand{\subtitle}[2][]{%
1196     \def\insertsubtitle{\gappto{\title}{\iftoggle{titlepunct}{}{:}} ##2}%
1197   }

```

We add support for printing the institute information.

```

1198 \ifundef{\beamer@origininstitute}{%
1199   \renewcommand{\institute}[2][]{\def\insertinstitute##2}{%
1200   }{%
1201     \renewcommand{\institute}[2][]{%
1202       \def\insertinstitute##2{\beamer@origininstitute##2}%
1203     }%

```

Our first change to `\maketitle` itself is to remove the initial vertical space.

```

1204 \def\@maketitle{%
1205   \newpage
1206   \null
1207   \begin{center}%
1208     \let\footnote\thanks
1209     {\LARGE \@title \par}%
1210     \vskip 1.5em%
1211   }%
1212   \large\lineskip .5em%
1213   \begin{tabular}[t]{c}%
1214     \author
1215   \end{tabular}\par
1216 }%

```

The other is to add in a row for the institute information.

```

1217 \ifdefvoid{\insertinstitute}{}{%
1218   {%
1219     \normalsize\lineskip .5em%
1220     \begin{tabular}[t]{c}%
1221       \insertinstitute
1222     \end{tabular}\par
1223   }%
1224 }%
1225   \vskip 1em%
1226   {\large \@date}%
1227   \end{center}%
1228   \par\vskip 1.5em%
1229 }%
1230 }{%
1231 }%

```

For consistency, if the `maketitle` option has been passed, we change the PDF metadata in the other modes to use the colon convention for joining the title and subtitle.

```

1232 \mode{%
1233   \ifbool{AL@beamer@switch@maketitle}{%
1234     \ifbool{beamer@autopdfinfo}{%
1235       \patchcmd{\beamer@firstminutepatches}{%

```

```

1236     \inserttitle\ifx\insertsubtitle@\empty\else\ - \insertsubtitle\fi
1237 }{%
1238     \inserttitle\ifx\insertsubtitle@\empty\else\iftoggle{titlepunct}{}{:}
1239         \insertsubtitle\fi
1240     }{}{%
1241     }{}{%
1242     }{}{%
1243 }

```

There is no more.

```

1244 \endinput

```

Change History

v1.1	
	\articlelayout: Remove personal customizations from <code>maketitle</code> code.
	General: Fix <code>maketitle</code> and <code>textinst</code> options.
	Improve documentation of <code>\BeamerSwitchSpawn</code> , <code>\handoutlayout</code> and <code>\articlelayout</code>
v1.2	
	General: Add ‘Quick start guide’ section.
v1.3	
	\BeamerSwitchSpawn: Decompose <code>\BeamerSwitchSpawn</code> into further configurable macros.
v1.4	
	General: Make margins around slides a configurable size
v1.5	
	\beamerswitch@Border: Remove empty frames from end of handout.
v1.6	
	\JobName: Fix bug triggered by spaces in job names.
