

beamerswitch — Convenient mode selection in Beamer documents

Alex Ball

Class v1.2 — 2017/05/22

This class is a wrapper around the `beamer` class to make it easier to use the same document to generate the different forms of the presentation: the slides themselves, an abbreviated slide set for transparencies or online reference, an n-up handout version, and a transcript or set of notes using the `article` class.

To contact the author about this package, please visit the GitHub page where the code is hosted: <https://github.com/alex-ball/beamerswitch>.

1 Quick start guide

Here are the key facts:

- The `beamerswitch` class makes it easier to switch between `beamer` modes.
- It is aimed at you if you want to generate handouts from your presentation, whether printouts of your slides or something more like a paper or article.
- It is *not* a drop-in replacement for `beamer`.

If you have an existing `beamer` presentation and want convert it to use `beamerswitch` instead, here's what you need to do.

1. Have you specified class options other than `ignorenonframetext`? If so, start by rewriting your `\documentclass` line in terms of `\PassOptionsToClass`:

Before	After
<code>\documentclass[10pt]{beamer}</code>	<code>\PassOptionsToClass{10pt}{beamer}</code>

Then add '`\documentclass{beamerswitch}`' directly below.

Otherwise, simply replace your `\documentclass` line with the `beamerswitch` one.

2. If you did *not* specify `ignorenonframetext` as one of your `beamer` options, add a '`\mode<all>`' line directly after '`\begin{document}`'.
3. Wrap any preamble content intended only for your slides (like `\usetheme` or `\usepackage` commands) with '`\mode<presentation>{...}`' or something more specific, as required.

In summary, here is an example:

Before	After
<pre>\documentclass[10pt]{beamer} \usetheme{metropolis} \title{Test presentation} \begin{document} \maketitle \end{document}</pre>	<pre>\PassOptionsToClass{10pt}{beamer} \documentclass{beamerswitch} \mode<presentation>{% \usetheme{metropolis} } \title{Test presentation} \begin{document} \mode<all> \maketitle \end{document}</presentation></pre>

At this point the document should compile exactly as before.

If you intend to use article mode at all, I strongly suggest that you proceed by converting your document body so it that works without the '`\mode<all>`' line. That means making sure all slide content is in a `frame` environment, new command definitions are moved to the preamble, and so on.

Lastly, read through the rest of this manual and see what `beamerswitch` can do for you!

2 Introduction

With `beamer`, it is possible to typeset the same document code in different ways to get different effects. The result you get depends on a potentially confusing mix of options, modes, and indeed classes.

Beamer has five modes for typesetting content. There are three modes that produce regular slides:

- The `beamer` mode relates to the normal, default slide set.
- The `trans` class option switches to the mode of the same name. It is intended for transparencies, but is really just an alternative mode that ignores ‘bare’ overlay specifications.
- The `handout` class option switches to the mode of the same name. It is intended for print-friendly versions, but is really just another alternative mode that ignores ‘bare’ overlay specifications.

The `beamer` manual shows how to use `handout` mode in conjunction with `pgfpages` to get several slides on a single side of A4 (or Letter) paper.

Beamer can also produce a double-height or double-width slide set, with the intention that each half will be shown on a different display (e.g. one for the audience, one for the speaker). There are three variations of this, activated using `\setbeameroption`:

- `show notes on second screen` uses the second screen for text marked up using `\note{<text>}`.
- `second mode text on second screen` uses the second screen for showing the slide typeset in `second` mode rather than `beamer`. Unlike `trans` and `handout`, `second` responds to ‘bare’ overlay specifications.
- `previous slide on second screen`, uses the second screen either for showing the previous slide or, if the slide has the `typeset second` option set, for showing the current slide typeset in `second` mode.

The final variation is to use a different class altogether, such as `article`, in conjunction with `beamerarticle`. In this case the content is set free-flowing in `article` mode, without any of the frame furniture.

The `beamer` manual suggests coping with all these variations by having the document code in one file, and using it as input to other files that each set up a different mode of operation. This is fine but a bit of a fiddle. It would be nice to be able to get the same effect using a single file and, ideally, a single command invocation.

The `beamerswitch` class addresses this issue by acting as a wrapper around the various options, and providing a common interface for switching between modes. More specifically, it has three main functions:

1. To provide more choice of handout-mode layouts than `pgfpages` gives you out-of-the-box. Additionally, I hope you will find the method for selecting them more memorable.
2. To enable you to switch to `article` mode with a simple change of class option, instead of having to fiddle with commented-out `\documentclass` and `\usepackage` lines.
3. To allow you to override the `beamer` mode from the command line, by choosing a given jobname suffix. Primarily this is to allow you to generate the different versions programmatically. Indeed, the class provides facilities for generating multiple versions with a single command.

3 Dependencies

To use `beamerswitch`, you will need to have the following packages available and reasonably up to date on your system. All of these ship with recent TeX distributions.

- | | | |
|-------------------------|-------------------------|------------------------|
| • <code>beamer</code> | • <code>iftex</code> | • <code>xkeyval</code> |
| • <code>etoolbox</code> | • <code>pgf</code> | • <code>xstring</code> |
| • <code>hyperref</code> | • <code>shellesc</code> | |

One feature of the class uses `latexmk` by default, though you can configure it to use something else if you need or want to.

4 Loading the class

The class is loaded in the usual way:

```
\documentclass[<options>]{beamerswitch}
```

The various options are described below.

4.1 Choosing the mode of the current run

The `beamerswitch` class, as explained above, does not do much itself but rather helps you to switch between `beamer` modes, specifically `article`, `beamer`, `trans` and `handout`. Note that it loads `beamer` with the `ignorenonframetext` option, so that text outside frames is only shown in `article` mode.

The normal way of choosing the mode is to use the respective class options.

article (no value, initially unset)

Switches to `article` mode, which uses the `article` class and resembles a normal article.

beamer (no value, initially set)

Switches to `beamer` mode, which uses the `beamer` class and resembles a normal slideshow.

handout (no value, initially unset)

Switches to `handout` mode, which uses the `beamer` class but uses a different series of overlay specifications. It resembles a set of printed pages with multiple slides shown on each page.

trans (no value, initially unset)

Switches to `trans` mode, which uses the `beamer` class and resembles a normal slideshow, but uses a different series of overlay specifications.

There is, however, a sneaky second way of setting the mode that overrides the first, and that is to use the `\jobname`. By default, this is the name of your `LATEX` file minus the `.tex` extension, but you can set it to something else when you run `LATEX`. If you set the `\jobname` to end in one of the following suffixes, the mode will automatically switch:

- `-article` will switch to `article` mode.
- `-handout` will switch to `handout` mode.
- `-slides` will switch to `beamer` mode.
- `-trans` will switch to `trans` mode.

The idea is that you can keep your source document the same, but by running `LATEX` with an alternative `\jobname`, you can get a different version out with a meaningfully different file name.

Of course, you may not want to use those suffixes. Perhaps you want them in German; perhaps your document's file name already ends in one of them; perhaps 'article' or 'trans' doesn't describe what you're using those modes for. The suffixes are provided by the following commands:

\ArticleSuffix

Holds the `\jobname` suffix that triggers `article` mode.

\BeamerSuffix

Holds the `\jobname` suffix that triggers `beamer` mode.

\HandoutSuffix

Holds the `\jobname` suffix that triggers `handout` mode.

\TransSuffix

Holds the `\jobname` suffix that triggers `trans` mode.

The CamelCase is an admittedly rather obscure signal to you that, if you want to change them to something else, you should do so via `\newcommand` before loading the class:

```
\newcommand*{\ArticleSuffix}{-script}
\documentclass{beamerswitch}
```

4.2 Using more than one mode at once

Another handy feature of the class is that it can spawn parallel compilations, so you could in theory generate all four versions from a single command. It achieves this magic by escaping to the shell and running `latexmk`. Thus for it to work you need to run `TeX` with shell escape enabled and you need `latexmk` to be installed.

alsoarticle

(no value, initially unset)

Spawns a new compilation process in `article` mode.

alsobeamer

(no value, initially unset)

Spawns a new compilation process in `beamer` mode.

alsohandout

(no value, initially unset)

Spawns a new compilation process in `handout` mode.

alsotrans

(no value, initially unset)

Spawns a new compilation process in `trans` mode.

also={*comma-separated list of modes*}

(no default, initially empty)

Spawns compilation processes in each of the specified modes. Note that the list has to be wrapped in braces, and only the four aforementioned modes are recognized.

If you would rather use a tool other than `latexmk` to manage your spawned compilation processes, it is possible to do that. Bear in mind, though, that `beamerswitch` is not clever enough to spot if you have already compiled the other version on a previous run so you have to take care of that yourself. The command that does the business is this:

\BeamerswitchSpawn{*suffix*}

Spawns a new compilation process with *suffix* appended to the `\jobname`.

See the [Implementation](#) section below for the default definition. Again, if you want to pre-define this to do something else, you have to do it before loading the class:

```
\newcommand{\BeamerSwitchSpawn}[1]{%
  \ShellEscape{...}%
}
\documentclass[beamerswitch]
```

4.3 Improving compatibility

nohyperref

(no value, initially unset)

The beamer class loads `hyperref` for you, but when you switch to `article` mode, `beamerarticle` doesn't, so it is easy for you to get caught out. To protect you from this, `beamerswitch` does load `hyperref` in `article` mode, with the pleasing side effect that `\subject` and `\keywords` then work as intended instead of throwing errors.

To achieve this, the class has to load `hyperref` quite early on, which can cause trouble with certain other packages. If you would rather load `hyperref` yourself at a different point, use this option.

textinst

(no value, initially unset)

In all modes, patches the `\inst` command so that it prints its argument using `\textsuperscript` instead of a mathematical superscript. This helps avoid unnecessary font changes.

5 Setting the layout of the handouts

The class provides a simplified interface to the `pgfpages` package. By default, it prints six slides to a side of A4 paper, but you can change this by using the following command in the preamble.

\handoutlayout{<options>}

Configures the layout of the page when using `handout` mode. It has no effect in other modes. The available `<options>` are listed below.

paper=<paper size>

(no default, initially `a4paper`)

Selects the size of paper to use for `handout` mode. The value is passed directly to `pgfpages`, so consult the documentation of that package for the allowed values. You can find them under the documentation for the `resize to` layout.

nup=2|3|3plus|4|4plus|6|8

(no default, initially `6`)

Selects how many slides are shown on a single page in `handout` mode. The 'plus' layouts leave blank space for recipients to make handwritten notes next to each slide. The effects of the various values are shown in Figure 1 on page 7. Note that the `2`, `3plus`, `4` and `6` layouts are intended for slides in the usual 4:3 aspect ratio, while the `3`, `4plus` and `8` layouts are intended for widescreen slides.

border=<length>

(default 0.4pt, initially 0pt)

Puts a rectangular border of thickness `<length>` around each slide. Note that the borders are drawn regardless of whether a slide is actually printed, so you may end up with empty boxes on the last page.

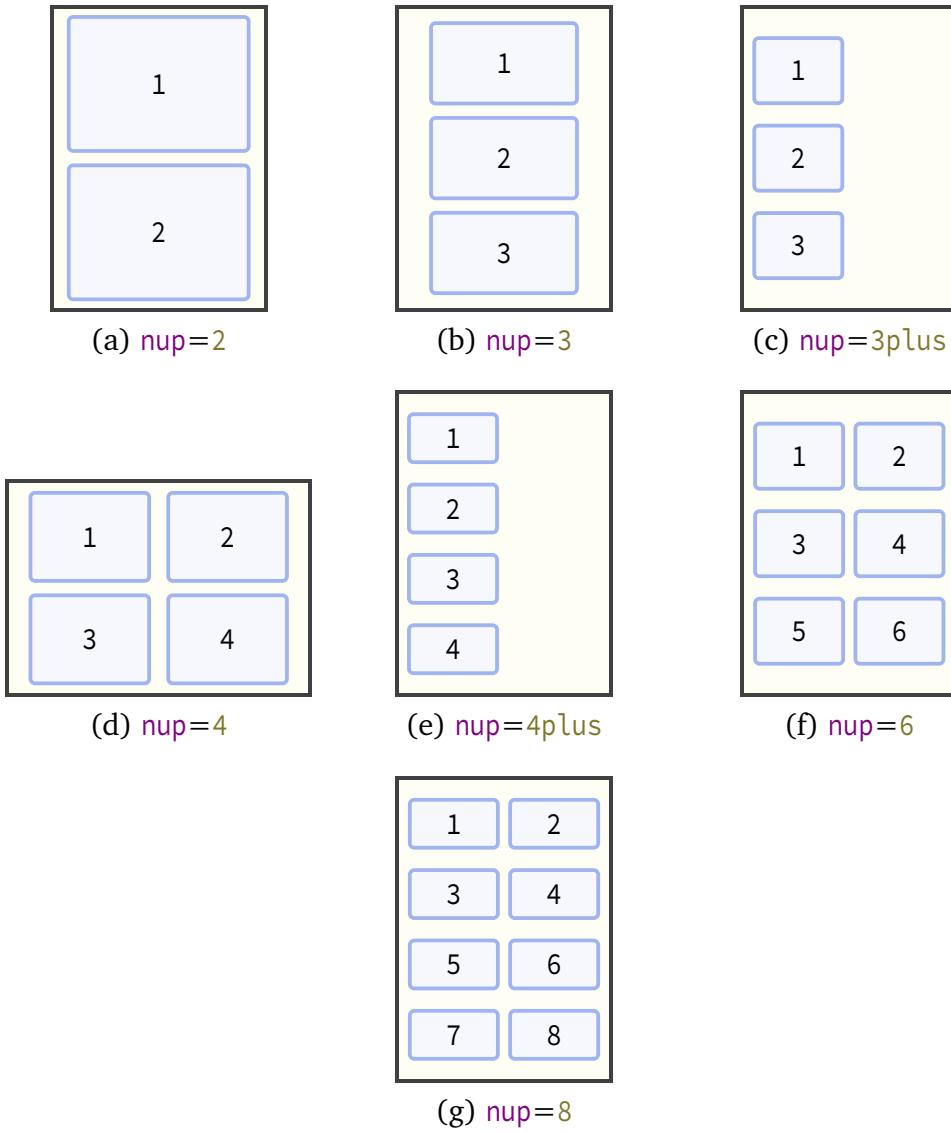

Figure 1: Handout layouts provided by `beamerswitch`

`pnos`

(no value, initially unset)

Adds page numbers to the bottom of each page.

6 Changing the look of article mode

Some additional options can be set by using the following command in the preamble.

`\articlelayout{<options>}`

Configures the appearance of `article` mode. It has no effect in other modes. The available `<options>` are listed below.

`maketitle`

(no value, initially unset)

In `article` mode, adjusts the `\maketitle` routine:

- The title is printed closer to the top margin.

- The subtitle is shown joined to the title using a colon (rather than on a new line).
- The institute is shown directly beneath the author name, similar to the `beamer` layout, so you can use `\inst` just as in `beamer` to tie authors to their affiliations.

If you have `xparse` (and hence `expl3`) installed, the class will detect cases where your title ends in a character like ‘?’ and will not add a colon to it in that case. You can also suppress the colon manually with the following code (add it *after* using `\title` if automatic detection is in effect):

```
\toggletrue{titlepunct}
```

`frametitles=para|margin|none` (no default, initially `para`)

In `article` mode, affects how frame titles are printed. By default, `beameralerticle` prints them as paragraph headings, represented by the value `para`. To have them printed in the margin (using `\marginpar`), use `margin`. To omit them altogether, use the value `none`.

7 Tips for further configuration

There are some other ways to customize the behaviour of the various modes.

You can use the standard `LATEX` methods for customizing how the `article` and `beamer` classes are loaded:

```
\PassOptionsToClass{a4paper,11pt}{article} % for article mode
\PassOptionsToClass{utf8}{beamer} % for beamer, handout, trans modes
\documentclass{beamerswitch}
```

And of course there is the standard `beamer` way of passing different options to different modes:

```
\documentclass{beamerswitch}
\mode

{
  \usepackage[utf8]{inputenc}
}
\mode{
  \setbeameroption{second mode text on second screen}
}

```

8 Feedback

I hope you find this class useful. Please report any bugs and add any suggestions for improvements or new features to the [Issue Tracker](#) on GitHub.

9 Implementation

9.1 Dependencies

We use the following packages:

- `xkeyval` with `xkvltxp` for setting options
- `etoolbox` for command patches and list processing
- `xstring` for comparisons
- `shellesc` for running parallel compilations
- `iftex` for determining which engine to use

```
19 \RequirePackage{xkeyval,xkvltxp,etoolbox,xstring,shellesc,iftex}
```

9.2 Class options

We recognize four main modes of operation: ‘beamer’, ‘trans’, ‘handout’, and ‘article’.

The `beamer` option triggers beamer mode.

```
20 \define@boolkey[DC]{beamerswitch}{beamer}[true]{%
21   \ifbool{DC@beamerswitch@beamer}{%
22     \setkeys[DC]{beamerswitch}{trans=false}
23     \setkeys[DC]{beamerswitch}{handout=false}
24     \setkeys[DC]{beamerswitch}{article=false}
25   }{}%
26 }
```

The `trans` option triggers trans mode.

```
27 \define@boolkey[DC]{beamerswitch}{trans}[true]{%
28   \ifbool{DC@beamerswitch@trans}{%
29     \setkeys[DC]{beamerswitch}{beamer=false}
30     \setkeys[DC]{beamerswitch}{handout=false}
31     \setkeys[DC]{beamerswitch}{article=false}
32   }{}%
33 }
```

The `handout` option triggers handout mode.

```
34 \define@boolkey[DC]{beamerswitch}{handout}[true]{%
35   \ifbool{DC@beamerswitch@handout}{%
36     \setkeys[DC]{beamerswitch}{beamer=false}
37     \setkeys[DC]{beamerswitch}{trans=false}
38     \setkeys[DC]{beamerswitch}{article=false}
39   }{}%
40 }
```

The `article` option triggers article mode.

```

41 \define@boolkey[DC]{beamerswitch}{article}[true]{%
42   \ifbool{DC@beamerswitch@article}{%
43     \setkeys[DC]{beamerswitch}{beamer=false}
44     \setkeys[DC]{beamerswitch}{trans=false}
45     \setkeys[DC]{beamerswitch}{handout=false}
46   }{}%
47 }

```

The `also` option allows the user to specify a set of alternative modes to typeset in parallel, in a comma-separated list. Alternatively, the user can specify the Boolean `also*` options directly.

```

48 \define@boolkey[DC]{beamerswitch}{alsobeamer}[true]{}
49 \define@boolkey[DC]{beamerswitch}{alsotrans}[true]{}
50 \define@boolkey[DC]{beamerswitch}{alsohandout}[true]{}
51 \define@boolkey[DC]{beamerswitch}{alsoarticle}[true]{}
52 \newcommand{\beamerswitch@SetAlso}[1]{%
53   \key@ifundefined[DC]{beamerswitch}{also#1}{%
54     \ClassWarning{beamerswitch}{`#1' is not a valid value for option `also'}%
55   }{%
56     \setkeys[DC]{beamerswitch}{also#1}%
57   }%
58 }
59 \define@key[DC]{beamerswitch}{also}{%
60   \forcsvlist{\beamerswitch@SetAlso}{#1}%
61 }

```

The `nohyperref` option stops the class from loading the `hyperref` package in article mode.

```
62 \define@boolkey[DC]{beamerswitch}{nohyperref}[true]{}
```

The `textinst` option adjusts the superscript used for institution markers.

```
63 \define@boolkey[DC]{beamerswitch}{textinst}[true]{}
```

The default behaviour is to use beamer mode only.

```

64 \setkeys[DC]{beamerswitch}{beamer=true,alsobeamer=false,alsotrans=false,%
65   alsohandout=false,alsoarticle=false}

```

Now we process the options given by the user.

```
66 \ProcessOptionsX[DC]<beamerswitch>
```

9.3 Jobname-based mode switching

We define some default values for the special suffixes.

```

67 \providecommand*\BeamerSuffix{-slides}
68 \providecommand*\TransSuffix{-trans}
69 \providecommand*\HandoutSuffix{-handout}

```

```
70 \providecommand*{\ArticleSuffix}{-article}
```

We provide a special routine for spawning new \TeX processes. We allow for the possibility of the user overriding this routine with another one, perhaps using a different automation tool; it should take one argument, being the jobname suffix.

```
71 \providecommand{\BeamerSwitchSpawn}[1]{%
72   \ifbool{PDFTeX}{%
73     \ShellEscape{latexmk -silent -pdf -synctex=1 -interaction=batchmode
74       \jobname=\jobname#1 \jobname}
75   }{%
76     \ifbool{LuaTeX}{%
77       \ShellEscape{latexmk -silent -lualatex -synctex=1 -interaction=batchmode
78         \jobname=\jobname#1 \jobname}
79     }{%
80       \ifbool{XeTeX}{%
81         \ShellEscape{latexmk -silent -xelatex -synctex=1 -interaction=batchmode
82           \jobname=\jobname#1 \jobname}
83       }{%
84         \ShellEscape{latexmk -silent -synctex=1 -interaction=batchmode
85           \jobname=\jobname#1 \jobname}
86       }%
87     }%
88   }%
89 }
```

We check for special jobnames and use them to override the above mode-related options. Note that if this happens, the `also*` options are ignored.

```
86 \IfEndWith*{\jobname}{\BeamerSuffix}{%
87   \setkeys[DC]{beamerswitch}{beamer=true}
88 }{%
89   \IfEndWith*{\jobname}{\TransSuffix}{%
90     \setkeys[DC]{beamerswitch}{trans=true}
91   }{%
92     \IfEndWith*{\jobname}{\HandoutSuffix}{%
93       \setkeys[DC]{beamerswitch}{handout=true}
94     }{%
95       \IfEndWith*{\jobname}{\ArticleSuffix}{%
96         \setkeys[DC]{beamerswitch}{article=true}
97       }{%
98         \ifbool{DC@beamerswitch@alsobeamer}{%
99           \BeamerSwitchSpawn{\BeamerSuffix}%
100        }{}%
101        \ifbool{DC@beamerswitch@alsotrans}{%
102          \BeamerSwitchSpawn{\TransSuffix}%
103        }{}%
104        \ifbool{DC@beamerswitch@alsohandout}{%
105          \BeamerSwitchSpawn{\HandoutSuffix}%
106        }{}%
107        \ifbool{DC@beamerswitch@alsoarticle}{%
108          \BeamerSwitchSpawn{\ArticleSuffix}%
109        }{}%
110      }%
111    }%
```

```
112 }%
113 }
```

9.4 Setting up modes

For article mode, we load the `article` class and the `beamerarticle` support package. Apologies for anyone hoping for `scrartcl` or `memoir` alternatives.

```
114 \ifbool{DC@beamerswitch@article}{%
115   \LoadClass{article}
116   \RequirePackage{beamerarticle}
```

It seems as though `beamerarticle` expects `hyperref` to be loaded, but doesn't actually do it itself. So we oblige, using the default options specified by `beamer`.

```
117 \ifbool{DC@beamerswitch@nohyperref}{%{%
118   \RequirePackage[bookmarks=true,%%
119     bookmarksopen=true,%%
120     pdfborder={0 0 0},%
121     pdfhighlight={/N},%
122     linkbordercolor={.5 .5 .5}]{hyperref}}%
123 }
```

While `beamer` takes care of adding presentation metadata to the PDF properties, `beamerarticle` misses the title and author properties. (It does manage to set the subject and keywords, though.) We achieve parity with some additional `\hypersetup`. Note that `beamerarticle` appends the subtitle to `\@title` with a linebreak and this does odd things in the context of `pdftitle`, so we fix it with `\pdfstringdefDisableCommands`.

```
124 \AtBeginDocument{%
125   \@ifpackageloaded{hyperref}{%
126     \pdfstringdefDisableCommands{\def\@#1#2{ - #2}}
127     \begingroup
128     \hypersetup{pdftitle={\@title}}%
129     \def\and{\unskip, }%
130     \let\thanks=\gobble
131     \let\inst=\gobble
132     \hypersetup{pdfauthor={\@author}}%
133     \endgroup
134   }{%
135   }
136 }
```

For the presentation modes, we load the `beamer` class with appropriate options. Since we are targeting users wanting different versions of their presentations with the same code, we activate `ignorenonframetext`.

```
137 \ifbool{DC@beamerswitch@handout}{%
138   \LoadClass[ignorenonframetext]{beamer}}
```

Handout mode lays multiple slides out on a single page. For this we use `pgfpages`. The actual configuration is handled later.

```
139 \RequirePackage{pgfpages}
```

We also activate `ignorenonframetext` for the other two modes.

```
140 }{%
141   \ifbool{DC@beamerswitch@trans}{%
142     \LoadClass[ignorenonframetext,trans]{beamer}
143   }{%
144     \LoadClass[ignorenonframetext]{beamer}
145   }%
146 }
147 }
```

9.5 Mode-independent layout

We implement the option that formats institution markers in text mode rather than math mode.

```
148 \ifbool{DC@beamerswitch@textinst}{%
149   \def\beamer@insttitle#1{\textsuperscript{#1}}
150   \def\beamer@instinst#1{\textsuperscript{#1}\ignorespaces}
151 }
```

9.6 Handout layout

We set up a command for drawing borders around the slides in handout mode. This is initially set up to do nothing.

```
152 \newcommand*\beamerswitch@Border{\relax}
```

Though `pgfpages` defines some perfectly fine layouts, we need to add configurability to the existing ones and provide some new ones.

The ‘1 by 2’ layout is similar to the normal `2 on 1` layout.

```
153 \mode{%
154   \pgfpagesdeclarelayout{1 by 2}
155   {
156     \edef\pgfpageoptionheight{\the\paperwidth} % landscaped by default
157     \edef\pgfpageoptionwidth{\the\paperheight}
158     \def\pgfpageoptionborder{0pt}
159     \def\pgfpageoptionfirstshipout{1}
160   }
161   {
162     \pgfpagesphysicalpageoptions
163     {%
164       logical pages=2,
165       physical height=\pgfpageoptionheight,
166       physical width=\pgfpageoptionwidth,
167       current logical shipout=\pgfpageoptionfirstshipout
168     }
169 }
```

```

169 \ifdim\paperheight>\paperwidth\relax
170 % put side-by-side
171 \pgfpageslogicalpageoptions{1}
172 {%
173   border shrink=\pgfpageoptionborder,%
174   border code=\beamerswitch@Border,%
175   resized width=.5\pgfphysicalwidth,%
176   resized height=\pgfphysicalheight,%
177   center=\pgfpoint{.25\pgfphysicalwidth}{.5\pgfphysicalheight}%
178 }%
179 \pgfpageslogicalpageoptions{2}
180 {%
181   border shrink=\pgfpageoptionborder,%
182   border code=\beamerswitch@Border,%
183   resized width=.5\pgfphysicalwidth,%
184   resized height=\pgfphysicalheight,%
185   center=\pgfpoint{.75\pgfphysicalwidth}{.5\pgfphysicalheight}%
186 }%
187 \else
188 % stack on top of one another
189 \pgfpageslogicalpageoptions{1}
190 {%
191   border shrink=\pgfpageoptionborder,%
192   border code=\beamerswitch@Border,%
193   resized width=\pgfphysicalwidth,%
194   resized height=.5\pgfphysicalheight,%
195   center=\pgfpoint{.5\pgfphysicalwidth}{.75\pgfphysicalheight}%
196 }%
197 \pgfpageslogicalpageoptions{2}
198 {%
199   border shrink=\pgfpageoptionborder,%
200   border code=\beamerswitch@Border,%

```

In theory it would be nice to anticipate the paper size that the article mode would use, and pass that as an option to `\pgfpagesuselayout` but as that's unlikely to be clean code, we settle here for setting it with an option.

```

742 \define@key[HL]{beamerswitch}{paper}{%
743   \def\beamerswitch@handoutpaper{\#1}%
744 }
```

The `nup` option specifies how many slides to include per page. The ‘plus’ keyword indicates a layout with additional gaps for writing.

```

745 \newcounter{beamerswitch@nupcase}
746 \define@choicekey+[HL]{beamerswitch}{nup}[\val\nr]{2, 3, 3plus, 4, 4plus, 6, 8}{%
747   \setcounter{beamerswitch@nupcase}{\nr}%
748 }{%
749   \ClassWarning{beamerswitch}{Value of `nup' not recognized.%
750   Allowed values are 2, 3, 3plus, 4, 4plus, 6, and 8.}%
751 }
```

The `borders` option switches on borders around the slides on handout pages (and gaps where slides would appear if there were enough). The value is used to set the width of the border.

```

752 \define@key[HL]{beamerswitch}{border}[0.4pt]{%
753   \RequirePackage{pgf}%
754   \renewcommand*{\beamerswitch@Border}{\pgfsetlinewidth{#1}\pgfstroke}%
755 }

```

The `pnos` option switches on page numbers for handout pages.

```

756 \define@boolkey[HL]{beamerswitch}{pnos}[true]{}

```

We set up the `\handoutlayout` command for applying these options.

```

757 \newcommand*{\handoutlayout}[1]{%
758   \only<handout>{%
759     \setkeys[HL]{beamerswitch}{#1}%

792       }%

```

We initialize the class with a layout of six slides on A4 paper.

```

793 \handoutlayout{paper=a4paper,nup=6}

```

9.7 Article layout

We provide some options for configuring the appearance of article mode.

The `maketitle` option triggers adjustments in how the title block is printed.

```
794 \define@boolkey[AL]{beamerswitch}{maketitle}[true]{}
```

One will be to join the title and subtitle with a colon. There is an edge case where, if the user provides a title that ends in ‘!?’ or ‘??’ and provides a subtitle while this option is in effect, they will end up with clashing punctuation in the middle of the displayed title (‘!?’ or ‘??’). We therefore introduce a toggle that, if set true, suppresses the additional colon.

```
795 \newtoggle{titlepunct}
```

Of course, we would rather not bother the user with this, so we introduce a command for testing the title for final punctuation.

The only way I can seem to do this is by switching to `expl3` syntax. Rather than introduce extra hard dependencies to cope with what will probably be quite a rare issue, we make the dependency soft: it will only be applied if `xparse` is available. If there is demand for it, we could introduce a class option to switch this code on or off, but let’s see how we go.

```
796 \IfFileExists{xparse.sty}{\@tempswatrue}{\@tempswafalse}
797 \if@tempswa
798   \RequirePackage{xparse}
799   \ExplSyntaxOn
800   \NewDocumentCommand{\bsw@punct@test}{m}{\l_bsw_punct_test:n {#1}}
801   \cs_new_protected:Nn \l_bsw_punct_test:n
802   {
803     \str_case_x:nnTF { \str_item:nn {#1} {-1} }
804     {
805       { , } { }
806       { ; } { }
807       { : } { }
808       { . } { }
809       { ! } { }
810       { ? } { }
811     }
812     { \global\toggletrue{titlepunct} }
813     { \global\togglefalse{titlepunct} }
814   }
815 \ExplSyntaxOff
```

We insert this test into the definitions for `\title` introduced by `beamer/beamerarticle`.

```
816 \mode

{%
817   \renewcommand{\title}[2][]{\beamer@origtitle{#2}\bsw@punct@test{#2}}
818 }
819 \mode{%
820   \long\def\beamer@title[#1]#2{%
821     \def\inserttitle{#2}%
822     \def\beamer@shorttitle{#1}%
823 }

```

```

823     \bsw@punct@test{#2}%
824   }
825 }
826 \else
827   \wlog{Beamerswitch: Auto-detection of title punctuation not available.}
828 \fi

```

We offer some alternatives for handling frame titles in article mode.

- `para` is what `beamerarticle` normally does.
- `margin` puts the frame titles in the margin.
- `none` gets rid of them entirely.

```

829 \define@choicekey+[AL]{beamerswitch}{frametitles}{para, margin, none}%
830   \def\beamerswitch@articleframetitles{#1}%
831 }%
832 \ClassWarning{beamerswitch}{Value of `frametitles' not recognized.
833   Allowed values are para, margin, and none.}%
834 }

```

We provide a command for setting these options.

```

835 \newcommand{\articlereadout}[1]{%
836   \setkeys[AL]{beamerswitch}{#1}%

```

The following options are mode specific.

```

837 \mode<article>{%

```

Personally I find slide titles somewhat intrusive in article mode. They can easily end up duplicating section headings in running text, or captions in figures. You may have other ideas, so we keep this behaviour configurable.

The `margin` value is implemented using `\marginpar`.

```

838 \ifcsstring{beamerswitch@articleframetitles}{margin}{%
839   \setbeamertemplate{frametitle}{%
840     \marginpar[%
841       \raggedleft\noindent\emshape\textbf{\insertframetitle}\par
842       \noindent\insertframesubtitle\par
843     ]{%
844       \raggedright\noindent\emshape\textbf{\insertframetitle}\par
845       \noindent\insertframesubtitle\par
846     }%
847   }%
848 }%
849 \ifcsstring{beamerswitch@articleframetitles}{none}{%
850   \setbeamertemplate{frametitle}{}
851 }%
852 \ifcsstring{beamerswitch@articleframetitles}{para}{%
853   \setbeamertemplate{frametitle}[default]
854 }%
855 }%
856

```

This is where we make our adjustments to `\maketitle`. We start by joining the subtitle to the title by means of a colon instead of a newline.

```
857 \ifbool{AL@beamer@switch@maketitle}{%
858   \renewcommand{\subtitle}[2][]{%
859     \def\insertsubtitle{\gappto{\title}{\iftoggle{titlepunct}{}{:}}##2}%
860   }
```

We add support for printing the institute information.

```
861 \ifundefined{\beamer@origininstitute}{%
862   \renewcommand{\institute}[2][]{\def\insertinstitute{\#2}}%
863 }{%
864   \renewcommand{\institute}[2][]{\def\insertinstitute{\#2}\beamer@origininstitute{\#2}}%
865 }
```

Our first change to `\maketitle` itself is to remove the initial vertical space.

```
866 \def\@maketitle{%
867   \newpage
868   \null
869   \begin{center}%
870     \let\footnote\thanks
871     {\LARGE \atitle \par}%
872     \vskip 1.5em%
873   %
874     \large\lineskip .5em%
875     \begin{tabular}[t]{c}%
876       \author
877     \end{tabular}\par
878 }
```

The other is to add in a row for the institute information.

```
879 \ifdefvoid{\insertinstitute}{%
880   %
881   \normalsize\lineskip .5em%
882   \begin{tabular}[t]{c}%
883     \insertinstitute
884   \end{tabular}\par
885   %
886   %
887   \vskip 1em%
888   {\large \date}%
889   \end{center}%
890   \par\vskip 1.5em%
891   %
892 }{%
893 }
```

For consistency, if the `maketitle` option has been passed, we change the PDF metadata in the other modes to use the colon convention for joining the title and subtitle.

```
894 \mode{%
895   \ifbool{AL@beamerswitch@maketitle}{%
896     \ifbool{beamer@autopdfinfo}{%
897       \patchcmd{\beamer@firstminutepatches}{%
898         \inserttitle\ifx\insertsubtitle\empty\else - \insertsubtitle\fi
899       }{%
900         \inserttitle\ifx\insertsubtitle\empty\else\iftoggle{titlepunct}{}{:}
901         \hookafter{\insertsubtitle\fi
902       }{}%
903     }{}%
904   }{}%
905 }
```

There is no more.

```
906 \endinput
```
