# The numeric style

This style prints numeric citations in square brackets. It is similar to the standard bibliographic facilities provided by LaTeX and to the plain.bst style of legacy BibTeX.

## Additional package options

#### The subentry option

The option subentry affects the handling of citations referring to members of a reference set. If this option is enabled, such citations get an extra letter which identifies the member (it is also printed in the bibliography): [4a, 7c, 4c, 7b, 5]. This option is disabled by default, but it has been enabled in this example. If disabled, citations referring to a set member will point to the entire set, i.e., the above citations would come out as [4, 7, 4, 7, 5].

## \cite examples

```
[5]
[5, p. 59]
[see 5]
[see 5, pp. 59–63]
```

### \parencite examples

```
With the numeric style, \parencite and \cite behave the exactly the same. This is just filler text [5].

This is just filler text [5, p. 59].

This is just filler text [see 5].

This is just filler text [see 5, pp. 59–63].
```

#### \textcite examples

Goossens, Mittelbach, and Samarin [5] show that this is just filler text. Goossens, Mittelbach, and Samarin [5, p. 59] show that this is just filler text. Goossens, Mittelbach, and Samarin [see 5] show that this is just filler text. Goossens, Mittelbach, and Samarin [see 5, pp. 59–63] show that this is just filler text.

### \supercite examples

This is just filler text.<sup>5</sup>

### \autocite examples

This is just filler text [5].

### Multiple citations

```
[5, 1, 2, 3, 6, 9, 8]
```
