

The Implementation of the caption package*

Axel Sommerfeldt

`axel.sommerfeldt@f-m.fm`

2011/08/06

Abstract

The caption package consists of two parts – the kernel (`caption3.sty`) and the main package (`caption.sty`).

The caption package redefines the L^AT_EX commands `\caption`, `\@caption`, and `\@makecaption` and maps the latter one to `\caption@@make`, giving the user the possibility to control the look & feel of the captions from floating environments like `figure` and `table`. Furthermore it does similar to the caption stuff coming from other packages (like the `longtable` or `supertabular` package): Mapping the appropriate internal commands (like `\LT@makecaption` or `\ST@caption`) to the ones offered by the `caption3` kernel. So you can think of the caption package as a layer package, it simply provides adaptation layers between the caption stuff coming from L^AT_EX 2_ε or packages, and the caption stuff offered by the `caption3` kernel.

User manuals

This document is describing the code implementation only. The user documentation can be found in

<code>caption-eng.pdf</code>	The English documentation
<code>caption-rus.pdf</code>	The Russian documentation ¹
<code>caption-deu.pdf</code>	The German documentation

*This package has version number v3.2d, last revised 2011/11/02.

¹Thanks a lot to Olga Lapko for this translation

8 Processing of options

```
228 \caption@SetupOptions{caption}{\caption@setkeys{#1}{#2}}
229 \caption@ProcessOptions*{caption}
```

9 \caption, \@caption, and \@makecaption

`\caption@caption` Here comes our definition of `\caption` and `\caption*`. Beside the support of the starred variant this code was adapted to the various packages we support. We are using `\caption@dblarg` instead of `\@dblarg` so `\caption{}` (with an empty arg.) will produce a list-of entry, but `\caption[]{} won't`.

```
230 \def\caption@caption{%
231   \caption@iftype
232     {\caption@checkgrouplevel\@empty\caption
233     \caption@star
234     {\@nameuse{donemaincaptiontrue}%
235     \caption@refstepcounter\@capttype}%
236     {\caption@dblarg{\@caption\@capttype}}}%
237   {\caption@Error{\noexpand\caption outside float}%
238   \caption@gobble}}
```

`\caption@star` A helper macro which processes the optional `*` after `\caption`.

```
239 \newcommand*\caption@star[2]{%
240   \@ifstar{\caption@starttrue#2[]}{#1#2}}
```

`\caption@@caption` As above, our version has been adapted to the packages we support. Additionally our code is nested by `\caption@beginex` & `\caption@end` instead of `\begingroup` & `\endgroup`. Furthermore we use `\caption@boxrestore` instead of `\@parboxrestore` so this code also works correctly inside list-based environments like `wide` & `addmargin`. (This, and the fact that we use `\linewidth` instead of `\hsize` inside `\@makecaption`, solves [L^AT_EX PR latex/2472](#).)

```
241 \long\def\caption@@caption#1[#2]#3{%
242   \ifcaption@star \else
243     \caption@prepareanchor{#1}{#2}%
244     \M@getttitle{#2}%
245     \memcaptioninfo{#1}{\csname the#1\endcsname}{#2}{#3}%
246   \fi
247   \par
248   \caption@beginex{#1}{#2}{#3}%
249   \caption@setfloatcapt{%
250     \caption@boxrestore
251     \if@minipage
252       \@setminipage
253     \fi
254     \caption@normalsize
255     \ifcaption@star
256       \let\caption@makeanchor\@firstofone
257     \fi
258     \@makecaption{\csname fnum@#1\endcsname}%
259     {\ignorespaces\caption@makeanchor{#3}}\par
260   \caption@if@minipage\@minipagetrue\@minipagefalse}%
261   \caption@end}
```

memoir document class stuff:

```
262 \providecommand\M@getttitle[1]{}
263 \providecommand\memcaptioninfo[4]{}
```

\caption@prepareanchor

```
264 \newcommand*\caption@prepareanchor[2]{%
265   \caption@makecurrent{#1}{#2}%
266   \caption@ifhypcap\caption@@start{}}
```

\caption@makecaption \@makecaption{<label>}{<text>}

We do basically the same as the original code (from the standard L^AT_EX document classes), but take care of the position= setting and use \caption@@make from the caption kernel to finally typeset the caption.

```
267 \long\def\caption@makecaption#1#2{%
268   \caption@iftop
269     {\vskip\belowcaptionskip}%
270     {\caption@rule\vskip\abovecaptionskip}%
271   \caption@@make{#1}{#2}%
272   \caption@iftop
273     {\vskip\abovecaptionskip\caption@rule}%
274     {\vskip\belowcaptionskip}}
```

\caption@redefine

We only redefine \caption and \@caption if the current definitions are well known, so documents written in the old (caption package v1.x) days (where \caption & \@caption were not redefined by us) will still compile fine. For example the usage of the captcont package, which brings it's own definition of \caption*, was quite common these days.

```
275 \newcommand*\caption@redefine{}
276 \g@addto@macro\caption@redefine{%
277   \caption@setbool{incompatible}{0}%

644     \let\caption@ORI@float@makebox\@undefined}%

\@xfloat We redefine \@xfloat so inside floating environments our type-specific options will be
used, a hyperref anchor will be set etc.
645     \let\caption@ORI@xfloat\@xfloat
646     \def\@xfloat#1[#2]{%
647         \caption@ORI@xfloat{#1}[#2]%
648         \caption@settype{#1}}%

649 }

Some packages (like the hyperref package for example) redefines \caption and
\@caption, too. So we have to use \AtBeginDocument here, so we can make
sure our definition is the one which will be valid at last.
650 \caption@AtBeginDocument{\caption@redefine}

```

`\@makecaption`

```
651 \let \@makecaption \caption@makecaption
```

10 `\captionof` and `\captionlistentry`

```
652 \caption@AtBeginDocument{%
653   \DeclareCaptionOption{type}{\setcaptiontype{#1}}%
654   \DeclareCaptionOption{type*}{\setcaptiontype*{#1}}%
655   \DeclareCaptionOptionNoValue{subtype}{\setcaptionsubtype\relax}%
656   \DeclareCaptionOptionNoValue{subtype*}{\setcaptionsubtype*}%
657 }
```

Important Note: Like `\captionof` the option `type=` should only be used inside a group, box, or environment and does not check if the argument is a valid floating environment or not.

`\setcaptiontype` Like `\captionsetup{type=xxx}`, but also works if `\captionsetup` was redefined.

```
658 \newcommand\setcaptiontype{%
659   \caption@boxrestore@mini
660   \caption@settype}
```

`\setcaptionsubtype` Same, but sets the sub-type.

```
661 \newcommand\setcaptionsubtype{%
662   \caption@iftype
663   \caption@setsubtype
664   {\caption@Error{\noexpand\setcaptionsubtype outside float}}}%
665 \newcommand\caption@setsubtype{%
666   \@ifstar
667   {\caption@@settype{sub}*{sub\@capttype}}%
668   {\caption@@settype{sub}{sub\@capttype}}}%
```

`\caption@settype` `\caption@settype*{<type>}`

sets `\@capttype` and executes the options associated with it (using `\caption@setoptions`). Furthermore we check `\currentgrouplevel` (if avail), redefine `\@currentlabel` so a `\label` before `\caption` will result in a hint instead of a wrong reference, and use the macro `\caption@(sub)typehook` (which will be used by our float package support).

The non-starred version sets a `hyperref` anchor additionally (if `hypcap=true` and the `hypcap` package is not loaded).

```
669 \newcommand*\caption@settype{%
670   \caption@@settype{}}
671 \newcommand*\caption@@settype[1]{%

12 `\ContinuedFloat`

`\ContinuedFloat` `\ContinuedFloat`
`\ContinuedFloat*`

This mainly decrements the appropriate counter and increments the continuation counter instead. Furthermore we set `\caption@resetContinuedFloat` to `\@gobble` so the continuation counter will not be reset to zero inside `\caption@refstepcounter`. Please forget about the optional argument, it was never working well, is incompatible to the subfig package, but is still there for compatibility reasons.

Note: The definition of `\ContinuedFloat` itself is compatible to the one inside the `subfig` package, except for the starred variant and the optional argument.

When the `hyperref` package is used we have the problem that the usage of `\ContinuedFloat` will create duplicate hyper links – `\currentHref` will be the same for the main float and the continued ones. So we have to make sure unique labels and references will be created each time. We do this by extending `\theHfigure` and `\theHtable`, so for continued floats the scheme

$$\langle type \rangle . \langle type \# \rangle \backslash \alpha \{ \langle continued \# \rangle \}$$

will be used instead of

$$\langle type \rangle . \langle type \# \rangle .$$

(This implementation follows an idea from Steven Douglas Cochran.)

Note: This does not help if the `hyperref` package option `naturalnames=true` is set.

```

825 \providecommand*\sf@ContinuedFloat[1]{}
826 \newcommand*\caption@CFtype{??}

```

`\theContinuedFloat` Its preset to `\@empty`, so usually the continuation counter is not included in the caption label or references.

```
827 \newcounter{ContinuedFloat}
828 \let\theContinuedFloat\@empty
```

`\caption@resetContinuedFloat` `\caption@resetContinuedFloat{<type>}`
If a continuation counter is defined, we reset it. (This one will be called inside `\@caption`.)

```
829 \newcommand*\caption@resetContinuedFloat[1]{%
830   \@stpelt{ContinuedFloat}\xdef\caption@CFtype{#1}}
```

`\phantomcaption` `\phantomcaption`
Use this one for figures with subcaptions but without main caption.

```
831 \newcommand\phantomcaption{%
832   \caption@iftype
833     {\caption@refstepcounter\@capttype}%
834     {\caption@Error{\noexpand\phantomcaption outside float}}}
```

13 Internal helpers

`\caption@refstepcounter` Resets the continuation counter, increments the float (i.e. figure or table) counter, and sets the `refstepcounter` flag.

```
835 \newcommand*\caption@refstepcounter[1]{%
836   \@ifundefined{c@#1}%
837     {\caption@Error{No float type '#1' defined}}%
838     {\caption@resetContinuedFloat{#1}%
839     \caption@@refstepcounter{#1}%
840     \let\caption@ifrefstepcounter\@firstoftwo}}
841 \newcommand*\caption@@refstepcounter{\refstepcounter}
842 \let\caption@ifrefstepcounter\@secondoftwo
```

`\caption@dblarg` A `\relax` was added compared to `\@dblarg` so `\caption{}` will be expanded to `\caption[\relax]{}` (and not to `\caption[]{}).`

```
843 \caption@ifundefined\kernel@ifnextchar
844   {\newcommand\caption@dblarg[1]{\@ifnextchar[#{1}{\caption@xdblarg{#1}}}%
845   {\newcommand\caption@dblarg[1]{\kernel@ifnextchar[#{1}{\caption@xdblarg{#1}}}}%
846 \newcommand\caption@xdblarg[2]{#1[#{2\relax}]{#2}}%
```

`\caption@begin` Our handling of `\caption` will always be surrounded by `\caption@begin` (or `\caption@beginex`) and `\caption@end`.
`\caption@begin{<type>}` performs these tasks:

1. Start a new group.
2. Define `\fnum@<type>` if the caption label format is set to non-default.
3. Override the `position=` setting, if necessary. (for example if set to `auto` or used inside a `supertabular`)

```
847 \newcommand*\caption@begin[1]{%
848   \begingroup
849   \caption@setfnum{#1}%
850   \caption@fixposition
851   \global\let\caption@fixedposition\caption@position}
```

`\caption@beginex` `\caption@beginex{<type>}{<list entry>}{<heading>}`
performs the same tasks as `\caption@begin` and additionally:

4. Set `\lst@@caption`, so `\fnum@lstlisting` will include a numbering.
5. Make an entry in the list-of-whatever.
6. Set `\caption@ifempty` according argument `<heading>`.

```
852 \newcommand\caption@beginex[3]{%
853   \caption@begin{#1}%
854   \let\lst@@caption\relax
855   \caption@addcontentsline{#1}{#2}%
856   \caption@ifempty{#3}{}}
```

`\caption@end` `\caption@end` closes the group.

```
857 \newcommand*\caption@end{%
858   \endgroup
859   \let\caption@position\caption@fixedposition}
```

`\caption@setfnum` `\caption@setfnum{<type>}`

redefines `\fnum@<type>` according the caption label format set with `labelformat=`.
But if `labelformat=default` is set, `\fnum@<type>` will not be overwritten by us.

```
860 \newcommand*\caption@setfnum[1]{%
861   \@ifundefined{fnum@#1}{\iftrue}{\ifx\caption@lfmt\caption@lfmt@default\else}%
862   \@namedef{fnum@#1}{\caption@fnum{#1}}%
863   \fi}
```

`\caption@boxrestore` The original code (from `latex/base/ltboxes.dtx`):

```
\def\@parboxrestore{\@arrayparboxrestore\let\\\@normalcr}
\def\@arrayparboxrestore{%
  \let\if@nobreak\iffalse
  \let\if@noskipsec\iffalse
  \let\par\@@par
  \let\-\@dischyph
  \let'\@acci\let'\@accii\let\=\@acciii
  \parindent\z@ \parskip\z@skip
  \everypar{}%
  \linewidth\hsize
  \@totalleftmargin\z@
  \leftskip\z@skip \rightskip\z@skip \@rightskip\z@skip
  \parfillskip\@flushglue \lineskip\normallineskip
  \baselineskip\normalbaselineskip
  \sloppy}
```

This one will be used by `\@caption` instead of `\@parboxrestore`.

```
864 \newcommand*\caption@boxrestore{%
865   \caption@parboxrestore{\@parboxrestore}{%
866     \let\if@nobreak\iffalse
867     \let\if@noskipsec\iffalse
868     \let\par\@@par
869 %   \let\-\@dischyph
870 %   \let'\@acci\let'\@accii\let\=\@acciii
```

```

871 \parindent\z@ \parskip\z@skip
872 \everypar{}%
873 % \linewidth\hsize
874 % \@totalleftmargin\z@
875 \leftskip\z@skip \rightskip\z@skip \@rightskip\z@skip
876 \parfillskip\@flushglue \lineskip\normallineskip
877 \baselineskip\normalbaselineskip
878 \sloppy
879 \let\\\@normalcr
880 }}

```

`\caption@boxrestore@mini` Resets `\par` so the very first `\par` in `\@caption` behaves quite the same as in floating environments. Will be used by `\setcaptiontype`.

```

881 \newcommand\caption@boxrestore@mini{%
882 \let\par\@par
883 \parindent\z@ \parskip\z@skip
884 \sloppy}

```

`\caption@normalsize` This one will be used by `\@caption` instead of `\normalsize`. Its code is equivalent to

```
\caption@font{normal}%
```

but executes faster (since the starred form of `\caption@font` does not use `\setkeys` internally).

```

885 \newcommand*\caption@normalsize{%
886 \caption@font*\KV@caption@fnt@normal\@unused}

```

`\caption@setfloatcapt` Needed for support of the float package, where the caption will not be typeset directly, but caught in a `\vbox` called `\@floatcapt` instead.

```
887 \let\caption@setfloatcapt\@firstofone
```

`\caption@makecurrent` All these are needed for support of the hyperref package.

```

\caption@makeanchor 888 \newcommand*\caption@makecurrent[2]{}
\caption@start      889 \let\caption@makeanchor\@firstofone

```

`\@tablescaption` The `frenchle/pro` package sets `\caption` to `\@tablescaption` at `\begin{table}` for special treatment of footnotes. Therefore we have to patch `\@tablescaption` so `\caption*` will work inside the table environment.

```

1024 \let\caption@tcORI\@tablescaption
1025 \def\@tablescaption{\caption@star\relax\caption@tcORI}%

```

`\f@ffrench` `\f@tfrench` and `\f@tfrench` reflect `\fnum@figure` and `\fnum@table` when used in French mode. These contain additional code which typesets the caption separator `\captionseparator` instead of the usual colon. Because this breaks with our `\@makecaption` code we have to remove this additional code here.

16.1 The float package

The float package usually do not use the L^AT_EX kernel command `\caption` to typeset the caption but `\float@caption` instead. (`\caption` will only be used if the float is re-styled with `\restylefloat*`.)

The main two things `\float@caption` is doing different are:

- The caption will be typeset inside a `\savebox` called `\@floatcapt` so it can be placed above or below the float contents afterwards.
- `\@makecaption` will not be used to finally typeset the caption. Instead `\@fs@capt` will be used which definition is part of the float style. (Note that `\@fs@capt` will not typeset any vertical space above or below the caption; instead this space will be typeset by the float style code itself.)

```

1149 \caption@IfPackageLoaded{float}[2001/11/08 v1.3d]{%
1150 \@ifpackageloaded{floatrow}{%
1151 \caption@ifpackageloaded{floatrow}[2007/08/24 v0.2a]{}{}}%
1152 }{}%

```

`\@float@setevery` `\@float@setevery{<float type>}` is provided by the float package; it's called every time a floating environment defined with `\newfloat` or `\restylefloat` begins. We use this hook to do some adaptations and to setup the proper caption style (if defined) and additional settings declared with `\captionsetup[<float style>]`.

```

1153 \let\caption@ORI@float@setevery\@float@setevery
1154 \def\@float@setevery#1{%
1155   \float@ifcaption{#1}{%

```

First of all we set the caption position to it's proper value by converting `\@fs@iftopcapt` (which is part of a float style and controls where the caption will be typeset, above or below the float contents) to our `position=` setting. Since the spacing above and below the caption will be done by the float style and *not* by us this sounds quite useless. But in fact it isn't, since some packages based on the caption package (like the subfig package) could have an interest for this information and therefore use the `\caption@iftop` macro we

provide in our kernel. Furthermore we need this information for ourself in `\captionof` which uses `\makecaption` to finally typeset the caption with skips.

```
1156 \caption@setposition{\@fs@iftopcapt t\else b\fi}%
```

Afterward we redefine `\caption@setfloatcapt` (which will be used inside `\@caption`) so the caption will be set inside the box `\@floatcapt`, without extra vertical space.

```
1157 \renewcommand\caption@setfloatcapt[1]{%
1158 \let\makecaption\caption@make
1159 \global\setbox\@floatcapt\vbox{%
1160 \color@begingroup ##1\color@endgroup}}%
```

To allow different caption styles for different float styles we also determine the current float style (e.g. ‘ruled’) and select a caption style (and additional settings) with the same name, if defined.

```
1161 \float@getstyle\float@style{#1}%
1162 \caption@setstyle*\float@style
1163 \caption@setoptions\float@style
1164 }{}%
1165 \caption@freezeHref % will be defrosted in \float@makebox
1166 \caption@ORI@float@setevery{#1}}%
```

`\caption@typehook` \LaTeX and almost every other packages use `\langle type \rangle`name to provide a macro for the type resp. environment name – for example the command `\figurename` will usually contain the name of the floating environment figure:

```
\newcommand\figurename{Figure}
```

But the float package doesn’t follow this common naming convention: For floats defined with `\newfloat` it uses `\fname@⟨type⟩` instead, which breaks with our code (and with `\autoref` and some other things as well). So we have to map the float package name to the common one here.

Note: If the float was not defined with `\newfloat` but with `\restylefloat` instead, `\fname@⟨type⟩` is not defined.

```
1167 \g@addto@macro\caption@typehook{%
1168 \expandafter\ifx\csname #1name\endcsname\relax
1169 \expandafter\let\csname #1name\endcsname
1170 \csname fname@#1\endcsname
1171 \fi}%
```

`\fs@plaintop` `\fs@boxed` Since the float styles `plaintop` and `boxed` don’t use `\abovecaptionskip` which could be set with `skip=` (`plaintop` uses `\belowcaptionskip` instead of `\abovecaptionskip`, and `boxed` uses a fixed space of 2pt) we patch the according float style macros here to change this.

```
1172 \g@addto@macro\fs@plaintop{\def\@fs@mid{\vspace\abovecaptionskip\relax}}%
1173 \g@addto@macro\fs@boxed{\def\@fs@mid{\kern\abovecaptionskip\relax}}%
```

`\float@getstyle` `\float@getstyle{⟨cmd⟩}{⟨type⟩}`

Determining the float style is not so easy because the only hint provided by the float package is the macro `\fst@⟨float type⟩` which points to the macro which represents the float style. So for example after

```
\floatstyle{ruled}
\newfloat{Program}{tbp}{lop}
```

`\fst@Program` will be defined as

```
\def\fst@Program{\fs@ruled} .
```

So here is what we do: We make the first level expansion of `\fst@float type` a string so we can gobble the first four tokens (= `\fs@`), so only the the name of the float style is left.

TODO: We need to convert the catcodes here.

```
1174 \providecommand*\float@getstyle[2]{%
1175   \edef#1{%
1176     \noexpand\expandafter\noexpand\@gobblefour\noexpand\string
1177     \expandafter\expandafter\expandafter\noexpand
1178     \csname fst@#2\endcsname}%
1179   \edef#1{#1}%
1180   \caption@Debug{floatstyle{#2} = '#1'}%}
```

```
\float@ifcaption \float@ifcaption{<type>}{<if-clause>}{<else-clause>}
```

Here we determine if the user has used `\newfloat` resp. `\restylefloat`, or `\restylefloat*`. This is quite easy: If `\@float@c@<captype>` is the same as `\float@caption`, the user has used `\newfloat` or `\restylefloat`, otherwise we assume he has used `\restylefloat*`. (This test will fail if some package re-defines `\float@caption`, so we have to assume that there is no one.)

```
1181 \providecommand*\float@ifcaption[1]{%
1182   \expandafter\ifx\csname @float@c@#1\endcsname\float@caption
1183   \expandafter\@firstoftwo
1184   \else
1185   \expandafter\@secondoftwo
1186   \fi}%
1187 }{%
1188 \providecommand*\float@ifcaption[1]{\@secondoftwo}%
1189 % \clearcaptionsetup{boxed}% used by the floatrow package?
1190 }
```

The skip between ‘boxed’ floats and their caption defaults to 2pt.

```
1191 \captionsetup[boxed]{skip=2pt} % do not issue a warning when not used
```

To emulate the ‘ruled’ definition of `\@fs@capt` we provide a caption style ‘ruled’ with appropriate options. But if the package option `ruled` was specified, we setup some caption parameters to emulate the behavior of the caption package *v1.x* option `ruled` instead, i.e., the current caption settings will be used, but without margin and without ‘single-line-check’.

```
1192 \caption@ifbool{ruled}{%
1193   \captionsetup[ruled]{margin=0pt,minmargin=0,slc=0}%
1194 }{%
1195   \DeclareCaptionStyle{ruled}{labelfont=bf,labelsep=space,strut=0}%
1196 }
1197 \caption@undefbool{ruled}
```

16.2 The floatflt package

```
1198 \caption@ifPackageLoaded{floatflt}[1996/02/27 v1.3]{%
```

```
\floatingfigure We patch \floatingfigure so \caption@floatflt will be used.
```

```

1199 \let\caption@ORI@floatingfigure\floatingfigure
1200 \def\floatingfigure{%
1201   \caption@floatflt{figure}%
1202   \caption@ORI@floatingfigure}%

```

`\floatingtable` Same with `\floatingtable...`

```

1203 \let\caption@ORI@floatingtable\floatingtable
1204 \def\floatingtable{%

The hypcap option

`\if@capstart` Like the `hypcap` package we define the switch `\if@capstart`, too.

```
1320 \newif\if@capstart
```

`\caption@start` While the `hypcap` package defines a macro called `\capstart` our variant is called `\caption@start` and is controlled by the option `hypcap=false/true`.

```
1321 \def\caption@start{\caption@ifhypcap\caption@start@relax}%
1322 \def\caption@start@{%
```

Generate the `hyperref` label and set the `hyperref` anchor, usually (if `hypcap=false`) both is done inside `\@caption`.

```
1323 \caption@makestart\@captype
1324 \caption@startanchor\@currentHref
```

Prevent `\@caption` from generating a new `hyperref` label, use the label we save in `\hc@currentHref` instead. (We also support the `@capstart` flag from the `hypcap` package.)

```
1325 \global\@capstarttrue
1326 \let\hc@currentHref\@currentHref
1327 \def\caption@makecurrentHref##1{%
1328 \global\@capstartfalse
1329 \global\let\@currentHref\hc@currentHref}%
```

Prevent `\@caption` from generating a `hyperref` anchor since this has already been done.

```
1330 \let\caption@makeanchor\@firstofone
1331 }%
```

`\caption@makestart` `\caption@makestart{<type>}` defines a `hyperref` anchor inside `\caption@start`. Since we offer `\ContinuedFloat` the float counter can change between ‘now’ and `\caption`, i.e., we simply don’t know the figure or table counter yet and therefore we are not able to generate the ‘right’ `hyperref` label. Two different solutions of this problem came into my mind:

1. I could use the aux file for this purpose.
-or-
2. I set `hypertexnames=false` locally. Furthermore I use `#1.caption.<counter>` (instead of `#1.<counter>`) as naming scheme for `\@currentHref` to avoid conflicts with other hyper links which are generated with `hypertexnames=true`.

The first idea has the advantage that the ‘right’ anchor name will be generated, but one needs an additional `LATEX` run if figures or tables will be inserted or removed.

The second idea has the advantage that it’s very easy to implement, but has some side-effects, e.g. the anchor names don’t follow the figure or table label names anymore.

Since I’m lazy I implemented the second idea, maybe I will revise this later on.

```
1332 \newcommand*\caption@makestart[1]{%
1333 \begingroup
1334 \Hy@hypertexnamesfalse
1335 % \gdef\@currentHlabel{}%
1336 \hyper@makecurrent{#1.caption}%
1337 \endgroup
1338 \caption@Debug{hypcap start=\@currentHref}}%
```

`\caption@startanchor` `\caption@startanchor{<Href>}` sets a **hyperref** anchor inside `\caption@start`. This code was taken from the `hyccap` package[10] and adapted.

Note: Since `\hyper@@anchor{<Href>}{\relax}` can cause a change from vertical mode to horizontal mode (design flaw in `hyperref` package!?), and since the workaround `\let\leavevmode\relax` which can be found in the `hyccap` package is not always sufficient (for example with “Direct pdfmark support” and `breaklinks=true`), we use `\caption@anchor` instead of `\hyper@@anchor` here.

```

1339 \newcommand*\caption@startanchor[1]{%
1340   \ifvmode\begingroup
1341     \caption@Debug{hyccap anchor: #1 (vertical mode)}%
1342     \@tempdima\prevdepth
1343     \nointerlineskip
1344     \vspace*{-\caption@hyccapSPACE}%
1345     \caption@anchor{#1}%
1346     \vspace*{\caption@hyccapSPACE}%
1347     \prevdepth\@tempdima
1348   \endgroup\else
1349     \caption@Debug{hyccap anchor: #1 (horizontal mode)}%
1350     \caption@anchor{#1}%
1351   \fi}%

```

`\caption@anchor` `\caption@anchor{<Href>}` sets a **hyperref** anchor.

```

1352 \newcommand*\caption@anchor[1]{%
1353   \ifmeasuring@ \else
1354     \caption@raisedlink{\hyper@anchorstart{#1}\hyper@anchorend}%
1355   \fi}%

```

Note: Since `\Hy@raisedlink` change `\@tempdima` we surrounded it by `\ifvmode`, suppressing “LaTeX Warning: Float too large for page by 1.0pt” in sideways floats. (This is not necessary since `hyperref v6.77`.)

```

1356 \ifx\HyperRaiseLinkLength\@tempdima
1357   \def\caption@raisedlink#1{\ifvmode#1\else\Hy@raisedlink{#1}\fi}%
1358 \else
1359   \let\caption@raisedlink\Hy@raisedlink
1360 \fi

```

`\caption@@start` Will be used by `\caption@freezeHref`. Apart from that we issue a warning if we expect a saved **hyperref** label coming from `\caption@start`, but there isn’t any.

```

1361 \def\caption@@start{%
1362   \caption@ifundefined\hc@currentHref{%
1363     \caption@Warning{%
1364       The option ‘hyccap=true’ will be ignored for this\MessageBreak
1365       particular \string\caption}}}%

```

`\caption@freezeHref` Suppress `\caption@start` from generating a **hyperref** label and setting a **hyperref** anchor. Instead if `\@caption` generates a **hyperref** label, it will be stored in `\caption@currentHref`. Furthermore we need to redefine `\caption@setfloatcapt` so no **hyperref** anchor will be placed in `\@caption`.

```

1366 \def\caption@freezeHref{%
1367   \let\caption@ORI@start\caption@start
1368   \def\caption@start{\let\caption@start\caption@ORI@start}%

```

16.5 The hypcap package

```

1393 \caption@ifPackageLoaded{hypcap}{% v1.0
1394 \ifx\caption@start\relax \else % hyperref hasn't stopped early

```

If the hypcap package was loaded, we give up our own hyperlink placement algorithm and give the control over the placement to the hypcap package instead.

`\capstart` We do this simply by mapping `\capstart` to `\caption@start@`, although our code does not behave exactly like the original one: The original `\capstart` has an effect on the next `\caption` only but our version affects *all* `\captions` in the same environment, at least unless a new `\capstart` will be placed.

```

1395 \let\caption@ORI@capstart\capstart % save for compatibility mode
1396 \caption@ifundefined\capstarttrue % check for v1.10 of hypcap package
1397 {\def\capstart{\caption@start@}}%
1398 {\def\capstart{\ifcapstart\caption@start@\fi}}%
1399 \let\caption@start\relax
1400 \let\caption@@start\relax

```

`\caption@hypcapspace` Furthermore we map our `\caption@hypcapspace` to `\hypcapspace` offered by the hypcap package.

```

1401 \caption@set@bool\caption@ifhypcap 1%
1402 \renewcommand*\caption@hypcapspace{\hypcapspace}%

```

```
1403 \fi}{}
```

16.6 The listings package

```
1404 \caption@ifpackageloaded{listings}[2004/02/13 v1.2]{%
```

`\lst@MakeCaption` To support the listings package we need to redefine `\lst@MakeCaption` so the original stuff is nested with `\caption@begin` and `\caption@end` etc.

Note: This macro is always called twice (with 't' resp. 'b' as parameter), therefore we need an extra group here.

```
1405 \let\caption@ORI@lst@MakeCaption\lst@MakeCaption
1406 \def\lst@MakeCaption#1{% #1 is 't' or 'b'
1407 \begingroup
```

Workaround for bug in listings package: If `\hsize` seems not to be set correctly, we set it to `\linewidth`.

```
1408 \ifdim\hsize>\linewidth
1409 \hsize\linewidth
1410 \fi
```

First of all, we set `position=#1` and if it was set to 'top', we swap the skips so the default behavior of the listings package will not be changed. (Note that the listings package has set its own `\abovecaptionskip` & `\belowcaptionskip` values prior to calling `\lst@MakeCaption`.)

```
1411 \caption@setposition{#1}%
1412 \caption@iftop{%
1413 \@tempdima\belowcaptionskip
1414 \belowcaptionskip\abovecaptionskip
1415 \abovecaptionskip\@tempdima}{}%
```

Workaround for issue with wrong skips (should be examined further)

```
1416 \caption@setup{rule=0}%
```

Afterwards we set the local 'lstlisting' options.

```
1417 \caption@setoptions{lstlisting}%
```

If the `position=` is now set to auto, we take over the `captionpos=` setting from the listings package.

```
1418 \caption@setautoposition{#1}%
```

At the end we do similar stuff as in our `\@caption` code.

```
1419 \caption@begin{lstlisting}%
1420 \caption@ORI@lst@MakeCaption{#1}%
1421 \caption@end
1422 \endgroup}%
```

`\lst@makecaption` Wrapper macros for typesetting the `caption=` resp. `title=` value.

```
\lst@maketitle 1423 \def\lst@makecaption{\caption@starfalse\@makecaption}%
1424 \def\lst@maketitle{\caption@startrue\@makecaption\@empty}%
```

`\ext@lstlisting` Since the listings package do not define `\ext@lstlisting` but we needed it when `\captionof{lstlisting}` will be done by the end user, we define it here.

```
1425 \providecommand*\ext@lstlisting{lol}%
1426 }{}
```

16.7 The longtable package

```

\LTcapttype \LTcapttype is preset to table.
1427 \providecommand*\LTcapttype{table}

1478 %         \caption@ORI@LT@array}}%

```

`\LT@c@ption` The original implementation:

```

\def\LT@c@ption#1[#2]#3{%
  \LT@makecaption#1\fnun@table{#3}%
  \def\@tempa{#2}%
  \ifx\@tempa\@empty\else
    {\let\\space
     \addcontentsline{lot}{table}{\protect\numberline{\thetable}{#2}}}%
  \fi}

```

Our implementation uses `\LTcapttype` instead of `{table}`:

```

1479 \long\def\LT@c@ption#1[#2]#3{%
1480     \LT@makecaption#1{\csname fnun@\LTcapttype\endcsname}{#3}%
1481     \LT@captionlistentry{#2}}%

```

`\LT@makecaption` `\LT@makecaption{<cmd>}{<label>}{<text>}`

The original definition:

```

\def\LT@makecaption#1#2#3{%
  \LT@mcol\LT@cols c{\hbox to\z@{\hss\parbox[t]\LTcapwidth{%
    % Based on article class "\@makecaption", "#1" is "\@gobble" in star
    % form, and "\@firstofone" otherwise.
    \sbox\@tempboxa{#1{#2: }#3}%
    \ifdim\wd\@tempboxa>\hsize
      #1{#2: }#3%
    \else
      \hbox to\hsize{\hfil\box\@tempboxa\hfil}%
    \fi
    \endgraf\vskip\baselineskip}%
  \hss}}

```

Our definition:

```

1482 \renewcommand\LT@makecaption[3]{%
1483     \caption@LT@make{%

```

If `\LTcapwidth` is not set to its default value `4in` we assume that it shall overwrite our own setting. (But `\captionsetup[longtable]{width=...}` will overwrite `\LTcapwidth`.)

```

1484     \caption@settype*\LTcaptype
1485     \ifdim\LTcapwidth=4in \else
1486       \setcaptionwidth\LTcapwidth
1487     \fi
1488     \caption@setoptions{longtable}%
1489 %    \caption@setContinuedFloat
1490     \caption@setoptions{@longtable}%

```

`position=auto` is a bad idea for longtables, but we do our very best. This works quite well for captions inside the longtable contents, but not for captions inside the longtable (end)foot.

Note: This should be ‘top’ if unclear!

```

1491     \caption@setautoposition{\ifcase\LT@rows t\else b\fi}%

```

We set `\ifcaption@star` according the 1st argument.

```

1492     \caption@startrue#1\caption@starfalse
1493     \caption@resetContinuedFloat\LTcaptype
1494     \caption@begin\LTcaptype
1495     \caption@normalsize

```

The following skip has the purpose to correct the height of the `\parbox[t]`. Usually it’s the height of the very first line, but because of our extra skips (`\abovecaptionskip` and `\belowcaptionskip`) it’s always `0pt`.

(A different idea would be typesetting the first skip outside the longtable column with `\noalign{\vskip...}`, but this means we have to move `\caption@begin` to some other place because it does not work in tabular mode. And at the moment I have no idea on how to do this in an elegant way...)

```

1496     \vskip-\ht\strutbox

```

The following code should look familiar. We do our skips and use `\caption@@make` to typeset the caption itself.

```

1497     \caption@iftop{\vskip\belowcaptionskip}{\vskip\abovecaptionskip}%
1498     \caption@@make{#2}{#3}\endgraf
1499     \caption@iftop{\vskip\abovecaptionskip}{\vskip\belowcaptionskip}%
1500     \caption@end}}%

```

```

1501 }{}

```

16.8 The picinpar package

```

1502 \caption@IfPackageLoaded{picinpar}{%

```

`\figwindow` The `picinpar` package comes with its own caption code (`\wincaption`, `\@wincaption`,
`\tabwindow` `\@makewincaption`, ...) so we redefine `\figwindow` & `\tabwindow` to use
`\caption` instead.

```

1503 \long\def\figwindow[#1,#2,#3,#4] {%
1504   \caption@window{figure}%

1540   }%
1541 }{%
1542 \let\@capttype\@undefined
```

`\piccaption` The original code:

```
\def\piccaption{\@ifnextchar [ {\@piccaption} {\@piccaption[]}}
```

Our code uses `\caption@star` so `\piccaption*` works, and `\caption@dblarg` so `\piccaption{}` works correctly.

```
1543 \def\piccaption{\caption@star\relax{\caption@dblarg\@piccaption}}%
```

`\make@piccaption` The original code:

```
\def\make@piccaption{%
  [...]
  \setbox\@TEXT=\vbox{\hsize\hsiz@\caption[\sh@rtf@rm]{\capti@nt@xt}}%
}
```

In our code we have to correct several things:

1. `\@capttype` must be defined, since we have removed the global definition.
2. We use `\caption@setoptions{parpic}` so `\captionsetup[parpic]{...}` is supported.
3. `\linewidth` must be set correctly. Usually this is done by `\@parboxrestore` inside `\@caption`, but since we use `\@caption@boxrestore` we have to map this to `\@parboxrestore` instead.
4. The two arguments of `\caption(\sh@rtf@rm & \capti@nt@xt)` should be expanded on first level so `\caption[]{...}` and `\caption[...]{}` work correctly.

```

`\rotcaptionof` Make `\rotcaptionof(*)` work.

```

1579 \def\rotcaptionof{%
1580   \caption@teststar\caption@of{\rotcaption*}\rotcaption}%

```

`\@makerotcaption` Original (bugfixed) code:

```

\long\def\@makerotcaption#1#2{%
  \setbox\@tempboxa\hbox{#1: #2}%
  \ifdim \wd\@tempboxa > .8\vszise
    \rotatebox{90}{%
      \begin{minipage}{.8\textheight}#1: #2\end{minipage}%
    }% \par % <== \par removed (AR)
  \else%
    \rotatebox{90}{\box\@tempboxa}%
  \fi
}

```

```

\fi
\nobreak\hspace{12pt}% <== \nobreak added (AR)
}

```

Our version emulates this behavior, but if `width=` is set, the rotated caption is always typeset as `minipage`. (Note that `margin=` is not supported here.)

```

1581 \long\def\@makerotcaption#1#2{%
1582   \ifdim\captionwidth=\z@
1583     \setcaptionwidth{.8\textheight}%

```

16.11 The sidecap package

```

1597 \caption@IfPackageLoaded{sidecap}[2003/06/06 v1.6f]{%
1598   \caption@setbool{needfreeze}{1}%

```

`\SC@zfloat` This macro will be called at the start of the environment, here is a good opportunity to do some adaptations to `\caption` and `\captionsetup`.

```

1599 \let\caption@ORI@SC@zfloat\SC@zfloat
1600 \def\SC@zfloat#1#2#3[#4]{%

```

First we use the original definition, but restore `\caption` and `\label` so `\caption@freeze` and `\caption@warmup` will work correctly.

```

1601   \caption@ORI@SC@zfloat{#1}{#2}{#3}[#4]%
1602   \SC@RestoreCommands

```

Since the `sidecap` package uses our `\caption` code outside the environment the regular `\captionsetup` will not work. So we need a special version here which saves the given argument list which will be executed later on. Furthermore we need to make `\caption*` work.

```

1603   \caption@settype*{#2}%
1604   \caption@freeze

```

The `sidecap` package uses `\ifx\label\SC@label` to test if it is just inside a `SC-figure` or not. So we redefine `\SC@label` here so this test will still work.

```

1605   \let\SC@label\label}%
1606 \providecommand*\SC@RestoreCommands{%
1607   \let\caption=\SC@orig@caption \let\label=\SC@orig@label}%

```

`\endSC@FLOAT` This macro will be called at the end of the environment, here we need to setup our stuff before the `sidecap` package actually typesets its caption.

```
1608 \let\caption@ORI@endSC@FLOAT\endSC@FLOAT
1609 \def\endSC@FLOAT{%
```

Note: `\@capttype` isn't defined here, this will be done inside the original definition of `\endSC@FLOAT`. But `\SC@capttype` is defined and can be used here, if needed.

```
1610 \let\caption@ORI@settype\caption@settype
1611 \def\caption@settype##1{% will be done in \xfloat
1612 \caption@ORI@settype*{##1}% do not change \@currentlabel
1613 \caption@setSC@justify
1614 %% \caption@setoptions{SCfloat}%
1615 \caption@setoptions{SC\@capttype}%
1616 \caption@start}%
```

Before we can typeset the caption we need to set the margin to zero because any extra margin would only be disturbing here.

(We don't need to take care about the caption position because the `sidecap` package set both `\abovecaptionskip` and `\belowcaptionskip` to a skip of zero anyway.)

Furthermore `\SC@justify` will override the caption justification, if set. The usage of `\SC@justify` differs from version to version of the `sidecap` package:

Version 1.4: `\SC@justify` is not defined

Version 1.5: `\SC@justify` is `\relax` when not set

Version 1.6: `\SC@justify` is `\@empty` when not set

```
1617 \def\caption@setSC@justify{%
1618 \caption@clearmargin
1619 \ifx\SC@justify\@empty \else
1620 \let\caption@hj\SC@justify
1621 \let\SC@justify\@empty
1622 \fi}%
```

Make the original definition of `\endSC@FLOAT` to use our caption stuff instead of its own.

Note: At this point the `sidecap` definition of `\caption` is valid, not the regular one!

```
1623 \let\caption\SC@orig@caption
1624 \def\SC@orig@caption[##1]##2{\caption@defrost}%
```

Finally we call the original definition of `\endSC@FLOAT`.

```
1625 \caption@setSC@justify % for compatibility mode
1626 \caption@ORI@endSC@FLOAT}%
```

```
1627 }{}
```

16.12 The subfigure package

```
1628 \caption@IfPackageLoaded{subfigure}[2002/01/23 v2.1]{%
