1 Introduction

This package provides manual change markup.

Any comments, thoughts or improvements are welcome, just send an email.

If you want to see the commented package-sourcecode, please uncomment \OnlyDescription in changes.drv and translate the document.

README: The changes-package allows users to manually markup changes of text such as additions, deletions, or replacements. Changed text is shown in a different colour; deleted text is striked out. The package allows free defining of additional authors and their associated colour. It also allows you to define a markup for authors or annotations.

As I'm not a native speaker, please feel free to report any grammatic or orthographic errors.

2 User interface of the *changes*-package

For activating manual change management, address the *changes*-package as follows:

```
\usepackage{changes}
```

Options for the package are described in [subsection 2.2](#).

2.1 Used packages

The *changes*-package uses already existing packages. The following packages have to be installed for the *changes*-package; otherwise errors may occur.

You will find detailed description of the packages in their distributions.

ifthen provides an enhanced \if-command as well as a while-loop

pdfcolmk solves the problem of coloured text and page breaks (with pdflatex)

ulem striking out texts

xcolor provides colourised markup of texts

xkeyval provides options with key-value-pairs

2.2 Options

draft

The *draft*-option enables markup of changes. The list of changes is available via `\listofchanges`. This option is the default option, if no other option is selected.

The *changes* package reuses the declaration of *draft* in `\documentclass`. The local declaration of *final* overrules the declaration of *draft* in `\documentclass`.

```
\usepackage[draft]{changes}
```

final

The *final*-option disables markup of changes, only the correct text will be shown. The list of changes is disabled, too.

The *changes* package reuses the declaration of *final* in `\documentclass`. The local declaration of *draft* overrules the declaration of *final* in `\documentclass`.

```
\usepackage[final]{changes}
```

ulem

All options for the *ulem* package can be specified as parameters of the *ulem*-option. Two or more options have to be embraced in curly brackets.

```
\usepackage[ulem=normalem]{changes}
\usepackage[ulem={normalem,normalbf}]{changes}
```

xcolor

All options for the *xcolor* package can be specified as parameters of the *xcolor*-option. Two or more option have to be embraced in curly brackets.

```
\usepackage[xcolor=dvipdf]{changes}
\usepackage[xcolor={dvipdf,gray}]{changes}
```

2.3 New commands

This section describes all new commands of the *changes*-package.

2.3.1 Change management

\added

The command \added marks new text. The new text is the mandatory argument for the command, thus it is written in curly braces. There are two optional arguments: author-id and remark. The author-id has to be defined using \definechangesauthor. Use an empty author for an anonymous remark.

Definition \added[⟨author-id⟩][⟨remark⟩]{⟨new text⟩}

Example This is \added[EK]{new} text.
This is new^{EK} text.
This is \added[] [anonymous]{new} text.
This is new¹ text.

\deleted

The command \deleted marks deleted text. For arguments see \added.

Definition \deleted[⟨author-id⟩][⟨remark⟩]{⟨deleted text⟩}

Example This is \deleted[] [unnecessary]{bad} text.
This is bad² text.

\replaced

The command \replaced marks replaced text. Mandatory arguments are new and old text. For optional arguments see \added.

Definition \replaced[⟨author-id⟩][⟨remark⟩]{⟨new text⟩}{⟨old text⟩}

Example This is \replaced[EK]{nice}{ugly} text.
This is niceugly^{EK} text.

\listofchanges

The command \listofchanges outputs a list of changes. The first L^AT_EX-run creates an auxiliary file, the second run uses the data of this file. Therefore you need two L^AT_EX-runs for an actual list of changes.

Definition \listofchanges

2.3.2 User specific adaptions

```
\definechangesauthor
```

The command `\definechangesauthor` defines a new author for changes. You have to define a unique author-id and a corresponding colour. Special characters or spaces are not allowed in the author-id. The name of the author can optionally be defined, it is used in the list of changes.

Definition `\definechangesauthor[<author-name>]{<author-id>}{{<colour>}}`

Example `\definechangesauthor{EK}{orange}`
`\definechangesauthor[Ekkart Kleinod]{EK}{orange}`

```
\setlocextension
```

The command `\setlocextension` sets the extension of the auxiliary file for the list of changes. The default extension is "loc". In the example, the auxiliary file for "foo.tex" would be named named "foo.changes".

Definition `\setlocextension{<extension>}`

Example `\setlocextension{changes}`

```
\setauthormarkup
```

The command `\setauthormarkup` sets the layout of the authormarkup in the text. The default markup is a superscripted author-id on the right side of the changed text.

Values for position (optional): `left` = left of the changes; all other values: right
Values for definition: any L^AT_EX-commands, author-id can be shown using "#1".

Definition `\setauthormarkup[<position>]{<definition>}`

Example `\setauthormarkup{(#1)}`
`\setauthormarkup[left]{(#1)~~~}`
`\setauthormarkup{\marginpar{#1}}`
`\setauthormarkup[right]{}{}`

```
\setremarkmarkup
```

The command `\setremarkmarkup` sets the layout of the remarkmarkup in the text.
The default markup sets the remark in a footnote.

Values for definition: any \LaTeX -commands, author-id can be used with "#1", remark
can be shown using "#2". Using the author-id you can use the author's colour with
`Changes@Color#1`.

Definition `\setremarkmarkup{<definition>}`

Example `\setremarkmarkup{(#2:#1)}`
`\setremarkmarkup{\footnote{#1:\textcolor{Changes@Color#1}{#2}}}`

3 The documented sourcecode

3.1 Package information and options

1 `(*changes)`

Set needed \LaTeX -format to $\text{\LaTeX}2\epsilon$, provide name, date, version. Type some
information to the console.

2 `\NeedsTeXFormat{LaTeX2e}`
3 `\ProvidesPackage{changes}`
4 `[2010/11/22 v0.5.3 changes-Paket]`
5 `\typeout{*** changes-Paket 2010/11/22 v0.5.3 ***}`

Package `xkeyval` provides options with key-value-pairs.

6 `\RequirePackage{xkeyval}`

Package `ifthen` provides improved if as well as a while-loop.

7 `\RequirePackage{ifthen}`

Options

Option `draft`, `default`

8 `\newboolean{Changes@optiondraft}`
9 `\setboolean{Changes@optiondraft}{true}`
10 `\DeclareOptionX{draft}{`
11 `\setboolean{Changes@optiondraft}{true}`
12 `\typeout{changes-option '\CurrentOption'}`
13 `}`

Option final

```
14 \DeclareOptionX{final}{  
15   \setboolean{Changes@optiondraft}{false}  
16   \typeout{changes-option '\CurrentOption'}  
17 }
```

Options for package *ulem*

```
18 \DeclareOptionX{ulem}{  
19   \typeout{ulem-option '#1', passed to package ulem}  
20   \PassOptionsToPackage{\#1}{ulem}  
21 }
```

Options for package *xcolor*

```
22 \DeclareOptionX{xcolor}{  
23   \typeout{xcolor-option '#1', passed to package xcolor}  
24   \PassOptionsToPackage{\#1}{xcolor}  
25 }
```

Unknown options

```
26 \DeclareOptionX*{  
27   \PackageWarning{Unknown changes-option '\CurrentOption'}  
28 }
```

Execute processing of options.

```
29 \ProcessOptionsX*\relax
```

Package *xcolor* provides coloured text.

```
30 \RequirePackage{xcolor}
```

Package *pdfcolmk* solves the problem of coloured text and page breaks (has to be loaded after *xcolor*).

```
31 \RequirePackage{pdfcolmk}
```

Package *ulem* provides commands for striking out text.

```
32 \RequirePackage{ulem}
```

69 \addto\captionsenglish{\def\changesnoloc{List of changes is available after the next \LaTeX\ r
70 }

```

File extension.

```
71 \newcommand{\Changes@extension}{loc}
```

\setlocextension Set new file extension. Argument: new extension.

```
72 \newcommand{\setlocextension}[1]{  
73   \renewcommand{\Changes@extension}{#1}  
74 }
```

3.3 management of authors

Authorcount.

```
75 \newcounter{Changes@AuthorCount}  
76 \setcounter{Changes@AuthorCount}{0}  
77 \newcounter{Changes@iAuthor}
```

\definechangesauthor Define a new author. Arguments: author-id and author's colour. Optional argument: author name.

Store author id, name and colour using named variables. Define counter and colour per author.

```
78 \newcommand{\definechangesauthor}[3][\empty]{  
79   \stepcounter{Changes@AuthorCount}  
80   \@namedef{Changes@Author\theChanges@AuthorCount}{#2}  
81   \@namedef{Changes@AuthorName#2}{#1}  
82   \@namedef{Changes@AuthorColor#2}{#3}  
83   \newcounter{Changes@AddCount#2}  
84   \newcounter{Changes@DeleteCount#2}  
85   \newcounter{Changes@ReplaceCount#2}  
86   \colorlet{Changes@Color#2}{#3}  
87 }
```

Define default-author (anonymous).

```
88 \definechangesauthor{\empty}{blue}
```

Position of the authors markup relative to the text. `true` = left, `false` = right (default).

```
89 \newboolean{Changes@AuthorPositionLeft}  
90 \setboolean{Changes@AuthorPositionLeft}{false}
```

\Changes@AuthorMark Markup of the author. Default: superscripted.

```
91 \newcommand{\Changes@AuthorMark}[1]{%  
92   \textsuperscript{#1}%  
93 }
```

\setauthormarkup Redefining the author markup.

```
94 \newcommand{\setauthormarkup}[2][left]{%
95   \ifthenelse{\equal{#1}{left}}%
96     {\setboolean{Changes@AuthorPositionLeft}{true}}%
97     {\setboolean{Changes@AuthorPositionLeft}{false}}%
98   \renewcommand{\Changes@AuthorMark}[1]{#2}%
99 }
```

\Changes@Remark Markup of remarks. Default: in a footnote.

```
100 \newcommand{\Changes@Remark}[2]{%
101   \footnote{\textcolor{\Changes@Color}{\#1}\#2}%
102 }
```

\setremarkmarkup Redefining the remark markup.

```
103 \newcommand{\setremarkmarkup}[1]{%
104   \renewcommand{\Changes@Remark}[2]{#1}%
105 }
```

3.4 Change commands

Temporary variable for exchange of optional parameters between interlocked commands.

```
106 \newcommand{\Changes@temp}{\empty}
```

\added The command formats text as new text. It's rather complicated for defining a command with two optional parameters.

Arguments: author-id (opt.), remark (opt), and new text

```
107 \newcommand{\added}[1][\empty]{%
108   \renewcommand{\Changes@temp}{#1}%
109   \Changes@added%
110 }
111 \newcommand{\Changes@added}[2][\empty]{%
112   \ifthenelse{\boolean{Changes@optiondraft}}{%
113     %
114     \textcolor{\Changes@Color}{\Changes@temp}%
115   }{%
116     \ifthenelse{\equal{\Changes@temp}{\empty}}{%
117       {}{\Changes@AuthorMark{\Changes@temp}}%
118     }{}%
119   }%
120 }
```

```
121 {\ifthenelse{\equal{@empty}{\Changes@temp}}%  
122 {}{\Changes@AuthorMark{\Changes@temp}}%  
123 }{}%  
124 \ifthenelse{\equal{@empty}{#1}}%  
125 {}{\Changes@Remark{\Changes@temp}{#1}}%  
126 }%  
127 \stepcounter{Changes@AddCount\Changes@temp}%  
128 }{#2}%  
129 }
```

\deleted The command formats text as deleted text. It's rather complicated for defining a command with two optional parameters.

The final-part is taken from a tip from *de.comp.text.tex*. It solves the problem of additional space caused by an empty command.

Arguments: author-id (opt.), remark (opt), and deleted text

```
130 \newcommand{\deleted}[1][{@empty}]{%  
131 \renewcommand{\Changes@temp}{#1}%  
132 \Changes@deleted%  
133 }  
134 \newcommand{\Changes@deleted}[2][{@empty}]{%  
135 \ifthenelse{\boolean{Changes@optiondraft}}%  
136 {}%  
137 \textcolor{Changes@Color}{\Changes@temp}{%  
138 \ifthenelse{\boolean{Changes@AuthorPositionLeft}}%  
139 {\ifthenelse{\equal{@empty}{\Changes@temp}}%  
140 {}{\Changes@AuthorMark{\Changes@temp}}%  
141 }{}%  
142 \sout{#2}%  
143 \ifthenelse{\not\boolean{Changes@AuthorPositionLeft}}%  
144 {\ifthenelse{\equal{@empty}{\Changes@temp}}%  
145 {}{\Changes@AuthorMark{\Changes@temp}}%  
146 }{}%  
147 \ifthenelse{\equal{@empty}{#1}}%  
148 {}{\Changes@Remark{\Changes@temp}{#1}}%  
149 }%  
150 \stepcounter{Changes@DeleteCount\Changes@temp}%  
151 }{\@bsphack \expandafter \@esphack}%  
152 }
```

\replaced The command formats text as replaced text. It's rather complicated for defining a command with two optional parameters.

Arguments: author-id (opt.), remark (opt), new text, and old text

```
153 \newcommand{\replaced}[1][{@empty}]{%  
154 \renewcommand{\Changes@temp}{#1}%
```

```
155 \Changes@replaced%
156 }
157 \newcommand{\Changes@replaced}[3][\empty]{%
158 \ifthenelse{\boolean{Changes@optiondraft}}{%
159 {%
160 \textcolor{Changes@Color}{Changes@temp}}{%
161 \ifthenelse{\boolean{Changes@AuthorPositionLeft}}{%
162 \ifthenelse{\equal{\empty}{\Changes@temp}}{%
163 {}{\Changes@AuthorMark{\Changes@temp}}{%
164 }}{}}{%
165 #2{%
166 \sout{#3}}{%
167 \ifthenelse{\not\boolean{Changes@AuthorPositionLeft}}{%
168 \ifthenelse{\equal{\empty}{\Changes@temp}}{%
169 {}{\Changes@AuthorMark{\Changes@temp}}{%
170 }}{}}{%
171 \ifthenelse{\equal{\empty}{#1}}{%
172 {}{\Changes@Remark{\Changes@temp}{#1}}{%
173 }}{%
174 \stepcounter{Changes@ReplaceCount}{Changes@temp}}{%
175 }{#2}}{%
176 }
```

3.5 List of changes

\changes@chopline Auxiliary command for reading the content of the loc-files.

```
177 \def\changes@chopline#1;#2;#3;#4;#5;#6 \\{%
178 \def\Changes@InID{#1}%
179 \def\Changes@InColor{#2}%
180 \def\Changes@InName{#3}%
181 \def\Changes@InAdded{#4}%
182 \def\Changes@InDeleted{#5}%
183 \def\Changes@InReplaced{#6}%
184 }
```

\listofchanges This command outputs a list of changes, sorted by authors. The values are read from the loc-file, if it exists.

```
185 \newcommand{\listofchanges}{%
186 \ifthenelse{\boolean{Changes@optiondraft}}{%
187 {%
188 \section*{\listchangesname}%
189 \IfFileExists{\jobname.\Changes@extension}{%
190 {%
191 \newboolean{Changes@MoreLines}%
192 \setboolean{Changes@MoreLines}{true}%
193 \newread\Changes@InFile
```

```
194 \openin\Changes@InFile = \jobname.\Changes@extension
195 \whiledo{\boolean{Changes@MoreLines}}{
196 \read\Changes@InFile to \Changes@Line
197 \ifeof\Changes@InFile
198 \setboolean{Changes@MoreLines}{false}
199 \else
200 \expandafter\changes@chopline\Changes@Line\\
201 \begin{tabbing}
202 mm\=mmmmmm\=\kill
203 \ifthenelse{\equal{\Changes@InID}{}}
204 {\textcolor{\Changes@InColor}{\changesauthorname: \changesanonymousname}\ \\
205 {\textcolor{\Changes@InColor}{\changesauthorname: \Changes@InID}}
206 \ifthenelse{\equal{\Changes@InName}{}}
207 {\textcolor{\Changes@InColor}{(\Changes@InName)}}
208 \\
209 }
210 \>\changesaddname: \>\Changes@InAdded\\
211 \>\changesdeletename: \>\Changes@InDeleted\\
212 \>\changesreplacename: \>\Changes@InReplaced\\
213 \end{tabbing}
214 \fi
215 }
216 \closein\Changes@InFile
217 }{
218 \emph{\changesnoloc}
219 }
220 }()
221 }
```

Writing the list of changes in the loc-file, therefore open file, write values, close file. Changes are written as L^AT_EX-formatted text, so they can simply be read via `\input`.

Line format: ID;colour;name;added;deleted;replaced

```
222 \AtEndDocument{
223 \newwrite\Changes@OutFile
224 \immediate\openout\Changes@OutFile = \jobname.\Changes@extension
225 \setcounter{Changes@iAuthor}{0}
226 \whiledo{\value{Changes@iAuthor} < \value{Changes@AuthorCount}}{
227 \stepcounter{Changes@iAuthor}
228 \def\Changes@ID{\nameuse{Changes@Author}{theChanges@iAuthor}}
229 \immediate\write\Changes@OutFile{\Changes@ID;%
230 \nameuse{Changes@AuthorColor}{Changes@ID};%
231 \nameuse{Changes@AuthorName}{Changes@ID};%
232 \the\value{Changes@AddCount}{Changes@ID};%
233 \the\value{Changes@DeleteCount}{Changes@ID};%
234 \the\value{Changes@ReplaceCount}{Changes@ID}}
235 }
```

```
236 \closeout\Changes@OutFile  
237 }  
  
238 </changes>
```

```

5 Authors

The *changes* package was written by several authors. The authors are (in alphabetical order):

- Kleinod, Ekkart
- Wolter, Steve

6 Versions

6.1 TODO/known bugs

- ant-task for deleting all *changes*-commands
- markup of figures/tables
- change-environments for longer text
- missing T1-fonts (umlauts) and *inputenc* create errors
- maybe introducing second-class change-commands (not so important), using starred commands?

6.2 Version 0.5.3

Date: 2010/11/22

- document options of `\documentclass` are used as well (suggestion and code of Steve Wolter)

6.3 Version 0.5.2

Date: 2007/10/10

- package options for *pdfcolmk*, *ulem*, and *xcolor* are passed to the packages

6.4 Version 0.5.1

Date: 2007/08/27

- deleted text is striked out again using package *ulem*, greying didn't work

6.5 Version 0.5

Date: 2007/08/26

- no usage of package *arrayjob* anymore, thus no errors using package *array*
- switch to UTF-8-encoding
- no usage of package *soul* anymore, thus no errors using UTF-8-encoding
- markup for deleted text changed to gray background, because there's no possibility to conveniently strikeout UTF-8-text
- new optional argument for author name
- coloured list of changes
- changed loc file format
- improved English documentation

6.6 Version 0.4

Date: 2007/01/24

- included *pdfcolmk* to solve problem with coloured text and page breaks
- extended \setremarkmarkup with author-id for using colour in remarks
- remarks are by default coloured now
- first version uploaded to CTAN

6.7 Version 0.3

Date: 2007/01/22

- english user-documentation
- replaced \changed with \replaced
- improved final-option: no additional space

6.8 Version 0.2

Date: 2007/01/17

- defined loc-names when missing *babel*-package
- `\setauthormarkup`, `\setlocextension`, `\setremarkmarkup` new
- generated examples
- inserted LPPL

Bugfixes

- fixed wrong *ifthen*-placement
- fixed error in loc, always showing "added"
- fixed authormarkup (`\if`-condition not bugfree)

6.9 Version 0.1

Date: 2007/01/16

- initial version
- commands `\added`, `\deleted`, and `\changed`
