

# The cool package\*

nsetzer

October 7, 2006

This is the cool package: a Content Oriented L<sup>A</sup>T<sub>E</sub>X package. That is, it is designed to give L<sup>A</sup>T<sub>E</sub>X commands the ability to contain the mathematical meaning while retaining the typesetting versatility.

Please note that there are examples of use of each of the defined commands at the location where they are defined.

This package requires the following, non-standard L<sup>A</sup>T<sub>E</sub>X packages (all of which are available on [www.ctan.org](http://www.ctan.org)): coolstr, coollist, forloop

## 1 Implementation

```
1 \newcounter{COOL@ct} %just a general counter
2 \newcounter{COOL@ct@}%just a general counter
```

### 1.1 Parenthesis

```
3 \newcommand{\inp}[2][0cm]{\mathopen{}\left(#2\parbox[h]{#1}{0cm}{}\right)}
4 % in parentheses ()
5 \newcommand{\inb}[2][0cm]{\mathopen{}\left[#2\parbox[h]{#1}{0cm}{}\right]}
6 % in brackets []
7 \newcommand{\inbr}[2][0cm]{\mathopen{}\left<#2\parbox[h]{#1}{0cm}{}\right>}
8 % in braces {}
9 \newcommand{\inap}[2][0cm]{\mathopen{}\left<#2\parbox[h]{#1}{0cm}{}\right>}
10 % in angular parentheses <>
11 \newcommand{\nop}[1]{\mathopen{}\left.#1\right.}
12 % no parentheses
```

`\COOL@decide@paren` `\COOL@decide@paren[parenthesis type]{function name}{contained text}`.

Since the handling of parentheses is something that will be common to many elements this function will take care of it.

If the optional argument is given, `\COOL@notation@function nameParen` is ignored and `parenthesis type` is used

`parenthesis type` and `\COOL@notation@function nameParen` must be one of none, p for (), b for [], br for {}, ap for ⟨⟩, inv for \left.\right.

```
13 \let\COOL@decide@paren@no@type=\relax
14 \newcommand{\COOL@decide@paren}[3][\COOL@decide@paren@no@type]{%
```

---

\*This document corresponds to cool v1.3, dated 2006/10/07.

```

15 \ifthenelse{ \equal{#1}{\COOL@decide@paren@no@type} }%
16 {%
17 \def\COOL@decide@paren@type{\csname COOL@notation@#2Paren\endcsname}%
18 }%
19 % Else

62 }%
63 }%
64 }%

```

```

65 }%
66 }%
67 }

```

## 1.2 Indices

`\COOL@decide@indices` `\COOL@decide@indices{\function name}{\local indication}{\indices}`  
 Since up or down indices can be as common as the parenthesis decision, this macro is the solution.

`\local indication` must be either u or d

`\indices` is very likely to be required to be a comma separated list in the near future

the options for indices are

- `local` allow the indices to be decided by an optional argument to the function (such as `\LeviCivita[u]{i j}`)
- `up` force the indices to appear as superscript
- `down` force the indices to appear as subscript

```

68 \newcommand{\COOL@decide@indices}[3]{%
69 \def\COOL@decide@indices@placement%
70 {\csname COOL@notation@#1Indices\endcsname}%
71 \ifthenelse{\equal{\COOL@decide@indices@placement}{local}}%
72 {%
73 \ifthenelse{\equal{#2}{u}}%
74 {^{#3}}%
75 {_{#3}}%
76 }%
77 % Else
78 {%
79 \ifthenelse{\equal{\COOL@decide@indices@placement}{up}}%
80 {%
81 {^{#3}}%
82 }%
83 % Else
84 {%
85 \ifthenelse{\equal{\COOL@decide@indices@placement}{down}}%
86 {%
87 {_{#3}}%
88 }%
89 % else
90 {%
91 \PackageError{cool}{Invalid Option Sent}%
92 {#1Indices can only be 'up', 'down', or 'local'}%
93 }%
94 }%
95 }%
96 }

```

### 1.3 Content Oriented LaTeX (COOL)

`\Style` `\Style{⟨options⟩}` sets the style of the output (how to notate particular functions). `⟨options⟩` is a comma delimited list of the form `⟨key⟩=⟨value⟩`, where `⟨key⟩` is the *long* form of the command name without the preceding backslash (i.e. `Integrate` and not `Int` or `\Int`). The list can be in any order and need only contain the styles that the user desires to set.

There can be multiple `\Style` commands within any document—the styled output of the command depends on the last `\Style` command to have specified its style.

For a list of styling options for a command, see the code where the command is defined

```
97 \newcommand{\Style}[1]{%
98 \COOL@keyeater#1,\COOL@keystop\COOL@keyend%
99 }
100 \newcommand{\COOL@keystop}{@@@}%
101 \def\COOL@keyeater#1=#2,#3\COOL@keyend{%
102 \ifx#3\COOL@keystop%
103 \expandafter\gdef\csname COOL@notation@#1\endcsname{#2}%
104 \else%
105 \expandafter\gdef\csname COOL@notation@#1\endcsname{#2}%
106 \COOL@keyeater#3\COOL@keyend%
107 \fi%
108 }
```

`\UseStyleFile` Since notational style should be kept consistent and will likely need to span several documents, use this command to input a notation style file that has previously been prepared. (to be implemented in a future release)

```
109 \newcommand{\UseStyleFile}[1]{}
```

#### 1.3.1 Fundamental Constants

see <http://functions.wolfram.com/> for the definitions

`\I` The square root of minus 1,  $i = \sqrt{-1}$ .

`\Style{ISymb=\mathbbm{i}}` , `\I` gives  $i$ .

```
110 \newcommand{\COOL@notation@ISymb}{i}
111 \newcommand{\I}{\COOL@notation@ISymb}
```

`\E` Euler’s constant and the base of the natural logarithm,  $e$ .

`\Style{ESymb=\mathbbm{e}}` , `\E` gives  $e$ .

```
112 \newcommand{\COOL@notation@ESymb}{e}
113 \newcommand{\E}{\COOL@notation@ESymb}
```

`\PI` Pi—the ratio of the circumference of a circle to its diameter,  $\pi$ .

`\Style{PISymb=\bbpi}`<sup>1</sup> , `\PI` gives  $\pi$ .

---

<sup>1</sup>to get the ‘bbpi’ symbol , you will need to use the package `mathbbol` and pass the `bbgreek` option

```

114 \newcommand{\COOL@notation@PISymb}{\pi}
115 \newcommand{\PI}{\COOL@notation@PISymb}

\GoldenRatio The Golden Ratio,  $\varphi$ 
116 \newcommand{\GoldenRatio}{\varphi}

\EulerGamma Euler's Gamma constant,  $\gamma$ .
      \Style{EulerGammaSymb=\gamma_E} , \EulerGamma gives  $\gamma_E$ 
117 \newcommand{\COOL@notation@EulerGammaSymb}{\gamma}
118 \newcommand{\EulerGamma}{\COOL@notation@EulerGammaSymb}

\Catalan Catalan constant,  $C$ 
119 \newcommand{\Catalan}{C}

\Glaisher Glaisher constant, Glaisher
120 \newcommand{\Glaisher}{\mathord{\operatorname{Glaisher}}}

\Khinchin Khinchin constant, Khinchin
121 \newcommand{\Khinchin}{\mathord{\operatorname{Khinchin}}}

```

### 1.3.2 Symbols

```

\Infinity Infinity,  $\infty$ 
122 \newcommand{\Infinity}{\infty}

\Indeterminant An indeterminate quantity
123 \newcommand{\Indeterminant}{%
124 \mathchoice%
125 {\mbox{\textrm>}}%
126 {\mbox{\small>}}%
127 {\mbox{\scriptsize>}}%
128 {\mbox{\tiny>}}%
129 }

\DirectedInfinity Directed Infinity \DirectedInfinity{\langle complex number \rangle} or \DirInfty{\langle complex
\DirInfty number \rangle}
130 \newcommand{\DirectedInfinity}[1]{#1 \, \infty}
131 \newcommand{\DirInfty}[1]{\DirectedInfinity{#1}}

\ComplexInfinity Complex infinity,  $\tilde{\infty}$ 
\CInfty 132 \newcommand{\ComplexInfinity}{\tilde{\infty}}
133 \newcommand{\CInfty}{\ComplexInfinity}

```

### 1.3.3 Exponential Functions

`\Exp` Exponential—for use when  $e^x$  won't suffice,  $\exp(x)$

```
134 \newcommand{\COOL@notation@ExpParen}{p}
135 \newcommand{\Exp}[1]
136 {%
137 \exp\COOL@decide@paren{Exp}{#1}%
138 }
```

`\Log` Logarithm, `\Log{x}`. This function has several options to be set. The usual parentheses, then some about the notation to be used for displaying the symbol.

```
139 \newcommand{\COOL@notation@LogParen}{none}
```

The following set the symbols:

`LogBaseESymb` can be `ln` or `log`, indicating what symbol should be used for the natural logarithm. If set to `log` then logarithms of base 10 are displayed as  $\log_{10}$ .

`LogShowBase` can be either `at will` or `always` and decides whether or not one should show the base, as in  $\log_b x$ . If this option is set to `always` then `LogBaseESymb` is ignored.

<code>\Log{5}</code>	$\ln 5$	$\ln 5$
<code>\Log[10]{5}</code>	$\log 5$	$\log 5$
<code>\Log[4]{5}</code>	$\log_4 5$	$\log_4 5$
<code>\Style{LogBaseESymb=log}</code>		
<code>\Log{5}</code>	$\log 5$	$\log 5$
<code>\Log[10]{5}</code>	$\log_{10} 5$	$\log_{10} 5$
<code>\Log[4]{5}</code>	$\log_4 5$	$\log_4 5$
<code>\Style{LogShowBase=always}</code>		
<code>\Log{5}</code>	$\log_e 5$	$\log_e 5$
<code>\Log[10]{5}</code>	$\log_{10} 5$	$\log_{10} 5$
<code>\Log[4]{5}</code>	$\log_4 5$	$\log_4 5$
<code>\Style{LogShowBase=at will}</code>		
<code>\Log{5}</code>	$\ln 5$	$\ln 5$
<code>\Log[10]{5}</code>	$\log 5$	$\log 5$
<code>\Log[4]{5}</code>	$\log_4 5$	$\log_4 5$
<code>\Style{LogParen=p}</code>		
<code>\Log[4]{5}</code>	$\log_4(5)$	$\log_4(5)$

```
140 \newcommand{\COOL@notation@LogBaseESymb}{ln}% 'ln', 'log'

190 }

```

### 1.3.4 Trigonometric Functions

`\Sin` The sine function, `\Sin{x}`,  $\sin(x)$

```

191 \newcommand{\COOL@notation@SinParen}{p}
192 \newcommand{\Sin}[1]{\sin\COOL@decide@paren{Sin}{#1}}

```

`\Cos` The cosine function, `\Cos{x}`,  $\cos(x)$

```

193 \newcommand{\COOL@notation@CosParen}{p}
194 \newcommand{\Cos}[1]{\cos\COOL@decide@paren{Cos}{#1}}

```

`\Tan` The tangent function, `\Tan{x}`,  $\tan(x)$   
195 `\newcommand{\COOL@notation@TanParen}{p}`  
196 `\newcommand{\Tan}[1]{\tan\COOL@decide@paren{Tan}{#1}}`

`\Csc` The cosecant function, `\Csc{x}`,  $\csc(x)$   
197 `\newcommand{\COOL@notation@CscParen}{p}`  
198 `\newcommand{\Csc}[1]{\csc\COOL@decide@paren{Csc}{#1}}`

`\Sec` The secant function, `\Sec{x}`,  $\sec(x)$   
199 `\newcommand{\COOL@notation@SecParen}{p}`  
200 `\newcommand{\Sec}[1]{\sec\COOL@decide@paren{Sec}{#1}}`

`\Cot` The cotangent function, `\Cot{x}`,  $\cot(x)$   
201 `\newcommand{\COOL@notation@CotParen}{p}`  
202 `\newcommand{\Cot}[1]{\cot\COOL@decide@paren{Cot}{#1}}`

### 1.3.5 Inverse Trigonometric Functions

`\COOL@notation@ArcTrig` The inverse trigonometric functions style is governed by this global key. Its options are

`inverse` (default), this displays as  $\sin^{-1}$   
`arc`, this displays as `arcsin`

203 `\def\COOL@notation@ArcTrig{inverse}`

`\ArcSin` The inverse of the sine function, `\ArcSin{x}`,  $\sin^{-1}(x)$   
204 `\newcommand{\COOL@notation@ArcSinParen}{p}`  
205 `\newcommand{\ArcSin}[1]{%`  
206 `\ifthenelse{ \equal{\COOL@notation@ArcTrig}{inverse} }%`  
207 `{%`  
208 `\sin^{-1}\COOL@decide@paren{ArcSin}{#1}%`  
209 `}`  
210 `% else`  
211 `{`  
212 `\ifthenelse{\equal{\COOL@notation@ArcTrig}{arc}}%`  
213 `{%`  
214 `\arcsin\COOL@decide@paren{ArcSin}{#1}%`  
215 `}%`  
216 `% else`  
217 `{%`  
218 `\PackageError{cool}{Invalid option sent}{}`  
219 `}%`  
220 `}%`  
221 `}`

`\ArcCos` the inverse of the cosine function, `\ArcCos{x}`,  $\cos^{-1}(x)$   
222 `\newcommand{\COOL@notation@ArcCosParen}{p}`  
223 `\newcommand{\ArcCos}[1]{%`  
224 `\ifthenelse{ \equal{\COOL@notation@ArcTrig}{inverse} }%`

```

225 {%
226 \cos^{-1}\COOL@decide@paren{ArcCos}{#1}%
227 }%
228 % else
229 {%
230 \ifthenelse{\equal{\COOL@notation@ArcTrig}{arc}}%
231 {%
232 \arccos\COOL@decide@paren{ArcCos}{#1}%
233 }%
234 % else
235 {%
236 \PackageError{cool}{Invalid option sent}{}%
237 }%
238 }%
239 }

```

**\ArcTan** The inverse of the tangent function,  $\text{\ArcTan}\{x\}$ ,  $\tan^{-1}(x)$

```

240 \newcommand{\COOL@notation@ArcTanParen}{p}
241 \newcommand{\ArcTan}[1]{%
242 \ifthenelse{ \equal{\COOL@notation@ArcTrig}{inverse} }%
243 {%

246 % else
247 {%
248 \ifthenelse{\equal{\COOL@notation@ArcTrig}{arc}}%
249 {%
250 \arctan\COOL@decide@paren{ArcTan}{#1}%
251 }%
252 % else
253 {%
254 \PackageError{cool}{Invalid option sent}{}%
255 }%
256 }%
257 }

```

**\ArcCsc** The Inverse Cosecant function,  $\text{\ArcCsc}\{x\}$ ,  $\csc^{-1}(x)$

```

258 \newcommand{\COOL@notation@ArcCscParen}{p}
259 \newcommand{\ArcCsc}[1]{\csc^{-1}\COOL@decide@paren{ArcCsc}{#1}}

```

**\ArcSec** The inverse secant function,  $\text{\ArcSec}\{x\}$ ,  $\sec^{-1}(x)$

```

260 \newcommand{\COOL@notation@ArcSecParen}{p}
261 \newcommand{\ArcSec}[1]{\sec^{-1}\COOL@decide@paren{ArcSec}{#1}}

```

**\ArcCot** The inverse cotangent function,  $\text{\ArcCot}\{x\}$ ,  $\cot^{-1}(x)$

```

262 \newcommand{\COOL@notation@ArcCotParen}{p}
263 \newcommand{\ArcCot}[1]{\cot^{-1}\COOL@decide@paren{ArcCot}{#1}}

```

### 1.3.6 Hyperbolic Functions

`\Sinh` Hyperbolic sine, `\Sinh{x}`,  $\sinh(x)$   
264 `\newcommand{\COOL@notation@SinhParen}{p}`  
265 `\newcommand{\Sinh}[1]{\sinh\COOL@decide@paren{Sinh}{#1}}`

`\Cosh` Hyperbolic cosine, `\Cosh{x}`,  $\cosh(x)$   
266 `\newcommand{\COOL@notation@CoshParen}{p}`  
267 `\newcommand{\Cosh}[1]{\cosh\COOL@decide@paren{Cosh}{#1}}`

`\Tanh` Hyperbolic Tangent, `\Tanh{x}`,  $\tanh(x)$   
268 `\newcommand{\COOL@notation@TanhParen}{p}`  
269 `\newcommand{\Tanh}[1]{\tanh\COOL@decide@paren{Tanh}{#1}}`

`\Csch` Hyperbolic cosecant `\Csch{x}`,  $\operatorname{csch}(x)$   
270 `\newcommand{\COOL@notation@CschParen}{p}`  
271 `\DeclareMathOperator{\csch}{csch}`  
272 `\newcommand{\Csch}[1]{\csch\COOL@decide@paren{Csch}{#1}}`

`\Sech` Hyperbolic secant, `\Sech{x}`,  $\operatorname{sech}(x)$   
273 `\newcommand{\COOL@notation@SechParen}{p}`  
274 `\DeclareMathOperator{\sech}{sech}`  
275 `\newcommand{\Sech}[1]{\sech\COOL@decide@paren{Sech}{#1}}`

`\Coth` Hyperbolic Cotangent, `\Coth{x}`,  $\operatorname{coth}(x)$   
276 `\newcommand{\COOL@notation@CothParen}{p}`  
277 `\newcommand{\Coth}[1]{\coth\COOL@decide@paren{Coth}{#1}}`

### 1.3.7 Inverse Hyperbolic Functions

`\ArcSinh` Inverse hyperbolic sine, `\ArcSinh{x}`,  $\sinh^{-1}(x)$   
278 `\newcommand{\COOL@notation@ArcSinhParen}{p}`  
279 `\newcommand{\ArcSinh}[1]{\sinh^{-1}\COOL@decide@paren{ArcSinh}{#1}}`

`\ArcCosh` Inverse hyperbolic cosine, `\ArcCosh{x}`,  $\cosh^{-1}(x)$   
280 `\newcommand{\COOL@notation@ArcCoshParen}{p}`  
281 `\newcommand{\ArcCosh}[1]{\cosh^{-1}\COOL@decide@paren{ArcCosh}{#1}}`

`\ArcTanh` Inverse hyperbolic tangent, `\ArcTanh{x}`,  $\tanh^{-1}(x)$   
282 `\newcommand{\COOL@notation@ArcTanhParen}{p}`  
283 `\newcommand{\ArcTanh}[1]{\tanh^{-1}\COOL@decide@paren{ArcTanh}{#1}}`

`\ArcCsch` Inverse hyperbolic cosecant, `\ArcCsch{x}`,  $\operatorname{csch}^{-1}(x)$   
284 `\newcommand{\COOL@notation@ArcCschParen}{p}`  
285 `\newcommand{\ArcCsch}[1]{\csch^{-1}\COOL@decide@paren{ArcCsch}{#1}}`

`\ArcSech` Inverse hyperbolic secant, `\ArcSech{x}`,  $\operatorname{sech}^{-1}(x)$   
286 `\newcommand{\COOL@notation@ArcSechParen}{p}`  
287 `\newcommand{\ArcSech}[1]{\sech^{-1}\COOL@decide@paren{ArcSech}{#1}}`

`\ArcCoth` Inverse hyperbolic cotangent, `\ArcCoth{x}`,  $\coth^{-1}(x)$   
 288 `\newcommand{\COOL@notation@ArcCothParen}{p}`  
 289 `\newcommand{\ArcCoth}[1]{\coth^{-1}\COOL@decide@paren{ArcCoth}{#1}}`

### 1.3.8 Product Logarithms

`\LambertW` Lambert Function. `\LambertW` is an alias for `\ProductLog` and its properties are therefore set using that function

290 `\newcommand{\LambertW}[1]{\ProductLog{#1}}`

`\ProductLog` Generalized Lambert Function `\ProductLog{[<index>],<variable>}`.

Lambert Function `\ProductLog{x}`  $W(x)$   
 Generalized Lambert Function `\ProductLog{k,x}`  $W_k(x)$

291 `\newcommand{\COOL@notation@ProductLogParen}{p}`  
 292 `\newcommand{\ProductLog}[1]{%`  
 293 `\listval{#1}{0}%`  
 294 `\ifthenelse{\value{COOL@listpointer}=1}%`  
 295 `{%`  
 296 `W\COOL@decide@paren{ProductLog}{#1}%`  
 297 `}%`  
 298 `% else`  
 299 `{%`  
 300 `\ifthenelse{\value{COOL@listpointer}=2}%`  
 301 `{%`  
 302 `W_{\listval{#1}{1}}\COOL@decide@paren{ProductLog}{\listval{#1}{2}}%`  
 303 `}%`  
 304 `% else`  
 305 `{%`  
 306 `\PackageError{cool}{‘ProductLog’ Invaoid Argument}%`  
 307 `{Must have a comma separated list of length 1 or 2}`  
 308 `}%`  
 309 `}%`  
 310 `}`

### 1.3.9 Max and Min

`\Max` the maximum function, `\Max{x,y,z}`,  $\max(x,y,z)$

311 `\newcommand{\COOL@notation@MaxParen}{p}`  
 312 `\newcommand{\Max}[1]{\max\COOL@decide@paren{Max}{#1}}`

`\Min` the minimum function, `\Min{x,y,z}`,  $\min(x,y,z)$

313 `\newcommand{\COOL@notation@MinParen}{p}`  
 314 `\newcommand{\Min}[1]{\min\COOL@decide@paren{Min}{#1}}`

### 1.3.10 Bessel Functions

`\BesselJ` Bessel Function of the first kind, `\BesselJ{<nu>}{x}`,  $J_\nu(x)$

315 `\newcommand{\COOL@notation@BesselJSymb}{J}`

```

316 \newcommand{\COOL@notation@BesselJParen}{p}
317 \newcommand{\BesselJ}[2]%
318 {\COOL@notation@BesselJSymb_{#1}\COOL@decide@paren{BesselJ}{#2}}

\BesselY Bessel Function of the second kind, \BesselY{\nu}{x},  $Y_\nu(x)$ 
319 \newcommand{\COOL@notation@BesselYSymb}{Y}
320 \newcommand{\COOL@notation@BesselYParen}{p}
321 \newcommand{\BesselY}[2]%
322 {\COOL@notation@BesselYSymb_{#1}\COOL@decide@paren{BesselY}{#2}}

\BesselI Modified Bessel Function of the first kind, \BesselI{\nu}{x},  $I_\nu(x)$ 
323 \newcommand{\COOL@notation@BesselISymb}{I}
324 \newcommand{\COOL@notation@BesselIParen}{p}
325 \newcommand{\BesselI}[2]%
326 {\COOL@notation@BesselISymb_{#1}\COOL@decide@paren{BesselI}{#2}}

\BesselK Modified Bessel Function of the second kind, \BesselK{\nu}{x},  $K_\nu(x)$ 
327 \newcommand{\COOL@notation@BesselKSymb}{K}
328 \newcommand{\COOL@notation@BesselKParen}{p}
329 \newcommand{\BesselK}[2]%

### 1.3.41 Generalized Functions

```

\DiracDelta Dirac Delta Function, \DiracDelta{x},  $\delta(x)$ 
2153 \newcommand{\COOL@notation@DiracDeltaParen}{p}
2154 \newcommand{\DiracDelta}[1]{\delta\COOL@decide@paren{DiracDelta}{#1}}

\HeavisideStep Heaviside Step Function
\UnitStep      \HeavisideStep{x}    $\theta(x)$ 
               \UnitStep{x}        $\theta(x)$ 
2155 \newcommand{\COOL@notation@HeavisideStepParen}{p}
2156 \newcommand{\HeavisideStep}[1]%
2157 {\theta\COOL@decide@paren{HeavisideStep}{#1}}
2158 \newcommand{\UnitStep}[1]{\HeavisideStep{#1}}

```

### 1.3.42 Calculus

```

\COOL@notation@DDisplayFunc Both \D and \pderiv are controlled by these keys.
\COOL@notation@DShorten     DDisplayFunc controls how the function is displayed, it can take the values:
                             inset   Display as  $\frac{df}{dx}$ 
                             outset  Display as  $\frac{d}{dx}f$ 
                             DShorten is for multiple derivatives. it can take the values
                             true    force derivatives to be consolidated, as in  $\frac{d^2}{dxdy}f$ 
                             false   expand derivatives as in  $\frac{d}{dx}\frac{d}{dx}f$ 
2159 \newcounter{COOL@multideriv}
2160 \newcommand{\COOL@notation@DDisplayFunc}{inset}
2161 \newcommand{\COOL@notation@DShorten}{true}

```

```

\COOL@derivative Both \D and pderiv have the same basic operation, so a macro is defined that
does the internals
\COOL@derivative{\derivative power(s)}{\function}{\wrt}{\symbol}

```

$\langle wrt \rangle$  is a comma separated list of length  $\geq 1$ .  
 $\langle symbol \rangle$  is passed by  $\backslash D$  or  $\backslash pderiv$  and is  $\backslash COOL@notation@DSymb$  or ‘ $\partial$ ’ respectively

$\backslash COOL@derivative\{2,3\}\{f\}\{x,y,z\}\{d\}$	$\frac{d^8 f}{dx^2 dy^3 dz^3}$
$\backslash COOL@derivative\{2,3,4,5\}\{f\}\{x,y,z\}\{d\}$	$\frac{d^9 f}{dx^2 dy^3 dz^4}$
$\backslash COOL@derivative\{2,n,1\}\{f\}\{x,y,z\}\{d\}$	$\frac{d^{2+n+1} f}{dx^2 dy^n dz}$
$\backslash COOL@derivative\{2,n\}\{f\}\{x,y,z\}\{d\}$	$\frac{d^{2+n+n} f}{dx^2 dy^n dz^n}$
$\backslash Style\{DDisplayFunc=outset\}$	
$\backslash COOL@derivative\{2,n\}\{f\}\{x,y,z\}\{d\}$	$\frac{d^{2+n+n} f}{dx^2 dy^n dz^n}$
$\backslash Style\{DShorten=false,DDisplayFunc=inset\}$	
$\backslash COOL@derivative\{2,n\}\{f\}\{x,y,z\}\{d\}$	$\frac{d^2}{dx^2} \frac{d^n}{dy^n} \frac{d^n}{dz^n} f$
$\backslash COOL@derivative\{2,3,4,5\}\{f\}\{x,y,z\}\{d\}$	$\frac{d^2}{dx^2} \frac{d^3}{dy^3} \frac{d^4}{dz^4} f$
$\backslash Style\{DShorten=false,DDisplayFunc=outset\}$	
$\backslash COOL@derivative\{2,n\}\{f\}\{x,y,z\}\{d\}$	$\frac{d^2}{dx^2} \frac{d^n}{dy^n} \frac{d^n}{dz^n} f$

2162  $\backslash newcommand\{\backslash COOL@notation@DSymb\}\{d\}$

2163  $\backslash newcommand\{\backslash COOL@derivative\}[4]\{\%$

Get the length of  $\langle wrt \rangle$  argument.  $\backslash listval\{\#3\}\{0\}$  gives the length of the list since lists begin indexing at 1.

2164  $\backslash listval\{\#3\}\{0\}\%$

2165  $\backslash setcounter\{COOL@listlen\}\{\backslash value\{COOL@listpointer\}\}\%$

Store the  $\langle wrt \rangle$  list and get the length of  $\langle derivative\ power(s) \rangle$ .

2166  $\backslash liststore\{\#3\}\{COOL@deriv@wrt@0\}\%$

2167  $\backslash listval\{\#1\}\{0\}\%$

2168  $\backslash setcounter\{COOL@ct\}\{\backslash value\{COOL@listpointer\}\}\%$

2169  $\backslash ifthenelse\{\backslash value\{COOL@ct\}\>\backslash value\{COOL@listlen\}\}\%$

2170  $\{\backslash setcounter\{COOL@ct\}\{\backslash value\{COOL@listlen\}\}\}\{\%$

2171  $\backslash liststore\{\#1\}\{COOL@deriv@powers@0\}\%$

Check to see if all of the powers are integers—if they are, then we may sum them in the usual sense

2172  $\backslash isint\{\backslash COOL@deriv@powers@i\}\%$

2173  $\backslash setcounter\{COOL@multideriv\}\{2\}\%$

2174  $\backslash whiledo\ \backslash boolean\{COOL@isint\} \backslash AND$

2175  $\backslash NOT \backslash value\{COOL@multideriv\}\>\backslash value\{COOL@ct\} \ ]\%$

2176  $\{\%$

2177  $\backslash def\backslash COOL@tempd\%$

2178  $\{\backslash csname\ COOL@deriv@powers@\backslash roman\{COOL@multideriv\}\backslash endcsname\}\%$

2179  $\backslash isint\{\backslash COOL@tempd\}\%$

2180  $\backslash stepcounter\{COOL@multideriv\}\%$

2181  $\}\%$

If the length of  $\langle derivative\ power(s) \rangle$  is less than the length of  $\langle wrt \rangle$ , then we assume that the last value applies to *all* the remaining derivatives.

## Change History

v0	General: pre-Initial version [tentative edition] . . . . . 1	v1.3	General: Redefined the <code>in*</code> commands to have a <code>mathopen</code> before the <code>left</code> . Added <code>IntegrateDifferentialDSymb</code> and <code>DSymb</code> options for <code>Integrate</code> and <code>D</code> . Added <code>IdentityMatrixSymb</code> for <code>IdentityMatrix</code> and changed the default to display a double-struck 1. Added <code>ESymb</code> , <code>ISymb</code> , <code>PISymb</code> , and <code>EulerGammaSymb</code> for fundamental constants . . . . 1
v1.0	General: Initial Release . . . . . 1		
v1.1	General: Added <code>listlenstore</code> to package to allow storing of the list length . . . . . 1		
v1.2	General: Split off the list, string, and <code>forloop</code> parts to separate packages . . . . . 1		

## Index
