

# The L<sup>A</sup>T<sub>E</sub>X `dtxdescribe` Package

v1.03 — 2022/02/01

© 2016–2022 Brian Dunn  
bd@BDTechConcepts.com

Describe additional object types in dtx source files.

## Abstract

The `doc` package includes tools for describing macros and environments in L<sup>A</sup>T<sub>E</sub>X source .dtx format. The `dtxdescribe` package adds additional tools for describing booleans, lengths, counters, hooks, keys, packages, classes, options, files, commands, arguments, and other objects. `dtxdescribe` also works with the regular document classes, for those who do not wish to use the `ltxdoc` class and .dtx files.

Each described item is given a margin tag similar to `\DescribeEnv`, and is listed in the index by itself and also by category. Each item may be sorted further by an optional class. All index entries except code lines are hyperlinked.

The `dtxexample` environment is provided for typesetting example code and its results. Contents are displayed verbatim along with a caption and cross-referencing. They are then `\input` and executed, and the result is shown.

Environments are also provided for displaying verbatim or formatted source code, user-interface displays, and sidebars with titles.

Macros are provided for formatting the names of inline L<sup>A</sup>T<sub>E</sub>X objects such as packages and booleans, as well as program and file names, file types, internet objects, the names of certain programs, a number of logos, and inline dashes and slashes.

`dtxdescribe` works with the `ltxdoc` class, but also works with the standard classes as well, except that the `macro` and `environment` environments are not supported. Either `makeidx` or `splitidx` may be loaded by the user. `makeidx` will be used by default.

`dtxdescribe` works with pdfT<sub>E</sub>X, X<sub>H</sub>T<sub>E</sub>X, and LuaT<sub>E</sub>X, and perhaps other engines as well.

## List of Figures

1	A Figure	.....	28
---	----------	-------	----

## 1 Introduction

The doc package provides \DescribeMacro and \DescribeEnv to help document new macros and environments. Each generates a heading in the documentation, to which \marg, \oarg, and \parg may be added to identify arguments to be passed to the new object. Their names are added to the margin, and index entries are added, as well as group of entries for environments.

dtxdescribe extends this concept to include a number of additional objects, such as booleans and keys. To help identify what is being described in the margin, small tags are added to the name, such as “Env”, “Bool”, or “Key”. These new objects are also listed in the index with the same tag shown after their names, and also by group. Optional classes may be used to further categories index entries.

Modifications have been made to interact with hyperref to provide hyper links for regular index entries as well as the new \Describe entries.

Additional macros are provided to generate colored margin tags and warnings, and a new dtxexample environment demonstrates code examples.

This documentation and its index show examples of these macros in use.

While the index may appear to be overkill for a small package, keep in mind that it includes a number of fictional entries from the examples. Extensive cross-referencing can be useful for larger works. And, of course, you need not cross-reference everything!

## 2 Using dtxdescribe

Place `\usepackage{dtxdescribe}` in the .dtx file's driver section:

```
%<*driver>
\documentclass{ltxdoc}
...
\usepackage{lmodern}
...
\usepackage{dtxdescribe}
...
\usepackage{packagename} % the name of your new package
...
\usepackage[...]{hyperref}
\usepackage[...]{cleveref}
...
%</driver>
```

Various objects inside the dtx file may be described with new macros such as `\DescribeBoolean`, `\DescribeLength`, `\DescribeCounter`, similar to the already-familiar `\DescribeMacro` and `\DescribeEnv`.

Optional “classes” may be assigned to the objects being described, including the new versions of `\DescribeMacro` and `\DescribeEnv`. These classes are printed in the margin tag and index entry for each item, and also generate additional index entries sorted by class. This is especially useful for key/value sets, where several sets may appear in the same document.

**inside a float** The margin tag is not printed if the `\Describe` macros are used inside a float such as a table, but the index entries are still made.

**\margin{text}** `\margin{text}` may be used to place a colored tag in the margin to summarize paragraph contents or draw attention to an index destination.

**⚠ \watchout{text}** `\watchout[optional text]` may be used to place a red warning sign in the margin, along with optional text.

The `dtxexample` environment may be used to typeset and execute small pieces of L<sup>A</sup>T<sub>E</sub>X code as examples of its use. Optional cross-referencing notes may be used to refer to any example float being generated.

### 3 The macros, and the `dtxexample` environment

#### 3.1 Macros and environments

Env macro  
Env environment  
⚠ .dtx only

These are only provided by the `ltxdoc` class and `doc` package to document a `.dtx` file, where comments are used by `docstrip` to disable these environments in the resulting `.sty` file. When using the regular document classes, the `macro` and `environment` environments would localize any definitions, and `\DescribeMacro` and `\DescribeEnv` should be used instead.

`\DescribeMacro`  $[\langle class \rangle] \{ \langle \backslash name \rangle \}$

The preexisting macro from the `doc` package is redefined to create hyperlinked index entries, and include an optional class. A margin tag is created and an index entry is made. When the optional class is used, it is displayed in front of the margin tag, and is used to group an index entry by macro name and another index entry by class. An example would be to describe the float creation and caption setup for a new class of float, such as the `dtxexample` float and the example “photograph” float both found in the index for this document. See example 1 on page 19 for examples.

`\DescribeEnv`  $[\langle class \rangle] \{ \langle environment\ name \rangle \}$

The preexisting macro from the `doc` package is redefined to create hyperlinked index entries, include an optional class, and also to place an ‘Env’ tag in front of the name in the margin. See example 2 on page 20.

#### 3.2 Arguments

The `\Describe...`  macros may be followed by `\marg`, `\oarg`, and `\parg` to describe arguments passed to the macros.

`\marg`  $\{ \langle text \rangle \}$

Shows a mandatory argument for a macro or environment.

The results looks like  $\{ \langle mandatory \rangle \}$ .

`\oarg`  $\{ \langle text \rangle \}$

Shows an optional argument for a macro or environment.

The results looks like  $[\langle optional \rangle]$ .

`\parg`  $\{ \langle text \rangle \}$

Used for “picture” arguments, such as coordinates.

The result looks like (*<coordinate>*).

\DescribeArgument

[*<class>*] {*<argument>*}

May be used to describe actions taken when given certain macro arguments. These will be given an ‘Arg’ margin tag and will appear in the index. The class may be used to categorize arguments by their macro or environment name. See example 9 on page 24.

### 3.3 Booleans, lengths, counters, hooks, keys

See example 4 on page 21.

\DescribeBoolean

[*<class>*] {*<name>*}

Describes a boolean. Given a ‘Bool’ tag in the margin and index.

\DescribeLength

[*<class>*] {*<name>*}

Describes a length. Given a ‘Len’ tag in the margin and index.

\DescribeCounter

[*<class>*] {*<name>*}

Describes a counter. Given a ‘Ctr’ tag in the margin and index.

\DescribeHook

[*<class>*] {*<name>*}

Describes a hook. Given a ‘Hook’ tag in the margin and index. The class may be used to categorize hooks by package. Example:

```
\DescribeHook[LaTeX]{para/begin}
```

\DescribeKey

[*<class>*] {*<name>*}

Describes a key. Given a ‘Key’ tag in the margin and index. The class may be used to categorize keys by their key/value group. See example 8 on page 23.

### 3.4 Packages, classes, options

\DescribePackage

[*<class>*] {*<name>*}

Describes a package. Given a ‘Pkg’ tag in the margin and index.

\DescribeClass

[*<class>*] {*<name>*}

Describes a L<sup>A</sup>T<sub>E</sub>X class. Given a ‘Cls’ tag in the margin and index.

\DescribeOption  
[*<class>*] {*<name>*}

Describes a L<sup>A</sup>T<sub>E</sub>X package or class option. Given an ‘Opt’ tag in the margin and index.

### 3.5 Files, programs, commands

\DescribeFile  
[*<class>*] {*<name>*}

Describes an operating-system file. Given a ‘File’ tag in the margin and index. The filename may have underscores.

\DescribeProgram  
[*<class>*] {*<name>*}

Describes an operating-system program. Given a ‘Prog’ tag in the margin and index. The program name may have underscores.

\DescribeCommand  
[*<class>*] {*<name>*}

Describes an operating-system command. Given a ‘Cmd’ tag in the margin and index. The command name may have underscores.

### 3.6 Other source objects

\DescribeObject  
[*<class>*] {*<name>*}

Describes an arbitrary programming object, such as a color definition or caption setup. A margin tag and index entry are created with \ttfamily type. When a class is used, it is pre-pended to the margin tag, appended to the index entry, and a second index entry is created grouped by class. If a macro name is to be described, use \DescribeMacro instead. See example 10 on page 25.

\DescribeOther  
[*<class>*] {*<name>*}

Describes an arbitrary non-programming object, such as a license agreement or credits. A margin tag and index entry are created in roman type. When a class is used, it is pre-pended to the margin tag, appended to the index entry, and a second index entry is created grouped by class. See example 11 on page 25.

### 3.7 In a description environment

To describe an object using a description environment, use the following. See example 12 on page 26.

\ItemDescribeMacro	$[\langle class \rangle] \{ \langle \backslash name \rangle \}$ A description.
\ItemDescribeEnv	$[\langle class \rangle] \{ \langle name \rangle \}$ A description.
\ItemDescribeArgument	$[\langle class \rangle] \{ \langle argument \rangle \}$ A description.
\ItemDescribeBoolean	$[\langle class \rangle] \{ \langle name \rangle \}$ A description.
\ItemDescribeLength	$[\langle class \rangle] \{ \langle \backslash name \rangle \}$ A description.
\ItemDescribeCounter	$[\langle class \rangle] \{ \langle name \rangle \}$ A description.
\ItemDescribeHook	$[\langle class \rangle] \{ \langle name \rangle \}$ A description.
\ItemDescribeKey	$[\langle class \rangle] \{ \langle name \rangle \}$ A description.
\ItemDescribePackage	$[\langle class \rangle] \{ \langle package\_name \rangle \}$ With underscores.
\ItemDescribeClass	$[\langle class \rangle] \{ \langle class\_name \rangle \}$ With underscores.
\ItemDescribeOption	$[\langle class \rangle] \{ \langle name \rangle \}$ A description.
\ItemDescribeFile	$[\langle class \rangle] \{ \langle file\_name \rangle \}$ With underscores.
\ItemDescribeProgram	$[\langle class \rangle] \{ \langle program\_name \rangle \}$ With underscores.
\ItemDescribeCommand	$[\langle class \rangle] \{ \langle command\_name \rangle \}$ With underscores.
\ItemDescribeObject	$[\langle class \rangle] \{ \langle name \rangle \}$ A description.
\ItemDescribeOther	$[\langle class \rangle] \{ \langle name \rangle \}$ A description.

## 3.8 Defaults

\DescribeDefault Default: <code>value</code>	$\{ \langle value \rangle \}$
	Shows the default value of a \Describe... item, such as displayed here. Place this macro immediately after the \Describe... macro and any arguments, but before the text description.

\DescribeDefaultcolor Default: <code>green!50!black</code>	The color of the margin tag used to show the default value. This is used by \textcolor to create the margin tag.
---	--

## 3.9 Nesting

\shownesting \*  $[\langle fraction \ of \ \backslash linewidth \rangle] \{ \langle container \ name \rangle \} \{ \langle contents \rangle \}$

It may be useful to show which objects contain which other objects. `\shownesting` shows a box enclosing a name for the container, and the container's contents. `\shownesting` be nested, showing boxes inside other boxes, which displays how each environment and macro is fit together inside each other.

The optional argument is the fraction of `\linewidth` to use for the box, from [0] to [1]. The default is [1]. Each `\shownesting` starts its own paragraph, unless the star \* is used, in which case the `\shownesting*` appears inline with previous text. To place two `\shownesting` boxes side-by-side, use optional arguments to specify less than full `\linewidth` for each box, and use `\shownesting*` for the second box to place it inline.

See example 13 on page 27 for an example.

### 3.10 `\margintag`, `\watchout`

`\margintag`

{*<text>*}

Creates a colored margin tag. May be used to identify the topic of a paragraph or the destination of an arbitrary index entry.

`\margintagcolor`

Default: `blue!70!black`

The color of the `\margintag`.

`\watchout`

[*<text>*]

Creates a red margin tag with a warning sign and optional text. May be used to warn the reader of special instructions, etc. Without the optional text the warning sign is displayed by itself.

`\watchoutcolor`

Default: `red!50!black`

The color of the `\watchout`.

### 3.11 `dtxexample` environment

\* [*<Notes/cross-references>*] {*<caption & label>*}

The `dtxexample` environment is useful for demonstrating a piece of L<sup>A</sup>T<sub>E</sub>X code. The example is a simulated float with its own caption and optional label, along with optional notes and/or cross-referencing commands. The contents of the `dtxexample` environment are printed verbatim, then loaded and executed as L<sup>A</sup>T<sub>E</sub>X code, showing the results just below the printed code. In the case of float commands, the floats are generated as expected somewhere nearby, and should be given their own labels. References to the float's labels may be placed in the optional argument to the `dtxexample` environment, and will be printed below the code.

The unstarred version places the code inside a minipage, forbidding a page break in the middle of the code listing. The starred version does not use a minipage. This is required when the code is too large to fit on a single page.

See example 14 for a demonstration of how dtxexample works.

\dtxexamplecodename      The text name of the code section.

Default: Code:

\dtxexampleresultname      The text name of the result section.

Default: Result:

### 3.12 noindmacro and noindenvironment environments

 .dtx only

These are like macro and environment, but not indexed. These only make sense if using the ltxdoc class and doc package to document a .dtx file, where comments are used by *docstrip* to disable these environments in the resulting .sty file. When using the regular document classes, noindmacro and noindenvironment environments should not be used, as they would localize any definitions. \DescribeMacro and \DescribeEnv should be used instead.

Env noindmacro      {<\name>} To document macros which should not be included in the index.

Env noindenvironment      {<name>} To document environments which should not be included in the index.

Replace

```
\begin{macro}{\macroname} \oarg{optional} \marg{mandatory}
...
\end{macro}
```

with

```
\begin{noindmacro}{\macroname} \oarg{optional} \marg{mandatory}
...
\end{noindmacro}
```

and similarly for noindenvironment.

### 3.13 sourceverb, sourcedisplay, UIdisplay, docsidebar

Env sourceverb      [<key/values>]      Display source code verbatim. Uses optional fancyvrb keys. Includes gobble=2 to absorb the leading % and space character of a dtx file source format. Because this is a verbatim environment, it *cannot* be used inside a macro.

Default: gobble=2,  
tabsize=4,  
xleftmargin=2em

Env fsourceverb      [<key/values>]      Display source code verbatim inside a frame. A label may be

Default: gobble=2,  
tabsize=4,  
xleftmargin=2em,frame=lines

included using the `label` key. Because this is a verbatim environment, it *cannot* be used inside a macro. See example 15 on page page 29.

`Env sourcedisplay` Display source code with manual formatting. This is not a verbatim environment. `\textcolor`, `\textbf`, and `\emph` may be used to highlight text. Macros must be escaped with `\cs`, characters such as `{` must be produced with `\{`, etc. `\backslash` must be used to force a new line. `\fquad`, `\fqquad`, and `\fqqquad` may be used to force indenting. Because this is *not* a verbatim environment, it *can* be used inside a macro. See example 16 on page 29.

`\fquad` Single-level indent inside a `sourcedisplay`.

`\fqquad` Double-level indent inside a `sourcedisplay`.

`\fqqquad` Triple-level indent inside a `sourcedisplay`.

`Env UIdisplay` Displays a user interface, such as a dialog box entry or a menu selection. See example 17 on page 30. Also see the `\UI` macro..

`\userentry` `\{<text to enter>\}` Typeset something for the user to enter. Also see the `\cmds` macro.

`\userentryname` Text to tell the user to enter the following item. Change with `\renewcommand`.

Default: `Enter`  $\Rightarrow$

`Env docsidebar` `\[<title>\]` Creates a sidebar within the document. See example 18 on page 31.

## 3.14 Formatted objects

Macros to format references to various kinds of objects.

This `dtxdescribe` package documentation uses `erewhon`, `cabin`, and `inconsolata`, along with `metalogox`, to demonstrate the following font effects.

### 3.14.1 L<sup>A</sup>T<sub>E</sub>X objects

`\pkg` `\{<packagename>\}` Prints as `packagename`. Also for a `classname`.

`\cs` `\{<csname>\}` Prints as `\csname`.

`\env` `\{<environment>\}` Prints as `environment`.

`\marg` `\{<argument>\}` Prints `\{<arg>\}`. Mandatory argument.

`\oarg` `\{<argument>\}` Prints `\[<arg>\]`. Optional argument.

---

\parg	{ <i>argument</i> } Prints ( <i>arg</i> ). Picture-mode argument.
\ctr	{ <i>counter</i> } Prints as counter.
\bool	{ <i>boolean</i> } Prints as boolean.
\optn	{ <i>option</i> } Prints as option, for example to a macro, package, class.
\TOC	TOC: Table of contents.
\LOF	LOF: List of figures.
\LOT	LOT: List of tables.

### 3.14.2 Programs and commands

\progcode	Prints as inline program code: Escape underscores and other special characters such as {, %, \$.
\prog	Prints as <i>grep</i> , <i>make</i> : A program name. Underscores allowed.
\filenm	Prints as <i>file_name</i> : Underscores allowed.
\UI	Prints as <b>General user-interface text</b> . What the user sees on the display. Also see the UIdisplay environment.
\cmds	Prints as <b>Commands to be entered</b> : What the user enters. Escape underscores and other special characters such as {, %, \$. Also see the \userentry macro.

### 3.14.3 File types

\ODT	ODT OpenDocument Format word processing document
\SVG	SVG image format
\PNG	PNG image format
\GIF	GIF image format
\JPG	JPG image format
\EPS	EPS image format
\PDF	PDF image format
\DVI	DVI image format

### 3.14.4 Internet

\UTF	UTF: Unicode
\URL	URL: Uniform Resource Locator
\element	{ <i>element name</i> } Prints as <element>, an HTML/css element
\attribute	{ <i>attribute name</i> } Prints as attribute, an HTML/css attribute. pdfTEX and XETEX only. <b>Not for LuaTEX.</b>
\attrib	{ <i>attribute name</i> } Prints as attribute, an HTML/css attribute. pdfTEX, XETEX, or LuaTEX.
\HTML	HTML: Hypertext Markup Language
\HTMLfive	HTML5: Old-style figure if font supports
\CSS	CSS: Cascading Style Sheet
\CSSthree	css3: Old-style figure if font supports
\EPUB	EPUB: E-book file format

### 3.14.5 Specific programs

\tikz	Tikz: Package logo
\CTAN	CTAN: Comprehensive TeX Archive Network
\TDS	TDS: TeX Directory Structure
\MathML	MathML: Mathematical Markup Language
\MathJax	MATHJAX: Math on the web.

### 3.14.6 Acronyms, brand names, trademarks

\brand	{ <i>name</i> } BRANDNAME, COMPANY NAME
\acro	{ <i>acronym</i> } ACRO: Acronym
\supregistered	Superscript trademark symbol®

### 3.15 Logos

Several additional logos are provided.

Also see the `metalogo` and `metalogox` packages.

<code>\dviTeX</code>	DVI T <small>E</small> X
<code>\dviLaTeX</code>	DVI L <small>A</small> T <small>E</small> X
<code>\pdfTeX</code>	PDF T <small>E</small> X
<code>\pdfLaTeX</code>	PDF L <small>A</small> T <small>E</small> X
<code>\LuaTeX</code>	LuaT <small>E</small> X
<code>\LuaLaTeX</code>	LuaL <small>A</small> T <small>E</small> X
<code>\XeTeX</code>	X <small>E</small> T <small>E</small> X, with reversed E if <code>graphics</code> is loaded.
<code>\XeLaTeX</code>	X <small>E</small> L <small>A</small> T <small>E</small> X, with reversed E if <code>graphics</code> is loaded.
<code>\AmS</code>	$\mathcal{A}\mathcal{M}\mathcal{S}$
<code>\LyX</code>	LyX
<code>\BibTeX</code>	B <small>I</small> B <small>T</small> E <small>X</small>
<code>\MakeIndex</code>	<i>MakeIndex</i>
<code>\ConTeXt</code>	ConT <small>E</small> xt
<code>\MiKTeX</code>	MiK <small>T</small> E <small>X</small>

### 3.16 Dashes and slashes

<code>\thinspace</code>	A breakable thin skip.
<code>\endash</code>	An endash: –
<code>\emdash</code>	An emdash: —
<code>\thinbrspace</code>	A thin space which allows a line break.
<code>\thinthinbrspace</code>	A very thin space which allows a line break.
<code>\Dash</code>	An unbreakable thin space, emdash, and breakable thin space: A—B
<code>\dash</code>	An unbreakable thin space, endash, and breakable thin space: A–B

\slash

An unbreakable very thin space, a slash, and a breakable very thin space:

Command	Result	
A--B	A-B	(not breakable)
A \dash B	A-B	(only breakable before the B)
A -- B	A - B	(breakable before or after the dash)
A---B	A—B	(not breakable)
A \Dash B	A—B	(only breakable before the B)
A --- B	A — B	(breakable before or after the dash)
A/B	A/B	(not breakable)
A \slash B	A/B	(only breakable before the B)
A / B	A / B	(breakable before or after the slash)
A~/~B	A / B	(not breakable)

## 4 Examples

---

### Example 1: Macros

*Code:*

```
\DescribeMacro{\mymacro} \oarg{optional} \marg{mandatory}
A typical macro definition.
```

```
\DescribeMacro[photograph]{\DeclareFloatingEnvironment}
Create a photograph float. \bigskip
```

```
\DescribeMacro[photograph]{\captionsetup}
Caption settings for a photograph float.
```

```
\DescribeMacro[photograph]{\cnameref}
\pkg{cleveref} name for the photograph float.
```

*Result:*

\mymacro  
[optional] {mandatory} A typical macro definition.

[photograph] Create a photograph float.

\DeclareFloatingEnvironment

[photograph] \captionsetup Caption settings for a photograph float.

[photograph] \cnameref cleveref name for the photograph float.

---

The optional class is used to label and group tags and index entries. See this document's index entries for examples of this "photograph" class and the dtxexample class of macros.

**hyperlinks** The re-defined \DescribeMacro, \DescribeEnv, and all the following macros create hyperlinked index entries, along with regular uses of \index.

---

**Example 2: Environment**

*Code:*

```
\DescribeEnv{myenvironment} \marg{argument} Short description.
```

*Result:*

Env myenvironment {*argument*} Short description.

---

**add'l tags**

The re-defined `\DescribeEnv` adds an ‘Env’ tag to the margin, and adds “(environment)” to its own index entry. Note that environments and all the other new objects defined by this package each receives two index entries, one by name, and one grouped with others of its kind.

**⚠ too much text**

Example 2 shows descriptive text on the same line as the `\DescribeEnvironment`. For macros and environments with many arguments after the name, it may be better to place any additional text in a following paragraph.

---

**Example 3: Second Environment**

*Code:*

```
\DescribeEnv[kindofenvironment]{otherenvironment}
  \oarg{opt args} \parg{coordinates} A description.
```

*Result:*

Env [kindofenvironment] otherenvironment [{*opt args*} ] ({*coordinates*}) A description.

---

The `otherenvironment` will be indexed by itself and also with `myenvironment` under the index entry “environments”, and also under the class `kindofenvironment`.

---

**Example 4: Booleans and Counters**

*Code:*

```
\DescribeBoolean[examples]{sampleboolean} Some description.
```

```
\DescribeCounter[examples]{samplecounter} Some description.
```

*Result:*

Some description.

Some description.

---

Most of the new \Describe\_\_\_\_ macros behave like the new \DescribeEnv, placing a tag in the margin, an index entry by name, and another index entry by group.

---

---

**Example 5: Lengths**

*Code:*

```
\DescribeLength[photograph]{\photowidth} Some description.
```

*Result:*

Some description.

---

Lengths have a leading backslash, but are otherwise described the same as the rest of the objects.

---

**Example 6: Packages, Classes, and Options**

*Code:*

```
\DescribePackage[examples]{samplepackage}
  About a \LaTeX\ package.
```

```
\DescribeClass[examples]{sample_class}
  About a \LaTeX\ class.
```

```
\DescribeOption[examples]{sampleoption}
  About an option for a package or class.
```

*Result:*

Pkg [examples] samplepackage

Cls [examples] sample\_class

Opt [examples] sampleoption

---

---

**Example 7: Files, Commands, and Programs**

*Code:*

```
\DescribeFile[bigfiles]{really_big_file.txt} Some description.
```

```
\DescribeFile[bigfiles]{another_big_file.txt} Some description.
```

```
\DescribeFile{lone_file.txt} Some description.
```

```
\DescribeCommand{OS_command} An operating-system command.
```

```
\DescribeProgram{program_name} An operating-system program.
```

*Result:*

File [bigfiles] Some description.

really\_big\_file.txt

File [bigfiles] Some description.

another\_big\_file.txt

File lone\_file.txt

Cmd OS\_command

Prog program\_name

---

Filenames, program names, and command names may have underscores, such as tested here. A class is used to group “bigfiles” together in the index.

---

**Example 8: Keys**

*Code:*

```
\DescribeKey[groupofkeys]{firstkey} About the first key  
of the |groupofkeys| set.  
  
\DescribeKey[groupofkeys]{secondkey} About the second key  
of |groupofkeys|.   
  
\DescribeKey[examples]{samplekey} About some key of |otherkeys|.   
  
\DescribeKey[examples]{sampltwokey} About another key of |otherkeys|.   
  
\DescribeKey{lonekey} A key without a class.
```

*Result:*

Key [groupofkeys] firstkey	About the first key of the groupofkeys set.
Key [groupofkeys] secondkey	About the second key of groupofkeys.
Key [examples] samplekey	About some key of otherkeys.
Key [examples] sampltwokey	About another key of otherkeys.
Key lonekey	A key without a class.

---

See the index key groups.

---

**Example 9: Arguments**

*Code:*

```
\DescribeArgument[figure]{[H]}  
What happens when a figure is [H]ere.
```

```
\DescribeArgument[figure]{[M]}  
What happens when a figure is in the [M]argin.
```

```
\DescribeArgument[\cs{mymacro}]{bold}  
What happens when \cs{mymacro} is given the |bold| argument.
```

*Result:*

Arg [figure] [H]

What happens when a figure is [H]ere.

Arg [figure] [M]

What happens when a figure is in the [M]argin.

Arg [\mymacro] bold

What happens when \mymacro is given the bold argument.

---

Arguments behave like keys, and may have an optional class to identify their macro or environment, and group their entries in the index.

 **macro names** Note the need to use \cs{mymacro} for the macro's name.

---

**Example 10: Object**

*Code:*

```
\DescribeObject[color]{somecolor}
    The color of something.

\DescribeObject[color]{othercolor}
    The other color.

\DescribeObject{randomobject} About some random object.
```

*Result:*

[color] somecolor	The color of something.
[color] othercolor	The other color.
randomobject	About some random object.

---

Describes an arbitrary programming object, using \ttfamily text.

---

**Example 11: Other**

*Code:*

```
\DescribeOther{license agreement}
The following is the fictional license agreement:

\DescribeOther{Before \env{myenvironment}}
    Actions to be done \cs{BeforeBeginEnvironment}.

\DescribeOther[otherclass]{Other Item} About the other item.

\DescribeOther[otherclass]{Additional Item} About the add'l item.
```

*Result:*

license agreement	The following is the fictional license agreement:
Before myenvironment	Actions to be done \BeforeBeginEnvironment.
[otherclass] Other Item	About the other item.
[otherclass] Additional Item	About the add'l item.

---

Describes an arbitrary non-programming object, using roman text.

---

**Example 12: Description environments**

---

*Code:*

```
\begin{description}
\ItemDescribeMacro[descexamples]{\macroname} Describe the macro.
\ItemDescribeBoolean[descexamples]{booleanname} Describe the boolean.
\ItemDescribeLength[descexamples]{\lengthname} Describe the length.
\ItemDescribeKey[descexamples]{keyname} Describe the key.
\ItemDescribePackage[descexamples]{package_name} Describe the package.
\ItemDescribeClass[descexamples]{class_name} Describe the class.
\ItemDescribeFile[descexamples]{file_name} Describe the file.
\ItemDescribeProgram[descexamples]{program_name} Describe the program.
\ItemDescribeCommand[descexamples]{command_name} Describe the class.
\end{description}
```

*Result:*

[descexamples] \macroname	<b>\macroname:</b> Describe the macro.
Bool [descexamples] booleanname	<b>booleanname:</b> Describe the boolean.
Len [descexamples] \lengthname	<b>\lengthname:</b> Describe the length.
Key [descexamples] keyname	<b>keyname:</b> Describe the key.
Pkg [descexamples] package_name	<b>package_name:</b> Describe the package.
Clss [descexamples] class_name	<b>class_name:</b> Describe the class.
File [descexamples] file_name	<b>file_name:</b> Describe the file.
Prog [descexamples] program_name	<b>program_name:</b> Describe the program.
Cmd [descexamples] command_name	<b>command_name:</b> Describe the class.

---

Uses a description environment to describe objects.

---

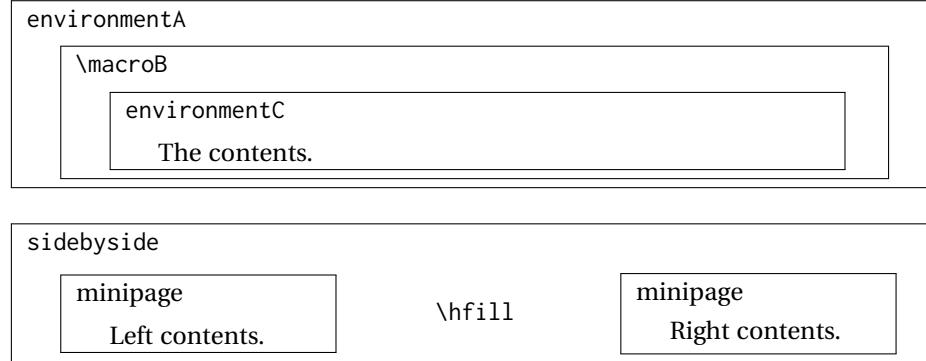

**Example 13: Nesting**

*Code:*

```
\shownesting{\env{environmentA}}{
    \shownesting{\cs{macroB}}{
        \shownesting{\env{environmentC}}{
            The contents.
        }
    }
}

\shownesting{\env{sidebyside}}{
    \shownesting[.35]{minipage}{
        Left contents.
    }
    \hfill \cs{hfill} \hfill
    \shownest[*]{.35}{minipage}{
        Right contents.
    }
}
```

*Result:*

---

Note the use of the optional arguments to select less than full `\linewidth`, and the starred form for the second box to place it inline with the `\hfill` text.

Contents of the figure.

Figure 1: A Figure

### **Example 14: dtxexample**

*Code:*

```
\begin{figure}
  \centering\fbox{Contents of the figure.}
  \caption{A Figure}\label{fig:afigure}
\end{figure}
```

*Result:*

*See fig. 1*

Example 14, typeset above, was created with the following code:

```
\begin{dtxexample}[See \cref{fig:afigure}]
  {\env{dtxexample}\label{ex:dtxexample}}
\begin{figure}
  \centering\fbox{Contents of the figure.}
  \caption{A Figure}\label{fig:afigure}
\end{figure}
\end{dtxexample}
```

When the example was created:

1. The “float” of type `example` was created, with the caption “`dtxexample`” and the label `ex:dtxexample`, which points to example 14.
2. The code was displayed verbatim.
3. The code was written to the file `dtxexample_cut.tex`.
4. The code was `\input` from `dtxexample_cut.tex`.
5. Executing the code created the figure with caption “A Figure” and label `fig:afigure`, which points to fig. 1.
6. The cross-reference to the figure was shown on the optional display line by the optional argument to `dtxexample`.
7. The starred form of `dtxexample` was used to create the closing rule below the code, since a float was being generated and nothing followed the code inline. An unstarred version would have created an extra rule.

---

**Example 15: fsourceverb**

*Code:*

```
% \begin{fsourceverb}[label=An fsourceverb example]
% \newcommand{\dosomething}[1][whattodo]{
%   doing #1
% }
% \end{fsourceverb}
```

*Result:*

---

```
----- An fsourceverb example -----
\newcommand{\dosomething}[1][whattodo]{
  doing #1
}
```

---

(The leading % characters would be present in the dtx source.)

---

**Example 16: sourcedisplay**

*Code:*

```
\begin{sourcedisplay}
\cs{\newcommand}{\dosomething}[1][\textcolor{red}{whattodo}]\{\\
\fquad \textcolor{blue}{doing} \textcolor{red}{\#1}\}\\
\end{sourcedisplay}
```

*Result:*

---

```
\newcommand{\dosomething}[1][whattodo]{
  doing #1
}
```

---

---

**Example 17: UIdisplay**

*Code:*

Select:  
\begin{UIdisplay}  
  \textsf{Preferences \\$\to\\$ Plugins \\$\to\\$ Files \\$\to\\$ HTML}  
\end{UIdisplay}  
For the field  
\begin{UIdisplay}  
Title heading:  
\end{UIdisplay}  
\userentry{H1}

---

*Result:*

Select:

**Preferences → Plugins → Files → HTML**

For the field

**Title heading:**

Enter ⇒ **H1**

---

---

**Example 18: docsidebar**

---

*Code:*

Main text.

More main text.

```
\begin{docsidebar}[A title]
An aside, which may help explain something
incidental to the main text.
\end{docsidebar}
```

Additional main text.

---

*Result:*

Main text.

More main text.

*A title*

---

An aside, which may help explain something incidental to the main text.

---

Additional main text.

---

## 5 Usage notes

**Placement of \Describe macros:** Typically L<sup>A</sup>T<sub>E</sub>X macro and environment definitions are enclosed in macro and environment environments at their place in the source code. \DescribeMacro and \DescribeEnv would be used elsewhere in the manual to describe how to use the code. \DescribeBoolean and such might be at their place in the source code, unless they are worthy of discussion for the end-user, in which case they should be in the “User’s Manual” section of the document.<sup>1</sup> It may be useful to use \DeclareBoolean and friends both at the code location and also in the User’s Manual section.

**Extra spaces:** When placing multiple uses of \Describe, \index, \margintag, and \watchout macros together, care must be taken to avoid extra space in the printed text where these macros occur. A trailing percent character may be used to avoid the extra space:

```
text text text% <-- avoids extra space
\margintag{A comment.}
\index{An entry}
\index{Another entry}
more inline text
```

**Unwanted vertical space:** Other environments nested inside a docsidebar may produce excessive vertical space. It may be required to insert

```
\vspace*{-\baselineskip}
```

**\margintag placement:** To have the margin tag appear next to the first line of a paragraph, place the \margintag or \watchout somewhere after the first few words in the paragraph. The \margintag may be on its own line, and the rest of the paragraph may follow on the next line. If too many words are printed before the \margintag, the words may wrap to the next line before the tag occurs.

**Margin tag overlap:** To keep margin tags in proper alignment, use a new paragraph or multiple lines between \margintag, \watchout, or \Declare macros

**missing tags** **\Describe inside floats:** When these macros are used inside a float, the margin tag is suppressed (there is no margin in a float), but the index entries are still created.

---

<sup>1</sup>Future versions may include \DeclareBoolean for use at the point where the boolean is defined, creating an index entry with a code line number, and \DescribeBoolean with a page number index entry for the related discussion in the User’s Manual portion of the document.

## 6 Code

### 6.1 Required packages

One of several index programs must be provided. One of several index programs must be provided.

```
1 \AtBeginDocument{  
2   \@ifpackageloaded{makeidx}{}{  
3     \@ifpackageloaded{splitidx}{}{  
4       \RequirePackage{makeidx}  
5       \makeindex  
6     }  
7 }
```

Pkg etoolbox v2.6 or later for \BeforeBeginEnvironment, \AfterEndEnvironment

```
8 \RequirePackage{etoolbox}[2011/01/03]%
```

Pkg xparse Used for the examples.

```
9 \RequirePackage{xparse}
```

Pkg calc Used for \shownesting.

```
10 \RequirePackage{calc}
```

Pkg xcolor Used for the examples.

```
11 \RequirePackage{xcolor}  
12 \definecolor{myurlcolor}{rgb}{0,0,.7}  
13 \definecolor{mylinkcolor}{rgb}{.7,0,0}
```

Pkg caption Used for the examples.

```
14 \RequirePackage{caption}
```

Pkg newfloat Used for the examples.

```
15 \RequirePackage{newfloat}
```

Pkg fancyvrb Used for the examples.

```
16 \RequirePackage{fancyvrb}
```

Pkg xstring Used for \StrSubstitute for \DescribeFile.

```
17 \RequirePackage{xstring}
```

If `hyperref` is loaded, disable some macros in PDF bookmarks:

### PDF bookmarks

```
18 \AtBeginDocument{  
19     \@ifpackageloaded{hyperref}{  
20         \pdfstringdefDisableCommands{  
21             \def\quad{}%  
22             \def\\{}%  
23             \def\pkg#1{#1}%  
24             \def\ctr#1{#1}%  
25             \def\bool#1{#1}%  
26             \def\optn#1{#1}%  
27             \def\env#1{#1}%  
28             \def\cs#1{\textbackslash#1}%

57             \def\element#1{#1}%  
58             \def\attribute#1{#1}%  
59             \def\attrib#1{#1}%  
60             \def\HTML{\HTML}%  
61             \def\HTMLfive{\HTML5}%  
62             \def\CSS{\CSS}%
```

Pkg `hyperref`

```

63      \def\CSSthree{CSS3}%
64      \def\EPUB{EPUB}%
65      \def\TOC{TOC}%
66      \def\LOF{LOF}%
67      \def\LOT{LOT}%
68  }
69 }
```

If `\hyperref` is not loaded, emulate `\hyperpage` here.

```

70  {
71      \newcommand*{\hyperpage}[1]{#1}
72  }
73 }
```

Pkg pict2e

```

74 \RequirePackage{pict2e}
75 \setlength{\unitlength}{1pt}
```

`\warningsign` Prints an exclamation point inside a triangle.

Creates a warning sign without relying on the presence of the fourier font. During copy/paste, this shows up as a simple exclamation point.

```

76 \newcommand*{\warningsign}{%
77 \begin{picture}(10,9)
78 \put(4,1){\scriptsize!}
79 \put(0,0){\line(500,866){5}}
80 \put(10,0){\line(-500,866){5}}
81 \put(0,0){\line(1,0){10}}
82 \end{picture}
83 }
```

## 6.2 Gobbling comment characters

DTXD@gobble The .dtx format uses leading percent characters for code to be in the documentation only. Other classes do not.

```

84 @ifpackageloaded{doc}{
85     \newcommand*{\DTXD@gobble}{2}
86 }{
87     \newcommand*{\DTXD@gobble}{0}
88 }
```

### 6.3 Vertical spacing

```

89 \setlength{\marginparsep}{1em}
90 \setlength{\marginparpush}{.7ex}
91
92 \setlength{\parindent}{0em}
93 \setlength{\parskip}{2ex}
```

From `\IndexMin`.

```

94 \ifdef{\IndexMin}
95   {\setlength{\IndexMin}{40ex}}
96   {\newlength{\IndexMin}}
```

### 6.4 ltxdoc emulation

If the `\ltxdoc` class is not used, some of its macros are replicated here.

```

97 \@ifclassloaded{ltxdoc}{}{
98   \def\cmd#1{\cs{\expandafter\cmd@to@cs\string#1}}
99   \def\cmd@to@cs#1#2{\char\number`#2\relax}
100  \DeclareRobustCommand\cs[1]{\texttt{\char`\\"#1}}
101  \providecommand\marg[1]{%
102    {\ttfamily\char`\{}{\meta{#1}}{\ttfamily\char`\})}
103  \providecommand\oarg[1]{%
104    {\ttfamily[\!}{\meta{#1}}{\ttfamily]\!}}
105  \providecommand\parg[1]{%
106    {\ttfamily(\!}{\meta{#1}}{\ttfamily)\!}}
107  \providecommand\url{\texttt}
108 }
```

### 6.5 doc emulation

If the `\doc` class is not used, some of its macros are replicated here.

```

109 \AtBeginDocument{
110   \@ifpackageloaded{doc}{}{
111     \newenvironment*{macro}[1]{%
112       \PackageError{dtxdescribe}{%
113         {The 'macro' environment is only\MessageBreak
114          available when using the doc package\MessageBreak
115          with a .dtx source file}%
116         {This environment only makes sense for .dtx source.}%
117       }{}%
118     \newenvironment*{environment}[1]{%
119       \PackageError{dtxdescribe}{%
120         {The 'environment' environment is only\MessageBreak
```

```

121           available when using the doc package\MessageBreak
122           with a .dtx source file}
123           {This environment only makes sense for .dtx source.}
124       }{}
125       \def\MacroFont{\fontencoding\encodingdefault
126           \fontfamily\ttdefault
127           \fontseries\mddefault
128           \fontshape\updefault
129           \small}%
130           \@ifundefined{actualchar}{\def\actualchar{@}}{}
131           \@ifundefined{quotechar}{\def\quotechar{"}}{}
132           \@ifundefined{levelchar}{\def\levelchar{!}}{}
133           \@ifundefined{encapchar}{\def\encapchar{|}}{}
134           \@ifundefined{verbatimchar}{\def\verbatimchar{+}}{}
135           \setlength\marginparpush{0pt} \setlength\marginparwidth{8pc}
136           \reversemarginpar
137           \DeclareRobustCommand\meta[1]{%
138               \ensuremath\langle
139               \ifmmode \expandafter \nfss@text \fi
140               %
141               \meta@font@select
142               \edef\meta@hyphen@restore
143                   {\hyphenchar\the\font\the\hyphenchar\font}%
144                   \hyphenchar\font\m@ne
145                   \language\l@nohyphenation
146                   #1%
147                   \meta@hyphen@restore
148                   }\ensuremath\rangle
149           }
150           \def\meta@font@select{\itshape}
151       }
152   }

```

## 6.6 Support macros

\PrintEnvName {*name*} Prints an environment name.

```

153 \providecommand*\PrintEnvName(){}
154 \renewcommand*\PrintEnvName[1]
155 {\strut\scriptsize\Env}\quad\MacroFont#1\ }

```

\DTXD@printtype {*text*}

Used to print the object class in the margin:

```

156 \newcommand*\DTXD@printtype[1]
157 {\raggedleft\strut\scriptsize\sffamily#1}\quad\MacroFont}

```

---

```
\usage {⟨text⟩}
```

Allow hyperlinks in the “usage” index entries:

```
158 \providecommand{\usage}{}  
159 \renewcommand{\usage}[1]{\textit{\hyperpage{#1}}}
```

\DTXD@origwrindex Used to bypass `hyperref` index modifications.

```
160 \let\DTXD@origwrindex\@wrindex
```

\DTXD@margintag {⟨class⟩} {⟨name⟩} {⟨margin tag⟩}

Creates the margin tag for the object being described.

The `class` is used to sub-categories keys into their key/value groups.

```
161 \newcommand*{\DTXD@margintag}[3]{%  
162     \@ifundefined{@capttype}{% not float?  
163         \leavevmode%  
164         \marginpar{  
165             {  
166                 \hbadness=10000%  
167                 \hfuzz=5em%  
168                 \DTXD@printtype{  
169                     #3% margintag  
170                     \ifblank{#1}{ }{ [#1]}% class  
171                 }%  
172                 \texttt{#2}% name  
173             }%  
174             }% marginpar  
175         }% not float?  
176 }
```

\DTXD@index {⟨class⟩} {⟨name⟩} {⟨margin tag⟩} {⟨index tag⟩} {⟨main/usage⟩}

Creates the index entries for the object being described, where `name` has no backslash or underscore.

The `class` is used to sub-categories keys into their key/value groups. `main` prints code lines in the index, and `usage` prints page numbers.

```
177 \newcommand*{\DTXD@index}[5]{%
```

The `makeindex` program allows each index entry to call a macro by appending a vertical bar and a macro name to each entry. `hyperref` adds a call by `\hyperpage` to each index entry, by appending the phrase `|hyperpage` to the entry in the `.idx` file.

The `doc` package uses the same mechanism to distinguish between code line entries (`|main`) and references to the use of a macro (`|usage`). The problem is that `makeindex` can only handle one macro call, but `hyperref` tries to append its `|hyperpage` to the already-existing `|usage` or `|main`.

The solution used for `dtxdescribe` is to allow `hyperref` to modify all regular index entries, but use the original definition of `\@wrindex` for the `\Describe____` macros, before `hyperref` modified it. Then, the `\usage` macro, defined above, manually adds the hyperlink.

Below, `\@bsphack` and `\@esphack` seem to be required for `\@wrindex` to work. `\ignorespaces` is used in addition because `\Declare` and `\index` entries often come in groups.

```
178 \@bsphack%
179 \begingroup%
180 \DTXD@origwrindex{%
```

Index by name:

Write the name, the formatted name, the index tag, and the class:

```
181 #2\actualchar{\protect\ttfamily#2} % name
182 (#4)% index tag
183 \ifblank{#1}{}{ [#1]}% class
184 \encapchar #5}%
```

Index by tag and class:

Write the tag and class as a group, under which is the name and the formatted name.

```
185 \begingroup%
186 \DTXD@origwrindex{%
187 #4:\levelchar% index tag
188 \ifblank{#1}{}{[#1]:\levelchar}% class
189 #2\actualchar{\protect\ttfamily#2}% name
190 \encapchar #5}%
```

Possibly index by class and name:

```
191 \ifblank{#1}{}{%
192 \begingroup%
193 \DTXD@origwrindex{%
194 #1\actualchar[#1]:\levelchar% class
195 #2\actualchar{\protect\ttfamily#2}% name
196 (#4)% index tag
197 \encapchar #5}}%
```

```
198 }% class given
199 % \@esphack%
200 \@esphack%
201 \ignorespaces%
202 }
```

\DTXD@margintagindex {*class*} {*name*} {*margin tag*} {*index tag*} {*main/usage*}

Creates the margin tag and the index entries. The *class* is used to sub-categories keys into their key/value groups.

```
203 \newcommand*{\DTXD@margintagindex}[5]{%
204 % \@bsphack%
```

The margin tag and the name:

```
205 \DTXD@margintag{#1}{#2}{#3}%
```

The index entries:

```
206 \DTXD@index{#1}{#2}{#3}{#4}{#5}%
207 }
```

\DTXD@macroname {*control sequence*}

Given a control sequence such as `\name`, prints its name without the backslash.

From: <http://tex.stackexchange.com/questions/42318/removing-a-backslash-from-a-character-sequence>

```
208 \begingroup\lccode`|=`\\
209 \lowercase{\endgroup\def\removebs#1{\if#1|\else#1\fi}}
210 \newcommand*{\DTXD@macroname}[1]{\expandafter\removebs#1}
```

\DTXD@verbatimcmd {*\name*}

While printing to the index file, prints the `\name` verbatim. From `\SpecialIndex` in the `doc` package.

```
211 \newcommand*{\DTXD@verbatimcmd}[1]{%
212 \string\verb\quotechar*\verbatimchar\string#1\verbatimchar%
213 }
```

\DTXD@cmdmargintagindex {*class*} {*name*} {*margin tag*} {*index tag*} {*main/usage*}

Creates the margin tag and index entries where name is a `\macro`.

---

```
214 \newcommand{\DTXD@cmdmargintagindex}[5]{%
215 @bsphack%
```

Create a margin tag with the name of the macro:

```
216 \@ifundefined{@capttype}{% not float?
217 \leavevmode%
218 \marginpar{%
219   {%
220     \hbadness=10000%
221     \hfuzz=5em%
222     \DTXD@printtype{%
223       #3% margin tag
224       \ifblank{#1}{}{ [#1]}% class
225     }%
226     \cmd{#2}% name
227   }%
228 }% marginpar
229 }% not float?
```

Create an index entry sorted by the name without its leading backslash, followed by the macro name with the backslash, and the tag. Prepend with the class if given.

Write (class):>name=csname (indextag)|usage

```
230 \begingroup%
231 \DTXD@origwrindex{%
232 \ifblank{#1}{}{#1\actualchar[#1]:\levelchar}% class
233 \DTXD@macroname{#2}\actualchar\DTXD@verbatimcmd{#2} % name
234 (#4)% index tag
235 \encapchar #5}%
```

Create an index entry grouped by the tag, then printed and sorted by the macro name with the backslash, and the tag.

Write indextag:>(class):>csname|usage

```
236 \begingroup%
237 \DTXD@origwrindex{%

242 @esphack%
243 \ignorespaces%
244 }
```

## 6.7 \DescribeMacro and \DescribeEnvironment

\DescribeMacro [*class*] {*\name*}

Redefined to allow hyperlinked index entries and an optional class:

```
245 \providecommand*\DescribeMacro{%
246 \renewcommand*\DescribeMacro[2][]{%
247 \@bsphack%
```

Create the margin tag with the macro's name:

```
248 \@ifundefined{@capttype}{% not float?
249 \leavevmode%
250 \marginpar{%
251   {%
252     \hbadness=10000%
253     \hfuzz=5em%
254     \raggedleft%
255     \ifblank{\#1}{{\scriptsize\textrm{\#1}}}{\scriptsize\textrm{\#1}}}% class
256     \cmd{\#2}% name
257   }%
258 }% marginpar
259 }{}% not float?
```

Write the index sorted by the name without the backslash, followed by the actual name with the backslash. Append the class if given.

Write *name=csname*>(*class*)|*usage*

```
260 \begingroup%
261 \DTXD@origwrindex{%
262   \DTXD@macroname{\#2}\actualchar\DTXD@verbatimcmd{\#2}% name
263   \ifblank{\#1}{}{\levelchar{\#1}}% class
264   \encapchar usage%
265 }%
```

Only if a class was given:

```
266 \ifblank{\#1}%
267 {}% no class
268 {}% class given
269 % Again, and prepend the class:
270 %
271 % Write class=(class):>name=csname\verb+|usage+
272 %   \begin{macrocode}
273   \begingroup%
274   \DTXD@origwrindex{%
```

---

```

275      #1\actualchar[#1]:\levelchar%
276      \DTXD@macroname{#2}\actualchar\DTXD@verbatimcmd{#2}%
277      \encapchar usage}%
278 }% class given
279 \esphack%
280 \ignorespaces%
281 }
```

\DescribeEnv [⟨class⟩] {⟨environment name⟩}

Redefined to allow hyperlinked index entries:

```

282 \providecommand*\DescribeEnv(){}
283 \renewcommand*\DescribeEnv[]{[]}
284 {\DTXD@margintagindex{#1}{#2}{Env}{environment}{usage}}
```

## 6.8 New \Describe... macros

\DTX@filename Stores the filename with a sanitized underscore.

```
285 \newcommand*\DTX@filename{}
```

\DTXD@filemarginparindex {⟨class⟩} {⟨name⟩} {⟨margin tag⟩} {⟨index tag⟩} {⟨main/usage⟩}

The name may have underscores.

```
286 \newcommand*\DTXD@filemarginparindex[5]{%
```

Create a detokenized version of the filename...

```
287 \renewcommand{\DTXD@filename}{\detokenize{#2}}%
```

... then replace any underscores with a detokenized `\_`, which will print as an underscore when read back from the index file:

```

288 \StrSubstitute{\DTXD@filename}%
289 {\detokenize{_}}{\detokenize{\_}}[\DTXD@filename]%
```

The original filename is printed in the margin. Any underscore characters have already been disabled by the `\catcode` change.

```
290 \DTXD@margintag{#1}{#2}{#3}{%
```

The detokenized and sanitized version is sent to the index file:

```
291 \DTXD@index{#1}{\DTXD@filename}{#3}{#4}{#5}{%
```

End the group with the disabled underscore, and clean up the extra space from the `\catcode` command:

```
292 \endgroup%
293 \ignorespaces%
294 }
```

`\DTXD@DescribeFile` [*<class>*] {*<name>*}

The name may have underscores.

```
295 \newcommand*{\DTXD@DescribeFile}[2][]{%
296 \DTXD@filemarginparindex{#1}{#2}{File}{file}{usage}%
297 }
```

`\DescribeFile` {*<name>*}

The underscore character is temporarily disabled, then the name is passed directly to `\DTXD@DescribeFile`.

```
298 \newcommand*{\DescribeFile}{}%
299 \begingroup\catcode`\_=12 \DTXD@DescribeFile%
300 }
```

`\DTXD@DescribeProgram` [*<class>*] {*<name>*}

The name may have underscores.

```
301 \newcommand*{\DTXD@DescribeProgram}[2][]{%
302 \DTXD@filemarginparindex{#1}{#2}{Prog}{program}{usage}%
303 }
```

`\DescribeProgram` {*<name>*}

The underscore character is temporarily disabled, then the name is passed directly to `\DTXD@DescribeProgram`.

```
304 \newcommand*{\DescribeProgram}{}%
305 \begingroup\catcode`\_=12 \DTXD@DescribeProgram%
306 }
```

`\DTXD@DescribeCommand` [*<class>*] {*<name>*}

The name may have underscores.

```
307 \newcommand*{\DTXD@DescribeCommand}[2][]{%
```

```
308 \DTXD@filemarginparindex{#1}{#2}{Cmd}{command}{usage}%
309 }
```

\DescribeCommand {*name*}

The underscore character is temporarily disabled, then the name is passed directly to \DTXD@DescribeCommand.

```
310 \newcommand*\DescribeCommand{%
311 \begingroup\catcode`\_=12 \DTXD@DescribeCommand%
312 }
```

\DTXD@DescribePackage [*class*] {*name*} The name may have underscores.

```
313 \newcommand*\DTXD@DescribePackage[2][]{%
314 \DTXD@filemarginparindex{#1}{#2}{Pkg}{package}{usage}%
315 }
```

\DescribePackage {*name*}

The underscore character is temporarily disabled, then the name is passed directly to \DTXD@DescribePackage.

```
316 \newcommand*\DescribePackage{%
317 \begingroup\catcode`\_=12 \DTXD@DescribePackage%
318 }
```

\DTXD@DescribeClass [*class*] {*name*}

The name may have underscores.

```
319 \newcommand*\DTXD@DescribeClass[2][]{%
320 \DTXD@filemarginparindex{#1}{#2}{Cls}{class}{usage}%
321 }
```

\DescribeClass {*name*}

The underscore character is temporarily disabled, then the name is passed directly to \DTXD@DescribeClass.

```
322 \newcommand*\DescribeClass{%
323 \begingroup\catcode`\_=12 \DTXD@DescribeClass%
324 }
```

\DescribeOption [*class*] {*name*}

```
325 \newcommand*{\DescribeOption}[2][]{  
326 {\DTXD@marginindex{#1}{#2}{Opt}{option}{usage}}}
```

\DescribeArgument [*class*] {*name*}

The class may be used to categorize arguments by their macro or environment name.

```
327 \newcommand*{\DescribeArgument}[2][]{  
328 {\DTXD@marginindex{#1}{#2}{Arg}{argument}{usage}}}
```

\DescribeBoolean [*class*] {*name*}

```
329 \newcommand*{\DescribeBoolean}[2][]{  
330 {\DTXD@marginindex{#1}{#2}{Bool}{boolean}{usage}}}

513 }

```

## 6.11 \margintag, \watchout

\margintagcolor The color of the \margintag.

```
514 \newcommand*\margintagcolor{blue!70!black}
```

\margintag {⟨text⟩}

Prints a colored margin tag.

```

515 \newcommand{\margintag}[1]{%
516 @ifundefined{@capttype}{% not float?
517 \marginpar{\raggedleft\textcolor{\margintagcolor}{#1}}%
518 \ignorespaces%
519 }{}% not float?
520 }

```

\watchoutcolor The color of the \watchout.

```
521 \newcommand*\watchoutcolor{red!50!black}
```

\watchout [⟨text⟩]

Prints a warning sign and optional text.

```

522 \newcommand{\watchout}[1][]{%
523 @ifundefined{@capttype}{% not float?
524   \marginpar{%
525     \raggedleft%
526     \textcolor{\watchoutcolor}{\warningsign\normalsize\quad#1}%
527   }%
528   \ignorespaces%
529 }{}% not float?
530 }

```

## 6.12 Nesting

Shows a box enclosing a label for the container, and the container's contents. May be nested.

```
\shownesting [⟨fraction of \linewidth⟩] {⟨container⟩} {⟨contents⟩}

531 \NewDocumentCommand{\shownesting}{s O{1} m m}{
532     \IfBooleanF{#1}{
533         \par\smallskip
534     }
535     \fbox{
536         \begin{minipage}{#2\linewidth-2em}
537             \hbadness=10000\relax%
538             #3\par\smallskip
539             \hspace{1em}
540             \begin{minipage}{\linewidth-1.5em}
541                 #4
542                 \end{minipage}
543             \end{minipage}
544     }
545 }
```

## 6.13 The `dtxexample` environment

Also see example 14 on page page 28.

File `dtxexample_cut.tex`

Used to store then `\input` example code.

`[color]` `DTXD@examplerulecolor` The color of the middle rule in the `dtxexample`.

```
546 \definecolor{DTXD@examplerulecolor}{rgb}{.9,.9,.9}
```

`\dtxexamplecodename` The text name of the code section.

```
547 \newcommand*{\dtxexamplecodename}{Code:}
```

`\dtxexampleresultname` The text name of the result section.

```
548 \newcommand*{\dtxexampleresultname}{Result:}
```

`Env` `dtxexample` \* [⟨notes/cross-references⟩] {⟨caption & label⟩}

Reads the code listing as a verbatim input using the `fancybox` package, then displays the code listing as a verbatim output, and also executes the code and displays the

result. A title caption is specified, along with optional cross-referencing commands or notes to refer to the results. The unstarred version places the code inside a minipage, forbidding a page break in the middle of the code listing. The starred version does not use a minipage. This is required when the code is too large to fit on a single page.

```
549 \NewDocumentEnvironment{dtxexample}{s +0{} m}
550 {%
```

Copy the environment's contents to the file `dtxexample_cut.tex`:

```
551 \VerbatimOut[gobble=\DTXD@gobble,tabsize=4]{dtxexample_cut.tex}%
552 }% start dtxexample
```

When the environment closes:

```
553 {%
```

Finish the verbatim output:

```
554 \endVerbatimOut
555 \par
556 \addvspace{\bigskipamount}
```

If unstarred, typeset the example in a minipage:

```
557 \IfBooleanTF{#1}{\vspace{\bigskipamount}}{\minipage{\ linewidth}}%
```

Emulated a float of type “example”:

```
558 \captionsetup{type=dtxexample}%
559 \hrule\medskip
560 \caption{#3}
```

Typeset the contents as verbatim:

```
561 \textcolor{DTXD@examplerulecolor}{\smallskip\hrule}
562 \smallskip
563 {\scriptsize\itshape\dtxexamplecodename}
564 \VerbatimInput[tabsize=4]{dtxexample_cut.tex}
565 \unskip
566 \textcolor{DTXD@examplerulecolor}{\hrule}
567 \smallskip
568 {\scriptsize\itshape\dtxexampleresultname}
569
```

Possible add the optional cross-references or notes:

```
570 \ifstrempty{#2}
571 {}
572 {{\itshape\small #2}}
```

If unstarred, close the `\minipage`.

```
573 \IfBooleanTF{#1}{}{\endminipage}%
574 } % end dtxexample
```

Outside of the environment's scope, input the example to generate its output and labels:

```
575 \AfterEndEnvironment{dtxexample}
576 {%
```

Execute the code:

```
577 \par\unskip\input{dtxexample_cut.tex}%
```

Closing rule::

```
578 \medskip\hrule%
579 }
```

A new float type for the examples.

[

dtxexample]

\

DeclareFloatingEnvironment

```
580 \DeclareFloatingEnvironment[
581 fileext=lox,
582 listname={List of Examples},
583 name=Example,
584 placement=hbp
585 ]{dtxexample}
```

]

[

dtxexample]

\

captionsetup

Caption setup for the examples.

```
586 \captionsetup*[dtxexample]{
587 format=hang,
588 font=bf,
589 justification=raggedright,
590 singlelinecheck=false,
591 skip=0pt,
592 position=top,
593 }
```

]

[

dtxexample]

\

crefname

Name for `cleveref`.

```
594 \AtBeginDocument{
```

---

```
595 \@ifpackageloaded{cleveref}{\crefname{dtxdexample}{example}{examples}}{}  
596 }
```

## 6.14 noindmacro and noindenvironment

Similar to `macro` and `environment`, but not indexed.

`Env noindmacro {<name>}`

```
597 \newenvironment{noindmacro}[1]  
598 {  
599     \setlength{\parskip}{\marginparpush}  
600     \leavevmode\par\DTxD@margintag{}\cmd{#1}{}  
601 }  
602 {\unskip}
```

`Env noindenvironment {<name>}`

```
603 \newenvironment{noindenvironment}[1]  
604 {  
605     \setlength{\parskip}{\marginparpush}  
606     \leavevmode\par\DTxD@margintag{}{#1}{Env}  
607 }  
608 {\unskip}
```

## 6.15 sourcedisplay, UIDisplay, docsidebar

For use in a `sourcedisplay`:

`\fquad` Forces a quad indent.

```
609 \newcommand*{\fquad}{\hspace*{1em}}
```

`\fqquad` Forces a double-quad indent.

```
610 \newcommand*{\fqquad}{\hspace*{2em}}
```

`\fqqquad` Forces a triple-quad indent.

```
611 \newcommand*{\fqqquad}{\hspace*{3em}}
```

Env `sourceverb` To typeset a block of source code, verbatim.

```
612 \DefineVerbatimEnvironment{sourceverb}{Verbatim}
613   {gobble=\DTXD@gobble,tabsize=4,xleftmargin=2em}
614 \BeforeBeginEnvironment{sourceverb}{\vspace*{-.5\parskip}}
```

Env `fsourceverb` To typeset a framed block of source code, verbatim.

```
615   \DefineVerbatimEnvironment{fsourceverb}{Verbatim}
616     {gobble=\DTXD@gobble,tabsize=4,xleftmargin=2em,frame=lines}
617 \BeforeBeginEnvironment{fsourceverb}{\vspace*{-.5\parskip}}
```

Env `sourcedisplay` To typeset a block of source code, allowing direct formatting.

```
618 \newenvironment{sourcedisplay}
619 {
620   \leavevmode
621   \par
622   \fqqquad\minipage{\linewidth-4em}
623   \ttfamily
624 }
625 {%
626   \endminipage
627   \par
628 }
```

Env `UIdisplay` To typeset a user interface display.

```
629 \newenvironment{UIdisplay}
630 {
631   \leavevmode
632   \par
633   \fqqquad\minipage{\linewidth-4em}
634   \sffamily\bfseries
635 }
636 {
637   \endminipage
638   \par
639 }
```

`\userentryname` Text to tell the user to enter the following item.

```
640 \newcommand*{\userentryname}{Enter~$\Rightarrow$}
```

`\userentry`  $\{\langle text \text{ to enter} \rangle\}$

---

Typesets text to be entered by the users.

```

641 \newcommand{\userentry}[1]{%
642 \par
643 \fqqquad%
644 \begin{minipage}{\linewidth-2em}
645   {\footnotesize \userentryname}\quad\cmds{#1}
646 \end{minipage}
647 \par
648 }
```

`\env docsidebar` To typeset a sidebar in the documentation.

```

649 \newenvironment{docsidebar}[1][]{%
650 {%
651   \quote\unskip\medskip
652   \setlength{\parskip}{1.5ex}%
653   \ifblank{#1}{}{\textit{#1}\newline}%
654   \rule[.5\bigskipamount]{\ linewidth}{.4pt}%
655   \newline%
656 }%
657 {%
658   \leavevmode\par
659   \rule[\bigskipamount]{\ linewidth}{.4pt}%
660   \endquote\unskip
661 }
```

## 6.16 Formatted objects

Macros to format references to various kinds of objects.

### 6.16.1 L<sup>A</sup>T<sub>E</sub>X objects

```

\pkg {\langle name\rangle} Also useable for class names.

662 \providerobustcmd*\{\pkg\}[1]{\mbox{\textsf{\#1}}}

\cs {\langle csname\rangle} From ltxdoc.

663 \providerobustcmd*\{\cs\}[1]{\texttt{\char`\\#1}}
```

`\env {\langle name\rangle}`

```

664 \providerobustcmd*\{\env\}[1]{\mbox{\texttt{\#1}}}
```

```
\marg {⟨argument⟩} From ltxdoc.  
665 \providecommand\marg[1]{%  
666  {\ttfamily\char`{`} \meta{#1} \ttfamily\char`{`}}}  
  
\oarg [⟨argument⟩] From ltxdoc.  
667 \providecommand\oarg[1]{%  
668  {\ttfamily[] \meta{#1} \ttfamily[]}}  
  
\parg (⟨argument⟩) From ltxdoc.  
669 \providecommand\parg[1]{%  
670  {\ttfamily{} \meta{#1} \ttfamily{}}}  
  
\ctr {⟨name⟩}  
671 \providerobustcmd*\{\ctr}[1]{\mbox{\texttt{#1}}}  
  
\bool {⟨name⟩}  
672 \providerobustcmd*\{\bool}[1]{\mbox{\texttt{#1}}}  
  
\optn {⟨name⟩}  
673 \providerobustcmd*\{\optn}[1]{\mbox{\texttt{#1}}}  
  
\TOC  
674 \providerobustcmd*\{\TOC\}{\acro{TOC}}  
  
\LOF  
675 \providerobustcmd*\{\LOF\}{\acro{LOF}}  
  
\LOT  
676 \providerobustcmd*\{\LOT\}{\acro{LOT}}
```

### 6.16.2 Programs and commands

\cmds {*commands to print*} No processing is provided for special characters.

```
677 \providerobustcmd*\{\cmds\}[1]{\mbox{\textbf{\texttt{#1}}}}
```

\progcode {*code to print*} No processing is provided for special characters.

```
678 \providerobustcmd*\{\progcode\}[1]{\mbox{\texttt{#1}}}
```

\prog {*program name*} Underscores are allowed.

```
679 \newcommand*\{DTXD@prog\}[1]{%
680     \mbox{\textsf{\textsl{\detokenize{#1}}}}%
681     \endgroup%
682 }
683
684 \providerobustcmd*\{\prog\}{%
685     \begingroup%
686     \catcode`\_=12%
687     \DTXD@prog%
688 }
```

\filenm {*file name*} Underscores are allowed.

```
689 \newcommand*\{DTXD@filenm\}[1]{%
690     \mbox{\texttt{\detokenize{#1}}}}%
691     \endgroup%
692 }
693
694 \providerobustcmd*\{\filenm\}{%
695     \begingroup%
696     \catcode`\_=12%
697     \DTXD@filenm%
698 }
```

\UI General user-interface text.

```
699 \providerobustcmd*\{\UI\}[1]{\textbf{\textsf{#1}}}
```

### 6.16.3 File types

\ODT

```
700 \providerobustcmd*\{\ODT\}{\acro{ODT}}
```

\SVG

701 \providerobustcmd\*\{\SVG\}{\acro{SVG}}

\PNG

702 \providerobustcmd\*\{\PNG\}{\acro{PNG}}

\GIF

703 \providerobustcmd\*\{\GIF\}{\acro{GIF}}

\JPG

704 \providerobustcmd\*\{\JPG\}{\acro{JPG}}

\EPS

705 \providerobustcmd\*\{\EPS\}{\acro{EPS}}

\PDF

706 \providerobustcmd\*\{\PDF\}{\acro{PDF}}

\DVI

707 \providerobustcmd\*\{\DVI\}{\acro{DVI}}

#### 6.16.4 Internet

\UTF

708 \providerobustcmd\*\{\UTF\}{\acro{UTF}}

\URL

709 \providerobustcmd\*\{\URL\}{\acro{URL}}

\element {<*name*>}

710 \providerobustcmd\*\{\element{1}\}{\texttt{&lt;#1&gt;}}

```
\attribute {⟨name⟩}
```

```
\attrib {⟨name⟩}
```

Each of these is “provided”, and any prior meaning will be unchanged. In particular, LuaTEX uses `\attribute`, so its meaning is unchanged if using LuaTEX.

```
711 \providerobustcmd*\{attrib}[1]{\mbox{\texttt{#1}}}}
```

```
712
```

```
713 \providerobustcmd*\{attribute}[1]{\mbox{\texttt{#1}}}}
```

```
\HTML
```

```
714 \providerobustcmd*\{\HTML}{\acro{HTML}}
```

```
\HTMLfive
```

```
715 \providerobustcmd*\{\HTMLfive}{\HTML\textsc{5}}
```

```
\CSS
```

```
716 \providerobustcmd*\{\CSS}{\acro{CSS}}
```

```
\CSSthree
```

```
717 \providerobustcmd*\{\CSSthree}{\CSS\textsc{3}}
```

```
\EPUB
```

```
718 \providerobustcmd*\{\EPUB}{\acro{EPUB}}
```

### 6.16.5 Specific programs

```
\tikz
```

```
719 \providerobustcmd*\{\tikz}{\textit{k}z}
```

```
\CTAN
```

```
720 \providerobustcmd*\{\CTAN}{\acro{CTAN}}
```

\TDS

721 \providerobustcmd\*\{\TDS\}{\acro{TDS}}

\MathML

722 \providerobustcmd\*\{\MathML\}{Math\acro{ML}}

\MathJax

723 \providerobustcmd\*\{\MathJax\}{\brand{MathJax}}

### 6.16.6 Acronyms, brand names, trademarks

\brand {\langle name\rangle}

724 \providerobustcmd\*\{\brand\}[1]{\textsc{\#1}}

\acro {\langle acronym\rangle}

725 \providerobustcmd\*\{\acro\}[1]{\textsc{\lowercase{\#1}}}

\supregistered Superscript trademark symbol.

726 \providerobustcmd\*\{\supregistered\}{\textsuperscript{\textregistered}}

### 6.17 Logos

\dviTeX DVI T<sub>E</sub>X

727 \providerobustcmd\*\{\dviTeX\}{\mbox{\DVI\,\TeX}}

\dviLaTeX DVI L<sup>A</sup>T<sub>E</sub>X

749 \providerobustcmd\*\{\LyX\}{\textsf{LyX}}

\BibTeX BIBT<sup>E</sup>X

750 \providerobustcmd\*\{\BibTeX\}{\mbox{B\textrm{textrm}{ib}\TeX}}

\MakeIndex *Makelindex*

751 \providerobustcmd\*\{\MakeIndex\}{\prog{MakeIndex}}

```
\ConTeXt ConTeXt  
752 \providerobustcmd{\ConTeXt}{\mbox{ConTeXt}}  
  
\MiKTeX MiKTeX  
753 \providerobustcmd{\MiKTeX}{\mbox{MiKTeX}}
```

## 6.18 Dashes and slashes

\thinspace A breakable thin skip.  
754 \DeclareRobustCommand{\thinspace}{\hspace{0.16667em}\relax}

\endash An endash: –

```
755 \def\endash{-}
```

\emdash An emdash: —

```
756 \def\emdash{-}
```

\thinbrspace A thin space which allows a line break.

```
757 \newcommand{\thinbrspace}{%  
758   \hspace{.16667em}\penalty\exhyphenpenalty\hspace{0pt}}%  
759 }
```

\thinthinbrspace A thin space which allows a line break.

```
760 \newcommand{\thinthinbrspace}{%  
761   \hspace{.08333em}\penalty\exhyphenpenalty\hspace{0pt}}%  
762 }
```

\Dash An unbreakable thin space, emdash, and breakable thin space.

```
763 \newrobustcmd{\Dash}{\unskip\thinspace\emdash\thinbrspace}
```

\dash An unbreakable thin space, endash, and breakable thin space.

```
764 \newrobustcmd{\dash}{\unskip\thinspace\endash\thinbrspace}
```

\slash An unbreakable very thin space, a slash, and a breakable thin space.

765 \newrobustcmd{\Slash}{\unskip\hspace{.08333em}/\thinthinbrspace}

## 7 Compiling dtxdescribe

To compile the dtxdescribe package:

Enter ⇒ **pdflatex dtxdescribe.ins**

To compile the dtxdescribe documentation

Enter ⇒ **pdflatex dtxdescribe.dtx**

(Several times)

Enter ⇒ **makeindex -s gglo.ist -o dtxdescribe.gls dtxdescribe.glo**

Enter ⇒ **makeindex -s gind.ist dtxdescribe**

Enter ⇒ **pdflatex dtxdescribe.dtx**

(Several times)
