

Parallel typesetting for critical editions: the **eledpar** package*

Maïeul Rouquette[†]based on the original **ledpar** by Peter Wilson
Herries Press[‡]

Abstract

The **eledmac** package, which is based on the PLAIN TeX set of **EDMAC** macros, has been used for some time for typesetting critical editions. The **eledpar** package is an extension to **eledmac** which enables texts and their critical apparatus to be typeset in parallel, either in two columns or on pairs of facing pages.

Note that before September 2012, **eledpar** was called **ledpar**. The changes from **ledmac/ledpar** to **eledmac/eledpar** is explained in **ledmac** documentation.

eledpar provides many tools and options. Normally, they are all documented in this file. Also provided is a help folder, “examples”. The folder contains additional examples (although not for all cases).

To report bugs, please go to **ledmac**'s GitHub page and click “New Issue”: <https://github.com/maieul/ledmac/issues/>. You must open an account with github.com to access my page (maieul/ledmac). GitHub accounts are free for open-source users. You can report bug in English or in French (better).

You can subscribe to the **eledmac** email list in:
<http://geekographie.maieul.net/146>

1 Introduction

The **EDMAC** macros [LW90] for typesetting critical editions of texts have been available for use with TeX for some years. Since **EDMAC** became available there had been a small but constant demand for a version of **EDMAC** that could be used with **L^AT_EX**. The **eledmac** package was introduced in 2003 in an attempt to satisfy that request.

Some critical editions contain texts in more than one form, such as a set of verses in one language and their translations in another. In such cases there is a desire to be able to typeset the two texts, together with any critical apparatus, in parallel. The **eledpar** package is an extension to **eledmac** that enables two texts and their apparatus to be set in parallel, either in two columns or on pairs of facing pages.

The package has to try and coerce T_EX into paths it was not designed for. Use of the package, therefore, may produce some surprising results.

This manual contains a general description of how to use **eledpar** starting in section 2; the complete source code for the package, with extensive documentation (in sections 11 through 32); and an Index to the source code. As **eledpar** is an adjunct to **eledmac** I assume that you have read the **eledmac** manual. Also **eledpar** requires **eledmac** to be used, preferably at least version 0.10 (2011/08/22). You do not need to read the source code for this package in order to use it but doing so may help to answer any questions you might have. On a first reading, I suggest that you should skip anything after the general documentation in sections 2 until 11, unless you are particularly interested in the innards of **eledpar**.

2 The **eledpar** package

A file may mix *numbered* and *unnumbered* text. Numbered text is printed with marginal line numbers and can include footnotes and endnotes that are referenced to those line numbers: this is how you'll want to print the text that you're editing. Unnumbered text is not printed with line numbers, and you can't use **eledmac**'s note commands with it: this is appropriate for introductions and other material added by the editor around the edited text.

The **eledpar** package lets you typeset two *numbered* texts in parallel. This can be done either as setting the ‘Leftside’ and ‘Rightside’ texts in two columns or on facing pages. In the paired pages case footnotes are placed at the bottom of the page on which they are called out — that is, footnotes belonging to the left are

set at the foot of a left (even numbered) page, and those for right texts are at the bottom of the relevant right (odd numbered) page. However, in the columnar case, all footnotes are set at the bottom left of the page on which they are called out — they are not set below the relevant column. The line numbering schemes need not be the same for the two texts.

2.1 General

`eledmac` essentially puts each chunk of numbered text (the text within a `\pstart ... \pend`) into a box and then following the `\pend` extracts the text line by line from the box to number and print it. More precisely, the text is first put into the box as though it was being typeset as normal onto a page and any notes are stored without being typeset. Then each typeset line is extracted from the box and any notes for that line are recalled. The line, with any notes, is then output for printing, possibly with a line number attached. Effectively, all the text is typeset and then afterwards all the notes are typeset.

`eledpar` similarly puts the left and right chunks into boxes but can't immediately output the text after a `\pend` — it has to wait until after both the left and right texts have been collected before it can start processing. This means that several boxes are required and possibly TeX has to store a lot of text in its memory; both the number of potential boxes and memory are limited. If TeX's memory is overfilled the recourse is to reduce the amount of text stored before printing.

`\maxchunks` It is possible to have multiple chunks in the left and right texts before printing them. The macro `\maxchunks{\langle num\rangle}` specifies the maximum number of chunks within the left or right texts. This is initially set as:

`\maxchunks{5120}`

meaning that there can be up to 5120 chunks in the left text and up to 5120 chunks in the right text, requiring a total of 10240 boxes. If you need more chunks then you can increase `\maxchunks`. The `\maxchunks` must be called in the preamble.

TeX has a limited number of boxes; if you get an error message along the lines of ‘no room for a new box’, then load the package `etex`, which needs `pdflatex` or `xelatex`. If you `\maxchunks` is too little you can get a `eledmac` error message along the lines: ‘Too many `\pstart` without printing. Some text will be lost.’ then you will have to either increase `\maxchunks` or use the parallel printing commands (`\Columns` or `\Pages`) more frequently.

When typesetting verse using `\syntax`, each line is treated as a chunk, so be warned that if you are setting parallel verses you might have to increase `\maxchunks` much more than it appears at first sight.

In general, `eledmac` is a TeX resource hog, and `eledpar` only makes things worse in this respect.

3 Parallel columns

`pairs` Numbered text that is to be set in columns must be within a `pairs` environment. Within the environment the text for the lefthand and righthand columns is

placed within the `Leftside` and `Rightside` environments, respectively; these are described in more detail below in section 5.

`\Columns`

The command `\Columns` typesets the texts in the previous pair of `Leftside` and `Rightside` environments. The general scheme for parallel columns looks like this:

```
\begin{pairs}
\begin{Leftside} ... \end{Leftside}
\begin{Rightside} ... \end{Rightside}
\Columns
\begin{Leftside} ... \end{Leftside}
...
\end{pairs}
\Columns
```

`\AtBeginPairs`

Keep in mind that the `\Columns` must be outside of the `pairs` environment.

You can use the macro `\AtBeginPairs` to insert a code at the begining of each `pairs` environments. That could be useful to add the `\sloppy` macro to prevent overfull hboxes in two columns.

```
\AtBeginPairs{\sloppy}
```

There is no required pagebreak before or after the columns.

The lengths `\Lcolwidth` and `\Rcolwidth` are the widths of the left and right columns, respectively. By default, these are:

```
\setlength{\Lcolwidth}{0.45\textwidth}
\setlength{\Rcolwidth}{0.45\textwidth}
```

They may be adjusted if one text tends to be ‘bulkier’ than the other.

The macro `\columnseparator` is called between each left/right pair of lines. By default it inserts a vertical rule of width `\columnrulewidth`. As this is initially defined to be 0pt the rule is invisible. For a visible rule between the columns you could try:

```
\setlength{\columnrulewidth}{0.4pt}
```

You can also modify `\columnseparator` if you want more control.

By default, columns are positioned to the right of the page. However, you use `\columnsposition{L}` to align them to the left, or `\columnsposition{C}` to center them.

When you use `\stanza`, the visible rule may shift when a verse has a hanging indent. To prevent shifting, use `\setstanzaindents` outside the `Leftside` or `Rightside` environment.

By default, the spaces around column separator are the same as the space:

- On the left of columns, if columns are aligned right.
- On the right of columns, if columns are aligned left.
- On both the Left and Right columns, if columns are centered.

`\beforecolumnseparator`
`\aftercolumnseparator`

You can redefine `\beforecolumnseparator` and `\aftercolumnseparator` length to define spaces before or after the column separator, instead of letting `eledpar` calculate them automatically.

```
\setlength{\beforecolumnseparator}{length}
\setlength{\aftercolumnseparator}{length}
```

If you want to revert to the previous behavior, just set with a negative value. If you want to mix two-column with single-column text, you can align horizontally single-column text to two-column text with `\widthliketwolumnstrue`. To reset this feature, use `\widthliketwolumnsfalse`. You can also call `\widthliketwolumns` as a global option when loading `eledmac` or `eledpar`.

In most cases, you should use `\widthliketwolumns` in combination with `\Xnoteswidthliketwolumns` and `\notesXwidthliketwolumns` to align the critical/familiar footnotes with the two columns. See `eledmac`'s handbook for more details.

4 Facing pages

4.1 Basic usage

`pages` Numbered text that is to be set on facing pages must be within a `pages` environment. Within the environment the text for the lefthand and righthand pages is placed within the `Leftside` and `Rightside` environments, respectively.

`\Pages` The command `\Pages` typesets the texts in the previous pair of `Leftside` and `Rightside` environments. The general scheme for parallel pages looks like this:

```
\begin{pages}
\begin{Leftside} ... \end{Leftside}
\begin{Rightside} ... \end{Rightside}
\begin{Leftside} ... \end{Leftside}
...
\end{pages}
\Pages
```

The `Leftside` text is set on lefthand (even numbered) pages and the `Rightside` text is set on righthand (odd numbered) pages. Each `\Pages` command starts a new even numbered page. After parallel typesetting is finished, a new page is started. Note that the `\Pages` must be outside of the `pages` environment.

4.2 Text width

`\Lcolwidth` `\Rcolwidth` Within the `pages` environment the lengths `\Lcolwidth` and `\Rcolwidth` are the widths of the left and right pages, respectively. By default, these are set to the normal `textwidth` for the document, but can be changed within the environment if necessary.

4.3 Setting

- `\goalfraction` When doing parallel pages `uledpar` has to guess where TeX is going to put page-breaks and hopefully get there first in order to put the pair of texts on their proper pages. When it thinks that the fraction `\goalfraction` of a page has been filled, it finishes that page and starts on the other side's text. The definition is:
`\newcommand*{\goalfraction}{0.9}`
If you think you can get more on a page, increase this. On the other hand, if some left text overflows onto an odd numbered page or some right text onto an even page, try reducing it, for instance by:
`\renewcommand*{\goalfraction}{0.8}`

4.4 Critical and familiar footnotes

Of course, in “Facing pages”, the `uledmac` both critical and familiar footnotes can be used. However, some specific points must be taken into consideration.

4.4.1 Note size setting

Since `uledpar` v.1.13.0, long notes in facing pages can flow from left to right pages, and *vice-versa*. However, the `uledmac` default setting for the maximum allotted size to notes is greater than `\textheight`. That makes impossible for long notes to flow across pages.¹ We have not changed this default setting, because we don't want to break compatibility with older version of `uledmac`. So, you MUST change the default setting via `\maxhXnotes` (for critical notes)`\maxhnotesX` (for familiar notes). Both commands are explained in handbook (5.4.9 p. 28). As an advisable setting:

```
\maxhXnotes{0.6\textheight}
\maxhnotesX{0.6\textheight}
```

4.4.2 Notes for one side only

- `\onlyXside` `\onlysideX` You may want to typeset notes on one side only (either left or right). Use `\onlyXside[⟨s⟩]{⟨p⟩}` to set critical notes, and `\onlysideX[⟨s⟩]{⟨p⟩}` to set familiar notes. `{⟨p⟩}` must be set to L for notes to be confined only on the left side and to R for notes to be confined only on the right side.

4.4.3 Familiar notes called in the right side, but to be printed in the left side

- `\footnoteXnomk` `\footnoteXmk` As often happens, the left side has less room for text. We may want to call familiar notes in the right side while using at the same time the available space in the left side to print them.

¹The same applies to L^AT_EX normal notes. Read <http://tex.stackexchange.com/a/228283/7712> for technical informations.

To achieve this, we call `\footnoteXnomk{<notecontent>}` in the left side. X is to be replaced by the series letter. We do this call in the left side after the word which matches up to the one in the right side after which we want to insert the actual footnote mark.

In the right side, we call `\footnoteXmk` at the place we want to have the footnote mark. X is to be replaced by the series letter. For example:

```
\begin{Leftside}
\beginnumbering
\pstart
A little cat\footnoteAnomk{A note.}. And so one ...
\pend
\endnumbering
\end{Leftside}
\begin{Rightside}
\beginnumbering
\pstart
Un petit chat\footnotemk. And so one ...
\pend
\endnumbering
\end{Rightside}
```

5 Left and right texts

5.1 Environments

Parallel texts are divided into `Leftside` and `Rightside`. The form of the contents of these two are independent of whether they will be set in columns or pages.

`Leftside` The left text is put within the `Leftside` environment and the right text likewise in the `Rightside` environment. The number of `Leftside` and `Rightside` environments must be the same.

5.2 Line numbering scheme

Within these environments you can designate the line numbering scheme(s) to be used. The `eledmac` package originally used counters for specifying the numbering scheme; now both `eledmac` and the `eledpar` package use macros instead. Following `\firstlinenum{<num>}` the first line number will be `<num>`, and following `\linenumincrement{<num>}` only every `<num>`th line will have a printed number. Using these macros inside the `Leftside` and `Rightside` environments gives you independent control over the left and right numbering schemes. The `\firstsublinenum` and `\sublinenumincrement` macros correspondingly set the numbering scheme for sublines. The starred versions change both left and right numbering schemes.

Generally speaking, controls like `\firstlinenum` or `\linenummargin` apply to sequential and left texts. To effect right texts only, they have to be within

```
\firstlinenum
\linenumincrement
\firstrightlinenum
\rightlinenumincrement
\firstsublinenum
\sublinenumincrement
\firstrightsublinenum
\rightsuslinenumincrement
```

\lineationR a **Rightside** environment. \lineation macro is the equivalent of `uledmac \lineation` macro for the right side. \lineation* macro is the equivalent of `uledmac \lineation` macro for both sides.

5.3 chunk

\pstart \pend In a serial (non-parallel) mode, each numbered paragraph, or chunk, is contained between the \pstart and \pend macros, and the paragraph is output when the \pend macro occurs. The situation is somewhat different with parallel typesetting as the left text (contained within \pstart and \pend groups within the **Leftside** environment) has to be set in parallel with the right text (contained within its own \pstart and \pend groups within the corresponding **Rightside** environment) the \pend macros cannot immediately initiate any typesetting — this has to be controlled by the \Columns or \Pages macros. Several chunks may be specified within a **Leftside** or **Rightside** environment. A multi-chunk text then looks like:

```
\begin{...side}
% \beginnumbering
\pstart first chunk \pend
\pstart second chunk \pend
...
\pstart last chunk \pend
% \endnumbering
\end{...side}
```

Numbering, via \beginnumbering and \endnumbering, may extend across several **Leftside** or **Rightside** environments. Remember, though, that the left/right sides are effectively independent of each other.

5.4 \AtEveryPstart and \AtEveryPstartCall

In general, remember that the moment where a \pstart is called is different from the moment when the \pstart... \pend content is printed, which is when \Pages or \Columns is processed.

Consequently:

- The argument of \AtEveryPstart (see 4.2.3 p. 13) is called before every chunk is printed, except if you used an optional argument for the \pstart.
- The argument of \AtEveryPstartCall is called before every \pstart.

5.5 Language setting

If you are using the `babel` package with different languages (via, say, \selectlanguage) for the left and right texts it is particularly important to select the appropriate language within the **Leftside** and **Rightside** environments. The initial language selected for the right text is the `babel` package's default. Also, it is the *last*

\selectlanguage in a side that controls the language used in any notes for that side when they get printed. If you are using multilingual notes then it is probably safest to explicitly specify the language(s) for each note rather than relying on the language selection for the side. The right side language is also applied to the right side line numbers.

5.6 Shifting

Corresponding left and right sides must have the same number of paragraph chunks — if there are four on the left there must be four on the right, even if some are empty. The start of each pair of left and right chunks are aligned horizontally on the page. The ends may come at different positions — if one chunk is shorter than the other then blank lines are output on the shorter side until the end of the longer chunk is reached.

However, sometime if the left pstarts are much greater than right pstarts, or *vice-versa*, you can decide to shift the pstarts on the left and right side. That means the start of pstarts are not aligned horizontally on the page, the shift is offset at the end of each double pages. To enable this function, load elefpar with the option `shiftedpststarts`.

6 Numbering text lines and paragraphs

`\beginnumbering` Each section of numbered text must be preceded by \beginnumbering and followed by \endnumbering, like:

```
\beginnumbering
<text>
\endnumbering
```

These have to be separately specified within `Leftside` and `Rightside` environments.

The \beginnumbering macro resets the line number to zero, reads an auxiliary file called `<jobname>.nn` (where `<jobname>` is the name of the main input file for this job, and `nn` is 1 for the first numbered section, 2 for the second section, and so on), and then creates a new version of this auxiliary file to collect information during this run. Separate auxiliary files are maintained for right hand texts and these are named `<jobname>.nnR`, using the ‘R’ to distinguish them from the left hand and serial (non-parallel) texts.

`\memorydump` The command \memorydump effectively performs an \endnumbering immediately followed by a \beginnumbering while not restarting the numbering sequence. This has the effect of clearing TeX’s memory of previous texts and any associated notes, allowing longer apparent streams of parallel texts. The command should be applied to both left and right texts, and after making sure that all previous notes have been output. For example, along the lines of:

```
\begin{Leftside}
\beginnumbering
...

```

```
\end{Leftside}
\begin{Rightside}
\begin{numbering}
...
\end{Rightside}
\Pages
\begin{Leftside}
\memorydump
...
\end{Leftside}
\begin{Rightside}
\memorydump
...

```

`\Rlineflag` The value of `\Rlineflag` is appended to the line numbers of the right texts. Its default definition is:

```
\newcommand*{\Rlineflag}{R}
```

This may be useful for parallel columns but for parallel pages it might be more appropriate to redefine it as:

```
\renewcommand*{\Rlineflag}{}.
```

The `\printlines` macro is ordinarily used to print the line number references for critical footnotes. For footnotes from right side texts a special version is supplied, called `\printlinesR`, which incorporates `\Rlineflag`. (The macro `\ledsavedprintlines` is a copy of the original `\printlines`, just in case ...). As provided, the package makes no use of `\printlinesR` but you may find it useful. For example, if you only use the B footnote series in righthand texts then you may wish to flag any line numbers in those footnotes with the value of `\Rlineflag`. You could do this by putting the following code in your preamble:

```
\let\oldBfootfmt\Bfootfmt
\renewcommand{\Bfootfmt}[3]{%
\let\printlines\printlinesR
\oldBfootfmt{\#1}{\#2}{\#3}}
```

`\numberpstarttrue` It's possible to insert a number at every `\pstart` command. You must use the `\numberpstarttrue` command to have it. You can stop the numerotation with `\numberpstartfalse`. You can redefine the commands `\thepstartL` and `\thepstartR` to change style. The numbering restarts on each `\begin{numbering}`

7 Verse

If you are typesetting verse with `eledmac` you can use the `\stanza` construct, and you can also use this in right or left parallel texts. In this case each verse line is a chunk which has two implications. (1) you can unexpectedly exceed the `\maxchunks` limit or the overall limit on the number of boxes, and (2) left and

right verse lines are matched, which may not be desirable if one side requires more print lines for verse lines than the other does.

astanza `eledpar` provides an **astanza** environment which you can use instead of `\stanza` (simply replace `\stanza` by `\begin{astanza}` and add `\end{astanza}` after the ending `\&`). Within the **astanza** environment each verse line is treated as a paragraph, so there must be no blank lines in the environment otherwise there will be some extraneous vertical spacing.

If you get an error message along the lines of ‘Missing number, treated as zero `\sza@0@`’ it is because you have forgotten to use `\setstanzaindent`s to set the stanza indents.

\skipnumbering The command `\skipnumbering` when inserted in a line of parallel text causes the numbering of that particular line to be skipped. This can be useful if you are putting some kind of marker (even if it is only a blank line) between stanzas. Remember, parallel texts must be numbered and this provides a way to slip in an ‘unnumbered’ line.

The **astanza** environment forms a chunk but you may want to have more than one stanza within the chunk. Here are a couple of ways of doing that with a blank line between each internal stanza, and with each stanza numbered. First some preliminary definitions:

```
\newcommand*{\stanzanum}[2][\stanzaindentbase]{%
  \hskip -#1\llap{\textbf{#2}}\hskip #1\ignorespaces}
\newcommand{\interstanza}{\par\mbox{}\skipnumbering}
```

And now for two stanzas in one. In this first example the line numbering repeats for each stanza.

```
\setstanzaindent{1,0,1,0,1,0,1,0,1,0,1}
\begin{pairs}
\begin{Leftside}
\firstlinenum{2}
\linenumincrement{1}
\begin{numbering}
\begin{astanza}
\stanzanum{1} First in first stanza &
Second in first stanza &
Second in first stanza &
Third in first stanza &
Fourth in first stanza &

\interstanza
\setline{2}\stanzanum{2} First in second stanza &
Second in second stanza &
Second in second stanza &
Third in second stanza &
Fourth in second stanza \&

\end{astanza}
...
\end{numbering}
\end{Leftside}
\end{pairs}
```

And here is a slightly different way of doing the same thing, but with the line numbering being continuous.

```
\setstanzaindents{1,0,1,0,1,0,0,1,0,1,0,1}
\begin{pairs}
\begin{Leftside}
\firstlinenum{2}
\linenumincrement{1}
\begin{numbering}
\begin{astanza}
\stanzanum{1} First in first stanza &
Second in first stanza &
Second in first stanza &
Third in first stanza &
Fourth in first stanza &
\strut &
\stanzanum{2}\advanceline{-1} First in second stanza &
Second in second stanza &
Second in second stanza &
Third in second stanza &
Fourth in second stanza \&
\end{astanza}
...
\end{numbering}
\end{Leftside}
\end{pairs}
```

\hangingsymbol Like in elemac, you could redefine the command `\hangingsymbol` to insert a character in each hanging line. If you use it, you must run L^AT_EX two time. Example for the French typography

```
\renewcommand{\hangingsymbol}{[\,}
```

You can also use it to force hanging verse to be flush right:

```
\renewcommand{\hangingsymbol}{\protect\hfill}
```

When you use `\lednopl` make sure to use it on both sides in the corresponding verses to keep the pages in sync.

8 Side notes

As in elemac, you must use one of the following commands to add side notes: `\ledsidenote`, `\ledleftnote`, `\ledrightnote`, `\ledouterote`, `\ledinnerote`.

The `\sidenotemargin` defines the margin of the sidenote for either left or right side, depending on the current environment. You can use `\sidenotemargin*` to define it for both sides.

9 Parallel ledgroups

You can also make parallel ledgroups (see the documentation of elemac about ledgroups). To do it you have:

- To load `elepar` package with the `parledgroup` option, or to add `\parledgrouptrue`.
- To push each ledgroup between `\pstart... \pend` command.

See the following example:

```
\begin{pages}
\begin{Leftside}
\begin{numbering}
\pstart
\begin{ledgroup}
    ledgroup content
\end{ledgroup}
\pend
\pstart
\begin{ledgroup}
    ledgroup content
\end{ledgroup}
\pend
\end{numbering}
\end{Leftside}
\begin{Rightside}
\begin{numbering}
\pstart
\begin{ledgroup}
    ledgroup content
\end{ledgroup}
\pend
\pstart
\begin{ledgroup}
    ledgroup content
\end{ledgroup}
\pend
\end{numbering}
\end{Rightside}
\Pages
\end{pages}
```

You can add sectioning a sectioning command, following this scheme:

```
\begin{..side}
\begin{numbering}
\pstart
\section{First ledgroup title}
\pend
```

```
\pstart
  \begin{ledgroup}\skipnumbering
    ledgroup content
  \end{ledgroup}
\pend
\pstart
\section{Second ledgroup title}
\pend
\pstart
  \begin{ledgroup}\skipnumbering
    ledgroup content
  \end{ledgroup}
\pend
\endnumbering
\end{..side}
```

9.1 Parallel ledgroups and `setspace` package

If you use the `setspace` package and want your notes in parallel ledgroups to be single-spaced (not half-spaced or double-spaced), just add to your preamble:

```
\let\parledgroupnotespacing\singlespacing
```

In effect, to have correct spacing, don't change the font size of your notes.

10 Sectioning commands

The standard sectioning commands of elemac are available, and provide parallel sectionings, for both two-column and two-page layout. By default, the section commands of the right side are not added to the table of contents. But you can change it, using `\elecsectnotoc{<arg>}`, where `<arg>` could be L (for left side) or R (for right side).

By default, the L^AT_EX marks for header are token from left side. You can change it, using `\elecsectmark{<arg>}`, where `<arg>` could be L (for left side) or R (for right side).

11 Implementation overview

TeX is designed to process a single stream of text, which may include footnotes, tables, and so on. It just keeps converting its input into a stream typeset pages. It was not designed for typesetting two texts in parallel, where it has to alternate from one to the other. Further, TeX essentially processes its input one paragraph at a time — it is very difficult to get at the ‘internals’ of a paragraph such as the individual lines in case you want to number them or put some mark at the start or end of the lines.

`eledmac` solves the problem of line numbering by putting the paragraph in typeset form into a box, and then extracting the lines one by one from the box for TeX to put them onto the page with the appropriate page breaks. Most of the `eledmac` code is concerned with handling this box and its contents.

`eledpar`'s solution to the problem of parallel texts is to put the two texts into separate boxes, and then appropriately extract the pairs of lines from the boxes. This involves duplicating much of the original box code for an extra right text box. The other, smaller, part of the code is concerned with coordinating the line extractions from the boxes.

The package code is presented in roughly in the same order as in `eledmac`.

12 Preliminaries

Announce the name and version of the package, which is targetted for LaTeX2e. The package also requires the `eledmac` package.

```
1 <*code>
2 \NeedsTeXFormat{LaTeX2e}
3 \ProvidesPackage{eledpar}[2015/04/13 v1.15.0 elelmac extension for parallel texts]%
4
```

Few commands use `\xspace` command.

```
5 \RequirePackage{xspace}%
```

With the option ‘shiftedpstarts’ a long pstart one the left side (or in the right side) doesn’t make a blank on the corresponding pstart, but the blank is put on the bottom of the page. Consequently, the pstarts on the parallel pages are shifted, but the shift stops at every end of pages. The `\shiftedverses` is kept for backward compatibility.

`\ifshiftedpstarts`

```
6 \newif\ifshiftedpstarts
7 \let\shiftedverses\shiftedpstartstrue
8 \let\shiftedverses\shiftedpstartsfalse
9 \DeclareOption{shiftedverses}{\shiftedpstartstrue}
10 \DeclareOption{shiftedpstarts}{\shiftedpstartstrue}
11 \DeclareOption{parledgroup}{\parledgrouptrue}
```

`\ifwidthliketwocolumns` The `\widthliketwocolumns` option can be called both in `eledpar` and `eledmac`.

```
12 \DeclareOption{widthliketwocolumns}{\widthliketwocolumnstrue}%
13 \ProcessOptions%
```

As noted above, much of the code is a duplication of the original `eledmac` code to handle the extra box(es) for the right hand side text, and sometimes for the left hand side as well. In order to distinguish I use ‘R’ or ‘L’ in the names of macros for the right and left code. The specifics of ‘L’ and ‘R’ are normally hidden from the user by letting the `Leftside` and `Rightside` environments set things up appropriately.

```
\ifl@dpairing \ifl@dpairing is set TRUE if we are processing parallel texts and \ifl@dpaging
\ifl@dpaging is also set TRUE if we are doing parallel pages. \ifledRcol is set TRUE if we
\ifledRcol are doing the right hand text. They are defined in elemac.

\Lcolwidth The widths of the left and right parallel columns (or pages).
\Rcolwidth 14 \newdimen\Lcolwidth
15 \Lcolwidth=0.45\textwidth
16 \newdimen\Rcolwidth
17 \Rcolwidth=0.45\textwidth
18
```

12.1 Messages

All the error and warning messages are collected here as macros.

```
\eledpar@error
19 \newcommand{\eledpar@error}[2]{\PackageError{eledpar}{#1}{#2}}
```

```
\led@err@TooManyPstarts
20 \newcommand*{\led@err@TooManyPstarts}{%
21   \eledpar@error{Too many \string\pstart\space without printing.
22   Some text will be lost}\{@ehc}}
```

```
\led@err@BadLeftRightPstarts
23 \newcommand*{\led@err@BadLeftRightPstarts}[2]{%
24   \eledpar@error{The numbers of left (#1) and right (#2)
25   \string\pstart s do not match}\{@ehc}}
```

```
\led@err@LeftOnRightPage
\led@err@RightOnLeftPage 26 \newcommand*{\led@err@LeftOnRightPage}{%
27   \eledpar@error{The left page has ended on a right page}\{@ehc}}
28 \newcommand*{\led@err@RightOnLeftPage}{%
29   \eledpar@error{The right page has ended on a left page}\{@ehc}}
```

13 Sectioning commands

\section@numR This is the right side equivalent of \section@num.

Each section will read and write an associated ‘line-list file’, containing information used to do the numbering. Normally the file will be called *<jobname>.nn*, where *nn* is the section number. However, for right side texts the file is called *<jobname>.nnR*. The \extensionchars applies to the right side files just as it does to the normal files.

```
30 \newcount\section@numR
31 \section@numR=\z@
```

\ifpst@rtedL \ifpst@rtedL is set FALSE at the start of left side numbering, and similarly for
\ifpst@rtedR \ifpst@rtedR. \ifpst@rtedL is defined in elemac.

```
32 \pst@rtedLfalse
33 \newif\ifpst@rtedR
34
```

\beginnumberingR This is the right text equivalent of \beginnumbering, and begins a section of numbered text.

```
35 \newcommand*\beginnumberingR{%
36   \ifnumberingR
37     \led@err@NumberingStarted
38     \endnumberingR
39   \fi

134   \l@endl@stuff}
135

```

14 Line counting

14.1 Choosing the system of lineation

Sometimes you want line numbers that start at 1 at the top of each page; sometimes you want line numbers that start at 1 at each \pstart; other times you want line numbers that start at 1 at the start of each section and increase regardless of page breaks. `eledpar` lets you choose different schemes for the left and right texts.

\ifbypstart@R The `\ifbypage@R` and `\ifbypstart@R` flag specify the current lineation system:
\bystart@Rtrue
\bystart@Rfalse

- line-of-page : `bypstart@R = false` and `bypage@R = true`.
- line-of-pstart : `bypstart@R = true` and `bypage@R = false`.

\bypage@Rtrue
\bypage@Rfalse `eledpar` will use the line-of-section system unless instructed otherwise.

```

136 \newif\ifbypage@R
137 \newif\ifbypstart@R

```

\lineationR \lineationR{<word>} is the macro used to select the lineation system for right texts. Its argument is a string: either `page`, `pstart` or `section`.

```

138 \newcommand*\lineationR[1]{{%
139   \ifnumbering
140     \led@err@LineationInNumbered
141   \else
142     \def\@tempa{\#1}\def\@tempb{page}%
143     \ifx\@tempa\@tempb
144       \global\bypage@Rtrue
145       \global\bypstart@Rfalse
146       \unless\ifnocritical@%
147         \pstartinfofootnote[] [false]%
148       \fi%
149     \else
150       \def\@tempb{pstart}%
151       \ifx\@tempa\@tempb
152         \global\bypage@Rfalse
153         \global\bypstart@Rtrue
154         \unless\ifnocritical@%
155           \pstartinfofootnote%
156         \fi%
157       \else
158         \def\@tempb{section}%
159         \ifx\@tempa\@tempb
160           \global\bypage@Rfalse%
161           \global\bypstart@Rfalse%
162           \unless\ifnocritical@%
163             \pstartinfofootnote[] [false]%
164           \fi%
165         \else
166           \led@warn@BadLineation
167         \fi%
168       \fi
169     \fi
170   \fi}}

```

\lineation* \lineation* change the lineation system for the side.

```

171 \WithSuffix\newcommand\lineation*[1]{%
172   \lineation{\#1}%
173   \lineationR{\#1}%
174 }%

```

\linenummargin \line@marginR You call \linenummargin{<word>} to specify which margin you want your right text's line numbers in; it takes one argument, a string. You can put the line numbers in the same margin on every page using `left` or `right`; or you can use `inner` or `outer` to get them in the inner or outer margins. You can change this within a numbered section, but the change may not take effect just when you'd like; if it's done between paragraphs nothing surprising should happen.

For right texts the selection is recorded in the count `\line@marginR`, otherwise in the count `\line@margin`: 0 for left, 1 for right, 2 for outer, and 3 for inner.

```

175 \newcount\line@marginR
176 \renewcommand*\linenummargin}[1]{%
177   \l@dgeLine@margin{#1}%
178   \ifnum\l@dtmpcntb>\m@ne
179     \ifledRcol
180       \global\line@marginR=\l@dtmpcntb
181     \else
182       \global\line@margin=\l@dtmpcntb
183     \fi
184   \fi}%

```

By default put right text numbers at the right.

```

185 \line@marginR=\@ne
186

```

`\c@firstlinenumR` The following counters tell eleedmac which right text lines should be printed with line numbers. `firstlinenum` is the number of the first line in each section that gets a number; `linenumincrement` is the difference between successive numbered lines. The initial values of these counters produce labels on lines 5, 10, 15, etc. `linenumincrement` must be at least 1.

```

187 \newcounter{firstlinenumR}
188   \setcounter{firstlinenumR}{5}
189 \newcounter{linenumincrementR}
190   \setcounter{linenumincrementR}{5}

```

`\c@firstsublinenumR` The following parameters are just like `firstlinenumR` and `linenumincrementR`, but for sub-line numbers. `sublinenumincrementR` must be at least 1.

```

191 \newcounter{firstsublinenumR}
192   \setcounter{firstsublinenumR}{5}
193 \newcounter{sublinenumincrementR}
194   \setcounter{sublinenumincrementR}{5}
195

```

`\firstlinenum` These are the user's macros for changing (sub) line numbers. They are defined in eleedmac v0.7, but just in case I have started by `\provide`ing them. The starred versions are specific to eleedpar.

`\linenumincrement`

`\firstsublinenum`

`\sublinenumincrement`

```

196 \providecommand*\firstlinenum{}%
197 \providecommand*\linenumincrement{}%
198 \providecommand*\firstsublinenum{}%
199 \providecommand*\sublinenumincrement{}%
200 \renewcommand*\firstlinenum}[1]{%
201   \ifledRcol \setcounter{firstlinenumR}{#1}%
202   \else      \setcounter{firstlinenum}{#1}%
203   \fi}%
204 \renewcommand*\linenumincrement}[1]{%
205   \ifledRcol \setcounter{linenumincrementR}{#1}%

```

```

206 \else      \setcounter{linenumincrement}{#1}%
207 \fi}
208 \renewcommand*{\firstsublinenum}[1]{%
209 \ifledRcol \setcounter{firstsublinenumR}{#1}%
210 \else      \setcounter{firstsublinenum}{#1}%
211 \fi}
212 \renewcommand*{\sublinenumincrement}[1]{%
213 \ifledRcol \setcounter{sublinenumincrementR}{#1}%
214 \else      \setcounter{sublinenumincrement}{#1}%
215 \fi}
216 \WithSuffix\newcommand\firstlinenum*[1]{\setcounter{firstlinenumR}{#1}\setcounter{firstlinenum}{#1}}
217 \WithSuffix\newcommand\linenumincrement*[1]{\setcounter{linenumincrementR}{#1}\setcounter{linenumincrement}{#1}}
218 \WithSuffix\newcommand\firstsublinenum*[1]{\setcounter{subfirstlinenumR}{#1}\setcounter{subfirstlinenum}{#1}}
219 \WithSuffix\newcommand\sublinenumincrement*[1]{\setcounter{sublinenumincrementR}{#1}\setcounter{sublinenumincrement}{#1}}

```

\Rlineflag This is appended to the line numbers of right text.

```

220 \newcommand*{\Rlineflag}{R}
221

```

\linenumrepR \linenumrepR{*ctr*} typesets the right line number *ctr*, and similarly \sublinenumrepR for subline numbers.

```

222 \newcommand*{\linenumrepR}[1]{\@arabic{#1}}
223 \newcommand*{\sublinenumrepR}[1]{\@arabic{#1}}
224

```

\leftlinenumR \leftlinenumR and \rightlinenumR are the macros that are called to print the right text's marginal line numbers. Much of the code for these is common and is maintained in \l0dlinenumR.

```

225 \newcommand*{\leftlinenumR}{%
226 \l0dlinenumR
227 \kern\linenumsep}
228 \newcommand*{\rightlinenumR}{%
229 \kern\linenumsep
230 \l0dlinenumR}
231 \newcommand*{\l0dlinenumR}{%
232 \numlabfont\linenumrepR{\line@numR}\Rlineflag%
233 \ifsublines@
234 \ifnum\subline@num>\z@%
235 \unskip\fullstop\sublinenumrepR{\subline@numR}%
236 \fi
237 \fi}
238

```

14.2 Line-number counters and lists

We need another set of counters and lists for the right text, corresponding to those in *eledmac* for regular or left text.

\line@numR The count \line@numR stores the line number that's used in the right text's marginal line numbering and in notes. The count \subline@numR stores a sub-line number that qualifies \line@numR. The count \absline@numR stores the absolute number of lines since the start of the right text section: that is, the number we've actually printed, no matter what numbers we attached to them.

```
239 \newcount\line@numR
240 \newcount\subline@numR
241 \newcount\absline@numR
242
```

\line@listR Now we can define the list macros that will be created from the line-list file. They are directly analogous to the left text ones. The full list of action codes and their meanings is given in the `eledmac` manual.

\actions@listR Here are the commands to create these lists:

```
243 \list@create{\line@listR}
244 \list@create{\insertlines@listR}
245 \list@create{\actionlines@listR}
246 \list@create{\actions@listR}
247 \list@create{\sw@listR}%
248 \list@create{\sw@list@inedtextR}%
249
```

\linesinpar@listL In order to synchronise left and right chunks in parallel processing we need to know how many lines are in each left and right text chunk, and the maximum of these for each pair of chunks.

```
250 \list@create{\linesinpar@listL}
251 \list@create{\linesinpar@listR}
252 \list@create{\maxlinesinpar@list}
253
```

\page@numR The right text page number.

```
254 \newcount\page@numR
255
```

14.3 Reading the line-list file

\read@linelist \read@linelist{<file>} is the control sequence that's called by \beginnumbering (via \line@list@stuff) to open and process a line-list file; its argument is the name of the file.

```
256 \renewcommand*{\read@linelist}[1]{%
```

We do different things depending whether or not we are processing right text

```
257 \ifledRcol
258   \list@clear{\line@listR}%
259   \list@clear{\insertlines@listR}%
260   \list@clear{\actionlines@listR}%
261   \list@clear{\actions@listR}%
262   \list@clear{\linesinpar@listR}%
```

```

263   \list@clear{\linesonpage@listR}
264   \list@clear{\sw@listR}%
265   \list@clear{\sw@list@inedtextR}%
266 \else
267   \list@clearing@reg
268   \list@clear{\linesinpar@listL}%
269   \list@clear{\linesonpage@listL}%
270 \fi

```

Make sure that the `\maxlinesinpar@list` is empty (otherwise things will be thrown out of kilter if there is any old stuff still hanging in there).

```
271 \list@clear{\maxlinesinpar@list}
```

Now get the file and interpret it.

```

272 \get@linelistfile{#1}%
273 \endgroup

```

When the reading is done, we're all through with the line-list file. All the information we needed from it will now be encoded in our list macros. Finally, we initialize the `\next@actionline` and `\next@action` macros, which specify where and what the next action to be taken is.

```

274 \ifledRcol
275   \global\page@numR=\m@ne
276   \ifx\actionlines@listR\empty
277     \gdef\next@actionlineR{1000000}%
278   \else
279     \gl@p\actionlines@listR\to\next@actionlineR
280     \gl@p\actions@listR\to\next@actionR
281   \fi
282 \else
283   \global\page@num=\m@ne
284   \ifx\actionlines@list\empty
285     \gdef\next@actionline{1000000}%
286   \else
287     \gl@p\actionlines@list\to\next@actionline
288     \gl@p\actions@list\to\next@action
289   \fi
290 \fi}
291

```

This version of `\read@linelist` creates list macros containing data for the entire section, so they could get rather large. The `\memorydump` macro is available if you run into macro memory limitations.

14.4 Commands within the line-list file

This section defines the commands that can appear within a line-list file, except for `\@lab` which is in a later section among the cross-referencing commands it is associated with.

The macros with `action` in their names contain all the code that modifies the action-code list.

`\@nl@regR` `\@nl` does everything related to the start of a new line of numbered text. Exactly what it does depends on whether right text is being processed.

```

292 \newcommand{\@nl@regR}{%

 538 \global\let\lock@off=\do@lockoff
 539

\n@num

```

\@ref \@ref marks the start of a passage, for creation of a footnote reference. It takes \insert@countR two arguments:

- #1, the number of entries to add to \insertlines@list for this reference. This value for right text, here and within \edtext, which computes it and writes it to the line-list file, will be stored in the count \insert@countR.

```
540   \newcount\insert@countR
```

- #2, a sequence of other line-list-file commands, executed to determine the ending line-number. (This may also include other \@ref commands, corresponding to uses of \edtext within the first argument of another instance of \edtext.)

The first thing \ceref itself does is to add the specified number of items to the \insertlines@list list.

```
541 \renewcommand*\ceref{[2]{%
542   \ifledRcol
543     \global\insert@countR=#1\relax
544     \loop\ifnum\insert@countR>\z@
545       \xright@appenditem{\the\absline@numR}\to\insertlines@listR
546       \global\advance\insert@countR \m@ne
547     \repeat}
```

Next, process the second argument to determine the page and line numbers for the end of this lemma. We temporarily equate \ceref to a different macro that just executes its argument, so that nested \ceref commands are just skipped this time. Some other macros need to be temporarily redefined to suppress their action.

```
548 \begingroup
549   \let\ceref=\dummy@ceref
550   \let\@opR@\gobble
551   \let\page@action=\relax
552   \let\sub@action=\relax
553   \let\set@line@action=\relax
554   \let\@lab=\relax
555   \let\@sw\@gobbletwo%
556   #2
557   \global\endpage@num=\page@numR
558   \global\endline@num=\line@numR
559   \global\endsubline@num=\subline@numR
560 \endgroup
```

Now store all the information about the location of the lemma's start and end in \line@list.

```
561   \xright@appenditem%
562   {\the\page@numR|\the\line@numR|%
563    \ifsublines@ \the\subline@numR \else 0\fi|%
564    \the\endpage@num|\the\endline@num|%
565    \ifsublines@ \the\endsubline@num \else 0\fi}\to\line@listR
```

Finally, execute the second argument of \ceref again, to perform for real all the commands within it.

```
566   #2
567 \else
```

And when not in right text

```
568   \ceref@reg{#1}{#2}%
569 \fi}
```

\cpend \cpend{\langle num\rangle} adds its argument to the \linesinpar@listL list, and analogously \cpendR for \cpendR. If needed, it resets line number. We start off with a \providetcommand just in case an older version of elemac is being used which does not define these macros.

```

570 \providecommand*{\@pend}{}
571 \renewcommand*{\@pend}[1]{%

576   \ifbypstart@R\global\line@numR=0\fi%
577   \xright@appenditem{#1}\to\linesinpar@listR}
578

```

\@lopL \@lopL{\langle num\rangle} adds its argument to the \linesonpage@listL list, and analogously \@lopR for \@lopR. We start off with a \providecommand just in case an older version of elemac is being used which does not define these macros.

```

579 \providecommand*{\@lopL}{}
580 \renewcommand*{\@lopL}[1]{%
581   \xright@appenditem{#1}\to\linesonpage@listL}
582 \providecommand*{\@lopR}{}
583 \renewcommand*{\@lopR}[1]{%
584   \xright@appenditem{#1}\to\linesonpage@listR}
585

```

14.5 Writing to the line-list file

We've now defined all the counters, lists, and commands involved in reading the line-list file at the start of a section. Now we'll cover the commands that elemac uses within the text of a section to write commands out to the line-list.

\linenum@outR The file for right texts will be opened on output stream \linenum@outR.
586 \newwrite\linenum@outR

\iffirst@linenum@out@R Once any file is opened on this stream, we keep it open forever, or else switch to another file that we keep open.

\first@linenum@out@Rfalse 587 \newif\iffirst@linenum@out@R
588 \first@linenum@out@Rtrue

\line@list@stuffR This is the right text version of the \line@list@stuff{\langle file\rangle} macro. It is called by \beginnumberingR and performs all the line-list operations needed at the start of a section. Its argument is the name of the line-list file.

```

589 \newcommand*{\line@list@stuffR}[1]{%
590   \read@linelist{#1}%
591   \iffirst@linenum@out@R
592     \immediate\closeout\linenum@outR
593     \global\first@linenum@out@Rfalse
594     \immediate\openout\linenum@outR=#1
595   \else
596     \if@minipage%
597       \leavevmode%
598     \fi%

```

```

599      \closeout\linenum@outR%
600      \openout\linenum@outR=#1%
601  \fi}
602

\new@lineL The \new@lineL macro sends the \cnl command to the left text line-list file, to
mark the start of a new text line.
603 \newcommand*{\new@lineL}{%
604   \write\linenum@out{\string\cnl[\the\c@page] [\thepage]}}

\new@lineR The \new@lineR macro sends the \cnl command to the right text line-list file, to
mark the start of a new text line.
605 \newcommand*{\new@lineR}{%
606   \write\linenum@outR{\string\cnl[\the\c@page] [\thepage]}}

\f@ag@start We enclose a lemma marked by \edtext in \f@ag@start and \f@ag@end: these
\f@ag@end send the \cref command to the line-list file.

\startsub \startsub and \endsub turn sub-lineation on and off, by writing appropriate
\endsub instructions to the line-list file.

607 \renewcommand*{\startsub}{\dimen0\lastskip
608   \ifdim\dimen0>0pt \unskip \fi
609   \ifledRcol \write\linenum@outR{\string\sub@on}%

611   \fi
612   \ifdim\dimen0>0pt \hskip\dimen0 \fi
613 \def\endsub{\dimen0\lastskip
614   \ifdim\dimen0>0pt \unskip \fi
615   \ifledRcol \write\linenum@outR{\string\sub@off}%
616   \else \write\linenum@out{\string\sub@off}%
617   \fi
618   \ifdim\dimen0>0pt \hskip\dimen0 \fi
619

\advanceline You can use \advanceline{<num>} in running text to advance the current visible
line-number by a specified value, positive or negative.
620 \renewcommand*{\advanceline}[1]{%
621   \ifledRcol \write\linenum@outR{\string\@adv[#1]}%
622   \else \write\linenum@out{\string\@adv[#1]}%
623   \fi}

\setline You can use \setline{<num>} in running text (i.e., within \pstart... \pend) to
set the current visible line-number to a specified positive value.
624 \renewcommand*{\setline}[1]{%
625   \ifnum#1<\z@
626     \led@warn@BadSetline
627   \else
628     \ifledRcol \write\linenum@outR{\string\@set[#1]}%
629     \else \write\linenum@out{\string\@set[#1]}%

```

```
630     \fi
631 \fi}
```

\setlinenum You can use `\setlinenum{<num>}` before a `\pstart` to set the visible line-number to a specified positive value. It writes a `\l@d@set` command to the line-list file.

```
632 \renewcommand*{\setlinenum}[1]{%
633   \ifnum#1<\z@%
634     \led@warn@BadSetlinenum%
635   \else%
636     \ifledRcol \write\linenum@outR{\string\l@d@set[#1]}%
637     \else      \write\linenum@out{\string\l@d@set[#1]} \fi%
638   \fi}%
639
```

\startlock You can use `\startlock` or `\endlock` in running text to start or end line number locking at the current line. They decide whether line numbers or sub-line numbers are affected, depending on the current state of the sub-lineation flags.

```
640 \renewcommand*{\startlock}{%
641   \ifledRcol \write\linenum@outR{\string\lock@on}%
642   \else      \write\linenum@out{\string\lock@on}%
643   \fi}%
644 \def\endlock{%
645   \ifledRcol \write\linenum@outR{\string\lock@off}%
646   \else      \write\linenum@out{\string\lock@off}%
647   \fi}%
648
```

`\skipnumbering`

15 Marking text for notes

The `\edtext` (or `\critext`) macro is used to create all footnotes and endnotes, as well as to print the portion of the main text to which a given note or notes is keyed. The idea is to have that lemma appear only once in the `.tex` file: all instances of it in the main text and in the notes are copied from that one appearance.

`\critext` requires two arguments. At any point within numbered text, you use it by saying:

```
\critext{#1}{#2}/
```

Similarly `\edtext` requires the same two arguments but you use it by saying:

```
\edtext{#1}{#2}
```

\critext And similarly for `\edtext`.

\set@line The \set@line macro is called by \edtext to put the line-reference field and font specifier for the current block of text into \l@d@nums.

```

649 \renewcommand{\set@line}{%

669 }
```

15.1 Specific hooks and commands for notes

The elemac \newseries@ initializes commands which are linked to notes series. However, to keep elemac as light as possible, it does not define commands which are specific to elepar. This is what does \newseries@elepar. The specific hooks are also defined here.

```
\newseries@elepar
670 \newcommand{\newseries@elepar}[1]{%
```

15.1.1 Notes to be printed on one side only

elepar allows notes to be printed on one side only. We need to declare these options. We also need boolean flags, and to set them to true when a note series is not printed on one side. We check the `nofamiliar` and `nocritical` elemac options.

```

671 \unless\ifnocritical%
672   \csgdef{onlysideX@#1}{}%
673   \global\newbool{keepforXside@#1}%
674 \fi%
675 \unless\ifnofamiliar%
676   \global\newbool{keepforsideX@#1}%
677   \csgdef{onlyXside@#1}{}%
678 \fi%
```

15.1.2 Familiar footnotes without marks

The `\footnoteXnomk` commands are for notes which are printed on the left side, while they are called in the right side. Basically, they set first toggle `\nomark@` to true, then call the `\footnoteX`. and finally add the footnote counter in the footnote counter list.

First, check the `nofamiliar` option of `eledmac`

```
679 \unless\ifnofamiliar%
680 % So declare the list.
681 % \begin{macrocode}
682 \expandafter\list@create\csname footnote#1@mk\endcsname%
```

Then, declare the `\footnoteXnomk` command.

```
683 \expandafter\newcommand\csname footnote#1nomk\endcsname[1]{%
```

First step: just call the normal `\footnoteX`, saying that we don't want to print the mark.

```
684 \toggletrue{nomk@}%
685 \csuse{footnote#1}{##1}%
686 \togglefalse{nomk@}%
```

Second, and last, step: store the footnote counter in the footnote counters list. We use some `\let`, because `\xright@appenditem` is difficult to use with `\expandafter`.

```
687 \letcs{@tmp}{footnote#1@mk}%
688 \numdef{@tmpa}{\csuse{c@footnote#1}}%
689 \global\xright@appenditem{@tmpa}\to{@tmp}%
690 \global\cslet{footnote#1@mk}{@tmp}%
691 }%
```

Then, declare the command which inserts the footnotemark in the right side.

```
692 \expandafter\newcommand\csname footnote#1mk\endcsname{%
```

Get the first element of the footnote mark list. As `\gl@p` is difficult to use with dynamic name macro, we use `\let` commands.

```
693 \letcs{@tmp}{footnote#1@mk}%
694 \gl@p{@tmp}\to{@tmpa}%
695 \global\cslet{footnote#1@mk}{@tmp}%
```

Set the footnotecounter with it. For the sake of security, we make a backup of the previous value.

```
696 \letcs{\old@footnote}{c@footnote#1}%
697 \setcounter{footnote#1}{\old@footnote}
```

Define the footnote mark and print it

```
698 \protected@csxdef{@thefnmark#1}{\csuse{thefootnote#1}}%
699 \csuse{@footnotemark#1}%
```

Restore previous footnote counter and finally add space.

```
700 \setcounter{footnote#1}{\old@footnote}%
701 \xspace%
702 }%
```

End of tools for familiar notes without marks

```
703 \fi
    End of \newseries@eledpar.
704 }%
```

15.1.3 Create hooks

Read the elemac code handbook about `\newhookcommand@series`. Here, we create hooks which are specific to `eledpar`.

```
705 \unless\ifnocritical@%
706   \newhookcommand@series{onlyXside}%
707 \fi%
708 \unless\ifnofamiliar@%
709   \newhookcommand@series{onlysideX}%
710 \fi
711
712
```

15.1.4 Init standards series (A,B,C,D,E,Z)

`\init@series@eledpar` `\newseries@eledpar` is called by `\newseries@`. However, this command is called before `eledpar` is loaded. Thus, we need to initiate a specific series hook for `eledpar`.

```
713 \newcommand{\init@series@eledpar}{%
714   \def\do##1{\newseries@eledpar{##1}}%
715   \dolistloop{\@series}%
716 }%
717 \init@series@eledpar%
```

16 Pstart numbers dumping and restoration

While in `elemac` the footnotes are inserted in the same time as the `\pstart` ... `\pend` are read, in `eledpar` they are inserted when the `\Columns` or `\Pages` commands are called. Consequently, if we do nothing, the value of the `PstartL` and `PstartR` counters are not the same in the main text and in the notes. To solve this problem, we dump the values in two list (one by side) when processing `\pstart` and restore these at each `\pstart` when calling `\Columns` or `\Pages`. We also dump and restore the value of the boolean `\ifnumberpstart`.

So, first step, creating the lists. Here, “pc” means “public counters”.

```
\list@pstartL@pc
\list@pstartR@pc
718 \list@create{\list@pstartL@pc}%
719 \list@create{\list@pstartR@pc}%
```

Two commands to dump current `pstarts`. We prefer two commands to one with argument indicating the side, because the commands are short, and so we save one test (or a `\csname` construction).

```

\dump@pstartL@pc
\dump@pstartR@pc 720 \def\dump@pstartL@pc{%
721   \xright@appenditem{\the\c@pstartL}\to\list@pstartL@pc%
722   \global\cslet{numberpstart@L}{\the\l@dnumpstartsL}{\ifnumberpstart}%
723 }%
724
725 \def\dump@pstartR@pc{%
726   \xright@appenditem{\the\c@pstartR}\to\list@pstartR@pc%
727   \global\cslet{numberpstart@R}{\the\l@dnumpstartsR}{\ifnumberpstart}%
728 }%
729

\restore@pstartL@pc And so, the commands to restore them
\restore@pstartR@pc 730 \def\restore@pstartL@pc{%
731   \ifx\list@pstartL@pc\empty\else%
732     \gl@p\list@pstartL@pc\to\@temp%
733     \global\c@pstartL=\@temp%
734   \fi%
735 }%
736 \def\restore@pstartR@pc{%
737   \ifx\list@pstartR@pc\empty\else%
738     \gl@p\list@pstartR@pc\to\@temp%
739     \global\c@pstartR=\@temp%
740   \fi%
741 }%

```

17 Parallel environments

The initial set up for parallel processing is deceptively simple.

pairs	The <code>pairs</code> environment is for parallel columns and the <code>pages</code> environment for parallel pages.
chapterinpages	<pre> 742 \newenvironment{pairs}{% 743 \l@dpairingtrue 744 \l@dpagingfalse 745 \initnumbering@sectcmd 746 \at@begin@pairs% 747 }{% 748 \l@dpairingfalse 749 } 750 </pre>
<code>\AtBeginPairs</code>	The <code>\AtBeginPairs</code> macro just define a <code>\at@begin@pairs</code> macro, called at the begining of each <code>pairs</code> environments.
	<pre> 751 \newcommand{\AtBeginPairs}[1]{\xdef\at@begin@pairs{#1}}% 752 \def\at@begin@pairs{}% 753 </pre>

The `pages` environment additionally sets the ‘column’ widths to the `\textwidth` (as known at the time the package is called). In this environment, there are two text in parallel on 2 pages. To prevent chapters starting on a lefthand page, the `\chapter` command is redefined to not clear pages.

```

754 \newenvironment{pages}{%
755   \let\oldchapter\chapter
756   \let\chapter\chapterinpages
757   \l@dpairingtrue
758   \l@dpagingtrue
759   \initnumbering@sectcmd
760   \setlength{\Lcolwidth}{\textwidth}%
761   \setlength{\Rcolwidth}{\textwidth}%
762 }{%
763   \l@dpairingfalse
764   \l@dpagingfalse
765   \let\chapter\oldchapter
766 }
767 \newcommand{\chapterinpages}{\thispagestyle{plain}%
768   \global\@topnum\z@
769   \global\@afterindentfalse
770   \secdef\@chapter\@schapter}
771

```

`ifinstanzaL` These boolean tests are switched by the `\stanza` command, using either the left
`ifinstanzaR` or right side.

```

772 \newif\ifinstanzaL
773 \newif\ifinstanzaR

```

`Leftside` Within the `pairs` and `pages` environments the left and right hand texts are within `Leftside` and `Rightside` environments, respectively. The `Leftside` environment is simple, indicating that right text is not within its purview and using some particular macros.

```

774 \newenvironment{Leftside}{%
775   \ledRcolfalse
776   \setcounter{pstartL}{1}
777   \let\pstart\pstartL
778   \let\thepstart\thepstartL
779   \let\pend\pendL
780   \let\memorydump\memorydumpL
781   \Leftsidehook
782   \let\old@startstanza\@startstanza
783   \def\@startstanza[##1]{\global\instanzaLtrue\old@startstanza[##1]}
784 }{
785   \Leftsidehookend}

```

`\Leftsidehook` Hooks into the start and end of the `Leftside` and `Rightside` environments. These
`\Leftsidehookend` are initially empty.

```

\Rightsidehook 786 \newcommand*{\Leftsidehook}{}\\
\Rightsidehookend

```

```

787 \newcommand*{\Leftsidehookend}{}%
788 \newcommand*{\Rightsidehook}{}%
789 \newcommand*{\Rightsidehookend}{}%
790

Rightside The Rightside environment is only slightly more complicated than the Leftside. Apart from indicating that right text is being provided it ensures that the right right text code will be used.
791 \newenvironment{Rightside}{%
792   \ledRcoltrue
793   \let\beginnumbering\beginnumberingR

810 }
811

```

18 Paragraph decomposition and reassembly

In order to be able to count the lines of text and affix line numbers, we add an extra stage of processing for each paragraph. We send the paragraph into a box register, rather than straight onto the vertical list, and when the paragraph ends we slice the paragraph into its component lines; to each line we add any notes or line numbers, add a command to write to the line-list, and then at last send the line to the vertical list. This section contains all the code for this processing.

18.1 Boxes, counters, \pstart and \pend

\num@linesR Here are numbers and flags that are used internally in the course of the paragraph decomposition.
\one@lineR
\par@lineR When we first form the paragraph, it goes into a box register, `\l@dLcolrawbox` or `\l@dRcolrawbox` for right text, instead of onto the current vertical list. The `\ifnumberedpar@` flag will be `true` while a paragraph is being processed in that way. `\num@lines(R)` will store the number of lines in the paragraph when it's

complete. When we chop it up into lines, each line in turn goes into the `\one@line` or `\one@lineR` register, and `\par@line(R)` will be the number of that line within the paragraph.

```
812 \newcount\num@linesR
813 \newbox\one@lineR
814 \newcount\par@lineR
```

`\pstartL` `\pstart` starts the paragraph by clearing the `\inserts@list` list and other relevant variables, and then arranges for the subsequent text to go into the appropriate box. `\pstart` needs to appear at the start of every paragraph that's to be numbered.

Beware: everything that occurs between `\pstart` and `\pend` is happening within a group; definitions must be global if you want them to survive past the end of the paragraph.

We have to have specific left and right `\pstart` when parallel processing; among other things because of potential changes in the linewidth.

```
815
816 \newcounter{pstartL}
817 \renewcommand{\thepstartL}{{\bfseries\c@pstartL}. }

18.2 Processing one line

For parallel texts we have to be able to process left and right lines independently. For sequential text we happily use the original \do@line. Otherwise ...

\l@dleftbox A line of left text will be put in the box \l@dleftbox, and analogously for a line
\l@drightbox of right text.

```
967 \newbox\l@dleftbox
968 \newbox\l@drightbox
969
```

\countLline We need to know the number of lines processed.

```
970 \newcount\countLline
971   \countLline \z@
972 \newcount\countRline
973   \countRline \z@
974
```

\@donereallinesL We need to know the number of ‘real’ lines output (i.e., those that have been input
\@donetotallinesL by the user), and the total lines output (which includes any blank lines output for
\@donereallinesR synchronisation).

```
\@donetotallinesR 975 \newcount\@donereallinesL
976 \newcount\@donetotallinesL
977 \newcount\@donereallinesR
978 \newcount\@donetotallinesR
979
```

\do@lineL The \do@lineL macro is called to do all the processing for a single line of left text.

```

18.5 Pstart number printing in side

The printing of the pstart number is like in eledmac, with two differences :

- Some commands have versions suffixed by R or L.
- The `\affixpstart@num` and `\affixpstart@numR` commands are called in the `\Pages` command. Consequently, the `pstartL` and `pstartR` counters must be reset at the begining of this command.

```

1426   \fi
1427 \add@inserts@nextR}
1428

```

18.7 Penalties

\add@penaltiesL \add@penaltiesL is the last macro used by \do@lineL. It adds up the club, widow, and interline penalties, and puts a single penalty of the appropriate size back into the paragraph; these penalties get removed by the \vsplit operation. \displaywidowpenalty and \brokenpenalty are not restored, since we have no easy way to find out where we should insert them.

In the code below, which is a virtual copy of the original \add@penalties, \num@lines is the number of lines in the whole paragraph, and \par@line is the

line we're working on at the moment. The count `\@l@dtempcnta` is used to calculate and accumulate the penalty; it is initially set to the value of `\ballast@count`, which has been worked out in `\do@ballast`. Finally, the penalty is checked to see that it doesn't go below -10000 .

```
\newcommand*{\add@penaltiesR}{\@l@dtempcnta=\ballast@count
\ifnum\num@linesR>\@ne
\global\advance\par@lineR \@ne
\ifnum\par@lineR=\@ne
\advance\@l@dtempcnta by \clubpenalty
\fi
\@l@dtempcntb=\par@lineR \advance\@l@dtempcntb \@ne
\ifnum\@l@dtempcntb=\num@linesR
\advance\@l@dtempcnta by \widowpenalty
\fi
\ifnum\par@lineR<\num@linesR
\advance\@l@dtempcnta by \interlinepenalty
\fi
\fi
\ifnum\@l@dtempcnta=\z@
\relax
\else
\ifnum\@l@dtempcnta>-10000
\penalty\@l@dtempcnta
\else
\penalty -10000
\fi
\fi}
```

This is for a single chunk. However, as we are probably dealing with several chunks at a time, the above is nor really relevant. I think that it is likely with parallel text that there is no real need to add back any penalties; even if there was, they would have to match across the left and right lines. So, I end up with the following.

```
1429 \newcommand*{\add@penaltiesL}{}
1430 \newcommand*{\add@penaltiesR}{}
1431
```

18.8 Printing leftover notes

`\flush@notesR` The `\flush@notesR` macro is called after the entire right text has been sliced up and sent on to the vertical list.

```
1432 \newcommand*{\flush@notesR}{%
\@xloop
\ifx\inserts@listR\empty \else
\gl@p\inserts@listR\to\@insertR
\@insertR
\global\let\@insertR=\undefined
\repeat}
```

1439

19 Footnotes

19.1 Normal footnote formatting

The `\printlines` macro prints the line numbers for a note—which, in the general case, is a rather complicated task. The seven parameters of the argument are the line numbers as stored in `\l@d@nums`, in the form described on 22.3 p. 68 of *eledmac*' handbook: the starting page, line, and sub-line numbers, followed by the ending page, line, and sub-line numbers, and then the font specifier for the lemma.

```

\printlinesR This is the right text version of \printlines and takes account of \Rlineflag.
\ledsavedprintlines Just in case, \ledsavedprintlines is a copy of the original \printlines.

Just a reminder of the arguments:
\printlinesR #1 | #2 | #3 | #4 | #5 | #6 | #7
\printlinesR start-page | line | subline | end-page | line | subline | font
1440 \def\printlinesR#1#2#3#4#5#6#7{\begingroup
1441   \setprintlines{#1}{#2}{#3}{#4}{#5}{#6}%
1442   \ifl@d@pnum #1\fullstop\fi
1443   \ifledplinenum \linenumr@p{#2}\Rlineflag\else \symplinenum\fi
1444   \ifl@d@ssub \fullstop \sublinenumr@p{#3}\fi
1445   \ifl@d@dash \endashchar\fi
1446   \ifl@d@pnum #4\fullstop\fi
1447   \ifl@d@elin \linenumr@p{#5}\Rlineflag\fi
1448   \ifl@d@esl \ifl@d@elin \fullstop\fi \sublinenumr@p{#6}\fi
1449 \endgroup}
1450
1451 \let\ledsavedprintlines\printlines
1452

```

19.2 Footnotes output specific to \Pages

`\print@Xnotes@forpages` The `\onlyXside` and `\onlysideX` hooks for `\Pages` allow notes to be printed either in left or right pages only. The implementation of such features is delegated to `\print@Xnotes@forpages`, which replaces `\print@Xnotes` inside `\Pages`. Here `\correct@footinsX@box` is how we proceed²:

- If notes are to be printed in both sides, we just proceed the usual way: print the foot starts for the series, then the foot group.
- If notes are to be printed in the left side, we do these prints only for even pages ; if notes are to be printed in the right side, we do these prints only for odd pages.

²See <http://tex.stackexchange.com/a/230332/7712>.

- However, that is not enough. Because the problem does not only consists in printing notes in any particular page. It is also not to put aside room for notes in the pages where we don't want to print them. To take an example: if some note in the left side is too long by 160pt to be printed in full in the left page, we do not want to put aside 160pt a space for it in the following right page.
- To solve this problem, we change the magnification factor associated with notes before going to the next page. If we start a page where no notes are supposed to be printed, the magnification counter is set to 0. We also set the note skip to 0pt. Before starting a new page where these notes are supposed to be printed, we reset these counter and skip to their default values. (About these counter and skip, read *TeXbook* p. 122-125).
- There still remains a last problem. This problem is quite complex to understand, so an example will speak for itself. Suppose we allow 10 lines of notes by page. Suppose a long note, be it 25 lines, which needs three pages to be printed. Suppose it must be printed only on left pages, namely odd pages.

On p. 2, the first 10 lines of the notes are printed. On p. 3, the box associated to the notes contains 10 lines. However, as we are in a right page, we don't void this box. So *TeX* will keep its content for the pages to come. However, on p. 4 it will also add one line in the footnote box, because in any case, *TeX* adds some content in the box when preparing the output routines, even if there is some content left in this box from the previous pages. So the lines in the note box at p. 4 will be $10 + 1 = 11$. There is one line which should not be there. Furthermore, as the box size is for 10 lines and not for 11 lines, this last line will be glued to the previous one.

To fix this double issue:

- For the pages where notes must be NOT printed, we allow to every note box one line less than it ought to be. In our example, that means that we allow *TeX* to add only $10 - 1 = 9$ line in the note box on p. 3. Before shifting to the pages where notes must be printed, we allow to every notes the expected number of lines. In our example, that means that we allow *TeX* to add 10 lines in the note box on p. 4. As on p. 3 only 9 lines were allowed, that means note box of p. 4 will contain $9 + 1 = 10$ lines. So the “one line too many” problem is solved.
- Still remains the “glue” problem. We solve it by recreating a clean note box. We split the one which is created by *TeX* to get the next line printed. Then, we create the new box, by bringing together the first part and the last part of the splitted box, adding some skip between them. That is achieved by `\correct@Xfootins@box` (or `\correct@footinsX@box` for familiar notes).

The code to print critical notes, when processing `\Pages`

```
1453 \newcommand\print@Xnotes@forpages[1]{%
```

First case: notes are for both sides. Just print the note start and the note group

```
1454     \ifcsempty{onlyXside@#1}{%
1455         \csuse{#1footstart}{#1}%
1456         \csuse{#1footgroup}{#1}%
1457     }%
```

Second case: notes are for one side only. First test if we are in a page where they must be printed.

```
1458     {%
1459         \ifboolexpr{%
1460             ((test {\ifcsstring{onlyXside@#1}{L}} and not test{\ifnumodd{\c@page}})%
1461             or%
1462             (test {\ifcsstring{onlyXside@#1}{R}} and test{\ifnumodd{\c@page}}))}%
1463         }%
```

If we are in a page where notes must be printed, print the notes, after having made the corrections which are needed for boxes.

```
1464     {%
1465         \correct@Xfootins@box{#1}%
1466         \csuse{#1footstart}{#1}%
1467         \csuse{#1footgroup}{#1}%
1468 }
```

Then, say not to keep room for notes in the next page.

```
1468     \global\count\csuse{#1footins}=0%
1469     \global\skip\csuse{#1footins}=0pt%
```

And also, allow one line less for notes in the next page.

```
1470     \csuse{Xnotefontsize@#1}%
1471     \global\advance\dimen\csuse{#1footins} by -\baselineskip%
```

Now we have printed the notes. So we put aside this fact.

```
1472     \global\boolfalse{keepforXside@#1}%
1473 }
```

In case we are on a page where notes must NOT be printed. First, memorize that we have not printed the notes, despite having some to print.

```
1474     {%
1475         \global\booltrue{keepforXside@#1}%
1476 }
```

Then restore expected rooms for notes on the next page.

```
1476     \global\count\csuse{#1footins}=\csuse{default@#1footins}%
1477     \global\skip\csuse{#1footins}=\csuse{beforeXnotes@#1}%
```

Last but not least, restore the normal line number allowed to notes for the following page.

```
1478     \bgroup%
1479         \csuse{Xnotefontsize@#1}%
1480         \global\advance\dimen\csuse{#1footins} by \baselineskip%
1481     \egroup%
1482 % End of \cs{print@Xnotes@forpages} .
1483 }
```

Now, `\correct@Xfootins@box`, to fix problem of last line being glued to the previous one.

```
1486 \newcommand{\correct@Xfootins@box}[1]{%
```

We need to make correction only in case we have not printed any note in the previous page, although there was to be “normally” printed.

```
1487 \ifbool{keepforXside@#1}{%
```

Some setting needed to do the right splitting.

```
1488     \csuse{Xnotefontsize@#1}%
1489     \splittopskip=0pt%
```

And now, split the last line, and push in the right place.

```
1490     \global\setbox\csuse{#1footins}=\vbox{%
1491         \vsplit\csuse{#1footins} to \dimexpr\ht\csuse{#1footins}-1pt\relax%
1492         \vskip \dimexpr-0.5\baselineskip-0.5\lineskip-0.5pt\relax%
1493         \unvbox\csuse{#1footins}%
1494     }%
```

End of the macro.

```
1495 }{%
1496 }%
```

And now, the same for familiar footnotes.

```
1497 \newcommand\print@notesX@forpages[1]{%
1498     \ifcsemptry{onlysideX@#1}{%
1499         \csuse{footstart#1}{#1}%
1500         \csuse{footgroup#1}{#1}%
1501     }%
1502     {%
1503         \ifboolexpr{%
1504             (\test{\ifcsstring{onlysideX@#1}{L}} and \not \test{\ifnumodd{\c@page}})%
1505             or%
1506             (\test{\ifcsstring{onlysideX@#1}{R}} and \test{\ifnumodd{\c@page}}))%
1507         }%
1508         t{%
1509             \correct@footinsX@box{#1}%

1672       \noexpand\csname sza@00\endcsname}\stanzaindentbase%
1673     \hangingsymbol%
1674   \fi%

```

```
1675 \fi%
1676 }%
```

Before we can define the main stanza macros we need to be able to save and reset the category code for &. To save the current value we use `\next` from the `\loop` macro.

```
1677 \chardef\next=\catcode`\
1678 \catcode`\&=\active
1679
```

astanza This is roughly an environmental form of `\stanza`, which treats its stanza-like contents as a single chunk.

```
1680 \newenvironment{astanza}{%
1681   \startstanzahook
1682   \catcode`\&=\active
1683   \global\stanza@count\@ne\stanza@modulo\@ne
1684   \ifnum\usenamecount{sza@0@}=\z@%
1685     \let\stanza@hang\relax
1686     \let\endlock\relax
1687   \else
1688     \rightskip\z@ plus 1fil\relax
1689   \fi
1690   \ifnum\usenamecount{szp@0@}=\z@%
1691     \let\sza@penalty\relax
1692   \fi
1693   \def&{%
1694     \endlock\mbox{}%
1695     \sza@penalty
1696     \global\advance\stanza@count\@ne
1697     \oastanza@line}%
1698   \def\&{\oastopastanza}%
1699   \pstart
1700   \oastanza@line
1701 }{}%
1702
```

\oastopastanza This command is called by `\&` in `astanza` environment. It allows optional arguments.

```
1703 \newcommandx{\oastopastanza}[1][1,usedefault]{%
1704   \endlock\mbox{}%
1705   \pend[#1]%
1706   \endstanzaextra}%
1707 }%
```

\oastanza@line This gets put at the start of each line in the environment. It sets up the paragraph style — each line is treated as a paragraph.

```
1708 \newcommand*{\oastanza@line}{%
1709   \ifnum\value{stanzaindentsrepetition}=0
1710     \parindent=\csname sza@\number\stanza@count
```

```

1711          @\endcsname\stanzaindentbase
1712  \else
1713      \parindent=\csname sza@\number\stanza@modulo
1714          @\endcsname\stanzaindentbase
1715      \managestanza@modulo
1716  \fi
1717  \par
1718 \stanza@hang%\mbox{}%
1719 \ignorespaces}
1720

```

Lastly reset the modified category codes.

```

1721 \catcode`&=\next
1722

```

24 Naming macros

The L^AT_EX kernel provides `\@namedef` and `\@namuse` for defining and using macros that may have non-letters in their names. We need something similar here as we are going to need and use some numbered boxes and counters.

<pre> \newnamebox A set of macros for creating and using ‘named’ boxes; the macros are called after \setnamebox the regular box macros, but including the string ‘name’. \unhnamebox 1723 \providetcommand*\{\newnamebox}[1]{% \unvnamebox 1724 \expandafter\newbox\csname #1\endcsname} \namebox 1725 \providetcommand*\{\setnamebox}[1]{% 1726 \expandafter\setbox\csname #1\endcsname} 1727 \providetcommand*\{\unhnamebox}[1]{% 1728 \expandafter\unhbox\csname #1\endcsname} 1729 \providetcommand*\{\unvnamebox}[1]{% 1730 \expandafter\unvbox\csname #1\endcsname} 1731 \providetcommand*\{\namebox}[1]{% 1732 \csname #1\endcsname} 1733 </pre>	<pre> \newnamecount Macros for creating and using ‘named’ counts. \usenamecount 1734 \providetcommand*\{\newnamecount}[1]{% 1735 \expandafter\newcount\csname #1\endcsname} 1736 \providetcommand*\{\usenamecount}[1]{% 1737 \csname #1\endcsname} 1738 </pre>
--	--

25 Counts and boxes for parallel texts

In sequential text, each chunk (that enclosed by `\pstart ... \pend`) is put into a box called `\raw@text` and then immediately printed, resulting in the box being emptied and ready for the next chunk. For parallel processing multiple boxes are needed as printing is delayed. We also need extra counters for various things.

\maxchunks The maximum number of chunk pairs before printing has to be called for. The default is 5120 chunk pairs.

```
1739 \newcount\l@dc@maxchunks
1740 \newcommand{\maxchunks}[1]{\l@dc@maxchunks=#1}
1741   \maxchunks{5120}
1742
```

\l@dnumstartsL The numbers of left and right chunks. **\l@dnumstartsL** is defined in `eledmac`.

\l@dnumstartsR 1743 `\newcount\l@dnumstartsR`
1744

\l@pscL A couple of scratch counts for use in left and right texts, respectively.

\l@pscR 1745 `\newcount\l@dpscL`
1746 `\newcount\l@dpscR`
1747

\l@dsuprawboxes This macro creates **\maxchunks** pairs of boxes for left and right chunks. The boxes are called **\l@dLcolrawbox1**, **\l@dLcolrawbox2**, etc.

```
1748 \newcommand*{\l@dsuprawboxes}{%
1749   \l@tempcntb=\l@dc@maxchunks
1750   \loop\ifnum\l@tempcntb>\z@
1751     \newnamebox{\l@dLcolrawbox}{\the\l@tempcntb}
1752     \newnamebox{\l@dRcolrawbox}{\the\l@tempcntb}
1753     \advance\l@tempcntb \m@ne
1754   \repeat}
1755
```

\l@dsupmaxlinecounts To be able to synchronise left and right texts we need to know the maximum number of text lines there are in each pair of chunks. **\l@dsupmaxlinecounts** creates **\maxchunks** new counts called **\l@dmaxlinesinpar1**, etc., and **\l@zeromaxlinecounts** zeroes all of them.

```
1756 \newcommand*{\l@dsupmaxlinecounts}{%
1757   \l@tempcntb=\l@dc@maxchunks
1758   \loop\ifnum\l@tempcntb>\z@
1759     \newnamecount{\l@dmaxlinesinpar}{\the\l@tempcntb}
1760     \advance\l@tempcntb \m@ne
1761   \repeat}
1762 \newcommand*{\l@zeromaxlinecounts}{%
1763   \begingroup
1764   \l@tempcntb=\l@dc@maxchunks
1765   \loop\ifnum\l@tempcntb>\z@
1766     \global\usenamecount{\l@dmaxlinesinpar}{\the\l@tempcntb}=\z@
1767     \advance\l@tempcntb \m@ne
1768   \repeat
1769   \endgroup}
1770
```

Make sure that all these are set up. This has to be done after the user has had an opportunity to change **\maxchunks**.

```

1771 \AtBeginDocument{%
1772   \l@dsetuprawboxes
1773   \l@dsetupmaxlinecounts
1774   \l@dzeromaxlinecounts
1775   \l@dnumpstartsL=\z@
1776   \l@dnumpstartsR=\z@
1777   \l@dpsscL=\z@
1778   \l@dpsscR=\z@}
1779

```

26 Fixing babel

With parallel texts there is the possibility that the two sides might use different languages via `babel`. On the other hand, `babel` might not be called at all (even though it might be already built into the format).

With the normal sequential text each line is initially typeset in the current language environment, and then it is output at which time its attachments are typeset (in the same language environment). In the parallel case lines are typeset in their current language but an attachment might be typeset outside the language environment of its line if the left and right side languages are different. To counter this, we have to make sure that the correct language is used at the proper times.

```

\ifl@dusedbabel A flag for checking if babel has been used as a package.
\l@dusedbabelfalse 1780 \newif\ifl@dusedbabel
\l@dusedbabeltrue \ifl@dsamelang Suppress \ifl@dsamelang which didn't work and was not logical, because both
columns could have the same language but not the main language of the document.

\l@dchecklang

\l@dbbl@set@language In babel the macro \bbl@set@language{\langle lang\rangle} does the work when the language
\langle lang\rangle is changed via \selectlanguage. Unfortunately for me, if it is given an
argument in the form of a control sequence it strips off the \ character rather than
expanding the command. I need a version that accepts an argument in the form
\lang without it stripping the \.
1781 \newcommand*\l@dbbl@set@language[1]{%
1782   \edef\languagename{\#1}%
1783   \select@language{\languagename}%
1784   \if@filesw
1785     \protected@write\@auxout{}{\string\select@language{\languagename}}%
1786     \addtocontents{toc}{\string\select@language{\languagename}}%
1787     \addtocontents{lof}{\string\select@language{\languagename}}%
1788     \addtocontents{lot}{\string\select@language{\languagename}}%
1789   \fi}
1790

```

The rest of the setup has to be postponed until the end of the preamble when we know if `babel` has been used or not. However, for now assume that it has not been used.

```
\selectlanguage \selectlanguage is a babel command. \theledlanguageL and \theledlanguageR  

\l@duselanguage are the names of the languages of the left and right texts. \l@duselanguage is  

\theledlanguageL similar to \selectlanguage.
```

```
1791 \providetcommand{\selectlanguage}[1]{}
1792 \newcommand*{\l@duselanguage}[1]{}
1793 \gdef\theledlanguageL{}
1794 \gdef\theledlanguageR{}
1795
```

Now do the `babel` fix or *Polyglossia*, if necessary.

```
1796 \AtBeginDocument{%
1797   \@ifundefined{xpg@main@language}{%
1798     \ifundefined{bb@main@language}{%
```

Either `babel` has not been used or it has been used with no specified language.

```
1799   \l@dusedbabelfalse
1800   \renewcommand*{\selectlanguage}[1]{}{%
```

Here we deal with the case where `babel` has been used. `\selectlanguage` has to be redefined to use our version of `\bb@set@language` and to store the left or right language.

```
1801   \l@dusedbabeltrue
1802   \let\l@doldselectlanguage\selectlanguage
1803   \let\l@doldbb@set@language\bb@set@language
1804   \let\bb@set@language\l@dbb@set@language
1805   \renewcommand{\selectlanguage}[1]{%
1806     \l@doldselectlanguage{\#1}%
1807     \ifledRcol \gdef\theledlanguageR{\#1}%
1808     \else \gdef\theledlanguageL{\#1}%
1809     \fi}
```

`\l@duselanguage` simply calls the original `\selectlanguage` so that `\theledlanguageL` and `\theledlanguageR` are unaltered.

```
1810   \renewcommand*{\l@duselanguage}[1]{%
1811     \l@doldselectlanguage{\#1}}
```

Lastly, initialise the left and right languages to the current `babel` one.

```
1812   \gdef\theledlanguageL{\bb@main@language}%
1813   \gdef\theledlanguageR{\bb@main@language}%
1814   }%
1815 }
```

If on Polyglossia

```
1816 { \let\old@otherlanguage\otherlanguage%
1817   \renewcommand{\otherlanguage}[2][]{%
1818     \selectlanguage[\#1]{\#2}%
1819     \ifledRcol \gdef\theledlanguageR{\#2}%
1820     \else \gdef\theledlanguageL{\#2}%
1821     \fi}%
1822   \let\l@duselanguage\select@language%
1823   \gdef\theledlanguageL{\xpg@main@language}%
1824   \gdef\theledlanguageR{\xpg@main@language}%
```

That's it.

1825 } }

```
\if@pstarts \check@pstarts returns \pstartstrue if there are any unprocessed chunks.
\pstartstrue 1826 \newif\if@pstarts
\pstartsfalse 1827 \newcommand*\check@pstarts{%
\check@pstarts 1828 \pstartsfalse

\cleartoevenpage \cleartoevenpage, which is defined in the memoir class, is like \clear(double)page
\cleartol@devenpage except that we end up on an even page. \cleartol@devenpage is similar except
that it first checks to see if it is already on an empty page.

```

2267 \providecommand{\cleartoevenpage}[1][\empty]{
2268   \clearpage
2269   \ifodd\c@page\hbox{}#1\clearpage\fi}
2270 \newcommand*\{\cleartol@devenpage}{%
2271   \ifdim\pagetotal<\topskip% on an empty page
2272   \else
2273     \clearpage
2274   \fi
2275   \ifodd\c@page\hbox{}\clearpage\fi}

```

\clearl@dleftpage \clearl@dleftpage and \clearl@drighthpage get us onto an odd and even page,
\clearl@drighthpage respectively, checking that we end up on the subsequent page. Both commands use
\newpage and not \clearpage. Because \clearpage prints all footnotes before
the next page, even if it has to add new empty pages, while \newpage does not.
And as we want notes started in the left page continue in the right page and
vice-versa, we must use \newpage and not \clearpage

```

2276 \newcommand*\{\clearl@dleftpage}{%
2277   \ifdim\pagetotal=0pt\hbox{}\fi%
2278   \newpage%

29 Sections' titles' commands

As switching from left to right pages does not clear the page since v1.13.0, but only creates new pages, no `\vbox{}` is inserted, and consequently parallel chapters are mis-aligned.

So we patch the `\chapter` command in order to prevent this problem.

```

\chapter
2517 \preto{\chapter}{%
2518   \ifl@printingpages%
2519     \vbox{}%
2520   \fi%
2521 }%
2522 {}%
2523 {}%

\eledsectnotoc \eledsectnotoc just saves its content \eledsectnotoc, which will be tested
where sectioning commands will be printed.
2524 \newcommand{\eledsectnotoc}[1]{\xdef\eledsectnotoc{#1}}
2525 \eledsectnotoc{R}

\eledsectmark \eledsectmark just saves its content \eledsectmark, which will be tested where
sectioning commands will be printed.
2526 \newcommand{\eledsectmark}[1]{\xdef\eledsectmark{#1}}
2527 \eledsectmark{L}

\edsection@correcting@skip Because the vertical correction needed after inserting a title in parallel depends
whether we are in parallel columns or parallel pages, we stock its length in
\edsection@correcting@skip.
2528 \newskip\edsection@correcting@skip

\eled@sectioningR@out We save the sectioning commands of the right side in the \eled@sectioningR@out
file.
2529 \newwrite\eled@sectioningR@out

```

30 Page break/no page break, depending on the specific line

We need to adapt the macro of the homonym section of elemac to elepar.

\prev@pbR The \l@prev@pbR macro is a etoolbox list, which contains the lines in which page
 \prev@nopbR breaks occur (before or after). The \l@prev@nopbR macro is a etoolbox list, which
 contains the lines in which NO page breaks occur (before or after).

```

2530 \def\l@prev@pbR{}
2531 \def\l@prev@nopbR{}

```

\ledpbR The \ledpbR macro writes the call to \led@pbR in line-list file. The \ledpbnumR
 \ledpbnumR macro writes the call to \led@pbnumR in line-list file. The \lednopbR macro writes
 \lednopbnum the call to \led@nopbR in line-list file. The \lednopbnumR macro writes the call
 \lednopbnumR to \led@nopbnumR in line-list file.

```

2532 \newcommand{\ledpbR}{\write\linenum@outR{\string\led@pbR}}
2533 \newcommand{\ledpbnumR}[1]{\write\linenum@outR{\string\led@pbnumR{#1}}}
2534 \newcommand{\lednopbR}{\write\linenum@outR{\string\led@nopbR}}
2535 \newcommand{\lednopbnumR}[1]{\write\linenum@outR{\string\led@nopbnumR{#1}}}

```

\led@pbR The \led@pbR add the absolute line number in the \prev@pbR list. The \led@pbnumR \led@pbnumR add the argument in the \prev@pbR list. The \led@nopbR add \led@nopbR the absolute line number in the \prev@nopbR list. The \led@nopbnumR add the \led@nopbnumR argument in the \prev@nopbR list.

```
2536 \newcommand{\led@pbR}{\listxadd{\l@prev@pbR}{\the\absline@numR}}

2577         \csuse{footnoterule\splitbotmarks\parledgroup@series}
2578         \fi
2579     }{}}
2580 }
2581 {}
2582 }
```

\parledgroupnotespacing \parledgroupnotespacing can be redefined by the user to change the interline spacing of ledgroup notes.

```
2583 \newcommand{\parledgroupnotespacing}{}{}
```

up@notespacing@correction \parledgroup@notespacing@correction is the difference between a normal line otespacing@set@correction skip and a line skip in a note. It's set by \parledgroup@notespacing@set@correction, called at the begining of \Pages.

```

2584 \dimdef{\parledgroup@notespacing@correction}{0pt}
2585 \newcommand{\parledgroup@notespacing@set@correction}{}{%
2586     {\notefontsetup\parledgroupnotespacing\dimdef{\temp@spacing}{\baselineskip}}%
2587     \dimdef{\parledgroup@notespacing@correction}{\baselineskip-\temp@spacing}}%
2588 }
```

rrection@notespacing@init \parledgroup@correction@notespacing@init sets the value of accumulated corrections of note spacing to 0 pt. It's called at the begining of each pages AND at the end of each ledgroup.

```

2589 \newcommand{\parledgroup@correction@notespacing@init}{}{%
2590     \dimdef{\parledgroup@notespacing@correction@accumulated}{0pt}
2591     \dimdef{\parledgroup@notespacing@correction@modulo}{0pt}
2592 }
2593 \parledgroup@correction@notespacing@init
```

rection@notespacing@final \parledgroup@correction@notespacing@final adds the total space deleted because of correction for notes, in a parallel ledgroup. It also adds the space needed by the other side spaces between note rules and notes. It's called after the print of each pstart/pend.

```

2594 \newcommand{\parledgroup@correction@notespacing@final}[1]{
2595   \ifparledgroup
2596     \vspace{\parledgroup@notespacing@correction@accumulated}

2611 \fi
2612 }

```

\parledgroup@correction@notespacing \parledgroup@correction@notespacing is used before each printed line. If it's a line of notes in parallel ledgroup, the space \parledgroup@notespacing@correction is decreased, to make interline space correct. The decreased space is added to \parledgroup@notespacing@correction@accumulated and \parledgroup@notespacing@correction. If \parledgroup@notespacing@correction@modulo is equal or greater than \baselineskip:

- It is decreased by \baselineskip.
- The total of line number in the current page is decreased by one.

For example, suppose an normal interline of 24 pt and interline for note of 12 pt. That means that the two lines of notes take the place of one normal line. For every two lines of notes, the line total for the current place is decreased by one.

```

2613 {}%
2614 \newcommand{\parledgroup@correction@notespacing}[1]{%
2615   \csuse{ifledgroupnotes#1@}%
2616   \vspace{-\parledgroup@notespacing@correction}%

2621   }% mean greater than equal
2622 }%
2623 }

```

\parledgroup@beforeenotesL \parledgroup@beforeenotesL and \parledgroup@beforeenotesR store the total \parledgroup@beforeenotesR of space before notes in the current parallel ledgroup.

```

2624 \dimdef{\parledgroup@beforeenotesL}{0pt}
2625 \dimdef{\parledgroup@beforeenotesR}{0pt}

```

ledgroup@beforenotes@save The macro `\parledgroup@beforenotes@save` dumps the space before notes of the current parallel ledgroup in a macro named with the current pstart number.

```
2626 \newcommand{\parledgroup@beforenotes@save}[1]{  
2627   \ifparledgroup  
2628     \csdimgdef{\parledgroup@beforenotes@\the\csuse{1@dnumpstarts#1}#1}{\csuse{\parledgroup@beforenotes@  
2629       \csdimgdef{\parledgroup@beforenotes#1}{0pt}  
2630     \fi  
2631 }
```

32 The End

i/code;

Appendix A Some things to do when changing version

Appendix A.1 Migration to `eledpar` 1.4.3

Version 1.4.3 corrects a bug added in version 0.12, which made hanging verse automatically flush right, despite the given value of the first element of the `\setstanzaindent` command.

If, however, you want to return to automatic flush-right margins for verses with hanging indents, you have to redefine the `\hangingsymbol` command.

```
\renewcommand{\hangingsymbol}{\protect\hfill}
```

See the two following examples:

With standard `\hangingsymbol`:

A very long verse should be sometime hanged. The position of the hanging verse is fixed.

With the modification of `\hangingsymbol`:

A very long verse should sometimes be hanging. And we can see that an hanging verse is flush right.

Change History

v0.1.		lated code	67	
	General: First public release	1	Fix babel problems	1
v0.2.			\Columns: Added \l@dchecklang	
	General: Added section of babel re-		and \l@duselanguage to	

\Columns	71	v0.3.a.
\Pages: Added \l@duselanguage to \Pages	78	General: Minor \linenummargin fix 1
v0.3.		\line@marginR: Don't just set \line@marginR in \linenummargin 20
General: Added \do@lineLhook and \do@lineRhook	47	v0.3.b.
Reorganize for ledarab	1	General: Improved parallel page balancing 1
\affixline@numR: Changed \affixline@numR to match new elemac	51	\Pages: Added \l@dminpagelines calculation for succeeding page pairs 80
\do@actions@nextR: Used \do@actions@fixedcode in \do@actionsR	49	v0.3.c.
\do@lineL: Added \do@lineLhook to \do@lineL	45	General: Compatibilty with Polyglossia 1
Simplified \do@lineL by using macros for some common code	45	v0.4.
\do@lineR: Changed \do@lineR similarly to \do@lineL	47	General: No more ledparpatch. All patches are now in the main file. 1
Leftside: Added hooks into Left-side environment	39	v0.5.
\flag@end: Removed extraneous spaces from \flag@end	32	General: Corrections about \section and other titles in numbered sections 1
\ifledRcol: Moved \ifl@dpairing to elemac	15	v0.6.
\ifpst@rtedR: Moved \ifpst@rtedL to elemac	16	General: Be able to us \chapter in parallel pages. 1
\l@dlinenumR: Simplified \leftlinenumR and \rightlinenumR by introducing \l@dlinenumR	22	v0.7.
\l@dnumstartsR: Moved \l@dnumstartsL to elemac	66	General: Option 'shiftedverses' which make there is no blank between two parallel verses with unequal length. 1
\ledsavedprintlines: Simplified \printlinesR by using \setprintlines	56	v0.8.
\ledstrutR: Added \ledstrutL and \ledstrutR	81	General: Possibility to have a symbol on each hanging of verses, like in the french typography. Redefine the commande \hangingsymbol to define the character. 1
\normalbfnoteX: Removed extraneous spaces from \normalbfnoteX	63	v0.9.
\Pages: Added \ledstrutL to \Pages	78	General: Possibility to number \pstart 10
Added \ledstrutR to \Pages	79	Possibilty to number the pstart with the commands \numberpstarttrue. 1
\Rightsidehookend: Added \Leftsidehook, \Leftsidehookend, \Rightsidehook and \Rightsidehookend	39	\ifledRcol: Moved \ifl@ledRcol and \ifnumberingR to elemac 15
\sublinenumrepR: Added \linenumrepR and \sublinenumrepR	22	v0.9.1.
		General: The numbering of the pstarts restarts on each \beginnumbering. 1

v0.9.2.				
	General: Debug : with \Columns,			
	the hanging indentation now			
	runs on the left columns and the			
	hanging symbol is shown only			
	when \stanza is used.	1		
v0.9.3.				
	General: \thepstartL and			
	\thepstartR use now			
	\bfseries and not \bf, which			
	is deprecated and makes con-			
	flicts with memoir class.	1		
v0.10.				
	General: \edlabel commands on			
	the right side are now correctly			
	indicated.	1		
	\edlabel commands which start			
	a paragraph are now put in the			
	right place.	1		
v0.11.				
	General: Change \do@lineL and			
	\do@lineR to allow line num-			
	bering by pstart (like in elemac			
	0.15).	45		
	Lineation can be by pstart (like			
	in elemac 0.15).	19		
	New management of hang-			
	ingsymbol insertion, preventing			
	undesirable insertions.	64		
	\affixline@numR: Changed			
	\affixline@numR to allow to			
	disable line numbering (like in			
	elemac 0.15).	51		
	\Columns: Line numbering by			
	pstart.	72		
	\get@nextboxR: Change \get@nextboxL			
	and \get@nextboxR to allow to			
	disable line numbering (like in			
	elemac 0.15).	86		
	Pstart number can be printed in			
	side	87		
	\inserthangingsymbolR: Prevent			
	the column separator for hang-			
	ing verse from shifting	64		
v0.12.				
	General: New management of hang-			
	ingsymbol insertion, preventing			
	undesirable insertions.	64		
v1.0.				
	General: Compatibility with ele-			
	mac. Change name to elepar. . . 1			
	Debug in lineation by pstart . . . 19			
v1.0.1.				
	General: Correction on \numberonlyfirstinline			
	with lineation by pstart or by			
	page.	1		
v1.1.				
	General: Shiftedverses becomes			
	shiftedpstarts.	1		
	\pstartR: Add \labelpstarttrue			
	(from elemac).	40		
v1.1.1.				
	\pstartR: Correct \pstartR bug in-			
	troduced by 1.1.	40		
v1.1.2.				
	\affixside@noteR: Remove spuri-			
	ous space between line number			
	and line content	62		
v1.2.				
	General: Support for \led<section>			
	commands in parallel texts. . . . 1			
v1.2.1.				
	\initnumbering@sectcountR: For			
	the right section, the counter is			
	defined only once.	18		
v1.3.				
	\edtext: Manage RTL language. 34			
v1.3.1.				
	\l@dbfnote: Compatibility of stan-			
	dard footnotes with elemac			
	when theses footnotes contain			
	any commands.	63		
v1.3.2.				
	General: Debug with some classes. 1			
v1.3.3.				
	General: Debugging the left notes of			
	the right column.	62		
	\l@dbfnote: Spurious space with			
	footnote in right column.	63		
v1.3.4.				
	General: Allow use of commands			
	in sidenotes, as introduced by			
	elemac 1.0.	62		
v1.3.5.				
	\normalbfnoteX: Allows one to			
	redefine \thefootnoteX with			
	alph when some packages are			
	loaded.	63		

v1.4.	
General: Added \do@insidelineLhook and \do@insidelineRhook	47
v1.4.1.	
\normalbfnoteX: Fix bug with nor- mal familiar footnotes when mixing RTL and LTR text.	63
astanza: Enable the use of stan- zaindentsrepetition within as- stanza environment.	64
v1.4.3.	
General: Corrects a false hanging verse when a verse is exactly the length of a line.	1
\inserthangingsymbolR: Hanging verse is no longer automatically flush right.	64
\pendL: Spurious spaces in \pendL. .	43
\pendR: Spurious spaces in \pstartR.	43
\pstartR: Spurious spaces in \pstartL and \pstartR.	40
v1.5.0.	
General: Add, as in eleddmac, fea- tures to manage page breaks.	1
\sublinenumincrement*: Add starred version of \firstlinenum, \linenumincrement, \firstsublinenum, \sublinenumincrement to change both Left and Right- side.	21
v1.6.0.	
General: Add tool and documenta- tion for parallel ledgroups	12
v1.7.0.	
General: Add, as in eleddmac, fea- tures to make crossrefs with pstart numbers.	1
v1.8.0.	
General: \beginnumbering is de- fined only on eleddmac, not on eleddpar.	16
\l@dlsnote, \l@drsnote and \l@dcnote defined only one time, in eleddmac.	62
Add \beforecolumnseparator and \aftercolumnseparator.	4
Add \columnsposition.	4
Add, as in eleddmac, new system of sectioning commands.	1
	Add, as in eleddmac, option to in- sert something after \pends / verses.
	1
	Add, as in eleddmac, option to insert something between \pstarts / verse.
	1
	Change \do@lineR and \do@lineR to allow new sec- tioning commands.
	45
	Compatibility with musixtex.
	1
	Debug eleddmac section- ing command after using \resumenumbers.
	1
	New sectioning commands, as in eleddmac.
	14
	\Columns: Modify \Columns to en- able to add section's title.
	70
	Suppress \l@dchecklang from \Columns.
	71
	\l@dchecklang: Suppress \l@dchecklang which didn't work and was not logical, be- cause both columns could have the same language but not the main language of the docu- ment.
	68
	\Pages: Modify \Pages to enable to add section's title.
	76
	\pendL: As in eleddmac, \pendL can have an optional argument.
	43
	\pendR: As in eleddmac, \pendR can have an optional argument.
	43
	\print@columnseparator: Move some code of \Columns to \print@columnseparator.
	73
	\pstartR: As in eleddmac, \pendL and \pendR can have an op- tional argument.
	40
	\sidenotemargin*: \sidenotemargin is now directly defined in ele- ddmac to be able to manage ele- ddpar.
	61
	Add \sidenotemargin*
	61
	\theledlanguageR: Correct left/right language setting with polyglossia.
	69
v1.8.1.	
	\do@lineL: Fix a bug with critical notes a the begining of a page, (maybe added by v1.8.0) (?).
	45

\do@lineR:	Fix a bug with critical notes at the begining of a page, added by v1.8.0 (?).	47	columns (this bug was added in 1.8.2).	1		
v1.8.2.			\Pages:	Debug wrong pages splitting when no optional argument is used in last \pend (bug was added in v.1.8.3).	76	
General:	Debug \eledxxx with some paper sizes	1	Debug wrong parallel pages synchronization when an \edtext falls accross two pages.	76		
	Debug left and side note (bugs added by 1.8.0)	1				
\eledpar@error:	Errors specific to eledpar send to eledpar handbook	16				
\flag@end:	\flag@start and \flag@end are now defined only one time for elemac and eledpar	32				
\lineation*:	Add \lineation*	20				
v1.8.3.			\line@list@stuffR:	Revert modification of 1.4.2, which makes bugs with numbering. Leave vertical mode to solve spurious space before minipage.	32	
General:	Add \noeledxxx, as in elemac	1	General:	Compatibility of standard footnotes with some biblatex styles.	1	
\doinsidelineRhook:	Added \dolineLhook, \dolineRhook, \doinsidelineLhook and \doinsidelineRhook	46	\edtext:	\crltext and \edtext are now defined only in elemac.	34	
\Pages:	Debug blank pages when using optional argument in the last \pend.	76				
\resumenumberingR:	Debug \resumenumberingR	18	v1.12.0.	General:	Compatibility with Lua ^L ATEX RTL languages.	1
v1.9.0.			\Columns:	Add \l@dpaginolumnstrue	70	
General:	Add \AtBeginPairs macro.	3	\edlabel:	\edlabel and \edindex works now with hyperref when using eledpar.	61	
	Compatibility with \Xnoteswidthliketwocolumns and \notesXwidthliketwocolumns	1	\edlabel:	is now defined only one time for both elemac and eledpar.	61	
\ifwidthliketwocolumns:	Added widthliketwocolumns option	15	\Pages:	Add \l@dpaginesttrue	76	
\theledlanguageR:	Debug left/right language switching with polyglossia. Don't write in .aux file when setting left/right lines.	69	\print@eledsectionL:	Compatibility with Lua ^L ATEX RTL languages.	46	
v1.9.1.			\print@eledsectionR:	Compatibility with Lua ^L ATEX RTL languages.	48	
\ifledRcol:	Moved \ifl@dpaging to elemac	15	\print@lineL:	Compatibility with Lua ^L ATEX RTL languages.	46	
v1.10.0.	General:	Compatibility with \AtEveryPstart and \AtEveryPend	v1.12.1.	\print@eledsectionL:	Fixes bug with Lua ^L ATEX RTL \eledsection.	46
		1				
	Restore critical notes in \eledsection in parallel		v1.13.0.	General:	Fix bug in shiftedpstarts when size difference between pstarts is very important.	1

With parallel pages, long notes can now flow from the Left to the right side and from the Right to the left side.	1	\eledsection and similar commands for RTL texts with Lua ^A T _E X.	1
\clear@drightpage: Use \newpage instead of \clearpage.	82	The \newifs are not followed by boolean values set to false, because it is the T _E X default setting.	1
\ifledRcol: Remove false boolean settings which are not needed.	15	v1.15.0.	
\Pages: Prevent false overfull hboxes when using \Pages outside of pages environment.	77	General: Add \AtEveryPstartCall.	1
When using shiftedpstarts option, a \l@leftbox with a null height will advance the \pagetotal in any case.	76	Fix vertical spurious space before right \eledchapter (bug added in v1.13.0).	1
\astanza: Enable the use of optional argument of & in astanza environment.	64	Prevent vertical space when using \AtEveryPstart or \AtEveryPend with a command which prints nothing	1
v1.13.1.		\do@actions@nextR: Add action 1008 and 1009	49
\correct@footinsX@box: Call \correct@footinsX@box and \correct@Xfootins@box directly in \print@notesX@forpages and \print@Xnotes@forpages.	57	\inserthangingsymbolR: Prevent more efficiently the column separator from shifting when a verse is hanging	64
Correct \correct@footinsX@box and \correct@Xfootins@box	57	\lineationR: As \lineation, \lineationR automatically set the \pstartinfo.	19
\Pages: Prevent false empty page after \Pages (bug added in 1.13.0)	76	\n@num: \n@num defined only one time for both eledmac and eledpar.	30
v1.14.0.		\skipnumbering: \skipnumbering defined only one time for both eledmac and eledpar	34
General: Fix bug with line number position when using
