

2.3 Protection

\protecting

code argument. \AtBeginDocument would issue an error in this case. This hook

Any

`\letcs{ command }{ csname }`

Similar to the TeX primitive `\let`

\csmugdef{

If patching fails, it executes *failure* without modifying the original *command* .
This command is robust.

`\tracingpatches` Enables tracing for all patching commands, including

`\ifdefprefix{ control sequence }{ true }{ false }`

Expands to *true* if the *control sequence* is defined and is a macro prefixed with

`\long` and/or `\protected`, and to *false* otherwise.

```
\ifdefequal { control sequence } { control sequence } { true } { false }
```

Compares two control sequences and expands to *true* if they are equal in the

3.6.1 TeX switches

```
\provi detoggla{ name }
```

in curly braces. The braces will be removed as the list is processed. Here is a usage example which prints a comma-separated list as an `itemize` environment:

```
\begin{itemize}
```

```
\listcsxadd{ listcsname }{ item }
```

Similar to `\listcseadd` except that the assignment is global.

```
\dolistloop{ listmacro }
```

3.8 Miscellaneous tools

Added \AfterPreamble	2.5
Added \undef	3.1.1

Added \gl uedef [3.1.2](#)
