

The fancytooltips package*

Robert Marik
marik@mendelu.cz

July 28, 2007

1 Introduction

The package `fancytooltips` is a package for L^AT_EX. The pdf can be created by pdf_latex or by latex + dvips + AdobeDistiller¹ + Adobe Acrobat². It allows to create tooltips in a similar way like `cooltooltips` package, but the tooltip is a page from another PDF file. In this way you can use mathematics, pictures and animations in your tooltips. The resulting PDF file can be used also with free Adobe Reader.

The tooltips are activated by clicking the active area on the screen and deactivated after closing page or by moving mouse outside the link. You can try the links [here](#) (Einstein's formula) and also [here](#) (animation – numbers from 1 to 6). You have to use the free Adobe Reader or nonfree Adobe Acrobat to see the effect (xpdf, evince and others fail to work with JavaScripts). For more examples how the presentation may look like see the `example.pdf` and `example-min.pdf` files in the `examples` subdirectory.

The buttons are created using `eforms.sty` which is a part of AcroTeX bundle.

2 Usage

2.1 The file with tooltips

The file with tooltips is an ordinary pdf file, one tooltip per page, tooltips should be in the top right corner at the page, in a colored box and the rest of the page should be transparent. If you consider to use `movetips` option (see below), then every page should have the dimensions equal to the dimensions of the colored box with tooltip³. We also provide simple cross referencing mechanism to refer to the tooltips. If the pdf file is created by L^AT_EX, you can define keywords to refer to the pages using `\keytip` command. Sim-

`\keytip`

*This document corresponds to `fancytooltips` v1.3a, dated 2007/07/28.

¹not free ps2pdf

²not free Adobe Reader.

³Look at the files `tooltipy.tex` and `tooltipy.pdf` from `examples` subdirectory for a simple example how to meet this condition under pdfL^AT_EX

ply put `\usepackage[createtips]{fancytooltips}` into preamble and write `\keytip{<foo>}` in document. This writes information about keyword `<foo>` and the pagenumber into file `fancytips.tex`.

2.2 The file with presentation – pdf \LaTeX users

In the file with presentation, the user is responsible

- input either `color` or `xcolor` package in the preamble
- \LaTeX the file two times (we write some macros into `aux` file).

This is not comfortable for the user, but everybody uses different set of packages and from this reason, this part is left to the user. (And among others, the `color` or `xcolor` package is probably inputted by the package which is used to build the presentation.)

filename option To input the tooltips from file `<foo.pdf>` call the package with **filename** option: `\usepackage[filename=foo]{fancytooltips}`.

movetips option By default, tooltip appears in the top right corner of the page (use View–PageLayout–Single Page in your Adobe Reader, please). If the option **movetips** is used, then tooltip appears close to the mouse pointer. More precisely, tooltip appears with left down corner at the mouse position, if there is enough place. If not, tooltip appears with right down corner at the mouse position. Finally, the tooltip is shifted down to fit the page, if necessary⁴.

\tooltip The user can put the tooltip into her or his presentation using the command `\tooltip{<stuff>}{<keyword-or-pagenumber>}` where `<stuff>` is the printed text in `<tooltipcolor>` color and `<keyword-or-pagenumber>` is either the pagenumber of the tooltip in the external file or the keyword defined by `\keytip` command. The printed text `<stuff>` is followed by `\TooltipExtratext` command. The default value is small blue soap in a box with zero dimensions, as you have seen in the second paragraph of this documentation. There is a package option **noextratext** which defines `\TooltipExtratext` to be empty.

noextratext option **\tooltipanim** The user can put a series (animation) of tooltips into the presentation by using `\tooltipanim{<stuff>}{<start>}{<end>}` command, where `<start>` and `<end>` are keywords defined by `\keytip` command or page numbers. The delay between two frames is `\delayinterval` milliseconds. The default value is 200, you can change it by command `\def\delayinterval{100}`.

\delayinterval The file `example.tex` from `exmaples` subdirectory shows, how to redefine these macros to gain different behavior, see the demo file `example.pdf`.

2.3 Changes for dvips users

pages option dvips users have to specify option **dvips** in **fancytips** package. They have to use also a **pages** option with the number of pages in the PDF file with tooltips. You

⁴This option works in this way if every page of the file with tooltips has dimensions of the box with tooltip. See the `examples` subdirectory.

have to call the package by something like this:

```
\usepackage[dvips,filename=tooltips,pages=27]{fancytooltips}
```

You have to `latex` (two times) and `dvips` your file first. This produces `filename.ps` and `Tooltipsdljs.fdf` files. Distill the pdf file into `filename.pdf` and open this file by Adobe Acrobat - this imports macros from `Tooltipsdljs.fdf` file. In Acrobat's JavaScript console (`Ctrl+J`) run (`Ctrl+Enter`) the command `ImportTooltips()`; which is defined for the document and it creates invisible buttons on the first page, imports icons (the file with icons specified as `<filename>` parameter when loading `fancytooltips` must be in working directory) and returns 1. Then save the file under another name.

3 Known problems

The package works only with the last `eforms.sty`, version 2006/10/03 v1.0a. You can download this version from www.arotex.net site. The version on CTAN and in MikTeX repositories is old and this package does not work with this old version.

4 Implementation

```
1 <*package>
2 \RequirePackage{everyshi}
3 \RequirePackage{graphicx}
4 \RequirePackage{xkeyval}
5 \RequirePackage{eso-pic}
6
7 \newif\ifcreatetips\createtipsfalse
8 \DeclareOptionX{createtips}{\createtipstrue}
9
10 \newif\ifTooltip@usepdftex\Tooltip@usepdftexttrue
11 \DeclareOptionX{dvips}{\Tooltip@usepdftextfalse}
12
13 \newif\ifextratext\extratexttrue
14 \DeclareOptionX{noextratext}{\extratextfalse}
15
16 \newif\ifmovetips\movetipsfalse
17 \DeclareOptionX{movetips}{\movetipstrue}
18
19 \DeclareOptionX{filename}{\xdef\TooltipFilename{#1}}
20 \DeclareOptionX{pages}{\xdef\TooltipPages{#1}}
21
22 \ProcessOptionsX
23
24 \ifx\TooltipFilename\undefined
25 \PackageWarning{fancytooltips}{** The filename with tooltips is not given. **}
26 \fi
27
28 \ifTooltip@usepdftex
```

```

29 \RequirePackage[pdftex]{eforms}
30 \def\TooltipExtratext{\hbox to 0 pt{\smash
31   {\raisebox{0.5em}{\includegraphics[width=0.7em]{%
32     {fancytipmark.pdf}}}\hss}}
33 \else
34 \RequirePackage[dvips]{eforms}
35 \def\TooltipExtratext{\hbox to 0 pt{\smash
36   {\raisebox{0.5em}{\includegraphics[width=0.7em]{%
37     {fancytipmark.eps}}}\hss}}
38 \fi%\ifTooltip@usepdftex
39 \ifextratext\else\let\TooltipExtratext\relax\fi
40
41 \ifcreatetips

```

This part (three lines) is processed if the option `createtips` is used. In the opposite case we process the second part, up to the end of the package.

```

42 \newwrite\tipfile
43 \immediate\openout\tipfile fancytips.tex
44 \def\keytip#1{\write\tipfile{\string\tooltipname{#1}{\arabic{page}}}}
45 \else

```

This part is processed if the option `createtips` is not used. We define macros which put the hidden button with the name `ikona.n` in the background of the page `n`, if one of the commands `\tooltip` or `\tooltipan` has been used on this page. Javascripts defined by `\tooltip` and `\tooltipan` commands then unhide this button and show the corresponding picture.

```

46
47 \newdimen\buttontipwidth
48 \newdimen\buttontipheight
49 \AtBeginDocument{
50 \buttontipwidth=\paperwidth
51 \buttontipheight=\paperheight
52 }
53
54 \ifTooltip@usepdftex
55 \def\frametip@{%
56   \pdfstartlink user{%
57     /Subtype /Widget
58     /F 6
59     /T (ikona.\thepage)
60     /FT /Btn
61     /Ff 65536
62     /H /N
63     /BS << /W 1 /S /S >>
64     /MK << /TP 1 /IF <</A[1.0 1.0]/SW /B>> >>
65   }%
66   \vbox to \buttontipheight {\vss\hbox to \buttontipwidth{\hss}\pdfendlink}
67 \else

```

For dvips users we use the macros from `eqxerquiz.sty` package.

```

68 \def\everyeqIcon#1{\def\every@eqIcon{#1}}

```

```

69 \def\every@eqIcon{}
70 \newcommand\eqIconFTT[4] []
71 {%
72 \push@@Button{#1}{#2}{#3}{#4}{-}{\eq@setButtonProps\eq@Button@driver}%
73 {\eqIconDefaults\every@ButtonField\every@eqIcon}%
74 }
75 \def\eqIconDefaults
76 {%
77 \rawPDF{-}\S{-}\mkIns{/TP 1 /IF<</A[1.0 1.0]/SW/B>>}\R{0}
78 \CA{-}\RC{-}\AC{-}\BC{-}\BG{-}\H{B}
79 \textColor{0 g}\Ff{\FfReadOnly}
80 }
81 \def\frametip@{\eqIconFTT[\BC{-}\BG{-}\F{\FHHidden}]}%
82 {ikona.\thepage}{\paperwidth}{\paperheight}}%
83 \fi%\ifTooltip@usepdftex
84
85 \def\frametip{%
86 \expandafter\ifx \csname TooltipPage\thepage\endcsname\relax
87 \else
88 \setbox0=\hbox{\frametip@}%
89 \hbox{\raise \dp0 \box0}
90 \fi}%
91 \AddToShipoutPicture{\hbox to 0 pt{\frametip\hss}}

```

In the macros `\tooltip` and `\tooltipanim` we print the text into box with zero dimensions and then we build a button which covers this text and has an associated JavaScript action. The important part is the `\PushButton` macro. You can adjust these macros or write similar macros which do what you need. For some examples see the file `example.tex` from the examples directory.

```
