# myfilist

# List Infos on just the Files You Want to Know About\*

Uwe Lück<sup>†</sup>

March 18, 2012

#### Abstract

myfilist addresses lazy file versions management, when you move your package or chapter files through various computers and various directories and after a while wonder where the most recent versions are.

Like Paul Ebermann's dateiliste, myfilist varies LATEX's \listfiles for listing file (especially version) informations. Differences to dateiliste and LATEX are:

- 1. You choose the files (and their order) to be listed;
- 2. indeed: this has very little to do with files used in typesetting some document;
- 3. output is just screen, .log, or a .txt-type file that you choose.

The code of this package was ready in spring 2008; in spring 2010 I presented it as a kind of study on improving nicetext's<sup>2</sup> txt-to-LATEX processing after nicetext v0.4 (aim was to do this without modifying the documented file, yet I did not obey this ruly strictly here). The new idea is adding wiki.sty's "environments" feature to makedoc and niceverb's "auto mode" in order to interprete txt comment indents in the package file, while wiki.sty's font switching still is not compatible with niceverb's. Easy script commands for achieving this are still missing (sorry; see the code in myfilist.tex that achieved the present formatting.)

<sup>\*</sup>This file describes version v0.3a of myfilist.sty as of 2011/01/30.

## 1 Installing

The file myfilist.sty is provided ready, installation only requires putting it somewhere where T<sub>E</sub>X finds it (which may need updating the filename data base).<sup>3</sup>

### 2 File Info Header

```

3 USAGE 3

### 3 Usage

Write a script file like gather.tex which you should have received together with myfilist.sty. We use  $\LaTeX$  (required!), yet (in general) not for typesetting a document, therefore the script file needn't contain \documentclass. myfilist.sty is loaded by

### \RequirePackage{myfilist}

instead of \usepackage{myfilist}. Usually you don't want to have myfilist.sty in the list, so type

#### \EmptyFileList

next; or type it after some additional \RequirePackage... for packages you want to use but not list.

Next list the names of the files whose informations you want to get as arguments of

#### \ReadFileInfos or \ReadPackageInfos or \ReadClassInfo

With the latter two, you can omit ".sty" or ".cls" as with \usepackage and \documentclass. With the first one, the file name extension ".tex" may be omitted. The two first commands accept lists with commas as separators almost like with \usepackage (currently we must use "%" to hide a line break in the script, and there must be no spaces in the list).—For more details on these commands, please see readprov.pdf.

The list of files is actually printed in the transcript .log and on screen on

#### \ListInfos

The list can additionally be written into a plain text file,

```
\ListInfos[filelist.txt]
```

as an example; i.e., you can use the brackets to tell which file is to contain your list of files. The file informations appear in the order of their names in your script file.

 $\ListInfos$  concludes, ends the job, anything following in the script file will be ignored.—All of this requires that you run gather.tex or your other script file, about as

#### latex gather

To list files that were loaded earlier in a different order, list them in an *optional* argument of **\EmptyFileList**, e.g.,

```
\EmptyFileList[myfilist.sty,readprov.sty]
```

**Note:** myfilist.sty (in its present state) is unable to list files that don't contain \ProvidesPackage, \ProvidesClass, or \ProvidesFile. myfilist.sty "loads"

files to extract version informations, but quits them as soon as it has found one of these IATEX  $2\varepsilon$  commands.

## 4 Implementation

```
\NeedsTeXFormat{LaTeX2e}[1994/12/01] %% \newcommand* etc.
     \ProvidesPackage{myfilist}
24
^{25}
                       [\filedate\space v\fileversion \space
                        \string\listfiles\space-- mine only (UL)]
  \ReadFileInfos, \ReadPackageInfos, and \ReadClassInfo are imple-
 mented in readprov.sty:
     \RequirePackage{readprov}[2010/11/26]
  \label{lem:lemptyFileList} $$\operatorname{EmptyFileList}[\langle read\text{-}again\text{-}files \rangle]$$
     \newcommand{\EmptyFileList}[1][]{%
       \let\@filelist\@gobble
       \ensuremath{\texttt{Qfor}\ensurema:=\#1\do{\%}}
30
          \global \expandafter \let \csname ver@\@tempa\endcsname \relax}}
31
  \ListInfos[\langle external \cdot output \cdot file \rangle]
     \newcommand*{\ListInfos}[1][]{%
32
       \ifx$#1$\@dofilelist\else
33
          \newwrite\file@of@filelist
34
          \immediate\openout\file@of@filelist=#1\relax
          \def\typeout##1{%
36
            \read@@typeout{##1}%
37
            \immediate\write\file@of@filelist{##1}}%
38
          \@dofilelist
39
         %% made at:
40
          \@tempcnta\time
                                 \@tempcntb\@tempcnta
42
          \divide\@tempcnta 60 \count@\@tempcnta
43
          \multiply\count@ 60 \advance\@tempcntb -\count@
44
         \typeout{ List made at
            \the\year/\two@digits{\the\month}/\two@digits{\the\day},
45
            \two@digits{\the\@tempcnta}:\two@digits{\the\@tempcntb}^^J
46
            from script file \jobname.tex^^J}%% TODO ''.tex''!? 2008/03/19
47
          \immediate\closeout\file@of@filelist
       \fi
49
       \stop}
50
       \%\% <- TODO how to suppress first empty line? 2008/03/16
51
       %% -> TODO more general style of output file 2008/03/19
52
     \let\read@@typeout\typeout
53
     \listfiles
54
55
56
     \endinput
57
```

5 EXAMPLE 5

## 5 Example

gather.tex for the present bundle has been as follows (added development versions of fifinddo.sty etc.):

```
\RequirePackage{myfilist}
\ProvidesFile{gather.tex}[2012/03/18 collect file infos]
\EmptyFileList[readprov.sty,myfilist.sty]
\ReadPackageInfos{readprov,myfilist}
\ReadFileInfos{readprov,myfilist,README.tex}%%,makedoc.cfg}
% \ReadPackageInfos{fifinddo,makedoc,niceverb}
\ReadFileInfos{gather}
\ListInfos[CONTENTs.txt]
```
