The fixdif Package

Zhang Tingxuan

2022/8/11 Version 1.4*

Abstract

The fixdif package redefines the \d command in LATEX and provides an interface to define commands for differential operators.

The package is compatible with pdfTeX, XeTeX and LuaTeX. Furthermore, the package is compatible with unicode-math package in XeTeX and LuaTeX.

1 The background

It's usually recommended that one should reserve a small skip between the differential operator and the expression before it¹. Take the following cases as an example:

$$f(x)dx$$
 and $f(x)dx$.

We usually consider that the example on the right side is better than the one on the left side. The little skip between f(x) and dx can be regarded as a symbol of the product of f(x) and dx.

So some users prefer to define a macro like this:

This macro works well in "display math" and "text math", but we still face the following three problems:

- 1. The skip before "d" would still be reserved in "text fraction", which is regarded bad. For example, $d y \ x \ produces dy/dx$;
- 2. This \d command cannot be used out of math mode. In another word, \d{o} would not produce "o" in text;
- 3. The skip between "d" and the expression before it can be regarded as a product operator. A product operator is definitely a binary operator.

Take \cdot (·) as an example. A binary operator reserves small skips before and after itself when in "display math" or "text math" such as $x \cdot y$, but the skips will disappear in "script math" or "script script math" such as $a^{x \cdot y}$. Thus the small skip should also disappear in script, but $a^{f(x)}dx$ still produces $a^{f(x)}dx$ but not $a^{f(x)}dx$.

To solve these problems, you can try this package.

¹See https://tex.stackexchange.com/questions/14821/whats-the-proper-way-to-typese t-a-differential-operator.

2 Introduction

To load this package, write

\usepackage{fixdif}

in the preamble. In your document,

 $[f(x)\d x,\quad x^{\d x},\quad x^{\d x},\quad x^{\d x}.]$

will produce

$$f(x) dx$$
, $\frac{dy}{dx}$, dy/dx , a^{ydx} .

2.1 When using unicode-math

If you are using unicode-math package with X_{\mathbb{T}}EX/LuaT_{\mathbb{E}}X in your document, you must pay attention to the following items:

- If you want to use amsmath package, make sure that the unicode-math package is loaded *after* amsmath.
- You had better specify the math font through the \setmathfont command provided by unicode-math in order to avoid bad skip in text fraction like dy/dx.
- Load the fixdif package after unicode-math.

Therefore the correct order is

\usepackage{amsmath}
\usepackage{unicode-math}
\setmathfont{...}[...]
\usepackage{fixdif}

2.2 When using hyperref

If you want to use the hyperref package simultaneously, remember to load hyperref before the fixdif package, otherwise the hyperref package will cause conflicts.

2.3 Basic commands and package options

\d The fixdif package provides a \d command for the differential operator "d" in math mode. When in text, \d behaves just like the old \d command in LATEX or plain TEX as an accent command. For example,

d x and d x

will produce "dx and x".

Set the font of \d There are two basic package options to control the \d 's style in math mode — rm and normal. The default option is rm, in which case f(x) d x produces f(x) dx. If you chose the normal option, for example

\usepackage[normal]{fixdif}

 $f(x) \ x$ would produces f(x) dx.

 \rcsetdfont

Besides the previous two optional fonts, you can reset the font of differential operator "d" through \resetdfont command in preamble:

\resetdfont{\mathsf}

then \d x will produce dx.

\partial Control the behavior of \partial In default, \partial will also be regarded as a differential operator in this package. If you don't like this default setting, you can use the nopartial option:

\usepackage[nopartial]{fixdif}

If you use the default setting, \partialnondif yields the ordinary symbol ∂ .

3 Define commands for differential operators

Attention! The commands in this section can be used in preamble only!

3.1 Define commands with a single command name

 $\left(\left(cmd \right) \right) \left(\left(csname \right) \right)$

(preamble only)

The **\letdif** command has two arguments — the first is the newly-defined command and the second is the control sequence *name* of a math character, that is, a command without its backslash. For example,

\letdif{\vr}{delta}

then \vr will produce a δ (\delta) with automatic skip before it.

Through the **\letdif** command, we can redefine a math character command by its name. For example,

\letdif{\delta}{delta}

then \delta itself will be a differential operator.

The second argument $\langle csname \rangle$ of $\ensuremath{\mbox{\mbox{letdif}}}$ command can be used repeatedly. If you want to get the ordinary symbol of $\langle csname \rangle$, you can input $\ensuremath{\mbox{\mbox{\mbox{mand}}}}$ in math mode. For example, in default, $\ensuremath{\mbox{\mbox{\mbox{mand}}}}$

the old partial symbol " ∂ ".

```
\left(\frac{d}{dt} \cdot \left(\frac{d}{dt} \cdot \left(\frac{d}{dt}\right)\right)\right) (preamble only)
```

This command is basically the same as **\letdif**, but this command will patch a correction after the differential operator. This is very useful when a math font is setted through unicode-math package. For example,

```
\usepackage{unicode-math}
\setmathfont{TeX Gyre Termes Math}
\usepackage{fixdif}
\letdif{\vr}{updelta}
```

this will cause bad negative skip after \vr, but if you change the last line into

```
\letdif*{\vr}{updelta}
```

you will get the result correct.

3.2 Define commands with multi commands or a string

The first argument of these commands is the newly-defined command; and the second argument should contain *more than one* tokens. For example, if you have loaded the xcolor package, you can use the following line:

Then you get the \redsfd as a differential operator. Take another example,

```
\left\{D}{\mathbf{D}}\right\}
```

Then you get \D for an uppercase upright "D" as a differential operator.

If your second argument contains only one command like \Delta, it's recommended to use \letdif or \letdif* instead.

\newdif and \newdif* will check whether $\langle cmd \rangle$ has been defined already. If so, an error message will be given.

These two commands are basically the same as \mbox{newdif} and $\mbox{newdif*}$. The only difference is that $\mbox{renewdif}$ and $\mbox{renewdif*}$ will check whether $\langle cmd \rangle$ has not been defined yet. If so, an error message will be given.

4 Using differential operators temporarily

These two commands can be used in math mode only, more specifically, after $\$ begin{document}. For example, $x\$ mathdif{\Delta}\psi\$ will get $x\$ $\Delta\psi$.

5 Examples

This section shows how to use this package properly in your document.

Take the two examples below:

```
\letdif{\Delta}{Delta} % Example 1, in preamble
\letdif{\nabla}{nabla} % Example 2, in preamble
```

Actually, the second example is more reasonable. Sometimes, we take " Δ " as laplacian (equivalent to ∇^2), while " Δ " can also be regarded as a variable or function at some other times. Consequently, it's better to save a different command for " Δ " as laplacian while reserve \Delta as a command for an ordinary math symbol " Δ ". However, in the vast majority of cases, " ∇ " is regarded as nabla operator so there is no need to save a different command for " ∇ ". Then we can correct the code above:

```
\letdif{\laplacian}{Delta} % Example 1, corrected, in preamble
```

With the xparse package, we can define the command in another method:

```
\letdif{\nabla}{nabla}
\DeclareDocumentCommand{ \laplacian }{ s }{
  \IfBooleanTF{#1}{\mathdif{\Delta}}{\nabla^2}
}
```

Then \laplacian produces ∇^2 and \laplacian* produces Δ .

Dealing with "+" and "-" If you input -d x, you'll get "-d x" in your document. However, if you think "-d x" is better, you can input -d x. The "d x" in a *group* will be regarded *ordinary* but not *inner* so that the small skip will disappear. Maybe "-d x" is just okay.

6 The source code

```
1 (*package)
```

Check the T_EX format and provides the package name.

```
2 \NeedsTeXFormat{LaTeX2e}
```

^{3 \}ProvidesPackage{fixdif}[2022/8/11 Interface for defining differential operators.]

6.1 Control the skip between slashes and differential operator

Change the math code of slash (/) and backslash (\setminus) so that the skip between slashes and differential operators can be ignored.

4 \@ifpackageloaded{unicode-math}{

If the unicode-math package has been loaded, use the X_HT_EX/LuaT_EX primitive \Umathcode to change the type of slashes. The numeral "4" stands for "open".

```
5 \Umathcode`\/="4 "0 "002F
6 \Umathcode"2044="4 "0 "2044
7 \Umathcode"2215="4 "0 "2215
8 \Umathcode"2F98="4 "0 "2F98
9 \Umathcode`\\="4 "0 "005C
10 \Umathcode"2216="4 "0 "2216
11 \Umathcode"29F5="4 "0 "29F5
12 \Umathcode"29F9="4 "0 "29F9
13 }{
```

If the unicode-math package has not been loaded, use the TEX primitive \mathcode to change the type of slashes. The \backslash needs to be redefined through \delimiter primitive too.

```
14 \mathcode`\/="413D
15 \mathcode`\\="426E % \backslash
16 \def\backslash{\delimiter"426E30F\relax}
17 }
```

6.2 Patch the skips around the differential operator

\mup@tch The following \mup@tch patches the skip after the differential operator.

```
18 \end{mup@tch{\mathbb{\mbox{\mbox{$\mbox{\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{}\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{}\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{}\box{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{
```

The \s@beforep@tch patches the commands with star (\letdif*, etc).

19 \def\s@beforep@tch{\mathchoice{}{}{\mbox{}}}

6.3 Declare the package options

Declare the options of the package and execute them.

```
20 \DeclareOption{rm}{\@ifpackageloaded{unicode-math}
21     {\def\@ddif{\symrm{d}}}{\def\@ddif{\mathrm{d}}}}
22 \DeclareOption{normal}{\def\@ddif{d}}
23 \DeclareOption{partial}{\def\fixdif@partial@bool{1}}
24 \DeclareOption{nopartial}{\def\fixdif@partial@bool{0}}
25 \ExecuteOptions{rm,partial}
26 \ProcessOptions\relax
```

```
Control the behavior of \partial.
                           27 \ifnum\fixdif@partial@bool=1
                                  \AtEndOfPackage{\letdif{\partial}{partial}}
                           29 \fi
\resetdfont Define the \resetdfont command.
                           30 \gdef\resetdfont#1{\let\@@dif\relax%
                           31 \def\@@dif{#1{d}}}
                           6.4 Deal with the \d command
             \@dif \@dif is the differential operator produced by \d in math mode. Here we prefer
                            \mathinner to \mathbin to make the skip.
                           32 \def\@dif{\mathinner{\@@dif}\mup@tch}
     \d@accent Restore the \d command in text by \d@accent with the \let primitive.
                           33 \let\d@accent\d
                    \d Redefine the \d command. In text, we need to expand the stuffs after \d
                           34 \ensuremath{\mbox{\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$\mbox{$
                           6.5 User's interface for defining new differential operators
         \letdif Define the \letdif and \letdif* command. The internal version of \letdif is
      \letdif* \@letdif, of \letdif* is \s@letdif.
                           35 \def\@letdif#1#2{\AtBeginDocument{%
                           #1 is the final command; #2 is the "control sequence name" of #1's initial definition.
                           Here we create a command (\csname#2nonfif\endcsname) to restore #2.
                                     \ifcsname #2nondif\endcsname\else%
                                     \expandafter\let\csname #2nondif\expandafter\endcsname
                                         \csname #2\endcsname%
                           38
