Chapter 1

Package description

In this chapter a short introduction of the package will be given. The package has been written in order for me to learn more about LaTeX and TeX. I have no idea if this package is written in a good way. Thus, if anyone reads and tries *FancyChapters* I would appreciate any feedback, good or bad. The reason is that it will help me gain insight in writing macros.

In any publication it is important to remember that consistency plays a important role. That is, with this package one can change the appearance of each chapter in the publication. However, this is not desirable so don't forget modesty and consistency.

1.1 Basic use and requirements

The package is invoked by writing the following in the preamble of your document

`\usepackage`[*style*]{*fancychapters*}

If the option, *style*, is omitted then the default definition of chapter is used. There are six predefined chapter styles, namely *Sonny, Lenny, Glenn, Conny, Rejne* and *Bjarne*. The names corresponds to Swedish given names, almost surely (a.e.) like IKEA[1]. Each such style has a default configuration and if that configuration is sufficient, then this is all that is needed.

The package does not rely on any other package. However, for the style `Lenny` a postscript font is default, but this font can easily be changed. I encourage the use of the default postscript font since it is scalable in a truly huge manner, which makes *Lenny* nice.
