

Documented Code For glossaries v4.43

2019-09-28

This is the documented code for the `glossaries` package. This bundle comes with the following documentation:

`glossariesbegin.pdf` If you are a complete beginner, start with “The `glossaries` package: a guide for beginners”.

`glossary2glossaries.pdf` If you are moving over from the obsolete `glossary` package, read “Upgrading from the `glossary` package to the `glossaries` package”.

`glossaries-user.pdf` For the main user guide, read “`glossaries.sty` v4.43: $\text{\LaTeX}2\text{e}$ Package to Assist Generating Glossaries”.

`mfirstuc-manual.pdf` The commands provided by the `mfistuc` package are briefly described in “`mfistuc.sty`: uppercasing first letter”.

`glossaries-code.pdf` This document is for advanced users wishing to know more about the inner workings of the `glossaries` package.

INSTALL Installation instructions.

CHANGES Change log.

README Package summary.

The user level commands described in the user manual (`glossaries-user.pdf`) may be considered “future-proof”. Even if they become deprecated, they should still work for old documents (although they may not work in a document that also contains new commands introduced since the old commands were deprecated, and you may need to specify a compatibility mode).

The internal commands in *this* document that aren’t documented in the *user manual* should not be considered future-proof and are liable to change. If you want a new user level command, you can post a feature request at <http://www.dickimaw-books.com/feature-request.html>. If you are a package writer wanting to integrate your package with `glossaries`, it’s better to request a new user level command than to hack these internals.

1 Main Package Code

1.1 Package Definition

This package requires $\text{\LaTeX} 2\epsilon$.

```
1 \NeedsTeXFormat{LaTeX2e}
2 \ProvidesPackage{glossaries}[2019/09/28 v4.43 (NLCT)]
```

Required packages:

```
3 \RequirePackage{ifthen}
4 \RequirePackage{xkeyval}[2006/11/18]
5 \RequirePackage{mfirstuc}
```

The textcase package has much better case changing handling, so use `\MakeTextUppercase` instead of `\MakeUppercase`

```
6 \RequirePackage{textcase}
7 \renewcommand*{\mffirstuc}{\MakeTextUppercase}%
8 \RequirePackage{xfor}
```

```
9 \RequirePackage{datatool-base}
```

Need to use `\new@ifnextchar` instead of `\@ifnextchar` in commands that have a final optional argument (such as `\gls`) so require `.` . Thanks to Morten Høgholm for suggesting this. (This has replaced using the `xspace` package.)

```
10 \RequirePackage{amsgen}
```

As from v3.0, now loading etoolbox (this is now redundant as datatool-base loads etoolbox):

```
11 \RequirePackage{etoolbox}
```

Check if doc has been loaded.

```
f@gls@docloaded
12 \newif\if@gls@docloaded
13 \@ifpackageloaded{doc}%
14 {%
15   \gls@docloadedtrue
16 }%
17 {%
18   \@ifclassloaded{nlectdoc}{\gls@docloadedtrue}{\gls@docloadedfalse}%
19 }
20 \if@gls@docloaded
```

\doc has been loaded, so some modifications need to be made to ensure both packages can work together. The amount of conflict has been reduced as from v4.11 and no longer involves patching internal commands.

\PrintChanges needs to use doc's version of theglossary, so save that.

```
org@theglossary
21 \let\glsorg@theglossary\theglossary

@endtheglossary
22 \let\glsorg@endtheglossary\endtheglossary

\PprintChanges Now redefine \PrintChanges so that it uses the original theglossary environment.
23 \let\glsorg@PrintChanges\PrintChanges
24 \renewcommand{\PrintChanges}{%
25   \begingroup
26   \let\theglossary\glsorg@theglossary
27   \let\endtheglossary\glsorg@endtheglossary
28   \glsorg@PrintChanges
29   \endgroup
30 }
```

End of doc stuff.

```
31 \fi
```

1.2 Package Options

debug Switch on debug mode. This will also cancel the nowarn option. This is now a choice key.

```

The default glossary style is stored in `\@glossary@default@style`. This is initialised to `list`. (The `list` style is defined in the accompanying package described in [section 1.19](#).) Note that the `list` style is incompatible with `classicthesis` so change the default to `index` if that package has been loaded.

```
y@default@style
```

```
139 \ifpackageloaded{classicthesis}
140 {\newcommand*{\@glossary@default@style}{index}}
141 {\newcommand*{\@glossary@default@style}{list}}
```

style The default glossary style can be changed using the `style` package option. The value can be the name of any defined glossary style. The glossary style is set at the beginning of the document, so you can still use the `style` key to set a style that is defined in another package. This package comes with some predefined styles that are defined in [section 1.19](#). This now uses `\def` instead of `\renewcommand` as `\@glossary@default@style` may have been set to `\relax`.

```
142 \define@key{glossaries.sty}{style}{%
143   \def\@glossary@default@style{\#1}}
144 }
```

Each `\DeclareOptionX` needs a corresponding `\DeclareOption` so that it can be passed as a document class option, so define a command that will implement both.

```
s@declareoption
```

```

145 \newcommand*{\@gls@declareoption}[2]{%
146   \DeclareOptionX{#1}{#2}%
147   \DeclareOption{#1}{#2}%

Each entry within a given glossary will have an associated number list. By default, this refers to the page numbers on which that entry has been used, but it can also refer to any counter used in the document (such as the section or equation counters). The default number list format displays the number list “as is”:

aryentrynumbers

```
149 \newcommand*{\glossaryentrynumbers}[1]{\#1\gls@save@numberlist{\#1}}
```

nonumberlist Note that the entire number list for a given entry will be passed to `\glossaryentrynumbers` so any font changes will also be applied to the delimiters. The `nonumberlist` package option suppresses the number lists (this simply redefines `\glossaryentrynumbers` to ignores its argument).

```

150 \@gls@declareoption{nonumberlist}{%
151   \renewcommand*{\glossaryentrynumbers}[1]{\gls@save@numberlist{\#1}}%
152 }

```

savenunderlist

Provide means to store the number list for entries.

```

153 \define@boolkey{glossaries.sty}[gls]{savenunderlist}[true]{}
154 \glssavenunderlistfalse

```

eautonumberlist

```
155 \newcommand*{\glo@seeautonumberlist}{}
```

eautonumberlist

Automatically activates number list for entries containing the `see` key.

```

156 \@gls@declareoption{seeautonumberlist}{%
157   \renewcommand*{\glo@seeautonumberlist}{%
158     \def\glo@prefix{\glsnextpages}%
159   }%
160 }

```

esclocations When using `makeindex` or `xindy`, the locations may need to be adjusted to ensure they’re in a format that’s allowed by the indexing application. This involves a bit of hackery and isn’t needed if the locations are all guaranteed to be in the correct form (or if the user is prepared to post-process the glossary file before calling the relevant indexing application) so `esclocations=false` will switch off this mechanism allowing for a faster and more stable approach.

```

161 \define@boolkey{glossaries.sty}[gls]{esclocations}[true]{}

\@gls@loadlong

```

`\@gls@loadsper` The package isn't loaded if isn't installed.

```

Keep track of the default glossary. This is initialised to the main glossary, but can be changed if for some reason you want to make a secondary glossary the main glossary. This affects any commands that can optionally take a glossary name as an argument (or as the value of the type key in a key-value list). This was mainly done so that `\loadglsentries` can temporarily change `\glsdefaulttype` while it loads a file containing new glossary entries (see [section 1.10](#)).

`\glsdefaulttype`

```

In v4.10, the redefinition of \glossary was removed since it was never intended as a user level command (and wasn't documented in the user manual), however it seems there are packages that have hacked the internal macros used by glossaries and no longer work with this redefinition removed, so it's been restored in v4.11 but is not used at all by glossaries. (This may be removed or moved to a compatibility mode in future.) As from v4.41, the use of \glossary now triggers a warning. The package option kernelglossredefs=nowarn may be used to remove the warning, but it's better not to use \glossary.

kernelglossredefs The glossaries package redefines the kernel commands \makeglossary and \glossary as a legacy action from the former glossary package. In hindsight that wasn't a good idea as it's possible that the glossaries package may need to be used with another class or package that needs these commands. Neither of these commands are documented in the main user manual and their use is not encouraged. The preferred commands are \makeglossaries (to open all associated glossary files) and \gls, \glstext etc or \glsadd for indexing.

```
1112 \onlypremakeg\setStyleFile
```

The name of the `makeindex` or `xindy` style file is given by `\istfilename`. This file is created by `\writeist` (which is used by `\makeglossaries`) so redefining this command will only have an effect if it is done *before* `\makeglossaries`. As from v1.17, use `\setStyleFile` instead of directly redefining `\istfilename`.

```
\istfilename

```
1118 \newcommand*{\gls@istfilebase}{\jobname}
```

The `makeglossaries` Perl script picks up this name from the auxiliary file. If the name ends with `.xdy` it calls `xindy` otherwise it calls `makeindex`. Since its not required by L^AT_EX, `\@istfilename` ignores its argument.

```
\@istfilename
```

```
1119 \newcommand*{\@istfilename}[1]{}

This command is the value of the `page_compositor` `makeindex` key. Again, any redefinition of this command must take place *before* `\writeist` otherwise it will have no effect. As from 1.17, use `\glsSetCompositor` instead of directly redefining `\glscompositor`.

(The page compositor is usually defined as a dash when using `makeindex`, but most of the standard counters used by L^AT_EX use a full stop as the compositor, which is why I have used it as the default.) If `xindy` is used `\glscompositor` only affects the `arabic-page-numbers` location class.

`\AlphaCompositor` This is only used by `xindy`. It specifies the compositor to use when location numbers are in the form `<letter><compositor><number>`. For example, if `\@glsAlphaCompositor` is set to “.” then it allows locations such as A.1 whereas if `\@glsAlphaCompositor` is set to “-” then it allows locations such as A-1.

`\glsnumberformat` The command `\glsnumberformat` indicates the default format for the page numbers in the glossary. (Note that this is not the same as `\glossaryentrynumbers`, but applies to individual numbers or groups of numbers within an entry’s associated number list.) If hyperlinks are defined, it will use `\glshypernumber`, otherwise it will simply display its argument “as is”.

A range of numbers within an entry's associated number list is delimited using `\delimR` (which corresponds to the `delim_r makeindex` keyword). The default is an en-dash.

```

The glossary preamble is given by `\glossarypreamble`. This will appear after the glossary sectioning command, and before the `theglossary` environment. It is designed to allow the user to add information pertaining to the glossary (e.g. “page numbers in italic indicate the primary definition”) therefore `\glossarypreamble` shouldn't be affected by the glossary style. (So if you define your own glossary style, don't have it change `\glossarypreamble`.) The preamble is empty by default. If you have multiple glossaries, and you want a different preamble for each glossary, you will need to use `\printglossary` for each glossary type, instead of `\printglossaries`, and redefine `\glossarypreamble` before each `\printglossary`.

The glossary postamble is given by `\glossarypostamble`. This is provided to allow the user to add something after the end of the `theglossary` environment (again, this shouldn't be affected by the glossary style). It is, of course, possible to simply add the text after

\printglossary, but if you only want the postamble to appear after the first glossary, but not after subsequent glossaries, you can do something like:

```
\renewcommand{\glossarypostamble}{For a complete list of terms

```

1318 \newcommand*@\glsaddxdyattribute[2]{%

```

`\forglsentries` To iterate through all entries in a given glossary use:

```
\forglsentries[<type>]{<cmd>}{<code>}

where `<type>` is the glossary label and `<cmd>` is a control sequence which will be set to the entry label in the current iteration.

```

`\forallglsentries` To iterate through all glossary entries over all glossaries listed in the optional argument (the default is all glossaries) use:

```
\forallglsentries[<glossary list>]{<cmd>}{<code>}

Within `\forallglsentries`, the current glossary type is given by `\@this@glo@`.

```

`\fglossaryexists` To check to see if a glossary exists use:

`\ifglossaryexists{<type>}{{<true-text>}}{<false-text>}`

where `<type>` is the glossary's label.

```

1590 \newcommand{\ifglossaryexists}[3]{%
1591   \ifcsundef{glotype@#1@out}{#3}{#2}%
1592 }

```

Since the label is used to form the name of control sequences, by default UTF8 etc characters can't be used in the label. A possible workaround is to use `\scantokens`, but commands such as `\glsentrytext` will no longer be usable in sectioning, caption etc commands. If the user really wants to be able to construct a label with UTF8 characters, allow them the means to do so (but on their own head be it, if they then use entries in `\section` etc). This can be done via:

```
\renewcommand*{\glsdetoklabel}[1]{\scantokens{#1\noexpand}}
```

(Note, don't use `\detokenize` or it will cause commands like `\glsaddall` to fail.) Since redefining `\glsdetoklabel` can cause things to go badly wrong, I'm not going to mention it in the main user guide. Only advanced users who know what they're doing ought to attempt it.

```

1594 \newcommand{\ifglsentryexists}[3]{%
1595   \ifcsundef{glo@{\glsdetoklabel{#1}@name}}{#3}{#2}%
1596 }

```

`\ifglsused` To determine if given glossary entry has been used in the document text yet use:

`\ifglsused{<label>}{{<true text>}}{<false text>}`

where `<label>` is the entry's label. If true it will do `<true text>` otherwise it will do `<false text>`.

1.6 Defining new glossaries

A comma-separated list of glossary names is stored in \glo@types. When a new glossary type is created, its identifying name is added to this list. This is used by commands that iterate through all glossaries (such as \makeglossaries and \printglossaries).

\glo@types

```
1748 \newcommand*\glo@types{}{}
```

ide@newglossary If the user removes the glossary package from their document, ensure the next run doesn't throw a load of undefined control sequence errors when the aux file is parsed.

```

\defglsentryfmt Allow different glossaries to have different display styles.

ls@forbidtexext As a security precaution, don't allow the user to specify a 'tex' extension for any of the glossary files. (Just in case a seriously confused novice user doesn't know what they're doing.) The argument must be a control sequence whose replacement text is the requested extension.

```

A new glossary type is defined using \newglossary. Syntax:

```
\newglossary[<log-ext>]{<name>}{<in-ext>}{<out-ext>} [<title>][<counter>]
```

where <log-ext> is the extension of the makeindex transcript file, <in-ext> is the extension of the glossary input file (read in by \printglossary and created by makeindex), <out-ext> is the extension of the glossary output file which is read in by makeindex (lines are written to this file by the \glossary command), <title> is the title of the glossary that is used in \glossarysection and <counter> is the default counter to be used by entries belonging to this glossary. The makerglossaries Perl script reads in the relevant extensions from the auxiliary file, and passes the appropriate file names and switches to makeindex.

`\@newglossary` is used to specify the file extensions for the `makeindex` input, output and transcript files. It is written to the auxiliary file by `\newglossary`. Since it is not used by L^AT_EX, `\@newglossary` simply ignores its arguments.

1.7 Defining new entries

New glossary entries are defined using `\newglossaryentry`. This command requires a label and a key-value list that defines the relevant information for that entry. The definition for these keys follows. Note that the name, description and symbol keys will be sanitized later, depending on the value of the package option `sanitize` (this means that if some of the keys haven't been defined, they can be constructed from the name and description key before they are sanitized).

- name** The name key indicates the name of the term being defined. This is how the term will appear in the glossary. The name key is required when defining a new glossary entry.

```
1855 \define@key{glossentry}{name}{%
1856 \def\@glo@name{\#1}%
1857 }
```

- description** The description key is usually only used in the glossary, but can be made to appear in the text by redefining `\glsentryfmt` or using `\defglsentryfmt`. The description key is required when defining a new glossary entry. If a long description is required, use `\longnewglossaryentry` instead of `\newglossaryentry`.

```
1858 \define@key{glossentry}{description}{%
1859 \def\@glo@desc{\#1}%
1860 }
```

scriptionplural

```
1861 \define@key{glossentry}{descriptionplural}{%
1862 \def\@glo@descplural{\#1}%
1863 }
```

- sort** The sort key needs to be sanitized here (the sort key is provided for `makeindex`'s benefit, not for use in the document). The sort key is optional when defining a new glossary entry. If omitted, the value is given by `<name> <description>`.

```
1864 \define@key{glossentry}{sort}{%
1865 \def\@glo@sort{\#1}}
```

- text** The text key determines how the term should appear when used in the document (i.e. outside of the glossary). If omitted, the value of the name key is used instead.

```
1866 \define@key{glossentry}{text}{%
1867 \def\@glo@text{\#1}%
1868 }
```

- plural** The plural key determines how the plural form of the term should be displayed in the document. If omitted, the plural is constructed by appending `\glspluralsuffix` to the value of the text key.

```
1869 \define@key{glossentry}{plural}{%
1870 \def\@glo@plural{\#1}%
1871 }
```

first The first key determines how the entry should be displayed in the document when it is first used. If omitted, it is taken to be the same as the value of the text key.

```
1872 \define@key{glossentry}{first}{%
1873 \def\@glo@first{\#1}%
1874 }
```

firstplural The firstplural key is used to set the plural form for first use, in the event that the plural is required the first time the term is used. If omitted, it is constructed by appending \glspluralsuffix to the value of the first key.

```
1875 \define@key{glossentry}{firstplural}{%
1876 \def\@glo@firstplural{\#1}%
1877 }
```

s@default@value

```
1878 \newcommand*{\@gls@default@value}{\relax}
```

symbol The symbol key is ignored by most of the predefined glossary styles, and defaults to \relax if omitted. It is provided for glossary styles that require an associated symbol, as well as a name and description. To make this value appear in the glossary, you need to redefine \glossentry. If you want this value to appear in the text when the term is used by commands like \gls, you will need to change \glsentryfmt (or use for \defglsentryfmt individual glossaries).

```
1879 \define@key{glossentry}{symbol}{%
1880 \def\@glo@symbol{\#1}%
1881 }
```

symbolplural

```
1882 \define@key{glossentry}{symbolplural}{%

type The type key specifies to which glossary this entry belongs. If omitted, the default glossary is used.

```
1885 \define@key{glossentry}{type}{%
1886 \def\@glo@type{\#1}}
```

counter The counter key specifies the name of the counter associated with this glossary entry:

```
1887 \define@key{glossentry}{counter}{%

```

```

1.8 Resetting and unsetting entry flags

Each glossary entry is assigned a conditional of the form `\ifglo@<label>\flag` which determines whether or not the entry has been used (see also `\ifglsused` defined below). These flags can be set and unset using the following macros, but first we need to know if we're in `amsmath`'s `align` environment's measuring pass.

`@ifnotmeasuring`

```
2710 \AtBeginDocument{%
2711   \@ifpackageloaded{amsmath}{%

2721 \newcommand*\gls@ifnotmeasuring[1]{#1}
```

`lspatchtabularx` Patch `\TX@trial` (as per David Carlisle's answer in <http://tex.stackexchange.com/a/94895>). This does nothing if `\TX@trial` hasn't been defined.

1.9 Keeping Track of How Many Times an Entry Has Been Unset

Version 4.14 introduced `\glsenableentrycount` that keeps track of how many times an entry is marked as used. The counter is reset back to zero when the first use flag is reset. Note that although the word “counter” is used here, it’s not an actual L^AT_EX counter or even an explicit T_EX count register but is just a macro. Any of the commands that use `\glsunset` or `\glslocalunset`, such as `\gls`, will automatically increment this value. Commands that don’t modify the first use flag (such as `\glistext` or `\glsentrytext`) don’t modify this value.

`try@defcounters` Define entry fields to keep track of how many times that entry has been marked as used.

```

2809 \newcommand*{\@newglossaryentry@defcounters}{%

1.10 Loading files containing glossary entries

Glossary entries can be defined in an external file. These external files can contain \newglossaryentry and \newacronym commands.¹

```
\loadglsentries[<type>]{<filename>}
```

This command will input the file using \input. The optional argument specifies to which glossary the entries should be assigned if they haven't used the type key. If the optional argument is not specified, the default glossary is used. Only those entries used in the document (via \glslink, \gls, \glspl and uppercase variants or \glsadd and \glsaddall will appear in the glossary). The mandatory argument is the filename (with or without .tex extension).

\loadglsentries

```
2954 \newcommand*{\loadglsentries}[2][\@gls@default]{%
2955   \let\@gls@default\glsdefaulttype
2956   \def\glsdefaulttype{\#1}\input{\#2}%

```

\loadglsentries can only be used in the preamble:

```
2959 \onlypreamble{\loadglsentries}
```

1.11 Using glossary entries in the text

Any term that has been defined using \newglossaryentry (or \newacronym) can be displayed in the text (i.e. outside of the glossary) using one of the commands defined in this section. Unless you use \glslink, the way the term appears in the text is determined by \glsdisplayfirst (if it is the first time the term has been used) or \glsdisplay (for subsequent use). Any formatting commands (such as \textbf is governed by \glstextformat. By default this just displays the link text "as is".

\glstextformat

```
2960 \newcommand*{\glstextformat}[1]{#1}
```

\glsentryfmt As from version 3.11a, the way in which an entry is displayed is now governed by \glsentryfmt. This doesn't take any arguments. The required information is set by commands like \gls. To

Links to glossary entries

The links to glossary entries all have a first optional argument that can be used to change the format and counter of the associated entry number. Except for `\glslink` and `\glsdisp`, the commands like `\gls` have a final optional argument that can be used to insert additional text in the link (this will usually be appended, but can be redefined using `\defglsentryfmt`). It goes against the L^AT_EX norm to have an optional argument after the mandatory arguments, but it makes more sense to write, say, `\gls{label}['s]` rather than, say, `\gls[append='s]{label}`. Since these control sequences are defined to include the final square bracket, spaces will be ignored after them. This is likely to lead to confusion as most users would not expect, say, `\gls{<label>}` to ignore following spaces, so `\new@ifnextchar` from the package is required.

The following keys can be used in the first optional argument. The counter key checks that the value is the name of a valid counter.

```
3305 \define@key{glslink}{counter}{%
3306   \ifcsundef{c@\#1}%
3307   {%
3308     \PackageError{glossaries}%
3309     {There is no counter called '#1'}%
3310     {%
3311       The counter key should have the name of a valid counter
3312       as its value%
3313     }%
3314   }%
3315   {%
3316     \def\@gls@counter{\#1}%
3317   }%
3318 }
```

The value of the format key should be the name of a command (without the initial backslash) that has a single mandatory argument which can be used to format the associated entry number.

```
3319 \define@key{glslink}{format}{%
3320   \def\@glsnumberformat{\#1}}
```

The hyper key is a boolean key, it can either have the value true or false, and indicates whether or not to make a hyperlink to the relevant glossary entry. If hyper is false, an entry will still be made in the glossary, but the given text won't be a hyperlink.

```
3321 \define@boolkey{glslink}{hyper}{true}{}%
```

Initialise hyper key.

```
3322 \ifdef{\hyperlink}{\KV@glslink@hypertrue}{\KV@glslink@hyperfalse}
```

The local key is a boolean key. If true this indicates that commands such as `\gls` should only do a local reset rather than a global one.

```
3323 \define@boolkey{glslink}{local}{true}{}%
```

The original `\glsifhyper` command isn't particularly useful as it makes more sense to check the actual hyperlink setting rather than testing whether the starred or unstarred version has been used. Therefore, as from version 4.08, `\glsifhyper` is deprecated in favour of

\glsifhyperon. In case there is a particular need to know whether the starred or unstarred version was used, provide a new command that determines whether the *-version, +-version or unmodified version was used.

```
\glslinkvar{\<unmodified case>}{\<star case>}{\<plus case>}
```

\glslinkvar Initialise to unmodified case.

```
3324 \newcommand*\glslinkvar[3]{#1}
```

\glsifhyper Now deprecated.

```

Syntax:

```
\glslink[\<options>]{\<label>}{\<text>}
```

Display *text* in the document, and add the entry information for *label* into the relevant glossary. The optional argument should be a key value list using the *glslink* keys defined above.

There is also a starred version:

```
\glslink*[\<options>]{\<label>}{\<text>}
```

which is equivalent to \glslink[hyper=false, *options*]{*label*}{*text*}

First determine which version is being used:

```
\glslink
3342 \newrobustcmd*\{\glslink\}{%
3343   \@gls@hyp@opt\@gls@@link
3344 }
```

\@gls@@link The main part of the business is in \@gls@link which shouldn't check if the term is defined as it's called by \gls etc which also perform that check.

Syntax:

`\gls[<options>]{<label>} [<insert text>]`

Link to glossary entry using singular form. The link text is taken from the value of the text or first keys used when the entry was defined.

The first optional argument is a key-value list, the same as `\glslink`, the mandatory argument is the entry label. After the mandatory argument, there is another optional argument to insert extra text in the link text (the location of the inserted text is governed by `\glsdisplay` and `\glsdisplayfirst`). As with `\glslink` there is a starred version which is the same as the unstarred version but with the `hyper` key set to `false`. (Additional options can also be specified in the first optional argument.)

First determine which version is being used:

```

\gls
3817 \newrobustcmd*\gls{\@gls@hyp@opt@gls}

```

Defined the un-starred form. Need to determine if there is a final optional argument

```

\@gls
3818 \newcommand*{\@gls}[2][]{%
3819   \new@ifnextchar[\@gls@{#1}{#2}]{\@gls@{#1}{#2}}[]%
3820 }

```

Get the entry name (as specified by the `name` key when the entry was defined). The argument is the label associated with the entry. Note that unless you used `name=false` in the `sanitize` package option you may get unexpected results if the `name` key contains any commands.

`\@Gls@entryname` This is a workaround in the event that the user defies the warning in the manual about not using `\Glsname` or `\Glsentryname` with acronyms. First the default behaviour:

```
4501 \newcommand*{\@Gls@entryname}[1]{%
4502  \@Gls@entry@field{#1}{name}%
4503 }
```

`\@Gls@acronymname` Now the behaviour when `\setacronymstyle` is used:

```
4504 \newcommand*{\@Gls@acronymname}[1]{%
4505  \ifglshaslong{#1}%
4506  {%
4507    \letcs{\glo@text}{\glsdetoklabel{#1}{name}}%
4508    \expandafter{\gls@getbody}\glo@text{}\@nil
4509    \expandafter{\ifx}\gls@body\glsentrylong\relax
4510    \expandafter{\Glsentrylong}\gls@rest
4511  \else
4512    \expandafter{\ifx}\gls@body\glsentryshort\relax
4513    \expandafter{\Glsentryshort}\gls@rest
4514  \else
4515    \expandafter{\ifx}\gls@body\acronymfont\relax
```

Temporarily make `\glsentryshort` behave like `\Glsentryshort`. (This is on the assumption that the argument of `\acronymfont` is `\glsentryshort{<label>}`, as that's the behaviour of the predefined acronym styles.) This is scoped to localise the effect of the assignment.

```

This key is only used by \glsaddall:
4716 \define@key{glossadd}{types}{\def\@glo@type{\#1}}

```

\glsadd[*options*]{*label*}

Add a term to the glossary without generating any link text. The optional argument indicates which counter to use, and how to format it (using a key-value list) the second argument is the entry label. Note that *options* only has two keys: counter and format (the types key will be ignored).

1.13 Creating associated files

The `\writeist` command creates the associated customized `.ist` `makeindex` style file. While defining this command, some characters have their catcodes temporarily changed to ensure they get written to the `.ist` file correctly. The `makeindex` actual character (usually `@`) is redefined to be a `?`, to allow internal commands to be written to the glossary file output file.

The special characters are stored in `\@gls@actualchar`, `\@gls@encapchar`, `\@gls@levelchar` and `\@gls@quotechar` to make them easier to use later, but don't change these values, because the characters are encoded in the command definitions that are used to escape the special characters (which means that the user no longer needs to worry about `makeindex` special characters).

The symbols and numbers label for group headings are hardwired into the `.ist` file as `glssymbols` and `glsnumbers`, the group titles can be translated (so that `\glssymbols{groupname}` replaces `glssymbols` and `\glsnumbers{groupname}` replaces `glsnumbers`) using the command `\glsgetgrouptitle` which is defined in `.`. This is done to prevent any problem characters in `\glssymbols{groupname}` and `\glsnumbers{groupname}` from breaking hyperlinks.

`@makeglossary` is an internal command that takes an argument indicating the glossary type. This command will create the glossary file required by `makeindex` for the given glossary type, using the extension supplied by the `<out-ext>` parameter used in `\newglossary` (and it will also activate the `\glossary` command, and create the customized `.ist` `makeindex` style file).

Note that you can't use `@makeglossary` for only some of the defined glossaries. You either need to have a `\makeglossary` for all glossaries or none (otherwise you will end up with a situation where TeX is trying to write to a non-existent file). The relevant glossary must be defined prior to using `@makeglossary`.

As from v4.10, the `\glossary` command isn't used by the `glossaries` package. Since the user isn't expected to use this command (as `glossaries` takes care of the particular format required for `makeindex/xindy`) there's no need for a user level command. Using a custom internal command prevents any conflict with other packages (and with the `\mark` mechanism).

The associated number should be stored in `\theglsentrycounter` before using `\gls@glossary`.

```
\gls@glossary
5534 \newcommand*{\gls@glossary}[1]{%
5535   \gls@glossary{#1}%
5536 }
```

```
\@gls@glossary {\gls@glossary{<type>}{<indexing info>}}
```

(In v4.10, `\@glossary` was redefined to `\@gls@glossary` to avoid conflict with other packages.) Initially define internal `\@gls@glossary` to ignore its argument. Indexing will be enabled when `\@gls@glossary` is redefined by `\@makeglossary`.

This command was originally defined to do `\@index{<indexing info>}` so that it behaved much like `\index`. The definition was then changed to use `\index` as memoir changes the definition of `\@index`. (Thanks to Dan Luecking for pointing this out.)

However, if normal indexing is enabled (for example with `\makeindex`) but no glossary lists are required (so `\@makeglossary` isn't used), then `\index` will cause a problem here. The `\@index` trick allows for special characters within `<indexing info>` (so you can do, for example, `\index{%@%}`), and the original design of `\@glossary` here was actually a legacy from the old `glossary` package. With the `glossaries` package, the indexing information supplied in the second argument is more constrained and just consists of the sort value (given by the `sort` key), the actual value (given by `\glossentry{<label>}` or `\subglossentry{<level>}{<label>}`), and the format. This means that there's no need to worry about special characters appearing in the second argument as they can't be in the label or sort value. (If they are in the sort value then the category code would've needed to be changed when the entry was defined or `\glspercentchar` would be needed with the sort sanitization switched off.) This means that it's safe to simply ignore the second argument.

@esc@wrglossary Write the glossary entry in the appropriate format. (Need to set `\@glsnumberformat` and `\@gls@counter` prior to use.) The argument is the entry's label. This is far more complicated with `xindy` than with other indexing methods. There are two necessary but conflicting requirements with `xindy`:

1. all backslashes in the location must be escaped;
2. `\c@page` can't be prematurely expanded.

(With `makeindex` there's the remote possibility that the page compositor is a `makeindex` special character, so that would also need to be escaped.)

For example, suppose `\thepage` is defined as

```
\renewcommand{\thepage}{\tally{page}}  
\newcommand{\tally}[1]{\tallynum{\expandafter\the\csname c@\#1\endcsname}}
```

where `\tallynum` is a robust command that takes a number as its argument. With all indexing methods other than `xindy`, a deferred write with `\thepage` as the location will expand to `\tallynum{\<n>}` where `\<n>` is the page number. Since the write is deferred, the page number is correct. (`makeindex` won't accept this location format, but `\makenoidxglossaries` and `bib2gls` are quite happy with it.) Unfortunately, this fails with `xindy` because `xindy` interprets this location as `tallynum{\<n>}` because `\t` represents a the character "t". The location must be written as `\tallynum{\<n>}`.

This means that the location `\tally{page}` must be expanded and then the backslashes must be doubled. Unfortunately `\c@page` mustn't be expanded until the deferred write is performed, so the location actually needs to be expanded to `\tallynum{\the\c@page}` but the backslashes in `\the\c@page` mustn't be escaped. All other backslashes must be escaped. (In this case, only the backslash in `\tallynum` but the location format may include other control sequences.) The code below works on the assumption that commands like `\tally` are defined in the form

```
\newcommand{\tally}[1]{\tallynum{\expandafter\the\csname c@\#1\endcsname}}
```

(note the use of `\expandafter` and `\name`) or in the form

```
\newcommand{\tally}[1]{\tallynum{\arabic{\#1}}}
```

In the second case, `\arabic` is one of the known commands that's temporarily adjusted to prevent `\c@page` from being prematurely expanded. In the first case, `\the` is temporarily modified (unless `\glswrallowprimitivemodsfalse`) to check if it's followed by `\c@page`. The `\expandafter` ensures that it is. If `\tally` is defined in another way that hides `\c@page` for example using `\the\value{\#1}` then the process fails.

With `makeindex`, `\tallynum` needs to expand to just the decimal number while writing the location to the glossary file, otherwise `makeindex` will reject it. This can be done by defining `\glstallypage` so that `\tally` can locally be set to `\arabic` while expansion is occurring. Again, `\c@page` must be protected from expansion until the deferred write occurs.

The expansion before the write occurs also allows the hyper prefix to be determined where `\theH<counter>` is defined in the form `<prefix>. \the<counter>`. It's possible (although again unlikely) that a `makeindex` character might occur in the prefix, which therefore needs escaping. The prefix is passed as the optional argument of `\setentrycounter` which is needed by commands like `\glshypernumber` to create a hyperlink for a given counter (like `\hyperpage` but for an arbitrary counter).

```
5630 \newcommand*{\@do@esc@wrgglossary}[1]{% please read documented code!

First a bit of hackery to prevent premature expansion of `\c@page`. Store original definitions (scoped):

5638   \let\gls@orgRoman@\Roman
```

Redefine:

```
5639   \ifgls@swallowprimitivemods

The redefinition of `\the` to use `\expandafter` solves the problem of `\the\csname c@<counter>\endcsname` but is only a partial solution to the problem of `\the\value`. With `\value`, `\c@page` is too deeply hidden and will be expanded too soon, but at least there won't be an error.

1.16 Displaying the glossary

An individual glossary is displayed in the text using \printglossary[*<key-val list>*]. If the type key is omitted, the default glossary is displayed. The optional argument can be used to specify an alternative glossary, and can also be used to set the style, title and entry in the table of contents. Available keys are defined below.

The `\printglossaries` command will do `\printglossary` for each glossary type that has been defined. It is better to use `\printglossaries` rather than individual `\printglossary` commands to ensure that you don't forget any new glossaries you may have created. It also makes it easier to chop and change the value of the acronym package option. However, if you want to list the glossaries in a different order, or if you want to set the title or table of contents entry, or if you want to use different glossary styles for each glossary, you will need to use `\printglossary` explicitly for each glossary type.

Within each glossary, the entries form distinct groups which are determined by the first character of the sort key. When using `makeindex`, there will be a maximum of 28 groups: symbols, numbers, and the 26 alphabetical groups A, ..., Z. If you use `xindy` the groups will depend on whatever alphabet is used. This is determined by the language or custom alphabets can be created in the `xindy` style file. The command `\glsgroupskip` specifies what to do between glossary groups. Glossary styles must redefine this command. (Note that `\glsgroupskip` only occurs between groups, not at the start or end of the glossary.)

```
\glsgroupskip
6463 \newcommand*\glsgroupskip{}
```

Each of the 28 glossary groups described above is preceded by a group heading. This is formatted by the command `\glsgroupheading` which takes one argument which is the *label* assigned to that group (not the title). The corresponding labels are: `glossymbols`, `glsnumbers`, A, ..., Z. Glossary styles must redefine this command. (In between groups, `\glsgroupheading` comes immediately after `\glsgroupskip`.)

```
\glsgroupheading
6464 \newcommand*\glsgroupheading[1]{}
```

It is possible to “trick” `makeindex` into treating entries as though they belong to the same group, even if the terms don’t start with the same letter, by modifying the sort key. For example, all entries belonging to one group could be defined so that the sort key starts with an `a`, while entries belonging to another group could be defined so that the sort key starts with a `b`, and so on. If you want each group to have a heading, you would then need to modify the translation control sequences `\glsgroupname` and `\glsgrouplabel` so that the label is translated into the required title (and vice-versa).

```
\glsgroupname{<label>}
```

This command produces the title for the glossary group whose label is given by `<label>`. By default, the group labelled `glssymbols` produces `\glssymbolsgroupname`, the group labelled `glsnumbers` produces `\glsnumbersgroupname` and all the other groups simply produce their label. As mentioned above, the group labels are: `glssymbols`, `glsnumbers`, `A`, ..., `Z`. If you want to redefine the group titles, you will need to redefine this command. Languages other than English may produce labels that are non-expandable, so we need to check for that otherwise it will create a “missing `\endcsname` inserted” error.

Glossary entries are encoded so that the second argument to `\glossaryentryfield` is always specified as `\glsnamefont{<name>}`. This allows the user to change the font used to display the name term without having to redefine `\glossaryentryfield`. The default uses the surrounding font, so in the list type styles (which place the name in the optional argument to `\item`) the name will appear in bold.

`\glsnamefont`

```
6554 \newcommand*{\glsnamefont}[1]{#1}
```

Each glossary entry has an associated number list (usually page numbers) that indicate where in the document the entry has been used. The format for these number lists can be changed using the `format` key in commands like `\glslink`. The default format is given by `\glshypernumber`. This takes a single argument which may be a single number, a number range or a number list. The number ranges are delimited with `\delimR`, the number lists are delimited with `\delimN`.

If the document doesn't have hyperlinks, the numbers can be displayed just as they are, but if the document supports hyperlinks, the numbers should link to the relevant location. This means extracting the individual numbers from the list or ranges. The package does this with the `\hyperpage` command, but this is encoded for comma and dash delimiters and only for the page counter, but this code needs to be more general. So I have adapted the code used in the package.

`\glshypernumber`

```
6555 \ifcsundef{hyperlink}{%
6556   {%

1.17 Acronyms

```
\oldacronym[<label>]{<abbrv>}{<long>}{<key-val list>}
```

This emulates the way the old package defined acronyms. It is equivalent to `\newacronym [<key-val list>] [<label>]{<abbrv>}{<long>}` and it additionally defines the command `\<label>` which is equivalent to `\gls{<label>}` (thus `<label>` must only contain alphabetical characters). If `<label>` is omitted, `<abbrv>` is used. This only emulates the syntax of the old package. The way the acronyms appear in the list of acronyms is determined by the definition of `\newacronym` and the glossary style.

Note that `\<label>` can't have an optional argument if the package is loaded. If hasn't been loaded then you can do `\<label>[<insert>]` but you can't do `\<label>[<key-val list>]`. For example if you define the acronym `svm`, then you can do `\svm['s]` but you can't do `\svm[format=textbf]`. If the package is loaded, `\svm['s]` will appear as `svm ['s]` which is unlikely to be the desired result. In this case, you will need to use `\gls` explicitly, e.g. `\gls{\svm}['s]`. Note that it is up to the user to load if desired.

```

```
\newacronym[<key-val list>][<label>]{<abbrev>}{<long>}
```

This is a quick way of defining acronyms, using `\newglossaryentry` with the appropriate values. It sets the glossary type to `\acronymtype` which will be `acronym` if the package option `acronym` has been used, otherwise it will be the default glossary. Since `\newacronym` merely calls `\newglossaryentry`, the acronym is treated like any other glossary entry.

If you prefer a different format, you can redefine `\newacronym` as required. The optional argument can be used to override any of the settings.

This is just a stub. It's redefined by commands like `\SetDefaultAcronymStyle`.

```
\newacronym
6637 \newcommand{\newacronym}[4][]{}
```

Set up some convenient short cuts. These need to be changed if \newacronym is changed (or if the description key is changed).

`\acrpluralsuffix` Plural suffix used by \newacronym. This just defaults to \glspluralsuffix but is changed to include \textup if the smallcaps option is used, so that the suffix doesn't appear in small caps as it doesn't look right. For example, ABCS looks as though the "s" is part of the acronym, but ABCs looks as though the "s" is a plural suffix. Since the entire text abcs is set in \textsc, \textup is need to cancel it out.

```
6638 \newcommand*{\acrpluralsuffix}{\glsacrpluralsuffix}

1.19 Predefined Glossary Styles

The glossaries bundle comes with some predefined glossary styles. These need to be loaded now for the style option to use them.

First, the glossary hyper-navigation commands need to be loaded.

```
7927 \RequirePackage{glossary-hypernav}
```

The styles that use list-like environments. These are not loaded if the nolist option is used:

```
7928 \@gls@loadlist
```

The styles that use the longtable environment. These are not loaded if the nolong package option is used.

```
7929 \@gls@loadlong
```

The styles that use the supertabular environment. These are not loaded if the nosuper package option is used or if the package isn't installed.

```
7930 \@gls@loadsupper
```

The tree-like styles. These are not loaded if the notree package option is used.

```
7931 \@gls@loadtree
```

The default glossary style is set according to the style package option, but can be overridden by \glossarystyle. The required style must be defined at this point.

```
7932 \ifx\@glossary@default@style\relax
```

```
7933 \else
```

```
7934   \setglossarystyle{\@glossary@default@style}

1.21 Compatibility with version 2.07 and below

In order to fix some bugs in v3.0, it was necessary to change the way information is written to the glo file, which also meant a change in the format of the Xindy style file. The compatibility option is meant for documents that use a customised Xindy style file with \noist. With the compatibility option, hopefully xindy will still be able to process the old document, but the bugs will remain. The issues in versions 2.07 and below:

- With xindy, the counter used by the entry was hard-coded into the Xindy style file. This meant that you couldn't use the counter to swap counters.
- With both xindy and makeindex, if used with hyperref and \theH<counter> was different to \thecounter, the link in the location number would be undefined.

```
8035 \csname ifglscompatible-2.07\endcsname
8036   \RequirePackage{glossaries-compatible-207}
8037 \fi
```

2 Prefix Support (glossaries-prefix Code)

This package provides a means of adding prefixes to your glossary entries. For example, you may want to use “`a \gls{<label>}`” on first use but use “`an \gls{<label>}`” on subsequent use.

```
8038 \NeedsTeXFormat{LaTeX2e}
8039 \ProvidesPackage{glossaries-prefix}[2019/09/28 v4.43 (NLCT)]
```

Pass all options to glossaries:

```
8040 \DeclareOption*{\PassOptionsToPackage{\CurrentOption}{glossaries}}
```

Process options:

```
8041 \ProcessOptions
```

Load glossaries:

```
8042 \RequirePackage{glossaries}
```

Add the new keys:

```
8043 \define@key{glossentry}{prefixfirst}{\def\@glo@entryprefixfirst{\#1}}%
8044 \define@key{glossentry}{prefixfirstplural}{\def\@glo@entryprefixfirstplural{\#1}}%
8045 \define@key{glossentry}{prefix}{\def\@glo@entryprefix{\#1}}%
8046 \define@key{glossentry}{prefixplural}{\def\@glo@entryprefixplural{\#1}}%
```

Add them to `\@gls@keymap`:

```
8047 \appto\@gls@keymap{,
8048   {prefixfirst}{prefixfirst},%
8049   {prefixfirstplural}{prefixfirstplural},%
8050   {prefix}{prefix},%
8051   {prefixplural}{prefixplural}%
8052 }
```

Set the default values:

```
8053 \appto\@newglossaryentryprehook{%
8054   \def\@glo@entryprefix{}%
8055   \def\@glo@entryprefixplural{}%
8056   \let\@glo@entryprefixfirst\@gls@default@value
8057   \let\@glo@entryprefixfirstplural\@gls@default@value
8058 }
```

Set the assignment code:

```
8059 \appto\@newglossaryentryposthook{%
8060   \gls@assign@field{}{\@glo@label}{prefix}{\@glo@entryprefix}%
8061   \gls@assign@field{}{\@glo@label}{prefixplural}{\@glo@entryprefixplural}%

```

If `prefixfirst` has not been supplied, make it the same as `prefix`.

```
8062 \expandafter\gls@assign@field\expandafter
8063   {\csname glo@\@glo@label @prefix\endcsname}{\@glo@label}{prefixfirst}%
8064   {\@glo@entryprefixfirst}%

```

If `prefixfirstplural` has not been supplied, make it the same as `prefixplural`.

```
8065 \expandafter\gls@assign@field\expandafter
8066 {\csname glo@\@glo@label \prefixplural\endcsname}{\@glo@label}%
8067 {\prefixfirstplural}{\@glo@entryprefixfirstplural}%
8068 }
```

Define commands to access these fields:

```
ntryprefixfirst
8069 \newcommand*{\glsentryprefixfirst}[1]{\csuse{glo@#1@prefixfirst}} 

efixfirstplural
8070 \newcommand*{\glsentryprefixfirstplural}[1]{\csuse{glo@#1@prefixfirstplural}} 

\glsentryprefix
8071 \newcommand*{\glsentryprefix}[1]{\csuse{glo@#1@prefix}} 

tryprefixplural
8072 \newcommand*{\glsentryprefixplural}[1]{\csuse{glo@#1@prefixplural}}
```

Now for the initial upper case variants:

```
ntryprefixfirst
8073 \newrobustcmd*{\Glsentryprefixfirst}[1]{%
8074 \protected@edef{\glo@text{\csname glo@#1@prefixfirst\endcsname}}{%
8075 \xmakefirstuc{\glo@text}
8076 }

efixfirstplural
8077 \newrobustcmd*{\Glsentryprefixfirstplural}[1]{%
8078 \protected@edef{\glo@text{\csname glo@#1@prefixfirstplural\endcsname}}{%
8079 \xmakefirstuc{\glo@text}
8080 }

\Glsentryprefix
8081 \newrobustcmd*{\Glsentryprefix}[1]{%
8082 \protected@edef{\glo@text{\csname glo@#1@prefix\endcsname}}{%
8083 \xmakefirstuc{\glo@text}
8084 }

tryprefixplural
8085 \newrobustcmd*{\Glsentryprefixplural}[1]{%
8086 \protected@edef{\glo@text{\csname glo@#1@prefixplural\endcsname}}{%
8087 \xmakefirstuc{\glo@text}
8088 }
```

Define commands to determine if the prefix keys have been set:

```

\ifglshasprefix
 8089 \newcommand*{\ifglshasprefix}[3]{%

3 Glossary Styles

3.1 Glossary hyper-navigation definitions (glossary-hypernav package)

Package Definition:

```
8241 \ProvidesPackage{glossary-hypernav} [2019/09/28 v4.43 (NLCT)]
```

The commands defined in this package are provided to help navigate around the groups within a glossary (see [section 1.16.](#)) `\printglossary` (and `\printglossaries`) set `\@glo@type` to the label of the current glossary. This is used to create a unique hypertarget in the event of multiple glossaries.

```
\glsnavhyperlink[<type>]{<label>}{<text>}
```

This command makes `<text>` a hyperlink to the glossary group whose label is given by `<label>` for the glossary given by `<type>`.

`glsnavhyperlink`

```
8242 \newcommand*{\glsnavhyperlink}[3][\@glo@type]{%
8243   \edef\gls@grplabel{\#2}\protected\edef\@gls@grptitle{\#3}%
8244   \glslink{\glsnavhyperlinkname{\#1}{\#2}}{\#3}}
```

`avhyperlinkname` Expands to the hypertarget name. The first argument is the glossary type. The second argument is the group label.

```
8245 \newcommand*{\glsnavhyperlinkname}[2]{\glsn:#1@\#2}
```

```
\glsnavhypertarget[<type>]{<label>}{<text>}
```

This command makes `<text>` a hypertarget for the glossary group whose label is given by `<label>` in the glossary given by `<type>`. If `<type>` is omitted, `\@glo@type` is used which is set by `\printglossary` to the current glossary label.

`snavhypertarget`

```
8246 \newcommand*{\glsnavhypertarget}[3][\@glo@type]{%
8247   \glsnavhypertarget{\#1}{\#2}{\#3}%
8248 }
```

The actual code is now in an internal command that doesn't have an optional argument, which makes it easier to save and restore the original behaviour.

`snavhypertarget`

```
8249 \newcommand*{\@glsnavhypertarget}[3]{%
```

Add this group to the aux file for re-run check.

```
8250 \protected@write\@auxout{}{\string\gls@hypergroup{#1}{#2}}%
```

Add the target.

```
8251 \glstarget{\glsnavhyperlinkname{#1}{#2}}{#3}%
```

```
8252 \expandafter\let
```

```
8253 \expandafter\@gls@list\csname \gls@hypergrouplist@#1\endcsname
```

Iterate through list and terminate loop if this group is found.

```
8254 \@for\@gls@elem:=\@gls@list\do{%
```

```
8255 \ifthenelse{\equal{\@gls@elem}{#2}}{\@endfortrue}{}%
```

```
8256 \if@endfor
```

```
8257 \else
```

```
8258 \GlossariesWarningNoLine{Navigation panel}
```

```
8259     for glossary type '#1'^^Jmissing group '#2'}%
```

```
8260 \gdef\gls@hypergrouprerun{%
```

```
8261 \GlossariesWarningNoLine{Navigation panel}
```

```
8262     has changed. Rerun LaTeX}}%
```

```
8263 \fi
```

```
8264 }
```

hypergrouprerun Give a warning at the end if re-run required

```
8265 \let\gls@hypergrouprerun\relax
```

```
8266 \AtEndDocument{\gls@hypergrouprerun}
```

@gls@hypergroup This adds to (or creates) the command \gls@hypergrouplist@(*glossary type*) which lists all groups for a given glossary, so that the navigation bar only contains those groups that are present. However it requires at least 2 runs to ensure the information is up-to-date.

```
8267 \newcommand*{\gls@hypergroup}[2]{%
```

```
8268 \ifundefined{\gls@hypergrouplist@#1}{%
```

```
8269 \expandafter\xdef\csname \gls@hypergrouplist@#1\endcsname{#2}{%
```

```
8270 }{%
```

```
8271 \expandafter\let\expandafter\gls@tmp
```

```
8272     \csname \gls@hypergrouplist@#1\endcsname
```

```
8273 \expandafter\xdef\csname \gls@hypergrouplist@#1\endcsname{%
```

```
8274     \gls@tmp, #2}{%
```

```
8275 }{%
```

```
8276 }
```

The \glsnavigation command displays a simple glossary group navigation. The symbol and number elements are defined separately, so that they can be suppressed if need be. (In earlier versions this command will produce a link to all 28 groups, but some groups may not be defined if there are groups that do not contain any terms, in which case you will get an undefined hyperlink warning. Version 1.14 changed this to only use labels for groups that are present.) Now for the whole navigation bit:

```

\glsnavigation
 8277 \newcommand*{\glsnavigation}{%
 8278   \def\@gls@between{}%
 8279   \ifcsundef{@gls@hypergrouplist@\@glo@type}%
 8280   {%
 8281     \def\@gls@list{}%
 8282   }%
 8283   {%
 8284     \expandafter\let\expandafter\@gls@list
 8285       \csname @gls@hypergrouplist@\@glo@type\endcsname
 8286   }%
 8287   \c@for\@gls@tmp:=\@gls@list\do{%
 8288     \@gls@between
 8289     \gls@getgrouptitle{\@gls@tmp}\{\gls@grptitle\}%
 8290     \glsnavhyperlink{\@gls@tmp}\{\gls@grptitle\}%
 8291     \let\@gls@between\glshypernavsep
 8292   }%
 8293 }

```

\glshypernavsep Separator for the hyper navigation bar.

```
8294 \newcommand*{\glshypernavsep}{\space\textbar\space}
```

The \glssymbolnav produces a simple navigation set of links for just the symbol and number groups. This used to be used at the start of \glsnavigation. This command is no longer needed.

```

\glssymbolnav
 8295 \newcommand*{\glssymbolnav}{%
 8296   \glsnavhyperlink{glssymbols}\{\glsgetgroup{glssymbols}\}%
 8297   \glshypernavsep
 8298   \glsnavhyperlink{glsnumbers}\{\glsgetgroup{glsnumbers}\}%
 8299   \glshypernavsep
 8300 }

```

3.2 In-line Style (glossary-inline.sty)

This defines an in-line style where the entries are comma-separated with just the name and description displayed.

```
8301 \ProvidesPackage{glossary-inline}[2019/09/28 v4.43 (NLCT)]
```

3.3 List Style (`glossary-list.sty`)

The style file defines glossary styles that use the `description` environment. Note that since the entry name is placed in the optional argument to the `\item` command, it will appear in a bold font by default.

```
8368 \ProvidesPackage{glossary-list}[2019/09/28 v4.43 (NLCT)]
```

`\indexspace` There are a few classes that don't define `\indexspace`, so provide a definition if it hasn't been defined.

```
8369 \providecommand{\indexspace}{%
8370   \par \vskip 10\p@ \oplus 5\p@ \ominus 3\p@ \relax
8371 }
```

`tgroupheaderfmt` Provide a way of adjusting the format of the group headings.

```
8372 \newcommand*{\glslistgroupheaderfmt}[1]{#1}
```

`tnavigationitem` Provide a way of adjusting the format of the navigation header. This puts the navigation line inside the optional argument of `item` to prevent unwanted space occurring at the start, but this can cause a problem if the navigation line is too long. With this command, it makes it easier for the user to customise the style without having to remember to modify `\glossaryheader` after the style has been set.

```
8373 \newcommand*{\glslistnavigationitem}[1]{\item[#1]}
```

`list` The list glossary style uses the `description` environment. The group separator `\glsgroupskip` is redefined as `\indexspace` which produces a gap between groups. The glossary heading and the group headings do nothing. Sub-entries immediately follow the main entry without the sub-entry name. This style does not use the entry's symbol. This is used as the default style for the `glossaries` package.

```
8374 \newglossarystyle{list}{%
```

Use `description` environment:

```
8375 \renewenvironment{theglossary}%
8376   {\begin{description}}{\end{description}}%
```

No header at the start of the environment:

```
8377 \renewcommand*{\glossaryheader}{}%
```

No group headings:

```
8378 \renewcommand*{\glsgroupheading}[1]{}%
```

Main (level 0) entries start a new item in the list:

```
8379 \renewcommand*{\glossentry}[2]{%
8380   \item[\glsentryitem{##1}%
8381     \glisttarget{##1}{\glossentryname{##1}}]
8382     \glossentrydesc{##1}\glspostdescription\space ##2}%

```

Sub-entries continue on the same line:

```
8383 \renewcommand*{\subglossentry}[3]{%
8384   \glssubentryitem{##2}%

```

```

8385     \glstarget{##2}{\strut}\space
8386     \glossentrydesc{##2}\glspostdescription\space ##3.}%
    Add vertical space between groups:
8387     \renewcommand*{\glsgroupskip}{\ifglsnogroupskip\else\indexspace\fi}%
8388 }

listgroup The listgroup style is like the list style, but the glossary groups have headings.
8389 \newglossarystyle{listgroup}{%
    Base it on the list style:
8390     \setglossarystyle{list}%
    Each group has a heading:
8391     \renewcommand*{\glsgroupheading}[1]{%
8392         \item[\glslistgroupheaderfmt{\glsgetgrouptitle{##1}}]}}

listhypergroup The listhypergroup style is like the listgroup style, but has a set of links to the groups at the
start of the glossary.
8393 \newglossarystyle{listhypergroup}{%
    Base it on the list style:
8394     \setglossarystyle{list}%
    Add navigation links at the start of the environment.
8395     \renewcommand*{\glossaryheader}{%
8396         \glslistnavigationitem{\glsnavigation}}%
    Each group has a heading with a hypertarget:
8397     \renewcommand*{\glsgroupheading}[1]{%
8398         \item[\glslistgroupheaderfmt
             {\glsnavhypertarget{##1}{\glsgetgrouptitle{##1}}}]}}

```

altlist The altlist glossary style is like the list style, but places the description on a new line. Sub-entries follow in separate paragraphs without the sub-entry name. This style does not use the entry's symbol.

```

8400 \newglossarystyle{altlist}{%
    Base it on the list style:
8401     \setglossarystyle{list}%
    Main (level 0) entries start a new item in the list with a line break after the entry name:

8410   \glstarget{##2}{\strut}\glossentrydesc{##2}\glspostdescription\space ##3}%
8411 }
```

altlistgroup The `altlistgroup` glossary style is like the `altlist` style, but the glossary groups have headings.

```
8412 \newglossarystyle{altlistgroup}{%
```

Base it on the `altlist` style:

```
8413 \setglossarystyle{altlist}{%
```

Each group has a heading:

```
8414 \renewcommand*{\glsgroupheading}[1]{%
8415   \item[\glslistgroupheaderfmt{\glsgetgrouptitle{##1}}]}
```

tlisthypergroup The `tlisthypergroup` glossary style is like the `altlistgroup` style, but has a set of links to the groups at the start of the glossary.

```
8416 \newglossarystyle{tlisthypergroup}{%
```

Base it on the `altlist` style:

```
8417 \setglossarystyle{altlist}{%
```

Add navigation links at the start of the environment.

```
8418 \renewcommand*{\glossaryheader}{%
8419   \glslistnavigationitem{\glsnavigation}}%
```

Each group has a heading with a hypertarget:

```
8420 \renewcommand*{\glsgroupheading}[1]{%
8421   \item[\glslistgroupheaderfmt
8422     {\glsnavhypertarget{##1}{\glsgetgrouptitle{##1}}}]}
```

listdotted The `listdotted` glossary style was supplied by Axel Menzel. I've modified it slightly so that the distance from the start of the name to the end of the dotted line is specified by `\glslistdottedwidth`. Note that this style ignores the page numbers as well as the symbol. Sub-entries are displayed in the same way as top-level entries.

```
8423 \newglossarystyle{listdotted}{%
```

Base it on the `list` style:

```
8424 \setglossarystyle{list}{%
```

Each main (level 0) entry starts a new item:

```
8425 \renewcommand*{\glossentry}[2]{%
8426   \item[]\makebox[\glslistdottedwidth][1]{%
8427     \glsentryitem{##1}%
8428     \glstarget{##1}{\glossentryname{##1}}%
8429     \unskip\leaders\hbox to 2.9mm{\hss.\hfill\strut}\glossentrydesc{##1}}%
```

Sub entries have the same format as main entries:

```
8430 \renewcommand*{\subglossentry}[3]{%
8431   \item[]\makebox[\glslistdottedwidth][1]{%
8432     \glssubentryitem{##2}%
8433     \glstarget{##2}{\glossentryname{##2}}%
8434     \unskip\leaders\hbox to 2.9mm{\hss.}\hfill\strut}\glossentrydesc{##2}}%
8435 }%
```

listdottedwidth

```
8436 \newlength\glslistdottedwidth
8437 \setlength{\glslistdottedwidth}{.5\hsize}
```

sublistdotted This style is similar to the glostylelistdotted style, except that the main entries just have the name displayed.

```
8438 \newglossarystyle{sublistdotted}{%
```

Base it on the listdotted style:

```
8439 \setglossarystyle{listdotted}{%
```

Main (level 0) entries just display the name:

```
8440 \renewcommand*{\glossentry}[2]{%
8441   \item[\glsentryitem{##1}\glstarget{##1}{\glossentryname{##1}}]}%
8442 }
```

3.4 Glossary Styles using longtable (the glossary-long package)

The glossary styles defined in the package used the longtable environment in the glossary.

```
8443 \ProvidesPackage{glossary-long}[2019/09/28 v4.43 (NLCT)]
```

Requires the package:

```
8444 \RequirePackage{longtable}
```

\glsdescwidth This is a length that governs the width of the description column. (There's a chance that the user may specify nolong and then load later, in which case \glsdescwidth may have already been defined by . The same goes for \glspagelistwidth.)

```
8445 \@ifundefined{glsdescwidth}{%
8446   \newlength\glsdescwidth
8447   \setlength{\glsdescwidth}{0.6\hsize}
8448 }{}
```

\glspagelistwidth This is a length that governs the width of the page list column.

```
8449 \@ifundefined{glspagelistwidth}{%
8450   \newlength\glspagelistwidth
8451   \setlength{\glspagelistwidth}{0.1\hsize}
8452 }{}
```

long The long glossary style command which uses the longtable environment:

```
8453 \newglossarystyle{long}{%
```

 Use longtable with two columns:

```
8454 \renewenvironment{theglossary}{%
8455     \begin{longtable}{lp{\glsdescwidth}}{}%
8456     \end{longtable}}{}
```

 Do nothing at the start of the environment:

```
8457 \renewcommand*\glossaryheader{}{}
```

 No heading between groups:

```
8458 \renewcommand*\glsgroupheading[1]{}{}
```

 Main (level 0) entries displayed in a row:

```
8459 \renewcommand{\glossentry}[2]{%
8460     \glsentryitem{##1}\glstarget{##1}{\glossentryname{##1}} &
8461     \glossentrydesc{##1}\glspostdescription\space ##2\tabularnewline
8462 }{}
```

 Sub entries displayed on the following row without the name:

```
8463 \renewcommand{\subglossentry}[3]{%
8464     &
8465     \glssubentryitem{##2}{%
8466         \glstarget{##2}{\strut}\glossentrydesc{##2}\glspostdescription\space
8467         ##3\tabularnewline
8468 }}{}
```

 Blank row between groups: The check for nogroupskip must occur outside \glsgroupskip
(<http://www.dickimaw-books.com/cgi-bin/bugtracker.cgi?action=view&key=108>)

```
8469 \ifglsnogroupskip
8470     \renewcommand*\glsgroupskip{}{%
8471 \else
8472     \renewcommand*\glsgroupskip{}{ \tabularnewline}%
8473 \fi
8474 }
```

longborder The longborder style is like the above, but with horizontal and vertical lines:

```
8475 \newglossarystyle{longborder}{%
```

 Base it on the glosstylelong style:

```
8476 \setglossarystyle{long}{}
```

 Use longtable with two columns with vertical lines between each column:

```
8477 \renewenvironment{theglossary}{%
8478     \begin{longtable}{|l|p{\glsdescwidth}|}{\end{longtable}}{}}
```

 Place horizontal lines at the head and foot of the table:

```
8479 \renewcommand*\glossaryheader{}{\hline\endhead\hline\endfoot}%
8480 }
```

longheader The longheader style is like the long style but with a header:

```
8481 \newglossarystyle{longheader}{%
```

Base it on the `glostylelong` style:

```
8482 \setglossarystyle{long}%
```

Set the table's header:

```
8483 \renewcommand*\glossaryheader{%
8484   \bfseries \entryname & \bfseries \descriptionname\tabularnewline\endhead}%
8485 }
```

`ongheaderborder` The `longheaderborder` style is like the `long` style but with a header and border:

```
8486 \newglossarystyle{longheaderborder}{%
```

Base it on the `glostylelongborder` style:

```
8487 \setglossarystyle{longborder}%
```

Set the table's header and add horizontal line to table's foot:

```
8488 \renewcommand*\glossaryheader{%
8489   \hline\bfseries \entryname & \bfseries
8490   \descriptionname\tabularnewline\hline
8491   \endhead
8492   \hline\endfoot}%
8493 }
```

`long3col` The `long3col` style is like `long` but with 3 columns

```
8494 \newglossarystyle{long3col}{%
```

Use a `longtable` with 3 columns:

```
8495 \renewenvironment{theglossary}%
8496   {\begin{longtable}{lp{\glscdescwidth}p{\glspagelistwidth}}}%
8497   {\end{longtable}}%
```

No table header:

```
8498 \renewcommand*\glossaryheader{}%
```

No headings between groups:

```
8499 \renewcommand*\glsgrouphereading[1]{}%
```

Main (level 0) entries on a row (name in first column, description in second column, page list in last column):

```
8500 \renewcommand{\glossentry}[2]{%
8501   \glstarget{\glsentryname}{\glossentrydesc} &
8502   \glossentrydesc & ##2\tabularnewline
8503 }%
```

Sub-entries on a separate row (no name, description in second column, page list in third column):

```
8504 \renewcommand{\subglossentry}[3]{%
8505   &
8506   \glssubentryitem{##2}%
8507   \glstarget{\strut}{\glossentrydesc} &
8508   ##3\tabularnewline
8509 }%
```

Blank row between groups: The check for nogroupskip must occur outside \glsgroupskip
(<http://www.dickimaw-books.com/cgi-bin/bugtracker.cgi?action=view&key=108>)

```
8510 \ifglsnogroupskip
8511   \renewcommand*\glsgroupskip{}%
8512 \else
8513   \renewcommand*\glsgroupskip{\&\& \tabularnewline}%
8514 \fi
8515 }
```

long3colborder The long3colborder style is like the long3col style but with a border:

```
8516 \newglossarystyle{long3colborder}{%
```

Base it on the glostylelong3col style:

```
8517 \setglossarystyle{long3col}{%
```

Use a longtable with 3 columns with vertical lines around them:

```
8518 \renewenvironment{theglossary}{%
8519   {\begin{longtable}{|l|p{\glsdescwidth}|p{\glspagelistwidth}|}}%
8520   {\end{longtable}}}%
```

Place horizontal lines at the head and foot of the table:

```
8521 \renewcommand*\glossaryheader{\hline\endhead\hline\endfoot}%
8522 }
```

long3colheader The long3colheader style is like long3col but with a header row:

```
8523 \newglossarystyle{long3colheader}{%
```

Base it on the glostylelong3col style:

```
8524 \setglossarystyle{long3col}{%
```

Set the table's header:

```
8525 \renewcommand*\glossaryheader{%
8526   \bfseries\entryname\&\bfseries\descriptionname\&
8527   \bfseries\pagelistname\tabularnewline\endhead}%
8528 }
```

colheaderborder The long3colheaderborder style is like the above but with a border

```
8529 \newglossarystyle{long3colheaderborder}{%
```

Base it on the glostylelong3colborder style:

```
8530 \setglossarystyle{long3colborder}{%
```

Set the table's header and add horizontal line at table's foot:

```
8531 \renewcommand*\glossaryheader{%
8532   \hline
8533   \bfseries\entryname\&\bfseries\descriptionname\&
8534   \bfseries\pagelistname\tabularnewline\hline\endhead
8535   \hline\endfoot}%
8536 }
```

`long4col` The `long4col` style has four columns where the third column contains the value of the associated symbol key.

```
8537 \newglossarystyle{long4col}{%
```

Use a `longtable` with 4 columns:

```
8538 \renewenvironment{theglossary}{%
8539 {\begin{longtable}{l l l l}}%
8540 {\end{longtable}}}%
```

No table header:

```
8541 \renewcommand*\glossaryheader{}%
```

No group headings:

```
8542 \renewcommand*\glsgroupheading[1]{}%
```

Main (level 0) entries on a single row (name in first column, description in second column, symbol in third column, page list in last column):

```
8543 \renewcommand{\glossentry}[2]{%
8544 \glstentryitem{##1}\glstarget{##1}{\glossentryname{##1}} &
8545 \glossentrydesc{##1} &
8546 \glossentrysymbol{##1} &
8547 ##2\tabularnewline
8548 }%
```

Sub entries on a single row with no name (description in second column, symbol in third column, page list in last column):

```
8549 \renewcommand{\subglossentry}[3]{%
8550 &
8551 \glssubentryitem{##2}%
8552 \glstarget{##2}{\strut}\glossentrydesc{##2} &
8553 \glossentrysymbol{##2} & ##3\tabularnewline
8554 }%
```

Blank row between groups: The check for `nogroupskip` must occur outside `\glsgroupskip` (<http://www.dickimaw-books.com/cgi-bin/bugtracker.cgi?action=view&key=108>)

```
8555 \ifglsnogroupskip
8556 \renewcommand*\glsgroupskip{}%
8557 \else
8558 \renewcommand*\glsgroupskip{ & & & \tabularnewline}%
8559 \fi
8560 }
```

`long4colheader` The `long4colheader` style is like `long4col` but with a header row.

```
8561 \newglossarystyle{long4colheader}{%
```

Base it on the `glostylelong4col` style:

```
8562 \setglossarystyle{long4col}{}
```

Table has a header:

```
8563 \renewcommand*\glossaryheader{}%
8564 \bfseries\entryname\bfseries\descriptionname\bfseries\symbolname\bfseries
```

```
8566     \bfseries\pagelistname\tabularnewline\endhead}%
8567 }
```

long4colborder The **long4colborder** style is like **long4col** but with a border.

```
8568 \newglossarystyle{long4colborder}{%
```

Base it on the **glostylelong4col** style:

```
8569 \setglossarystyle{long4col}{%
```

Use a **longtable** with 4 columns surrounded by vertical lines:

```
8570 \renewenvironment{theglossary}%
8571 {\begin{longtable}{|l|l|l|l|}}%
8572 {\end{longtable}}%
```

Add horizontal lines to the head and foot of the table:

```
8573 \renewcommand*\glossaryheader{\hline\endhead\hline\endfoot}%
8574 }
```

colheaderborder The **long4colheaderborder** style is like the above but with a border.

```
8575 \newglossarystyle{long4colheaderborder}{%
```

Base it on the **glostylelong4col** style:

```
8576 \setglossarystyle{long4col}{%

Use a **longtable** with 4 columns surrounded by vertical lines:

```
8577 \renewenvironment{theglossary}%
8578 {\begin{longtable}{|l|l|l|l|}}%
8579 {\end{longtable}}%
```

Add table header and horizontal line at the table's foot:

```
8580 \renewcommand*\glossaryheader{%
8581   \hline\bfseries\entryname\&\bfseries\descriptionname\&
8582   \bfseries \symbolname\&
8583   \bfseries\pagelistname\tabularnewline\hline\endhead
8584   \hline\endfoot}%
8585 }
```

altnlong4col The **altnlong4col** style is like the **long4col** style but can have multiline descriptions and page lists.

```
8586 \newglossarystyle{altnlong4col}{%
```

Base it on the **glostylelong4col** style:

```
8587 \setglossarystyle{long4col}{%

Use a **longtable** with 4 columns where the second and last columns may have multiple lines in each row:

```
8588 \renewenvironment{theglossary}%
8589 {\begin{longtable}{lp{\glscdescwidth}lp{\glspagelistwidth}}}%
8590 {\end{longtable}}%
8591 }
```

tlong4colheader The `altnlong4colheader` style is like `altnlong4col` but with a header row.

```
8592 \newglossarystyle{altnlong4colheader}{%
  Base it on the glostylelong4colheader style:
8593   \setglossarystyle{long4colheader}%

3.5 Glossary Styles using `longtable` and `booktabs` (the `glossary-longbooktabs`) package

The styles here are based on David Carlisle's patch at <http://tex.stackexchange.com/a/56890>

```
8610 \ProvidesPackage{glossary-longbooktabs}[2019/09/28 v4.43 (NLCT)]
```

Requires `booktabs` package:

```
8611 \RequirePackage{booktabs}
```

and the base packages for long styles:

```
8612 \RequirePackage{glossary-long}
8613 \RequirePackage{glossary-longragged}
(longtable and array loaded by those packages).
```

long-booktabs The long-booktabs style is similar to the longheader style but uses the booktabs rules and patches longtable to check for group skip occurring at a page break.

```
8614 \newglossarystyle{long-booktabs}{%
```

If the style change is scoped, the patch will only have a local effect, which may be useful if it conflicts with other tables in the document.

```
8615 \glspatchLToutput
```

As with the longheader style, use the long style as a base.

```
8616 \setglossarystyle{long}%
```

Add a header with rules.

```
8617 \renewcommand*{\glossaryheader}{%
8618   \toprule \bfseries \entryname & \bfseries
8619   \descriptionname\tabularnewline\midrule\endhead
8620   \bottomrule\endfoot}%

```

Check for the nogroupskip package option. If there should be a gap between groups, insert the penalty and the vertical space. The check for nogroupskip should occur outside \glsgroupskip to be on the safe side.

```
8621 \ifglsnogroupskip
8622   \renewcommand*{\glsgroupskip}{}%
8623 \else
8624   \renewcommand*{\glsgroupskip}{\glspenaltygroupskip}%
8625 \fi
8626 }
```

ng3col-booktabs The long3col-booktabs style is similar to the long3colheader style but uses the booktabs rules and patches longtable to check for group skip occurring at a page break.

```
8627 \newglossarystyle{long3col-booktabs}{%
```

If the style change is scoped, the patch will only have a local effect, which may be useful if it conflicts with other tables in the document.

```
8628 \glspatchLToutput
```

Use the long3col style as a base.

```
8629 \setglossarystyle{long3col}%
```

Add a header with rules.

```
8630 \renewcommand*{\glossaryheader}{%
8631   \toprule \bfseries \entryname &
8632   \bfseries \descriptionname &
8633   \bfseries \pagelistname
8634   \tabularnewline\midrule\endhead
8635   \bottomrule\endfoot}%

```

Check for the nogroupskip package option. If there should be a gap between groups, insert the penalty and the vertical space. The check for nogroupskip should occur outside \glsgroupskip to be on the safe side.

```
8636 \ifglsnogroupskip
8637   \renewcommand*\glsgroupskip{}%
8638 \else
8639   \renewcommand*\glsgroupskip{\glspenaltygroupskip}%
8640 \fi
8641 }
```

ng4col-booktabs The long4col-booktabs style is similar to the long4colheader style but uses the booktabs rules and patches longtable to check for group skip occurring at a page break.

```
8642 \newglossarystyle{long4col-booktabs}{%
```

If the style change is scoped, the patch will only have a local effect, which may be useful if it conflicts with other tables in the document.

```
8643 \glspatchLToutput

Use the long4col style as a base.

```
8644 \setglossarystyle{long4col}{%
```

Add a header with rules.

```
8645 \renewcommand*\glossaryheader{}%
8646   \toprule \bfseries \entryname &

8652 \ifglsnogroupskip
8653   \renewcommand*\glsgroupskip{}%
8654 \else
8655   \renewcommand*\glsgroupskip{\glspenaltygroupskip}%
8656 \fi
8657 }
```

ng4col-booktabs The altlong4col-booktabs style is similar to the altlong4colheader style but uses the booktabs rules and patches longtable to check for group skip occurring at a page break.

```
8658 \newglossarystyle{altnormal4col-booktabs}{%
```

The patch \glspatchLToutput is already applied in long4col-booktabs and so doesn't need to be here.

```
8659 \glspatchLToutput

Ragged styles.

`ragged-booktabs` The `longragged-booktabs` style is similar to the `longragged` style but uses the `booktabs` rules and patches `longtable` to check for group skip occurring at a page break.

```
8665 \newglossarystyle{longragged-booktabs}{%
```

If the style change is scoped, the patch will only have a local effect, which may be useful if it conflicts with other tables in the document.

8671 }
```

`ed3col-booktabs` The `longragged3col-booktabs` style is similar to the `longragged3col` style but uses the `booktabs` rules and patches `longtable` to check for group skip occurring at a page break.

```
8672 \newglossarystyle{longragged3col-booktabs}{%
```

If the style change is scoped, the patch will only have a local effect, which may be useful if it conflicts with other tables in the document.

`ed4col-booktabs` The `altrongagged4col-booktabs` style is similar to the `altrongagged4col` style but uses the `booktabs` rules and patches `longtable` to check for group skip occurring at a page break.

```
8680 \newglossarystyle{altrongagged4col-booktabs}{%

3.6 Glossary Styles using longtable (the glossary-longragged package)

The glossary styles defined in the package used the longtable environment in the glossary and use ragged right formatting for the multiline columns.

```
8727 \ProvidesPackage{glossary-longragged}[2019/09/28 v4.43 (NLCT)]
```

Requires the package:

```
8728 \RequirePackage{array}
```

Requires the package:

```
8729 \RequirePackage{longtable}

3.7 Glossary Styles using multicol (`glossary-mcols.sty`)

The style file defines glossary styles that use the `multicol` package. These use the tree-like glossary styles in a `multicol` environment.

```
8883 \ProvidesPackage{glossary-mcols}[2019/09/28 v4.43 (NLCT)]
```

Required packages:

```
8884 \RequirePackage{multicol}
8885 \RequirePackage{glossary-tree}
```

\indexspace The are a few classes that don't define \indexspace, so provide a definition if it hasn't been defined.

```
8886 \providecommand{\indexspace}{%
8887   \par \vskip 10\p@ \oplus 5\p@ \ominus 3\p@ \relax
8888 }
```

\glsmcols Define macro in which to store the number of columns. (Defaults to 2.)

```
8889 \newcommand*\glsmcols{2}
```

mcolindex Multi-column index style. Same as the index, but puts the glossary in multiple columns. (Ideally the glossary title should go in the optional argument of multcols, but the title isn't part of the glossary style.)

```
8890 \newglossarystyle{mcolindex}{%
8891   \setglossarystyle{index}%
8892   \renewenvironment{theglossary}%

mcolindexgroup As mcolindex but has headings:

```
8903 \newglossarystyle{mcolindexgroup}{%
8904   \setglossarystyle{mcolindex}%
8905   \renewcommand*\glsgroupheading[1]{%
8906     \item\glstreegroupheaderfmt{\glsgetgroup{##1}\indexspace}%
8907 }

3.10 Tree Styles (`glossary-tree.sty`)

The style file defines glossary styles that have a tree-like structure. These are designed for hierarchical glossaries.

```
9424 \ProvidesPackage{glossary-tree}[2019/09/28 v4.43 (NLCT)]
```

`\indexspace` There are a few classes that don't define `\indexspace`, so provide a definition if it hasn't been defined.

```

9425 \providecommand{\indexspace}{%
9426   \par \vskip 10\p@ \plus 5\p@ \minus 3\p@ \relax
9427 }

```

`\glstreenamefmt` Format used to display the name in the tree styles. (This may be counteracted by `\glsnamefont`.) This command was previously also used to format the group headings.

```
9428 \newcommand*{\glstreenamefmt}[1]{\textbf{#1}}
```

`\groupheaderfmt` Format used to display the group header in the tree styles. Before v4.22, `\glstreenamefmt` was used for the group header, so the default definition uses that to help maintain backward-compatibility, since in previous versions redefining `\glstreenamefmt` would've also affected the group headings.

```
9429 \newcommand*{\glstreegroupheaderfmt}[1]{\glstreenamefmt{#1}}
```

`\navigationfmt` Format used to display the navigation header in the tree styles.

```
9430 \newcommand*{\glstreenavigationfmt}[1]{\glstreenamefmt{#1}}
```

Allow the user to adjust the index style without disturbing the index.

`\glstreeitem` Top level item used in index style.

index The index glossary style is similar in style to the way indices are usually typeset using \item, \subitem and \subsubitem. The entry name is set in bold. 4 Backwards Compatibility

4.1 glossaries-compatible-207

Provides compatibility with version 2.07 and below. This uses original glossaries xindy and makeindex formatting, so can be used with old documents that had customized style files, but hyperlinks may not work properly.

```
9682 \NeedsTeXFormat{LaTeX2e}
9683 \ProvidesPackage{glossaries-compatible-207}[2019/09/28 v4.43 (NLCT)]
```

`AddXdyAttribute` Adds an attribute in old format.

5 Accessibility Support (glossaries-accsupp Code)

The package is experimental. It is intended to provide a means of using the PDF accessibility support in glossary entries. See the documentation for further details about accessibility support.

```
10469 \NeedsTeXFormat{LaTeX2e}
```

Package version number now in line with main glossaries package number.

```

5.1 Defining Replacement Text

The version 0.1 stored the replacement text in the symbol key. This has been changed to use the new keys defined here. Example of use:

```
\newglossaryentry{dr}{name=Dr,description={},access={Doctor}}
```

access The replacement text corresponding to the name key:

```

10514 \define@key{glossentry}{access}{%
10515   \def\@glo@access{#1}%
10516 }

```

textaccess The replacement text corresponding to the text key:

```

10517 \define@key{glossentry}{textaccess}{%
10518   \def\@glo@textaccess{#1}%
10519 }

```

firstaccess The replacement text corresponding to the first key:

```

10520 \define@key{glossentry}{firstaccess}{%
10521   \def\@glo@firstaccess{#1}%
10522 }

```

pluralaccess The replacement text corresponding to the plural key:

```
10523 \define@key{glossentry}{pluralaccess}{%
10524   \def\@glo@pluralaccess{#1}%
10525 }
```

rstpluralaccess The replacement text corresponding to the firstplural key:

```
10526 \define@key{glossentry}{firstpluralaccess}{%
10527   \def\@glo@firstpluralaccess{#1}%
10528 }
```

symbolaccess The replacement text corresponding to the symbol key:

```
10529 \define@key{glossentry}{symbolaccess}{%
10530   \def\@glo@symbolaccess{#1}%
10531 }
```

bolpluralaccess The replacement text corresponding to the symbolplural key:

```
10532 \define@key{glossentry}{symbolpluralaccess}{%
10533   \def\@glo@symbolpluralaccess{#1}%
10534 }
```

scriptionaccess The replacement text corresponding to the description key:

```
10535 \define@key{glossentry}{descriptionaccess}{%
10536   \def\@glo@descaccess{#1}%
10537 }
```

ionpluralaccess The replacement text corresponding to the descriptionplural key:

```
10538 \define@key{glossentry}{descriptionpluralaccess}{%
10539   \def\@glo@descpluralaccess{#1}%
10540 }
```

shortaccess The replacement text corresponding to the short key:

```
10541 \define@key{glossentry}{shortaccess}{%
10542   \def\@glo@shortaccess{#1}%
10543 }
```

ortpluralaccess The replacement text corresponding to the shortplural key:

```
10544 \define@key{glossentry}{shortpluralaccess}{%
10545   \def\@glo@shortpluralaccess{#1}%
10546 }
```

longaccess The replacement text corresponding to the long key:

```
10547 \define@key{glossentry}{longaccess}{%
10548   \def\@glo@longaccess{#1}%
10549 }
```

ongpluralaccess The replacement text corresponding to the longplural key:

```
10550 \define@key{glossentry}{longpluralaccess}{%
10551   \def\@glo@longpluralaccess{#1}%
10552 }
```

There are no equivalent keys for the user1...user6 keys. The replacement text would have to be explicitly put in the value, e.g., user1={\glsaccsupp{inches}{in}}.

Append these new keys to \gls@keymap:

```
10553 \appto{\gls@keymap}{%
10554   {access}{access},%
10555   {textaccess}{textaccess},%
10556   {firstaccess}{firstaccess},%
10557   {pluralaccess}{pluralaccess},%
10558   {firstpluralaccess}{firstpluralaccess},%
10559   {symbolaccess}{symbolaccess},%
10560   {symbolpluralaccess}{symbolpluralaccess},%
10561   {descaccess}{descaccess},%
10562   {descpluralaccess}{descpluralaccess},%
10563   {shortaccess}{shortaccess},%
10564   {shortpluralaccess}{shortpluralaccess},%
10565   {longaccess}{longaccess},%
10566   {longpluralaccess}{longpluralaccess}%
10567 }
```

\gls@noaccess Indicates that no replacement text has been provided.

```
10568 \def{\gls@noaccess}{\relax}
```

Add to the start hook (the access key is initialised to the value of the symbol key at the start for backwards compatibility):

```
10569 \let{\gls@oldnewglossaryentryprehook}{\newglossaryentryprehook}
10570 \renewcommand*{\@newglossaryentryprehook}{%
10571   \gls@oldnewglossaryentryprehook
10572   \def{\glo@access}{\glo@symbol}%
10573 }
```

Initialise the other keys:

```
10573 \def{\glo@textaccess}{\glo@access}%
10574 \def{\glo@firstaccess}{\glo@access}%
10575 \def{\glo@pluralaccess}{\glo@textaccess}%
10576 \def{\glo@firstpluralaccess}{\glo@pluralaccess}%

10583 \def{\glo@longaccess}{\relax}%
10584 \def{\glo@longpluralaccess}{\glo@longaccess}%
10585 }
```

Add to the end hook:

```
10586 \let{\gls@oldnewglossaryentryposthook}{\newglossaryentryposthook}
10587 \renewcommand*{\@newglossaryentryposthook}{%
10588   \gls@oldnewglossaryentryposthook

```

5.3 Displaying the Glossary

We need to redefine the way the glossary entries are formatted to include the accessibility support. The predefined glossary styles use `\glossentryname`, `\glossentrydesc` and `\glossentrysymbol`, but we need to provide compatibility with earlier versions in case users have defined their own styles using `\accsuppglossaryentryfield` and `\accsuppglossarysubentryfield`.

Now redefine `\glossentryname`, `\glossentrydesc` and `\glossentrysymbol` etc so they use the accessibility stuff.

```

6 Multi-Lingual Support

Many thanks to everyone who contributed to the translations both via email and on `comp.text.tex`. Language support has now been split off into independent language modules.

```
11869 \NeedsTeXFormat{LaTeX2e}
11870 \ProvidesPackage{glossaries-babel}[2019/09/28 v4.43 (NLCT)]
```

Load `tracklang` to obtain language settings.

```
11871 \RequirePackage{tracklang}
11872 \let\glsifusetranslator\@secondoftwo
```

Check for tracked languages:

```
11873 \AnyTrackedLanguages
11874 {%
