1 Introduction

The `glossaries` package is provided to assist generating glossaries. It has a certain amount of flexibility, allowing the user to customize the format of the glossary and define multiple glossaries. It also supports acronyms and glossary styles that include symbols (in addition to a name and description) for glossary entries. There is provision for loading a database of glossary terms. Only those terms used¹ in the document will be added to the glossary.

This package replaces the `glossary` package which is now obsolete.
Please see the document “Upgrading from the `glossary` package to the `glossaries` package” ([glossary2glossaries.pdf](#)) for assistance in upgrading.

One of the strengths of this package is its flexibility, however the drawback of this is the necessity of having a large manual that can cover all the various settings. If you are daunted by the size of the manual, try starting off with the much shorter guide for beginners ([glossariesbegin.pdf](#)).

¹that is, if the term has been referenced using any of the commands described in subsection 2.4, subsection 2.5 or via `\glssee` (or the `see` key)

The `glossaries` package comes with a `Perl` script called `makeglossaries`. This provides a convenient interface to `makeindex` or `xindy`. It is strongly recommended that you use this script, but *it is not essential*. If you are reluctant to install Perl, or for any other reason you don't want to use `makeglossaries`, you can call `makeindex` or `xindy` explicitly. See [subsection 1.3](#) for further details.

This manual is structured as follows:

- [section 2](#) gives an overview of the main user commands and their syntax.
- [section 3](#) describes the associated `mfirstruc` package.
- [section 4](#) contains the documented source code for those who want to know more about how the package works. This describes more advanced commands, such as determining if an entry or a glossary exists and commands that iterate through defined terms or glossaries.
- [section 5](#) contains the documented code for the `mfirstruc` package.

The remainder of this introductory section covers the following:

- [subsection 1.1](#) lists the sample documents provided with this package.
- [subsection 1.2](#) provides information for users who wish to write in a language other than English.
- [subsection 1.3](#) describes how to use a post-processor to create the sorted glossaries for your document.
- [subsection 1.4](#) provides some assistance in the event that you encounter a problem.

1.1 Sample Documents

The `glossaries` package is provided with some sample documents that illustrate the various functions. These should be located in the `samples` subdirectory (folder) of the `glossaries` documentation directory. This location varies according to your operating system and `TEX` distribution. You can use `texdoc` to locate the main `glossaries` documentation. For example, in a terminal or command prompt, type:

```
texdoc -l glossaries
```

This should display the full pathname of the file `glossaries.pdf`. View the contents of that directory and see if it contains the `samples` subdirectory.

If you can't find the sample files, they are available in the subdirectory `doc/latex/glossaries/samples/` in the `glossaries.tds.zip` archive which can be downloaded from [CTAN](#).

The sample documents are as follows:

minimalgls.tex This document is a minimal working example. You can test your installation using this file. To create the complete document you will need to do the following steps:

1. Run `minimalgls.tex` through L^AT_EX either by typing

```
latex minimalgls
```

in a terminal or by using the relevant button or menu item in your text editor or front-end. This will create the required associated files but you will not see the glossary. If you use PDFL^AT_EX you will also get warnings about non-existent references. These warnings may be ignored on the first run.

If you get a `Missing \begin{document}` error, then it's most likely that your version of `xkeyval` is out of date. Check the log file for a warning of that nature. If this is the case, you will need to update the `xkeyval` package.

2. Run `makeglossaries` on the document. This can be done on a terminal either by typing

```
makeglossaries minimalgls
```

or by typing

```
perl makeglossaries minimalgls
```

If your system doesn't recognise the command `perl` then it's likely you don't have Perl installed. In which case you will need to use `makeindex` directly. You can do this in a terminal by typing (all on one line):

```
makeindex -s minimalgls.ist -t minimalgls.glg -o minimalgls.gls  
minimalgls.glo
```

(See [subsubsection 1.3.3](#) for further details on using `makeindex` explicitly.)

Note that if you need to specify the full path and the path contains spaces, you will need to delimit the file names with the double-quote character.

3. Run `minimalgls.tex` through L^AT_EX again (as step 1)

You should now have a complete document. The number following each entry in the glossary is the location number. By default, this is the page number where the entry was referenced.

sample4col.tex This document illustrates a four column glossary where the entries have a symbol in addition to the name and description. To create the complete document, you need to do:

```
latex sample4col  
makeglossaries sample4col  
latex sample4col
```

As before, if you don't have Perl installed, you will need to use `makeindex` directly instead of using `makeglossaries`. The vertical gap between entries is the gap created at the start of each group. This can be suppressed by redefining `\glsgroupskip` after the glossary style has been set:

```
\renewcommand*\glsgroupskip{}{}
```

sampleAcr.tex This document has some sample acronyms. It also adds the glossary to the table of contents, so an extra run through L^AT_EX is required to ensure the document is up to date:

```
latex sampleAcr
makeglossaries sampleAcr
latex sampleAcr
latex sampleAcr
```

sampleAcrDesc.tex This is similar to the previous example, except that the acronyms have an associated description. As with the previous example, the glossary is added to the table of contents, so an extra run through L^AT_EX is required:

```
latex sampleAcrDesc
makeglossaries sampleAcrDesc
latex sampleAcrDesc
latex sampleAcrDesc
```

sampleDesc.tex This is similar to the previous example, except that it defines the acronyms using `\newglossaryentry` instead of `\newacronym`. As with the previous example, the glossary is added to the table of contents, so an extra run through L^AT_EX is required:

```
latex sampleDesc
makeglossaries sampleDesc
latex sampleDesc
latex sampleDesc
```

sampleDB.tex This document illustrates how to load external files containing the glossary definitions. It also illustrates how to define a new glossary type. This document has the number list suppressed and uses `\glsaddall` to add all the entries to the glossaries without referencing each one explicitly. To create the document do:

```
latex sampleDB
makeglossaries sampleDB
latex sampleDB
```

The glossary definitions are stored in the accompanying files `database1.tex` and `database2.tex`. Note that if you don't have Perl installed, you will need to use `makeindex` twice instead of a single call to `makeglossaries`:

1. Create the main glossary:

```
makeindex -s sampleDB.ist -t sampleDB.glg -o sampleDB.gls sampleDB.glo
```

2. Create the secondary glossary:

```
makeindex -s sampleDB.ist -t sampleDB.nlg -o sampleDB.not sampleDB.ntn
```

sampleEq.tex This document illustrates how to change the location to something other than the page number. In this case, the equation counter is

used since all glossary entries appear inside an `equation` environment. To create the document do:

```
latex sampleEq  
makeglossaries sampleEq  
latex sampleEq
```

sampleEqPg.tex This is similar to the previous example, but the number lists are a mixture of page numbers and equation numbers. This example adds the glossary to the table of contents, so an extra L^AT_EX run is required:

```
latex sampleEqPg  
makeglossaries sampleEqPg  
latex sampleEqPg  
latex sampleEqPg
```

sampleSec.tex This document also illustrates how to change the location to something other than the page number. In this case, the `section` counter is used. This example adds the glossary to the table of contents, so an extra L^AT_EX run is required:

```
latex sampleSec  
makeglossaries sampleSec  
latex sampleSec  
latex sampleSec
```

sampleNtn.tex This document illustrates how to create an additional glossary type. This example adds the glossary to the table of contents, so an extra L^AT_EX run is required:

```
latex sampleNtn  
makeglossaries sampleNtn  
latex sampleNtn  
latex sampleNtn
```

Note that if you don't have Perl installed, you will need to use `makeindex` twice instead of a single call to `makeglossaries`:

1. Create the main glossary:

```
makeindex -s sampleNtn.ist -t sampleNtn.glg -o sampleNtn.gls sampleNtn.glo
```

2. Create the secondary glossary:

```
makeindex -s sampleNtn.ist -t sampleNtn.nlg -o sampleNtn.not sampleNtn.ntn
```

sample.tex This document illustrates some of the basics, including how to create child entries that use the same name as the parent entry. This example adds the glossary to the table of contents, so an extra L^AT_EX run is required:

```
latex sample  
makeglossaries sample  
latex sample  
latex sample
```

You can see the difference between word and letter ordering if you substitute `order=word` with `order=letter`. (Note that this will only have an effect if you use `makeglossaries`. If you use `makeindex` explicitly, you will need to use the `-l` switch to indicate letter ordering.)

sampletree.tex This document illustrates a hierarchical glossary structure where child entries have different names to their corresponding parent entry. To create the document do:

```
latex sampletree  
makeglossaries sampletree  
latex sampletree
```

samplexdy.tex This document illustrates how to use the `glossaries` package with `xindy` instead of `makeindex`. The document uses UTF8 encoding (with the `inputenc` package). The encoding is picked up by `makeglossaries`. By default, this document will create a `xindy` style file called `samplexdy.xdy`, but if you uncomment the lines

```
\setStyleFile{samplexdy-mc}  
\noist  
\GlsSetXdyLanguage{}
```

it will set the style file to `samplexdy-mc.xdy` instead. This provides an additional letter group for entries starting with “Mc” or “Mac”. If you use `makeglossaries`, you don’t need to supply any additional information. If you don’t use `makeglossaries`, you will need to specify the required information. Note that if you set the style file to `samplexdy-mc.xdy` you must also specify `\noist`, otherwise the `glossaries` package will overwrite `samplexdy-mc.xdy` and you will lose the “Mc” letter group.

To create the document do:

```
latex samplexdy  
makeglossaries samplexdy  
latex samplexdy
```

If you don’t have Perl installed, you will have to call `xindy` explicitly instead of using `makeglossaries`. If you are using the default style file `samplexdy.xdy`, then do (no line breaks):

```
xindy -L english -C utf8 -I xindy -M samplexdy -t samplexdy.glg  
-o samplexdy.gls samplexdy.glo
```

otherwise, if you are using `samplexdy-mc.xdy`, then do (no line breaks):

```
xindy -I xindy -M samplexdy-mc -t samplexdy.glg -o samplexdy.gls  
samplexdy.glo
```

sampleutf8.tex This is another example that uses `xindy`. Unlike `makeindex`, `xindy` can cope with accented or non-Latin characters. This document uses UTF8 encoding. To create the document do:

```
latex sampleutf8  
makeglossaries sampleutf8  
latex sampleutf8
```

If you don't have Perl installed, you will have to call `xindy` explicitly instead of using `makeglossaries` (no line breaks):

```
xindy -L english -C utf8 -I xindy -M sampleutf8 -t sampleutf8.glg  
-o sampleutf8.gls sampleutf8.glo
```

If you remove the `xindy` option from `sampleutf8.tex` and do:

```
latex sampleutf8  
makeglossaries sampleutf8  
latex sampleutf8
```

you will see that the entries that start with a non-Latin character now appear in the symbols group, and the word "manoeuvre" is now after "manor" instead of before it. If you are unable to use `makeglossaries`, the call to `makeindex` is as follows (no line breaks):

```
makeindex -s sampleutf8.ist -t sampleutf8.glg -o sampleutf8.gls  
sampleutf8.glo
```

sampleaccsupp.tex This document uses the experimental `glossaries-accsupp` package. The symbol is set to the replacement text. Note that some PDF viewers don't use the accessibility support. Information about the `glossaries-accsupp` package can be found in [subsection 2.14](#).

1.2 Multi-Lingual Support

As from version 1.17, the `glossaries` package can now be used with `xindy` as well as `makeindex`. If you are writing in a language that uses accented characters or non-Latin characters it is recommended that you use `xindy` as `makeindex` is hard-coded for Latin languages. This means that you are not restricted to the A, ..., Z letter groups. If you want to use `xindy`, remember to use the `xindy` package option. For example:

```
\documentclass[frenchb]{article}  
\usepackage[utf8]{inputenc}  
\usepackage[T1]{fontenc}  
\usepackage{babel}  
\usepackage[xindy]{glossaries}
```

If you use an accented or other expandable character at the start of an entry name, you must place it in a group, or it will cause a problem for commands that convert the first letter to uppercase (e.g. `\Gls`) due to expansion issues. For example:

```
\newglossaryentry{elite}{name={{\'e}lite},  
description={select group or class}}
```

If you use the `inputenc` package, `makeglossaries` will pick up the encoding from the auxiliary file. If you use `xindy` explicitly instead of via `makeglossaries`, you may need to specify the encoding using the `-C` option. Read the `xindy` manual for further details.

1.2.1 Changing the Fixed Names

As from version 1.08, the `glossaries` package now has limited multi-lingual support, thanks to all the people who have sent me the relevant translations either via email or via `comp.text.tex`. However you must load `babel` or `polyglossia` *before* `glossaries` to enable this. Note that if `babel` is loaded and the `translator` package is detected on `TEX`'s path, then the `translator` package will be loaded automatically. However, it may not pick up on the required languages so, if the predefined text is not translated, you may need to explicitly load the `translator` package with the required languages. For example:

```
\usepackage[spanish]{babel}
\usepackage[spanish]{translator}
\usepackage{glossaries}
```

Alternatively, specify the language as a class option rather than a package option. For example:

```
\documentclass[spanish]{report}

\usepackage{babel}
\usepackage{glossaries}
```

If you want to use `ngerman` or `german` instead of `babel`, you will need to include the `translator` package to provide the translations. For example:

```
\documentclass[ngerman]{article}
\usepackage{ngerman}
\usepackage{translator}
\usepackage{glossaries}
```

The following languages are currently supported by the `glossaries` package:

Language	As from version
Brazilian Portuguese	1.17
Danish	1.08
Dutch	1.08
English	1.08
French	1.08
German	1.08
Irish	1.08
Italian	1.08
Hungarian	1.08
Polish	1.13
Spanish	1.08

The language dependent commands and `translator` keys used by the `glossaries` package are listed in [table 1](#).

Due to the varied nature of `glossaries`, it's likely that the predefined translations may not be appropriate. If you are using the `babel` package and do not have the `translator` package installed, you need to be familiar with the advice given in <http://www.tex.ac.uk/cgi-bin/texfaq2html?label=latextwords>. If you have the `translator` package installed, then you can provide your own dictionary with the necessary modifications (using `\deftranslation`) and load it

Table 1: Customised Text

Command Name	Translator Key Word	Purpose
\glossaryname	Glossary	Title of the main glossary.
\acronymname	Acronyms	Title of the list of acronyms (when used with package option <code>acronym</code>).
\entryname	Notation (glossaries)	Header for first column in the glossary (for 2, 3 or 4 column glossaries that support headers).
\descriptionname	Description (glossaries)	Header for second column in the glossary (for 2, 3 or 4 column glossaries that support headers).
\symbolname	Symbol (glossaries)	Header for symbol column in the glossary for glossary styles that support this option.
\pagelistname	Page List (glossaries)	Header for page list column in the glossary for glossaries that support this option.
\glssymbolsgroupname	Symbols (glossaries)	Header for symbols section of the glossary for glossary styles that support this option.
\glsnumbersgroupname	Numbers (glossaries)	Header for numbers section of the glossary for glossary styles that support this option.

using `\usedictionary`. Note that the dictionaries are loaded at the beginning of the document, so it won't have any effect if you put `\deftranslation` in the preamble. It should be put in your personal dictionary instead. See the translator documentation for further details.

If you are using `babel` and don't want to use the translator interface, you can suppress it using the package option `translate=false`, and either load `glossaries-babel` after `glossaries` or specify your own translations. For example:

```
\documentclass[british]{article}

\usepackage{babel}
\usepackage[translate=false]{glossaries}
\usepackage{glossaries-babel}

or:

\documentclass[british]{article}

\usepackage{babel}
\usepackage[translate=false]{glossaries}

\addto\captionsbritish{%
    \renewcommand*{\glossaryname}{List of Terms}%
    \renewcommand*{\acronymname}{List of Acronyms}%
    \renewcommand*{\entryname}{Notation}%
    \renewcommand*{\descriptionname}{Description}%
    \renewcommand*{\symbolname}{Symbol}%
    \renewcommand*{\pagelistname}{Page List}%
    \renewcommand*{\glssymbolsgroupname}{Symbols}%
    \renewcommand*{\glsnumbersgroupname}{Numbers}%
}
```

If you are using `polyglossia` instead of `babel`, `glossaries-polyglossia` will automatically be loaded unless you specify the package option `translate=false`.

Note that `xindy` provides much better multi-lingual support than `makeindex`, so it's recommended that you use `xindy` if you have glossary entries that contain accented characters or non-Roman letters. See [subsubsection 2.8.2](#) for further details.

1.3 Generating the Associated Glossary Files

In order to generate a sorted glossary with compact location lists, it is necessary to use an external indexing application as an intermediate step. It is this application that creates the file containing the code that typesets the glossary. If this step is omitted, the glossaries will not appear in your document. The two indexing applications that are most commonly used with L^AT_EX are `makeindex` and `xindy`. As from version 1.17, the `glossaries` package can be used with either of these applications. Previous versions were designed to be used with `makeindex` only. Note that `xindy` has much better multi-lingual support than `makeindex`, so `xindy` is recommended if you're not writing in English. Commands that only have an effect when `xindy` is used are described in [subsubsection 2.8.2](#).

The `glossaries` package comes with the Perl script `makeglossaries` which will run `makeindex` or `xindy` on all the glossary files using a customized style

file (which is created by `\makeglossaries`). See [subsubsection 1.3.1](#) for further details. Perl is stable, cross-platform, open source software that is used by a number of TeX-related applications. Further information is available at <http://www.perl.org/about.html>. However, whilst it is strongly recommended that you use the `makeglossaries` script, it is possible to use the `glossaries` package without having Perl installed. In which case, if you have used the `xindy` package option, you will need to use `xindy` (see [subsubsection 1.3.2](#)), otherwise you will need to use `makeindex` (see [subsubsection 1.3.3](#)). Note that some commands and package options have no effect if you don't use `makeglossaries`. These are listed in [table 2](#).

Note that if any of your entries use an entry that is not referenced outside the glossary, you will need to do an additional `makeglossaries`, `makeindex` or `xindy` run, as appropriate. For example, suppose you have defined the following entries:

```
\newglossaryentry{citrusfruit}{name={citrus fruit},
description={fruit of any citrus tree. (See also
\gls{orange})} }

\newglossaryentry{orange}{name={orange},
description={an orange coloured fruit.}}
```

and suppose you have `\gls{citrusfruit}` in your document but don't reference the `orange` entry, then the `orange` entry won't appear in your glossary until you first create the glossary and then do another run of `makeglossaries`, `makeindex` or `xindy`. For example, if the document is called `myDoc.tex`, then you must do:

```
latex myDoc
makeglossaries myDoc
latex myDoc
makeglossaries myDoc
latex myDoc
```

Likewise, an additional `makeglossaries` and L^AT_EX run may be required if the document pages shift with re-runs. For example, if the page numbering is not reset after the table of contents, the insertion of the table of contents on the second L^AT_EX run may push glossary entries across page boundaries, which means that the number lists in the glossary may need updating.

The examples in this document assume that you are accessing `makeglossaries`, `xindy` or `makeindex` via a terminal. Windows users can use the MSDOS Prompt which is usually accessed via the Start→All Programs menu or Start→All Programs→Accessories menu. Alternatively, your text editor may have the facility to create a function that will call the required application. See your editor's user manual for further details.

If any problems occur, remember to check the transcript files (e.g. `.glg` or `.alg`) for messages.

1.3.1 Using the `makeglossaries` Perl Script

The `makeglossaries` script picks up the relevant information from the auxiliary (`.aux`) file and will either call `xindy` or `makeindex`, depending on the supplied information. Therefore, you only need to pass the document's name without the extension to `makeglossaries`. For example, if your document is called `myDoc.tex`, type the following in your terminal:

Table 2: Commands and package options that have no effect when using `xindy` or `makeindex` explicitly

Command or Package Option	<code>makeindex</code>	<code>xindy</code>
<code>order=letter</code>	use -l	use -M <code>ord/letorder</code>
<code>order=word</code>	default	default
<code>xindy={language=<lang>,codename=<code>}</code>	N/A	use -L <code><lang></code> -C <code><code></code>
<code>\GlsSetXdyLanguage{<lang>}</code>	N/A	use -L <code><lang></code>
<code>\GlsSetXdyCodePage{<code>}</code>	N/A	use -C <code><code></code>

```
latex myDoc
makeglossaries myDoc
latex myDoc
```

You may need to explicitly load `makeglossaries` into Perl:

```
perl makeglossaries myDoc
```

There is a batch file called `makeglossaries.bat` which does this for Windows users, but you must have Perl installed to be able to use it.

The `makeglossaries` script contains POD (Plain Old Documentation). If you want, you can create a man page for `makeglossaries` using `pod2man` and move the resulting file onto the man path.

1.3.2 Using `xindy` explicitly

If you want to use `xindy` to process the glossary files, you must make sure you have used the `xindy` package option:

```
\usepackage[xindy]{glossaries}
```

This is required regardless of whether you use `xindy` explicitly or whether it's called implicitly via `makeglossaries`. This causes the glossary entries to be written in raw `xindy` format, so you need to use `-I xindy` not `-I tex`.

To run `xindy` type the following in your terminal (all on one line):

```
xindy -L <language> -C <encoding> -I xindy -M <style> -t <base>.glg
-o <base>.gls <base>.glo
```

where `<language>` is the required language name, `<encoding>` is the encoding, `<base>` is the name of the document without the `.tex` extension and `<style>` is the name of the `xindy` style file without the `.xdy` extension. The default name for this style file is `<base>.xdy` but can be changed via `\setStyleFile{<style>}`. You may need to specify the full path name depending on the current working directory. If any of the file names contain spaces, you must delimit them using double-quotes.

For example, if your document is called `myDoc.tex` and you are using UTF8 encoding in English, then type the following in your terminal:

```
xindy -L english -C utf8 -I xindy -M myDoc -t myDoc.glg -o myDoc.gls myDoc.glo
```

Note that this just creates the main glossary. You need to do the same for each of the other glossaries (including the list of acronyms if you have used the acronym

package option), substituting `.glg`, `.gls` and `.glo` with the relevant extensions. For example, if you have used the `acronym` package option, then you would need to do:

```
xindy -L english -C utf8 -I xindy -M myDoc -t myDoc.alg -o myDoc.acr myDoc.acn
```

For additional glossaries, the extensions are those supplied when you created the glossary with `\newglossary`.

Note that if you use `makeglossaries` instead, you can replace all those calls to `xindy` with just one call to `makeglossaries`:

```
makeglossaries myDoc
```

Note also that some commands and package options have no effect if you use `xindy` explicitly instead of using `makeglossaries`. These are listed in [table 2](#).

1.3.3 Using `makeindex` explicitly

If you want to use `makeindex` explicitly, you must make sure that you haven't used the `xindy` package option or the glossary entries will be written in the wrong format. To run `makeindex`, type the following in your terminal:

```
makeindex -s <style>.ist -t <base>.glg -o <base>.gls <base>.glo
```

where `<base>` is the name of your document without the `.tex` extension and `<style>.ist` is the name of the `makeindex` style file. By default, this is `<base>.ist`, but may be changed via `\setStyleFile{<style>}`. Note that there are other options, such as `-l` (letter ordering). See the `makeindex` manual for further details.

For example, if your document is called `myDoc.tex`, then type the following at the terminal:

```
makeindex -s myDoc.ist -t myDoc.glg -o myDoc.gls myDoc.glo
```

Note that this only creates the main glossary. If you have additional glossaries (for example, if you have used the `acronym` package option) then you must call `makeindex` for each glossary, substituting `.glg`, `.gls` and `.glo` with the relevant extensions. For example, if you have used the `acronym` package option, then you need to type the following in your terminal:

```
makeindex -s myDoc.ist -t myDoc.alg -o myDoc.acr myDoc.acn
```

For additional glossaries, the extensions are those supplied when you created the glossary with `\newglossary`.

Note that if you use `makeglossaries` instead, you can replace all those calls to `makeindex` with just one call to `makeglossaries`:

```
makeglossaries myDoc
```

Note also that some commands and package options have no effect if you use `makeindex` explicitly instead of using `makeglossaries`. These are listed in [table 2](#).

1.3.4 Note to Front-End and Script Developers

The information needed to determine whether to use `xindy` or `makeindex` and the information needed to call those applications is stored in the auxiliary file. This information can be gathered by a front-end, editor or script to make the glossaries where appropriate. This section describes how the information is stored in the auxiliary file.

The file extensions used by each defined glossary are given by

```
\@newglossary{\langle label \rangle}{\langle log \rangle}{\langle out-ext \rangle}{\langle in-ext \rangle}
```

where $\langle in-ext \rangle$ is the extension of the *indexing application's* input file (the output file from the `glossaries` package's point of view), $\langle out-ext \rangle$ is the extension of the *indexing application's* output file (the input file from the `glossaries` package's point of view) and $\langle log \rangle$ is the extension of the indexing application's transcript file. The label for the glossary is also given for information purposes only, but is not required by the indexing applications. For example, the information for the main glossary is written as:

```
\@newglossary{main}{glg}{gls}{glo}
```

The indexing application's style file is specified by

```
\@istfilename{\langle filename \rangle}
```

The file extension indicates whether to use `makeindex` (.ist) or `xindy` (.xdy). Note that the glossary information is formatted differently depending on which indexing application is supposed to be used, so it's important to call the correct one.

Word or letter ordering is specified by:

```
\@glsorder{\langle order \rangle}
```

where $\langle order \rangle$ can be either `word` or `letter`.

If `xindy` should be used, the language and code page for each glossary is specified by

```
\@xdylanguage{\langle label \rangle}{\langle language \rangle}\@gls@codepage{\langle label \rangle}{\langle code \rangle}
```

where $\langle label \rangle$ identifies the glossary, $\langle language \rangle$ is the root language (e.g. `english`) and $\langle code \rangle$ is the encoding (e.g. `utf8`). These commands are omitted if `makeindex` should be used.

1.4 Troubleshooting

The `glossaries` package comes with a minimal file called `minimalgls.tex` which can be used for testing. This should be located in the `samples` subdirectory (folder) of the `glossaries` documentation directory. The location varies according to your operating system and `TEX` installation. For example, on my Linux partition it can be found in `/usr/local/texlive/2008/texmf-dist/doc/latex/glossaries/`. Further information on debugging `LATEX` code is available at <http://theoval.cmp.uea.ac.uk/~nlct/latex/minexample/>.

Below is a list of the most frequently asked questions. For other queries, consult the glossaries FAQ at <http://theoval.cmp.uea.ac.uk/~nlct/latex/packages/faq/glossariesfaq.html>.

1. **Q.** I get the error message:

```
Missing \begin{document}
```

A. Check you are using an up to date version of the `xkeyval` package.

2. **Q.** I've used the `smallcaps` option, but the acronyms are displayed in normal sized upper case letters.

A. The `smallcaps` package option uses `\textsc` to typeset the acronyms. This command converts lower case letters to small capitals, while upper case letters remain their usual size. Therefore you need to specify the acronym in lower case letters.

3. **Q.** My acronyms won't break across a line when they're expanded.

A. PDF^AT_EX can break hyperlinks across a line, but L^AT_EX can't. If you can't use PDF^AT_EX then disable the first use links using the package option `hyperfirst=false`.

4. **Q.** How do I change the font that the acronyms are displayed in?

A. The easiest way to do this is to specify the `smaller` package option and redefine `\acronymfont` to use the required typesetting command. For example, suppose you would like the acronyms displayed in a sans-serif font, then you can do:

```
\usepackage[smaller]{glossaries}
\renewcommand*\acronymfont[1]{\textsf{\#1}}
```

5. **Q.** How do I change the font that the acronyms are displayed in on first use?

A. The easiest way to do this is to specify the `smaller` package option and redefine `\firstacronymfont` to use the required command. Note that if you don't want the acronym on subsequent use to use `\textsmaller`, you will also need to redefine `\acronymfont`, as above. For example to make the acronym emphasized on first use, but use the surrounding font for subsequent use, you can do:

```
\usepackage[smaller]{glossaries}
\renewcommand*\firstacronymfont[1]{\emph{\#1}}
\renewcommand*\acronymfont[1]{\#1}
```

6. **Q.** I don't have Perl installed, do I have to use `makeglossaries`?

A. Although it is strongly recommended that you use `makeglossaries`, you don't have to use it. For further details, read [subsubsection 1.3.2](#) or [subsubsection 1.3.3](#), depending on whether you want to use `xindy` or `makeindex`.

7. **Q.** I'm used to using the glossary package: are there any instructions on migrating from the glossary package to the glossaries package?

A. Read the file `glossary2glossaries.pdf` which should be available from the same location as this document.

8. **Q.** I'm using `babel` but the fixed names haven't been translated.

A. The `glossaries` package currently only supports the following languages: Brazilian Portuguese, Danish, Dutch, English, French, German, Irish, Italian, Hungarian, Polish and Spanish. If you want to add another language, send me the translations, and I'll add them to the next version.

If you are using one of the above languages, but the text hasn't been translated, try adding the `translator` package with the required languages explicitly (before you load the `glossaries` package). For example:

```
\usepackage[ngerman]{babel}
\usepackage[ngerman]{translator}
\usepackage{glossaries}
```

Alternatively, you can add the language as a global option to the class file. Check the `translator` package documentation for further details.

9. **Q.** My acronyms contain strange characters when I use commands like `\acrlong`.

A. Switch off the sanitization:

```
\usepackage[sanitize=none]{glossaries}
```

and protect fragile commands.

10. **Q.** My glossaries haven't appeared.

A. Remember to do the following:

- Add `\makeglossaries` to the document preamble.
- Use either `\printglossary` for each glossary that has been defined or `\printglossaries`.
- Use the commands listed in [subsection 2.4](#), [subsection 2.5](#) or [subsection 2.6](#) for each entry that you want to appear in the glossary.
- Run `LATEX` on your document, then run `makeglossaries`, then run `LATEX` on your document again. If you want the glossaries to appear in the table of contents, you will need an extra `LATEX` run. If any of your entries cross-reference an entry that's not referenced in the main body of the document, you will need to run `makeglossaries` (see [subsection 1.3](#)) after the second `LATEX` run, followed by another `LATEX` run.

Check the log files (`.log`, `.glg` etc) for any warnings.

11. **Q.** It is possible to change the rules used to sort the glossary entries?

A. If it's for an individual entry, then you can use the entry's `sort` key to sort it according to a different term. If it's for the entire alphabet, then you will need to use `xindy` (instead of `makeindex`) and use an appropriate `xindy` language module. Writing `xindy` modules or styles is beyond the scope of this manual. Further information about `xindy` can be found at the [Xindy Web Site](#).² There is also a link to the `xindy` mailing list from that site.

²<http://xindy.sourceforge.net/>

2 Overview of Main User Commands

2.1 Package Options

The `glossaries` package options are as follows:

nowarn This suppresses all warnings generated by the `glossaries` package.

nomain This suppresses the creation of the main glossary. Note that if you use this option, you must create another glossary in which to put all your entries (either via the `acronym` package option described below or via `\newglossary` described in [subsection 2.9](#)).

toc Add the glossaries to the table of contents. Note that an extra L^AT_EX run is required with this option.

numberline When used with `toc`, this will add `\numberline{}` in the final argument of `\addcontentsline`. This will align the table of contents entry with the numbered section titles. Note that this option has no effect if the `toc` option is omitted. If `toc` is used without `numberline`, the title will be aligned with the section numbers rather than the section titles.

acronym This creates a new glossary with the label `acronym`. This is equivalent to:

```
\newglossary[alg]{acronym}{acr}{acn}{\acronymname}
```

If the `acronym` package option is used, `\acronymtype` is set to `acronym` otherwise it is set to `main`.³ Entries that are defined using `\newacronym` are placed in the glossary whose label is given by `\acronymtype`, unless another glossary is explicitly specified.

acronymlists By default, only the `acronym` glossary is considered to be a list of acronyms. If you have other lists of acronyms, you can specify them as a comma-separated list in the value of `acronymlists`. For example, if you want the `main` glossary to also contain a list of acronyms, you can do:

```
\usepackage[acronym,acronymlists={main}]{glossaries}
```

No check is performed to determine if the listed glossaries exist, so you can add glossaries you haven't defined yet. For example:

```
\usepackage[acronym,acronymlists={main,acronym2}]{glossaries}
\newglossary[alg2]{acronym2}{acr2}{acn2}{Statistical Acronyms}
```

section This is a $\langle key \rangle = \langle value \rangle$ option. Its value should be the name of a sectional unit (e.g. chapter). This will make the glossaries appear in the named sectional unit, otherwise each glossary will appear in a chapter, if chapters exist, otherwise in a section. Unnumbered sectional units will be used by default. Example:

```
\usepackage[section=subsection]{glossaries}
```

³Actually it sets `\acronymtype` to `\glsdefaulttype` if the `acronym` package option is not used, but `\glsdefaulttype` usually has the value `main`.

You can omit the value if you want to use sections, i.e.

```
\usepackage[section]{glossaries}
```

is equivalent to

```
\usepackage[section=section]{glossaries}
```

You can change this value later in the document using

```
\setglossarysection
```

```
\setglossarysection{\langle name \rangle}
```

where $\langle name \rangle$ is the sectional unit.

The start of each glossary adds information to the page header via

```
\glossarymark
```

```
\glossarymark{\langle glossary title \rangle}
```

This defaults to `\@mkboth`, but you may need to redefine it. For example, to only change the right header:

```
\renewcommand{\glossarymark}[1]{\markright{\#1}}
```

or to prevent it from changing the headers:

```
\renewcommand{\glossarymark}[1]{}{}
```

Occasionally you may find that another package defines `\cleardoublepage` when it is not required. This may cause an unwanted blank page to appear before each glossary. This can be fixed by redefining `\glsclearpage`:

```
\renewcommand*{\glsclearpage}{\clearpage}
```

numberedsection The glossaries are placed in unnumbered sectional units by default, but this can be changed using `numberedsection`. This option can take three possible values: `false` (no number, i.e. use starred form), `nolabel` (numbered, i.e. unstarred form, but not labelled) and `autolabel` (numbered with automatic labelling). If `numberedsection=autolabel` is used, each glossary is given a label that matches the glossary type, so the main (default) glossary is labelled `main`, the list of acronyms is labelled `acronym`⁴ and additional glossaries are labelled using the value specified in the first mandatory argument to `\newglossary`. For example, if you load `glossaries` using:

```
\usepackage[section, numberedsection=autolabel]{glossaries}
```

then each glossary will appear in a numbered section, and can be referenced using something like:

The main glossary is in section~\ref{main} and the list of acronyms is in section~\ref{acronym}.

⁴if the `acronym` option is used, otherwise the list of acronyms is the main glossary

If you can't decide whether to have the acronyms in the main glossary or a separate list of acronyms, you can use `\acronymtype` which is set to `main` if the `acronym` option is not used and is set to `acronym` if the `acronym` option is used. For example:

```
The list of acronyms is in section~\ref{\acronymtype}.
```

As from version 1.14, you can add a prefix to the label by redefining

```
\glsautoprefix
```

```
\glsautoprefix
```

For example:

```
\renewcommand*\glsautoprefix{glo:}
```

will add `glo:` to the automatically generated label, so you can then, for example, refer to the list of acronyms as follows:

```
The list of acronyms is in section~\ref{glo:\acronymtype}.
```

Or, if you are undecided on a prefix:

```
The list of acronyms is in section~\ref{\glsautoprefix\acronymtype}.
```

style This is a $\langle key \rangle = \langle value \rangle$ option. Its value should be the name of the glossary style to use. Predefined glossary styles are listed in [subsection 2.12](#).

nolong This prevents the `glossaries` package from automatically loading `glossary-long` (which means that the `longtable` package also won't be loaded). This reduces overhead by not defining unwanted styles and commands. Note that if you use this option, you won't be able to use any of the glossary styles defined in the `glossary-long` package.

nosuper This prevents the `glossaries` package from automatically loading `glossary-super` (which means that the `supertabular` package also won't be loaded). This reduces overhead by not defining unwanted styles and commands. Note that if you use this option, you won't be able to use any of the glossary styles defined in the `glossary-super` package.

nolist This prevents the `glossaries` package from automatically loading `glossary-list`. This reduces overhead by not defining unwanted styles. Note that if you use this option, you won't be able to use any of the glossary styles defined in the `glossary-list` package. Note that since the default style is `list`, you will also need to use the `style` option to set the style to something else.

notree This prevents the `glossaries` package from automatically loading `glossary-tree`. This reduces overhead by not defining unwanted styles. Note that if you use this option, you won't be able to use any of the glossary styles defined in the `glossary-tree` package.

nostyles This prevents all the predefined styles from being loaded. This option is provided in the event that the user has custom styles that are not dependent on the styles provided by the `glossaries` package. Note that if you use this option, you can't use the `style` package option. Instead you must either use `\glossarystyle{<style>}` or the `style` key in the optional argument to `\printglossary`.

nonumberlist This option will suppress the associated number lists in the `glossaries` (see also [subsection 2.3](#)).

counter This is a `<key>=<value>` option. The value should be the name of the default counter to use in the number lists.

sanitize This is a `<key>=<value>` option whose value is also a `<key>=<value>` list. By default, the `glossaries` package sanitizes the values of the `name`, `description` and `symbol` keys used when defining a new glossary entry. This means that you can use fragile commands in those keys, but it may lead to unexpected results if you try to display these values within the document text. This sanitization can be switched off using the `sanitize` package option. (See [subsection 4.2](#) and [subsection 4.7](#) for further details.) For example, to switch off the sanitization for the `description` and `name` keys, but not for the `symbol` key, do:

```
\usepackage[sanitize={name=false,description=false,%
symbol=true}]{glossaries}
```

You can use `sanitize=none` as a shortcut for
`sanitize={name=false,description=false,symbol=false}`.

Note: this sanitization only applies to the `name`, `description` and `symbol` keys. It doesn't apply to any of the other keys (except the `sort` key which is always sanitized) so fragile commands contained in the value of the other keys must always be protected using `\protect`. Since the value of the `text` key is obtained from the `name` key, you will still need to protect fragile commands in the `name` key if you don't use the `text` key.

description This option changes the definition of `\newacronym` to allow a description. See [subsection 2.10](#) for further details.

footnote This option changes the definition of `\newacronym` and the way that acronyms are displayed. See [subsection 2.10](#) for further details.

smallcaps This option changes the definition of `\newacronym` and the way that acronyms are displayed. See [subsection 2.10](#) for further details.

smaller This option changes the definition of `\newacronym` and the way that acronyms are displayed. If you use this option, you will need to include the `relsize` package or otherwise define `\textsmaller` or redefine `\acronymfont`. See [subsection 2.10](#) for further details.

dua This option changes the definition of `\newacronym` so that acronyms are always expanded. See [subsection 2.10](#) for further details.

shortcuts This option provides shortcut commands for acronyms. See [subsection 2.10](#) for further details.

makeindex (Default) The glossary information and indexing style file will be written in `makeindex` format. If you use `maketables`, it will automatically detect that it needs to call `makeindex`. If you don't use `maketables`, you need to remember to use `makeindex` not `xindy`. The indexing style file will be given a `.ist` extension.

xindy The glossary information and indexing style file will be written in `xindy` format. If you use `maketables`, it will automatically detect that it needs to call `xindy`. If you don't use `maketables`, you need to remember to use `xindy` not `makeindex`. The indexing style file will be given a `.xdy` extension.

The `xindy` package option may additionally have a value that is a $\langle key \rangle = \langle value \rangle$ comma-separated list to override the language and codepage. For example:

```
\usepackage[xindy={language=english,codepage=utf8}]{glossaries}
```

You can also specify whether you want a number group in the glossary. This defaults to true, but can be suppressed. For example:

```
\usepackage[xindy={glsnumbers=false}]{glossaries}
```

See [subsection 2.8.2](#) for further details on using `xindy` with the `glossaries` package.

order This may take two values: `word` or `letter`. The default is word ordering. Note that this option has no effect if you don't use `maketables`.

translate This is a boolean option. The default is `true` if `babel`, `polyglossia` or `translator` have been loaded, otherwise the default value is `false`.

translate=true If `babel` has been loaded and the `translator` package is installed, `translator` will be loaded and the translations will be provided by the `translator` package interface. You can modify the translations by providing your own dictionary. If the `translator` package isn't installed and `babel` is loaded, the `glossaries-babel` package will be loaded and the translations will be provided using `babel`'s `\addto\caption<language>` mechanism. If `polyglossia` has been loaded, `glossaries-polyglossia` will be loaded.

translate=false Don't provide translations, even if `babel` or `polyglossia` has been loaded. You can then provide your own translations or explicitly load `glossaries-babel` or `glossaries-polyglossia`.

hyperfirst This is a boolean option that specifies whether each term has a hyperlink on first use. The default is `hyperfirst=true` (terms on first use have a hyperlink, unless explicitly suppressed using starred versions of commands such as `\gls*`).

2.2 Defining Glossary Entries

All glossary entries must be defined before they are used, so it is better to define them in the preamble to ensure this.⁵ However only those entries that occur in the document (using any of the commands described in subsection 2.4, subsection 2.5 or subsection 2.6) will appear in the glossary. Each time an entry is used in this way, a line is added to an associated glossary file (.glo), which then needs to be converted into a corresponding .gls file which contains the typeset glossary which is input by \printglossary or \printglossaries. The Perl script `makeglossaries` can be used to call `makeindex` or `xindy`, using a customised indexing style file, for each of the glossaries that are defined in the document. Note that there should be no need for you to explicitly edit or input any of these external files. See subsection 1.3 for further details.

\makeglossaries

The command `\makeglossaries` must be placed in the preamble in order to create the customised `makeindex` (.ist) or `xindy` (.xdy) style file and to ensure that glossary entries are written to the appropriate output files. If you omit `\makeglossaries` none of the glossaries will be created.

Note that some of the commands provided by the `glossaries` package must be placed before `\makeglossaries` as they are required when creating the customised style file. If you attempt to use those commands after `\makeglossaries` you will generate an error.

\noist

You can suppress the creation of the customised `xindy` or `makeindex` style file using `\noist`. Note that this command must be used before `\makeglossaries`.

The default name for the customised style file is given by `\jobname.ist` (for `makeindex`) or `\jobname.xdy` (for `xindy`). This name may be changed using:

\setStyleFile

where `\setStyleFile{<name>}` is the name of the style file without the extension. Note that this command must be used before `\makeglossaries`.

Each glossary entry is assigned a number list that lists all the locations in the document where that entry was used. By default, the location refers to the page number but this may be overridden using the `counter` package option. The default form of the location number assumes a full stop compositor (e.g. 1.2), but if your location numbers use a different compositor (e.g. 1-2) you need to set this using

\glsSetCompositor

\glsSetCompositor{<symbol>}

For example:

\glsSetCompositor{-}

Note that this command must be used before `\makeglossaries`.

If you use `xindy`, you can have a different compositor for page numbers starting with an uppercase alphabetical character using:

⁵The only preamble restriction on `\newglossaryentry` and `\newacronym` was removed in version 1.13, but the restriction remains for `\loadglsentries`.

```
\glsSetAlphaCompositor
```

```
\glsSetAlphaCompositor{\langle symbol \rangle}
```

Note that this command has no effect if you haven't used the `xindy` package option. For example, if you want number lists containing a mixture of A-1 and 2.3 style formats, then do:

```
\glsSetCompositor{.}
\glsSetAlphaCompositor{-}
```

See [subsection 2.3](#) for further information about number lists.

New glossary entries are defined using the command:

```
\newglossaryentry
```

```
\newglossaryentry{\langle label \rangle}{\langle key-val list \rangle}
```

The first argument, `\langle label \rangle`, must be a unique label with which to identify this entry. The second argument, `\langle key-val list \rangle`, is a `\langle key \rangle=\langle value \rangle` list that supplies the relevant information about this entry. There are two required fields: `name` and `description`, except for sub-entries where the `name` field may be omitted. Available fields are listed below:

name The name of the entry (as it will appear in the glossary). If this key is omitted and the `parent` key is supplied, this value will be the same as the parent's name.

```
\nopostdesc
```

description A brief description of this term (to appear in the glossary). Within this value, you can use `\nopostdesc` to suppress the description terminator for this entry. For example, if this entry is a parent entry that doesn't require a description, you can do `description={\nopostdesc}`. If you want a paragraph break in the description use `\glspar`. However, note that not all glossary styles support multi-line descriptions. If you are using one of the tabular-like glossary styles that permit multi-line descriptions, use `\newline` not `\backslash` if you want to force a line break.

```
\glspar
```

parent The label of the parent entry. Note that the parent entry must be defined before its sub-entries. See [subsubsection 2.2.2](#) for further details.

descriptionplural The plural form of the description (as passed to `\glsdisplay` and `\glsdisplayfirst` by `\glspl`, `\Glsp` and `\GLSp`). If omitted, the value is set to the same as the `description` key.

text How this entry will appear in the document text when using `\gls` (or one of its uppercase variants). If this field is omitted, the value of the `name` key is used.

first How the entry will appear in the document text the first time it is used with `\gls` (or one of its uppercase variants). If this field is omitted, the value of the `text` key is used.

plural How the entry will appear in the document text when using `\glspl` (or one of its uppercase variants). If this field is omitted, the value is obtained by appending `\glspluralsuffix` to the value of the `text` field. The default value of `\glspluralsuffix` is the letter "s".

firstplural How the entry will appear in the document text the first time it is used with `\glsp{}` (or one of its uppercase variants). If this field is omitted, the value is obtained from the `plural` key, if the `first` key is omitted, or by appending `\glspluralsuffix` to the value of the `first` field, if the `first` field is present.

Note: prior to version 1.13, the default value of `firstplural` was always taken by appending “`s`” to the `first` key, which meant that you had to specify both `plural` and `firstplural`, even if you hadn’t used the `first` key.

symbol This field is provided to allow the user to specify an associated symbol. If omitted, the value is set to `\relax`. Note that not all glossary styles display the symbol.

symbolplural This is the plural form of the symbol (as passed to `\glsdisplay` and `\glsdisplayfirst` by `\glsp{}`, `\Gls{}` and `\GLS{}`). If omitted, the value is set to the same as the `symbol` key.

sort This value indicates how `makeindex` or `xindy` should sort this entry. If omitted, the value is given by the `name` field.

type This specifies the label of the glossary in which this entry belongs. If omitted, the default glossary is assumed. The list of acronyms type is given by `\acronymtype` which will either be `main` or `acronym`, depending on whether the `acronym` package option was used.

user1, ..., **user6** Six additional keys provided for any additional information the user may want to specify. (For example, an associated dimension or an alternative plural.)

nonumberlist Suppress the number list for this entry.

see Cross-reference another entry. Using the `see` key will automatically add this entry to the glossary, but will not automatically add the cross-referenced entry. The referenced entry should be supplied as the value to this key. If you want to override the “`see`” tag, you can supply the new tag in square brackets before the label. For example `see=[see also]{anotherlabel}`. For further details, see [subsection 2.6](#).

Note that if the name starts with an accented letter or non-Latin character, you must group the accented letter, otherwise it will cause a problem for commands like `\Gls` and `\Glspl{}`. For example:

```
\newglossaryentry{elite}{name={{\'e}lite},  
description={select group or class}}
```

Note that the same applies if you are using the `inputenc` package:

```
\newglossaryentry{elite}{name={{\'e}lite},  
description={select group or class}}
```

Note that in both of the above examples, you will also need to supply the `sort` key if you are using `makeindex` whereas `xindy` is usually able to sort accented letters correctly.

2.2.1 Plurals

You may have noticed from above that you can specify the plural form when you define a term. If you omit this, the plural will be obtained by appending `\glspluralsuffix` to the singular form. This command defaults to the letter “s”. For example:

```
\newglossaryentry{cow}{name=cow,description={a fully grown  
female of any bovine animal}}
```

defines a new entry whose singular form is “cow” and plural form is “cows”. However, if you are writing in archaic English, you may want to use “kine” as the plural form, in which case you would have to do:

```
\newglossaryentry{cow}{name=cow,plural=kine,  
description={a fully grown female of any bovine animal}}
```

If you are writing in a language that supports multiple plurals (for a given term) then use the plural key for one of them and one of the user keys to specify the other plural form. For example:

```
\newglossaryentry{cow}{name=cow,description={a fully grown  
female of any bovine animal (plural cows, archaic plural kine)},  
user1={kine}}
```

You can then use `\glspl{cow}` to produce “cows” and `\glsuseri{cow}` to produce “kine”. You can, of course, define an easy to remember synonym. For example:

```
\let\glsaltp{\glsuseri}
```

Then you don’t have to remember which key you used to store the alternative plural.

If you are using a language that usually forms plurals by appending a different letter, or sequence of letters, you can redefine `\glspluralsuffix` as required. However, this must be done *before* the entries are defined. For languages that don’t form plurals by simply appending a suffix, all the plural forms must be specified using the plural key (and the `firstplural` key where necessary).

2.2.2 Sub-Entries

As from version 1.17, it is possible to specify sub-entries. These may be used to order the glossary into categories, in which case the sub-entry will have a different name to its parent entry, or it may be used to distinguish different definitions for the same word, in which case the sub-entries will have the same name as the parent entry. Note that not all glossary styles support hierarchical entries and may display all the entries in a flat format. Of the styles that support sub-entries, some display the sub-entry’s name whilst others don’t. Therefore you need to ensure that you use a suitable style. See [subsection 2.12](#) for a list of predefined styles.

Note that the parent entry will automatically be added to the glossary if any of its child entries are used in the document. If the parent entry is not referenced in the document, it will not have a number list.

Hierarchical Categories To arrange a glossary with hierarchical categories, you need to first define the category and then define the sub-entries using the relevant category entry as the value of the `parent` key. For example, suppose I want a glossary of mathematical symbols that are divided into Greek letters and Roman letters. Then I can define the categories as follows:

```
\newglossaryentry{greekletter}{name={Greek letters},
description={\nopostrdesc}}
```

```
\newglossaryentry{romanletter}{name={Roman letters},
description={\nopostrdesc}}
```

Note that in this example, the category entries don't need a description so I have set the descriptions to `\nopostrdesc`. This gives a blank description and suppresses the description terminator.

I can now define my sub-entries as follows:

```
\newglossaryentry{pi}{name={pi},
description={ratio of the circumference of a circle to the diameter},
parent=greekletter}

\newglossaryentry{C}{name=C,
description={Euler's constant},
parent=romanletter}
```

Homographs Sub-entries that have the same name as the parent entry, don't need to have the `name` key. For example, the word "glossary" can mean a list of technical words or a collection of glosses. In both cases the plural is "glossaries". So first define the parent entry:

```
\newglossaryentry{glossary}{name=glossary,
description={\nopostrdesc},
plural={glossaries}}
```

Again, the parent entry has no description, so the description terminator needs to be suppressed using `\nopostrdesc`.

Now define the two different meanings of the word:

```
\newglossaryentry{glossarylist}{
description={1) list of technical words},
sort={1},
parent={glossary}

\newglossaryentry{glossarycol}{
description={2) collection of glosses},
sort={2},
parent={glossary}}
```

Note that if I reference the parent entry, the location will be added to the parent's number list, whereas if I reference any of the child entries, the location will be added to the child entry's number list. Note also that since the sub-entries have the same name, the `sort` key is required.

In the above example, the plural form for both of the child entries is the same as the parent entry, so the `plural` key was not required for the child entries. However, if the sub-entries have different plurals, they will need to be specified. For example:

```

\newglossaryentry{bravo}{name={bravo},
description={\nopostdesc}},

\newglossaryentry{bravocry}{description={1) cry of approval (pl.\ bravos)},
sort={1},
plural={bravos},
parent=bravo}

\newglossaryentry{bravoruffian}{description={2) hired ruffian or
killer (pl.\ bravoes)},
sort={2},
plural={bravoes},
parent=bravo}

```

2.2.3 Loading Entries From a File

You can store all your glossary entry definitions in another file and use:

```
\loadglsentries
```

where `<filename>` is the name of the file containing all the `\newglossaryentry` commands. The optional argument `<type>` is the name of the glossary to which those entries should belong, for those entries where the `type` key has been omitted (or, more specifically, for those entries whose type has been specified by `\glsdefaulttype`, which is what `\newglossaryentry` uses by default). For example, suppose I have a file called `myentries.tex` which contains:

```

\newglossaryentry{perl}{type=main,
name={Perl},
description={A scripting language}}

\newglossaryentry{tex}{name={\TeX},
description={A typesetting language},sort={TeX}>

\newglossaryentry{html}{type=\glsdefaulttype,
name={html},
description={A mark up language}}

```

and suppose in my document preamble I use the command:

```
\loadglsentries[languages]{myentries}
```

then this will add the entries `tex` and `html` to the glossary whose type is given by `languages`, but the entry `perl` will be added to the main glossary, since it explicitly sets the type to `main`.

Note: if you use `\newacronym` (see [subsection 2.10](#)) the type is set as `type=\acronymtype` unless you explicitly override it. For example, if my file `myacronyms.tex` contains:

```
\newacronym{aca}{aca}{a contrived acronym}
```

then (supposing I have defined a new glossary type called `altacronym`)

```
\loadglsentries[altacronym]{myacronyms}
```

will add `aca` to the glossary type `acronym`, if the package option `acronym` has been specified, or will add `aca` to the glossary type `altacronym`, if the package option `acronym` is not specified.⁶ In this instance, it is better to change `myacronyms.tex` to:

```
\newacronym[type=\glsdefaulttype]{aca}{aca}{a contrived acronym}
```

and now

```
\loadglsentries[altacronym]{myacronyms}
```

will add `aca` to the glossary type `altacronym`, regardless of whether or not the package option `acronym` is used.

Note that only those entries that have been used in the text will appear in the relevant glossaries. Note also that `\loadglsentries` may only be used in the preamble.

2.3 Number lists

Each entry in the glossary has an associated *number list*. By default, these numbers refer to the pages on which that entry has been used (using any of the commands described in [subsection 2.4](#) and [subsection 2.5](#)). The number list can be suppressed using the `nonumberlist` package option, or an alternative counter can be set as the default using the `counter` package option. The number list is also referred to as the location list.

Both `makeindex` and `xindy` concatenate a sequence of 3 or more consecutive pages into a range. With `xindy` you can vary the minimum sequence length using `\GlsSetXdyMinRangeLength{\langle n \rangle}` where $\langle n \rangle$ is either an integer or the keyword `none` which indicates that there should be no range formation.

Note that `\GlsSetXdyMinRangeLength` must be used before `\makeglossaries` and has no effect if `\noist` is used.

With both `makeindex` and `xindy`, you can replace the separator and the closing number in the range using:

```
\glsSetSuffixF
```

```
\glsSetSuffixFF{\langle suffix \rangle}
```

```
\glsSetSuffixFF
```

where the former command specifies the suffix to use for a 2 page list and the latter specifies the suffix to use for longer lists. For example:

```
\glsSetSuffixF{f.}
\glsSetSuffixFF{ff.}
```

Note that if you use `xindy`, you will also need to set the minimum range length to 1 if you want to change these suffixes:

```
\GlsSetXdyMinRangeLength{1}
```

⁶This is because `\acronymtype` is set to `\glsdefaulttype` if the `acronym` package option is not used.

Note that if you use the `hyperref` package, you will need to use `\nohyperpage` in the suffix to ensure that the hyperlinks work correctly. For example:

```
\glsSetSuffixF{\nohyperpage{f.}}
\glsSetSuffixFF{\nohyperpage{ff.}}
```

Note that `\glsSetSuffixF` and `\glsSetSuffixFF` must be used before `\makeglossaries` and have no effect if `\noist` is used.

2.4 Links to Glossary Entries

Once you have defined a glossary entry using `\newglossaryentry`, you can refer to that entry in the document using one of the commands listed in this section. The text which appears at that point in the document when using one of these commands is referred to as the *link text* (even if there are no hyperlinks). The commands in this section also add a line to an external file that is used by `makeindex` or `xindy` to generate the relevant entry in the glossary. This information includes an associated location that is added to the number list for that entry. By default, the location refers to the page number. For further information on number lists, see [subsection 2.3](#).

It is strongly recommended that you don't use the commands defined in this section in the arguments of sectioning or caption commands.

The above warning is particularly important if you are using the `glossaries` package in conjunction with the `hyperref` package. Instead, use one of the commands listed in [subsection 2.7](#) (such as `\glsentrytext`) or provide an alternative via the optional argument to the sectioning/caption command. Examples:

```
\section{An overview of \glsentrytext{perl}}
\section[An overview of Perl]{An overview of \gls{perl}}
```

The way the link text is displayed depends on

```
\glstextformat{\text{}}
```

For example, to make all link text appear in a sans-serif font, do:

```
\renewcommand*\glstextformat[1]{\textsf{#1}}
```

Each entry has an associated conditional referred to as the first use flag. This determines whether `\gls`, `\glspl` (and their uppercase variants) should use the value of the first or `text` keys. Note that an entry can be used without affecting the first use flag (for example, when used with `\glslink`). See [subsection 2.11](#) for commands that unset or reset this conditional.

The command:

```
\glslink[<options>]{<label>}{<text>}
```

will place `\glstextformat{\text{}}` in the document at that point and add a line into the associated glossary file for the glossary entry given by `<label>`. If hyperlinks

are supported, $\langle text \rangle$ will be a hyperlink to the relevant line in the glossary. (Note that this command doesn't affect the first use flag: use `\glsdisp` instead.) The optional argument $\langle options \rangle$ must be a $\langle key \rangle=\langle value \rangle$ list which can take any of the following keys:

format This specifies how to format the associated location number for this entry in the glossary. This value is equivalent to the `makeindex` encap value, and (as with `\index`) the value needs to be the name of a command *without* the initial backslash. As with `\index`, the characters (and) can also be used to specify the beginning and ending of a number range. Again as with `\index`, the command should be the name of a command which takes an argument (which will be the associated location). Be careful not to use a declaration (such as `bfseries`) instead of a text block command (such as `textbf`) as the effect is not guaranteed to be localised. If you want to apply more than one style to a given entry (e.g. `bold` and `italic`) you will need to create a command that applies both formats, e.g.

```
\newcommand*{\textbfem}[1]{\textbf{\emph{#1}}}
```

and use that command.

In this document, the standard formats refer to the standard text block commands such as `\textbf` or `\emph` or any of the commands listed in [table 3](#).

If you use `xindy` instead of `makeindex`, you must specify any non-standard formats that you want to use with the `format` key using `\GlsAddXdyAttribute{\<name>}`. So if you use `xindy` with the above example, you would need to add:

```
\GlsAddXdyAttribute{textbfem}
```

Note that unlike `\index`, you can't have anything following the command name, such as an asterisk or arguments. If you want to cross-reference another entry, either use the `see` key when you define the entry or use `\glssee` (described in [subsection 2.6](#)).

If you are using hyperlinks and you want to change the font of the hyperlinked location, don't use `\hyperpage` (provided by the `hyperref` package) as the locations may not refer to a page number. Instead, the `glossaries` package provides number formats listed in [table 3](#).

Note that if the `\hyperlink` command hasn't been defined, the `hyper<xx>` formats are equivalent to the analogous `text<xx>` font commands (and `hyperemph` is equivalent to `emph`). If you want to make a new format, you will need to define a command which takes one argument and use that; for example, if you want the location number to be in a bold sans-serif font, you can define a command called, say, `\hyperbsf`:

```
\newcommand{\hyperbsf}[1]{\textbf{\hypersetup{font=bf}}}
```

Table 3: Predefined Hyperlinked Location Formats

<code>hyperrm</code>	serif hyperlink
<code>hypersf</code>	sans-serif hyperlink
<code>hypertt</code>	monospaced hyperlink
<code>hyperbf</code>	bold hyperlink
<code>hypermd</code>	medium weight hyperlink
<code>hyperit</code>	italic hyperlink
<code>hypersl</code>	slanted hyperlink
<code>hyperup</code>	upright hyperlink
<code>hypersc</code>	small caps hyperlink
<code>hyperemph</code>	emphasized hyperlink

and then use `hyperbsf` as the value for the `format` key. (See also [subsection 4.15](#).) Remember that if you use `xindy`, you will need to add this to the list of location attributes:

```
\GlsAddXdyAttribute{hyperbsf}
```

counter This specifies which counter to use for this location. This overrides the default counter used by this entry. (See also [subsection 2.3](#).)

hyper This is a boolean key which can be used to enable/disable the hyperlink to the relevant entry in the glossary. (Note that setting `hyper=true` will have no effect if `\hyperlink` has not been defined.) The default value is `hyper=true`.

There is also a starred version:

```
\glslink*[<options>]{<label>}{<text>}
```

which is equivalent to `\glslink`, except it sets `hyper=false`. Similarly, all the following commands described in this section also have a starred version that disables the hyperlink.

The command:

```
\gls [<options>]{<label>}[<insert>]
```

is the same as `\glslink`, except that the link text is determined from the values of the `text` and `first` keys supplied when the entry was defined using `\newglossaryentry`. If the entry has been marked as having been used, the value of the `text` key will be used, otherwise the value of the `first` key will be used. On completion, `\gls` will mark the entry's first use flag as used.

There are two uppercase variants:

```
\Gls [<options>]{<label>}[<insert>]
```

and

```
\GLS[⟨options⟩]{⟨label⟩}[⟨insert⟩]
```

which make the first letter of the link text or all the link text uppercase, respectively.

The final optional argument *⟨insert⟩*, allows you to insert some additional text into the link text. By default, this will append *⟨insert⟩* at the end of the link text, but this can be changed (see [subsubsection 2.4.1](#)).

The first optional argument *⟨options⟩* is the same as the optional argument to `\glslink`. As with `\glslink`, these commands also have a starred version that disable the hyperlink.

There are also analogous plural forms:

```
\glsp{⟨options⟩}{⟨label⟩}[⟨insert⟩]
```

```
\Glspl{⟨options⟩}{⟨label⟩}[⟨insert⟩]
```

```
\GLSpl{⟨options⟩}{⟨label⟩}[⟨insert⟩]
```

These determine the link text from the `plural` and `firstplural` keys supplied when the entry was first defined. As before, these commands also have a starred version that disable the hyperlink.

Note that `\glslink` doesn't use or affect the first use flag, nor does it use `\glsdisplay` or `\glsdisplayfirst` (see [subsubsection 2.4.1](#)). Instead, you can use:

```
\glsdisp{⟨options⟩}{⟨label⟩}{⟨link text⟩}
```

This behaves in the same way as `\gls`, except that it uses *⟨link text⟩* instead of the value of the `first` or `text` key. (Note that this command always sets *⟨insert⟩* to nothing.) This command affects the first use flag, and uses `\glsdisplay` or `\glsdisplayfirst`.

The command:

```
\glstext{⟨options⟩}{⟨label⟩}[⟨insert⟩]
```

is similar to `\gls` except that it always uses the value of the `text` key and does not affect the first use flag. Unlike `\gls`, the inserted text *⟨insert⟩* is always appended to the link text since `\glstext` doesn't use `\glsdisplay` or `\glsdisplayfirst`. (The same is true for all the following commands described in this section.)

There are also analogous commands:

```
\Gls{text}{⟨options⟩}{⟨label⟩}[⟨insert⟩]
```

```
\GLStext{text}{⟨options⟩}{⟨label⟩}[⟨insert⟩]
```

As before, these commands also have a starred version that disable the hyperlink.

The command:

```
\glsfirst
```

is similar to `\glstext` except that it always uses the value of the `first` key. Again, `\glsfirst` is always appended to the end of the link text and does not affect the first use flag.

There are also analogous commands:

```
\Glsfirst
```

```
\GLSfirst
```

As before, these commands also have a starred version that disable the hyperlink.

The command:

```
\glsplural
```

is similar to `\glstext` except that it always uses the value of the `plural` key. Again, `\glsplural` is always appended to the end of the link text and does not mark the entry as having been used.

There are also analogous commands:

```
\Glsplural
```

```
\GLSplural
```

As before, these commands also have a starred version that disable the hyperlink.

The command:

```
\glsfirstplural
```

is similar to `\glstext` except that it always uses the value of the `firstplural` key. Again, `\glsfirstplural` is always appended to the end of the link text and does not mark the entry as having been used.

There are also analogous commands:

```
\Glsfirstplural
```

```
\GLSfirstplural
```

As before, these commands also have a starred version that disable the hyperlink.

The command:

```
\glsname [⟨options⟩] {⟨label⟩} [⟨insert⟩]
```

is similar to `\glstext` except that it always uses the value of the `name` key. Again, `⟨insert⟩` is always appended to the end of the link text and does not mark the entry as having been used. Note: if you want to use this command and the `name` key contains commands, you will have to disable the **sanitization** of the `name` key and protect fragile commands.

There are also analogous commands:

```
\Glsname [⟨options⟩] {⟨text⟩} [⟨insert⟩]
```

```
\GLSname [⟨options⟩] {⟨text⟩} [⟨insert⟩]
```

As before, these commands also have a starred version that disable the hyperlink.

The command:

```
\glssymbol [⟨options⟩] {⟨label⟩} [⟨insert⟩]
```

is similar to `\glstext` except that it always uses the value of the `symbol` key. Again, `⟨insert⟩` is always appended to the end of the link text and does not mark the entry as having been used. Note: if you want to use this command and the `symbol` key contains commands, you will have to disable the **sanitization** of the `symbol` key and protect fragile commands.

There are also analogous commands:

```
\Glssymbol [⟨options⟩] {⟨text⟩} [⟨insert⟩]
```

```
\GLSsymbol [⟨options⟩] {⟨text⟩} [⟨insert⟩]
```

As before, these commands also have a starred version that disable the hyperlink.

The command:

```
\glsdesc [⟨options⟩] {⟨label⟩} [⟨insert⟩]
```

is similar to `\glstext` except that it always uses the value of the `description` key. Again, `⟨insert⟩` is always appended to the end of the link text and does not mark the entry as having been used. Note: if you want to use this command and the `description` key contains commands, you will have to disable the **sanitization** of the `description` key and protect fragile commands.

There are also analogous commands:

```
\Glsdesc [⟨options⟩] {⟨text⟩} [⟨insert⟩]
```

```
\GLSdesc [⟨options⟩] {⟨text⟩} [⟨insert⟩]
```

As before, these commands also have a starred version that disable the hyperlink.
The command:

```
\glsuseri [⟨options⟩] {⟨label⟩} [⟨insert⟩]
```

is similar to `\glstext` except that it always uses the value of the `user1` key. Again, `⟨insert⟩` is always appended to the end of the link text and does not mark the entry as having been used.

There are also analogous commands:

```
\Glsuseri [⟨options⟩] {⟨text⟩} [⟨insert⟩]
```

```
\GLSuseri [⟨options⟩] {⟨text⟩} [⟨insert⟩]
```

As before, these commands also have a starred version that disable the hyperlink.
Similarly for the other user keys:

```
\glsuserii [⟨options⟩] {⟨text⟩} [⟨insert⟩]
```

```
\Glsuserii [⟨options⟩] {⟨text⟩} [⟨insert⟩]
```

```
\GLSuserii [⟨options⟩] {⟨text⟩} [⟨insert⟩]
```

```
\glsuseriii [⟨options⟩] {⟨text⟩} [⟨insert⟩]
```

```
\Glsuseriii [⟨options⟩] {⟨text⟩} [⟨insert⟩]
```

```
\GLSuseriii [⟨options⟩] {⟨text⟩} [⟨insert⟩]
```

```
\glsuseriv [⟨options⟩] {⟨text⟩} [⟨insert⟩]
```

```
\Glsuseriv [⟨options⟩] {⟨text⟩} [⟨insert⟩]
```

```
\GLSuseriv [⟨options⟩] {⟨text⟩} [⟨insert⟩]
```

```
\glsuserv \glsuserv[⟨options⟩]{⟨text⟩}[⟨insert⟩]
```

```
\Glsuserv \Glsuserv[⟨options⟩]{⟨text⟩}[⟨insert⟩]
```

```
\GLSuserv \GLSuserv[⟨options⟩]{⟨text⟩}[⟨insert⟩]
```

```
\glsuservi \glsuservi[⟨options⟩]{⟨text⟩}[⟨insert⟩]
```

```
\Glsuservi \Glsuservi[⟨options⟩]{⟨text⟩}[⟨insert⟩]
```

```
\GLSuservi \GLSuservi[⟨options⟩]{⟨text⟩}[⟨insert⟩]
```

2.4.1 Changing the format of the link text

The format of the link text for `\gls`, `\glspl` and their uppercase variants is governed by two commands:

```
\glsdisplayfirst \glsdisplayfirst
```

which is used the first time a glossary entry is used in the text and

```
\glsdisplay \glsdisplay
```

which is used subsequently. Both commands take four arguments: the first is either the singular or plural form given by the `text`, `plural`, `first` or `firstplural` keys (set when the term was defined) depending on context; the second argument is the term's description (as supplied by the `description` or `descriptionplural` keys); the third argument is the symbol associated with the term (as supplied by the `symbol` or `symbolplural` keys) and the fourth argument is the additional text supplied in the final optional argument to `\gls` or `\glspl` (or their uppercase variants). The default definitions of `\glsdisplay` and `\glsdisplayfirst` simply print the first argument immediately followed by the fourth argument. The remaining arguments are ignored.

`\glslabel` If required, you can access the label for the given entry via `\glslabel`, so it is possible to use this label in the definition of `\glsdisplay` or `\glsdisplayfirst` to supply additional information using any of the commands described in [subsection 2.7](#), if required.

Note that `\glsdisplay` and `\glsdisplayfirst` are not used by `\glslink`. If you want to supply your own link text, you need to use `\glsdisp` instead.

For example, suppose you want a glossary of measurements and units, you can use the `symbol` key to store the unit:

```
\newglossaryentry{distance}{name=distance,
description={The length between two points},
symbol={km}}
```

and now suppose you want `\gls{distance}` to produce “distance (km)” on first use, then you can redefine `\glsdisplayfirst` as follows:

```
\renewcommand{\glsdisplayfirst}[4]{#1#4 (#3)}
```

Note that the additional text is placed after #1, so `\gls{distance}['s]` will produce “distance's (km)” rather than “distance (km)'s” which looks a bit odd (even though it may be in the context of “the distance (km) is measured between the two points” — but in this instance it would be better not to use a contraction).

Note also that all of the link text will be formatted according to `\glstextformat` (described earlier). So if you do, say:

```
\renewcommand{\glstextformat}[1]{\textbf{#1}}
\renewcommand{\glsdisplayfirst}[4]{#1#4 (#3)}
```

then `\gls{distance}` will produce “**distance (km)**”.

If you have multiple glossaries, changing `\glsdisplayfirst` and `\glsdisplay` will change the way entries for all of the glossaries appear when using the commands `\gls`, `\glspl`, their uppercase variants and `\glsdisp`. If you only want the change to affect entries for a given glossary, then you need to use

```
\defglsdisplay
```

and

```
\defglsdisplayfirst
```

instead of redefining `\glsdisplay` and `\glsdisplayfirst`.

Both `\defglsdisplay` and `\defglsdisplayfirst` take two arguments: the first (which is optional) is the glossary's label⁷ and the second is how the term should be displayed when it is invoked using commands `\gls`, `\glspl`, their uppercase variants and `\glsdisp`. This is similar to the way `\glsdisplayfirst` was redefined above.

For example, suppose you have created a new glossary called `notation` and you want to change the way the entry is displayed on first use so that it includes the symbol, you can do:

```
\defglsdisplayfirst[notation]{#1#4 (denoted #3)}
```

Now suppose you have defined an entry as follows:

```
\newglossaryentry{set}{type=notation,
name=set,
description={A collection of objects},
symbol={$\$\$}
}
```

⁷main for the main (default) glossary, `\acronymtype` for the list of acronyms, or the name supplied in the first mandatory argument to `\newglossary` for additional glossaries.

The first time you reference this entry using `\gls` it will be displayed as: “set (denoted *S*)” (similarly for `\glspl` and the uppercase variants).

Remember that if you use the `symbol` key, you need to use a glossary style that displays the symbol, as many of the styles ignore it. In addition, if you want either the description or symbol to appear in the link text, you will have to disable the `sanitization` of these keys and protect fragile commands.

2.4.2 Enabling and disabling hyperlinks to glossary entries

If you load the `hyperref` or `html` packages prior to loading the `glossaries` package, commands such as `\glslink` and `\gls`, described above, will automatically have hyperlinks to the relevant glossary entry, unless the `hyper` option has been set to `false`. You can disable or enable links using:

`\glsdisablehyper`

and

`\glsenablehyper`

respectively. The effect can be localised by placing the commands within a group. Note that you should only use `\glsenablehyper` if the commands `\hyperlink` and `\hypertarget` have been defined (for example, by the `hyperref` package).

You can disable just the first use links using the package option `hyperfirst=false`. Note that this option only affects commands that recognise the first use flag, for example `\gls`, `\glspl` and `\glsdisp` but not `\glslink`.

2.5 Adding an Entry to the Glossary Without Generating Text

It is possible to add a line in the glossary file without generating any text at that point in the document using:

`\glsadd[⟨options⟩]{⟨label⟩}`

This is similar to `\glslink`, only it doesn’t produce any text (so therefore, there is no `hyper` key available in `⟨options⟩` but all the other options that can be used with `\glslink` can be passed to `\glsadd`). For example, to add a page range to the glossary number list for the entry whose label is given by `set`:

```
\glsadd[format=()]{set}
Lots of text about sets spanning many pages.
\glsadd[format=)]{set}
```

To add all entries that have been defined, use:

`\glsaddall[⟨options⟩]`

The optional argument is the same as for `\glsadd`, except there is also a key `types` which can be used to specify which glossaries to use. This should be a comma

separated list. For example, if you only want to add all the entries belonging to the list of acronyms (specified by the glossary type `\acronymtype`) and a list of notation (specified by the glossary type `notation`) then you can do:

```
\glsaddall[types={\acronymtype,notation}]
```

2.6 Cross-Referencing Entries

There are several ways of cross-referencing entries in the glossary:

1. You can use commands such as `\gls` in the entries description. For example:

```
\newglossaryentry{apple}{name=apple,
description={firm, round fruit. See also \gls{pear}}}
```

Note that with this method, if you don't use the cross-referenced term in the glossary, you will need two runs of `makeglossaries`:

```
latex filename
makeglossaries filename
latex filename
makeglossaries filename
latex filename
```

2. As described in [subsection 2.2](#), you can use the `see` key when you define the entry. For example:

```
\newglossaryentry{MaclaurinSeries}{name={Maclaurin series},
description={Series expansion},
see={TaylorsTheorem}}
```

Note that in this case, the entry with the `see` key will automatically be added to the glossary, but the cross-referenced entry won't. You therefore need to ensure that you use the cross-referenced term with the commands described in [subsection 2.4](#) or [subsection 2.5](#).

You can optionally override the “see” tag using square brackets at the start of the `see` value. For example:

```
\newglossaryentry{MaclaurinSeries}{name={Maclaurin series},
description={Series expansion},
see=[see also]{TaylorsTheorem}}
```

3. After you have defined the entry, use

```
\glssee[\langle tag\rangle]{\langle label\rangle}{\langle xr label list\rangle}
```

where $\langle xr label list\rangle$ is a comma-separated list of entry labels to be cross-referenced, $\langle label\rangle$ is the label of the entry doing the cross-referencing and $\langle tag\rangle$ is the “see” tag. For example:

```
\glssee[see also]{series}{FourierSeries,TaylorsTheorem}
```

Note that this automatically adds the entry given by $\langle label \rangle$ to the glossary but doesn't add the cross-referenced entries (specified by $\langle xr label list \rangle$) to the glossary.

In both cases 2 and 3 above, the cross-referenced information appears in the number list, whereas in case 1, the cross-referenced information appears in the description. In cases 2 and 3, the default text for the “see” tag is given by `\seename`.

2.7 Using Glossary Terms Without Links

The commands described in this section display entry details without adding any information to the glossary. They don't use `\glstextformat`, they don't have any optional arguments, they don't affect the first use flag and, apart from `\glshyperlink`, they don't produce hyperlinks.

`\glsentryname` `\glsentryname{\langle label \rangle}`

`\Glsentryname` `\Glsentryname{\langle label \rangle}`

These commands display the name of the glossary entry given by $\langle label \rangle$, as specified by the `name` key. `\Glsentryname` makes the first letter uppercase.

`\glsentrytext` `\glsentrytext{\langle label \rangle}`

`\Glsentrytext` `\Glsentrytext{\langle label \rangle}`

These commands display the subsequent use text for the glossary entry given by $\langle label \rangle$, as specified by the `text` key. `\Glsentrytext` makes the first letter uppercase.

`\glsentryplural` `\glsentryplural{\langle label \rangle}`

`\Glsentryplural` `\Glsentryplural{\langle label \rangle}`

These commands display the subsequent use plural text for the glossary entry given by $\langle label \rangle$, as specified by the `plural` key. `\Glsentryplural` makes the first letter uppercase.

`\glsentryfirst` `\glsentryfirst{\langle label \rangle}`

`\Glsentryfirst` `\Glsentryfirst{\langle label \rangle}`

These commands display the first use text for the glossary entry given by $\langle label \rangle$, as specified by the `first` key. `\Glsentryfirst` makes the first letter uppercase.

`\glsentryfirstplural`

```
\glsentryfirstplural{\langle label \rangle}
```

`\Glsentryfirstplural`

```
\Glsentryfirstplural{\langle label \rangle}
```

These commands display the plural form of the first use text for the glossary entry given by $\langle label \rangle$, as specified by the `firstplural` key. `\Glsentryfirstplural` makes the first letter uppercase.

`\glsentrydesc`

```
\glsentrydesc{\langle label \rangle}
```

`\Glsentrydesc`

```
\Glsentrydesc{\langle label \rangle}
```

These commands display the description for the glossary entry given by $\langle label \rangle$. `\Glsentrydesc` makes the first letter uppercase.

`\glsentrydescplural`

```
\glsentrydescplural{\langle label \rangle}
```

`\Glsentrydescplural`

```
\Glsentrydescplural{\langle label \rangle}
```

These commands display the plural description for the glossary entry given by $\langle label \rangle$. `\Glsentrydescplural` makes the first letter uppercase.

`\glsentrysymbol`

```
\glsentrysymbol{\langle label \rangle}
```

`\Glsentrysymbol`

```
\Glsentrysymbol{\langle label \rangle}
```

These commands display the symbol for the glossary entry given by $\langle label \rangle$. `\Glsentrysymbol` makes the first letter uppercase.

`\glsentrysymbolplural`

```
\glsentrysymbolplural{\langle label \rangle}
```

`\Glsentrysymbolplural`

```
\Glsentrysymbolplural{\langle label \rangle}
```

These commands display the plural symbol for the glossary entry given by $\langle label \rangle$. `\Glsentrysymbolplural` makes the first letter uppercase.

`\glsentryuseri`

```
\glsentryuseri{\langle label \rangle}
```

\Glsentryuseri	\Glsentryuseri{\langle label \rangle}
\glsentryuserii	\glsentryuserii{\langle label \rangle}
\Glsentryuserii	\Glsentryuserii{\langle label \rangle}
\glsentryuseriii	\glsentryuseriii{\langle label \rangle}
\Glsentryuseriii	\Glsentryuseriii{\langle label \rangle}
\glsentryuseriv	\glsentryuseriv{\langle label \rangle}
\Glsentryuseriv	\Glsentryuseriv{\langle label \rangle}
\glsentryuserserv	\glsentryuserserv{\langle label \rangle}
\Glsentryuserserv	\Glsentryuserserv{\langle label \rangle}
\glsentryuserservi	\glsentryuserservi{\langle label \rangle}
\Glsentryuserservi	\Glsentryuserservi{\langle label \rangle}

These commands display the value of the user keys for the glossary entry given by *\langle label \rangle*.

\glshyperlink	\glshyperlink[\langle link text \rangle]{\langle label \rangle}
---------------	---

This command provides a hyperlink to the glossary entry given by *\langle label \rangle* **but does not add any information to the glossary file**. The link text is given by \glsentryname{\langle label \rangle} by default, but can be overridden using the optional argument.

If you use `\glshyperlink`, you need to ensure that the relevant entry has been added to the glossary using any of the commands described in subsection 2.4 or subsection 2.5 otherwise you will end up with a broken link.

For further information see subsubsection 4.10.2.

2.8 Displaying a glossary

`\printglossaries` The command `\printglossaries` will display all the glossaries in the order in which they were defined. Note that no glossaries will appear until you have either used the Perl script `makeglossaries` or have directly used `makeindex` or `xindy` (as described in subsection 1.3). If the glossary still does not appear after you re-L^AT_EX your document, check the `makeindex/xindy` log files to see if there is a problem. Remember that you also need to use the command `\makeglossaries` in the preamble to enable the glossaries.

An individual glossary can be displayed using:

```
\printglossary[<options>]
```

where `<options>` is a `<key>=<value>` list of options. The following keys are available:

type The value of this key specifies which glossary to print. If omitted, the default glossary is assumed. For example, to print the list of acronyms:

```
\printglossary[type=\acronymtype]
```

title This is the glossary's title (overriding the title specified when the glossary was defined).

toctitle This is the title to use for the table of contents (if the `toc` package option has been used). It may also be used for the page header, depending on the page style. If omitted, the glossary title is used.

style This specifies which glossary style to use for this glossary, overriding the effect of the `style` package option or `\glossarystyle`.

numberedsection This specifies whether to use a numbered section for this glossary, overriding the effect of the `numberedsection` package option. This key has the same syntax as the `numberedsection` package option, described in subsection 2.1.

nonumberlist Unlike the package option of the same name, this key is a boolean key. If true (`nonumberlist=true`) the numberlist is suppressed for this glossary. If false (`nonumberlist=false`) the numberlist is displayed for this glossary. If no value is supplied, true is assumed.

`\glossarypreamble` Information can be added to the start of the glossary (after the title and before the main body of the glossary) by redefining `\glossarypreamble`. For example:

```
\renewcommand{\glossarypreamble}{Numbers in italic indicate  
primary definitions.}
```

This needs to be done before the glossary is displayed using `\printglossaries` or `\printglossary`. Note that if you want a different preamble for each glossary, you will need to use a separate `\printglossary` for each glossary and change the definition of `\glossarypreamble` between each glossary. For example:

```
\renewcommand{\glossarypreamble}{Numbers in italic indicate
primary definitions.}
\printglossary
\renewcommand{\glossarypreamble}{}
\printglossary[type=acronym]
```

Alternatively, you can do something like:

```
\renewcommand{\glossarypreamble}{Numbers in italic indicate
primary definitions.\gdef\glossarypreamble{}}
\printglossaries
```

which will print the preamble text for the first glossary and change the preamble to do nothing for subsequent glossaries. (Note that `\gdef` is required as the glossary is placed within a group.)

There is an analogous command called `\glossarypostamble` which is placed at the end of each glossary.

2.8.1 Changing the way the entry name appears in the glossary

`\glsnamefont` Within each glossary, each entry name is formatted according to `\glsnamefont` which takes one argument: the entry name. This command is always used regardless of the glossary style. By default, `\glsnamefont` simply displays its argument in whatever the surrounding font happens to be. This means that in the list-like glossary styles (defined in the `glossary-list` style file) the name will appear in bold, since the name is placed in the optional argument of `\item`, whereas in the tabular styles (defined in the `glossary-long` and `glossary-super` style files) the name will appear in the normal font. The hierarchical glossary styles (defined in the `glossary-tree` style file) also set the name in bold.

For example, suppose you want all the entry names to appear in medium weight small caps, then you can do:

```
\renewcommand{\glsnamefont}[1]{\textsc{\mdseries #1}}
```

2.8.2 Xindy

If you want to use `xindy` to sort the glossary, you must use the package option `xindy`:

```
\usepackage[xindy]{glossaries}
```

This ensures that the glossary information is written in `xindy` syntax.

Section 1.3 covers how to use the external indexing application. This section covers the commands provided by the `glossaries` package that allow you to adjust the `xindy` style file (`.xdy`) and parameters.

To assist writing information to the `xindy` style file, the `glossaries` package provides the following commands:

<code>\glsopenbrace</code>	<code>\glsopenbrace</code>
----------------------------	----------------------------

```
\glsclosebrace
```

```
\glsclosebrace
```

which produce an open and closing brace. (This is needed because `\{` and `\}` don't expand to a simple brace character when written to a file.)

In addition, if you are using a package that makes the double quote character active (e.g. `ngerman`) you can use:

```
\glsquote
```

```
\glsquote{\text{}}
```

which will produce "`\text{}`". Alternatively, you can use `\string` to write the double-quote character. This document assumes that the double quote character has not been made active, so the examples just use " for clarity.

If you want greater control over the `xindy` style file than is available through the L^AT_EX commands provided by the `glossaries` package, you will need to edit the `xindy` style file. In which case, you must use `\noist` to prevent the style file from being overwritten by the `glossaries` package. For additional information about `xindy`, read the `xindy` documentation.

Language and Encodings When you use `xindy`, you need to specify the language and encoding used (unless you have written your own custom `xindy` style file that defines the relevant alphabet and sort rules). If you use `makeglossaries`, this information is obtained from the document's auxiliary (`.aux`) file. The `glossaries` package attempts to find the root language, but in the event that it gets it wrong or if `xindy` doesn't support that language, then you can specify the language using:

```
\GlsSetXdyLanguage
```

```
\GlsSetXdyLanguage[\text{glossary type}]{\text{language}}
```

where `\text{language}` is the name of the language. The optional argument can be used if you have multiple glossaries in different languages. If `\text{glossary type}` is omitted, it will be applied to all glossaries, otherwise the language setting will only be applied to the glossary given by `\text{glossary type}`.

If the `inputenc` package is used, the encoding will be obtained from the value of `\inputencodingname`. Alternatively, you can specify the encoding using:

```
\GlsSetXdyCodePage
```

```
\GlsSetXdyCodePage{\text{code}}
```

where `\text{code}` is the name of the encoding. For example:

```
\GlsSetXdyCodePage{utf8}
```

Note that you can also specify the language and encoding using the package option `xindy={language=\text{lang}, codepage=\text{code}}`. For example:

```
\usepackage[xindy={language=english,codepage=utf8}]{glossaries}
```

If you write your own custom `xindy` style file that includes the language settings, you need to set the language to nothing:

```
\GlsSetXdyLanguage{}
```

(and remember to use `\noist` to prevent the style file from being overwritten).

The commands `\GlsSetXdyLanguage` and `\GlsSetXdyCodePage` have no effect if you don't use `makeglossaries`. If you call `xindy` without `makeglossaries` you need to remember to set the language and encoding using the `-L` and `-C` switches.

Locations and Number lists The most likely attributes used in the `format` key (`textrm`, `hyperrm` etc) are automatically added to the `xindy` style file, but if you want to use another attribute, you need to add it using:

```
\GlsAddXdyAttribute
```

where `<name>` is the name of the attribute, as used in the `format` key. For example, suppose I want a bold, italic, hyperlinked location. I first need to define a command that will do this:

```
\newcommand*{\hyperbfit}[1]{\textit{\hyperbf{#1}}}
```

but with `xindy`, I also need to add this as an allowed attribute:

```
\GlsAddXdyAttribute{hyperbfit}
```

Note that `\GlsAddXdyAttribute` has no effect if `\noist` is used or if `makeglossaries` is omitted.
`\GlsAddXdyAttribute` must be used before `\makeglossaries`.

If the location numbers don't get expanded to a simple Arabic or Roman number or a letter from a, ..., z or A, ..., Z, then you need to add a location style in the appropriate format.

For example, suppose you want the page numbers written as words rather than digits and you use the `fmtcount` package to do this. You can redefine `\thepage` as follows:

```
\renewcommand*{\thepage}{\Numberstring{page}}
```

This gets expanded to `\protect \Numberstringnum {<n>}` where `<n>` is the Arabic page number. This means that you need to define a new location that has that form:

```
\GlsAddXdyLocation{Numberstring}{:sep "\string\protect\space
\string\Numberstringnum\space\glsclosebrace"
"arabic-numbers" :sep "\glsclosebrace"}
```

Note that it's necessary to use `\space` to indicate that spaces also appear in the format, since, unlike `TeX`, `xindy` doesn't ignore spaces after control sequences.

Note that `\GlsAddXdyLocation` has no effect if `\noist` is used or if `makeglossaries` is omitted.
`\GlsAddXdyLocation` must be used before `\makeglossaries`.

In the number list, the locations are sorted according to type. The default ordering is: `roman-page-numbers` (e.g. i), `arabic-page-numbers` (e.g. 1), `arabic-section-numbers` (e.g. 1.1 if the compositor is a full stop or 1-1 if the compositor is a hyphen⁸), `alpha-page-numbers` (e.g. a), `Roman-page-numbers` (e.g. I), `Alpha-page-numbers` (e.g. A), `Appendix-page-numbers` (e.g. A.1 if the Alpha compositor is a full stop or A-1 if the Alpha compositor is a hyphen⁹), user defined location names (as specified by `\GlsAddXdyLocation` in the order in which they were defined), `see` (cross-referenced entries). This ordering can be changed using:

```
\GlsSetXdyLocationClassOrder {<location names>}
```

where each location name is delimited by double quote marks and separated by white space. For example:

```
\GlsSetXdyLocationClassOrder{
    "arabic-page-numbers"
    "arabic-section-numbers"
    "roman-page-numbers"
    "Roman-page-numbers"
    "alpha-page-numbers"
    "Alpha-page-numbers"
    "Appendix-page-numbers"
    "see"
}
```

Note that `\GlsSetXdyLocationClassOrder` has no effect if `\noist` is used or if `\makeglossaries` is omitted.

`\GlsSetXdyLocationClassOrder` must be used before `\makeglossaries`.

If a number list consists of a sequence of consecutive numbers, the range will be concatenated. The number of consecutive locations that causes a range formation defaults to 2, but can be changed using:

```
\GlsSetXdyMinRangeLength {<n>}
```

For example:

```
\GlsSetXdyMinRangeLength{3}
```

The argument may also be the keyword `none`, to indicate that there should be no range formations. See the `xindy` manual for further details on range formations.

Note that `\GlsSetXdyMinRangeLength` has no effect if `\noist` is used or if `\makeglossaries` is omitted.

`\GlsSetXdyMinRangeLength` must be used before `\makeglossaries`.

See [subsection 2.3](#) for further details.

⁸see `\setCompositor` described in [subsection 2.2](#)

⁹see `\setAlphaCompositor` described in [subsection 2.2](#)

Glossary Groups The glossary is divided into groups according to the first letter of the sort key. The `glossaries` package also adds a number group by default, unless you suppress it in the `xindy` package option. For example:

```
\usepackage[xindy={glsnumbers=false}]{glossaries}
```

Any entry that doesn't go in one of the letter groups or the number group is placed in the default group.

If you have a number group, the default behaviour is to locate it before the "A" letter group. If you are not using a Roman alphabet, you can change this using

```
\GlsSetXdyFirstLetterAfterDigits{\langle letter\rangle}
```

Note that `\GlsSetXdyFirstLetterAfterDigits` has no effect if `\noist` is used or if `\makeglossaries` is omitted.

`\GlsSetXdyFirstLetterAfterDigits` must be used before `\makeglossaries`.

2.9 Defining New Glossaries

A new glossary can be defined using:

```
\newglossary
```

where `\newglossary` where `\newglossary` is the label to assign to this glossary. The arguments `\in-ext` and `\out-ext` specify the extensions to give to the input and output files for that glossary, `\title` is the default title for this new glossary and the final optional argument `\counter` specifies which counter to use for the associated number lists (see also [subsection 2.3](#)). The first optional argument specifies the extension for the `makeindex` or `xindy` transcript file (this information is only used by `\makeglossaries` which picks up the information from the auxiliary file).

Note that the main (default) glossary is automatically created as:

```
\newglossary{main}{gls}{glo}{\glossaryname}
```

so it can be identified by the label `main` (unless the `nomain` package option is used). Using the `acronym` package option is equivalent to:

```
\newglossary{alg}{acronym}{acr}{acn}{\acronymname}
```

so it can be identified by the label `acronym`. If you are not sure whether the `acronym` option has been used, you can identify the list of acronyms by the command `\acronymtype` which is set to `acronym`, if the `acronym` option has been used, otherwise it is set to `main`. Note that if you are using the main glossary as your list of acronyms, you need to declare it as a list of acronyms using the package option `acronymlists`.

All glossaries must be defined before `\makeglossaries` to ensure that the relevant output files are opened.

2.10 Acronyms

You may have noticed in [subsection 2.2](#) that when you specify a new entry, you can specify alternate text to use when the term is first used in the document. This provides a useful means to define acronyms. For convenience, the `glossaries` package defines the command:

```
\newacronym[⟨key-val list⟩]{⟨label⟩}{⟨abbrv⟩}{⟨long⟩}
```

By default, this is equivalent to:

```
\newglossaryentry{⟨label⟩}{type=\acronymtype,  
name={⟨abbrv⟩},  
description={⟨long⟩},  
text={⟨abbrv⟩},  
first={⟨long⟩ ⟨abbrv⟩},  
plural={⟨abbrv⟩\glspluralsuffix},  
firstplural={⟨long⟩\glspluralsuffix\space ⟨abbrv⟩\glspluralsuffix},  
⟨key-val list⟩}
```

As mentioned in the previous section, the command `\acronymtype` is the name of the glossary in which the acronyms should appear. If the `acronym` package option has been used, this will be `acronym`, otherwise it will be `main`. The acronyms can then be used in exactly the same way as any other glossary entry. If you want more than one list of acronyms, you must identify the others using the package options `acronymlists`. This ensures that options such as `footnote` and `smallcaps` work for the additional lists of acronyms.

Note: since `\newacronym` sets `type=\acronymtype`, if you want to load a file containing acronym definitions using `\loadglsentries[⟨type⟩]{⟨filename⟩}`, the optional argument `⟨type⟩` will not have an effect unless you explicitly set the type as `type=\glsdefaulttype` in the optional argument to `\newacronym`. See [subsubsection 2.2.3](#).

For example, the following defines the acronym IDN:

```
\newacronym{idn}{IDN}{identification number}
```

This is equivalent to:

```
\newglossaryentry{idn}{type=\acronymtype,  
name={IDN},  
description={identification number},  
text={IDN},  
first={identification number (IDN)},  
plural={IDNs},  
firstplural={identification numbers (IDNs)}}
```

so `\gls{idn}` will produce “identification number (IDN)” on first use and “IDN” on subsequent uses.

This section describes acronyms that have been defined using `\newacronym`. If you prefer to define all your acronyms using `\newglossaryentry` explicitly, then

you should skip this section and ignore the package options: `smallcaps`, `smaller`, `description`, `dua` and `footnote`, as these options change the definition of `\newacronym` for common acronym formats as well as the way that the link text is displayed (see [subsubsection 2.4.1](#)). Likewise you should ignore the package option `shortcuts` and the new commands described in this section, such as `\acrshort`, as they vary according to the definition of `\newacronym`.

If you use any of the package options `smallcaps`, `smaller`, `description` or `footnote`, the acronyms will be displayed in the document using:

```
\acronymfont{\acronymfont{\text{}}}
```

and

```
\firstacronymfont{\firstacronymfont{\text{}}}
```

where `\firstacronymfont` is applied on first use and `\acronymfont` is applied on subsequent use. Note that if you don't use any of the above package options, changing the definition of `\acronymfont` or `\firstacronymfont` will have no effect. In this case, the recommended route is to use either the `smaller` or the `smallcaps` package option and redefine `\acronymfont` and `\firstacronymfont` as required. (The `smallcaps` option sets the default plural suffix in an upright font to cancel the effect of `\textsc`, whereas `smaller` sets the suffix in the surrounding font.) For example, if you want acronyms in a normal font on first use and emphasized on subsequent use, do:

```
\usepackage[smaller]{glossaries}
\renewcommand*\firstacronymfont[1]{\#1}
\renewcommand*\acronymfont[1]{\emph{\#1}}
```

(Note that it is for this reason that the `relsize` package is not automatically loaded when selecting the `smaller` package option.)

[Table 4](#) lists the package options that govern the acronym styles and how the `\newglossaryentry` keys are used to store $\langle long \rangle$ (the long form) and $\langle abbrv \rangle$ (the short form). Note that the `smallcaps` option redefines `\acronymfont` so that it sets its argument using `\textsc` (so you should use lower case characters in $\langle abbrv \rangle$) and the `smaller` option redefines `\acronymfont` to use `\textsmaller`,¹⁰ otherwise `\acronymfont` simply displays its argument in the surrounding font.

In case you can't remember which key stores the long or short forms (or their plurals) the `glossaries` package provides the commands:

- `\glsshortkey` The key used to store the short form.

`\glsshortpluralkey`

- `\glsshortpluralkey` The key used to store the plural version of the short form.

`\glslongkey`

- `\glslongkey` The key used to store the long form.

`\glslongpluralkey`

- `\glslongpluralkey` The key used to store the plural version of the long form.

¹⁰you will need to load a package, such as `relsize`, that defines `\textsmaller` if you use this option.

Table 4: Package options governing `\newacronym` and how the information is stored in the keys for `\newglossaryentry`

Package Option	first key	text key	description key	symbol key
description,footnote	$\langle abbrv \rangle$	$\langle abbrv \rangle$	user supplied	$\langle long \rangle$
description,dua	$\langle long \rangle$	$\langle long \rangle$	user supplied	$\langle abbrv \rangle$
description	$\langle long \rangle$	$\langle abbrv \rangle$	user supplied	$\langle abbrv \rangle$
footnote	$\langle abbrv \rangle$	$\langle abbrv \rangle$	$\langle long \rangle$	
smallcaps	$\langle long \rangle$	$\langle abbrv \rangle$	$\langle long \rangle$	$\langle abbrv \rangle$
smaller	$\langle long \rangle$	$\langle abbrv \rangle$	$\langle long \rangle$	$\langle abbrv \rangle$
dua	$\langle long \rangle$	$\langle long \rangle$	$\langle long \rangle$	$\langle abbrv \rangle$
None of the above	$\langle long \rangle$ ($\langle abbrv \rangle$)	$\langle abbrv \rangle$	$\langle long \rangle$	

These can be used in the optional argument of `\newacronym` to override the defaults. For example:

```
\newacronym[\glslongpluralkey={diagonal matrices}]{dm}{DM}{diagonal
matrix}
```

If the first use uses the plural form, `\glspl{dm}` will display: diagonal matrices (DMs).

Each of the package options `smallcaps`, `smaller`, `footnote`, `dua` and `description` use `\defglstitle` and `\defglstitlefirst` (described in [subsubsection 2.4.1](#)) to change the way the link text is displayed. This means that these package options only work for the glossary type given by `\acronymtype`. If you have multiple lists of acronyms, you will need to make the appropriate changes for each additional glossary type.

description,footnote

When these two package options are used together, the first use displays the entry as:

```
\firstacronymfont{\langle abbrv \rangle}\langle insert\rangle\footnote{\langle long \rangle}
```

while subsequent use displays the entry as:

```
\acronymfont{\langle abbrv \rangle}\langle insert\rangle
```

where $\langle insert \rangle$ indicates the text supplied in the final optional argument to `\gls`, `\glsp` or their uppercase variants.

In this case, the long form is stored in the `symbol` key. This means that the long form will not be displayed in the list of acronyms unless you use a glossary style that displays the entry's symbol (for example, the `index` style). Entries will be sorted according to the short form.

Note also that when these two package options are used (in the given order), the `glossaries` package additionally implements the `sanitize` option using `sanitize={description=false,symbol=false}`, so remember to protect fragile commands when defining acronyms.

dua

The **dua** package option always displays the expanded form and so may not be used with **footnote**, **smaller** or **smallcaps**. Both first use and subsequent use displays the entry in the form:

```
⟨long⟩⟨insert⟩
```

If the **description** package option is also used, the **name** key is set to the long form, otherwise the **name** key is set to the short form and the **description** key is set to the long form. In both cases the **symbol** is set to the short form. Therefore, if you use the **description** package option and you want the short form to appear in the list of acronyms, you will need to use a glossary style that displays the entry's symbol (for example, the **index** style). Entries will be sorted according to the long form if the **description** option is used, otherwise they will be sorted according to the short form (unless overridden by the **sort** key in the optional argument of **\newacronym**).

description

This package option displays the entry on first use as:

```
⟨long⟩⟨insert⟩ (⟨firstacronymfont{⟨abbrv⟩}⟩)
```

while subsequent use displays the entry as:

```
\acronymfont{⟨abbrv⟩}⟨insert⟩
```

Note also that if this package option is used, the **glossaries** package additionally implements the option **sanitize={symbol=false}**, so remember to protect fragile commands when defining acronyms.

Note that with this option, you need to specify the description using the **description** key in the optional argument of **\newacronym**. When this option is used without the **footnote** or **dua** options, the name field is specified as

```
\acrnameformat
```

```
\acrnameformat{⟨short⟩}{⟨long⟩}
```

This defaults to **\acronymfont{⟨short⟩}**, which means that the long form will not appear in the list of acronyms by default. To change this, you need to redefine **\acrnameformat** as appropriate. For example, to display the long form followed by the short form in parentheses do:

```
\renewcommand*{\acrnameformat}[2]{#2 (\acronymfont{#1})}
```

Note that even if you redefine **\acrnameformat**, the entries will be sorted according to the short form, unless you override this using the **sort** key in the optional argument to **\newacronym**.

footnote

This package option displays the entry on first use as:

```
\firstacronymfont{⟨abbrv⟩}⟨insert⟩\footnote{⟨long⟩}
```

while subsequent use displays the entry as:

```
\acronymfont{\textit{abbrv}}\textit{insert}
```

Acronyms will be sorted according to the short form.

Note also that if this package option is used, the `glossaries` package additionally implements the option `sanitize={description=false}`, so remember to protect fragile commands when defining acronyms.

Note that on first use, it is the long form in the footnote that links to the relevant glossary entry (where hyperlinks are enabled), whereas on subsequent use, the acronym links to the relevant glossary entry. It is possible to change this to make the acronym on first use have the hyperlink instead of the footnote, but since the footnote marker will also be a hyperlink, you will have two hyperlinks in immediate succession. This can be ambiguous where the hyperlinks are coloured rather than boxed. The code required to change the first use to make the acronym a hyperlink is as follows:

```
\def\glsdisplayfirst[\acronymtype]{%
\noexpand\protect\noexpand
  \glslink[\@gls@link@opts]{\@gls@link@label}{\firstacronymfont{\#1}\#4}%
\noexpand\protect\noexpand\footnote{\#2}}%
```

Note that this involves using internal commands (i.e. commands whose name contains an @ character), so if this code is placed in a `.tex` file it needs to be placed within a `\makeatletter ... \makeatother` pair. (See <http://www.tex.ac.uk/cgi-bin/texfaq2html?label=atsigns> for further details.)

smallcaps

If neither the `footnote` nor `description` options have been set, this option displays the entry on first use as:

```
(long)\textit{insert} (\firstacronymfont{\textit{abbrv}})
```

while subsequent use displays the entry as:

```
\acronymfont{\textit{abbrv}}\textit{insert}
```

where `\acronymfont` is set to `\textsc{\#1}`.

Note that since the acronym is displayed using `\textsc`, the short form, `\textit{abbrv}`, should be specified in lower case. (Recall that `\textsc{abc}` produces ABC whereas `\textsc{ABC}` produces ABC.)

Note also that if this package option is used, the `glossaries` package additionally implements the option `sanitize={symbol=false}`, so remember to protect fragile commands when defining acronyms.

smaller

If neither the `footnote` nor `description` options have been set, this option displays the entry on first use as:

```
long⟨insert⟩ (\firstacronymfont{⟨abbrv⟩})
```

while subsequent use displays the entry as:

```
\acronymfont{⟨abbrv⟩}⟨insert⟩
```

where `\acronymfont` is set to `\textsmaller{#1}`.¹¹ The entries will be sorted according to the short form.

Remember to load a package that defines `\textsmaller` (such as `relsize`) if you want to use this option, unless you want to redefine `\acronymfont` to use some other formatting command.

Note also that if this package option is used, the `glossaries` package additionally implements the option `sanitize={symbol=false}`, so remember to protect fragile commands when defining acronyms.

None of the above

If none of the package options `smallcaps`, `smaller`, `footnote`, `dua` or `description` are used, then on first use the entry is displayed as:

```
long ⟨⟨abbrv⟩⟩⟨insert⟩
```

while subsequent use displays the entry as:

```
⟨abbrv⟩⟨insert⟩
```

Entries will be sorted according to the short form. Note that if none of the acronym-related package options are used, the `sanitize` option will not be affected.

Recall from [subsection 2.4](#) that you can access the values of individual keys using commands like `\glisttext`, so it is possible to use these commands to print just the long form or just the abbreviation without affecting the flag that determines whether the entry has been used. However the keys that store the long and short form vary depending on the acronym style, so the `glossaries` package provides commands that are set according to the package options. These are as follows:

```
\acrshort[⟨options⟩]{⟨label⟩}[⟨insert⟩]
```

```
\Acrshort[⟨options⟩]{⟨label⟩}[⟨insert⟩]
```

¹¹not that this was change from using `\smaller` to `\textsmaller` as declarations cause a problem for `\makefirststuc`.

\ACRshort

```
\ACRshort[<options>]{<label>}[<insert>]
```

Print the abbreviated version with (if required) a hyperlink to the relevant entry in the glossary. This is usually equivalent to \gls{text} (or its uppercase variants) but may additionally put the link text within the argument to \acronymfont.

\acrlong

```
\acrlong[<options>]{<label>}[<insert>]
```

\Acrlong

```
\ACRlong[<options>]{<label>}[<insert>]
```

\ACRlong

```
\ACRlong[<options>]{<label>}[<insert>]
```

Print the long version with (if required) a hyperlink to the relevant entry in the glossary. This is may be equivalent to \glsdesc, \glssymbol or \glsfirst (or their uppercase variants), depending on package options.

\acrfull

```
\acrfull[<options>]{<label>}[<insert>]
```

\Acrfull

```
\ACRfull[<options>]{<label>}[<insert>]
```

\ACRfull

```
\ACRfull[<options>]{<label>}[<insert>]
```

Print the long version followed by the abbreviation in brackets with (if required) a hyperlink to the relevant entry in the glossary.

Note that if any of the above commands produce unexpected output and you haven't used any of the acronym-related package options, you will need to switch off the sanitization. For example:

```
\usepackage[sanitize=none]{glossaries}
```

However, if you do this, you must remember to protect fragile commands when defining acronyms or glossary entries.

Note that if you change the definition of \newacronym, you may additionally need to change the above commands as well as changing the way the text is displayed using \defglsdisplay and \defglsdisplayfirst.

The package option **shortcuts** provides the synonyms listed in [table 5](#). If any of those commands generate an “undefined control sequence” error message, check that you have enabled the shortcuts using the **shortcuts** package option. Note that there are no shortcuts for the commands that produce all upper case text.

Table 5: Synonyms provided by the package option `shortcuts`

Shortcut Command	Equivalent Command
<code>\acs</code>	<code>\acrshort</code>
<code>\Acs</code>	<code>\Acrshort</code>
<code>\acsp</code>	<code>\acrshortpl</code>
<code>\Acsp</code>	<code>\Acrshortpl</code>
<code>\acl</code>	<code>\acrlong</code>
<code>\Acl</code>	<code>\Acrlong</code>
<code>\aclp</code>	<code>\acrlongpl</code>
<code>\Aclp</code>	<code>\Acrlongpl</code>
<code>\acf</code>	<code>\acrfull</code>
<code>\Acf</code>	<code>\Acrfull</code>
<code>\acfp</code>	<code>\acrfullpl</code>
<code>\Acfp</code>	<code>\Acrfullpl</code>
<code>\ac</code>	<code>\gls</code>
<code>\Ac</code>	<code>\Gls</code>
<code>\ACP</code>	<code>\glspl</code>
<code>\ACP</code>	<code>\Glspl</code>

2.10.1 Upgrading From the `glossary` Package

Users of the obsolete `glossary` package may recall that the syntax used to define new acronyms has changed with the replacement `glossaries` package. In addition, the old `glossary` package created the command `\(acr-name)` when defining the acronym `(acr-name)`.

In order to facilitate migrating from the old package to the new one, the `glossaries` package¹² provides the command:

```
\oldacronym[⟨label⟩]{⟨abbrv⟩}{⟨long⟩}{⟨key-val list⟩}
```

This uses the same syntax as the `glossary` package's method of defining acronyms. It is equivalent to:

```
\newacronym[⟨key-val list⟩]{⟨label⟩}{⟨abbrv⟩}{⟨long⟩}
```

In addition, `\oldacronym` also defines the commands `\⟨label⟩`, which is equivalent to `\gls{⟨label⟩}`, and `\⟨label⟩*`, which is equivalent to `\Gls{⟨label⟩}`. If `⟨label⟩` is omitted, `⟨abbrv⟩` is used. Since commands names must consist only of alphabetical characters, `⟨label⟩` must also only consist of alphabetical characters. Note that `\⟨label⟩` doesn't allow you to use the first optional argument of `\gls` or `\Gls` — you will need to explicitly use `\gls` or `\Gls` to change the settings.

Recall that, in general, L^AT_EX ignores spaces following command names consisting of alphabetical characters. This is also true for `\⟨label⟩` unless you additionally load the `xspace` package.

¹²as from version 1.18

The `glossaries` package doesn't load the `xspace` package since there are both advantages and disadvantages to using `\xspace` in `\langle label \rangle`. If you don't use the `xspace` package you need to explicitly force a space using `_` (backslash space) however you can follow `\langle label \rangle` with additional text in square brackets (the final optional argument to `\gls`). If you use the `xspace` package you don't need to escape the spaces but you can't use the optional argument to insert text (you will have to explicitly use `\gls`).

To illustrate this, suppose I define the acronym "abc" as follows:

```
\oldacronym{abc}{example acronym}{}{}
```

This will create the command `\abc` and its starred version `\abc*`. [Table 6](#) illustrates the effect of `\abc` (on subsequent use) according to whether or not the `xspace` package has been loaded. As can be seen from the final row in the table, the `xspace` package prevents the optional argument from being recognised.

Table 6: The effect of using `xspace` with `\oldacronym`

Code	With <code>xspace</code>	Without <code>xspace</code>
<code>\abc.</code>	abc.	abc.
<code>\abc xyz</code>	abc xyz	abcxyz
<code>\abc\ xyz</code>	abc xyz	abc xyz
<code>\abc* xyz</code>	Abc xyz	Abc xyz
<code>\abc['s] xyz</code>	abc ['s] xyz	abc's xyz

2.11 Unsetting and Resetting Entry Flags

When using `\gls`, `\glsp` and their uppercase variants it is possible that you may want to use the value given by the first key, even though you have already used the glossary entry. Conversely, you may want to use the value given by the `text` key, even though you haven't used the glossary entry. The former can be achieved by one of the following commands:

```
\glsreset{\glsreset{\langle label \rangle}}
```

```
\glslocalreset{\glslocalreset{\langle label \rangle}}
```

while the latter can be achieved by one of the following commands:

```
\glsunset{\glsunset{\langle label \rangle}}
```

```
\glslocalunset{\glslocalunset{\langle label \rangle}}
```

You can also reset or unset all entries for a given glossary or list of glossaries using:

```
\glsresetall[\glsresetall{\langle glossary list \rangle}]
```

```
\glslocalresetall
```

```
\glslocalresetall[⟨glossary list⟩]
```

```
\glsunsetall
```

```
\glsunsetall[⟨glossary list⟩]
```

```
\glslocalunsetall
```

```
\glslocalunsetall[⟨glossary list⟩]
```

where *⟨glossary list⟩* is a comma-separated list of glossary labels. If omitted, all defined glossaries are assumed. For example, to reset all entries in the main glossary and the list of acronyms:

```
\glsresetall[main,acronym]
```

You can determine whether an entry's first use flag is set using:

```
\ifglsused
```

```
\ifglsused{⟨label⟩}{⟨true part⟩}{⟨false part⟩}
```

where *⟨label⟩* is the label of the required entry. If the entry has been used, *⟨true part⟩* will be done, otherwise *⟨false part⟩* will be done.

2.12 Glossary Styles

The *glossaries* package comes with some pre-defined glossary styles. Note that the styles are suited to different types of glossaries: some styles ignore the associated symbol; some styles are not designed for hierarchical entries, so they display sub-entries in the same way as they display top level entries; some styles are designed for homographs, so they ignore the name for sub-entries. You should therefore pick a style that suits your type of glossary. See [table 7](#) for a summary of the available styles.

The glossary style can be set using the *style* key in the optional argument to *\printglossary* or using the command:

```
\glossarystyle
```

```
\glossarystyle{⟨style-name⟩}
```

Some of the glossary styles may also be set using the *style* package option, it depends if the package in which they are defined is automatically loaded by the *glossaries* package.

```
\glsdescwidth  
\glspagelistwidth
```

The tabular-like styles that allow multi-line descriptions and page lists use the length *\glsdescwidth* to set the width of the description column and the length *\glspagelistwidth* to set the width of the page list column.¹³ These will need to be changed using *\setlength* if the glossary is too wide. Note that the *long4col* and *super4col* styles (and their header and border variations) don't use these lengths as they are designed for single line entries. Instead you should use the analogous *altnormal4col* and *altsuper4col* styles. If you want to explicitly create a line-break within a multi-line description in a tabular-like style you should use *\newline* instead of *\backslash\backslash*.

¹³these lengths will not be available if you use both the *nolong* and *nosuper* package options or if you use the *nostyles* package option unless you explicitly load the relevant package.

Table 7: Glossary Styles. An asterisk in the style name indicates anything that matches that doesn't match any previously listed style (e.g. `long3col*` matches `long3col`, `long3colheader`, `long3colborder` and `long3colheaderborder`). A maximum level of 0 indicates a flat glossary (sub-entries are displayed in the same way as main entries). Where the maximum level is given as — there is no limit, but note that `makeindex` imposes a limit of 2 sub-levels. If the homograph column is checked, then the name is not displayed for sub-entries. If the symbol column is checked, then the symbol will be displayed if it has been defined.

Style	Maximum Level	Homograph	Symbol
<code>listdotted</code>	0		
<code>sublistdotted</code>	1		
<code>list*</code>	1	✓	
<code>altlist*</code>	1	✓	
<code>long*3col*</code>	1	✓	
<code>long4col*</code>	1	✓	✓
<code>altnlong*4col*</code>	1	✓	✓
<code>long*</code>	1	✓	
<code>super*3col*</code>	1	✓	
<code>super4col*</code>	1	✓	✓
<code>altsuper*4col*</code>	1	✓	✓
<code>super*</code>	1	✓	
<code>index*</code>	2		✓
<code>treenoname*</code>	—	✓	✓
<code>tree*</code>	—		✓
<code>alttree*</code>	—		✓

Note that if you use the `style` key in the optional argument to `\printglossary`, it will override any previous style settings for the given glossary, so if, for example, you do

```
\renewcommand*{\glsgroupskip}{}  
\printglossary[style=long]
```

then the new definition of `\glsgroupskip` will not have an affect for this glossary, as `\glsgroupskip` is redefined by `style=long`. Likewise, `\glossarystyle` will also override any previous style definitions, so, again

```
\renewcommand*{\glsgroupskip}{}  
\glossarystyle{long}
```

will reset `\glsgroupskip` back to its default definition for the named glossary style (`long` in this case). If you want to modify the styles, either use `\newglossarystyle` (described in the next section) or make the modifications after `\glossarystyle`, e.g.:

```
\glossarystyle{long}  
\renewcommand*{\glsgroupskip}{}  
\glossarystyle{long}
```

All the styles except for the three- and four-column styles and the `listdotted` style use the command `\glspostdescription` after the description. This simply displays a full stop by default. To eliminate this full stop (or replace it with something else, say, a comma) you will need to redefine `\glspostdescription` before the glossary is displayed. Alternatively, you can suppress it for a given entry by placing `\nopostdesc` in the entry's description.

2.12.1 List Styles

The styles described in this section are all defined in the package `glossary-list`. Since they all use the `description` environment, they are governed by the same parameters as that environment. These styles all ignore the entry's symbol. Note that these styles will automatically be available unless you use the `nolist` or `nostyles` package options.

list The `list` style uses the `description` environment. The entry name is placed in the optional argument of the `\item` command (so it will appear in bold by default). The description follows, and then the associated number list for that entry. The symbol is ignored. If the entry has child entries, the description and number list follows (but not the name) for each child entry. Groups are separated using `\indexspace`.

listgroup The `listgroup` style is like `list` but the glossary groups have headings.

listhypergroup The `listhypergroup` style is like `listgroup` but has a navigation line at the start of the glossary with links to each group that is present in the glossary. This requires an additional run through L^AT_EX to ensure the group information is up to date. In the navigation line, each group is separated by `\glshypernavsep` which defaults to a vertical bar with a space on either side. For example, to simply have a space separating each group, do:

```
\renewcommand*{\glshypernavsep}{\space}
```

`\glslistdottedwidth`

Note that the hyper-navigation line is now (as from version 1.14) set inside the optional argument to `\item` instead of after it to prevent a spurious space at the start. This can be changed by redefining `\glossaryheader`, but note that this needs to be done *after* the glossary style has been set.

altlist The `altlist` style is like `list` but the description starts on the line following the name. (As with the `list` style, the symbol is ignored.) Each child entry starts a new line, but as with the `list` style, the name associated with each child entry is ignored.

altlistgroup The `altlistgroup` style is like `altlist` but the glossary groups have headings.

altlisthypergroup The `altlisthypergroup` style is like `altlistgroup` but has a set of links to the glossary groups. The navigation line is the same as that for `listhypergroup`, described above.

listdotted This style uses the `description` environment.¹⁴ Each entry starts with `\item[]`, followed by the name followed by a dotted line, followed by the description. Note that this style ignores both the number list and the symbol. The length `\glslistdottedwidth` governs where the description should start. This is a flat style, so child entries are formatted in the same way as the parent entries.

sublistdotted This is a variation on the `listdotted` style designed for hierarchical glossaries. The main entries have just the name displayed. The sub entries are displayed in the same manner as `listdotted`.

2.12.2 Longtable Styles

The styles described in this section are all defined in the package `glossary-long`. Since they all use the `longtable` environment, they are governed by the same parameters as that environment. Note that these styles will automatically be available unless you use the `nolong` or `nostyles` package options. These styles fully justify the description and page list columns. If you want ragged right formatting instead, use the analogous styles described in [subsubsection 2.12.3](#).

long The `long` style uses the `longtable` environment (defined by the `longtable` package). It has two columns: the first column contains the entry's name and the second column contains the description followed by the number list. The entry's symbol is ignored. Sub groups are separated with a blank row. The width of the first column is governed by the widest entry in that column. The width of the second column is governed by the length `\glsdescwidth`. Child entries have a similar format to the parent entries except that their name is suppressed.

longborder The `longborder` style is like `long` but has horizontal and vertical lines around it.

longheader The `longheader` style is like `long` but has a header row.

¹⁴This style was supplied by Axel Menzel.

longheaderborder The `longheaderborder` style is like `longheader` but has horizontal and vertical lines around it.

long3col The `long3col` style is like `long` but has three columns. The first column contains the entry's name, the second column contains the description and the third column contains the number list. The entry's symbol is ignored. The width of the first column is governed by the widest entry in that column, the width of the second column is governed by the length `\glstdescwidth`, and the width of the third column is governed by the length `\glspagelistwidth`.

long3colborder The `long3colborder` style is like the `long3col` style but has horizontal and vertical lines around it.

long3colheader The `long3colheader` style is like `long3col` but has a header row.

long3colheaderborder The `long3colheaderborder` style is like `long3colheader` but has horizontal and vertical lines around it.

long4col The `long4col` style is like `long3col` but has an additional column in which the entry's associated symbol appears. This style is used for brief single line descriptions. The column widths are governed by the widest entry in the given column. Use `altslong4col` for multi-line descriptions.

long4colborder The `long4colborder` style is like the `long4col` style but has horizontal and vertical lines around it.

long4colheader The `long4colheader` style is like `long4col` but has a header row.

long4colheaderborder The `long4colheaderborder` style is like `long4colheader` but has horizontal and vertical lines around it.

altslong4col The `altslong4col` style is like `long4col` but allows multi-line descriptions and page lists. The width of the description column is governed by the length `\glstdescwidth` and the width of the page list column is governed by the length `\glspagelistwidth`. The widths of the name and symbol columns are governed by the widest entry in the given column.

altslong4colborder The `altslong4colborder` style is like the `long4colborder` but allows multi-line descriptions and page lists.

altslong4colheader The `altslong4colheader` style is like `long4colheader` but allows multi-line descriptions and page lists.

altslong4colheaderborder The `altslong4colheaderborder` style is like `long4colheaderborder` but allows multi-line descriptions and page lists.

2.12.3 Longtable Styles (Ragged Right)

The styles described in this section are all defined in the package `glossary-longragged`. These styles are analogous to those defined in `glossary-long` but the multiline columns are left justified instead of fully justified. Since these styles all use the `longtable` environment, they are governed by the same parameters as

that environment. The `glossary-longragged` package additionally requires the `array` package. Note that these styles will only be available if you explicitly load `glossary-longragged`:

```
\usepackage{glossaries}
\usepackage{glossary-longragged}
```

Note that you can't set these styles using the `style` package option since the styles aren't defined until after the `glossaries` package has been loaded.

longragged The `longragged` style has two columns: the first column contains the entry's name and the second column contains the (left-justified) description followed by the number list. The entry's symbol is ignored. Sub groups are separated with a blank row. The width of the first column is governed by the widest entry in that column. The width of the second column is governed by the length `\glsdescwidth`. Child entries have a similar format to the parent entries except that their name is suppressed.

longraggedborder The `longraggedborder` style is like `longragged` but has horizontal and vertical lines around it.

longraggedheader The `longraggedheader` style is like `longragged` but has a header row.

longraggedheaderborder The `longraggedheaderborder` style is like `longraggedheader` but has horizontal and vertical lines around it.

longragged3col The `longragged3col` style is like `longragged` but has three columns. The first column contains the entry's name, the second column contains the (left justified) description and the third column contains the (left justified) number list. The entry's symbol is ignored. The width of the first column is governed by the widest entry in that column, the width of the second column is governed by the length `\glsdescwidth`, and the width of the third column is governed by the length `\glspagelistwidth`.

longragged3colborder The `longragged3colborder` style is like the `longragged3col` style but has horizontal and vertical lines around it.

longragged3colheader The `longragged3colheader` style is like `longragged3col` but has a header row.

longragged3colheaderborder The `longragged3colheaderborder` style is like `longragged3colheader` but has horizontal and vertical lines around it.

altnlongragged4col The `altnlongragged4col` style is like `longragged3col` but has an additional column in which the entry's associated symbol appears. The width of the description column is governed by the length `\glsdescwidth` and the width of the page list column is governed by the length `\glspagelistwidth`. The widths of the name and symbol columns are governed by the widest entry in the given column.

altnlongragged4colborder The `altnlongragged4colborder` style is like the `altnlongragged4col` but has horizontal and vertical lines around it.

altnogragged4colheader The `altnogragged4colheader` style is like `altnogragged4col` but has a header row.

altnogragged4colheaderborder The `altnogragged4colheaderborder` style is like `altnogragged4colheader` but has horizontal and vertical lines around it.

2.12.4 Supertabular Styles

The styles described in this section are all defined in the package `glossary-super`. Since they all use the `supertabular` environment, they are governed by the same parameters as that environment. Note that these styles will automatically be available unless you use the `nosuper` or `nostyles` package options. In general, the `longtable` environment is better, but there are some circumstances where it is better to use `supertabular`.¹⁵ These styles fully justify the description and page list columns. If you want ragged right formatting instead, use the analogous styles described in [subsubsection 2.12.5](#).

super The `super` style uses the `supertabular` environment (defined by the `supertabular` package). It has two columns: the first column contains the entry's name and the second column contains the description followed by the number list. The entry's symbol is ignored. Sub groups are separated with a blank row. The width of the first column is governed by the widest entry in that column. The width of the second column is governed by the length `\glsdescwidth`. Child entries have a similar format to the parent entries except that their name is suppressed.

superborder The `superborder` style is like `super` but has horizontal and vertical lines around it.

superheader The `superheader` style is like `super` but has a header row.

superheaderborder The `superheaderborder` style is like `superheader` but has horizontal and vertical lines around it.

super3col The `super3col` style is like `super` but has three columns. The first column contains the entry's name, the second column contains the description and the third column contains the number list. The entry's symbol is ignored. The width of the first column is governed by the widest entry in that column. The width of the second column is governed by the length `\glsdescwidth`. The width of the third column is governed by the length `\glspagelistwidth`.

super3colborder The `super3colborder` style is like the `super3col` style but has horizontal and vertical lines around it.

super3colheader The `super3colheader` style is like `super3col` but has a header row.

super3colheaderborder The `super3colheaderborder` style is like `super3colheader` but has horizontal and vertical lines around it.

¹⁵e.g. with the `flowfram` package.

super4col The `super4col` style is like `super3col` but has an additional column in which the entry's associated symbol appears. This style is designed for entries with brief single line descriptions. The column widths are governed by the widest entry in the given column. Use `altsuper4col` for multi-line descriptions.

super4colborder The `super4colborder` style is like the `super4col` style but has horizontal and vertical lines around it.

super4colheader The `super4colheader` style is like `super4col` but has a header row.

super4colheaderborder The `super4colheaderborder` style is like `super4colheader` but has horizontal and vertical lines around it.

altsuper4col The `altsuper4col` style is like `super4col` but allows multi-line descriptions and page lists. The width of the description column is governed by the length `\glsdescwidth` and the width of the page list column is governed by the length `\glspagelistwidth`. The width of the name and symbol columns is governed by the widest entry in the given column.

altsuper4colborder The `altsuper4colborder` style is like the `super4colborder` style but allows multi-line descriptions and page lists.

altsuper4colheader The `altsuper4colheader` style is like `super4colheader` but allows multi-line descriptions and page lists.

altsuper4colheaderborder The `altsuper4colheaderborder` style is like `super4colheaderborder` but allows multi-line descriptions and page lists.

2.12.5 Supertabular Styles (Ragged Right)

The styles described in this section are all defined in the package `glossary-superragged`. These styles are analogous to those defined in `glossary-super` but the multiline columns are left justified instead of fully justified. Since these styles all use the `supertabular` environment, they are governed by the same parameters as that environment. The `glossary-superragged` package additionally requires the `array` package. Note that these styles will only be available if you explicitly load `glossary-superragged`:

```
\usepackage{glossaries}
\usepackage{glossary-superragged}
```

Note that you can't set these styles using the `style` package option since the styles aren't defined until after the `glossaries` package has been loaded.

superragged The `superragged` style uses the `supertabular` environment (defined by the `supertabular` package). It has two columns: the first column contains the entry's name and the second column contains the (left justified) description followed by the number list. The entry's symbol is ignored. Sub groups are separated with a blank row. The width of the first column is governed by the widest entry in that column. The width of the second column is governed by the length `\glsdescwidth`. Child entries have a similar format to the parent entries except that their name is suppressed.

superraggedborder The superraggedborder style is like superragged but has horizontal and vertical lines around it.

superraggedheader The superraggedheader style is like superragged but has a header row.

superraggedheaderborder The superraggedheaderborder style is like superraggedheader but has horizontal and vertical lines around it.

superragged3col The superragged3col style is like superragged but has three columns. The first column contains the entry's name, the second column contains the (left justified) description and the third column contains the (left justified) number list. The entry's symbol is ignored. The width of the first column is governed by the widest entry in that column. The width of the second column is governed by the length `\glsdescwidth`. The width of the third column is governed by the length `\glspagelistwidth`.

superragged3colborder The superragged3colborder style is like the superragged3col style but has horizontal and vertical lines around it.

superragged3colheader The superragged3colheader style is like superragged3col but has a header row.

superragged3colheaderborder The superragged3colheaderborder style is like superragged3colheader but has horizontal and vertical lines around it.

altsuperragged4col The altsuperragged4col style is like superragged3col but has an additional column in which the entry's associated symbol appears. The column widths for the name and symbol column are governed by the widest entry in the given column.

altsuperragged4colborder The altsuperragged4colborder style is like the altsuperragged4col style but has horizontal and vertical lines around it.

altsuperragged4colheader The altsuperragged4colheader style is like altsuperragged4col but has a header row.

altsuperragged4colheaderborder The altsuperragged4colheaderborder style is like altsuperragged4colheader but has horizontal and vertical lines around it.

2.12.6 Tree-Like Styles

The styles described in this section are all defined in the package `glossary-tree`. These styles are designed for hierarchical glossaries but can also be used with glossaries that don't have sub-entries. These styles will display the entry's symbol if it exists. Note that these styles will automatically be available unless you use the `notree` or `nostyles` package options.

index The index style is similar to the way indices are usually formatted in that it has a hierarchical structure up to three levels (the main level plus two sub-levels). The name is typeset in bold, and if the symbol is present it is set in parentheses after the name and before the description. Sub-entries are indented and also include the name, the symbol in brackets (if present) and the description. Groups are separated using `\indexspace`.

- indexgroup** The indexgroup style is similar to the index style except that each group has a heading.
- indexhypergroup** The indexhypergroup style is like indexgroup but has a set of links to the glossary groups. The navigation line is the same as that for listhypergroup, described above.
- tree** The tree style is similar to the index style except that it can have arbitrary levels. (Note that `makeindex` is limited to three levels, so you will need to use `xindy` if you want more than three levels.) Each sub-level is indented by `\glstreeindent`. Note that the name, symbol (if present) and description are placed in the same paragraph block. If you want the name to be apart from the description, use the alttree style instead. (See below.)
- treegroup** The treegroup style is similar to the tree style except that each group has a heading.
- treehypergroup** The treehypergroup style is like treegroup but has a set of links to the glossary groups. The navigation line is the same as that for listhypergroup, described above.
- treenoname** The treenoname style is like the tree style except that the name for each sub-entry is ignored.
- treenonamegroup** The treenonamegroup style is similar to the treenoname style except that each group has a heading.
- treenonamehypergroup** The treenonamehypergroup style is like treenonamegroup but has a set of links to the glossary groups. The navigation line is the same as that for listhypergroup, described above.
- alttree** The alttree style is similar to the tree style except that the indentation for each level is determined by the width of the text specified by

```
\glssetwidest[<level>]{<text>}
```

The optional argument $\langle level \rangle$ indicates the level, where 0 indicates the top-most level, 1 indicates the first level sub-entries, etc. If `\glssetwidest` hasn't been used for a given sub-level, the level 0 widest text is used instead. If $\langle level \rangle$ is omitted, 0 is assumed.

For each level, the name is placed to the left of the paragraph block containing the symbol (optional) and the description. If the symbol is present, it is placed in parentheses before the description.

- alttreegroup** The alttreegroup is like the alttree style except that each group has a heading.
- alttreehypergroup** The alttreehypergroup style is like alttreegroup but has a set of links to the glossary groups. The navigation line is the same as that for listhypergroup, described above.

2.13 Defining your own glossary style

If the predefined styles don't fit your requirements, you can define your own style using:

```
\newglossarystyle{<name>}{<definitions>}
```

where $\langle name \rangle$ is the name of the new glossary style (to be used in `\glossarystyle`). The second argument $\langle definitions \rangle$ needs to redefine all of the following:

`theglossary`

```
theglossary
```

This environment defines how the main body of the glossary should be typeset. Note that this does not include the section heading, the glossary preamble (defined by `\glossarypreamble`) or the glossary postamble (defined by `\glossarypostamble`). For example, the `list` style uses the `description` environment, so the `theglossary` environment is simply redefined to begin and end the `description` environment.

`\glossaryheader`

```
\glossaryheader
```

This macro indicates what to do at the start of the main body of the glossary. Note that this is not the same as `\glossarypreamble`, which should not be affected by changes in the glossary style. The `list` glossary style redefines `\glossaryheader` to do nothing, whereas the `longheader` glossary style redefines `\glossaryheader` to do a header row.

`\glsgroupheading`

```
\glsgroupheading{<label>}
```

This macro indicates what to do at the start of each logical block within the main body of the glossary. If you use `makeindex` the glossary is sub-divided into a maximum of twenty-eight logical blocks that are determined by the first character of the `sort` key (or `name` key if the `sort` key is omitted). The sub-divisions are in the following order: symbols, numbers, A, ..., Z. If you use `xindy`, the sub-divisions depend on the language settings.

Note that the argument to `\glsgroupheading` is a label *not* the group title. The group title can be obtained via

`\glsgetgroupitle`

```
\glsgetgroupitle{<label>}
```

This obtains the title as follows: if $\backslash<label>\groupname$ exists, this is taken to be the title, otherwise the title is just $\langle label \rangle$.

A navigation hypertarget can be created using

`\glsnavhypertarget`

```
\glsnavhypertarget{<label>}{<text>}
```

For further details about `\glsnavhypertarget`, see [subsection 6.1](#).

Most of the predefined glossary styles redefine `\glsgroupheading` to simply

ignore its argument. The `listhypergroup` style redefines `\glsgroupheading` as follows:

```
\renewcommand*{\glsgroupheading}[1]{%
  \item[\glsnavhypertarget{##1}{\glsgetgroup{##1}}]}
```

See also `\glsgroupskip` below. (Note that command definitions within `\newglossarystyle` must use `##1` instead of `#1` etc.)

`\glsgroupskip`

This macro determines what to do after one logical group but before the header for the next logical group. The list glossary style simply redefines `\glsgroupskip` to be `\indexspace`, whereas the tabular-like styles redefine `\glsgroupskip` to produce a blank row.

`\glossaryentryfield`

```
\glossaryentryfield{\label}{\formattedname}{\description}{\symbol}{\numberlist}
```

This macro indicates what to do for a given glossary entry. Note that `\formattedname` will always be in the form `\glsnamefont{\name}`. This allows the user to set a given font for the entry name, regardless of the glossary style used. Note that `\label` is the label used when the glossary entry was defined via either `\newglossaryentry` or `\newacronym`.

Each time you use a glossary entry it creates a hyperlink (if hyperlinks are enabled) to the relevant line in the glossary. Your new glossary style must therefore redefine `\glossaryentryfield` to set the appropriate target. This is done using

`\glstarget`

```
\glstarget{\label}{\text}
```

where `\label` is the entry's label. Note that you don't need to worry about whether the `hyperref` package has been loaded, as `\glstarget` won't create a target if `\hypertarget` hasn't been defined.

For example, the `list` style defines `\glossaryentryfield` as follows:

```
\renewcommand*{\glossaryentryfield}[5]{%
  \item[\glstarget{##1}{##2}] ##3\glspostdescription\space ##5}
```

Note also that `\numberlist` will always be of the form

```
\glossaryentrynumbers{\relax
\setentrycounter{\countername}\glsnumberformat{\number(s)}}
```

where `\number(s)` may contain `\delimN` (to delimit individual numbers) and/or `\delimR` (to indicate a range of numbers). There may be multiple occurrences of `\setentrycounter{\countername}\glsnumberformat{\number(s)}`, but note that the entire number list is enclosed within the argument to `\glossaryentrynumbers`. The user can redefine this to change the way the entire number list is formatted, regardless of the glossary style. However the most common use of `\glossaryentrynumbers` is to provide a means of suppressing the number list altogether. (In fact, the `nonumberlist` option redefines

\glossaryentrynumbers to ignore its argument.) Therefore, when you define a new glossary style, you don't need to worry about whether the user has specified the nonumberlist package option.

```
\glossarysubentryfield{\langle level\rangle}{\langle label\rangle}{\langle formatted
name\rangle}{\langle description\rangle}{\langle symbol\rangle} {\{number list\}}
```

This is new to version 1.17, and is used to display sub-entries. The first argument, *<level>*, indicates the sub-entry level. This must be an integer from 1 (first sub-level) onwards. The remaining arguments are analogous to those for \glossaryentryfield described above.

For further details of these commands, see [subsection 4.15](#).

2.13.1 Example: creating a completely new style

If you want a completely new style, you will need to redefine all of the commands and the environment listed above.

For example, suppose you want each entry to start with a bullet point. This means that the glossary should be placed in the itemize environment, so theglossary should start and end that environment. Let's also suppose that you don't want anything between the glossary groups (so \glsgroupheading and \glsgroupskip should do nothing) and suppose you don't want anything to appear immediately after \begin{theglossary} (so \glossaryheader should do nothing). In addition, let's suppose the symbol should appear in brackets after the name, followed by the description and last of all the number list should appear within square brackets at the end. Then you can create this new glossary style, called, say, `mylist`, as follows:

```
\newglossarystyle{mylist}{%
% put the glossary in the itemize environment:
\renewenvironment{theglossary}{\begin{itemize}}{\end{itemize}}%
% have nothing after \begin{theglossary}:
\renewcommand*{\glossaryheader}{}%
% have nothing between glossary groups:
\renewcommand*{\glsgroupheading}[1]{}%
\renewcommand*{\glsgroupskip}{}%
% set how each entry should appear:
\renewcommand*{\glossaryentryfield}[5]{%
\item % bullet point
\glstarget{##1}{##2}% the entry name
\space (##4)% the symbol in brackets
\space ##3% the description
\space [##5]% the number list in square brackets
}%
% set how sub-entries appear:
\renewcommand*{\glossarysubentryfield}[6]{%
\glossaryentryfield{##2}{##3}{##4}{##5}{##6}}%
}
```

Note that this style creates a flat glossary, where sub-entries are displayed in exactly the same way as the top level entries.

2.13.2 Example: creating a new glossary style based on an existing style

If you want to define a new style that is a slightly modified version of an existing style, you can use `\glossarystyle` within the second argument of `\newglossarystyle` followed by whatever alterations you require. For example, suppose you want a style like the `list` style but you don't want the extra vertical space created by `\indexspace` between groups, then you can create a new glossary style called, say, `mylist` as follows:

```
\newglossarystyle{mylist}{%
  \glossarystyle{list}%
  % base this style on the list style
  \renewcommand{\glsgroupskip}{\relax}%
  % make nothing happen between groups
}
```

2.13.3 Example: creating a glossary style that uses the `user1`, ..., `user6` keys

Since `\glossaryentryfield` and `\glossarysubentryfield` provide the label for the entry, it's also possible to access the values of the generic user keys, such as `user1`. For example, suppose each entry not only has an associated symbol, but also units (stored in `user1`) and dimension (stored in `user2`). Then you can define a glossary style that displays each entry in a `longtable` as follows:

```
\newglossarystyle{long6col}{%
  % put the glossary in a longtable environment:
  \renewenvironment{theglossary}{%
    \begin{longtable}{l p{\glsdescwidth} c c p{\glspagelistwidth}}%
    \end{longtable}%
  }%
  % Set the table's header:
  \renewcommand*{\glossaryheader}{%
    \bfseries Term & \bfseries Description & \bfseries Symbol &
    \bfseries Units & \bfseries Dimensions & \bfseries Page List
    \\\endhead}%
  % No heading between groups:
  \renewcommand*{\glsgroupheading}[1]{\relax}%
  % Main (level 0) entries displayed in a row:
  \renewcommand*{\glossaryentryfield}[5]{%
    \glstarget{\#1}{\#2}%
    Name
    & \#3%
    Description
    & \#4%
    Symbol
    & \glsentryuseri{\#1}%
    Units
    & \glsentryuserii{\#1}%
    Dimensions
    & \#5%
    Page list
    \\%
    end of row
  }%
  % Sub entries treated the same as level 0 entries:
  \renewcommand*{\glossarysubentryfield}[6]{%
    \glossaryentryfield{\#2}{\#3}{\#4}{\#5}{\#6}%
  }%
  % Nothing between groups:
  \renewcommand*{\glsgroupskip}{\relax}
}
```

2.14 Accessibility Support

Limited accessibility support is provided by the accompanying `glossaries-accsupp` package, but note that this package is experimental and it requires the `accsupp` package which is also listed as experimental. This package defines additional keys that may be used when defining glossary entries. The keys are as follows:

access The replacement text corresponding to the `name` key.

textaccess The replacement text corresponding to the `text` key.

firstaccess The replacement text corresponding to the `first` key.

pluralaccess The replacement text corresponding to the `plural` key.

firstpluralaccess The replacement text corresponding to the `firstplural` key.

symbolaccess The replacement text corresponding to the `symbol` key.

symbolpluralaccess The replacement text corresponding to the `symbolplural` key.

descriptionaccess The replacement text corresponding to the `description` key.

descriptionpluralaccess The replacement text corresponding to the `descriptionplural` key.

For example:

```
\newglossaryentry{tex}{name={\TeX},description={Document preparation language},access={TeX}}
```

Now `\gls{tex}` will be equivalent to

```
\BeginAccSupp{ActualText=\TeX}\EndAccSupp{}
```

See [section 7](#) for further details. It is recommended that you also read the `accsupp` documentation.

3 Mfirstuc Package

The `glossaries` bundle is supplied with the package `mfirstuc` which provides the command:

```
\makefirstuc{\langle stuff \rangle}
```

which makes the first object of `\langle stuff \rangle` uppercase unless `\langle stuff \rangle` starts with a control sequence followed by a non-empty group, in which case the first object in the group is converted to uppercase. Examples:

- `\makefirstuc{abc}` produces Abc
- `\makefirstuc{\emph{abc}}` produces *Abc* (`\MakeUppercase` has been applied to the letter “a” rather than `\emph`.) Note however that `\makefirstuc{\{\em abc\}}` produces ABC and `\makefirstuc{\em abc}` produces abc.
- `\makefirstuc{\{'a\}bc}` produces Ábc

- `\makefirstuc{\ae bc}` produces $\mathcal{A}bc$
- `\makefirstuc{{\ae}bc}` produces $\mathcal{A}bc$
- `\makefirstuc{{\ä}bc}` produces $\mathring{A}bc$

Note that non-Latin or accented characters appearing at the start of the text must be placed in a group (even if you are using the `inputenc` package) due to expansion issues.

In version 1.02 of `mfirstuc`, a bug fix resulted in a change in output if the first object is a control sequence followed by an empty group. Prior to version 1.02, `\makefirstuc{\ae{}bc}` produced $\mathcal{a}Bc$. However as from version 1.02, it now produces $\mathcal{A}bc$.

Note also that

```
\newcommand{\abc}{abc}
\makefirstuc{\abc}
```

produces: ABC. This is because the first object in the argument of `\makefirstuc` is `\abc`, so it does `\MakeUppercase\abc`. Whereas:

```
\newcommand{\abc}{abc}
\expandafter\makefirstuc\expandafter{\abc}
```

produces: Abc. There is a short cut command which will do this:

<code>\xmakefirstuc</code>	<code>\xmakefirstuc{\langle stuff \rangle}</code>
----------------------------	---

This is equivalent to `\expandafter\makefirstuc\expandafter{\langle stuff \rangle}`. So

```
\newcommand{\abc}{abc}
\xmakefirstuc{\abc}
```

produces: Abc.

If you want to use an alternative command to convert to uppercase, for example `\MakeTextUppercase`,¹⁶ you can redefine the internal command `\@gls@makefirstuc`. For example:

```
\renewcommand{\@gls@makefirstuc}[1]{\MakeTextUppercase #1}
```

(Remember that command names that contain the @ character must either be placed in packages or be placed between `\makeatletter` and `\makeatother`.)

4 Glossaries Documented Code

4.1 Package Definition

This package requires L^AT_EX 2 _{ε} .

```
1 \NeedsTeXFormat{LaTeX2e}
2 \ProvidesPackage{glossaries}[2010/02/06 v2.05 (NLCT)]
```

¹⁶defined in the `textcase` package

Required packages:

```
3 \RequirePackage{ifthen}
4 \RequirePackage{xkeyval}[2006/11/18]
5 \RequirePackage{mfirstuc}
6 \RequirePackage{xfor}
```

Need to use `\new@ifnextchar` instead of `\@ifnextchar` in commands that have a final optional argument (such as `\gls`) so require `amsgen`. Thanks to Morten Høgholm for suggesting this. (This has replaced using the `xspace` package.)

```
7 \RequirePackage{amsgen}
```

4.2 Package Options

`toc` The `toc` package option will add the glossaries to the table of contents. This is a boolean key, if the value is omitted it is taken to be true.

```
8 \define@boolkey{glossaries.sty}{gls}{toc}{true}{}
```

`numberline` The `numberline` package option adds `\numberline` to `\addcontentsline`. Note that this option only has an effect if used in with `toc=true`.

```
9 \define@boolkey{glossaries.sty}{gls}{numberline}{true}{}
```

The sectional unit used to start the glossary is stored in `\@@glossarysec`. If chapters are defined, this is initialised to `chapter`, otherwise it is initialised to `section`.

`\@@glossarysec`

```
10 \@ifundefined{chapter}{\newcommand*{\@@glossarysec}{section}}{%
11   \newcommand*{\@@glossarysec}{chapter}}
```

`section` The `section` key can be used to set the sectional unit. If no unit is specified, use `section` as the default. The starred form of the named sectional unit will be used. If you want some other way to start the glossary section (e.g. a numbered section) you will have to redefine `\glossarysection`.

```
12 \define@choicekey{glossaries.sty}{section}{part,chapter,section,%
13 subsection,subsubsection,paragraph,subparagraph}{section}{%
14   \renewcommand*{\@@glossarysec}{#1}}
```

Determine whether or not to use numbered sections.

`\@@glossarysecstar`

```
15 \newcommand*{\@@glossarysecstar}{*}
```

`\@@glossaryseclabel`

```
16 \newcommand*{\@@glossaryseclabel}{}
```

`\glsautoprefix` Prefix to add before label if automatically generated:

```
17 \newcommand*{\glsautoprefix}{}
```

```

numberedsection
18 \define@choicekey{glossaries.sty}{numberedsection}[\val\nr]{%
19 false,nolabel,autolabel][nolabel]{%
20 \ifcase\nr\relax
21   \renewcommand*{\@glossarysecstar}{*}%
22   \renewcommand*{\@glossaryseclabel}{ }%
23 \or
24   \renewcommand*{\@glossarysecstar}{ }%
25   \renewcommand*{\@glossaryseclabel}{ }%
26 \or
27   \renewcommand*{\@glossarysecstar}{ }%
28   \renewcommand*{\@glossaryseclabel}{ }%
29   \label{\glsautoprefix\@glo@type}}%
30 \fi
31 }

```

The default glossary style is stored in `\@glossary@default@style`. This is initialised to `list`. (The `list` style is defined in the accompanying `glossary-list` package described in [subsection 4.18](#).)

```
\@glossary@default@style
32 \newcommand*{\@glossary@default@style}{list}
```

- style** The default glossary style can be changed using the `style` package option. The value can be the name of any defined glossary style. The glossary style is set at the beginning of the document, so you can still use the `style` key to set a style that is defined in another package. This package comes with some predefined styles that are defined in [subsection 4.18](#).

```
33 \define@key{glossaries.sty}{style}{%
34 \renewcommand*{\@glossary@default@style}{#1}}
```

Each entry within a given glossary will have an associated number list. By default, this refers to the page numbers on which that entry has been used, but it can also refer to any counter used in the document (such as the section or equation counters). The default number list format displays the number list “as is”:

```
\glossaryentrynumbers
35 \newcommand*{\glossaryentrynumbers}[1]{#1}
```

- nonumberlist** Note that the entire number list for a given entry will be passed to `\glossaryentrynumbers` so any font changes will also be applied to the delimiters. The `nonumberlist` package option suppresses the number lists (this simply redefines `\glossaryentrynumbers` to ignores its argument).

```
36 \DeclareOptionX{nonumberlist}{%
37 \renewcommand*{\glossaryentrynumbers}[1]{}}
```

```
\@gls@loadlong
38 \newcommand*{\@gls@loadlong}{\RequirePackage{glossary-long}}
```

- nolong** This option prevents `glossary-long` from being loaded. This means that the glossary styles that use the `longtable` environment will not be available. This option is provided to reduce overhead caused by loading unrequired packages.

```
39 \DeclareOptionX{nolong}{\renewcommand*{\@gls@loadlong}{}}
```

```

\@gls@loadsuper The glossary-super package isn't loaded if supertabular isn't installed.
40 \IfFileExists{supertabular.sty}{%
41   \newcommand*{\@gls@loadsuper}{\RequirePackage{glossary-super}}{}{%
42   \newcommand*{\@gls@loadsuper}{}}

nosuper This option prevents glossary-super from being loaded. This means that the glossary styles that use the supertabular environment will not be available. This option is provided to reduce overhead caused by loading unrequired packages.
43 \DeclareOptionX{nosuper}{\renewcommand*{\@gls@loadsuper}{}}

\@gls@loadlist
44 \newcommand*{\@gls@loadlist}{\RequirePackage{glossary-list}}

nolist This option prevents glossary-list from being loaded (to reduce overheads if required). Naturally, the styles defined in glossary-list will not be available if this option is used.
45 \DeclareOptionX{nolist}{\renewcommand*{\@gls@loadlist}{}}

\@gls@loadtree
46 \newcommand*{\@gls@loadtree}{\RequirePackage{glossary-tree}}

notree This option prevents glossary-tree from being loaded (to reduce overheads if required). Naturally, the styles defined in glossary-tree will not be available if this option is used.
47 \DeclareOptionX{notree}{\renewcommand*{\@gls@loadtree}{}}

nostyles Provide an option to suppress all the predefined styles (in the event that the user has custom styles that are not dependent on the predefined styles).
48 \DeclareOptionX{nostyles}{%
49   \renewcommand*{\@gls@loadlong}{}{%
50   \renewcommand*{\@gls@loadsuper}{}{%
51   \renewcommand*{\@gls@loadlist}{}{%
52   \renewcommand*{\@gls@loadtree}{}{%
53   \let\@glossary@default@style\relax
54 }

\glsdefmain Define the main glossary. This will be the first glossary to be displayed when using \printglossaries.
55 \newcommand*{\glsdefmain}{%
56   \newglossary{main}{\gls}{\glo}{\glossaryname}%
57 }

Keep track of the default glossary. This is initialised to the main glossary, but can be changed if for some reason you want to make a secondary glossary the main glossary. This affects any commands that can optionally take a glossary name as an argument (or as the value of the type key in a key-value list). This was mainly done so that \loadglsentries can temporarily change \glsdefaulttype while it loads a file containing new glossary entries (see subsection 4.9).

\glsdefaulttype
58 \newcommand*{\glsdefaulttype}{main}

```

Keep track of which glossary the acronyms are in. This is initialised to `\glsdefaulttype`, but is changed by the `acronym` package option.

<code>\acronymtype</code>	
59 <code>\newcommand*{\acronymtype}{\glsdefaulttype}</code>	The <code>nomain</code> option suppress the creation of the main glossary.
60 <code>\DeclareOptionX{nomain}{%</code>	
61 <code>\let\glsdefaulttype\relax</code>	
62 <code>\renewcommand*{\glsdefmain}{}%</code>	
63 <code>}</code>	
<code>acronym</code>	The <code>acronym</code> option sets an associated conditional which is used in subsection 4.16 to determine whether or not to define a separate glossary for acronyms.
64 <code>\define@boolkey{glossaries.sty}[gls]{acronym}[true]{%</code>	
65 <code>\DeclareAcronymList{acronym}{%</code>	
66 <code>}</code>	
<code>\@glsacronymlists</code>	Comma-separated list of glossary labels indicating which glossaries contain acronyms. Note that <code>\SetAcronymStyle</code> must be used after adding labels to this macro.
67 <code>\newcommand*{\@glsacronymlists}{}{}</code>	
<code>\@addtoacronymlists</code>	
68 <code>\newcommand*{\@addtoacronymlists}[1]{%</code>	
69 <code>\ifx\@glsacronymlists\@empty</code>	
70 <code>\protected@xdef\@glsacronymlists{\#1}{%</code>	
71 <code>\else</code>	
72 <code>\protected@xdef\@glsacronymlists{\@glsacronymlists,\#1}{%</code>	
73 <code>\fi</code>	
74 <code>}</code>	
<code>\DeclareAcronymList</code>	Identifies the named glossary as a list of acronyms and adds to the list. (Doesn't check if the glossary exists, but checks if label already in list. Use <code>\SetAcronymStyle</code> after identifying all the acronym lists.)
75 <code>\newcommand*{\DeclareAcronymList}[1]{%</code>	
76 <code>\glsIfListOfAcronyms{\#1}{}{\@addtoacronymlists{\#1}}{}</code>	
77 <code>}</code>	
<code>\glsIfListOfAcronyms</code>	<code>\glsIfListOfAcronyms{\langle label \rangle}{\langle true part \rangle}{\langle false part \rangle}</code>
	Determines if the glossary with the given label has been identified as being a list of acronyms.
78 <code>\newcommand{\glsIfListOfAcronyms}[1]{%</code>	
79 <code>\edef\@do@gls@islistofacronyms{%</code>	
80 <code>\noexpand\gls@islistofacronyms{\#1}{\@glsacronymlists}{}</code>	
81 <code>\@do@gls@islistofacronyms</code>	
82 <code>}</code>	
	Internal command requires label and list to be expanded:
83 <code>\newcommand{\@gls@islistofacronyms}[4]{%</code>	
84 <code>\def\gls@islistofacronyms##1,#1,##2\end@gls@islistofacronyms{%</code>	
85 <code>\def\@before{\#1}\def\@after{\#2}{}</code>	
86 <code>\gls@islistofacronyms,\#2,#1,\@nil\end@gls@islistofacronyms</code>	
87 <code>\ifx\@after\@nil</code>	

```

\if@glsisacronymlist Convenient boolean.
93 \newif\if@glsisacronymlist

\gls@checkisacronymlist Sets the above boolean if argument is a label representing a list of acronyms.
94 \newcommand*{\gls@checkisacronymlist}[1]{%
95   \glsIfListOfAcronyms{#1}%
96   {\@glsisacronymlisttrue}{\@glsisacronymlistfalse}%
97 }

\SetAcronymLists Sets the “list of acronyms” list. Argument must be a comma-separated list of
glossary labels. (Doesn’t check at this point if the glossaries exists.)
98 \newcommand*{\SetAcronymLists}[1]{%
99   \renewcommand*{\@glsacronymlists}{#1}%
100 }

acronymlists
101 \define@key{glossaries.sty}{acronymlists}{%
102   \@addtoacronymlists{#1}%
103 }

```

The default counter associated with the numbers in the glossary is stored in `\glscounter`. This is initialised to the page counter. This is used as the default counter when a new glossary is defined, unless a different counter is specified in the optional argument to `\newglossary` (see [subsection 4.6](#)).

```

\glscounter
104 \newcommand{\glscounter}{page}

counter The counter option changes the default counter. (This just redefines \glscounter.)
105 \define@key{glossaries.sty}{counter}{%
106   \renewcommand*{\glscounter}{#1}%
107 }

```

The glossary keys whose values are written to another file (i.e. `sort`, `name`, `description` and `symbol`) need to be sanitized, otherwise fragile commands would not be able to be used in `\newglossaryentry`. However, strange results will occur if you then use those fields in the document. As these fields are not normally used in the document, but are by default only used in the glossary, the default is to sanitize them. If however you want to use these values in the document (either by redefining commands like `\glsdisplay` or by using commands like `\glsentrydesc`) you will have to switch off the sanitization using the `sanitize` package option, but you will then have to use `\protect` to protect fragile commands when defining new glossary entries. The `sanitize` option takes a key-value list as its value, which can be used to switch individual values on and off. For example:

```
\usepackage[sanitize={description,name,symbol=false}]{glossaries}
```

will switch off the sanitization for the `symbol` key, but switch it on for the `description` and `name` keys. This would mean that you can use fragile commands in the `description` and `name` when defining a new glossary entry, but not for the `symbol`.

The default values are defined as:

```
\@gls@sanitizedesc
108 \newcommand*{\@gls@sanitizedesc}{\@onelvel@sanitize\@glo@desc}

\@gls@sanitizename
109 \newcommand*{\@gls@sanitizename}{\@onelvel@sanitize\@glo@name}

\@gls@sanitizesymbol
110 \newcommand*{\@gls@sanitizesymbol}{\@onelvel@sanitize\@glo@symbol}
```

(There is no equivalent for the `sort` key, since that is only provided for the benefit of `makeindex` or `xindy`, and so will always be sanitized.)

Before defining the `sanitize` package option, The key-value list for the `sanitize` value needs to be defined. These are all boolean keys. If they are not given a value, assume `true`.

Firstly the `description`. If set, it will redefine `\@gls@sanitizedesc` to use `\@onelvel@sanitize`, otherwise `\@gls@sanitizedesc` will do nothing.

```
111 \define@boolkey[gls]{sanitize}{description}[true]{%
112 \ifgls@sanitize@description
113   \renewcommand*{\@gls@sanitizedesc}{\@onelvel@sanitize\@glo@desc}%
114 \else
115   \renewcommand*{\@gls@sanitizedesc}{}%
116 \fi
117 }
```

Similarly for the `name` key:

```
118 \define@boolkey[gls]{sanitize}{name}[true]{%
119 \ifgls@sanitize@name
120   \renewcommand*{\@gls@sanitizename}{\@onelvel@sanitize\@glo@name}%
121 \else
122   \renewcommand*{\@gls@sanitizename}{}%
123 \fi}
```

and for the `symbol` key:

```
124 \define@boolkey[gls]{sanitize}{symbol}[true]{%
125 \ifgls@sanitize@symbol
126   \renewcommand*{\@gls@sanitizesymbol}{%
127     \@onelvel@sanitize\@glo@symbol}%
128 \else
129   \renewcommand*{\@gls@sanitizesymbol}{}%
130 \fi}
```

sanitize Now define the `sanitize` option. It can either take a key-val list as its value, or it can take the keyword `none`, which is equivalent to `description=false`, `symbol=false`, `name=false`:

```
131 \define@key{glossaries.sty}{sanitize}[description=true,symbol=true,
132 name=true]{%
133 \ifthenelse{\equal{\#1}{none}}{%
134 \renewcommand*{\@gls@sanitizedesc}{}%
```

```

135 \renewcommand*{\@gls@sanitizename}{}
136 \renewcommand*{\@gls@sanitizesymbol}{}
137 }{\setkeys[gls]{sanitize}{#1}}%
138 }

translate Define translate option. If false don't set up multi-lingual support.
139 \define@boolkey{glossaries.sty}[gls]{translate}[true]{} 

Set the default value:
140 \glstranslatefalse
141 \c@ifpackageloaded{translator}{\glstranslatetrue}{}
142 \c@ifpackageloaded{babel}{\glstranslatetrue}{}
143 \c@ifpackageloaded{polyglossia}{\glstranslatetrue}{}}

hyperfirst Set whether or not terms should have a hyperlink on first use.
144 \define@boolkey{glossaries.sty}[gls]{hyperfirst}[true]{} 
145 \glshyperfirsttrue

footnote Set the long form of the acronym in footnote on first use.
146 \define@boolkey{glossaries.sty}[glsacr]{footnote}[true]{}%
147 \ifthenelse{\boolean{glsacrdescription}}{}%
148 {\renewcommand*{\@gls@sanitizedesc}{}}
149 }

description Allow acronyms to have a description (needs to be set using the description key in the optional argument of \newacronym).
150 \define@boolkey{glossaries.sty}[glsacr]{description}[true]{}%
151 \renewcommand*{\@gls@sanitizesymbol}{}%
152 }

smallcaps Define \newacronym to set the short form in small capitals.
153 \define@boolkey{glossaries.sty}[glsacr]{smallcaps}[true]{}%
154 \renewcommand*{\@gls@sanitizesymbol}{}%
155 }

smaller Define \newacronym to set the short form using \smaller which obviously needs to be defined by loading the appropriate package.
156 \define@boolkey{glossaries.sty}[glsacr]{smaller}[true]{}%
157 \renewcommand*{\@gls@sanitizesymbol}{}%
158 }

dua Define \newacronym to always use the long forms (i.e. don't use acronyms)
159 \define@boolkey{glossaries.sty}[glsacr]{dua}[true]{}%
160 \renewcommand*{\@gls@sanitizesymbol}{}%
161 }

shortcuts Define acronym shortcuts.
162 \define@boolkey{glossaries.sty}[glsacr]{shortcuts}[true]{} 

\glsorder Stores the glossary ordering. This may either be "word" or "letter". This passes the relevant information to makeglossaries. The default is word ordering.
163 \newcommand*{\glsorder}{word}

```

\@glsorder The ordering information is written to the auxiliary file for `makeglossaries`, so ignore the auxiliary information.

```
164 \newcommand*{\@glsorder}[1]{}

order
165 \define@choicekey{glossaries.sty}{order}{word,letter}{%
166   \def\glsorder{\#1}%

\ifglsxindy Provide boolean to determine whether xindy or makeindex will be used to sort the glossaries.
167 \newif\ifglsxindy

The default is makeindex.
168 \glsxindyfalse

Define package option to specify that makeindex will be used to sort the glossaries:
169 \DeclareOptionX{makeindex}{\glsxindyfalse}

The xindy package option may have a value which in turn can be a key=value list. First define the keys for this sub-list. The boolean glsnumbers determines whether to automatically add the glsnumbers letter group.
170 \define@boolkey[gls]{xindy}{glsnumbers}[true]{}
171 \gls@xindy@glsnumberstrue

\@xdy@main@language Define what language to use for each glossary type (if a language is not defined for a particular glossary type the language specified for the main glossary is used.)
172 \def\@xdy@main@language{\rootlanguagename}%

Define key to set the language
173 \define@key[gls]{xindy}{language}{\def\@xdy@main@language{\#1}%

\gls@codepage Define the code page. If \inputencodingname is defined use that, otherwise have initialise with no codepage.
174 \@ifundefined{\inputencodingname}{%
175   \def\gls@codepage{}%}
176   \def\gls@codepage{\inputencodingname}
177 }

Define a key to set the code page.
178 \define@key[gls]{xindy}{codepage}{\def\gls@codepage{\#1}%

Define package option to specify that xindy will be used to sort the glossaries:
179 \define@key{glossaries.sty}{xindy}[]%
180   \glsxindytrue
181   \setkeys[gls]{xindy}{\#1}%
182 }

\GlossariesWarning Prints a warning message.
183 \newcommand*{\GlossariesWarning}[1]{%
184   \PackageWarning{glossaries}{\#1}%
185 }
```

```

\GlossariesWarningNoLine Prints a warning message without the line number.
186 \newcommand*{\GlossariesWarningNoLine}[1]{%
187   \PackageWarningNoLine{glossaries}{#1}%
188 }

Define package option to suppress warnings
189 \DeclareOptionX{nowarn}{%

218   \string#1\space after \string\makeglossaries}}%
219 }
```

4.3 Default values

This section sets up default values that are used by this package. Some of the names may already be defined (e.g. by `babel`) so `\providecommand` is used.

Main glossary title:

```
\glossaryname
220 \providecommand*{\glossaryname}{Glossary}
```

The title for the `acronym` glossary type (which is defined if `acronym` package option is used) is given by `\acronymname`. If the `acronym` package option is not used, `\acronymname` won't be used.

```
\acronymname
221 \providecommand*{\acronymname}{Acronyms}
```

`\glsettoctitle` Sets the TOC title for the given glossary.

```
222 \newcommand*{\glsettoctitle}[1]{%
223 \def\glossarytoctitle{\csname @glotype@#1@title\endcsname}}
```

The following commands provide text for the headers used by some of the tabular-like glossary styles. Whether or not they get used in the glossary depends on the glossary style.

```
\entryname
224 \providecommand*{\entryname}{Notation}
```

```
\descriptionname
225 \providecommand*{\descriptionname}{Description}
```

```
\symbolname
226 \providecommand*{\symbolname}{Symbol}
```

```
\pagelistname
227 \providecommand*{\pagelistname}{Page List}
```

Labels for `makeindex`'s symbol and number groups:

```
\glssymbolsgroupname
228 \providecommand*{\glssymbolsgroupname}{Symbols}
```

```
\glsnumbersgroupname
229 \providecommand*{\glsnumbersgroupname}{Numbers}
```

`\glspluralsuffix` The default plural is formed by appending `\glspluralsuffix` to the singular form.

```
230 \newcommand*{\glspluralsuffix}{s}
```

```

\seename
231 \providecommand*{\seename}{\see}

\andname
232 \providecommand*{\andname}{\&}

Add multi-lingual support. Thanks to everyone who contributed to the translations from both comp.text.tex and via email.

\addglossarytocaptions If using translator, \glossaryname should be defined in terms of \translate, but if babel is also loaded, it will redefine \glossaryname whenever the language is set, so override it. (Don't use \addto as polyglossia doesn't define it.)
233 \newcommand*{\addglossarytocaptions}[1]{%
234   \@ifundefined{captions#1}{}{%
235     \expandafter\let\expandafter\@gls@tmp\csname captions#1\endcsname

291                             \translate{Symbols (glossaries)}}%%
292                         \renewcommand*\{\glsnumbersgroupname}{%
293                             \translate{Numbers (glossaries)}}%%
294                     }{%
295                         \@ifpackageloaded{babel}{%
296                             {\RequirePackage{glossaries-babel}}{%
297                             }{%
298                                 \@ifpackageloaded{polyglossia}{%
299                                     {\RequirePackage{glossaries-polyglossia}}{}{%
300                                 }{%
301                         \fi

```

\glspostdescription The description terminator is given by `\glspostdescription` (except for the 3 and 4 column styles). This is a full stop by default:

```
302 \newcommand*\{\glspostdescription}{.}
```

\nopostdesc Provide a means to suppress description terminator for a given entry. (Useful for entries with no description.) Has no effect outside the glossaries.

```
303 \newcommand*\{\nopostdesc}{}
```

\@nopostdesc Suppress next description terminator.

```
304 \newcommand*\{\@nopostdesc}{%
305     \let\org\glspostdescription\glspostdescription
306     \def\glspostdescription{%
307         \let\glspostdescription\org\glspostdescription}%
308 }
```

\glspar Provide means of having a paragraph break in glossary entries

```
309 \newcommand{\glspar}{\par}
```

\setStyleFile Sets the style file. The relevant extension is appended.

```
310 \ifglsxindy
311     \newcommand{\setStyleFile}[1]{%
```

```

312     \renewcommand{\istfilename}{#1.xdy}
313 \else
314   \newcommand{\setStyleFile}[1]{%
315     \renewcommand{\istfilename}{#1.ist}}
316 \fi

```

This command only has an effect prior to using `\makeglossaries`.

317 `\@onlypremakeg\setStyleFile`

The name of the `makeindex` or `xindy` style file is given by `\istfilename`. This file is created by `\writeist` (which is used by `\makeglossaries`) so redefining this command will only have an effect if it is done *before* `\makeglossaries`. As from v1.17, use `\setStyleFile` instead of directly redefining `\istfilename`.

```

\istfilename
318 \ifglsxindy
319   \def\istfilename{\jobname.xdy}
320 \else
321   \def\istfilename{\jobname.ist}
322 \fi

```

The `makeglossaries` Perl script picks up this name from the auxiliary file. If the name ends with `.xdy` it calls `xindy` otherwise it calls `makeindex`. Since its not required by L^AT_EX, `\@istfilename` ignores its argument.

```

\@istfilename
323 \newcommand*{\@istfilename}[1]{}

```

This command is the value of the `page_compositor` `makeindex` key. Again, any redefinition of this command must take place *before* `\writeist` otherwise it will have no effect. As from 1.17, use `\glsSetCompositor` instead of directly redefining `\glscompositor`.

```

\glscompositor
324 \newcommand*{\glscompositor}{{}}

```

`\glsSetCompositor` Sets the compositor.

```

325 \newcommand*{\glsSetCompositor}[1]{%
326   \renewcommand*{\glscompositor}{#1}}

```

Only use before `\makeglossaries`

327 `\@onlypremakeg\glsSetCompositor`

(The page compositor is usually defined as a dash when using `makeindex`, but most of the standard counters used by L^AT_EX use a full stop as the compositor, which is why I have used it as the default.) If `xindy` is used `\glscompositor` only affects the `arabic-page-numbers` location class.

`\@glsAlphacompositor` This is only used by `xindy`. It specifies the compositor to use when location numbers are in the form `<letter><compositor><number>`. For example, if `\@glsAlphacompositor` is set to “.” then it allows locations such as A.1 whereas if `\@glsAlphacompositor` is set to “-” then it allows locations such as A-1.

328 `\newcommand*{\@glsAlphacompositor}{\glscompositor}`

```

\glsSetAlphaCompositor Sets the alpha compositor.
329 \ifglsxindy%
330   \newcommand*\glsSetAlphaCompositor[1]{%
331     \renewcommand*{\glsAlphaCompositor}{#1}%

362   }%
363   Individual numbers in an entry's associated number list are delimited using
364   \delimN (which corresponds to the delim_n makeindex keyword). The default
365   value is a comma followed by a space.
366 \delimN
367   \newcommand{\delimN}{, }%
368   A range of numbers within an entry's associated number list is delimited using
369   \delimR (which corresponds to the delim_r makeindex keyword). The default is
370   an en-dash.
371 \delimR
372   \newcommand{\delimR}{--}%

```

The glossary preamble is given by `\glossarypreamble`. This will appear after the glossary sectioning command, and before the `theglossary` environment. It is designed to allow the user to add information pertaining to the glossary (e.g. “page numbers in italic indicate the primary definition”) therefore `\glossarypreamble` shouldn’t be affected by the glossary style. (So if you define your own glossary style, don’t have it change `\glossarypreamble`.) The preamble is empty by default. If you have multiple glossaries, and you want a different preamble for each glossary, you will need to use `\printglossary` for each glossary type, instead of `\printglossaries`, and redefine `\glossarypreamble` before each `\printglossary`.

```
\glossarypreamble
349 \newcommand*{\glossarypreamble}{}%
```

The glossary postamble is given by `\glossarypostamble`. This is provided to allow the user to add something after the end of the `theglossary` environment (again, this shouldn’t be affected by the glossary style). It is, of course, possible to simply add the text after `\printglossary`, but if you only want the postamble to appear after the first glossary, but not after subsequent glossaries, you can do something like:

```
\renewcommand{\glossarypostamble}{For a complete list of terms
see \cite{blah}\gdef\glossarypreamble{}}
```

```
\glossarypostamble
350 \newcommand*{\glossarypostamble}{}%
```

The sectioning command that starts a glossary is given by `\glossarysection`. (This does not form part of the glossary style, and so should not be changed by a glossary style.) If `\phantomsection` is defined, it uses `\p@glossarysection`, otherwise it uses `\@glossarysection`.

```
\glossarysection
351 \newcommand*{\glossarysection}[2][\@gls@title]{%
352   \def\@gls@title{\#2}%
353   \@ifundefined{phantomsection}{%
354     \@glossarysection{\#1}{\#2}{\@p@glossarysection{\#1}{\#2}}%
355     \glossarymark{\glossarytoctitle}%
356   }%
```

`\glossarymark` Sets the header mark for the glossary. Takes the glossary short (TOC) title as the argument.

```
357 \@ifundefined{glossarymark}{%
358   \newcommand{\glossarymark}[1]{\@mkboth{\#1}{\#1}}%
359 }%
360   \GlossariesWarning{overriding \string\glossarymark}%
361   \@ifclassloaded{memoir}{%
362   {%
363     \renewcommand{\glossarymark}[1]{%
364       \markboth{\memUHead{\#1}}{\memUHead{\#1}}%
365     }%
366   }%
367 {}}
```

```

368     \renewcommand{\glossarymark}[1]{\cmkboth{#1}{#1}}
369 }
370 }
```

The required sectional unit is given by `\@@glossarysec` which was defined by the `section` package option. The starred form of the command is chosen. If you don't want any sectional command, you will need to redefine `\glossarysection`. The sectional unit can be changed, if different sectional units are required.

```

\setglossarysection
371 \newcommand*{\setglossarysection}[1]{%
372 \setkeys{glossaries.sty}{section=#1}}
```

The command `\@glossarysection` indicates how to start the glossary section if `\phantomsection` is not defined.

```

\@glossarysection
373 \newcommand*{\@glossarysection}[2]{%
374 \ifx\@@glossarysecstar\empty
375   \csname\@@glossarysec\endcsname{#2}%
376 \else
377   \csname\@@glossarysec\endcsname*{#2}%
378   \gls@toc{#1}{\@@glossarysec}%
379 \fi
380 \@@glossaryseclabel}
```

As `\@glossarysection`, but put in `\phantomsection`, and swap where `\gls@toc` goes. If using chapters do a `\clearpage`. This ensures that the hyper link from the table of contents leads to the line above the heading, rather than the line below it.

```

\@p@glossarysection
381 \newcommand*{\@p@glossarysection}[2]{%
382 \gls@clearpage
383 \phantomsection
384 \ifx\@@glossarysecstar\empty
385   \csname\@@glossarysec\endcsname{#2}%
386 \else
387   \gls@toc{#1}{\@@glossarysec}%
388   \csname\@@glossarysec\endcsname*{#2}%
389 \fi
390 \@@glossaryseclabel}
```

The `\gls@docclearpage` command is used to issue a `\clearpage` (or `\cleardoublepage`) depending on whether the glossary sectional unit is a chapter. If the sectional unit is something else, do nothing.

```

\gls@docclearpage
391 \newcommand*{\gls@docclearpage}{%
392 \ifthenelse{\equal{\@@glossarysec}{chapter}}{%
393 \GIfundefined{cleardoublepage}{\clearpage}{\cleardoublepage}{}}
394 }
```

`\glsclearpage` This just calls `\gls@doclearpage`, but it makes it easier to have a user command so that the user can override it.

```
395 \newcommand*{\glsclearpage}{\gls@doclearpage}
```

The glossary is added to the table of contents if `glstoc` flag set. If it is set, `\@gls@toc` will add a line to the `.toc` file, otherwise it will do nothing. (The first argument to `\@gls@toc` is the title for the table of contents, the second argument is the sectioning type.)

```
\@gls@toc
 396 \newcommand*{\@gls@toc}[2]{%
 397 \ifglsnocatname
 398   \ifglsnumberline
 399     \addcontentsline{toc}{#2}{\numberline{}#1}%
 400   \else
 401     \addcontentsline{toc}{#2}{#1}%
 402   \fi
 403 \fi}
```

4.4 Xindy

This section defines commands that only have an effect if `xindy` is used to sort the glossaries.

`\glsnoxindywarning` Issues a warning if `xindy` hasn't been specified. These warnings can be suppressed by redefining `\glsnoxindywarning` to ignore its argument

```
404 \newcommand*{\glsnoxindywarning}[1]{%
405   \GlossariesWarning{Not in xindy mode --- ignoring \string#1}%
406 }
```

\@xdyattributes Define list of attributes (\string is used in case the double quote character has been made active)

```
407 \ifglsxindy
408   \edef\@xdyattributes{\string"default\string"}%
409 \fi
```

`\@x dylocref` Define list of markup location references.

```
410 \ifglsxindy  
411   \def\@xdylocref{}  
412 \fi
```

\GlsAddXdyAttribute Adds an attribute.

```
413 \ifglsxindy
414   \newcommand*\GlsAddXdyAttribute[1]{%
415   \edef\@xdyattributes{\@xdyattributes ~\J \string"\#1\string"}%
416   \expandafter\toks@\expandafter{\@xdylocref}%
417   \edef\@xdylocref{\the\toks@ ~\J}%
418   (markup-locref
419   :open \string"\string"~n\string\setentrycounter
420   {\noexpand\glscounter}%
421   \expandafter\string\csname#1\endcsname
422   \expandafter\@gobble\string\{\string" ~\J
423   :close \string"\expandafter\@gobble\string\}\string" ~\J
424   :attr \string"\#1\string"})}
```

Only has an effect before \writeist:

```
425  \@onlypremakeg\GlsAddXdyAttribute
426 \else
427  \newcommand*\GlsAddXdyAttribute[1]{%
428    \glsnoxindywarning\GlsAddXdyAttribute}
429 \fi
```

Add known attributes:

```
430 \ifglsxindy
431  \GlsAddXdyAttribute{glsnumberformat}
432  \GlsAddXdyAttribute{textrm}
433  \GlsAddXdyAttribute{textsf}
434  \GlsAddXdyAttribute{texttt}
435  \GlsAddXdyAttribute{textbf}
436  \GlsAddXdyAttribute{textmd}
437  \GlsAddXdyAttribute{textit}
438  \GlsAddXdyAttribute{textup}
439  \GlsAddXdyAttribute{textsl}
440  \GlsAddXdyAttribute{textsc}
441  \GlsAddXdyAttribute{emph}
442  \GlsAddXdyAttribute{glshypernumber}
443  \GlsAddXdyAttribute{hyperrm}
444  \GlsAddXdyAttribute{hypersf}
445  \GlsAddXdyAttribute{hypertt}
446  \GlsAddXdyAttribute{hyperbf}
447  \GlsAddXdyAttribute{hypermd}
448  \GlsAddXdyAttribute{hyperit}
449  \GlsAddXdyAttribute{hyperup}
450  \GlsAddXdyAttribute{hypersl}
451  \GlsAddXdyAttribute{hypersc}
452  \GlsAddXdyAttribute{hyperemph}
453 \fi
```

\@xdyuseralphabets List of additional alphabets

```
454 \def\@xdyuseralphabets{}
```

\GlsAddXdyAlphabet \GlsAddXdyAlphabet{\langle name\rangle}{\langle definition\rangle} adds a new alphabet called *name*.
The definition must use xindy syntax.

```
455 \ifglsxindy
456  \newcommand*\GlsAddXdyAlphabet[2]{%

4.5 Loops and conditionals

\forallglossaries To iterate through all glossaries (or comma-separated list of glossary names given in optional argument) use:

```
\forallglossaries[⟨glossary list⟩]{⟨cmd⟩}{⟨code⟩}
```

where ⟨cmd⟩ is a control sequence which will be set to the name of the glossary in the current iteration.

```
610 \newcommand*{\forallglossaries}[3][\@glo@types]{%
611   \@for#2:=#1\do{\ifx#2\empty\else#3\fi}%
612 }
```

\forglsentries To iterate through all entries in a given glossary use:

```
\forglsentries[⟨type⟩]{⟨cmd⟩}{⟨code⟩}
```

where ⟨type⟩ is the glossary label and ⟨cmd⟩ is a control sequence which will be set to the entry label in the current iteration.

```
613 \newcommand*{\forglsentries}[3][\glsdefaulttype]{%
614   \edef\@@glo@list{\csname glolist@\#1\endcsname}%
615   \@for#2:=\@@glo@list\do{\ifx#2\empty\else#3\fi}%
616 }
```

\forallglsentries To iterate through all glossary entries over all glossaries listed in the optional argument (the default is all glossaries) use:

```
\forallglsentries[⟨glossary list⟩]{⟨cmd⟩}{⟨code⟩}
```

Within \forallglsentries, the current glossary type is given by \@@this@glo@.

```
617 \newcommand*{\forallglsentries}[3][\@glo@types]{%
618   \expandafter\forallglossaries\expandafter[#1]{\@@this@glo@}{%
619     \forglsentries[\@@this@glo@]{#2}{#3}}}
```

\ifglossaryexists To check to see if a glossary exists use:

```
\ifglossaryexists{⟨type⟩}{⟨true-text⟩}{⟨false-text⟩}
```

where ⟨type⟩ is the glossary's label.

```
620 \newcommand{\ifglossaryexists}[3]{%
621   \@ifundefined{glotype@\#1@out}{#3}{#2}%
622 }
```

\ifglsentryexists To check to see if a glossary entry has been defined use:

```
\ifglsentryexists{⟨label⟩}{⟨true text⟩}{⟨false text⟩}
```

where ⟨label⟩ is the entry's label.

```
623 \newcommand{\ifglsentryexists}[3]{%
624   \ifundefined{glo@\#1@name}{#3}{#2}}
```

\ifglsused To determine if given glossary entry has been used in the document text yet use:

```
\ifglsused{⟨label⟩}{⟨true text⟩}{⟨false text⟩}
```

where $\langle label \rangle$ is the entry's label. If true it will do $\langle true\ text \rangle$ otherwise it will do $\langle false\ text \rangle$.

```
625 \newcommand*{\ifglsused}[3]{\ifthenelse{\boolean{glo@#1@flag}}{#2}{#3}}
```

The following two commands will cause an error if the given condition fails:

```
\glsdoifexists \glsdoifexists{\langle label \rangle}{\langle code \rangle}
```

Generate an error if entry specified by $\langle label \rangle$ doesn't exists, otherwise do $\langle code \rangle$.

```
626 \newcommand{\glsdoifexists}[2]{%
627   \ifglsentryexists{#1}{#2}{%
628     \PackageError{glossaries}{Glossary entry '#1' has not been%
629     defined}{You need to define a glossary entry before you%
630     can use it.}%
631 }
```

```
\glsdoifnoexists \glsdoifnoexists{\langle label \rangle}{\langle code \rangle}
```

The opposite: only do second argument if the entry doesn't exists. Generate an error message if it exists.

```
632 \newcommand{\glsdoifnoexists}[2]{%
633   \ifglsentryexists{#1}{%
634     \PackageError{glossaries}{Glossary entry '#1' has already%
635     been defined}{}%
636 }
```

4.6 Defining new glossaries

A comma-separated list of glossary names is stored in `\@glo@types`. When a new glossary type is created, its identifying name is added to this list. This is used by commands that iterate through all glossaries (such as `\makeglossaries` and `\printglossaries`).

```
\@glo@types
```

```
637 \newcommand*{\@glo@types}{,}
```

A new glossary type is defined using `\newglossary`. Syntax:

```
\newglossary[⟨log-ext⟩]{⟨name⟩}{⟨in-ext⟩}{⟨out-ext⟩}{⟨title⟩}[⟨counter⟩]
```

where $\langle log-ext \rangle$ is the extension of the `makeindex` transcript file, $\langle in-ext \rangle$ is the extension of the glossary input file (read in by `\printglossary` and created by `makeindex`), $\langle out-ext \rangle$ is the extension of the glossary output file which is read in by `makeindex` (lines are written to this file by the `\glossary` command), $\langle title \rangle$ is the title of the glossary that is used in `\glossarysection` and $\langle counter \rangle$ is the default counter to be used by entries belonging to this glossary. The `makeglossaries` Perl script reads in the relevant extensions from the auxiliary file, and passes the appropriate file names and switches to `makeindex`.

```
\newglossary
```

```
638 \newcommand*{\newglossary}[5][glg]{%
639   \ifglossaryexists{#2}{%
640     \PackageError{glossaries}{Glossary type '#2' already exists}{%
```

```
641 You can't define a new glossary called '#2' because it already
642 exists}%
643 }%
```

Check if default has been set

```
644 \ifx\glsdefaulttype\relax
645   \gdef\glsdefaulttype{#2}%
646 \fi
```

Add this to the list of glossary types:

```
647 \toks@{#2}\edef\@glo@types{\@glo@types\the\toks@,}%
```

Define a comma-separated list of labels for this glossary type, so that all the entries for this glossary can be reset with a single command. When a new entry is created, its label is added to this list.

```
648 \expandafter\gdef\csname glolist@#2\endcsname{,}%
```

Store details of this new glossary type:

```
649 \expandafter\def\csname @glotype@#2@in\endcsname{#3}%
650 \expandafter\def\csname @glotype@#2@out\endcsname{#4}%
651 \expandafter\def\csname @glotype@#2@title\endcsname{#5}%
652 \protected@write\@auxout{}{\string\@newglossary{#2}{#1}{#3}{#4}}%
```

How to display this entry in the document text (uses `\glsdisplay` and `\glsdisplayfirst` by default). These can be redefined by the user later if required (see `\defglsdisplay` and `\defglsdisplayfirst`). These may already have been defined if this has been specified as a list of acronyms.

```
653 \@ifundefined{gls@#2@display}%
654   \expandafter\gdef\csname gls@#2@display\endcsname{%
655     \glsdisplay}{}%
656 \ifundefined{gls@#2@displayfirst}%
657   \expandafter\gdef\csname gls@#2@displayfirst\endcsname{%
658     \glsdisplayfirst}{}%
```

Find out if the final optional argument has been specified, and use it to set the counter associated with this glossary. (Uses `\glscounter` if no optional argument is present.)

```
659 \ifnnextchar[{\@gls@setcounter{#2}}%
660   {\@gls@setcounter{#2}[\glscounter]}}}
```

Only define new glossaries in the preamble:

```
661 \onlypreamble{\newglossary}
```

Only define new glossaries before `\makeglossaries`

```
662 \onlypremakeg{\newglossary}
```

`\@newglossary` is used to specify the file extensions for the `makeindex` input, output and transcript files. It is written to the auxiliary file by `\newglossary`. Since it is not used by L^AT_EX, `\@newglossary` simply ignores its arguments.

```
\@newglossary
```

```
663 \newcommand*{\@newglossary}[4]{}
```

Store counter to be used for given glossary type (the first argument is the glossary label, the second argument is the name of the counter):

```
\@gls@setcounter
664 \def\@gls@setcounter#1[#2]{%
665 \expandafter\def\csname @glo@type@#1@counter\endcsname{#2}%
666 }
```

Get counter associated with given glossary (the argument is the glossary label):

```
\@gls@getcounter
667 \newcommand*{\@gls@getcounter}[1]{%
668 \csname @glo@type@#1@counter\endcsname}
```

Define the main glossary. This will be the first glossary to be displayed when using `\printglossaries`.

```
669 \glsdefmain
```

4.7 Defining new entries

New glossary entries are defined using `\newglossaryentry`. This command requires a label and a key-value list that defines the relevant information for that entry. The definition for these keys follows. Note that the `name`, `description` and `symbol` keys will be sanitized later, depending on the value of the package option `sanitize` (this means that if some of the keys haven't been defined, they can be constructed from the `name` and `description` key before they are sanitized).

- `name` The `name` key indicates the name of the term being defined. This is how the term will appear in the glossary. The `name` key is required when defining a new glossary entry.

```
670 \define@key{glossentry}{name}{%
671 \def\@glo@name{#1}%
672 }
```

- `description` The `description` key is usually only used in the glossary, but can be made to appear in the text by redefining `\glsdisplay` and `\glsdisplayfirst` (or using `\defglsdisplay` and `\defglsdisplayfirst`), however, you will have to disable the `sanitize` option (using the `sanitize` package option, `sanitize={description=false}`, and protect fragile commands). The `description` key is required when defining a new glossary entry. (Be careful not to make the description too long, because `makeindex` has a limited buffer. `\@glo@desc` is defined to be a short command to discourage lengthy descriptions for this reason. If you do have a very long description, or if you require paragraph breaks, define a separate command that contains the description, and use it as the value to the `description` key.)

```
673 \define@key{glossentry}{description}{%
674 \def\@glo@desc{#1}%
675 }
```

descriptionplural

```
676 \define@key{glossentry}{descriptionplural}{%
677 \def\@glo@descplural{#1}%
678 }
```

- sort** The `sort` key needs to be sanitized here (the `sort` key is provided for `makeindex`'s benefit, not for use in the document). The `sort` key is optional when defining a new glossary entry. If omitted, the value is given by `<name> <description>`.
- ```
679 \define@key{glossentry}{sort}{%
680 \def\@glo@sort{\#1}}
```
- text** The `text` key determines how the term should appear when used in the document (i.e. outside of the glossary). If omitted, the value of the `name` key is used instead.
- ```
681 \define@key{glossentry}{text}{%
682 \def\@glo@text{\#1}%
683 }
```
- plural** The `plural` key determines how the plural form of the term should be displayed in the document. If omitted, the plural is constructed by appending `\glspluralsuffix` to the value of the `text` key.
- ```
684 \define@key{glossentry}{plural}{%
685 \def\@glo@plural{\#1}%
686 }
```
- first** The `first` key determines how the entry should be displayed in the document when it is first used. If omitted, it is taken to be the same as the value of the `text` key.
- ```
687 \define@key{glossentry}{first}{%
688 \def\@glo@first{\#1}%
689 }
```
- firstplural** The `firstplural` key is used to set the plural form for first use, in the event that the plural is required the first time the term is used. If omitted, it is constructed by appending `\glspluralsuffix` to the value of the `first` key.
- ```
690 \define@key{glossentry}{firstplural}{%
691 \def\@glo@firstplural{\#1}%
692 }
```
- symbol** The `symbol` key is ignored by most of the predefined glossary styles, and defaults to `\relax` if omitted. It is provided for glossary styles that require an associated symbol, as well as a name and description. To make this value appear in the glossary, you need to redefine `\glossaryentryfield` so that it uses its fourth parameter. If you want this value to appear in the text when the term is used by commands like `\gls`, you will need to change `\glsdisplay` and `\glsdisplayfirst` (either explicitly for all glossaries or via `\defglsdisplay` and `\defglsdisplayfirst` for individual glossaries).
- ```
693 \define@key{glossentry}{symbol}{%
694 \def\@glo@symbol{\#1}%
695 }
```
- symbolplural**
- ```
696 \define@key{glossentry}{symbolplural}{%
697 \def\@glo@symbolplural{\#1}%
698 }
```
- type** The `type` key specifies to which glossary this entry belongs. If omitted, the default glossary is used.
- ```
699 \define@key{glossentry}{type}{%
700 \def\@glo@type{\#1}}
```

counter The counter key specifies the name of the counter associated with this glossary entry:

```
701 \define@key{glossentry}{counter}{%
702 \ifundefined{c@\#1}{\PackageError{glossaries}{There is no counter
703 called '#1'}{\The counter key should have the name of a valid
704 counter as its value}}{%
705 \def\@glo@counter{\#1}}}
```

see The **see** key specifies a list of cross-references

```
706 \define@key{glossentry}{see}{%
707 \def\@glo@see{\#1}}
```

parent The **parent** key specifies the parent entry, if required.

```
708 \define@key{glossentry}{parent}{%
709 \def\@glo@parent{\#1}}
```

nonumberlist The **nonumberlist** key suppresses the number list for the given entry.

```
710 \define@key{glossentry}{nonumberlist}[none]{%
711 \def\@glo@prefix{\glsnonextpages}}
```

Define some generic user keys. (6 ought to be enough!)

user1

```
712 \define@key{glossentry}{user1}{%
713   \def\@glo@useri{\#1}%
714 }
```

user2

```
715 \define@key{glossentry}{user2}{%
716   \def\@glo@userii{\#1}%
717 }
```

user3

```
718 \define@key{glossentry}{user3}{%
719   \def\@glo@useriii{\#1}%
720 }
```

940     \fi
941 \fi
942 }
```

4.8 Resetting and unsetting entry flags

Each glossary entry is assigned a conditional of the form `\ifglo@⟨label⟩@flag` which determines whether or not the entry has been used (see also `\ifglsused` defined below). These flags can be set and unset using the following macros:

The command `\glsreset{⟨label⟩}` can be used to set the entry flag to indicate that it hasn't been used yet. The required argument is the entry label.

```
\glsreset
943 \newcommand*{\glsreset}[1]{%
944 \glsdoifexists{#1}{%
945 \expandafter\global\csname glo@#1@flagfalse\endcsname}}
```

As above, but with only a local effect:

```
\glslocalreset
946 \newcommand*{\glslocalreset}[1]{%
947 \glsdoifexists{#1}{%
948 \expandafter\let\csname ifglo@#1@flag\endcsname\iffalse}}
```

The command `\glsunset{⟨label⟩}` can be used to set the entry flag to indicate that it has been used. The required argument is the entry label.

```
\glsunset
949 \newcommand*{\glsunset}[1]{%
950 \glsdoifexists{#1}{%
951 \expandafter\global\csname glo@#1@flagtrue\endcsname}}
```

As above, but with only a local effect:

```
\glslocalunset
952 \newcommand*{\glslocalunset}[1]{%
953 \glsdoifexists{#1}{%
954 \expandafter\let\csname ifglo@#1@flag\endcsname\iftrue}}
```

Reset all entries for the named glossaries (supplied in a comma-separated list).
Syntax: `\glsresetall[⟨glossary-list⟩]`

```
\glsresetall
955 \newcommand*{\glsresetall}[1][\@glo@types]{%
956 \forallglsentries[#1]{\@glsentry}{%
957 \glsreset{\@glsentry}}}
```

As above, but with only a local effect:

```
\glslocalresetall  
958 \newcommand*{\glslocalresetall}[1][\@glo@types]{%  
959 \forallglsentries[#1]{\glsentry}{%  
960 \glslocalreset{\glsentry}}}
```

Unset all entries for the named glossaries (supplied in a comma-separated list).
Syntax: `\glsunsetall[⟨glossary-list⟩]`

```
\glsunsetall  
961 \newcommand*{\glsunsetall}[1][\@glo@types]{%  
962 \forallglsentries[#1]{\glsentry}{%  
963 \glsunset{\glsentry}}}
```

As above, but with only a local effect:

```
\glslocalunsetall  
964 \newcommand*{\glslocalunsetall}[1][\@glo@types]{%  
965 \forallglsentries[#1]{\glsentry}{%  
966 \glslocalunset{\glsentry}}}
```

4.9 Loading files containing glossary entries

Glossary entries can be defined in an external file. These external files can contain `\newglossaryentry` and `\newacronym` commands.¹⁷

```
\loadglsentries[⟨type⟩]{⟨filename⟩}
```

This command will input the file using `\input`. The optional argument specifies to which glossary the entries should be assigned if they haven't used the `type` key. If the optional argument is not specified, the default glossary is used. Only those entries used in the document (via `\glslink`, `\gls`, `\glspl` and uppercase variants or `\glsadd` and `\glsaddall` will appear in the glossary). The mandatory argument is the filename (with or without .tex extension).

```
\loadglsentries  
967 \newcommand*{\loadglsentries}[2][\@gls@default]{%  
968 \let\gls@default\glsdefaulttype  
969 \def\glsdefaulttype[#1]\input{#2}%  
970 \let\glsdefaulttype\gls@default}  
  
\loadglsentries can only be used in the preamble:  
971 \onlypreamble{\loadglsentries}
```

4.10 Using glossary entries in the text

Any term that has been defined using `\newglossaryentry` (or `\newacronym`) can be displayed in the text (i.e. outside of the glossary) using one of the commands defined in this section. Unless you use `\glslink`, the way the term appears in the text is determined by `\glsdisplayfirst` (if it is the first time the term has been used) or `\glsdisplay` (for subsequent use). Any formatting commands (such as

¹⁷and any other valid L^AT_EX code that can be used in the preamble.

`\textbf` is governed by `\glstextformat`. By default this just displays the link text “as is”.

```
\glstextformat  
972 \newcommand*{\glstextformat}[1]{#1}
```

The first time an entry is used, the way in which it is displayed is governed by `\glsdisplayfirst`. This takes four parameters: #1 will be the value of the entry’s `first` or `firstplural` key, #2 will be the value of the entry’s `description` key, #3 will be the value of the entry’s `symbol` key and #4 is additional text supplied by the final optional argument to commands like `\gls` and `\glspl`. The default is to display the first parameter followed by the additional text.

```
\glsdisplayfirst  
973 \newcommand*{\glsdisplayfirst}[4]{#1#4}
```

After the first use, the entry is displayed according to the format of `\glsdisplay`. Again, it takes four parameters: #1 will be the value of the entry’s `text` or `plural` key, #2 will be the value of the entry’s `description` key, #3 will be the value of the entry’s `symbol` key and #4 is additional text supplied by the final optional argument to commands like `\gls` and `\glspl`.

```
\glsdisplay  
974 \newcommand*{\glsdisplay}[4]{#1#4}
```

When a new glossary is created it uses `\glsdisplayfirst` and `\glsdisplay` as the default way of displaying its entry in the text. This can be changed for the entries belonging to an individual glossary using `\defglsdisplay` and `\defglsdisplayfirst`.

```
\defglsdisplay[<type>]{<definition>}
```

The glossary type is given by `<type>` (the default glossary if omitted) and `<definition>` should have at most #1, #2, #3 and #4. These represent the same arguments as those described for `\glsdisplay`.

```
\defglsdisplay  
975 \newcommand*{\defglsdisplay}[2][\glsdefaulttype]{%  
976 \expandafter\def\csname gls@#1@display\endcsname##1##2##3##4{#2}}  
  
\defglsdisplayfirst[<type>]{<definition>}
```

The glossary type is given by `<type>` (the default glossary if omitted) and `<definition>` should have at most #1, #2, #3 and #4. These represent the same arguments as those described for `\glsdisplayfirst`.

```
\defglsdisplayfirst  
977 \newcommand*{\defglsdisplayfirst}[2][\glsdefaulttype]{%  
978 \expandafter\def\csname gls@#1@displayfirst\endcsname##1##2##3##4{#2}}
```

4.10.1 Links to glossary entries

The links to glossary entries all have a first optional argument that can be used to change the format and counter of the associated entry number. Except for `\glslink`, the commands like `\gls` have a final optional argument that can be used to insert additional text in the link (this will usually be appended, but can be redefined using `\defglsdisplay` and `\defglsdisplayfirst`). It goes against the L^AT_EX norm to have an optional argument after the mandatory arguments, but it makes more sense to write, say, `\gls{label}['s]` rather than, say, `\gls[append='s]{label}`. Since these control sequences are defined to include the final square bracket, spaces will be ignored after them. This is likely to lead to confusion as most users would not expect, say, `\gls{<label>}` to ignore following spaces, so `\new@ifnextchar` from the `amsen` package is required.

The following keys can be used in the first optional argument. The `counter` key checks that the value is the name of a valid counter.

```
979 \define@key{glslink}{counter}{%
980 \@ifundefined{c@\#1}{\PackageError{glossaries}{There is no counter
981 called '#1'}{\The counter key should have the name of a valid
982 counter as its value}}{%
983 \def\@gls@counter{\#1}}}
```

The value of the `format` key should be the name of a command (without the initial backslash) that has a single mandatory argument which can be used to format the associated entry number.

```
984 \define@key{glslink}{format}{%
985 \def\@glsnumberformat{\#1}}
```

The `hyper` key is a boolean key, it can either have the value `true` or `false`, and indicates whether or not to make a hyperlink to the relevant glossary entry. If `hyper` is `false`, an entry will still be made in the glossary, but the given text won't be a hyperlink.

```
986 \define@boolkey{glslink}{hyper}[true]{}
```

Syntax:

`\glslink[<options>]{<label>}{<text>}`

Display `<text>` in the document, and add the entry information for `<label>` into the relevant glossary. The optional argument should be a key value list using the `glslink` keys defined above.

There is also a starred version:

`\glslink*[{<options>}]{<label>}{<text>}`

which is equivalent to `\glslink[hyper=false,<options>]{<label>}{<text>}`

First determine whether or not we are using the starred version:

```
\glslink
987 \newcommand{\glslink}{%
988 \@ifstar{\sgls@link}{\gls@@link}}
\@sgls@link The starred version of \glslink calls the unstarred version with hyperlinks disabled.
989 \newcommand*{\@sgls@link}[1][]{\@gls@@link[hyper=false,#1]}
```

\@gls@@link The unstarred version of \glslink checks for the existance of the term. The main part of the business is in \@gls@link which shouldn't check if the term is defined as it's called by \gls etc which also perform that check.

```

990 \newcommand*{\@gls@@link}[3][]{%
991   \ifglsentryexists{#2}%
992   {%
993     \@gls@link[#1]{#2}{#3}%
994   }%
995   \PackageError{glossaries}{Glossary entry ‘#2’ has not been%
996   defined}{You need to define a glossary entry before you%
997   can use it.}%
998   \glstextformat{#3}%
999 }%
1000 }
```

Display the specified text. (The entry doesn't exist so there's nothing to link it to.)

\@gls@link

```
1001 \def\@gls@link[#1]{#2}{#3}{%
Inserting \leavevmode suggested by Donald Arseneau (avoids problem with tabularx).
```

```

1002   \leavevmode
1003   \def\glslabel{#2}%
1004   \def\glsnumberformat{\glsnumberformat}%
1005   \edef\@gls@counter{\csname glo@#2@counter\endcsname}%
1006   \KV@glslink@hypertrue
1007   \setkeys{\glslink}{#1}%
1008   \edef\the\glsentrycounter{\expandafter\noexpand
1009     \csname the\@gls@counter\endcsname}%

1010   \do@wrglossary{#2}%
1011   \ifKV@glslink@hyper
1012     \glslink{glo:#2}{\glstextformat{#3}}%
1013   \else
1014     \glstextformat{#3}\relax
1015   \fi
1016 }
```

Set the formatting information in the format required by `makeindex`. The first argument is the format specified by the user (via the `format` key), the second argument is the name of the counter used to indicate the location and the third argument is a control sequence which stores the required format.

\@set@glo@numformat

```

1017 \def\@set@glo@numformat#1#2#3{%
1018   \expandafter\@glo@check@mkidxrangechar#3\@nil
1019   \protected@edef#1{\@glo@prefix setentrycounter{#2}%
1020   \expandafter\string\csname\@glo@suffix\endcsname}%
1021 \gls@checkmkidxchars#1}
```

Check to see if the given string starts with a (or). If it does set \@glo@prefix to the starting character, and \@glo@suffix to the rest (or `glsnumberformat` if

there is nothing else), otherwise set \@glo@prefix to nothing and \@glo@suffix to all of it.

```

1022 \def@\glo@check@mkidxrangechar#1#2@\nil{%

1320 \noexpand\@gls@xdycheckbackslash
1321 }%
1322 }

```

Now go ahead and define \gls@xdycheckbackslash

```
1323 \def@gls@xdycheckbackslash
```

\@glslink If \hyperlink is not defined \glslink ignores its first argument and just does the second argument, otherwise it is equivalent to \hyperlink.

```

1324 \@ifundefined{hyperlink}{%
1325   \gdef\@glslink#1#2{#2}%
1326 }{%
1327   \gdef\@glslink#1#2{\hyperlink{#1}{#2}}%
1328 }

```

\@glstarget If \hypertarget is not defined, \glstarget ignores its first argument and just does the second argument, otherwise it is equivalent to \hypertarget.

```

1329 \newlength\gls@tmpplen
1330 \@ifundefined{hypertarget}{%
1331   \gdef\@glstarget#1#2{#2}%
1332 }{%
1333   \gdef\@glstarget#1#2{%
1334     \settoheight{\gls@tmpplen}{#2}%
1335     \raisebox{\gls@tmpplen}{\hypertarget{#1}{}}#2}%
1336 }

```

Glossary hyperlinks can be disabled using \glsdisablehyper (effect can be localised):

```
\glsdisablehyper
1337 \newcommand{\glsdisablehyper}{%
1338 \renewcommand*\@glslink[2]{##2}%
1339 \renewcommand*\@glstarget[2]{##2}}
```

Glossary hyperlinks can be enabled using \glsenablehyper (effect can be localised):

```
\glsenablehyper
1340 \newcommand{\glsenablehyper}{%
1341 \renewcommand*\@glslink[2]{\hyperlink{##1}{##2}}%
1342 \renewcommand*\@glstarget[2]{%
1343   \settoheight{\gls@tmpplen}{##2}%
1344   \raisebox{\gls@tmpplen}{\hypertarget{##1}{}}##2}}
```

Syntax:

```
\gls[<options>]{<label>}[<insert text>]
```

Link to glossary entry using singular form. The link text is taken from the value of the `text` or `first` keys used when the entry was defined.

The first optional argument is a key-value list, the same as `\glslink`, the mandatory argument is the entry label. After the mandatory argument, there is another optional argument to insert extra text in the link text (the location of the inserted text is governed by `\glsdisplay` and `\glsdisplayfirst`). As with `\glslink` there is a starred version which is the same as the unstarred version but with the `hyper` key set to `false`. (Additional options can also be specified in the first optional argument.)

First determine if we are using the starred form:

```
\gls  
1345 \newcommand*{\gls}{\@ifstar\@sgls\@gls}
```

Define the starred form:

```
\@sgls  
1346 \newcommand*{\@sgls}[1][]{\@gls[hyper=false,#1]}
```

Defined the un-starred form. Need to determine if there is a final optional argument

```
\@gls  
1347 \newcommand*{\@gls}[2][]{%  
1348 \new@ifnextchar[\{\@gls@{\#1}{\#2}\}{\@gls@{\#1}{\#2}}[]]}
```

`\@gls@` Read in the final optional argument:

```
1349 \def\@gls@#2[#3]{%  
1350 \glsdoifexists{#2}{\edef\@glo@type{\glsentrytype{#2}}}%
```

Save options in `\@gls@link@opts` and label in `\@gls@link@label`

```
1351 \def\@gls@link@opts{#1}%  
1352 \def\@gls@link@label{#2}%
```

Determine what the link text should be (this is stored in `\@glo@text`)

```
1353 \ifglsused{#2}{%  
1354 {  
1355 \def\@glo@text{  
1356 \csname gls@\@glo@type @display\endcsname  
1357 {\glsentrytext{#2}}{\glsentrydesc{#2}}{\glsentrysymbol{#2}}{#3}}%  
1358 }%  
1359 {  
1360 \def\@glo@text{  
1361 \csname gls@\@glo@type @displayfirst\endcsname  
1362 {\glsentryfirst{#2}}{\glsentrydesc{#2}}{\glsentrysymbol{#2}}{#3}}%  
1363 }%
```

Call `\@gls@link`. If `footnote` package option has been used and the glossary type is `\acronymtype`, suppress hyperlink for first use. Likewise if the `hyperfirst=false` package option is used.

```
1364 \ifglsused{#2}{%
```

```

1365   \gls@link[#1]{#2}{\glo@text}%
1366 }{%
1367   \gls@checkisacronymlist\glo@type
1368   \ifthenelse{\boolean{\glsisacronymlist}}{\AND
1369     \boolean{\glsacrfootnote}}{\OR \NOT\boolean{\glshyperfirst}}}{%
1370     \gls@link[#1,hyper=false]{#2}{\glo@text}%
1371 }{%
1372   \gls@link[#1]{#2}{\glo@text}%
1373 }%
1374 }%

```

Indicate that this entry has now been used

```

1375 \glsunset{#2}%
1376 }

```

\Gls behaves like \gls, but the first letter of the link text is converted to uppercase (note that if the first letter has an accent, the accented letter will need to be grouped when you define the entry). It is mainly intended for terms that start a sentence:

```
\Gls
1377 \newcommand*{\Gls}{\glsstar@sGls\Gls}
```

Define the starred form:

```
1378 \newcommand*{\sGls}[1][]{\Gls[hyper=false,#1]}
```

Defined the un-starred form. Need to determine if there is a final optional argument

```
1379 \newcommand*{\Gls}[2][]{%
1380 \new@ifnextchar[\sGls[#1]{#2}]{\Gls[#1]{#2}[]}}
```

\@Gls@ Read in the final optional argument:

```
1381 \def\@Gls@#1#2[#3]{%
1382 \glsdoifixexists[#2]{\edef\glo@type{\glsentrytype{#2}}}
```

Save options in \gls@link@opts and label in \gls@link@label

```
1383 \def\gls@link@opts{\#1}%
1384 \def\gls@link@label{\#2}
```

Determine what the link text should be (this is stored in \glo@text)

```
1385 \ifglsused{#2}{%
1386 }{%
1387   \protected@edef\glo@text{%
1388     \csname gls@\glo@type @display\endcsname
1389     {\glsentrytext{#2}}{\glsentrydesc{#2}}%
1390     {\glsentrysymbol{#2}}{#3}}%
1391 }{%
1392 }{%
1393   \protected@edef\glo@text{%
1394     \csname gls@\glo@type @displayfirst\endcsname
1395     {\glsentryfirst{#2}}{\glsentrydesc{#2}}%
1396     {\glsentrysymbol{#2}}{#3}}%
1397 }
```

Call `\@gls@link` If footnote package option has been used and the glossary type is `\acronymtype`, suppress hyperlink for first use. Likewise if the `hyperfirst=false` package option is used.

```

1398 \ifglsused{#2}{%
1399   \@gls@link[#1]{#2}{%
1400     \expandafter\makefirststuc\expandafter{\@glo@text}}%
1401 }{%
1402   \gls@checkisacronymlist@glo@type
1403   \ifthenelse{(\boolean{glsisacronymlist})\AND
1404     \boolean{glsacrfootnote})} \OR \NOT\boolean{glshyperfirst}}{%
1405     \@gls@link[#1,hyper=false]{#2}{%
1406       \expandafter\makefirststuc\expandafter{\@glo@text}}%
1407     }{%
1408       \@gls@link[#1]{#2}{%
1409         \expandafter\makefirststuc\expandafter{\@glo@text}}%
1410       }%
1411 }%

```

Indicate that this entry has now been used

```

1412 \glsunset{#2}%
1413 }

```

`\GLS` behaves like `\gls`, but the link text is converted to uppercase:

```
\GLS
1414 \newcommand*{\GLS}{\@ifstar@sGLS@\GLS}
```

Define the starred form:

```
1415 \newcommand*{\sGLS}[1][]{\GLS[hyper=false,#1]}
```

Defined the un-starred form. Need to determine if there is a final optional argument

```
1416 \newcommand*{\GLS}[2][]{%
1417 \new@ifnextchar[\{@GLS@{#1}{#2}\}{\@GLS@{#1}{#2}[]}}
```

`\@GLS@` Read in the final optional argument:

```
1418 \def\@GLS@#1#2[#3]{%
1419 \glsdoifexists{#2}{\edef@glo@type{\glsentrytype{#2}}}{%
```

Save options in `\@gls@link@opts` and label in `\@gls@link@label`

```
1420 \def\@gls@link@opts{#1}%
1421 \def\@gls@link@label{#2}%
```

Determine what the link text should be (this is stored in `\@glo@text`).

```
1422 \ifglsused{#2}{\def\@glo@text{%
1423 \csname gls@\@glo@type @display\endcsname

```

\glsdisp \glsdisp[*options*]{*label*}{*text*} This is like \gls except that the link text is provided. This differs from \glslink in that it uses \glsdisplay or \glsdisplayfirst and unsets the first use flag.

First determine if we are using the starred form:

```
1541 \newcommand*{\glsdisp}{\@ifstar{\glsdisp}{\glsdisp}}
```

Define the starred form:

```

\@sgls
1542 \newcommand*{\sglsdisp}[1][]{\glsdisp[hyper=false,#1]}

```

Defined the un-starred form.

```

\@glsdisp
1543 \newcommand*{\glsdisp}[3][]{%
1544   \glsdoifexists{#2}{%
1545     \edef\glo@type{\glsentrytype{#2}}%

```

Save options in \gls@link@opts and label in \gls@link@label

```

1546   \def\gls@link@opts{#1}%
1547   \def\gls@link@label{#2}%

```

Determine what the link text should be (this is stored in \glo@text)

```

1548   \ifglsused{#2}%
1549   {%
1550     \def\glo@text{%
1551       \csname gls@\glo@type @display\endcsname
1552       {#3}{\glsentrydesc{#2}}{\glsentrysymbol{#2}}{}{}}%
1553   }%
1554   {%
1555     \def\glo@text{%
1556       \csname gls@\glo@type @displayfirst\endcsname
1557       {#3}{\glsentrydesc{#2}}{\glsentrysymbol{#2}}{}{}}%
1558   }%

```

Call \gls@link. If footnote package option has been used and the glossary type is \acronymtype, suppress hyperlink for first use. Likewise if the hyperfirst=false package option is used.

```

1559   \ifglsused{#2}%
1560   {%
1561     \gls@link[#1]{#2}{\glo@text}}%

```

```

1562    }%
1563    {%
1564      \gls@checkisacronymlist\@glo@type
1565      \ifthenelse{\(\boolean{glsisacronymlist}\) \AND
1566        \boolean{glsacrfootnote}\) } \OR \NOT\boolean{glshyperfirst}}%
1567    {%
1568      \gls@link[#1,hyper=false]{#2}{\glo@text}%
1569    }%
1570    {%
1571      \gls@link[#1]{#2}{\glo@text}%
1572    }%
1573  }%

```

Indicate that this entry has now been used

```

1574   \glsunset{#2}%
1575 }%
1576 }

```

\glstext behaves like \gls except it always uses the value given by the `text` key and it doesn't mark the entry as used.

```
\glstext
1577 \newcommand*{\glstext}{\ifstar\sglstext\glstext}
```

Define the starred form:

```
1578 \newcommand*{\sglstext}[1][]{\glstext[hyper=false,#1]}
```

Defined the un-starred form. Need to determine if there is a final optional argument

```
1579 \newcommand*{\glstext}[2][]{%
1580 \new@ifnextchar[\{\glsentry@{#1}{#2}\}]{\glstext@{#1}{#2}[]}}
```

Read in the final optional argument:

```
1581 \def\glstext@#1#2[#3]{%
1582 \glsdoifexists{#2}{\edef\glo@type{\glsentrytype{#2}}}}
```

Determine what the link text should be (this is stored in \glo@text)

```
1583 \protected\edef\glo@text{\glsentrytext{#2}}%
```

Call \gls@link

```
1584 \gls@link[#1]{#2}{\glo@text#3}%
1585 }%
1586 }
```

\GLStext behaves like \glstext except the text is converted to uppercase.

```
\GLStext
1587 \newcommand*{\GLStext}{\ifstar\sGLStext\GLStext}
```

Define the starred form:

```
1588 \newcommand*{\sGLStext}[1][]{\GLStext[hyper=false,#1]}
```

Defined the un-starred form. Need to determine if there is a final optional argument

```
1589 \newcommand*{\GLStext}[2][]{%
1590 \new@ifnextchar[\{\GLStext@{#1}{#2}\}]{\GLStext@{#1}{#2}[]}}
```

Read in the final optional argument:

```
1591 \def\@GLStext{\#1\#2[\#3]{%

2023 \newcommand*{\Glsuservi}[2][]{%
2024 \new@ifnextchar[{\Glsuservi[#1]{#2}}{\Glsuservi[#1]{#2}[]}}
    Read in the final optional argument:
2025 \def\Glsuservi[#1#2[#3]{%
2026 \glsdoifexists[#2]{\edef\glo@type{\glsentrytype[#2]}}%
    Determine what the link text should be (this is stored in \glo@text)
2027 \protected@edef\glo@text{\glsentryuservi[#2]}%
    Call \gls@link
2028 \gls@link[#1]{#2}{%
2029   \expandafter\makefirstuc\expandafter{\glo@text}#3}%
2030 }%
2031 }
    \GLSuservi behaves like \glsuservi except that the link text is converted to uppercase.

\GLSuservi
2032 \newcommand*{\GLSuservi}{\@ifstar{\sGLSuservi}{\GLSuservi}}
```

Define the starred form:

```
2033 \newcommand*{\@GLSuservi}[1][]{\@GLSuservi[hyper=false,#1]}
```

Defined the un-starred form. Need to determine if there is a final optional argument

```
2034 \newcommand*{\@GLSuservi}[2][]{%
```

```
2035 \new@ifnextchar[\@GLSuservi@{#1}{#2}]{\@GLSuservi@{#1}{#2}[]}{}
```

Read in the final optional argument:

```
2036 \def\@GLSuservi@#1#2[#3]{%
```

```
2037 \glsdoifexists[#2]{\edef\@glo@type{\glsentrytype[#2]}{}}
```

Determine what the link text should be (this is stored in \@glo@text)

```
2038 \protected@edef\@glo@text{\glsentryuservi[#2]}{}
```

Call \@gls@link

```
2039 \@gls@link[#1]{#2}{\MakeUppercase{\@glo@text#3}}{}
```

```
2040 }{}
```

```
2041 }
```

4.10.2 Displaying entry details without adding information to the glossary

These commands merely display entry information without adding entries in the associated file or having hyperlinks.

Get the entry name (as specified by the name key when the entry was defined).

The argument is the label associated with the entry. Note that unless you used name=false in the sanitize package option you may get unexpected results if the name key contains any commands.

```
\glsentryname
```

```
2042 \newcommand*{\glsentryname}[1]{\csname glo@#1@name\endcsname}
```

```
\Glsentryname
```

```
2043 \newcommand*{\Glsentryname}[1]{%
```

```
2044 \protected@edef\@glo@text{\csname glo@#1@name\endcsname}{}
```

```
2045 \expandafter\makefirstuc\expandafter{\@glo@text}}
```

Get the entry description (as specified by the description when the entry was defined). The argument is the label associated with the entry. Note that unless you used description=false in the sanitize package option you may get unexpected results if the description key contained any commands.

```
\glsentrydesc
```

```
2046 \newcommand*{\glsentrydesc}[1]{\csname glo@#1@desc\endcsname}
```

```
\Glsentrydesc
```

```
2047 \newcommand*{\Glsentrydesc}[1]{%
```

```
2048 \protected@edef\@glo@text{\csname glo@#1@desc\endcsname}{}
```

```
2049 \expandafter\makefirstuc\expandafter{\@glo@text}}
```

Plural form:

```

\glsentrydescplural
2050 \newcommand*{\glsentrydescplural}[1]{%
2051 \csname glo@#1@descplural\endcsname}

\Glsentrydescplural
2052 \newcommand*{\Glsentrydescplural}[1]{%
2053 \protected@edef{\glo@text{\csname glo@#1@descplural\endcsname}}{%
2054 \expandafter\makefirstuc\expandafter{\glo@text}}}

```

Get the entry text, as specified by the `text` key when the entry was defined.
The argument is the label associated with the entry:

```

\glsentrytext
2055 \newcommand*{\glsentrytext}[1]{\csname glo@#1@text\endcsname}

\Glsentrytext
2056 \newcommand*{\Glsentrytext}[1]{%
2057 \protected@edef{\glo@text{\csname glo@#1@text\endcsname}}{%
2058 \expandafter\makefirstuc\expandafter{\glo@text}}}

```

Get the plural form:

```

\glsentryplural
2059 \newcommand*{\glsentryplural}[1]{\csname glo@#1@plural\endcsname}

\Glsentryplural
2060 \newcommand*{\Glsentryplural}[1]{%
2061 \protected@edef{\glo@text{\csname glo@#1@plural\endcsname}}{%
2062 \expandafter\makefirstuc\expandafter{\glo@text}}}

```

Get the symbol associated with this entry. The argument is the label associated with the entry. Note that unless you used `symbol=false` in the `sanitize` package option you may get unexpected results if the `symbol` key contained any commands.

```

\glsentrysymbol
2063 \newcommand*{\glsentrysymbol}[1]{\csname glo@#1@symbol\endcsname}

\Glsentrysymbol
2064 \newcommand*{\Glsentrysymbol}[1]{%
2065 \protected@edef{\glo@text{\csname glo@#1@symbol\endcsname}}{%
2066 \expandafter\makefirstuc\expandafter{\glo@text}}}

```

Plural form:

```

\glsentrysymbolplural
2067 \newcommand*{\glsentrysymbolplural}[1]{%
2068 \csname glo@#1@symbolplural\endcsname}

\Glsentrysymbolplural
2069 \newcommand*{\Glsentrysymbolplural}[1]{%
2070 \protected@edef{\glo@text{\csname glo@#1@symbolplural\endcsname}}{%
2071 \expandafter\makefirstuc\expandafter{\glo@text}}}

```

Get the entry text to be used when the entry is first used in the document (as specified by the `first` key when the entry was defined).

```
\glsentryfirst
2072 \newcommand*{\glsentryfirst}[1]{\csname glo@#1@first\endcsname}

\Glsentryfirst
2073 \newcommand*{\Glsentryfirst}[1]{%
2074 \protected@edef{\glo@text{\csname glo@#1@first\endcsname}}{%
2075 \expandafter\makefirstuc\expandafter{\glo@text}}}
```

Get the plural form (as specified by the `firstplural` key when the entry was defined).

```
\glsentryfirstplural
2076 \newcommand*{\glsentryfirstplural}[1]{%
2077 \csname glo@#1@firstpl\endcsname}

\Glsentryfirstplural
2078 \newcommand*{\Glsentryfirstplural}[1]{%
2079 \protected@edef{\glo@text{\csname glo@#1@firstpl\endcsname}}{%
2080 \expandafter\makefirstuc\expandafter{\glo@text}}}
```

Display the glossary type with which this entry is associated (as specified by the `type` key used when the entry was defined)

```
\glsentrytype
2081 \newcommand*{\glsentrytype}[1]{\csname glo@#1@type\endcsname}
```

Display the sort text used for this entry. Note that the `sort` key is sanitize, so unexpected results may occur if the `sort` key contained commands.

```
\glsentrysort
2082 \newcommand*{\glsentrysort}[1]{\csname glo@#1@sort\endcsname}
```

\glsentryuseri Get the first user key (as specified by the `user1` when the entry was defined). The argument is the label associated with the entry.

```
2083 \newcommand*{\glsentryuseri}[1]{\csname glo@#1@useri\endcsname}
```

```
\Glsentryuseri
2084 \newcommand*{\Glsentryuseri}[1]{%
2085 \protected@edef{\glo@text{\csname glo@#1@useri\endcsname}}{%
2086 \expandafter\makefirstuc\expandafter{\glo@text}}}
```

\glsentryuserii Get the second user key (as specified by the `user2` when the entry was defined). The argument is the label associated with the entry.

```
2087 \newcommand*{\glsentryuserii}[1]{\csname glo@#1@userii\endcsname}
```

```
\Glsentryuserii
2088 \newcommand*{\Glsentryuserii}[1]{%
2089 \protected@edef{\glo@text{\csname glo@#1@userii\endcsname}}{%
2090 \expandafter\makefirstuc\expandafter{\glo@text}}}
```

```

\glsentryuseriii Get the third user key (as specified by the user3 when the entry was defined). The
argument is the label associated with the entry.
2091 \newcommand*{\glsentryuseriii}[1]{\csname glo@#1@useriii\endcsname}

\Glsentryuseriii
2092 \newcommand*{\Glsentryuseriii}[1]{%
2093 \protected@edef{\glo@text{\csname glo@#1@useriii\endcsname}}{%
2094 \expandafter\makefirstuc\expandafter{\glo@text}}}

\glsentryuseriv Get the fourth user key (as specified by the user4 when the entry was defined).
The argument is the label associated with the entry.
2095 \newcommand*{\glsentryuseriv}[1]{\csname glo@#1@useriv\endcsname}

\Glsentryuseriv
2096 \newcommand*{\Glsentryuseriv}[1]{%
2097 \protected@edef{\glo@text{\csname glo@#1@useriv\endcsname}}{%
2098 \expandafter\makefirstuc\expandafter{\glo@text}}}

\glsentryusersv Get the fifth user key (as specified by the user5 when the entry was defined). The
argument is the label associated with the entry.
2099 \newcommand*{\glsentryusersv}[1]{\csname glo@#1@usersv\endcsname}

\Glsentryusersv
2100 \newcommand*{\Glsentryusersv}[1]{%
2101 \protected@edef{\glo@text{\csname glo@#1@usersv\endcsname}}{%
2102 \expandafter\makefirstuc\expandafter{\glo@text}}}

\glsentryusersvi Get the sixth user key (as specified by the user6 when the entry was defined). The
argument is the label associated with the entry.
2103 \newcommand*{\glsentryusersvi}[1]{\csname glo@#1@usersvi\endcsname}

\Glsentryusersvi
2104 \newcommand*{\Glsentryusersvi}[1]{%
2105 \protected@edef{\glo@text{\csname glo@#1@usersvi\endcsname}}{%
2106 \expandafter\makefirstuc\expandafter{\glo@text}}}

\glshyperlink Provide a hyperlink to a glossary entry without adding information to the glossary
file. The entry needs to be added using a command like \glslink or \glsadd to
ensure that the target is defined. The first (optional) argument specifies the link
text. The entry name is used by default. The second argument is the entry label.

2107 \newcommand*{\glshyperlink}[2][\glsentryname{\glo@label}]{%
2108 \def{\glo@label}{#2}%
2109 \glslink{\glo@label}{#1}}

```

4.11 Adding an entry to the glossary without generating text

The following keys are provided for \glsadd and \glsaddall:

```

2110 \define@key{glossadd}{counter}{\def{\gls@counter}{#1}}
2111 \define@key{glossadd}{format}{\def{\glo@format}{#1}}

```

This key is only used by `\glsaddall`:

```
2112 \define@key{glossadd}{types}{\def\@glo@type{\#1}}
  \glsadd[⟨options⟩]{⟨label⟩}
```

Add a term to the glossary without generating any link text. The optional argument indicates which counter to use, and how to format it (using a key-value list) the second argument is the entry label. Note that *(options)* only has two keys: counter and format (the types key will be ignored).

```
\glsadd
2113 \newcommand*{\glsadd}[2][]{%
2114   \glsdoifexists{\#2}{%
2115     \def\@glsnumberformat{\glsnumberformat}%
2116     \edef\@gls@counter{\csname glo@\#2@counter\endcsname}%
2117     \setkeys{glossadd}{\#1}%
2118     \edef\theglsentrycounter{\expandafter\noexpand
2119       \csname the\@gls@counter\endcsname}%
2120     \do@wrglossary{\#2}%
2121   }%
2122
2123 \glsaddall[⟨glossary list⟩]
```

Add all terms defined for the listed glossaries (without displaying any text). If types key is omitted, apply to all glossary types.

```
\glsaddall
2122 \newcommand*{\glsaddall}[1][]{%
2123   \edef\@glo@type{\@glo@types}%
2124   \setkeys{glossadd}{\#1}%
2125   \forallglsentries[\@glo@type]{\@glo@entry}{%
2126     \glsadd{\#1}{\@glo@entry}}%
2127 }
```

4.12 Creating associated files

The `\writeist` command creates the associated customized `.ist` `makeindex` style file. While defining this command, some characters have their catcodes temporarily changed to ensure they get written to the `.ist` file correctly. The `makeindex` actual character (usually `\texttt{@}`) is redefined to be a `?`, to allow internal commands to be written to the glossary file output file.

The special characters are stored in `\@gls@actualchar`, `\@gls@encapchar`, `\@gls@levelchar` and `\@gls@quotechar` to make them easier to use later, but don't change these values, because the characters are encoded in the command definitions that are used to escape the special characters (which means that the user no longer needs to worry about `makeindex` special characters).

The symbols and numbers label for group headings are hardwired into the `.ist` file as `glssymbols` and `glsnumbers`, the group titles can be translated (so that `\glssymbolsgroupname` replaces `glssymbols` and `\glsnumbersgroupname` replaces `glsnumbers`) using the command `\glsgetgroupname` which is defined in `glossary-hypernav`. This is done to prevent any problem characters in `\glssymbolsgroupname` and `\glsnumbersgroupname` from breaking hyperlinks.

```

\glsopenbrace Define \glsopenbrace to make it easier to write an opening brace to a file.
2128 \edef\glsopenbrace{\expandafter\gobble\string\{}}

\glsclosebrace Define \glsclosebrace to make it easier to write an opening brace to a file.
2129 \edef\glsclosebrace{\expandafter\gobble\string\}}

\glsquote Define command that makes it easier to write quote marks to a file in the event
that the double quote character has been made active.
2130 \edef\glsquote#1{\string"#1\string"}

@\glsfirstletter Define the first letter to come after the digits 0,...,9. Only required for xindy.
2131 \ifglsxindy
2132   \newcommand*{\glsfirstletter}{A}
2133 \fi

\GlsSetXdyFirstLetterAfterDigits Sets the first letter to come after the digits 0,...,9.
2134 \ifglsxindy
2135   \newcommand*{\GlsSetXdyFirstLetterAfterDigits}[1]{%
2136     \renewcommand*{\glsfirstletter}{#1}}
2137 \else
2138   \newcommand*{\GlsSetXdyFirstLetterAfterDigits}[1]{%
2139     \glsnoxindywarning{\GlsSetXdyFirstLetterAfterDigits}}
2140 \fi

@\glsminrange Define the minimum number of successive location references to merge into a
range.
2141 \newcommand*{\glsminrange}{2}

\GlsSetXdyMinRangeLength Set the minimum range length. The value must either be none or a positive integer.
The glossaries package doesn't check if the argument is valid, that is left to xindy.
2142 \ifglsxindy
2143   \newcommand*{\GlsSetXdyMinRangeLength}[1]{%
2144     \renewcommand*{\glsminrange}{#1}}
2145 \else
2146   \newcommand*{\GlsSetXdyMinRangeLength}[1]{%
2147     \glsnoxindywarning{\GlsSetXdyMinRangeLength}}
2148 \fi

\writeist
2149 \newwrite\istfile
2150 \ifglsxindy
    Code to use if xindy is required.
2151 \def\writeist{%
        Open the style file
2152   \openout\istfile=\istfilename
        Write header comment at the start of the file
2153   \write\istfile{;; xindy style file created by the glossaries
2154     package}%
2155   \write\istfile{;; for document '\jobname' on
2156     \the\year-\the\month-\the\day}%

```

Specify the required styles

```
2157      \write\listfile{^^J; required styles^^J}
2158      \@for\xdystyle:=\@xdyrequiredstyles\do{%
2159          \ifx\xdystyle\@empty
2160          \else

The command `\noist` will suppress the creation of the `.ist` file (it simply redefines `\writeist` to do nothing). Obviously you need to use this command before `\writeist` to have any effect. Since the `.ist` file should only be created once, `\noist` is called at the end of `\writeist`.

```

\noist
2347 \newcommand{\noist}{\let\writeist\relax}

```

`\@makeglossary` is an internal command that takes an argument indicating the glossary type. This command will create the glossary file required by `makeindex` for the given glossary type, using the extension supplied by the `<out-ext>` parameter used in `\newglossary` (and it will also activate the `\glossary` command, and create the customized `.ist` `makeindex` style file).

Note that you can't use `\@makeglossary` for only some of the defined glossaries. You either need to have a `\makeglossary` for all glossaries or none (otherwise you will end up with a situation where `TeX` is trying to write to a non-existent file). The relevant glossary must be defined prior to using `\@makeglossary`.

```

\@makeglossary

4.13 Writing information to associated files

The `\glossary` command is redefined so that it takes an optional argument `(type)` to specify the glossary type (use `\glsdefaulttype` glossary by default). This shouldn't be used at user level as `\glslink` sets the correct format. The associated number should be stored in `\the\glstentrycounter` before using `\glossary`.

```
\glossary
2390 \renewcommand*{\glossary}[1][\glsdefaulttype]{%
2391   \glossary[#1]}
```

Define internal `\@glossary` to ignore its argument. This gets redefined in `\@makeglossary`. This is defined to just `\index` as `memoir` changes the definition of `\@index`. (Thanks to Dan Luecking for pointing this out.)

```
\@glossary
2392 \def\@glossary[#1]{\index}
```

This is a convenience command to set `\@glossary`. It is used by `\@makeglossary` and then redefined to do nothing, as it only needs to be done once.

```
\@gls@renewglossary
2393 \newcommand{\@gls@renewglossary}{%
2394   \gdef\@glossary[##1]{\@bsphack\begingroup\@wrglossary{##1}\%}
2395   \let\@gls@renewglossary\@empty
2396 }
```

The `\@wrglossary` command is redefined to have two arguments. The first argument is the glossary type, the second argument is the glossary entry (the format of which is set in `\glslink`).

```
\@wrglossary
2397 \renewcommand*{\@wrglossary}[2]{%
2398   \expandafter\protected@write\csname glo@#1@file\endcsname{}{\#2}\%
2399   \endgroup\@espshack
2400 }
```

`\@do@wrglossary` Write the glossary entry in the appropriate format. (Need to set `glsnumberformat` and `gls@counter` prior to use.) The argument is the entry's label.

```
2401 \newcommand{\@do@wrglossary}[1]{%

4.15 Displaying the glossary

An individual glossary is displayed in the text using `\printglossary[<key-val list>]`. If the type key is omitted, the default glossary is displayed. The optional argument can be used to specify an alternative glossary, and can also be used to set the style, title and entry in the table of contents. Available keys are defined below.

<code>\warn@noprintglossary</code>	Warn the user if they have forgotten <code>\printglossaries</code> or <code>\printglossary</code> . (Will be suppressed if there is at least one occurrence of <code>\printglossary</code> . There is no check to ensure that there is a <code>\printglossary</code> for each defined glossary.)
------------------------------------	--

```
2480 \def\warn@noprintglossary{\GlossariesWarning{No
2481   \string\printglossary\space or \string\printglossaries\space
2482   found.^^JThis document will not have a glossary}}
```

<code>\printglossary</code>	The TOC title needs to be processed in a different manner to the main title in case the translator and hyperref packages are both being used.
-----------------------------	---

```
2483 \@ifundefined{\printglossary}{}{%
  If \printglossary is already defined, issue a warning and undefine it.
  2484 \GlossariesWarning{Overriding \string\printglossary}%
  2485 \let\printglossary\undefined
  2486 }

  \printglossary has an optional argument. The default value is to set the glossary type to the main glossary.
```

2487 `\newcommand*{\printglossary}[1][type=\glsdefaulttype]{%`

If xindy is being used, need to find the root language for `makeglossaries` to pass to xindy.

```

Suppress warning about no `\printglossary`

```

2519  \global\let\warn@noprintglossary\relax
2520 }

```

The `\printglossaries` command will do `\printglossary` for each glossary type that has been defined. It is better to use `\printglossaries` rather than individual `\printglossary` commands to ensure that you don't forget any new glossaries you may have created. It also makes it easier to chop and change the value of the `acronym` package option. However, if you want to list the glossaries in a different order, or if you want to set the title or table of contents entry, or if you want to use different glossary styles for each glossary, you will need to use `\printglossary` explicitly for each glossary type.

```

\printglossaries
2521 \newcommand*{\printglossaries}{%
2522 \forallglossaries{\@glo@type}{\printglossary[type=\@glo@type]}}

```

The keys that can be used in the optional argument to `\printglossary` are as follows: The `type` key sets the glossary type.

```
2523 \define@key{printgloss}{type}{\def\@glo@type{#1}}
```

The `title` key sets the title used in the glossary section header. This overrides the title used in `\newglossary`.

```
2524 \define@key{printgloss}{title}{\def\glossarytitle{#1}}
```

The `toctitle` sets the text used for the relevant entry in the table of contents.

```
2525 \define@key{printgloss}{toctitle}{\def\glossarytoctitle{#1}%
2526 \let\gls@dotoc@title\relax
2527 }
```

The `style` key sets the glossary style (but only for the given glossary).

```
2528 \define@key{printgloss}{style}{%
2529 \@ifundefined{\glsstyle@#1}{\PackageError{glossaries}{Glossary
2530 style '#1' undefined}{}}
2531 \def\@glossarystyle{\csname \glsstyle@#1\endcsname}}
```

The `numberedsection` key determines if this glossary should be in a numbered section.

```
2532 \define@choicekey{printgloss}{numberedsection}[\val\nr]{%
2533 false,nolabel,autolabel}[nolabel]{%
2534 \ifcase\nr\relax
2535 \renewcommand*{\@glossarysecstar}{*}%
2536 \renewcommand*{\@glossaryseclabel}{}
2537 \or
2538 \renewcommand*{\@glossarysecstar}{}%
2539 \renewcommand*{\@glossaryseclabel}{}
2540 \or
2541 \renewcommand*{\@glossarysecstar}{}%
2542 \renewcommand*{\@glossaryseclabel}{\label{\glsautoprefix\@glo@type}}%
2543 \fi}
```

The `nonumberlist` key determines if this glossary should have a number list.

```
2544 \define@boolkey{printgloss}[gls]{nonumberlist}[true]{%
2545 \ifglsnonumberlist
2546 \def\glossaryentrynumbers##1{%
2547 \else
2548 \def\glossaryentrynumbers##1{##1}%
2549 \fi}
```

`\@glsnonextpages` Suppresses the next number list only. Global assignments required as it may not occur in the same level of grouping as the next numberlist. (For example, if `\glsnonextpages` is placed in the entry's description and 3 column tabular style glossary is used.) `\org@glossaryentrynumbers` needs to be set at the start of each glossary, in the event that `\glossaryentrynumber` is redefined.

```
2550 \newcommand*{\@glsnonextpages}{%
2551 \gdef\glossaryentrynumbers##1{%
2552 \glsresetentrylist}}
```

```

\glsresetentrylist Resets \glossaryentrynumbers
2553 \newcommand*{\glsresetentrylist}{%
2554   \global\let\glossaryentrynumbers\org@glossaryentrynumbers}

\glsnonextpages Outside of \printglossary this does nothing.
2555 \newcommand*{\glsnonextpages}{}}

 If the theglossary environment has already been defined, a warning will be issued. This environment should be redefined by glossary styles.
2556 \Cifundefined{theglossary}{%
2557   \newenvironment{theglossary}{}{}%
2558 }{%
2559   \GlossariesWarning{overriding ‘theglossary’ environment}%
2560   \renewenvironment{theglossary}{}{}%
2561 }

The glossary header is given by \glossaryheader. This forms part of the glossary style, and must indicate what should appear immediately after the start of the theglossary environment. (For example, if the glossary uses a tabular-like environment, it may be used to set the header row.) Note that if you don’t want a header row, the glossary style must redefine \glossaryheader to do nothing.

\glossaryheader
2562 \newcommand*{\glossaryheader}{}}

\glstarget \glstarget{\langle label \rangle}{\langle name \rangle}

Provide user interface to \@glstarget to make it easier to modify the glossary style in the document.
2563 \newcommand*{\glstarget}[2]{\@glstarget{glo:#1}{#2}{}}

\glossaryentryfield \glossaryentryfield{\langle label \rangle}{\langle name \rangle}{\langle description \rangle}{\langle symbol \rangle}{\langle page-list \rangle}

This command governs how each entry row should be formatted in the glossary. Glossary styles need to redefine this command. Most of the predefined styles ignore \langle symbol \rangle.
2564 \newcommand*{\glossaryentryfield}[5]{%
2565   \noindent\textrm{bf}{\glstarget{\#1}{\#2}} #4 #3. #5\par}

\glossarysubentryfield \glossarysubentryfield{\langle level \rangle}{\langle label \rangle}{\langle name \rangle}{\langle description \rangle}{\langle symbol \rangle}{\langle page-list \rangle}

This command governs how each subentry should be formatted in the glossary. Glossary styles need to redefine this command. Most of the predefined styles ignore \langle symbol \rangle. The first argument is a number indicating the level. (The level should be greater than or equal to 1.)
2566 \newcommand*{\glossarysubentryfield}[6]{%
2567   \glstarget{\#2}{\strut}\#4. #6\par}

Within each glossary, the entries form distinct groups which are determined by the first character of the sort key. When using makeindex, there will be a maximum of 28 groups: symbols, numbers, and the 26 alphabetical groups A, ..., Z. If you use xindy the groups will depend on whatever alphabet is used. This is determined by the language or custom alphabets can be created in the xindy

```

style file. The command `\glsgroupskip` specifies what to do between glossary groups. Glossary styles must redefine this command. (Note that `\glsgroupskip` only occurs between groups, not at the start or end of the glossary.)

```
\glsgroupskip
2568 \newcommand*{\glsgroupskip}{}%
```

Each of the 28 glossary groups described above is preceded by a group heading. This is formatted by the command `\glsgroupheading` which takes one argument which is the *label* assigned to that group (not the title). The corresponding labels are: `glossymbols`, `glsnumbers`, `A`, ..., `Z`. Glossary styles must redefine this command. (In between groups, `\glsgroupheading` comes immediately after `\glsgroupskip`.)

```
\glsgroupheading
2569 \newcommand*{\glsgroupheading}[1]{}%
```

It is possible to “trick” `makeindex` into treating entries as though they belong to the same group, even if the terms don’t start with the same letter, by modifying the `sort` key. For example, all entries belonging to one group could be defined so that the `sort` key starts with an `a`, while entries belonging to another group could be defined so that the `sort` key starts with a `b`, and so on. If you want each group to have a heading, you would then need to modify the translation control sequences `\glsgetgroupname` and `\glsgetgrouplabel` so that the label is translated into the required title (and vice-versa).

`\glsgetgroupname{<label>}`

This command produces the title for the glossary group whose label is given by `<label>`. By default, the group labelled `glossymbols` produces `\glossymbolsgroupname`, the group labelled `glsnumbers` produces `\glsnumbersgroupname` and all the other groups simply produce their label. As mentioned above, the group labels are: `glossymbols`, `glsnumbers`, `A`, ..., `Z`. If you want to redefine the group titles, you will need to redefine this command.

```
\glsgetgroupname
2570 \newcommand*{\glsgetgroupname}[1]{%
2571 \c@ifundefined{\#1groupname}{\#1}{\csname #1groupname\endcsname}}
```

`\glsgetgrouplabel{<title>}`

This command does the reverse to the previous command. The argument is the group title, and it produces the group label. Note that if you redefine `\glsgetgroupname`, you will also need to redefine `\glsgetgrouplabel`.

```
\glsgetgrouplabel
2572 \newcommand*{\glsgetgrouplabel}[1]{%
2573 \ifthenelse{\equals{\#1}{\glossymbolsgroupname}}{\glossymbols}{%
2574 \ifthenelse{\equals{\#1}{\glsnumbersgroupname}}{\glsnumbers}{\#1}}}
```

The command `\setentrycounter` sets the entry’s associated counter (required by `\glshypernumber` etc.) `\glslink` and `\glsadd` encode the `\glossary` argument so that the relevant counter is set prior to the formatting command.

```

\setentrycounter
2575 \newcommand*{\setentrycounter}[1]{\def\glsentrycounter{#1}}
The current glossary style can be set using \glossarystyle{<style>}.
\glossarystyle
2576 \newcommand*{\glossarystyle}[1]{%
2577 \@ifundefined{glsstyle@#1}{\PackageError{glossaries}{Glossary
2578 style '#1' undefined}{}{%
2579 \csname glsstyle@#1\endcsname}}

```

\newglossarystyle New glossary styles can be defined using:

```
\newglossarystyle{<name>}{<definition>}
```

The *<definition>* argument should redefine `\glossary`, `\glossaryheader`, `\glossgroupheading`, `\glossaryentryfield` and `\glossgroupskip` (see subsection 4.18 for the definitions of predefined styles). Glossary styles should not redefine `\glossarypreamble` and `\glossarypostamble`, as the user should be able to switch between styles without affecting the pre- and postambles.

```

2580 \newcommand{\newglossarystyle}[2]{%
2581 \@ifundefined{glsstyle@#1}{%
2582 \expandafter\def\csname glsstyle@#1\endcsname{#2}}{%
2583 \PackageError{glossaries}{Glossary style '#1' is already defined}{}}}

```

Glossary entries are encoded so that the second argument to `\glossaryentryfield` is always specified as `\glsnamefont{<name>}`. This allows the user to change the font used to display the name term without having to redefine `\glossaryentryfield`. The default uses the surrounding font, so in the list type styles (which place the name in the optional argument to `\item`) the name will appear in bold.

```

\glsnamefont
2584 \newcommand*{\glsnamefont}[1]{#1}

```

Each glossary entry has an associated number list (usually page numbers) that indicate where in the document the entry has been used. The format for these number lists can be changed using the `format` key in commands like `\glslink`. The default format is given by `\glshypernumber`. This takes a single argument which may be a single number, a number range or a number list. The number ranges are delimited with `\delimR`, the number lists are delimited with `\delimN`.

If the document doesn't have hyperlinks, the numbers can be displayed just as they are, but if the document supports hyperlinks, the numbers should link to the relevant location. This means extracting the individual numbers from the list or ranges. The `hyperref` package does this with the `\hyperpage` command, but this is encoded for comma and dash delimiters and only for the page counter, but this code needs to be more general. So I have adapted the code used in the `hyperref` package.

```

\glshypernumber
2585 \@ifundefined{hyperlink}{%
2586 \def\glshypernumber#1{#1}{%
2587 \def\glshypernumber#1{%
2588   \glslink{\nohyperpage{}}{\@nil}}}

```

\@glshypernumber This code was provided by Heiko Oberdiek to allow material to be attached to the location.

```

2589 \def\@glshypernumber#1\nohyperpage#2#3\@nil{%
2590   \ifx\\#1\\%
2591   \else
2592     \@delimR#1\delimR\delimR\\%
2593   \fi
2594   \ifx\\#2\\%
2595   \else
2596     #2%
2597   \fi
2598   \ifx\\#3\\%
2599   \else
2600     \@glshypernumber#3\@nil
2601   \fi
2602 }
```

\@delimR displays a range of numbers for the counter whose name is given by \@gls@counter (which must be set prior to using \@glshypernumber).

```
\@delimR
2603 \def\@delimR#1\delimR #2\delimR #3\\{%
2604 \ifx\\#2\\%
2605   \@delimN{#1}%
2606 \else
2607   \@gls@numberlink{#1}\delimR\@gls@numberlink{#2}%
2608 \fi}
```

\@delimN displays a list of individual numbers, instead of a range:

```
\@delimN
2609 \def\@delimN#1{\@@delimN#1\delimN \delimN\\}
2610 \def\@@delimN#1\delimN #2\delimN#3\\{%
2611 \ifx\\#3\\%
2612   \@gls@numberlink{#1}%
2613 \else
2614   \@gls@numberlink{#1}\delimN\@gls@numberlink{#2}%
2615 \fi
2616 }
```

The following code is modified from hyperref's \HyInd@pagelink where the name of the counter being used is given by \@gls@counter.

```

2617 \def\@gls@numberlink#1{%
2618 \begingroup
2619   \toks@={}%
2620   \@gls@removespaces#1 \@nil
2621 \endgroup}

2622 \def\@gls@removespaces#1 #2\@nil{%
2623   \toks@=\expandafter{\the\toks@#1}%
2624   \ifx\\#2\\%
2625     \edef\x{\the\toks@}%
2626     \ifx\x\empty
2627     \else
2628       \hyperlink{\glsentrycounter.\the\toks@}{\the\toks@}%

```

```

2629   \fi
2630 \else
2631   \gls@ReturnAfterFi%
2632   \gls@removespaces#2\@nil
2633 }%
2634 \fi
2635 }
2636 \long\def\gls@ReturnAfterFi#1\fi{\fi#1}

```

The following commands will switch to the appropriate font, and create a hyperlink, if hyperlinks are supported. If hyperlinks are not supported, they will just display their argument in the appropriate font.

```

\hyperrm
2637 \newcommand*{\hyperrm}[1]{\textrm{\glshypernumber{#1}}}

\hypersf
2638 \newcommand*{\hypersf}[1]{\textsf{\glshypernumber{#1}}}

\hypertt
2639 \newcommand*{\hypertt}[1]{\texttt{\glshypernumber{#1}}}

\hyperbf
2640 \newcommand*{\hyperbf}[1]{\textbf{\glshypernumber{#1}}}

\hypermd
2641 \newcommand*{\hypermd}[1]{\textmd{\glshypernumber{#1}}}

\hyperit
2642 \newcommand*{\hyperit}[1]{\textit{\glshypernumber{#1}}}

\hypersl
2643 \newcommand*{\hypersl}[1]{\textsl{\glshypernumber{#1}}}

\hyperup
2644 \newcommand*{\hyperup}[1]{\textup{\glshypernumber{#1}}}

\hypersc
2645 \newcommand*{\hypersc}[1]{\textsc{\glshypernumber{#1}}}

\hyperemph
2646 \newcommand*{\hyperemph}[1]{\emph{\glshypernumber{#1}}}

```

4.16 Acronyms

If the `acronym` package option is used, a new glossary called `acronym` is created

```

2647 \ifglsacronym
2648 \newglossary[alg]{acronym}{acr}{acn}{\acronymname}
      and \acronymtype is set to the name of this new glossary.
2649 \renewcommand*{\acronymtype}{acronym}
2650 \fi

```

```
\oldacronym \oldacronym[⟨label⟩]{⟨abbrv⟩}{⟨long⟩}{⟨key-val list⟩}
```

This emulates the way the old `glossary` package defined acronyms. It is equivalent to `\newacronym[⟨key-val list⟩]{⟨label⟩}{⟨abbrv⟩}{⟨long⟩}` and it additionally defines the command `\⟨label⟩` which is equivalent to `\gls{⟨label⟩}` (thus `⟨label⟩` must only contain alphabetical characters). If `⟨label⟩` is omitted, `⟨abbrv⟩` is used. This only emulates the syntax of the old `glossary` package. The way the acronyms appear in the list of acronyms is determined by the definition of `\newacronym` and the glossary style.

Note that `\⟨label⟩` can't have an optional argument if the `xspace` package is loaded. If `xspace` hasn't been loaded then you can do `\⟨label⟩[⟨insert⟩]` but you can't do `\⟨label⟩[⟨key-val list⟩]`. For example if you define the acronym `svm`, then you can do `\svm['s]` but you can't do `\svm[format=textbf]`. If the `xspace` package is loaded, `\svm['s]` will appear as `svm ['s]` which is unlikely to be the desired result. In this case, you will need to use `\gls` explicitly, e.g. `\gls{\svm}['s]`. Note that it is up to the user to load `xspace` if desired.

```
2651 \newcommand{\oldacronym}[4]{\gls@label}{%
2652   \def\gls@label{\#2}%
2653   \newacronym[\#4]{\#1}{\#2}{\#3}%
2654   \@ifundefined{xspace}{%
2655     \expandafter\edef\csname\endcsname{%
2656       \noexpand\@ifstar{\noexpand\Gls{\#1}}{\noexpand\gls{\#1}}}%
2657   }{%
2658     \expandafter\edef\csname\endcsname{%
2659       \noexpand\@ifstar{\noexpand\Gls{\#1}\noexpand\xspace}{%
2660         \noexpand\gls{\#1}\noexpand\xspace}}%
2661   }%
2662 }
```

```
\newacronym[⟨key-val list⟩]{⟨label⟩}{⟨abbrev⟩}{⟨long⟩}
```

This is a quick way of defining acronyms, all it does is call `\newglossaryentry` with the appropriate values. It sets the glossary type to `\acronymtype` which will be `acronym` if the package option `acronym` has been used, otherwise it will be the default glossary. Since `\newacronym` merely calls `\newglossaryentry`, the acronym is treated like any other glossary entry.

If you prefer a different format, you can redefine `\newacronym` as required. The optional argument can be used to override any of the settings.

This is just a stub. It's redefined by commands like `\SetDefaultAcronymStyle`.

```
\newacronym
2663 \newcommand{\newacronym}[4][]{}
```

Set up some convenient short cuts. These need to be changed if `\newacronym` is changed (or if the `description` key is changed).

`\acrpluralsuffix` Plural suffix used by `\newacronym`. This just defaults to `\glspluralsuffix` but is changed to include `\textup` if the `smallcaps` option is used, so that the suffix doesn't appear in small caps as it doesn't look right. For example, ABCS looks as though the "s" is part of the acronym, but ABCs looks as though the "s" is a plural suffix. Since the entire text `abcs` is set in `\textsc`, `\textup` is needed to cancel it out.

```
2664 \newcommand*{\acrpluralsuffix}{\glspluralsuffix}
```

Make a note of the keys that are used to store the long and short forms:

```
\glsshortkey
```

```
2665 \newcommand*{\glsshortkey}{text}
```

```
\glsshortpluralkey
```

```
2666 \newcommand*{\glsshortpluralkey}{plural}
```

```
\glslongkey
```

```
2667 \newcommand*{\glslongkey}{description}
```

```
\glslongpluralkey
```

```
2668 \newcommand*{\glslongpluralkey}{descriptionplural}
```

Using the default definitions, `\acrshort` is the same as `\glstext`, which means that it will print the abbreviation.

```
\acrshort
```

```
2669 \newcommand*{\acrshort}[2][]{%
```

```
2670   \new@ifnextchar[{\@acrshort{\#1}{\#2}}{\@acrshort{\#1}{\#2}[]}]}
```

```
\Acrshort
```

```
2671 \newcommand*{\Acrshort}[2][]{%
```

```
2672   \new@ifnextchar[{\@Acrshort{\#1}{\#2}}{\@Acrshort{\#1}{\#2}[]}]}
```

```
\ACRshort
```

```
2673 \newcommand*{\ACRshort}[2][]{%
```

```
2674   \new@ifnextchar[{\@ACRshort{\#1}{\#2}}{\@ACRshort{\#1}{\#2}[]}]}
```

Plural:

```
\acrshortpl
```

```
2675 \newcommand*{\acrshortpl}[2][]{%
```

```
2676   \new@ifnextchar[{\@acrshortpl{\#1}{\#2}}{\@acrshortpl{\#1}{\#2}[]}]}
```

```
\Acrshortpl
```

```
2677 \newcommand*{\Acrshortpl}[2][]{%
```

```
2678   \new@ifnextchar[{\@Acrshortpl{\#1}{\#2}}{\@Acrshortpl{\#1}{\#2}[]}]}
```

```
\ACRshortpl
```

```
2679 \newcommand*{\ACRshortpl}[2][]{%
```

```
2680   \new@ifnextchar[{\@ACRshortpl{\#1}{\#2}}{\@ACRshortpl{\#1}{\#2}[]}]}
```

`\acrlong` is set to `\glsdesc`, so it will print the long form, unless the description key has been set to something else.

```
\acrlong
```

```
2681 \newcommand*{\acrlong}[2][]{%
```

```
2682   \new@ifnextchar[{\@acrlong{\#1}{\#2}}{\@acrlong{\#1}{\#2}[]}]}
```

```

\Acrlong
2683 \newcommand*{\Acrlong}[2] []{%
2684   \new@ifnextchar[{\@Acrlong{#1}{#2}}{\@Acrlong{#1}{#2}[]}}}

\ACRlong

2698   \new@ifnextchar[{\@ACRfull{#1}{#2}}{\@ACRfull{#1}{#2}[]}}}

Plural:

\acrfullpl
2699 \newcommand*{\acrfullpl}[2] []{%
2700   \new@ifnextchar[{\@acrfullpl{#1}{#2}}{\@acrfullpl{#1}{#2}[]}}}

\Acrfullpl
2701 \newcommand*{\Acrfullpl}[2] []{%
2702   \new@ifnextchar[{\@Acrfullpl{#1}{#2}}{\@Acrfullpl{#1}{#2}[]}}}

\ACRfullpl
2703 \newcommand*{\ACRfullpl}[2] []{%
2704   \new@ifnextchar[{\@ACRfullpl{#1}{#2}}{\@ACRfullpl{#1}{#2}[]}}}

```

4.17 Predefined acronym styles

`\acronymfont` This is only used with the additional acronym styles:

2705 `\newcommand{\acronymfont}[1]{#1}`

`\firstacronymfont` This is only used with the additional acronym styles:

2706 `\newcommand{\firstacronymfont}[1]{\acronymfont{#1}}`

`\acrnameformat` The styles that allow an additional description use `\acrnameformat{<short>}{<long>}` to determine what information is displayed in the name.

2707 `\newcommand*{\acrnameformat}[2]{\acronymfont{#1}}`

Define some tokens used by `\newacronym`:

`\glskeylisttok`

2708 `\newtoks\glskeylisttok`

`\glslabeltok`

2709 `\newtoks\glslabeltok`

`\glsshorttok`

2710 `\newtoks\glsshorttok`

`\glslongtok`

2711 `\newtoks\glslongtok`

`\newacronymhook` Provide a hook for `\newacronym`:

2712 `\newcommand*{\newacronymhook}{}%`

`SetDefaultAcronymDisplayStyle` Sets the default acronym display style for given glossary.

2713 `\newcommand*{\SetDefaultAcronymDisplayStyle}[1]{%`
2714 `\def\glsdisplay[#1]{##1##4}%`
2715 `\def\glsdisplayfirst[#1]{##1##4}%`
2716 `}`

`\DefaultNewAcronymDef` Sets up the acronym definition for the default style. The information is provided by the tokens `\glslabeltok`, `\glsshorttok`, `\glslongtok` and `\glskeylisttok`.

2717 `\newcommand*{\DefaultNewAcronymDef}{%`
2718 `\edef\@do@newglossaryentry{%`
2719 `\noexpand\newglossaryentry{\the\glslabeltok}%`
2720 `}`
2721 `type=\acronymtype,%`
2722 `name={\the\glsshorttok},%`
2723 `description={\the\glslongtok},%`
2724 `text={\the\glsshorttok},%`
2725 `sort={\the\glsshorttok},%`
2726 `descriptionplural={\the\glslongtok\noexpand\acrpluralsuffix},%`
2727 `first={\the\glslongtok\space(\the\glsshorttok)},%`
2728 `plural={\the\glsshorttok\noexpand\acrpluralsuffix},%`
2729 `firstplural={\noexpand\@glo@descplural\space`
2730 `(\noexpand\@glo@plural)},%`
2731 `\the\glskeylisttok`
2732 `}`

```

2733  }%
2734  \o@do@newglossaryentry
2735 }

```

\SetDefaultAcronymStyle Set up the default acronym style:

```
2736 \newcommand*{\SetDefaultAcronymStyle}{%
```

Set the display style:

```

2737 \o@for@gls@type:=\glsacronymlists\do{%
2738   \SetDefaultAcronymDisplayStyle{\gls@type}%
2739 }%

```

Set up the definition of \newacronym:

```
2740 \renewcommand{\newacronym}[4] []{%
```

If user is just using the main glossary and hasn't identified it as a list of acronyms, then update. (This is done to ensure backwards compatibility with versions prior to 2.04).

```

2741 \ifx\glsacronymlists\empty
2742   \def\glo@type{\acronymtype}%
2743   \setkeys{glossentry}{##1}%
2744   \DeclareAcronymList{\glo@type}%
2745   \SetDefaultAcronymDisplayStyle{\glo@type}%
2746 \fi
2747 \glskeylisttok{##1}%
2748 \glslabeltok{##2}%
2749 \glsshorttok{##3}%
2750 \glslongtok{##4}%
2751 \newacronymhook
2752 \DefaultNewAcronymDef
2753 }%

```

Define short cuts.

```

2754 \renewcommand*{\acrpluralsuffix}{\glspluralsuffix}%
2755 \renewcommand*{\glsshortkey}{text}%
2756 \renewcommand*{\glsshortpluralkey}{plural}%

4.18 Predefined Glossary Styles

The glossaries bundle comes with some predefined glossary styles. These need to be loaded now for the `style` option to use them.

First, the glossary hyper-navigation commands need to be loaded.

```
3331 \RequirePackage{glossary-hypernav}
```

The styles that use list-like environments. These are not loaded if the `nolist` option is used:

```
3332 \@gls@loadlist
```

The styles that use the `longtable` environment. These are not loaded if the `nolong` package option is used.

```
3333 \@gls@loadlong
```

The styles that use the `supertabular` environment. These are not loaded if the `nosuper` package option is used or if the `supertabular` package isn't installed.

```
3334 \@gls@loadsuper
```

The tree-like styles. These are not loaded if the `notree` package option is used.

```
3335 \@gls@loadtree
```

The default glossary style is set according to the `style` package option, but can be overridden by `\glossarystyle`. The required style must be defined at this point.

```
3336 \ifx@\glossary@default@style\relax
3337 \else
3338 \glossarystyle{\@glossary@default@style}
3339 \fi
```

5 Mfirstuc Documented Code

```

3340 \NeedsTeXFormat{LaTeX2e}
3341 \ProvidesPackage{mfirstuc}[2009/11/03 v1.04 (NLCT)]

\makefirstuc Syntax:
\makefirstuc{\text{}}
```

Makes the first letter uppercase, but will skip initial control sequences if they are followed by a group and make the first thing in the group uppercase, unless the group is empty. Thus `\makefirstuc{abc}` will produce: *A*bc, `\makefirstuc{\ae bc}` will produce: *Æ*bc, but `\makefirstuc{\emph{abc}}` will produce *Abc*. This is required by `\Gls` and `\Glspl`.

```

3342 \newif\if@gls@scs
3343 \newtoks\@gls@sm@first
3344 \newtoks\@gls@sm@rest
3345 \def\makefirstuc#1{%
3346   \def\gls@argi{#1}%
3347   \ifx\gls@argi\@empty
3348     \else
3349       \def\@gls@tmp{\ #1}%
3350       \@onel@vel@sanitize\@gls@tmp
3351       \expandafter\@gls@checkcs\@gls@tmp\relax\relax
3352       \if@gls@scs
3353         \@gls@getbody #1{}\@nil
3354         \ifx\@gls@rest\@empty
3355           \@gls@makefirstuc{#1}%
3356         \else
3357           \expandafter\@gls@split\@gls@rest\@nil
3358           \ifx\@gls@first\@empty
3359             \@gls@makefirstuc{#1}%
3360           \else
3361             \expandafter\@gls@sm@first\expandafter{\@gls@first}%
3362             \expandafter\@gls@sm@rest\expandafter{\@gls@rest}%
3363             \edef\@gls@dom@firstuc{\noexpand\@gls@body
3364               \noexpand\@gls@makefirstuc\the\@gls@sm@first}%
3365               \the\@gls@sm@rest}%
3366             \@gls@dom@firstuc
3367           \fi
3368         \fi
3369       \else
3370         \@gls@makefirstuc{#1}%
3371       \fi
3372     \fi
3373 }

```

Put first argument in `\@gls@first` and second argument in `\@gls@rest`:

```

3374 \def\gls@split#1#2\@nil{%
3375   \def\@gls@first{#1}\def\@gls@rest{#2}%
3376 }
3377 \def\@gls@checkcs#1 #2#3\relax{%
3378   \def\@gls@argi{#1}\def\@gls@argii{#2}%
3379   \ifx\@gls@argi\@gls@argii
3380     \@glscstrue
3381   \else
3382     \@glscsf@lse
3383   \fi
3384 }

```

Make first thing upper case:

```
3385 \def\@gls@makefirstuc#1{\MakeUppercase #1}
      Get the first grouped argument and stores in \@gls@body.
3386 \def\@gls@getbody#1{\def\@gls@body{#1}\@gls@gobbletonil}
      Scoup up everything to \@nil and store in \@gls@rest:
3387 \def\@gls@gobbletonil#1@nil{\def\@gls@rest{#1}}
```

\xmakefirstuc Expand argument once before applying \makefirstuc (added v1.01).

```
3388 \newcommand*{\xmakefirstuc}[1]{%
3389 \expandafter\makefirstuc\expandafter{#1}}
```

6 Glossary Styles

6.1 Glossary hyper-navigation definitions (glossary-hypernav package)

Package Definition:

```
3390 \ProvidesPackage{glossary-hypernav}[2007/07/04 v1.01 (NLCT)]
```

The commands defined in this package are provided to help navigate around the groups within a glossary (see [subsection 4.15.](#)) \printglossary (and \printglossaries) set \@glo@type to the label of the current glossary. This is used to create a unique hypertarget in the event of multiple glossaries.

```
\glsnavhyperlink[<type>]{<label>}{<text>}
```

This command makes *<text>* a hyperlink to the glossary group whose label is given by *<label>* for the glossary given by *<type>*.

```
\glsnavhyperlink
3391 \newcommand*{\glsnavhyperlink}[3][\@glo@type]{%
3392   \edef\gls@grplabel{#2}\protected@edef\gls@grptitle{#3}%
3393   \glslink{glsn:#1@#2}{#3}}
```

```
\glsnavhypertarget[<type>]{<label>}{<text>}
```

This command makes *<text>* a hypertarget for the glossary group whose label is given by *<label>* in the glossary given by *<type>*. If *<type>* is omitted, \@glo@type is used which is set by \printglossary to the current glossary label.

```
\glsnavhypertarget
3394 \newcommand*{\glsnavhypertarget}[3][\@glo@type]{%
      Add this group to the aux file for re-run check.
3395   \protected@write\@auxout{}{\string\gls@hypergroup{#1}{#2}}%
      Add the target.
3396   \glstarget{glsn:#1@#2}{#3}%
      Check list of know groups to determine if a re-run is required.
3397   \expandafter\let
3398     \expandafter\gls@list\csname\gls@hypergrouplist@#1\endcsname
```

Iterate through list and terminate loop if this group is found.

```
3399  \@for\@gls@elem:=\@gls@list\do{%
3400    \ifthenelse{\equal{\@gls@elem}{#2}}{\@endfortrue}{}%
```

Check if list terminated prematurely.

```
3401  \if@endfor
3402  \else
```

This group was not included in the list, so issue a warning.

```
3403  \GlossariesWarningNoLine{Navigation panel
3404    for glossary type '#1' Jmissing group '#2'}%
3405  \gdef\gls@hypergruprerun{%
3406    \GlossariesWarningNoLine{Navigation panel
3407    has changed. Rerun LaTeX}}%
3408  \fi
3409 }
```

\gls@hypergruprerun Give a warning at the end if re-run required

```
3410 \let\gls@hypergruprerun\relax
3411 \AtEndDocument{\gls@hypergruprerun}
```

\@gls@hypergroup This adds to (or creates) the command \@gls@hypergroup{*glossary type*} which lists all groups for a given glossary, so that the navigation bar only contains those groups that are present. However it requires at least 2 runs to ensure the information is up-to-date.

```
3412 \newcommand*{\@gls@hypergroup}[2]{%
3413 \@ifundefined{\gls@hypergroup{#1}}{%
3414   \expandafter\xdef\csname@gls@hypergroup{#1}\endcsname{#2}%
3415 }{%
3416   \expandafter\let\expandafter\@gls@tmp
3417     \csname@gls@hypergroup{#1}\endcsname
3418   \expandafter\xdef\csname@gls@hypergroup{#1}\endcsname{%
3419     \@gls@tmp, #2}%
3420 }%
3421 }
```

The \glsnavigation command displays a simple glossary group navigation. The symbol and number elements are defined separately, so that they can be suppressed if need be. Note that this command will produce a link to all 28 groups, but some groups may not be defined if there are groups that do not contain any terms, in which case you will get an undefined hyperlink warning. Now for the whole navigation bit:

```
\glsnavigation
3422 \newcommand*{\glsnavigation}{%
3423 \def\@gls@between{}%
3424 \ifundefined{\gls@hypergroup{@\glo@type}}{%
3425   \def\@gls@list{}%
3426 }{%
3427   \expandafter\let\expandafter\@gls@list
3428     \csname@gls@hypergroup{@\glo@type}\endcsname
3429 }%
3430 \@for\@gls@tmp:=\@gls@list\do{%
3431   \@gls@between
```

```

3432   \glsnavhyperlink{\@gls@tmp}{\glsgetgroupitle{\@gls@tmp}}%
3433   \let\@gls@between\glshypernavsep%
3434 }%
3435 }

```

\glshypernavsep Separator for the hyper navigation bar.
 3436 \newcommand*\{\glshypernavsep}{\space\textbar\space}

The \glssymbolnav produces a simple navigation set of links for just the symbol and number groups. This used to be used at the start of \glsnavigation. This command is no longer needed.

```

\glssymbolnav
3437 \newcommand*\{\glssymbolnav}{%
3438 \glsnavhyperlink{glssymbols}{\glsgetgroupitle{glssymbols}}%
3439 \glshypernavsep
3440 \glsnavhyperlink{glsnumbers}{\glsgetgroupitle{glsnumbers}}%
3441 \glshypernavsep
3442 }

```

6.2 List Style (glossary-list.sty)

The glossary-list style file defines glossary styles that use the `description` environment. Note that since the entry name is placed in the optional argument to the `\item` command, it will appear in a bold font by default.

3443 \ProvidesPackage{glossary-list}[2009/05/30 v2.01 (NLCT)]

list The list glossary style uses the `description` environment. The group separator `\glsgroupskip` is redefined as `\indexspace` which produces a gap between groups. The glossary heading and the group headings do nothing. Sub-entries immediately follow the main entry without the sub-entry name. This style does not use the entry's symbol. This is used as the default style for the `glossaries` package.

3444 \newglossarystyle{list}{%

 Use `description` environment:

```

3445 \renewenvironment{theglossary}%
3446 {\begin{description}}{\end{description}}%

```

 No header at the start of the environment:

3447 \renewcommand*\{\glossaryheader}{()}

 No group headings:

3448 \renewcommand*\{\glsgroupheading}{[1]{}}

 Main (level 0) entries start a new item in the list:

```

3449 \renewcommand*\{\glossaryentryfield}{[5]{%
3450 \item[\glstarget{##1}{##2}] ##3\glspostdescription\space ##5}%

```

 Sub-entries continue on the same line:

```

3451 \renewcommand*\{\glossarysubentryfield}{[6]{%
3452 \glstarget{##2}{\strut}##4\glspostdescription\space ##6.}%
3453 \% \end{macrocode}
3454 \% Add vertical space between groups:
3455 \% \begin{macrocode}
3456 \renewcommand*\{\glsgroupskip}{\indexspace}%
3457 }

```

listgroup The `listgroup` style is like the `list` style, but the glossary groups have headings.

```
3458 \newglossarystyle{listgroup}{%
```

Base it on the `list` style:

```
3459 \glossarystyle{list}{%
```

Each group has a heading:

```
3460 \renewcommand*{\glsgroupheading}[1]{\item[\glsgrouptitle{##1}]}}
```

listhypergroup The `listhypergroup` style is like the `listgroup` style, but has a set of links to the groups at the start of the glossary.

```
3461 \newglossarystyle{listhypergroup}{%
```

Base it on the `list` style:

```
3462 \glossarystyle{list}{%
```

Add navigation links at the start of the environment:

```
3463 \renewcommand*{\glossaryheader}{%
```

```
3464 \item[\glsnavigation]}
```

Each group has a heading with a hypertarget:

```
3465 \renewcommand*{\glsgroupheading}[1]{%
```

```
3466 \item[\glshavhypertarget{##1}{\glsgrouptitle{##1}}]}
```

altlist The `altlist` glossary style is like the `list` style, but places the description on a new line. Sub-entries follow in separate paragraphs without the sub-entry name. This style does not use the entry's symbol.

```
3467 \newglossarystyle{altlist}{%
```

Base it on the `list` style:

```
3468 \glossarystyle{list}{%
```

Main (level 0) entries start a new item in the list with a line break after the entry name:

```
3469 \renewcommand*{\glossaryentryfield}[5]{%
```

```
3470 \item[\glstarget{##1}{##2}]\mbox{}\\newline
```

```
3471 ##3\glspostdescription\\space ##5}%
```

Sub-entries start a new paragraph:

```
3472 \renewcommand{\glossarysubentryfield}[6]{%
```

```
3473 \par\glstarget{##2}{\strut}##4\glspostdescription\\space ##6}%
```

```
3474 }
```

altlistgroup The `altlistgroup` glossary style is like the `altlist` style, but the glossary groups have headings.

```
3475 \newglossarystyle{altlistgroup}{%
```

Base it on the `altlist` style:

```
3476 \glossarystyle{altlist}{%
```

Each group has a heading:

```
3477 \renewcommand*{\glsgroupheading}[1]{\item[\glsgrouptitle{##1}]}}
```

altlisthypergroup The `altlisthypergroup` glossary style is like the `altlistgroup` style, but has a set of links to the groups at the start of the glossary.

```
3478 \newglossarystyle{altlisthypergroup}{%
```

Base it on the `altlist` style:

```
3479 \glossarystyle{altlist}%
```

Add navigation links at the start of the environment:

```
3480 \renewcommand*{\glossaryheader}{%
3481   \item[\glsnavigation]}%
```

Each group has a heading with a hypertarget:

```
3482 \renewcommand*{\glsgroupheading}[1]{%
3483   \item[\glsnavhypertarget{\#\#1}{\glsgetgroupname{\#\#1}}]}
```

listdotted The `listdotted` glossary style was supplied by Axel Menzel. I've modified it slightly so that the distance from the start of the name to the end of the dotted line is specified by `\glslistdottedwidth`. Note that this style ignores the page numbers as well as the symbol. Sub-entries are displayed in the same way as top-level entries.

```
3484 \newglossarystyle{listdotted}{%
```

Base it on the `list` style:

```
3485 \glossarystyle{list}%
```

Each main (level 0) entry starts a new item:

```
3486 \renewcommand*{\glossaryentryfield}[5]{%
3487   \item[]\makebox[\glslistdottedwidth][1]{\glstarget{\#\#1}{\#\#2}}%
3488   \unskip\leaders\hbox to 2.9mm{\hss.}\hfill\strut}##3}%
3489 }
```

Sub entries have the same format as main entries:

```
3490 \renewcommand*{\glossarysubentryfield}[6]{%
3491   \item[]\makebox[\glslistdottedwidth][1]{\glstarget{\#\#2}{\#\#3}}%
3492   \unskip\leaders\hbox to 2.9mm{\hss.}\hfill\strut}##4}%
3493 }
```

`\glslistdottedwidth`

```
3493 \newlength\glslistdottedwidth
3494 \setlength{\glslistdottedwidth}{.5\hsize}
```

sublistdotted This style is similar to the `glostylelistdotted` style, except that the main entries just have the name displayed.

```
3495 \newglossarystyle{sublistdotted}{%
```

Base it on the `listdotted` style:

```
3496 \glossarystyle{listdotted}%
```

Main (level 0) entries just display the name:

```
3497 \renewcommand*{\glossaryentryfield}[5]{%
3498   \item[\glstarget{\#\#1}{\#\#2}]}%
3499 }
```

6.3 Glossary Styles using longtable (the `glossary-long` package)

The glossary styles defined in the `glossary-long` package used the `longtable` environment in the glossary.

```
3500 \ProvidesPackage{glossary-long}[2009/05/30 v2.01 (NLCT)]
```

Requires the `longtable` package:

```
3501 \RequirePackage{longtable}
```

`\glsdescwidth` This is a length that governs the width of the description column. (There's a chance that the user may specify `nolong` and then load `glossary-long` later, in which case `\glsdescwidth` may have already been defined by `glossary-super`. The same goes for `\glspagelistwidth`.)

```
3502 \@ifundefined{\glsdescwidth}{%
3503   \newlength\glsdescwidth
3504   \setlength{\glsdescwidth}{0.6\hsize}
3505 }
```

`\glspagelistwidth` This is a length that governs the width of the page list column.

```
3506 \@ifundefined{\glspagelistwidth}{%
3507   \newlength\glspagelistwidth
3508   \setlength{\glspagelistwidth}{0.1\hsize}
3509 }
```

`long` The `long` glossary style command which uses the `longtable` environment:

```
3510 \newglossarystyle{long}{%
```

Use `longtable` with two columns:

```
3511 \renewenvironment{theglossary}%
3512   {\begin{longtable}{lp{\glsdescwidth}}}{%
3513   \end{longtable}}
```

Do nothing at the start of the environment:

```
3514 \renewcommand*\{\glossaryheader}{}
```

No heading between groups:

```
3515 \renewcommand*\{\glsgroupheading}{[1]}
```

Main (level 0) entries displayed in a row:

```
3516 \renewcommand*\{\glossaryentryfield}{[5]}{%
3517   \glstarget{\#1}{\#2} & ##3\glspostdescription\space ##5\\}
```

Sub entries displayed on the following row without the name:

```
3518 \renewcommand*\{\glossarysubentryfield}{[6]}{%
3519   & \glstarget{\#2}{\strut}##4\glspostdescription\space ##6\\}
```

Blank row between groups:

```
3520 \renewcommand*\{\glsgroupskip}{ & \\}
3521 }
```

`longborder` The `longborder` style is like the above, but with horizontal and vertical lines:

```
3522 \newglossarystyle{longborder}{%
```

Base it on the `glostylelong` style:

```
3523 \glossarystyle{long}{%
```

Use `longtable` with two columns with vertical lines between each column:

```
3524 \renewenvironment{theglossary}{%
3525   \begin{longtable}{|l|p{\glsdescwidth}|}{\end{longtable}}
```

Place horizontal lines at the head and foot of the table:

```
3526 \renewcommand*\{\glossaryheader}{\hline\endhead\hline\endfoot}{%
3527 }
```

longheader The `longheader` style is like the `long` style but with a header:

```
3528 \newglossarystyle{longheader}{%
```

Base it on the `glostylelong` style:

```
3529 \glossarystyle{long}{%
```

Set the table's header:

```
3530 \renewcommand*\glossaryheader{%
```

```
3531   \bfseries \entryname & \bfseries \descriptionname\\endhead}{%
```

```
3532 }
```

longheaderborder The `longheaderborder` style is like the `long` style but with a header and border:

```
3533 \newglossarystyle{longheaderborder}{%
```

Base it on the `glostylelongborder` style:

```
3534 \glossarystyle{longborder}{%
```

Set the table's header and add horizontal line to table's foot:

```
3535 \renewcommand*\glossaryheader{%
```

```
3536   \hline\bfseries \entryname & \bfseries \descriptionname\\hline
```

```
3537   \endhead
```

```
3538   \hline\endfoot}{%
```

```
3539 }
```

long3col The `long3col` style is like `long` but with 3 columns

```
3540 \newglossarystyle{long3col}{%
```

Use a `longtable` with 3 columns:

```
3541 \renewenvironment{theglossary}{%
```

```
3542   \begin{longtable}{lp{\glscdescwidth}p{\glspagelistwidth}}}{%
```

```
3543   \end{longtable}}
```

No table header:

```
3544 \renewcommand*\glossaryheader{}{}
```

No headings between groups:

```
3545 \renewcommand*\glsgroupheading[1]{}{}
```

Main (level 0) entries on a row (name in first column, description in second column, page list in last column):

```
3546 \renewcommand*\glossaryentryfield[5]{%
```

```
3547   \glstarget{##1}{##2} & ##3 & ##5\\}{%
```

Sub-entries on a separate row (no name, description in second column, page list in third column):

```
3548 \renewcommand*\glossarysubentryfield[6]{%
```

```
3549   & \glstarget{##2}{\strut}##4 & ##6\\}{%
```

Blank row between groups:

```
3550 \renewcommand*\glsgroupskip{}{ & \\}{}
```

```
3551 }
```

long3colborder The `long3colborder` style is like the `long3col` style but with a border:

```
3552 \newglossarystyle{long3colborder}{%
```

Base it on the `glostylelong3col` style:

```
3553 \glossarystyle{long3col}{}
```

Use a `longtable` with 3 columns with vertical lines around them:

```
3554 \renewenvironment{theglossary}%
3555   {\begin{longtable}{|l|p{\glsdescwidth}|p{\glspagelistwidth}|}}%
3556   {\end{longtable}}%
```

Place horizontal lines at the head and foot of the table:

```
3557 \renewcommand*\glossaryheader{\hline\endhead\hline\endfoot}%
3558 }
```

long3colheader The `long3colheader` style is like `long3col` but with a header row:

```
3559 \newglossarystyle{long3colheader}{%
```

Base it on the `glostylelong3col` style:

```
3560 \glossarystyle{long3col}{%
```

Set the table's header:

```
3561 \renewcommand*\glossaryheader{%
3562   \bfseries\entryname\&\bfseries\descriptionname\&
3563   \bfseries\pagelistname\\endhead}%
3564 }
```

long3colheaderborder The `long3colheaderborder` style is like the above but with a border

```
3565 \newglossarystyle{long3colheaderborder}{%
```

Base it on the `glostylelong3colborder` style:

```
3566 \glossarystyle{long3colborder}{%
```

Set the table's header and add horizontal line at table's foot:

```
3567 \renewcommand*\glossaryheader{%
3568   \hline
3569   \bfseries\entryname\&\bfseries\descriptionname\&
3570   \bfseries\pagelistname\\hline\endhead
3571   \hline\endfoot}%
3572 }
```

long4col The `long4col` style has four columns where the third column contains the value of the associated `symbol` key.

```
3573 \newglossarystyle{long4col}{%
```

Use a `longtable` with 4 columns:

```
3574 \renewenvironment{theglossary}%
3575   {\begin{longtable}{llll}}%
3576   {\end{longtable}}%
```

No table header:

```
3577 \renewcommand*\glossaryheader{}%
```

No group headings:

```
3578 \renewcommand*\glsgroupheading[1]{}%
```

Main (level 0) entries on a single row (name in first column, description in second column, symbol in third column, page list in last column):

```
3579 \renewcommand*\glossaryentryfield[5]{%
3580   \glstarget{\#1}{\#2} \#3 \#4 \#5\\}%
```

Sub entries on a single row with no name (description in second column, symbol in third column, page list in last column):

```
3581 \renewcommand*{\glossarysubentryfield}[6]{%
3582     & \glstarget{##2}{\strut}##4 & ##5 & ##6\\}%
3583 \renewcommand*{\glsgroupskip}{ & & &\\}%
3584 }
```

Blank row between groups:

```
3583 \renewcommand*{\glsgroupskip}{ & & &\\}%
3584 }
```

long4colheader The **long4colheader** style is like **long4col** but with a header row.

```
3585 \newglossarystyle{long4colheader}{%
```

Base it on the **glostylelong4col** style:

```
3586 \glossarystyle{long4col}{%
```

Table has a header:

```
3587 \renewcommand*{\glossaryheader}{%
3588     \bfseries\entryname&\bfseries\descriptionname&
3589     \bfseries \symbolname&
3590     \bfseries\pagelistname\\endhead}%
3591 }
```

long4colborder The **long4colborder** style is like **long4col** but with a border.

```
3592 \newglossarystyle{long4colborder}{%
```

Base it on the **glostylelong4col** style:

```
3593 \glossarystyle{long4col}{%
```

Use a **longtable** with 4 columns surrounded by vertical lines:

```
3594 \renewenvironment{theglossary}{%
3595     \begin{longtable}{|l|l|l|l|}}%
3596     \end{longtable}<!--</pre>
```

Add horizontal lines to the head and foot of the table:

```
3597 \renewcommand*{\glossaryheader}{\hline\endhead\hline\endfoot}%
3598 }
```

long4colheaderborder The **long4colheaderborder** style is like the above but with a border.

```
3599 \newglossarystyle{long4colheaderborder}{%
```

Base it on the **glostylelong4col** style:

```
3600 \glossarystyle{long4col}{%
```

Use a **longtable** with 4 columns surrounded by vertical lines:

```
3601 \renewenvironment{theglossary}{%
3602     \begin{longtable}{|l|l|l|l|}}%
3603     \end{longtable}<!--</pre>
```

Add table header and horizontal line at the table's foot:

```
3604 \renewcommand*{\glossaryheader}{%
3605     \hline\bfseries\entryname&\bfseries\descriptionname&
3606     \bfseries \symbolname&
3607     \bfseries\pagelistname\\hline\endhead\hline\endfoot}%
3608 }
```

altnlong4col The **altnlong4col** style is like the **long4col** style but can have multiline descriptions and page lists.

```
3609 \newglossarystyle{altnlong4col}{%
```

Base it on the `glostylelong4col` style:

```
3610 \glossarystyle{long4col}%
```

Use a `longtable` with 4 columns where the second and last columns may have multiple lines in each row:

```
3611 \renewenvironment{theglossary}%
3612   {\begin{longtable}{lp{\glsdescwidth}lp{\glspagelistwidth}}}}
3613   {\end{longtable}}%
3614 }
```

altnlong4colheader The `altnlong4colheader` style is like `altnlong4col` but with a header row.

```
3615 \newglossarystyle{altnlong4colheader}{}%
```

Base it on the `glostylelong4colheader` style:

```
3616 \glossarystyle{long4colheader}%
```

Use a `longtable` with 4 columns where the second and last columns may have multiple lines in each row:

```
3617 \renewenvironment{theglossary}%
3618   {\begin{longtable}{lp{\glsdescwidth}lp{\glspagelistwidth}}}}
3619   {\end{longtable}}%
3620 }
```

altnlong4colborder The `altnlong4colborder` style is like `altnlong4col` but with a border.

```
3621 \newglossarystyle{altnlong4colborder}{}%
```

Base it on the `glostylelong4colborder` style:

```
3622 \glossarystyle{long4colborder}%
```

Use a `longtable` with 4 columns where the second and last columns may have multiple lines in each row:

```
3623 \renewenvironment{theglossary}%
3624   {\begin{longtable}{|l|p{\glsdescwidth}|l|p{\glspagelistwidth}|}}
3625   {\end{longtable}}%
3626 }
```

altnlong4colheaderborder The `altnlong4colheaderborder` style is like the above but with a header as well as a border.

```
3627 \newglossarystyle{altnlong4colheaderborder}{}%
```

Base it on the `glostylelong4colheaderborder` style:

```
3628 \glossarystyle{long4colheaderborder}%
```

Use a `longtable` with 4 columns where the second and last columns may have multiple lines in each row:

```
3629 \renewenvironment{theglossary}%
3630   {\begin{longtable}{|l|p{\glsdescwidth}|l|p{\glspagelistwidth}|}}
3631   {\end{longtable}}%
3632 }
```

6.4 Glossary Styles using longtable (the glossary-longragged package)

The glossary styles defined in the glossary-longragged package used the longtable environment in the glossary and use ragged right formatting for the multiline columns.

```
3633 \ProvidesPackage{glossary-longragged}[2009/05/30 v2.01 (NLCT)]
```

Requires the array package:

```
3634 \RequirePackage{array}
```

Requires the longtable package:

```
3635 \RequirePackage{longtable}
```

\glsdescwidth This is a length that governs the width of the description column. This may have already been defined.

```
3636 \@ifundefined{\glsdescwidth}{%
3637   \newlength\glsdescwidth
3638   \setlength{\glsdescwidth}{0.6\hsize}
3639 }{}
```

\glspagelistwidth This is a length that governs the width of the page list column. This may already have been defined.

```
3640 \@ifundefined{\glspagelistwidth}{%
3641   \newlength\glspagelistwidth
3642   \setlength{\glspagelistwidth}{0.1\hsize}
3643 }{}
```

longragged The longragged glossary style is like the long but uses ragged right formatting for the description column.

```
3644 \newglossarystyle{longragged}{%
```

Use longtable with two columns:

```
3645   \renewenvironment{theglossary}%
3646     {\begin{longtable}{l>{\raggedright}p{\glsdescwidth}}{%
3647       \end{longtable}}{}}
```

Do nothing at the start of the environment:

```
3648   \renewcommand*{\glossaryheader}{}%
```

No heading between groups:

```
3649   \renewcommand*{\glsgroupheading}[1]{}%
```

Main (level 0) entries displayed in a row:

```
3650   \renewcommand*{\glossaryentryfield}[5]{%
3651     \glstarget{##1}{##2} & ##3\glspostdescription\space ##5%
3652     \tabularnewline}%
```

Sub entries displayed on the following row without the name:

```
3653   \renewcommand*{\glossarysubentryfield}[6]{%
3654     & \glstarget{##2}{\strut}##4\glspostdescription\space ##6%
3655     \tabularnewline}%
```

Blank row between groups:

```
3656   \renewcommand*{\glsgroupskip}{\& \tabularnewline}%
3657 }
```

longraggedborder The `longraggedborder` style is like the above, but with horizontal and vertical lines:

```
3658 \newglossarystyle{longraggedborder}{%
```

Base it on the `glostylelongragged` style:

```
3659 \glossarystyle{longragged}{%
```

Use `longtable` with two columns with vertical lines between each column:

```
3660 \renewenvironment{theglossary}{%
```

```
3661   \begin{longtable}{|l|>{\raggedright}p{\glscdescwidth}|}}%
```

```
3662   \end{longtable}{}}
```

Place horizontal lines at the head and foot of the table:

```
3663 \renewcommand*{\glossaryheader}{\hline\endhead\hline\endfoot}{}
```

```
3664 }
```

longraggedheader The `longraggedheader` style is like the `longragged` style but with a header:

```
3665 \newglossarystyle{longraggedheader}{%
```

Base it on the `glostylelongragged` style:

```
3666 \glossarystyle{longragged}{%
```

Set the table's header:

```
3667 \renewcommand*{\glossaryheader}{%
```

```
3668   \bfseries \entryname & \bfseries \descriptionname
```

```
3669   \tabularnewline\endhead{}}
```

```
3670 }
```

longraggedheaderborder The `longraggedheaderborder` style is like the `longragged` style but with a header and border:

```
3671 \newglossarystyle{longraggedheaderborder}{%
```

Base it on the `glostylelongraggedborder` style:

```
3672 \glossarystyle{longraggedborder}{%
```

Set the table's header and add horizontal line to table's foot:

```
3673 \renewcommand*{\glossaryheader}{%
```

```
3674   \hline\bfseries \entryname & \bfseries \descriptionname
```

```
3675   \tabularnewline\hline
```

```
3676   \endhead
```

```
3677   \hline\endfoot{}}
```

```
3678 }
```

longragged3col The `longragged3col` style is like `longragged` but with 3 columns

```
3679 \newglossarystyle{longragged3col}{%
```

Use a `longtable` with 3 columns:

```
3680 \renewenvironment{theglossary}{%
```

```
3681   \begin{longtable}{l>{\raggedright}p{\glscdescwidth}>{\raggedright}p{\glspagelistwidth}}{}}
```

```
3682   \end{longtable}{}}
```

No table header:

```
3684 \renewcommand*{\glossaryheader}{()}
```

No headings between groups:

```
3685 \renewcommand*{\glsgroupheading}[1]{()}
```

Main (level 0) entries on a row (name in first column, description in second column, page list in last column):

```
3686 \renewcommand*{\glossaryentryfield}[5]{%
3687     \glstarget{##1}{##2} & ##3 & ##5\tabularnewline}%
```

Sub-entries on a separate row (no name, description in second column, page list in third column):

```
3688 \renewcommand*{\glossarysubentryfield}[6]{%
3689     & \glstarget{##2}{\strut}##4 & ##6\tabularnewline}%
```

Blank row between groups:

```
3690 \renewcommand*{\glsgroupskip}{\&\&\tabularnewline}%
3691 }
```

longragged3colborder The `longragged3colborder` style is like the `longragged3col` style but with a border:

```
3692 \newglossarystyle{longragged3colborder}{%
```

Base it on the `glostylelongragged3col` style:

```
3693 \glossarystyle{longragged3col}{%
```

Use a `longtable` with 3 columns with vertical lines around them:

```
3694 \renewenvironment{theglossary}%
3695     {\begin{longtable}{|l|}>{\raggedright}p{\glsdescwidth}|%
3696      >{\raggedright}p{\glspagelistwidth}|}}%
3697     {\end{longtable}}%
```

Place horizontal lines at the head and foot of the table:

```
3698 \renewcommand*{\glossaryheader}{\hline\endhead\hline\endfoot}%
3699 }
```

longragged3colheader The `longragged3colheader` style is like `longragged3col` but with a header row:

```
3700 \newglossarystyle{longragged3colheader}{%
```

Base it on the `glostylelongragged3col` style:

```
3701 \glossarystyle{longragged3col}{%
```

Set the table's header:

```
3702 \renewcommand*{\glossaryheader}{%
3703     \bfseries\entryname\&\bfseries\descriptionname\&
3704     \bfseries\pagelistname\tabularnewline\endhead}%
3705 }
```

longragged3colheaderborder The `longragged3colheaderborder` style is like the above but with a border

```
3706 \newglossarystyle{longragged3colheaderborder}{%
```

Base it on the `glostylelongragged3colborder` style:

```
3707 \glossarystyle{longragged3colborder}{%
```

Set the table's header and add horizontal line at table's foot:

```
3708 \renewcommand*{\glossaryheader}{%
3709     \hline
3710     \bfseries\entryname\&\bfseries\descriptionname\&
3711     \bfseries\pagelistname\tabularnewline\hline\endhead
3712     \hline\endfoot}%
3713 }
```

altnragged4col The `altnragged4col` style is like the `altnragged4col` style defined in the `glossary-long` package, except that ragged right formatting is used for the description and page list columns.

```
3714 \newglossarystyle{altnragged4col}{%
```

Use a `longtable` with 4 columns where the second and last columns may have multiple lines in each row:

```
3715 \renewenvironment{theglossary}%
3716   {\begin{longtable}{l>{\raggedright}p{\glsdescwidth}l%
3717     >{\raggedright}p{\glspagelistwidth}}}%%
3718   {\end{longtable}}%
```

No table header:

```
3719 \renewcommand*{\glossaryheader}{}%
```

No group headings:

```
3720 \renewcommand*{\glsgroupheading}[1]{}%
```

Main (level 0) entries on a single row (name in first column, description in second column, symbol in third column, page list in last column):

```
3721 \renewcommand*{\glossaryentryfield}[5]{%
3722   \glstarget{##1}{##2} & ##3 & ##4 & ##5\tabularnewline}%

```

Sub entries on a single row with no name (description in second column, symbol in third column, page list in last column):

```
3723 \renewcommand*{\glossarysubentryfield}[6]{%
3724   & \glstarget{##2}{\strut}##4 & ##5 & ##6\tabularnewline}%

```

Blank row between groups:

```
3725 \renewcommand*{\glsgroupskip}{} & & &\tabularnewline}%
3726 }
```

altnragged4colheader The `altnragged4colheader` style is like `altnragged4col` but with a header row.

```
3727 \newglossarystyle{altnragged4colheader}{%
```

Base it on the `glostylealtnragged4col` style:

```
3728 \glossarystyle{altnragged4col}{}%
```

Use a `longtable` with 4 columns where the second and last columns may have multiple lines in each row:

```
3729 \renewenvironment{theglossary}%
3730   {\begin{longtable}{l>{\raggedright}p{\glsdescwidth}l%
3731     >{\raggedright}p{\glspagelistwidth}}}%%
3732   {\end{longtable}}%
```

Table has a header:

```
3733 \renewcommand*{\glossaryheader}{}%
3734   \bfseries\entryname&\bfseries\descriptionname&
3735   \bfseries\symbolname&
3736   \bfseries\pagelistname\tabularnewline\endhead}%
3737 }
```

altnragged4colborder The `altnragged4colborder` style is like `altnragged4col` but with a border.

```
3738 \newglossarystyle{altnragged4colborder}{%
```

Base it on the `glostylealtnragged4col` style:

```
3739 \glossarystyle{altnragged4col}{}%
```

Use a `longtable` with 4 columns where the second and last columns may have multiple lines in each row:

```
3740 \renewenvironment{theglossary}%
3741   {\begin{longtable}{|l|>{\raggedright}p{\glsdescwidth}|l|%
3742     >{\raggedright}p{\glspagelistwidth}|}}%
3743   {\end{longtable}}%
```

Add horizontal lines to the head and foot of the table:

```
3744 \renewcommand*{\glossaryheader}{\hline\endhead\hline\endfoot}%
3745 }
```

`altnongragged4colheaderborder` The `altnongragged4colheaderborder` style is like the above but with a header as well as a border.

```
3746 \newglossarystyle{altnongragged4colheaderborder}{%
```

Base it on the `glostylealtnongragged4col` style:

```
3747 \glossarystyle{altnongragged4col}{%
```

Use a `longtable` with 4 columns where the second and last columns may have multiple lines in each row:

```
3748 \renewenvironment{theglossary}%
3749   {\begin{longtable}{|l|>{\raggedright}p{\glsdescwidth}|l|%
3750     >{\raggedright}p{\glspagelistwidth}|}}%
3751   {\end{longtable}}%
```

Add table header and horizontal line at the table's foot:

```
3752 \renewcommand*{\glossaryheader}{%
3753   \hline\bfseries\entryname\&\bfseries\descriptionname\&
3754   \bfseries\symbolname\&
3755   \bfseries\pagelistname\tabularnewline\hline\endhead
3756   \hline\endfoot}%
3757 }
```

6.5 Glossary Styles using supertabular environment (glossary-super package)

The glossary styles defined in the `glossary-super` package use the `supertabular` environment.

```
3758 \ProvidesPackage{glossary-super}[2009/05/30 v2.01 (NLCT)]
```

Requires the `supertabular` package:

```
3759 \RequirePackage{supertabular}
```

`\glsdescwidth` This is a length that governs the width of the description column. This may already have been defined if `glossary-long` has been loaded.

```
3760 \@ifundefined{\glsdescwidth}{%
3761   \newlength{\glsdescwidth}
3762   \setlength{\glsdescwidth}{0.6\hsize}
3763 }{}
```

`\glspagelistwidth` This is a length that governs the width of the page list column. This may already have been defined if `glossary-long` has been loaded.

```
3764 \@ifundefined{\glspagelistwidth}{%
3765   \newlength{\glspagelistwidth}
```

```
3766 \setlength{\glspagelistwidth}{0.1\hsize}
3767 }{}
```

super The super glossary style uses the `supertabular` environment (it uses lengths defined in the `glossary-long` package.)

```
3768 \newglossarystyle{super}{%
```

Put the glossary in a `supertabular` environment with two columns and no head or tail:

```
3769 \renewenvironment{theglossary}%
3770   {\tablehead{}\tabletail{}%
3771   \begin{supertabular}{lp{\glscdescwidth}}{}%
3772   \end{supertabular}}%
```

Do nothing at the start of the table:

```
3773 \renewcommand*{\glossaryheader}{}%
```

No group headings:

```
3774 \renewcommand*{\glsgroupheading}[1]{}%
```

Main (level 0) entries put in a row (name in first column, description and page list in second column):

```
3775 \renewcommand*{\glossaryentryfield}[5]{%
3776   \glstarget{##1}{##2} & ##3\glspostdescription\space ##5\\}%
```

Sub entries put in a row (no name, description and page list in second column):

```
3777 \renewcommand*{\glossarysubentryfield}[6]{%
3778   & \glstarget{##2}{\strut}##4\glspostdescription\space ##6\\}%
```

Blank row between groups:

```
3779 \renewcommand*{\glsgroupskip}{ & \\}%
3780 }
```

superborder The `superborder` style is like the above, but with horizontal and vertical lines:

```
3781 \newglossarystyle{superborder}{%
```

Base it on the `glostypesuper` style:

```
3782 \glossarystyle{super}{%
```

Put the glossary in a `supertabular` environment with two columns and a horizontal line in the head and tail:

```
3783 \renewenvironment{theglossary}%
3784   {\tablehead{\hline}\tabletail{\hline}%
3785   \begin{supertabular}{|l|p{\glscdescwidth}|}{}%
3786   \end{supertabular}}%
3787 }
```

superheader The `superheader` style is like the `super` style, but with a header:

```
3788 \newglossarystyle{superheader}{%
```

Base it on the `glostypesuper` style:

```
3789 \glossarystyle{super}{%
```

Put the glossary in a `supertabular` environment with two columns, a header and no tail:

```
3790 \renewenvironment{theglossary}%
3791   {\tablehead{\bfseries \entryname & \bfseries \descriptionname\\}%
3792 }
```

```

3792   \tabletail{}%
3793   \begin{supertabular}{lp{\glsdescwidth}}}%
3794   {\end{supertabular}}%
3795 }

```

superheaderborder The `superheaderborder` style is like the `super` style but with a header and border:

```
3796 \newglossarystyle{superheaderborder}{%
```

Base it on the `glostypesuper` style:

```
3797 \glossarystyle{super}{%
```

Put the glossary in a `supertabular` environment with two columns, a header and horizontal lines above and below the table:

```

3798 \renewenvironment{theglossary}%
3799   {\tablehead{\hline\bfseries \entryname &%
3800   \bfseries \descriptionname\\ \hline}%
3801   \tabletail{\hline}%
3802   \begin{supertabular}{|l|p{\glsdescwidth}|}{}%
3803   {\end{supertabular}}%
3804 }

```

super3col The `super3col` style is like the `super` style, but with 3 columns:

```
3805 \newglossarystyle{super3col}{%
```

Put the glossary in a `supertabular` environment with three columns and no head or tail:

```

3806 \renewenvironment{theglossary}%
3807   {\tablehead{}\tabletail{}%}
3808   \begin{supertabular}{lp{\glsdescwidth}p{\glspagelistwidth}}{}%
3809   {\end{supertabular}}%

```

Do nothing at the start of the table:

```
3810 \renewcommand*\glossaryheader{}%
```

No group headings:

```
3811 \renewcommand*\glsgroupheading[1]{}%
```

Main (level 0) entries on a row (name in first column, description in second column, page list in last column):

```

3812 \renewcommand*\glossaryentryfield[5]{%
3813   \glstarget{##1}{##2} & ##3 & ##5\\}%

```

Sub entries on a row (no name, description in second column, page list in last column):

```

3814 \renewcommand*\glossarysubentryfield[6]{%
3815   & \glstarget{##2}{\strut}##4 & ##6\\}%

```

Blank row between groups:

```

3816 \renewcommand*\glsgroupskip{} & &\\}%
3817 }

```

super3colborder The `super3colborder` style is like the `super3col` style, but with a border:

```
3818 \newglossarystyle{super3colborder}{%
```

Base it on the `glostypesuper3col` style:

```
3819 \glossarystyle{super3col}{%
```

Put the glossary in a `supertabular` environment with three columns and a horizontal line in the head and tail:

```
3820 \renewenvironment{theglossary}%
3821   {\tablehead{\hline}\tabletail{\hline}%
3822    \begin{supertabular}{|l|p{\glsdescwidth}|p{\glspagelistwidth}|}{}%
3823    \end{supertabular}}%
3824 }
```

super3colheader The `super3colheader` style is like the `super3col` style but with a header row:

```
3825 \newglossarystyle{super3colheader}{%
```

Base it on the `glostylesuper3col` style:

```
3826 \glossarystyle{super3col}{%
```

Put the glossary in a `supertabular` environment with three columns, a header and no tail:

```
3827 \renewenvironment{theglossary}%
3828   {\bfseries\tablehead{\entryname&\bfseries\descriptionname&%
3829    \bfseries\pagelistname\\}\tabletail{}%
3830    \begin{supertabular}{lp{\glsdescwidth}p{\glspagelistwidth}}{}%
3831    \end{supertabular}}%
3832 }
```

super3colheaderborder The `super3colheaderborder` style is like the `super3col` style but with a header and border:

```
3833 \newglossarystyle{super3colheaderborder}{%
```

Base it on the `glostylesuper3colborder` style:

```
3834 \glossarystyle{super3colborder}{%
```

Put the glossary in a `supertabular` environment with three columns, a header with horizontal lines and a horizontal line in the tail:

```
3835 \renewenvironment{theglossary}%
3836   {\bfseries\tablehead{\hline
3837    \bfseries\entryname&\bfseries\descriptionname&
3838    \bfseries\pagelistname\\}\hline\tabletail{\hline}%
3839    \begin{supertabular}{|l|p{\glsdescwidth}|p{\glspagelistwidth}|}{}%
3840    \end{supertabular}}%
3841 }
```

super4col The `super4col` glossary style has four columns, where the third column contains the value of the corresponding `symbol` key used when that entry was defined.

```
3843 \newglossarystyle{super4col}{%
```

Put the glossary in a `supertabular` environment with four columns and no head or tail:

```
3844 \renewenvironment{theglossary}%
3845   {\tablehead{}\tabletail{}%
3846    \begin{supertabular}{llll}{}%
3847    \end{supertabular}}%
```

Do nothing at the start of the table:

```
3848 \renewcommand*\glossaryheader{}%
```

No group headings:

```
3849 \renewcommand*{\glsgroupheading}[1]{}
```

Main (level 0) entries on a row with the name in the first column, description in second column, symbol in third column and page list in last column:

```
3850 \renewcommand*{\glossaryentryfield}[5]{%
```

```
3851   \glstarget{##1}{##2} & ##3 & ##4 & ##5\\}%
```

Sub entries on a row with no name, the description in the second column, symbol in third column and page list in last column:

```
3852 \renewcommand*{\glossarysubentryfield}[6]{%
```

```
3853   & \glstarget{##2}{\strut}##4 & ##5 & ##6\\}%
```

Blank row between groups:

```
3854 \renewcommand*{\glsgroupskip}{ & & &\\}%
```

```
3855 }
```

super4colheader The **super4colheader** style is like the **super4col** but with a header row.

```
3856 \newglossarystyle{super4colheader}{%
```

Base it on the **glostylesuper4col** style:

```
3857 \glossarystyle{super4col}{%
```

Put the glossary in a **supertabular** environment with four columns, a header and no tail:

```
3858 \renewenvironment{theglossary}{%
```

```
3859   {\tablehead{\bfseries\entryname\&\bfseries\descriptionname\&
```

```
3860     \bfseries\symbolname \&
```

```
3861     \bfseries\pagelistname\\}%
```

```
3862   \tabletail{}}
```

```
3863   \begin{supertabular}{l l l l}
```

```
3864   \end{supertabular}}
```

```
3865 }
```

super4colborder The **super4colborder** style is like the **super4col** but with a border.

```
3866 \newglossarystyle{super4colborder}{%
```

Base it on the **glostylesuper4col** style:

```
3867 \glossarystyle{super4col}{%
```

Put the glossary in a **supertabular** environment with four columns and a horizontal line in the head and tail:

```
3868 \renewenvironment{theglossary}{%
```

```
3869   {\tablehead{\hline}\tabletail{\hline}}
```

```
3870   \begin{supertabular}{|l|l|l|l|}
```

```
3871   \end{supertabular}}
```

```
3872 }
```

super4colheaderborder The **super4colheaderborder** style is like the **super4col** but with a header and border.

```
3873 \newglossarystyle{super4colheaderborder}{%
```

Base it on the **glostylesuper4col** style:

```
3874 \glossarystyle{super4col}{%
```

Put the glossary in a `supertabular` environment with four columns and a header bordered by horizontal lines and a horizontal line in the tail:

```
3875 \renewenvironment{theglossary}%
3876   {\tablehead{\hline\bfseries\entryname\&\bfseries\descriptionname\&
3877     \bfseries\symbolname \&
3878     \bfseries\pagelistname\\hline}\tabletail{\hline}%
3879   \begin{supertabular}{|l|l|l|l|}%
3880   \end{supertabular}}%
3881 }
```

altsuper4col The `altsuper4col` glossary style is like `super4col` but has provision for multiline descriptions.

```
3882 \newglossarystyle{altsuper4col}{%
```

Base it on the `glostylesuper4col` style:

```
3883 \glossarystyle{super4col}%
```

Put the glossary in a `supertabular` environment with four columns and no head or tail:

```
3884 \renewenvironment{theglossary}%
3885   {\tablehead{}\tabletail{}%
3886   \begin{supertabular}{lp{\glscdescwidth}lp{\glspagelistwidth}}}}%
3887 \end{supertabular}}%
3888 }
```

altsuper4colheader The `altsuper4colheader` style is like the `altsuper4col` but with a header row.

```
3889 \newglossarystyle{altsuper4colheader}{%
```

Base it on the `glostylesuper4colheader` style:

```
3890 \glossarystyle{super4colheader}%
```

Put the glossary in a `supertabular` environment with four columns, a header and no tail:

```
3891 \renewenvironment{theglossary}%
3892   {\tablehead{\bfseries\entryname\&\bfseries\descriptionname\&
3893     \bfseries\symbolname \&
3894     \bfseries\pagelistname\\}\tabletail{}%
3895   \begin{supertabular}{lp{\glscdescwidth}lp{\glspagelistwidth}}}}%
3896 \end{supertabular}}%
3897 }
```

altsuper4colborder The `altsuper4colborder` style is like the `altsuper4col` but with a border.

```
3898 \newglossarystyle{altsuper4colborder}{%
```

Base it on the `glostylesuper4colborder` style:

```
3899 \glossarystyle{super4colborder}%
```

Put the glossary in a `supertabular` environment with four columns and a horizontal line in the head and tail:

```
3900 \renewenvironment{theglossary}%
3901   {\tablehead{\hline}\tabletail{\hline}%
3902   \begin{supertabular}%
3903     {|l|p{\glscdescwidth}|l|p{\glspagelistwidth}|}%
3904   \end{supertabular}}%
3905 }
```

altsuper4colheaderborder The `altsuper4colheaderborder` style is like the `altsuper4col` but with a header and border.

```
3906 \newglossarystyle{altsuper4colheaderborder}{%
```

Base it on the `glostylesuper4colheaderborder` style:

```
3907 \glossarystyle{super4colheaderborder}{%
```

Put the glossary in a `supertabular` environment with four columns and a header bordered by horizontal lines and a horizontal line in the tail:

```
3908 \renewenvironment{theglossary}%
3909   {\tablehead{\hline
3910     \bfseries\entryname &
3911     \bfseries\descriptionname &
3912     \bfseries\symbolname &
3913     \bfseries\pagelistname\\hline}%
3914   \tabletail{\hline}%
3915   \begin{supertabular}%
3916     {|l|p{\glsdescwidth}|l|p{\glspagelistwidth}|}%
3917   \end{supertabular}%
3918 }
```

6.6 Glossary Styles using supertabular environment (glossary-superragged package)

The glossary styles defined in the `glossary-superragged` package use the `supertabular` environment. These styles are like those provided by the `glossary-super` package, except that the multiline columns have ragged right justification.

```
3919 \ProvidesPackage{glossary-superragged}[2009/05/30 v2.01 (NLCT)]
```

Requires the `array` package:

```
3920 \RequirePackage{array}
```

Requires the `supertabular` package:

```
3921 \RequirePackage{supertabular}
```

\glsdescwidth This is a length that governs the width of the description column. This may already have been defined.

```
3922 \@ifundefined{\glsdescwidth}{%
3923   \newlength{\glsdescwidth}
3924   \setlength{\glsdescwidth}{0.6\hsize}
3925 }{}
```

\glspagelistwidth This is a length that governs the width of the page list column. This may already have been defined.

```
3926 \@ifundefined{\glspagelistwidth}{%
3927   \newlength{\glspagelistwidth}
3928   \setlength{\glspagelistwidth}{0.1\hsize}
3929 }{}
```

superragged The `superragged` glossary style uses the `supertabular` environment.

```
3930 \newglossarystyle{superragged}{%
```

Put the glossary in a `supertabular` environment with two columns and no head or tail:

```
3931 \renewenvironment{theglossary}%
3932   {\tablehead{}\tabletail{}%
3933   \begin{supertabular}{l>{\raggedright}p{\glsdescwidth}}{}%
3934   \end{supertabular}}%
```

Do nothing at the start of the table:

```
3935 \renewcommand*{\glossaryheader}{}%
```

No group headings:

```
3936 \renewcommand*{\glsgroupheading}[1]{}%
```

Main (level 0) entries put in a row (name in first column, description and page list in second column):

```
3937 \renewcommand*{\glossaryentryfield}[5]{%
3938   \glstarget{##1}{##2} & ##3\glspostdescription\space ##5%
3939   \tabularnewline}%

```

Sub entries put in a row (no name, description and page list in second column):

```
3940 \renewcommand*{\glossarysubentryfield}[6]{%
3941   & \glstarget{##2}{\strut}##4\glspostdescription\space ##6%
3942   \tabularnewline}%

```

Blank row between groups:

```
3943 \renewcommand*{\glsgroupskip}{} & \tabularnewline}%
3944 }
```

superraggedborder The `superraggedborder` style is like the above, but with horizontal and vertical lines:

```
3945 \newglossarystyle{superraggedborder}{}%
```

Base it on the `glostypesuperragged` style:

```
3946 \glossarystyle{superragged}%
```

Put the glossary in a `supertabular` environment with two columns and a horizontal line in the head and tail:

```
3947 \renewenvironment{theglossary}%
3948   {\tablehead{\hline}\tabletail{\hline}%
3949   \begin{supertabular}{|l|>{\raggedright}p{\glsdescwidth}|}{}%
3950   \end{supertabular}}%
3951 }
```

superraggedheader The `superraggedheader` style is like the `super` style, but with a header:

```
3952 \newglossarystyle{superraggedheader}{}%
```

Base it on the `glostypesuperragged` style:

```
3953 \glossarystyle{superragged}%
```

Put the glossary in a `supertabular` environment with two columns, a header and no tail:

```
3954 \renewenvironment{theglossary}%
3955   {\tablehead{\bfseries \entryname} & \bfseries \descriptionname
3956   \tabularnewline}%
3957   \tabletail{}%
3958   \begin{supertabular}{l>{\raggedright}p{\glsdescwidth}}{}%
3959   \end{supertabular}}%
3960 }
```

superraggedheaderborder The `superraggedheaderborder` style is like the `superragged` style but with a header and border:

```
3961 \newglossarystyle{superraggedheaderborder}{%
```

Base it on the `glostypesuper` style:

```
3962 \glossarystyle{superragged}{%
```

Put the glossary in a `supertabular` environment with two columns, a header and horizontal lines above and below the table:

```
3963 \renewenvironment{theglossary}{%
3964   {\tablehead{\hline\bfseries \entryname &
3965     \bfseries \descriptionname\tabularnewline\hline}%
3966   \tabletail{\hline}%
3967   \begin{supertabular}{|l|>{\raggedright}p{\glscdescwidth}|}{}%
3968   \end{supertabular}%
3969 }
```

superragged3col The `superragged3col` style is like the `superragged` style, but with 3 columns:

```
3970 \newglossarystyle{superragged3col}{%
```

Put the glossary in a `supertabular` environment with three columns and no head or tail:

```
3971 \renewenvironment{theglossary}{%
3972   {\tablehead{}\tabletail{}%
3973   \begin{supertabular}{l>{\raggedright}p{\glscdescwidth}%
3974     >{\raggedright}p{\glspagelistwidth}}{}%
3975   \end{supertabular}%
3976 }
```

Do nothing at the start of the table:

```
3976 \renewcommand*{\glossaryheader}{}%
```

No group headings:

```
3977 \renewcommand*{\glsgroupheading}[1]{}%
```

Main (level 0) entries on a row (name in first column, description in second column, page list in last column):

```
3978 \renewcommand*{\glossaryentryfield}[5]{%
3979   \glstarget{##1}{##2} & ##3 & ##5\tabularnewline}%
3980 }
```

Sub entries on a row (no name, description in second column, page list in last column):

```
3980 \renewcommand*{\glossarysubentryfield}[6]{%
3981   & \glstarget{##2}{\strut}##4 & ##6\tabularnewline}%
3982 }
```

Blank row between groups:

```
3982 \renewcommand*{\glsgroupskip}{\&\tabularnewline}%
3983 }
```

superragged3colborder The `superragged3colborder` style is like the `superragged3col` style, but with a border:

```
3984 \newglossarystyle{superragged3colborder}{%
```

Base it on the `glostypesuperragged3col` style:

```
3985 \glossarystyle{superragged3col}{%
```

Put the glossary in a `supertabular` environment with three columns and a horizontal line in the head and tail:

```
3986 \renewenvironment{theglossary}%
3987   {\tablehead{\hline}\tabletail{\hline}%
3988    \begin{supertabular}{|l|>{\raggedright}p{\glsdescwidth}|%
3989     >{\raggedright}p{\glspagelistwidth}|}}%
3990   {\end{supertabular}}%
3991 }
```

superragged3colheader The `superragged3colheader` style is like the `superragged3col` style but with a header row:

```
3992 \newglossarystyle{superragged3colheader}{%
```

Base it on the `glostypesuperragged3col` style:

```
3993 \glossarystyle{superragged3col}{%
```

Put the glossary in a `supertabular` environment with three columns, a header and no tail:

```
3994 \renewenvironment{theglossary}%
3995   {\bfseries\tablehead{\entryname\&\bfseries\descriptionname\&%
3996    \bfseries\pagename\tabularnewline}\tabletail{}%}
3997   \begin{supertabular}{l>{\raggedright}p{\glsdescwidth}%
3998     >{\raggedright}p{\glspagelistwidth}}}}%
3999   {\end{supertabular}}%
4000 }
```

erraggedright3colheaderborder The `superragged3colheaderborder` style is like the `superragged3col` style but with a header and border:

```
4001 \newglossarystyle{superragged3colheaderborder}{%
```

Base it on the `glostypesuperragged3colborder` style:

```
4002 \glossarystyle{superragged3colborder}{%
```

Put the glossary in a `supertabular` environment with three columns, a header with horizontal lines and a horizontal line in the tail:

```
4003 \renewenvironment{theglossary}%
4004   {\tablehead{\hline%
4005    \bfseries\entryname\&\bfseries\descriptionname\&%
4006    \bfseries\pagename\tabularnewline\hline}%
4007   \tabletail{\hline}%
4008   \begin{supertabular}{|l|>{\raggedright}p{\glsdescwidth}|%
4009     >{\raggedright}p{\glspagelistwidth}|}}%
4010   {\end{supertabular}}%
4011 }
```

altsuperragged4col The `altsuperragged4col` glossary style is like `altsuper4col` style in the `glossary-super` package but uses ragged right formatting in the description and page list columns.

```
4012 \newglossarystyle{altsuperragged4col}{%
```

Put the glossary in a `supertabular` environment with four columns and no head or tail:

```
4013 \renewenvironment{theglossary}%
4014   {\tablehead{}\tabletail{}%}
4015   \begin{supertabular}{l>{\raggedright}p{\glsdescwidth}l%
4016     >{\raggedright}p{\glspagelistwidth}}}}%
4017   {\end{supertabular}}%
```

Do nothing at the start of the table:

```
4018 \renewcommand*{\glossaryheader}{}%
```

No group headings:

```
4019 \renewcommand*{\glsgroupheading}[1]{}%
```

Main (level 0) entries on a row with the name in the first column, description in second column, symbol in third column and page list in last column:

```
4020 \renewcommand*{\glossaryentryfield}[5]{%
```

```
4021 \glstarget{##1}{##2} & ##3 & ##4 & ##5\tabularnewline} %
```

Sub entries on a row with no name, the description in the second column, symbol in third column and page list in last column:

```
4022 \renewcommand*{\glossarysubentryfield}[6]{%
```

```
4023 & \glstarget{##2}{\strut}##4 & ##5 & ##6\tabularnewline} %
```

Blank row between groups:

```
4024 \renewcommand*{\glsgroupskip}{ & & &\tabularnewline} %
```

```
4025 } %
```

altsuperragged4colheader The `altsuperragged4colheader` style is like the `altsuperragged4col` style but with a header row.

```
4026 \newglossarystyle{altsuperragged4colheader}{%
```

Base it on the `glostylealtsuperragged4col` style:

```
4027 \glossarystyle{altsuperragged4col}{%
```

Put the glossary in a `supertabular` environment with four columns, a header and no tail:

```
4028 \renewenvironment{theglossary}{%
4029   \tablehead{\bfseries\entryname\&\bfseries\descriptionname\&
4030   \bfseries\symbolname \&
4031   \bfseries\pagelistname\tabularnewline}\tabletail{}%
4032   \begin{supertabular}{l>{\raggedright}p{\glsdescwidth}l%
4033     >{\raggedright}p{\glspagelistwidth}}}}%
4034   \end{supertabular}%
4035 }
```

altsuperragged4colborder The `altsuperragged4colborder` style is like the `altsuperragged4col` style but with a border.

```
4036 \newglossarystyle{altsuperragged4colborder}{%
```

Base it on the `glostylealtsuperragged4col` style:

```
4037 \glossarystyle{altsuperragged4col}{%
```

Put the glossary in a `supertabular` environment with four columns and a horizontal line in the head and tail:

```
4038 \renewenvironment{theglossary}{%
4039   \tablehead{\hline}\tabletail{\hline}%
4040   \begin{supertabular}%
4041     {|l|>{\raggedright}p{\glsdescwidth}|l|%
4042       >{\raggedright}p{\glspagelistwidth}|}%
4043   \end{supertabular}%
4044 }
```

`ltsuperragged4colheaderborder` The `altsuperragged4colheaderborder` style is like the `altsuperragged4col` style but with a header and border.

```
4045 \newglossarystyle{altsuperragged4colheaderborder}{%
```

Base it on the `glostylealtsuperragged4col` style:

```
4046 \glossarystyle{altsuperragged4col}{%
```

Put the glossary in a `supertabular` environment with four columns and a header bordered by horizontal lines and a horizontal line in the tail:

```
4047 \renewenvironment{theglossary}%
4048   {\tablehead{\hline
4049     \bfseries\entryname &
4050     \bfseries\descriptionname &
4051     \bfseries\symbolname &
4052     \bfseries\pagelistname\tabularnewline\hline}%
4053   \tabletail{\hline}%
4054   \begin{supertabular}%
4055     {|l|>{\raggedright}p{\glscdescwidth}|l|%
4056       >{\raggedright}p{\glspagelistwidth}|}%
4057   \end{supertabular}%
4058 }
```

6.7 Tree Styles (`glossary-tree.sty`)

The `glossary-tree` style file defines glossary styles that have a tree-like structure. These are designed for hierarchical glossaries.

```
4059 \ProvidesPackage{glossary-tree}[2009/01/14 v1.01 (NLCT)]
```

`index` The `index` glossary style is similar in style to the way indices are usually typeset using `\item`, `\subitem` and `\subsubitem`. The entry name is set in bold. If an entry has a symbol, it is placed in brackets after the name. Then the description is displayed, followed by the number list. This style allows up to three levels.

```
4060 \newglossarystyle{index}{%
```

Set the paragraph indentation and skip and define `\item` to be the same as that used by `theindex`:

```
4061 \renewenvironment{theglossary}%
4062   {\setlength{\parindent}{0pt}%
4063   \setlength{\parskip}{0pt plus 0.3pt}%
4064   \let\item\@idxitem}%
4065 {}%
```

Do nothing at the start of the environment:

```
4066 \renewcommand*{\glossaryheader}{}%
```

No group headers:

```
4067 \renewcommand*{\glsgroupheding}[1]{}%
```

Main (level 0) entry starts a new item with the name in bold followed by the symbol in brackets (if it exists), the description and the page list.

```
4068 \renewcommand*{\glossaryentryfield}[5]{%
4069 \item\textbf{\glstarget{\#1}{\#2}}%
4070 \ifx\relax##4\relax
4071 \else
4072 \space{##4}%
}
```

```
4073 \fi  
4074 \space ##3\glspostdescription \space ##5}%
```

Sub entries: level 1 entries use `\subitem`, levels greater than 1 use `\subsubitem`.

The level (`##1`) shouldn't be 0, as that's catered by `\glossaryentryfield`, but for completeness, if the level is 0, `\item` is used. The name is put in bold, followed by the symbol in brackets (if it exists), the description and the page list.

```
4075 \renewcommand*\glossarysubentryfield}[6]{%  
4076 \ifcase##1\relax  
4077 % level 0  
4078 \item  
4079 \or  
4080 % level 1  
4081 \subitem  
4082 \else  
4083 % all other levels  
4084 \subsubitem  
4085 \fi  
4086 \textbf{\glstarget{##2}{##3}}%  
4087 \ifx\relax##5\relax  
4088 \else  
4089 \space##5)%  
4090 \fi  
4091 \space##4\glspostdescription\space##6}%
```

Vertical gap between groups is the same as that used by indices:

```
4092 \renewcommand*\glsgroupskip}{\indexspace}
```

indexgroup The `indexgroup` style is like the `index` style but has headings.

```
4093 \newglossarystyle{indexgroup}{%
```

Base it on the `glostyleindex` style:

```
4094 \glossarystyle{index}{%
```

Add a heading for each group. This puts the group's title in bold followed by a vertical gap.

```
4095 \renewcommand*\glsgroupheading}[1]{%  
4096 \item\textbf{\glsgetgroupname{##1}}\indexspace)%  
4097 }
```

indexhypergroup The `indexhypergroup` style is like the `indexgroup` style but has hyper navigation.

```
4098 \newglossarystyle{indexhypergroup}{%
```

Base it on the `glostyleindex` style:

```
4099 \glossarystyle{index}{%
```

Put navigation links to the groups at the start of the glossary:

```
4100 \renewcommand*\glossaryheader}{%  
4101 \item\textbf{\glsnavigation}\indexspace)%
```

Add a heading for each group (with a target). The group's title is in bold followed by a vertical gap.

```
4102 \renewcommand*\glsgroupheading}[1]{%  
4103 \item\textbf{\glsnavhypertarget{##1}{\glsgetgroupname{##1}}}%  
4104 \indexspace)%  
4105 }
```

tree The tree glossary style is similar in style to the index style, but can have arbitrary levels.

```
4106 \newglossarystyle{tree}{%
```

Set the paragraph indentation and skip:

```
4107 \renewenvironment{theglossary}%
4108   {\setlength{\parindent}{0pt}%
4109   \setlength{\parskip}{0pt plus 0.3pt}}%
4110 {}}
```

Do nothing at the start of the `theglossary` environment:

```
4111 \renewcommand*{\glossaryheader}{}%
```

No group headings:

```
4112 \renewcommand*{\glsgroupheading}[1]{}
```

Main (level 0) entries: name in bold, followed by symbol in brackets (if it exists), the description and the page list:

```
4113 \renewcommand{\glossaryentryfield}[5]{%
4114   \hangindent0pt\relax
4115   \parindent0pt\relax
4116   \textbf{\glstarget{##1}{##2}}%
4117   \ifx\relax##4\relax
4118   \else
4119     \space{##4}%
4120   \fi
4121   \space{##3}\glspostdescription \space{##5}\par}%

```

Sub entries: level $\langle n \rangle$ is indented by $\langle n \rangle$ times `\glstreeindent`. The name is in bold, followed by the symbol in brackets (if it exists), the description and the page list.

```
4122 \renewcommand{\glossarysubentryfield}[6]{%
4123   \hangindent##1\glstreeindent\relax
4124   \parindent##1\glstreeindent\relax
4125   \textbf{\glstarget{##2}{##3}}%
4126   \ifx\relax##5\relax
4127   \else
4128     \space{##5}%
4129   \fi
4130   \space{##4}\glspostdescription\space{##6}\par}%

```

Vertical gap between groups is the same as that used by indices:

```
4131 \renewcommand*{\glsgroupskip}{\indexspace}
```

treegroup Like the tree style but the glossary groups have headings.

```
4132 \newglossarystyle{treegroup}{%
```

Base it on the `glostyletree` style:

```
4133 \glossarystyle{tree}{}
```

Each group has a heading (in bold) followed by a vertical gap):

```
4134 \renewcommand{\glsgroupheading}[1]{\par
4135   \noindent\textbf{\glsgrouptitle{##1}}\par\indexspace}%
4136 }
```

treehypergroup The treehypergroup style is like the treegroup style, but has a set of links to the groups at the start of the glossary.

```
4137 \newglossarystyle{treehypergroup}{%
```

Base it on the glostyletree style:

```
4138   \glossarystyle{tree}{%
```

Put navigation links to the groups at the start of the theglossary environment:

```
4139   \renewcommand*\glossaryheader{}{%
```

```
4140     \par\noindent\textbf{\glsnavigation}\par\indexspace{}}
```

Each group has a heading (in bold with a target) followed by a vertical gap):

```
4141   \renewcommand*\glsgroupheading[1]{%
```

```
4142     \par\noindent
```

```
4143     \textbf{\glsnavhypertarget{\#\#1}{\glsgetgrouptitle{\#\#1}}}\par
```

```
4144     \indexspace{}
```

```
4145 }
```

\glstreeindent Length governing left indent for each level of the tree style.

```
4146 \newlength\glstreeindent
```

```
4147 \setlength{\glstreeindent}{10pt}
```

treenoname The treenoname glossary style is like the tree style, but doesn't print the name or symbol for sub-levels.

```
4148 \newglossarystyle{treenoname}{%
```

Set the paragraph indentation and skip:

```
4149   \renewenvironment{theglossary}{%
```

```
4150     \setlength{\parindent}{0pt}{}
```

```
4151     \setlength{\parskip}{0pt plus 0.3pt}{}
```

```
4152   }{}
```

No header:

```
4153   \renewcommand*\glossaryheader{}{}
```

No group headings:

```
4154 \renewcommand*\glsgroupheading[1]{}}{}
```

Main (level 0) entries: the name is in bold, followed by the symbol in brackets (if it exists), the description and the page list.

```
4155   \renewcommand{\glossaryentryfield}[5]{%
```

```
4156     \hangindent0pt\relax
```

```
4157     \parindent0pt\relax
```

```
4158     \textbf{\glstarget{\#\#1}{\#\#2}}{}
```

```
4159     \ifx\relax##4\relax
```

```
4160     \else
```

```
4161       \space{\#\#4}{}
```

```
4162     \fi
```

```
4163     \space{\#\#3}{\glspostdescription}\space{\#\#5}{\par}{}
```

Sub entries: level $\langle n \rangle$ is indented by $\langle n \rangle$ times \glstreeindent. The name and symbol are omitted. The description followed by the page list are displayed.

```
4164   \renewcommand{\glossarysubentryfield}[6]{%
```

```
4165     \hangindent##1\glstreeindent\relax
```

```
4166     \parindent##1\glstreeindent\relax
```

```
4167     \glstarget{\#\#2}{\strut}{}
```

```
4168     ##4\glspostdescription\space{\#\#6}{\par}{}
```

Vertical gap between groups is the same as that used by indices:

```
4169 \renewcommand*\glsgroupskip{\indexspace}%
4170 }
```

treenonamegroup Like the `treenoname` style but the glossary groups have headings.

```
4171 \newglossarystyle{treenonamegroup}{%
```

Base it on the `glostyletreenoname` style:

```
4172 \glossarystyle{treenoname}{%
```

Give each group a heading:

```
4173 \renewcommand{\glsgroupheading}[1]{\par
4174   \noindent\textbf{\glsgetgrouptitle{##1}}\par\indexspace}%
4175 }
```

treenonamehypergroup The `treenonamehypergroup` style is like the `treenonamegroup` style, but has a set of links to the groups at the start of the glossary.

```
4176 \newglossarystyle{treenonamehypergroup}{%
```

Base it on the `glostyletreenoname` style:

```
4177 \glossarystyle{treenoname}{%
```

Put navigation links to the groups at the start of the `theglossary` environment:

```
4178 \renewcommand*\glossaryheader[2][0]{%
4179   \par\noindent\textbf{\glsnavigation}\par\indexspace}%
```

Each group has a heading (in bold with a target) followed by a vertical gap):

```
4180 \renewcommand*\glsgroupheading[1]{%
4181   \par\noindent
4182   \textbf{\glsnavhypertarget{##1}{\glsgetgrouptitle{##1}}}\par
4183   \indexspace}%
4184 }
```

\glssetwidest `\glssetwidest[<level>]{<text>}` sets the widest text for the given level. It is used by the `alttree` glossary styles to determine the indentation of each level.

```
4185 \newcommand*\glssetwidest[2][0]{%
4186   \expandafter\def\csname @glswidestname\romannumeral#1\endcsname{%
4187     #2}%
4188 }
```

\@glswidestname Initialise `\@glswidestname`.

```
4189 \newcommand*\@glswidestname{}%
```

alttree The `alttree` glossary style is similar in style to the `tree` style, but the indentation is obtained from the width of `\@glswidestname` which is set using `\glssetwidest`.

```
4190 \newglossarystyle{alttree}{%
```

Redefine `theglossary` environment.

```
4191 \renewenvironment{theglossary}{%
4192   \def\@gls@prevlevel{-1}%
4193   \mbox{}\par}%
4194 \par}%
```

Set the header and group headers to nothing.

```
4195 \renewcommand*\glossaryheader[2][0]{%
4196 \renewcommand*\glsgroupheading[1]{}}
```

Redefine the way that the level 0 entries are displayed.

```
4197 \renewcommand{\glossaryentryfield}[5]{%
  If the level hasn't changed, keep the same settings, otherwise change \glstreeindent
  accordingly.
```

```
4198 \ifnum\@gls@prevlevel=0\relax
4199 \else
```

Find out how big the indentation should be by measuring the widest entry.

```
4200 \settowidth{\glstreeindent}{\textbf{@glswidestname\space}}%
```

Set the hangindent and paragraph indent.

```
4201 \hangindent\glstreeindent
4202 \parindent\glstreeindent
4203 \fi
```

Put the name to the left of the paragraph block.

```
4204 \makebox[0pt][r]{\makebox[\glstreeindent][1]{%
  \textbf{\glstarget{##1}{##2}}}}%
```

If the symbol is missing, ignore it, otherwise put it in brackets.

```
4206 \ifx\relax##4\relax
4207 \else
4208   (##4)\space
4209 \fi
```

Do the description followed by the description terminator and location list.

```
4210 ##3\glspostdescription \space ##5\par
```

Set the previous level to 0.

```
4211 \def\@gls@prevlevel{0}%
4212 }%
```

Redefine the way sub-entries are displayed.

```
4213 \renewcommand{\glossarysubentryfield}[6]{%
```

If the level hasn't changed, keep the same settings, otherwise adjust \glstreeindent accordingly.

```
4214 \ifnum\@gls@prevlevel=##1\relax
4215 \else
```

Compute the widest entry for this level, or for level 0 if not defined for this level.

Store in \gls@tmpplen

```
4216 @ifundefined{@glswidestname\romannumeral##1}{%
4217   \settowidth{\gls@tmpplen}{\textbf{@glswidestname\space}}}{%
4218   \settowidth{\gls@tmpplen}{\textbf{\csname @glswidestname\romannumeral##1\endcsname\space}}}%
```

Determine if going up or down a level

```
4220 \ifnum\@gls@prevlevel<##1\relax
```

Depth has increased, so add the width of the widest entry to \glstreeindent.

```
4221 \setlength\glstreeindent\gls@tmpplen
4222 \addtolength\glstreeindent\parindent
4223 \parindent\glstreeindent
4224 \else
```

Depth has decreased, so subtract width of the widest entry from the previous level to `\glstreeindent`. First determine the width of the widest entry for the previous level and store in `\glstreeindent`.

```
4225      \gdef\glswidestname{\romannumeral\@gls@prevlevel}%
4226          \settowidth{\glstreeindent}{\textbf{%
4227              \glswidestname\space}}%

4229              \csname\glswidestname\romannumeral\@gls@prevlevel%
4230                  \endcsname\space}}%
```

Subtract this length from the previous level's paragraph indent and set to `\glstreeindent`.

```
4231      \addtolength{\parindent}{-\glstreeindent}%
4232          \setlength{\glstreeindent}{\parindent
4233              \fi
4234          \fi}
```

Set the hanging indentation.

```
4235      \hangindent\glstreeindent
```

Put the name to the left of the paragraph block

```
4236      \makebox[0pt][r]{\makebox[\gls@tmpplen][1]{%
4237          \textbf{\glstarget{\#2}{\#3}}}}%
```

If the symbol is missing, ignore it, otherwise put it in brackets.

```
4238      \ifx##5\relax\relax
4239          \else
4240              (##5)\space
4241          \fi
```

Do the description followed by the description terminator and location list.

```
4242      ##4\glspostdescription\space ##6\par
```

Set the previous level macro to the current level.

```
4243      \def\@gls@prevlevel{\#1}%
4244  }%
```

Vertical gap between groups is the same as that used by indices:

```
4245      \renewcommand*{\glsgroupskip}{\indexspace}%
4246 }
```

`alttreegroup` Like the `alttree` style but the glossary groups have headings.

```
4247 \newglossarystyle{alttreegroup}{%
```

Base it on the `glostylealttree` style:

```
4248 \glossarystyle{alttree}%
```

Give each group a heading.

```
4249 \renewcommand{\glsgroupheading}[1]{\par
4250     \def\@gls@prevlevel{-1}%
4251     \hangindent0pt\relax
4252     \parindent0pt\relax
4253     \textbf{\glsgetgrouptitle{\#1}}\par\indexspace}%
4254 }
```

`alttreehypergroup` The `alttreehypergroup` style is like the `alttreegroup` style, but has a set of links to the groups at the start of the glossary.

```
4255 \newglossarystyle{alttreehypergroup}{%
```

Base it on the `glostylealttree` style:

```
4256 \glossarystyle{alttree}%
Put the navigation links in the header
4257 \renewcommand*{\glossaryheader}{%
4258   \par
4259   \def\@gls@prevlevel{-1}%
4260   \hangindent0pt\relax
4261   \parindent0pt\relax
4262   \textbf{\glsnavigation}\par\indexspace}%
Put a hypertarget at the start of each group
4263 \renewcommand*{\glsgroupheading}[1]{%
4264   \par
4265   \def\@gls@prevlevel{-1}%
4266   \hangindent0pt\relax
4267   \parindent0pt\relax
4268   \textbf{\glsnavhypertarget{\#\#1}{\glsgetgrouptitle{\#\#1}}}\par
4269   \indexspace}}
```

7 Accessibilty Support (glossaries-accsupp Code)

The `glossaries-accsupp` package is experimental. It is intended to provide a means of using the PDF accessibility support in glossary entries. See the `accsupp` documentation for further details about accessibility support.

```
4270 \NeedsTeXFormat{LaTeX2e}
4271 \ProvidesPackage{glossaries-accsupp}[2009/11/02 v0.2 (NLCT)]
Pass all options to glossaries:
4272 \DeclareOption*{\PassOptionsToPackage{\CurrentOption}{glossaries}}
Process options:
4273 \ProcessOptions
Required packages:
4274 \RequirePackage{glossaries}
4275 \RequirePackage{accsupp}
```

7.1 Defining Replacement Text

The version 0.1 stored the replacement text in the `symbol` key. This has been changed to use the new keys defined here. Example of use:

```
\newglossaryentry{dr}{name=Dr,description={},access={Doctor}}
access The replacement text corresponding to the name key:
4276 \define@key{glossentry}{access}{%
4277   \def\@glo@access{\#1}%
4278 }
textaccess The replacement text corresponding to the text key:
4279 \define@key{glossentry}{textaccess}{%
4280   \def\@glo@textaccess{\#1}%
4281 }
```

firstaccess The replacement text corresponding to the first key:

```
4282 \define@key{glossentry}{firstaccess}{%
4283   \def\@glo@firstaccess{\#1}%
4284 }
```

pluralaccess The replacement text corresponding to the plural key:

```
4285 \define@key{glossentry}{pluralaccess}{%
4286   \def\@glo@pluralaccess{\#1}%
4287 }
```

firstpluralaccess The replacement text corresponding to the firstplural key:

```
4288 \define@key{glossentry}{firstpluralaccess}{%
4289   \def\@glo@firstpluralaccess{\#1}%
4290 }
```

symbolaccess The replacement text corresponding to the symbol key:

```
4291 \define@key{glossentry}{symbolaccess}{%
4292   \def\@glo@symbolaccess{\#1}%
4293 }
```

symbolpluralaccess The replacement text corresponding to the symbolplural key:

```
4294 \define@key{glossentry}{symbolpluralaccess}{%
4295   \def\@glo@symbolpluralaccess{\#1}%
4296 }
```

descriptionaccess The replacement text corresponding to the description key:

```
4297 \define@key{glossentry}{descriptionaccess}{%
4298   \def\@glo@descaccess{\#1}%
4299 }
```

descriptionpluralaccess The replacement text corresponding to the descriptionplural key:

```
4300 \define@key{glossentry}{descriptionpluralaccess}{%
4301   \def\@glo@descpluralaccess{\#1}%
4302 }
```

There are no equivalent keys for the user1...user6 keys. The replacement text would have to be explicitly put in the value, e.g., user1={\glsaccsupp{inches}{in}}.

\@gls@noaccess Indicates that no replacement text has been provided.

```
4303 \def\@gls@noaccess{\relax}
```

Add to the start hook (the access key is initialised to the value of the symbol key at the start for backwards compatibility):

```
4304 \let\@gls@oldnewglossaryentryprehook\@newglossaryentryprehook
4305 \renewcommand*\@newglossaryentryprehook{%
4306   \@gls@oldnewglossaryentryprehook
4307   \def\@glo@access{\@glo@symbol}%
}
```

Initialise the other keys:

```
4308 \def\@glo@textaccess{\@glo@access}%
4309 \def\@glo@firstaccess{\@glo@access}%
4310 \def\@glo@pluralaccess{\@glo@textaccess}%
4311 \def\@glo@firstpluralaccess{\@glo@pluralaccess}%
```

```

4312 \def\@glo@symbolaccess{\relax}%
4313 \def\@glo@symbolpluralaccess{@glo@symbolaccess}%
4314 \def\@glo@descaccess{\relax}%
4315 \def\@glo@descpluralaccess{@glo@descaccess}%
4316 }

Add to the end hook:
4317 \let\gls@oldnewglossaryentryposthook\newglossaryentryposthook
4318 \renewcommand*\newglossaryentryposthook{%
4319 \gls@oldnewglossaryentryposthook

Store the access information:
4320 \expandafter
4321 \protected@xdef\csname glo@\@glo@label @access\endcsname{%
4322 \@glo@access}%
4323 \expandafter
4324 \protected@xdef\csname glo@\@glo@label @textaccess\endcsname{%
4325 \@glo@textaccess}%
4326 \expandafter
4327 \protected@xdef\csname glo@\@glo@label @firstaccess\endcsname{%
4328 \@glo@firstaccess}%
4329 \expandafter
4330 \protected@xdef\csname glo@\@glo@label @pluralaccess\endcsname{%
4331 \@glo@pluralaccess}%
4332 \expandafter
4333 \protected@xdef\csname glo@\@glo@label @firstpluralaccess\endcsname{%
4334 \@glo@firstpluralaccess}%
4335 \expandafter
4336 \protected@xdef\csname glo@\@glo@label @symbolaccess\endcsname{%
4337 \@glo@symbolaccess}%
4338 \expandafter
4339 \protected@xdef\csname glo@\@glo@label @symbolpluralaccess\endcsname{%
4340 \@glo@symbolpluralaccess}%
4341 \expandafter
4342 \protected@xdef\csname glo@\@glo@label @descaccess\endcsname{%
4343 \@glo@descaccess}%
4344 \expandafter
4345 \protected@xdef\csname glo@\@glo@label @descpluralaccess\endcsname{%
4346 \@glo@descpluralaccess}%
4347 }

```

7.2 Accessing Replacement Text

\glsentryaccess Get the value of the access key for the entry with the given label:

```

4348 \newcommand*\glsentryaccess[1]{%
4349 \csname glo@\#1@access\endcsname
4350 }

```

\glsentrytextaccess Get the value of the textaccess key for the entry with the given label:

```

4351 \newcommand*\glsentrytextaccess[1]{%
4352 \csname glo@\#1@textaccess\endcsname
4353 }

```

\glsentryfirstaccess Get the value of the firstaccess key for the entry with the given label:

```
4354 \newcommand*{\glsentryfirstaccess}[1]{%
4355   \csname glo@#1@firstaccess\endcsname
4356 }
```

\glsentrypluralaccess Get the value of the `pluralaccess` key for the entry with the given label:

```
4357 \newcommand*{\glsentrypluralaccess}[1]{%
4358   \csname glo@#1@pluralaccess\endcsname
4359 }
```

\glsentryfirstpluralaccess Get the value of the `firstpluralaccess` key for the entry with the given label:

```
4360 \newcommand*{\glsentryfirstpluralaccess}[1]{%
4361   \csname glo@#1@firstpluralaccess\endcsname
4362 }
```

\glsentrysymbolaccess Get the value of the `symbolaccess` key for the entry with the given label:

```
4363 \newcommand*{\glsentrysymbolaccess}[1]{%
4364   \csname glo@#1@symbolaccess\endcsname
4365 }
```

\glsentrysymbolpluralaccess Get the value of the `symbolpluralaccess` key for the entry with the given label:

```
4366 \newcommand*{\glsentrysymbolpluralaccess}[1]{%
4367   \csname glo@#1@symbolpluralaccess\endcsname
4368 }
```

\glsentrydescaccess Get the value of the `descriptionaccess` key for the entry with the given label:

```
4369 \newcommand*{\glsentrydescaccess}[1]{%
4370   \csname glo@#1@descaccess\endcsname
4371 }
```

\glsentrydescpluralaccess Get the value of the `descriptionpluralaccess` key for the entry with the given label:

```
4372 \newcommand*{\glsentrydescpluralaccess}[1]{%
4373   \csname glo@#1@descaccess\endcsname
4374 }
```

\glsaccsupp *\glsaccsupp{<replacement text>}{{<text>}}*

This can be redefined to use E or Alt instead of `ActualText`. (I don't have the software to test the E or Alt options.)

```
4375 \newcommand*{\glsaccsupp}[2]{%
4376   \BeginAccSupp{ActualText=#1}#2\EndAccSupp{}%
4377 }
```

\xglsaccsupp Fully expands replacement text before calling `\glsaccsupp`

```
4378 \newcommand*{\xglsaccsupp}[2]{%
4379   \protected@edef\@gls@replacementtext{\#1}%
4380   \expandafter\glsaccsupp\expandafter{\@gls@replacementtext}{\#2}%
4381 }
```

\glsnameaccessdisplay Displays the first argument with the accessibility text for the entry with the label given by the second argument (if set).

```
4382 \DeclareRobustCommand*{\glsnameaccessdisplay}[2]{%
4383   \protected@edef\@glo@access{\glsentryaccess{\#2}}%
4384   \ifx\@glo@access\@gls@noaccess
```

```

4385      #1%
4386  \else
4387    \xglsaccsupp{@glo@access}{#1}%
4388  \fi
4389 }

```

\glstextaccessdisplay As above but for the textaccess replacement text.

```

7.3 Displaying the Glossary

Entries within the glossary or list of acronyms are now formatted via `\accsuppglossaryentryfield` and `\accsuppglossarysubentryfield`.

```

\@glossaryentryfield
4695 \ifglsxindy
4696   \renewcommand*{\glossaryentryfield}{%
4697     \string\\accsuppglossaryentryfield}
4698 \else
4699   \renewcommand*{\glossaryentryfield}{%
4700     \string\accsuppglossaryentryfield}
4701 \fi

\@glossarysubentryfield
4702 \ifglsxindy
4703   \renewcommand*{\glossarysubentryfield}{%
4704     \string\\accsuppglossarysubentryfield}
4705 \else
4706   \renewcommand*{\glossarysubentryfield}{%
4707     \string\accsuppglossarysubentryfield}
4708 \fi

\accsuppglossaryentryfield
4709 \newcommand*{\accsuppglossaryentryfield}[5]{%
4710   \glossaryentryfield{#1}%
4711   {\glsnameaccessdisplay{#2}{#1}}%
4712   {\glsdescriptionaccessdisplay{#3}{#1}}%
4713   {\glssymbolaccessdisplay{#4}{#1}{#5}}%
4714 }

\accsuppglossarysubentryfield
4715 \newcommand*{\accsuppglossarysubentryfield}[6]{%
4716   \glossaryentryfield{#1}{#2}%
4717   {\glsnameaccessdisplay{#3}{#2}}%
4718   {\glsdescriptionaccessdisplay{#4}{#2}}%
4719   {\glssymbolaccessdisplay{#5}{#2}{#6}}%
4720 }

```

7.4 Acronyms

Use `\newacronymhook` to modify the key list to set the access text to the long version by default.

```
4721 \renewcommand*{\newacronymhook}{%
4722   \edef\@gls@keylist{\glsshortkey access=\the\glslongtok,%
4723     \the\glskeylisttok}%
4724   \expandafter\glskeylisttok\expandafter{\@gls@keylist}%
4725 }
```

`\DefaultNewAcronymDef` Modify default style to use access text:

```
4726 \renewcommand*{\DefaultNewAcronymDef}{%
4727   \edef\@do@newglossaryentry{%
4728     \noexpand\newglossaryentry{\the\glslabeltok}%
4729     {%
4730       type=\acronymtype,%
4731       name={\the\glsshorttok},%
4732       description={\the\glslongtok},%
4733       descriptionaccess=\relax,
4734       text={\the\glsshorttok},%
4735       textaccess={\the\glslongtok},%
4736       access={\noexpand\@glo@textaccess},%

Add means of referencing accessibility support for acronyms:

```

\glsshortaccesskey
4837 \newcommand*{\glsshortaccesskey}{\glsshortkey access}%

\glsshortpluralaccesskey
4838 \newcommand*{\glsshortpluralaccesskey}{\glsshortpluralkey access}%

\glslongaccesskey
4839 \newcommand*{\glslongaccesskey}{\glslongkey access}%

\glslongpluralaccesskey
4840 \newcommand*{\glslongpluralaccesskey}{\glslongpluralkey access}%

```

8 Multi-Lingual Support

Many thanks to everyone who contributed to the translations both via email and on comp.text.tex.

8.1 Babel Captions

Define `babel` captions if multi-lingual support is required, but the `translator` package is not loaded.

```

8.3 Brazilian Dictionary

This is a dictionary file provided by Thiago de Melo for use with the `translator` package.

```
5240 \ProvidesDictionary{glossaries-dictionary}{Brazilian}
```

Provide Brazilian translations:

```
5241 \providetranslation{Glossary}{Gloss\'ario}
5242 \providetranslation{Acronyms}{Siglas}
5243 \providetranslation{Notation (glossaries)}{Nota\c c \~ao}
5244 \providetranslation{Description (glossaries)}{Descri\c c \~ao}
5245 \providetranslation{Symbol (glossaries)}{S\'imbolo}
5246 \providetranslation{Page List (glossaries)}{Lista de P\'aginas}
5247 \providetranslation{Symbols (glossaries)}{S\'imbolos}
5248 \providetranslation{Numbers (glossaries)}{N\'umeros}
```

8.4 Danish Dictionary

This is a dictionary file provided for use with the `translator` package.

```
5249 \ProvidesDictionary{glossaries-dictionary}{Danish}
```

Provide Danish translations:

```
5250 \providetranslation{Glossary}{Ordliste}
5251 \providetranslation{Acronyms}{Akronymer}
5252 \providetranslation{Notation (glossaries)}{Symbolforklaring}
5253 \providetranslation{Description (glossaries)}{Beskrivelse}
5254 \providetranslation{Symbol (glossaries)}{Symbol}
5255 \providetranslation{Page List (glossaries)}{Side}
5256 \providetranslation{Symbols (glossaries)}{Symboler}
5257 \providetranslation{Numbers (glossaries)}{Tal}
```

8.5 Dutch Dictionary

This is a dictionary file provided for use with the `translator` package.

```
5258 \ProvidesDictionary{glossaries-dictionary}{Dutch}
```

Provide Dutch translations:

```
5259 \providetranslation{Glossary}{Woordenlijst}
5260 \providetranslation{Acronyms}{Acroniemen}
5261 \providetranslation{Notation (glossaries)}{Benaming}
5262 \providetranslation{Description (glossaries)}{Beschrijving}
5263 \providetranslation{Symbol (glossaries)}{Symbool}
5264 \providetranslation{Page List (glossaries)}{Pagina's}
5265 \providetranslation{Symbols (glossaries)}{Symbolen}
5266 \providetranslation{Numbers (glossaries)}{Cijfers}
```

8.6 English Dictionary

This is a dictionary file provided for use with the `translator` package.

```
5267 \ProvidesDictionary{glossaries-dictionary}{English}
```

Provide English translations:

```
5268 \providetranslation{Glossary}{Glossary}
5269 \providetranslation{Acronyms}{Acronyms}
5270 \providetranslation{Notation (glossaries)}{Notation}
5271 \providetranslation{Description (glossaries)}{Description}
5272 \providetranslation{Symbol (glossaries)}{Symbol}
5273 \providetranslation{Page List (glossaries)}{Page List}
5274 \providetranslation{Symbols (glossaries)}{Symbols}
5275 \providetranslation{Numbers (glossaries)}{Numbers}
```

8.7 French Dictionary

This is a dictionary file provided for use with the translator package.

```
5276 \ProvidesDictionary{glossaries-dictionary}{French}
```

Provide French translations:

```
5277 \providetranslation{Glossary}{Glossaire}
5278 \providetranslation{Acronyms}{Acronymes}
5279 \providetranslation{Notation (glossaries)}{Terme}
5280 \providetranslation{Description (glossaries)}{Description}
5281 \providetranslation{Symbol (glossaries)}{Symbole}
5282 \providetranslation{Page List (glossaries)}{Pages}
5283 \providetranslation{Symbols (glossaries)}{Symboles}
5284 \providetranslation{Numbers (glossaries)}{Nombres}
```

8.8 German Dictionary

This is a dictionary file provided for use with the translator package.

```
5285 \ProvidesDictionary{glossaries-dictionary}{German}
```

Provide German translations (quite a few variations were suggested for German; I settled on the following):

```
5286 \providetranslation{Glossary}{Glossar}
5287 \providetranslation{Acronyms}{Akronyme}
5288 \providetranslation{Notation (glossaries)}{Bezeichnung}
5289 \providetranslation{Description (glossaries)}{Beschreibung}
5290 \providetranslation{Symbol (glossaries)}{Symbol}
5291 \providetranslation{Page List (glossaries)}{Seiten}
5292 \providetranslation{Symbols (glossaries)}{Symbole}
5293 \providetranslation{Numbers (glossaries)}{Zahlen}
```

8.9 Irish Dictionary

This is a dictionary file provided for use with the translator package.

```
5294 \ProvidesDictionary{glossaries-dictionary}{Irish}
```

Provide Irish translations:

```
5295 \providetranslation{Glossary}{Gluais}
5296 \providetranslation{Acronyms}{Acrainmneacha}
5297 \providetranslation{Notation (glossaries)}{Ciall}
5298 \providetranslation{Description (glossaries)}{Tuairisc}
5299 \providetranslation{Symbol (glossaries)}{Comhartha}
5300 \providetranslation{Page List (glossaries)}{Leathanaigh}
```

```
5301 \providetranslation{Symbols (glossaries)}{Comhartha'\{i\}}
5302 \providetranslation{Numbers (glossaries)}{Uimhreacha}
```

8.10 Italian Dictionary

This is a dictionary file provided for use with the translator package.

```
5303 \ProvidesDictionary{glossaries-dictionary}{Italian}
```

Provide Italian translations:

```
5304 \providetranslation{Glossary}{Glossario}
5305 \providetranslation{Acronyms}{Acronimi}
5306 \providetranslation{Notation (glossaries)}{Nomenclatura}
5307 \providetranslation{Description (glossaries)}{Descrizione}
5308 \providetranslation{Symbol (glossaries)}{Simbolo}
5309 \providetranslation{Page List (glossaries)}{Elenco delle pagine}
5310 \providetranslation{Symbols (glossaries)}{Simboli}
5311 \providetranslation{Numbers (glossaries)}{Numeri}
```

8.11 Magyar Dictionary

This is a dictionary file provided for use with the translator package.

```
5312 \ProvidesDictionary{glossaries-dictionary}{Magyar}
```

Provide translations:

```
5313 \providetranslation{Glossary}{Sz\'ojegyz\'ek}
5314 \providetranslation{Acronyms}{Bet\H uszavak}
5315 \providetranslation{Notation (glossaries)}{Kifejez\'es}
