

# Package `hfvfloat`

## Rotating and scaling of objects and captions

### ver 2.14

Herbert Voß\*

May 10, 2019

The package `hfvfloat` defines a macro to place objects and captions of floats in different positions with different rotating angles.

All objects and captions are framed on the first pages, which is only for some demonstration here and has no additional sense!

To compare the place of the definition of the floating objects in the source and the output a marginnote `\float` is set into the margin. This is done also only for demonstration!

53	Output of multi-inner2s2c (pages 2–9) . . . . .	54
54	Output of sub-default2s2c (pages 2–9) . . . . .	55
55	Output of sub-after2s2c (pages 2–9) . . . . .	55
56	Caption at bottom right beside the float with a caption width of $0.5\text{\columnwidth}$ .	57
57	A float which needs the complete paper width and height. . . . .	57

## 1 The package options

fbox	The objects and captions are put into a \fbox command, like in this documentation. This doesn't make real sense and is only for some demonstration useful or for locating problems if images seems to have too much whitespace.
hyperref	Load package hyperref.

The length \belowcaptionskip is set by L<sup>A</sup>T<sub>E</sub>X to 0pt and changed in hvfloat to the same value than \abovecaptionskip. This length can be changed to another value in the usual way with \setlength or \addtolength.

The following packages are loaded by hvfloat and the optional argument hypcap is passed to the packages caption and subcaption:

`caption, subcaption, atbegshi, expl3, multido, graphicx, xkeyval, ifoddpage, and afterpage.`

## 2 The Macros and optional arguments

The syntax for the macros and \setDefaults, \hvSet, and \hvFloat is

```
\hvset{key=value list}
\setDefaults
\hvFloat* [Options] + {float type}{floating object}[short caption] {long caption}{label}
```

The star version is explained in section [10 on page 22](#) and [18.2 on page 51](#) and the optional `+is` explained in section [16.3 on page 38](#).

\hvSet allows the global setting of keywords and \setDefaults sets all keywords to its default value as shown in [Table 2 on the next page](#).

If \hvFloat has an empty second parameter <float type>, then \hvFloat switches by default to a nonfloat (see table 2) object, which is not important for the user. All other parameters may also be empty and the short caption as second optional parameter missing. This one is as usual the caption for the \listoffigures.

There are some more macros defined, more or less for internally use in hvfloat, but they can be used for own purposes.

```
\figcaption[short caption text] {caption text}
\tabcaption[short caption text] {caption text}
```

They are used for the nonFloat keyword, where these macros write captions in the same way but outside of a float environment. The default caption cannot be used here. It is no problem to use the \tabcaption command to place a caption anywhere, like here in an inlined mode:

Table 1: A Caption without any sense and any object

A label can be put inside the argument or after the command in the usual way, so that a reference to the not existing table 2 is no problem.

[...] It is no problem to use the `\verb|\tabcaption|` command to place a caption anywhere, like here in an `inlined` mode: `\tabcaption[The Caption without sense ...]{A Caption without any sense and any object}\label{dummy}` A label can be put inside the argument or after the command in the usual way, so that a reference to the not existing table-`\ref{dummy}` is no problem.

With the macro `\defhvstyle` one can define a style which can be used instead of the individual setting:

`\defhvstyle{name}{setting}`

Internally the style is saved in a macro named `\hv@<name>`.

There are the following keywords:

Table 2: The optional keywords for the macro `\hvFloat`

Keyword	Default	Description
<code>floatPos</code>	<code>htb</code>	This is <i>not</i> the same default placement setting like the one from the floats.
<code>rotAngle</code>	<code>0</code>	The value for the angle if both, the object and the caption should be rotated in the same way.
<code>capWidth</code>	<code>n</code>	The width of the caption. Can be »n« like a natural width, »w« for the width of the object, »h« for the height of the object, or a scale for <code>\columnwidth</code> .
<code>capAngle</code>	<code>0</code>	The value for the angle if the caption should be rotated. Counted anti clockwise.
<code>capPos</code>	<code>before</code>	<p>The position of the caption relative to the object. Possible values are</p> <p><code>before</code>: <i>always</i> before (left) from the object.</p> <p><code>left</code>: <i>always</i> before (left) from the object, but on the <i>same page</i> in twocolumn mode.</p> <p><code>after</code>: <i>always</i> after (right) from the object.</p> <p><code>right</code>: <i>always</i> after (right) from the object, but on the <i>same page</i> in twocolumn mode.</p> <p><code>inner</code>: in twoside mode always typeset at the inner margin.</p> <p><code>outer</code>: in twoside mode always typeset at the outer margin.</p> <p><code>evenPage</code>: in twoside mode with fullpage objects always on an even page.</p> <p><code>oddPage</code>: in twoside mode with fullpage objects always on an odd page.</p>
<code>capVPos</code>	<code>c</code>	This is only important for <code>capPos=left right</code> . Only in this case the caption can vertically placed at the bottom, center and top.
<code>objectPos</code>	<code>center</code>	The horizontalplacement of the object relative to the document. Possible values are <code>(l)eft (c)enter (r)ight</code> .
<code>objectAngle</code>	<code>0</code>	The value for the angle if the object should be rotated. Counted anti clockwise.
<code>floatCapSep</code>	<code>5pt</code>	The additional width between the object and a left or right placed caption.

### 3 The default use of floating environments

Keyword	Default	Description
use0Box	false	Instead of passing the object as parameter to the \hvFloat, the contents maybe saved in the box \hv0Box With use0Box=true the contents of this box will be used.
nonFloat	false	The object isn't put in a floating environment. It is printed as standard text with an additional caption. The float counters are increased as usual and can be referenced.
wide	false	The float can use \textwidth+\marginparwidth as horizontal width.
objectFrame	false	put a frame with no separation around the float object.
style	-	Use a defined style

## 3 The default use of floating environments

In this case there is no essential difference to the well known figure or table environment, f.ex.:

```
\begin{figure}
... object ...
\caption{...}% caption below the object
\end{figure}
```

Figure 2: Without any keywords (only the fbox package option)

Code for figure 2:

```
\hvFloat{figure}{\includegraphics{images/rose}}{Without any keywords (only the \texttt{fbox} package option)}{fig:0}
```

float

Code for table 3:

```
\hvFloat[capPos=top]{table}{%
\begin{tabularx}{\textwidth}{>{\ttfamily l}|l|X}
\rmfamily Name & Type & Description\\ \hline
\CMD{hvFloat} & command & places object and caption in different ways\\
```

Table 3: With the only Option `capPos=top` to place the caption on top of the table, which is often the default.

Name	Type	Description
<code>\hvFloat</code>	command	places object and caption in different ways
<code>hvFloatEnv</code>	environment	places object and caption exactly Here
<code>\figcaption</code>	command	writes a figure caption in a non floating environment
<code>\tabcaption</code>	command	writes a table caption in a non floating environment
<code>\setDefaults</code>	command	sets all options to the defaults
<code>\defhvstyle</code>	command	define a user style

```

hvFloatEnv & environment & places object and caption exactly Here\\
\CMD{figcaption} & command & writes a figure caption in a non floating environment\\
\CMD{tabcaption} & command & writes a table caption in a non floating environment\\
\CMD{setDefaults} & command & sets all options to the defaults\\
\CMD{defhvstyle} & command & define a user style
\end{tabularx}}%
{With the only Option \texttt{capPos=top} to place the caption on top of the table, which is often
the default.}%
{tab:0}

```

See section 13 for some more informations about tabulars as objects.

## 4 Caption width

### 4.1 Default – natural width

The default setting is the natural width of a paragraph with respect to the current linewidth or columnwidth for a caption below or above an object. It behaves in the same way as a caption set by one of the default floating environments like `figure` or `table`:

```
\hvFloat[floatPos=!htb]{figure}{\includegraphics{images/rose}}%
{Default caption width setting, which is the natural width with respect to the current linewidth
 .}{fig:width0}
```

For the following examples the package option `fbox` is disabled. All frames are now set with the macro `\frame` or the optional keyword `objectFrame`.

For a caption beside an object, the *natural* caption width (without the optional argument `wide`) is given by the current linewidth minus the width of the object and the space between object and caption, which is set by `floatCapSep` (see Table 2 on page 7).

```
\hvFloat[floatPos=!htb,capPos=after,objectFrame]{figure}{\includegraphics[scale=1.5]{images/rose}}%
%
{Caption right beside with a \emph{natural} width, which is given by the width of the object,
the separation between object and caption, and the current linewidth.}{fig:width1}
```

`float`

`float`

#### 4 Caption width

Figure 3: Default caption width setting, which is the natural width with respect to the current linewidth.

Figure 4: Caption right beside with a *natural* width, which is given by the width of the object, the separation between object and caption, and the current linewidth.

#### 4.2 Relative linewidth

With `capWidth=<number>` the caption width is set to `<number>\columnwidth`. For captions at the bottom or on top of objects the setting is not checked if `<number>` is greater than 1.

```
\hvFloat[floatPos!=htb, capWidth=0.9]{figure}{\includegraphics{images/rose}}%
{Caption below with a width of 0.9 of the current line width (column width), which is
in this special case \the\linewidth. Divide it by 28.82 to get cm.}{fig:width2}
```

**float** If such a value like `0.9\linewidth` is used for a caption beside an object, then the macro does a test if the space beside the object is less equal the defined caption width. If not then the width is set to the possible value between object and margin:

```
\hvFloat[floatPos!=htb,
         capPos=after,
         capWidth=0.9]{figure}{\includegraphics[scale=1.5]{images/rose}}%
```

### 4.3 Identical object and caption width

Figure 5: Caption below with a width of 0.9 of the current line width (column width), which is in this special case 376.4258pt. Divide it by 28.82 to get cm.

```
{Caption right beside with a width setting of \texttt{0.9\textbackslash linewidth}  
which is too big for this example and therefore corrected  
by the macro to the maximal width.}{fig:width3}
```

[float]

Figure 6: Caption right beside with a width setting of  
0.9\linewidth which is too big for this example and therefore corrected by the macro to the maximal width.

### 4.3 Identical object and caption width

With `capWidth=w` the caption width is like the object width which makes only real sense if you have a lot of identical images with respect to its widths.

```
\hvFloat[floatPos=!htb,capWidth=w]{figure}{\includegraphics[width=0.5\linewidth]{images/CTAN}}%  
{Caption below with a width of the given object which may be a problem  
if it is a very small object.}{fig:width4}
```

[float]

## 5 Caption left or right of the object

Figure 7: Caption below with a width of the given object which may be a problem if it is a very small object.

### 4.4 caption width to height of the object

With `capWidth=h` the caption width is like the object height which makes only real sense if you want to put a rotated caption beside the object.

```
\hvFloat[floatPos=!htb,capPos=after,capWidth=h,capAngle=90,objectFrame]{figure}{\includegraphics{images/rose}}%
{Caption beside with a width of the given object height which may be a problem
if it is a very small object.}{fig:width5}
```

Figure 8: Caption beside with a width of the given object height which may be a problem if it is a very small object.

## 5 Caption left or right of the object

By default the caption is set on the left side of the object. If the caption and the object are set side by side, then the keyvalue before is identical to the setting `left`.

### 5.1 Caption right with specific length

Code for figure 9:

```
\hvFloat%
[floatPos=htb,
 capPos=right,
 objectFrame,
 objectPos=c]{figure}{\includegraphics[scale=0.9]{images/rose}}%
{Caption beside object and vertically centered}%
```

## 5.2 Caption left and rotated

```
{Caption vertically centered right beside the float with a natural caption width  
(the default). \blindtext%  
{fig:1}
```

Figure 9: Caption vertically centered right beside the float with a natural caption width (the default). Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like "Huardest gefburn"? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

```
float  
capPos=right
```

## 5.2 Caption left and rotated

Code for figure 10:

```
\hvFloat%  
[floatPos=htb,  
 capPos=left,  
 capWidth=h,% of \columnwidth  
 capAngle=90,  
 objectFrame  
]{figure}{\includegraphics{images/rose}}%  
[Centered Caption beside Object]%  
{Caption vertically centered left beside the float with a caption width  
of \texttt{capWidth=h}, which is the height of the object.}{fig:2}
```

Figure 10: Caption vertically centered left beside the float with a caption width of `capWidth=h`, which is the height of the object.

```
float  
capAngle=90
```

It is no problem to rotate the object, too. But with a different angle value than for the caption. Do not ask for the sense, it is only a demonstration of what is possible ... The object (image) is rotated by -30 degrees with the macro `\rotatebox`. Without any definition the caption will be

## 6 Caption inner or outer

placed vertically centered to the object. Important for the height of the object is the surrounding orthogonal rectangle.

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

Code for figure 11:

```
\hvFloat[%  
    capWidth=h,  
    capPos=after,  
    capAngle=180,  
    objectAngle=90,  
    capVPos=center,  
    objectPos=center]{figure}{\frame{\includegraphics{images/rose}}}%  
[Centered Caption beside Object]{%  
{Caption vertically centered right beside the float with a caption width of the height  
of the image and a rotation of the caption and the object.}{fig:3}}
```

float

Figure 11: Caption vertically centered right beside the float with a caption width of the height of the image and a rotation of the caption and the object.  
caption of the image and a rotation of the caption and the object.

## 6 Caption inner or outer

Setting the caption position to *inner* or *outer* makes only sense for a document in twoside mode. For a oneside document *inner* is the same as *left* and *outer* is the same as *right*. We show only the code for the first image with the setting `capPos=inner`, whereas the second one chooses only `capPos=outer`.

Code for figure 12:

```
\hvFloat[capPos=inner]{figure}{\includegraphics{images/rose}}%  
[Centered Caption on the inner side]{%  
Caption set with the parameter setting \texttt{capPos=inner}, which will be  
a caption on the right side for an even page and on the left side for  
an odd page.}{fig:20}
```

Figure 12: Caption set with the parameter setting `capPos=inner`, which will be a caption on the right side for an even page and on the left side for an odd page.

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

Now the same Image with `capPos=outer`. The current pagenumber is 15, an odd page. We now set a pagebreak at the end of the second image to see if it works with *inner/outer*.

```
\hvFloat[capPos=outer]{\begin{figure}[Centered Caption on the inner side]{\includegraphics{images/rose}}%  
Caption set with the parameter setting \texttt{capPos=outer}, which will be  
a caption on the right side for an even page and on the left side for  
an odd page.\end{figure}}
```

<code>float</code>
<code>capPos=inner</code>

Figure 13: Caption set with the parameter setting `capPos=outer`, which will be a caption on the right side for an even page and on the left side for an odd page.

<code>float</code>
<code>capPos=outer</code>

We have an odd page, the reason why figure 13 has the caption for *inner* on the left side and figure 14 for *outer* on the right side.

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how

<code>float</code>
--------------------

## 7 Vertical Position of the Caption

Figure 14: Caption at the bottom right beside the float with a caption width of  $0.5\text{\columnwidth}$  and `capPos=outer`.

the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

Code for figure 15:

```
\hvFloat[%  
    capWidth=0.5,% of \columnwidth  
    capPos=inner,% =====> INNER  
    capAngle=0,  
    capVPos=bottom,  
    objectPos=center]{figure}{\includegraphics{images/rose}}%  
[Centered Caption beside Object]{%  
    Caption vertically centered right beside the float with a caption  
    width of \texttt{0.5\textbackslash columnwidth} and \texttt{capPos=outer} }{fig:22}
```

float

Figure 15: Caption vertically centered right beside the float with a caption width of  $0.5\text{\columnwidth}$  and `capPos=outer`

We have an even page, the reason why figure 12 has the caption for *inner* on the right side and figure 14 for *outer* on the left side.

## 7 Vertical Position of the Caption

The caption can be placed beside the object in the positions

(c)enter|(b)ottom|(t)op

The code for figure 16:

```
\hvFloat[%  
    floatPos=htb,%  
    capWidth=0.25,%  
    capPos=right,%  
    capVPos=bottom,%

```

float

## 8 Horizontal Position of the Float

Figure 18: Caption centered right beside the float

## 8 Horizontal Position of the Float

The caption is always near the object, only divided by the length `\floatCapSep` which can be set by the keyword of the same name `floatCapSep`. It accepts only a value with any allowed unit. The keyword `objectPos` refers always to the complete floating object: caption *and* object. The meaning of `objectPos=left` is: Put the object as far as possible to the left margin. If `capPos=left` is also used, then the caption is at the left margin followed by the object (see Figure 20 on the next page).

The code for figure 19:

```
\hvFloat[%  
    capWidth=0.25,  
    capPos=right,  
    capVPos=top,  
    objectPos=left,  
    objectFrame,  
]{figure}{\includegraphics{images/rose}}{  
    Caption at top right beside the float and object position left}{fig:7}
```

float

Figure 19: Caption at top right beside the float and object position left

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how

the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

The same with `capPos=left` :

Figure 20: Caption at top right beside the float and object position left

float
<code>capPos=left</code>

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

The code for figure 21:

```
\hvFloat[%  
    capWidth=0.25,  
    capPos=before,  
    capVPos=top,  
    objectPos=right,  
    objectFrame,  
]{figure}{\includegraphics{images/rose}}{  
    Caption at top leftt beside the float and object position right}{fig:8}
```

Figure 21: Caption at top left beside the float and object position right

float
-------

Hello, here is some text without a meaning. This text should show what a printed text will

## 9 Wide floats

look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

## 9 Wide floats

With the optional argument `wide` the width of the defined `\marginparwidth` is added to the allowed horizontal width of the float.

The code for figure 22:

```
\hvFloat[wide,
    capPos=right,
    capVPos=top,
    objectPos=left,
]{figure}{\includegraphics[width=0.75\linewidth]{images/CTAN}}%
    Caption at top right beside the float and object position left and
the option \texttt{wide}.){fig:70}
```

Figure 22: Caption at top right beside the float and object position left and the option wide.

The code for figure 23:

```
\hvFloat[wide,
    capPos=left,
    capVPos=top,
    objectPos=right,
]{figure}{\includegraphics[width=0.75\linewidth]{images/CTAN}}%
    {Caption at top left beside the object and object position left and
the option \texttt{wide}.){fig:80}}
```

Figure 23: Caption at top left beside the object and object position left and the option wide.

For a twosided document it will place the object always in the margin.

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

```
\hvFloat[wide,
    capPos=inner,
    capVPos=top,
]{figure}{\includegraphics[width=0.75\linewidth]{images/CTAN}}{%
Caption at top and inner beside the float and object position right and
the option \texttt{wide}.}{fig:81}
```

Figure 24: Caption at top and inner beside the float and object position right and the option wide.

Now we set the same image with the same setting on the next page. The caption will change its side due to the setting `capPos=outer`.

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

```
\hvFloat[wide,
    capPos=inner,
    capVPos=top,
]{figure}{\includegraphics[width=0.75\linewidth]{images/CTAN}}{%
Caption at top inner beside the float and object position right and
the option \texttt{wide}.}{fig:811}
```

Figure 25: Caption at top inner beside the float and object position right and the option wide.

The caption can be typeset completely into the margin with:

## 11 Full Page Width in Landscape Mode

```
\captionsetup{justification=RaggedRight}
\hvFloat[wide,
  capPos=outer,
  capVPos=top,
  floatCapSep=\marginparsep,
]{figure}{\includegraphics[width=\linewidth]{images/CTAN}}{%
Caption at top inner beside the float and object position right and
the option \texttt{wide}.}{fig:812}
```

Figure 26:  
Caption at top  
inner beside the  
float and object  
position right  
and the option  
wide.

## 10 The star version \hvFloat\*

In the twocolumn mode the floating environment can be set over both columns with the star version \hvFloat\*. The floating environment will not be on the bottom of the page. The code for the following example (Figure 27 on the facing page) is:

```
\hvFloat*[capPos=right]{figure}%
{\includegraphics{images/frose}}%
[A float with the default caption setting]%
[A default caption of a "''" object with the default setting, which
is a "left" caption which means that it always appears before the object.
This can be an even or odd page. And some more text whch has no
real meaning because it fills only the space for a long caption.]%
{fig:0}
```

The example shows on page 3 the star version and on page 4 the same without using the star.

## 11 Full Page Width in Landscape Mode

If you do not want to load the package lscape (or pdflscape) you can use the floatPos=p option to put the image on an own page and rotated by 90 degrees (figure 28).

Code for figure 28:

```
\hvFloat[%
  floatPos=p,
  capPos=bottom,
  rotAngle=90,
  objectPos=center,
```

Figure 27: Output of default1s2c (pages 2–5)

```
[{figure}{\includegraphics[width=0.9\texttheight]{images/CTAN}}%
[Object and Caption in landscape mode]{%
Caption and object in landscape mode. \blindtext}{fig:9}
```

The float can also be put to the left or to the right (above/below in landscape) with the `objectPos=l` parameter

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

The code for figure 29:

```
\hvFloat[%
  floatPos=p,
  capWidth=h,
  capPos=right,
  objectAngle=90,
  capAngle=-90,
  objectPos=left,
]{figure}{\includegraphics[width=\texttheight]{images/CTAN}}%
[Rotated Caption in Landscape]{%
Caption right beside the float and object position left. The caption rotated by -90$^{\circ}$ degrees.\blindtext}{fig:10}
```

float  
landscape

This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

## 12 The *nonFloat* Option

Sometimes it is better to put a “float” in a specific position of the page. This is possible with the *nonfloat* package and the keyword *nonFloat*.

Some nonsense text before the following `\emph{non floating}` object.

```
\hvFloat[%  
  nonFloat,  
  capWidth=0.25,  
  capPos=right,  
  capVPos=bottom,  
  objectPos=center,  
  objectFrame,  
]{figure}{\includegraphics[scale=1.5]{images/rose}}%  
[Nonfloat Captions]{%  
Caption of a ‘‘nonfloat’’ Object, using the \texttt{nonfloat} Package}{fig:11}
```

Some nonsense text after the preceding `\emph{non floating}` object.

`float`

Some nonsense text before the following *non floating* object.

Figure 30: Caption of a  
“nonfloat” Object, using  
the *nonfloat* Package

Some nonsense text after the preceding *non floating* object.

The image 12 is exactly placed where the command `\hvFloat` appears. There are only commands for `figure` and `table` environments:

```
\newcommand{\figcaption}{\def\@capttype{figure}\caption}
\newcommand{\tabcaption}{\def\@capttype{table}\caption}
```

But it is no problem, to define more `xxxcaption` commands to support other with the `float` package defined new floats.

## 13 Tabulars as Objects

The object has to be passed as an parameter to the `\hvFloat` macro. This is no problem with images but maybe with tables, so it is easier to use the box `\hvOBox` to save the table in this box and pass it then to `\hvFloat` with the `useOBox` option. For example see table 4 and 5:

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

```
\savebox{\hvOBox}{%
\begin{tabular}{>{\small\ttfamily}l|l|l}\hline
\rmfamily Name & Type & Description\\\hline
\CMD{\hvFloat} & command & places object and caption in different ways\\
\hvFloatEnv & environment & places object and caption exactly Here\\
\CMD{\figcaption} & command & writes a figure caption in a non floating environment\\
\CMD{\tabcaption} & command & writes a table caption in a non floating environment\\
\CMD{\setDefaults} & command & sets all options to the defaults\\\hline
\end{tabular}%
}
```

The code for table 4 and 5 is:

```
\hvFloat[%
  floatPos=!hb,
  capPos=top,
  useOBox=true]{table}{}{Demonstration of the \texttt{useOBox} Parameter}{table:1}

\blindtext

\hvFloat[%
  floatPos=hb,
  useOBox=true,
  objectAngle=90,
```

### 13 Tabulars as Objects

```
capPos=right,
capVPos=top,
capWidth=0.3]{table}{}{Another demonstration of the \texttt{use0Box} Parameter}{table:2}
```

In this case leave the third parameter empty.

`float`

Table 4: Demonstration of the `use0Box` Parameter

Name	Type	Description
\hvFloat	command	places object and caption in different ways
\hvFloatEnv	environment	places object and caption exactly Here
\figcaption	command	writes a figure caption in a non floating environment
\tabcaption	command	writes a table caption in a non floating environment
\setDefaults	command	sets all options to the defaults

`float`

Table 5: Demonstration of the `use0Box` Parameter

Name	Type	Description
\hvFloat	command	places object and caption in different ways
\hvFloatEnv	environment	places object and caption exactly Here
\figcaption	command	writes a figure caption in a non floating environment
\tabcaption	command	writes a table caption in a non floating environment
\setDefaults	command	sets all options to the defaults

## 14 Text and objects

With the `onlyText` keyword it is no problem to put some text beside an image without getting the caption title Figure/Table. The object still can be a floating one or a nonfloating if the `nonfloat` keyword is used.

The code for figure 14:

```
\hvFloat[%  
  onlyText=true,  
  capAngle=90,  
  capPos=right,  
  capVPos=top,  
  objectFrame,  
  capWidth=h]{}{\includegraphics{images/rose}}%  
[``\texttt{onlyText}`` Caption]%  
  Demonstration of the \texttt{onlyText} Parameter, which makes it  
  possible to put some text beside a floating object without getting  
  a starting \texttt{Figure:} or \texttt{Table:}\{fig:text}
```

Demonstration of the `onlyText` Parameter, which makes it possible to put some text beside a floating object without getting a starting `Figure:` or `Table:`

float

## 15 Environment `hvFloatEnv`

With the environment `hvFloatEnv` one can place an object exactly on that position where the environment is defined. For captions the use of `\captionof` is recommended:

```
\begin{hvFloatEnv}  
  \captionof{table}{A caption for a nice table}  
  \begin{tabular}{@{} l c r @{} }\hline  
    left & center & right \\  
    L & C & R \\ \hline  
  \end{tabular}  
  \end{hvFloatEnv}
```

Table 6: A caption for a nice table

left	center	right
L	C	R

The environment has an optional argument for setting the line width which is preset to `\textwidth`. The object is always centered.

```
\begin{hfloatEnv}[0.5\textwidth]
\captionof{table}{A caption for a nice table}
\begin{tabular}[@{} l c r @{} }\hline
left & center & right \\
L & C & R \\ \hline
\end{tabular}
\end{hfloatEnv}
```

Table 7: A caption for a nice table

left	center	right
L	C	R

## 16 Full page objects in onecolumn mode

For an image or table which needs the whole space of a page the caption can be printed at the bottom of the preceding or following page. It is possible in oneside and twoside mode, but makes only real sense in the twoside mode. `hfloat` defines three additional optional arguments for placing images in a complete column, page or paper:

```
\define@key{Gin}{fullpage}[true]{%
  \def\Gin@ewidth{\columnwidth}%
  \def\Gin@eheight{\textheight}%
  \Gin@boolkey{false}{iso}%
}
\define@key{Gin}{FullPage}[true]{%
  \def\Gin@ewidth{\textwidth}%
  \def\Gin@eheight{\textheight}%
  \Gin@boolkey{false}{iso}%
}
\define@key{Gin}{FULLPAGE}[true]{%
  \def\Gin@ewidth{\paperwidth}%
  \def\Gin@eheight{\paperheight}%
  \Gin@boolkey{false}{iso}%
}
```

Figure 31 on the next page shows the meaning of the optional arguments `fullpage`, `FullPage`, and `FULLPAGE` for `\includegraphics[...]{tiger}`.

### 16.1 Using the `textarea`

The setting `capPos=evenPage` (even) or `capPos=oddPage` (odd) page for a document in `twocolumn` mode makes no real sense. For a twosided document a setting like `capPos=inner` for inner or `capPos=outer` for outer margin makes more sense. For an image or table which needs the whole space of a page the caption can be printed at the bottom of the preceding or following page. It is possible in oneside and twoside mode, but makes only real sense in the twoside mode. Without any additional argument the caption is set first and the object on the following page:

## 16.1 Using the `textarea`

Figure 31: Output of `fullpage1s2c` (pages 1–8)

### 16.1.1 Using the default or `capPos=before`

Without any additional argument the caption is set first (left) at the bottom of the current page and the object on the following page. This is the same setting like `capPos=left` for a `onecolumn` document. For the `twocolumn` option it makes more sense to use the setting `capPos=before` if the caption and object can appear on different pages.

```
\hvFloat[fullpage]%
{figure}%
{\includegraphics[fullpage]{images/frose}}%
{A fullpage float with the default caption setting]%
{A default caption of a “fullpage” object with the default setting, which
is a “left” caption which means that it always appears ‘‘before’’ the object.
This can be an even or odd page. And some more text which has no
real meaning because it fills only the space for a long caption.]%
{fig:fullpage0}
```

With this setting the caption is always placed *before* the following object. This maybe sufficient for a oneside document but not the best solution if this document is printed on a duplex machine. In such a case it may make sense to have the captions always on an even (left) page, even though the document is typeset in a oneside mode. Figure 32 on page 33 shows the

Table 8: Valid optional arguments for a full page object.

Name	Type	Description
fullpage	true false	Put the caption on the bottom of the preceding or following page and the object alone a page.
FULLPAGE	true false	The same for full papersize objects over one or two columns. The pagestyle is set to empty
multiFloat	true false	For multiple objects with captions for every object. See section 16.3 on page 38.
subFloat	true false	For multiple objects with one main and more subcaptions. See section 17 on page 40.
separatorLine	true	Put a line with a predefined width of 0.4pt between the text and the caption. Only valid for the keyword fullpage.
capPos	value	caption before, after an object or on an evenPage or oddPage.

output for a oneside document with a setting capPos=before .

Depending to the used documentclass it can be a problem, if the caption should be placed on the first page. In such a case use one of the other setting. Table 8 shows the valid optional arguments for a full page floating object.

## 16.1 Using the textarea

Figure 32: Output of default1s1c (pages 2–9)

### 16.1.2 Using capPos=after

The caption will be printed always on the right side which is the same as *after* the full page object. The object appears immediately on the next page and the caption of the next following page at the bottom. There is no check for an even or odd page. This behaviour makes only sense for a oneside document.

```
\hvFloat[fullpage, capPos=after]%
{figure}%
{\includegraphics[fullpage]{images/frose}}%
[A float which needs the complete page width and height.]%
{A Caption of a ‘‘fullpage’’ object, which follows on the next page.}
This can be an even or odd page. And some more text which has no
real meaning because it fills only the space for a long caption.%
{fig:fullpage1}
```

Figure 33: Output of after1s1c (pages 2–9)

## 16.1 Using the textarea

### 16.1.3 Using capPos=evenPage — caption on an even page

With `capPos=evenPage` the caption will be printed on an even (left) page, the object will always be on an odd (right) page. This option makes only real sense for The `twoside` mode!

```
\hvFloat[fullpage, capPos=evenPage]%
{figure}%
{\includegraphics[fullpage]{images/frose}}%
[A float whith a caption on an even page (left)]%
[A caption on an even (left) page of a “fullpage” object.. \blindtext]
{fig:fullpage3}
```

Figure 34: Output of even1s1c (pages 2–9)

### 16.1.4 Using `capPos=oddPage` — caption on an odd page

With `capPos=oddPage` the caption will be printed on an odd (right) page, the object will always be on an even (left) page, which is before the caption.

```
\hvFloat[fullpage, capPos=oddPage]%
{figure}%
{\includegraphics[fullpage]{images/frose}}%
[A float which needs the complete page width and height.]%
{A Caption on an odd page of a “fullpage” object, which follows on the next page.
This can be an even or odd page. And some more text whch has no
real meaning because it fills only the space for a long caption.}
{fig:fullpage}
```

Figure 35: Output of `odd1s1c` (pages 2–9)

### 16.1.5 Using `capPos=inner` or `capPos=outer` — caption on the inner or outer side

These settings make no sense in onecolumn mode.

## 16.2 Using the paper size

It belongs to the user to create an object which fills the complete page. However, with the keyword **FULLPAGE** which is valid for `\hbox{}` and for the macro `\includegraphics` an image will be scaled to the paper dimensions `\paperwidth` and `\paperheight`. It can be used in one- and twocolumn mode!

```
\hbox{%
  \begin{figure}%
    \includegraphics[FULLPAGE]{frose.png}%
  \end{figure}%
}

[A fullpage float with the default caption setting]%
[A default caption of a "fullpage" object with the default setting, which
  is a "left" caption which means that it always appears before the object.
  This can be an even or odd page. And some more text which has no
  real meaning because it fills only the space for a long caption.]%
\fig{fullpage}
```

Figure 36: Output of paper-default1s1c (pages 2–9)

## 16 Full page objects in onecolumn mode

Figure 37: Output of paper-after1s1c (pages 2–9)

### 16.3 Multifloats

Multifloats is the name for more than one image and/or tabular in *one* floating environment. Every image and/or tabular has its own caption, which is different to a subcaption. The syntax for multiple floats is

```
\hvFloat[Options] +{float type}{floating object} [short caption] {long caption}{label}
    +{float type}{floating object} [short caption] {long caption}{label}
    +...
    +{float type}{floating object} [short caption] {long caption}{label}
```

The + symbol defines an additional Object which will be part of the same floating environment. It's up too the user to be sure that one page or one column can hold all defined objects. Every object gets its own caption which is the reason why figures and tabulars and ... can be mixed:

```
\captionsetup{singlelinecheck=false}
\hvFloat[fullpage,capPos=before,multiFloat]%
+{figure}{\includegraphics[width=\linewidth]{images/CTAN}}% no 1
[Short caption A]%
{A Caption A of a ‘‘fullpage’’ object, which follows on the left or right column. This can be an even or odd page. And some more text whch has no
```

### 16.3 Multifloats

```

real meaning because it fills only the space for a long caption.}%
{img:demo0}%
+{table}{\begin{tabular}{lrcp{3cm}}\hline
    & & no 2
\begin{array}{llll}
\text{Linksbündig} & \text{Rechtsbündig} & \text{Zentriert} & \text{Parbox}\\
\hline
\text{L} & \text{R} & \text{C} & \text{P}\\
\text{left} & \text{right} & \text{center} & \text{Text with possible linebreaks}\\
\multicolumn{4}{c}{\text{Multicolumn over all columns}}\\
\end{array}\hline
\end{tabular}}%<br>
[Short Caption B]%
{A Caption B of a "fullpage" object, which follows on the left or right column. This can be an even or odd page.}%
+{figure}{\includegraphics[width=\linewidth]{images/CTAN}}%<br>
{A Caption C of a "fullpage" object, which follows on the left or right column.}%
{img:demo1}%
+{figure}{\includegraphics[width=\linewidth]{images/CTAN}}%<br>
{A Caption C of a "fullpage" object, which follows on the left or right column.}%
{img:demo2}

```

Figure 38: Output of `multi-default1s1c` (pages 4–11)

The page with the objects has no additional informations it holds only the figures and/or

## 17 Subfloat page

Figure 39: Output of `multi-after1s1c` (pages 4–11)

tabulars. If you want it like subfigures or subtabulars then go to section 17. The setting `\captionsetup{singlelinecheck=false}` is needed if you want the captions always left aligned.

## 17 Subfloat page

A subfloat page can have only one type of floats which will have one main caption and individual subcaptions. The syntax is similiar to the one for a multifloat page:

```
\hvFloat[Options] +{float type}{<empty>} [short caption] {long caption}{label}
    +{<empty>} {floating object} [short caption] {long caption}{label}
    +
    +{<empty>} {floating object} [short caption] {long caption}{label}
```

Some arguments are ignored for a subfloat, one can leave them empty. The first line defines only the type and the main caption, the object entry is ignored! All aditional lines will have the same float type, the reason why the float type entry is ignored.

```
\hvFloat[fullpage,capPos=before,objectFrame,subFloat]%
+{figure}{}[Short main caption of the objects]%   main short lsi entry
{The main caption of a ‘‘fullpage’’ object, which follows on the left or
```

```

right column. This can be an even or odd page. And some more text whch has no
real meaning because it fills only the space for a long caption.}% main caption
{sub:demo0}%
+{}{\includegraphics[width=\linewidth]{images/CTAN}}%
[Short caption B]%
{A Caption B of a “fullpage” sub object.}% subcaption
{}%
+{}{\includegraphics[width=\linewidth]{images/CTAN}}%
{A Caption C of a “fullpage” object, which follows on the left or right column.}%
{sub:demo1}%
+{}{\includegraphics[width=\linewidth]{images/CTAN}}%
{A Caption D of a “fullpage” object}%
{sub:demo2}%
+{}{\includegraphics[width=\linewidth]{images/CTAN}}%
{A Caption E of a “fullpage” object}%
{sub:demo3}

```

The keyword `subFloat` defines the images or tabulars as subfloats. The package `subcaption` is loaded by default and should be activated with `\captionsetup[sub][singlelinecheck]`.

## 17 Subfloat page

Figure 40: Output of sub-default1s1c (pages 4–11)

Figure 41: Output of sub-after1s1c (pages 4–11)

# 18 Full page objects in twocolumn mode

The filenames always have a “2c” for two columns in its names, e.g. `left2s2c` indicates `capPos=before` and the documentclass setting `twoside` and `twocolumn`. Depending to the used documentclass it can be a problem, if the caption should be placed on the first page of the whole document. In such a case use one of the other setting. Table 8 on page 32 shows the valid optional arguments for a full page floating object.

## 18.1 Default setting

For the `twocolumn` mode the caption can be in the left (first) or right (second) column. With the default setting (without using the keyword `capPos`) it is equivalent to the setting `capPos=before`, the caption is always placed *before* (left of) the object. This can be the first or the second column and both can be on different pages. With `capPos=before` (uppercase L) it is possible to get the caption and the object in the `twocolumn` mode always on one page. This is then the left (first) column for the caption (see figure 42).

Figure 42: Output of `default2s2c` (pages 2–9)

```
\hvFloat[fullpage]{figure}%
{\includegraphics[width=\columnwidth,height=0.9\textheight]{images/frose}}%
[A float which needs the complete column width and height.]%
```

{A Caption of a “fullpage” object, which follows on the next column.  
This is always the right column on an even or odd page. And some more  
text whch has no real meaning because it fills only the space for a long  
caption.}%  
{fig:fullpage0-2}

The example 42 on the previous page shows that the caption and the object can be on different pages. If you do not like this behaviour, then use the setting `capPos=left`, which puts the caption before the object, but always on the *same page* (see Figure 43).

Figure 43: Output of `left2s2c` (pages 2–9)

### 18.1.1 Using `capPos=after`

The caption will be printed always right of the object which is the same as *after* the full page object. With `capPos=after` it is possible to get the caption in the twocolumn mode always in the right (second) column (see figure 45 on page 46)

```
\hvFloat[fullpage, capPos=after]{figure}%
{\includegraphics[fullpage]{images/rose}}%
[A float which needs the complete column width and height.]%
{A Caption of a “fullpage” object, which is on the left column.  
This is always the right column on an even or odd page. And some more
```

text which has no real meaning because it fills only the space for a long caption.)%  
{fig:fullpage1-2}

Figure 44: Output of after2s2c (pages 2–9)

The caption and the object can be on different pages (Figure 44). If you do not like this behaviour, then use the setting `capPos=right` instead of `capPos=after`. Figure right2s2c shows that caption and object in this case are always on the same page.

Figure 45: Output of right2s2c (pages 2-9)

### 18.1.2 Using capPos=evenPage – caption on an even page

There can be a problem if there is not enough space on the bottom of the even page. Then the caption will be on the next page which is an odd one. In such a case use a manually \clearpage or wait for an update of hvfloat.

Figure 46: Output of even2s2c (pages 2–9)

### 18.1.3 Using `capPos=oddPage` — caption on an odd page

There can be a problem if there is not enough space on the bottom of the even page. Then the caption will be on the next page which is an odd one. In such a case use a manually `\clearpage` or wait for an update of `hvfloat`.

Figure 47: Output of `odd2s2c` (pages 2–9)

### 18.1.4 Using `capPos=inner` — caption in the inner column

The caption will be printed in the right column for an even page and in the left column for an odd page.

```
\hvFloat[fullpage,capPos=inner]{figure}{\includegraphics[fullpage]{images/rose}}%
[A float which needs the complete column width and height.]%
{A Caption of a "fullpage" object, which follows on the left or right column.
This can be an even or odd page. And some more text which has no
real meaning because it fills only the space for a long caption.}{fig:fullpage3-2}
```

Figure 48: Output of `inner2s2c` (pages 2–9)

### 18.1.5 Using `capPos=outer` — caption on the outer column

The caption will be printed on the left column an odd page, the object can appear before or after this caption.

```
\hvFloat[fullpage, capPos=outer]{figure}%
\includegraphics[fullpage]{images/rose}%
[A float which needs the complete page width and height with \texttt{capPos=outer}.]%
{A Caption of a “fullpage” object, which has the caption position in the
outer page. This can be an even or odd page. And some more text whch has no
real meaning because it fills only the space for a long caption.}{fig:fullpage2-2a}
```

Figure 49: Output of outer2s2c (pages 2–9)

## 18.2 Using full page in twocolumn mode

### 18.2.1 Using full page in twocolumn mode

With the star version of `\hbox{}` The object is placed over both columns, the whole page. In such a case the only useful caption position is `capPos=inner` for `inner`.

```
\hbox*[fullpage, capPos=inner]{figure}%
{\includegraphics[FullPage]{images/rose}}%
[A float which needs the complete page width and height with \texttt{capPos=outer}.]%
[A caption of a “fullpage” object in twocolumn mode: It uses the star version
of \textbackslash\hbox. The object goes over both columns.]{fig:two}
```

Figure 50: Output of paper-default2s2c (pages 2–9)

Figure 51: Output of paper-inner2s2c (pages 2–9)

### 18.3 Multifloats

Multifloats is the name for more than one image and/or tabular in *one* floating environment. Every image and/or tabular has its own caption, which is different to a subcaption. The + symbol defines an additional Object which will be part of the same floating environment. It's up to the user to be sure that one page or one column can hold all defined objects. Every object gets its own caption which is the reason why figures and tabulars and ... can be mixed:

```
\captionsetup{singlelinecheck=false}
\hvFloat[fullpage,multiFloat,capPos=inner]{%
+{figure}{\includegraphics[height=0.4\textheight]{images/rose}}% no 1
[Short caption A]%
{A Caption A of a "fullpage" object, which follows on the left or
right column. This can be an even or odd page. And some more text whch has no
real meaning because it fills only the space for a long caption.}%
{multi:demo0}%
+{table}{\begin{tabular}{|l|c|}\hline
Linksbündig & Rechtsbündig\\
L & R & \\
left & right & \\
\multicolumn{2}{c}{Multicolumn}\hline
}% no 2
```

```

\end{tabular}}%  

[Short Caption B]  

{A Caption B of a "fullpage" object, which follows on the left or  

right column. This can be an even or odd page.}  

{}%  

+{figure}{\includegraphics[height=0.4\textheight]{images/rose}}% no 3  

{A Caption C of a "fullpage" object, which follows on the left or  

right column.}  

{multi:demo1}

```

The page with the objects has no additional informations it holds only the figures and/or tabulars. If you want it like subfigures or subtabulars then go to section [17 on page 40](#). The setting `\captionsetup{singlelinecheck=false}` is needed if you want the captions always left aligned.

Figure 52: Output of `multi-default2s2c` (pages 2-9)

## 19 Subfloat page

A subfloat page can have only one type of floats which will have one main caption and individual subcaptions. Some arguments are ignored for a subfloat, one can leave them empty. The first line defines only the type and the main caption, the object entry is ignored! All additional lines will have the same float type, the reason why the float type entry is ignored.

Figure 53: Output of multi-inner2s2c (pages 2-9)

```

\captionsetup[sub]{singlelinecheck}
\hvFloat[fullpage, capPos=before, objectFrame, subFloat]%
+{figure}{}[Short main caption of the objects]%
  \main short lsi entry
  {The main caption of a "fullpage" object, which follows on the left or right column. This can be an even or odd page. And some more text which has no real meaning because it fills only the space for a long caption.}%
  \main caption
  {sub:demo00}%
+{}{\includegraphics[height=0.28\textheight]{images/rose}}%
  [Short caption B]%
  {A Caption B of a "fullpage" sub object.}%
  \subcaption
  {}%
+{}{\includegraphics[height=0.28\textheight]{images/rose}}%
  {A Caption C of a "fullpage" object, which follows on the left or right column.}%
  {sub:demo10}%
+{}{\includegraphics[height=0.28\textheight]{images/rose}}%
  {A Caption D of a "fullpage" object.}%
  {sub:demo20}

```

The keyword `subFloat` defines the images or tabulars as subfloats. The package `subcaption` is loaded by default. For the subcaptions the `singlelinecheck` should be true (see listing).

Figure 54: Output of sub-default2s2c (pages 2–9)

Figure 55: Output of sub-after2s2c (pages 2–9)

## 20 References to the page

With the command `\pageref` one can have a reference to the page number of a caption. For the `fullpage` option this can be the wrong page if someone wants a reference to the page where the object is set. Let's assume that we use something like

```
\setDefaults
\hvFloat[fullpage,capPos=evenPage]{figure}%
{\IncludeGraphics{images/frose}}%
[A float which needs the complete paper width and height.]%
[A Caption of a "fullpage" object, which follows on the next page.
This can be an even or odd page. The object uses the complete paper dimensions]%
{demo:fullpage}
```

The label `demo:fullpage` is used for the *image* and not for the caption! Internally another label called `demo:fullpage-cap` is set on the caption page which can be before or behind the object (depending to the optional argument of `capPos`). For example:

The caption of `figure~\ref{demo:fullpage}` is on page `\pageref{demo:fullpage-cap}`, but the image itself is on page `\pageref{demo:fullpage}`.

The caption of figure 57 is on page 57, but the image itself is on page 58. With package `varioref` it is:

Whith the package `\Lpack{varioref}` (<https://ctan.org/pkg/varioref>) one can get something like: see `figure~\vref{demo:fullpage}`, which uses a correct page number of the floating object and not the caption page number which is `\vpageref{demo:fullpage-cap}`.  
The `figure~\ref{demo:fullpage}` is on page `\pageref{demo:fullpage}` and the caption on page `\pageref{demo:fullpage-cap}`

Whith the package `varioref` (<https://ctan.org/pkg/varioref>) one can get something like: see figure 57 on page 58, which uses a correct page number of the floating object and not the caption pagenumber which is on the next page. The figure 57 is on page 58 and the caption on page 57

## 21 Defining a style

With `\defhvstyle` one can define a special style to get rid of the individual setting:

`\defhvstyle{name}{setting}`

For example:

```
\defhvstyle{RightCaption}{floatPos=htb, capWidth=0.5, capPos=after, capVPos=bottom, objectPos=center}
\hvFloat[style=RightCaption]{figure}{\includegraphics{images/rose}}%
{Caption vertically centered right beside the float with a caption width of
\textrm{0.5\textrm{columnwidth}.}\}{fig:style}
```

Figure 56: Caption at bottom right beside the float with a caption width of  $0.5\text{\columnwidth}$ .

## 22 Global float setting

Instead of writing the following sequence into the preamble:

```
\makeatletter  
\renewcommand\fps@figure{tb}  
\renewcommand\fps@table{t}  
\makeatother
```

you can change the global setting of floats by loading the package `hfloat-fps`. It allows optional package options to set the global placement:

```
\usepackage[figure=tb,table=t]{hfloat-fps}
```

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.
